QUALIFICATION AND DEVELOPMENT TESTS

NARRATIVE

SCHEDULES

1. Production Schedule

   a. Updated status

2. Master Summary Schedule

   a. Mission Engineering Releases for spacecraft included for first time in Program Progress Report.
   b. S/C-1 Adapter deleted and replaced by S/C-2.
   c. Revised and updated status.

3. Mission Simulators 1 & 2, Translation and Docking Trainer

   a. Simulators updated and included slack times.
   b. Translation and Docking Trainer revised, updated, and included slack times.

4. Ground Test Program

   a. Revised and updated status.

5. Compatibility Test Program

   a. Revised and updated status.

6. Mission 1A Support

   a. Included for first time in Program Progress Report.

WORK PLANS

1. Manufacturing Work Plans S/C-1, 2, 3A, 3, 4, 5 & 6. Statics 2, 3, 4, 5 & 7

   a. S/C-6 included for first time in Program Progress Report.
   b. Balance revised and updated.

2. Zone Status Graphs for CTU S/C-2, 3A & 3

   a. CTU deleted
   b. Balance revised and updated

3. Final Assembly and White Room Graphs S/C-1, 2, 3A

   a. S/C-1 deleted
   b. Balance revised and updated

4. Equipment Study Graphs S/C-2, 3A & 3

   a. Revised and updated status

5. Supplementary Work Plans S/C-2, 3A & 3

   a. Revised and updated status.

MAN-HOURS

1. Actual Engineering Man-Hours

   a. Updated to latest actuals

VENDOR STATUS

1. Vendor Qualification & Development Test Program

   a. Revised and updated.

2. Master Schedules

   a. Updated

3. System Tabulation Sheets

   a. Revised and updated

4. A.G.E. Tabulation Sheets

   a. Revised and updated

5. Narratives

   a. Revised and updated

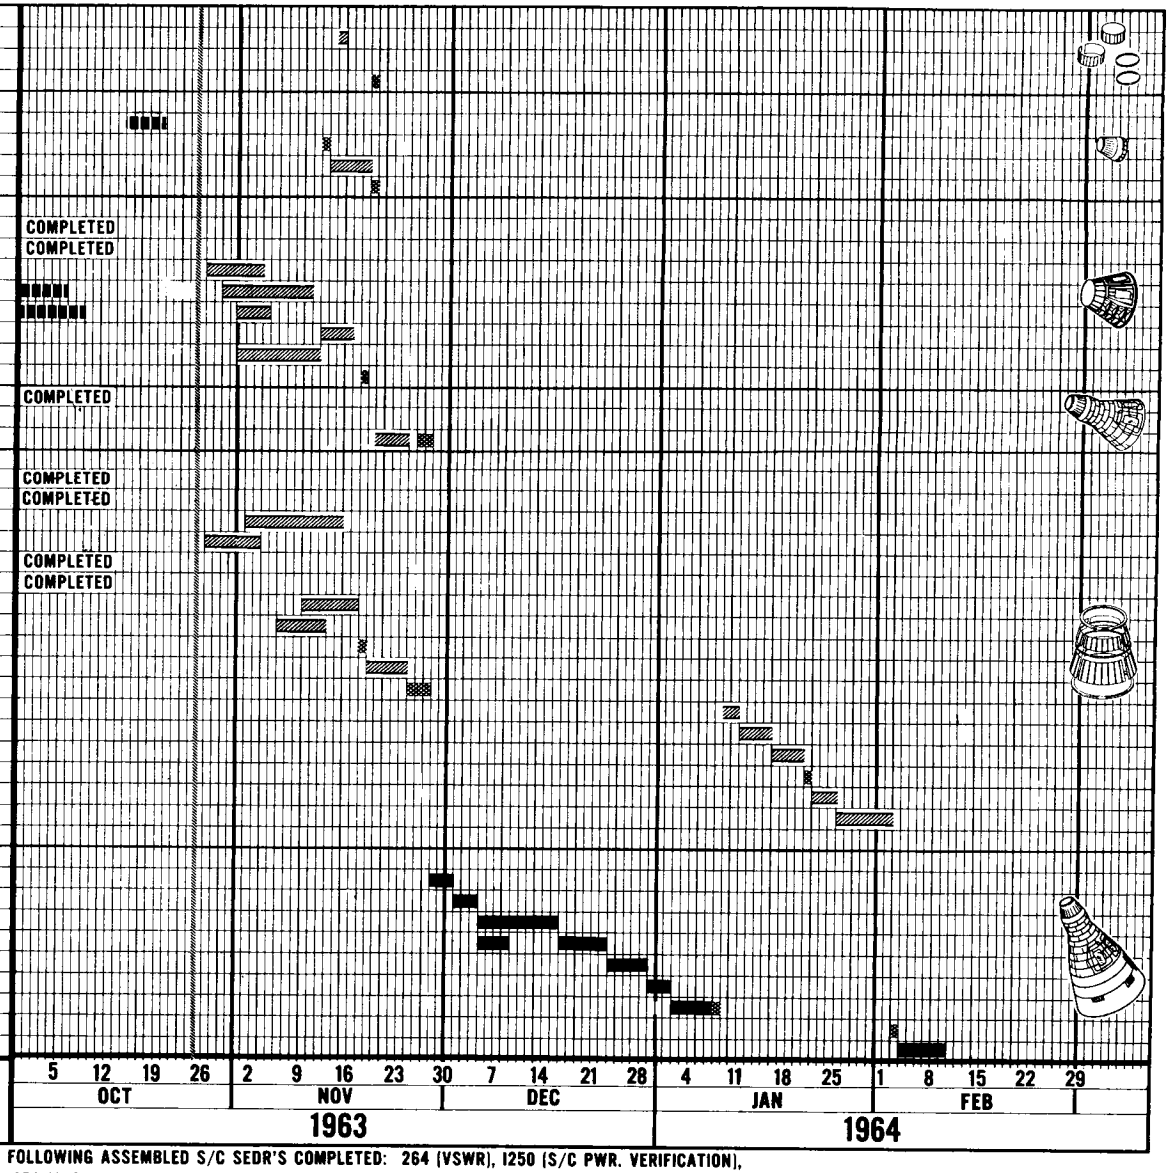
PROJECT GEMINI COMPATIBILITY TEST UNIT TEST SCHEDULE

R & R SECTION		
SEQUENTIAL SYSTEM TEST	IA259	
MATE WITH RCS & CABIN		
R C S SECTION		
RCS PRESSURE & LEAK	● B255	
MOVE TO HYPERGOLIC AREA		
RCS SERVICING, STATIC FIRING & DE-SERVICING	● 260 - B263	
MOVE TO WHITE ROOM & MATE WITH CABIN		
CABIN SECTION - CTU		
ELECTRICAL & SEQUENTIAL SYSTEM TEST	IC250 - IC259	COMPLETED
COMMUNICATION SYSTEM	IC251	COMPLETED
COOLANT SYSTEM	C262	
INSTRUMENTATION SYSTEM	C253	
GUIDANCE & CONTROL	IC252	
GROUNDING CHANGES TO WIRING		
ECS	IC254	
MATE WITH RCS AND R & R		
BIO-MEDICAL	K253	COMPLETED
RE-ENTRY CONFIGURATION		
COMMUNICATION SYSTEM TEST & MATE	G251	
ADAPTER SECTION: CTU		
SEQUENTIAL SYSTEM	ID259	COMPLETED
COMMUNICATION SYSTEM	ID251	COMPLETED
COOLANT SYSTEM	ID262	
INSTRUMENTATION SYSTEM	ID253	
OAM SYSTEM	ID252	COMPLETED
MECH. SYSTEM PWR. DIST. TEST	D272	COMPLETED
ECS SYSTEM	ID254	
OAMS PRESSURE & LEAK	● D255	
MOVE TO HYPERGOLIC FACILITY		
SERVICING, STATIC FIRING & DE-SERVICING	● 260 - D263	
MOVE TO WHITE ROOM & MATE WITH RE-ENTRY		
INSTALL RCS/FC MODULE		
RSS LEAK & VALIDATION	● ID266	
COOLANT SYSTEM LEAK TEST	D262	
MOVE TO CRYOGENIC AREA		
F C TEST (GASEOUS REACTANTS)	● ID258	
CRYOGENIC SERVICING & OPERATION	● D261 - ID270	
ASSEMBLED SPACECRAFT		
COOLANT SYSTEM & ECS TEST	H262 - IH254	
ELECTRICAL & SEQUENTIAL SYSTEM	H250 - H259	
G & C SYSTEM & RADAR TEST	H252 - H257	
INSTRUMENTATION SYSTEM	H253	
RCS - OAMS TEST	H255	
COMMUNICATION SYSTEM	H251	
SIMULATED MISSION & DEMATE	265 - TR052.068	
MATE & MOVE TO ALTITUDE CHAMBER	269	
PRE-ALTITUDE SERVICING & ALTITUDE CHAMBER	● H268 - H269	



MFG. TIME, MOVES & MATES
PHASE I TESTING
PHASE II, III, & IV TESTING
COMPLETE OR IN WORK

● 3 SHIFTS/DAY - 7 DAYS/WEEK (IF REQUIRED)

25 OCTOBER 1963

FOLLOWING ASSEMBLED S/C SEDR'S COMPLETED: 264 (VSWR), I250 (S/C PWR. VERIFICATION), I259 (SEQUENTIAL C/O). MECHANICAL SYSTEM POWER DISTR.

[illegible] SUMMARY

[illegible]

[illegible]

[illegible]

[illegible] 30 Day [illegible] [illegible] scheduled for delivery [illegible]

[illegible]

STATIC 2

1. Under construction in manufacturing section. Delivery to test area now scheduled for 23 January 1964.

2. 30 Day Forecast - No test activity.

STATIC 3

1. Critical launch (cold). On 18 October 1963 a [illegible] for gaskets on all adapter mold line doors was added to the test requirement. Before the addition of these gaskets, test [illegible] was approximately two weeks ahead of [illegible]. [illegible] the test set up and gasket installation has been completed, and the set up is back in process. The two week ahead of [illegible] has been lost.

2. 30 Day Forecast - Anticipate set up to be completed to test runs to start by 1 November 1963. Testing to continue [illegible] November.

STATIC 4

1. Modification to -9 configuration by manufacturing completed on 30 October 1963.

2. 30 Day Forecast - [illegible] for pressure test [illegible] and ultimate to be completed on 8 October 1963. [illegible] completed by [illegible] November 1963. [illegible] to be completed by 22 November 1963. [illegible] set up for [illegible] [illegible] 22 [illegible] [illegible] in [illegible]

[illegible]

1. [illegible]

MONTHLY SUMMARY

[illegible]
[illegible]
Vehicle: [illegible]
[illegible]
DATE: 25 [illegible]

ENGINEERING STATUS

Testing and checkout of Simulator for S/N 1 is progressing and completion will be possible upon receipt of Flight Hardware. Estimate approximately [illegible] weeks of testing and checkout required after last piece of hardware is received.

PROCUREMENT

The #2 DDP-24 Computer shipped 24 October and should be installed the [illegible] of 28 October.

Modified and unmodified Flight Hardware shortages should be complete [illegible] 1 November. The propellant gage will ship date has slipped from [illegible] October to 30 October, due to Qual. Test consuming more time than originally anticipated by vendor.

One half of the Incremental Velocity Indicator was received on [illegible] which will enable testing of this system to begin. The [illegible] Incremental Velocity Indicator will ship on 3 November.

ASSEMBLY AND DELIVERY STATUS

The following Flight Hardware has been received this month and is being installed on Simulator S/N 1:

2-Lap Belts	Dock Entry [illegible]
4-Backboard Ejection Seats	Dock Entry [illegible]
4-Egress Kit, Cushion Assy.	Dock Entry [illegible]
4-Pelvic Seat Structure Block	Dock Entry [illegible]
1-Suit and Cabin Temp. Indicator	Dock Entry [illegible]
1-Cabin Pressure Indicator	Dock Entry [illegible]
1-Secondary O2 Indicator	Dock Entry [illegible]
3-Polished Mirrors Item #1	Receiver [illegible]
3-Polished Mirrors Item #2	Receiver [illegible]

Programming and de-bugging of the Mark I and DDP-24 Computer at Link, for shipment to the Cape, is approximately three weeks behind schedule. Mark I is about 63% complete while the DDP-24 is about [illegible]% complete.

The #2 DDP-24 was shipped 24 October and should be in place during the [illegible] of 28 October. Integration of the #2 DDP-24 with the Mark I [illegible] improve testing and final checkout of Simulator S/N 1.

Fabrication of the equipment cabinets and crew stations for Simulator [illegible] is about two weeks behind schedule. The instructors station is approximately [illegible] weeks behind schedule. Overall the equipment cabinets [illegible] are about 33% complete.

TEST STATUS

Simulator S/N 2 [illegible] starting, due to the [illegible]

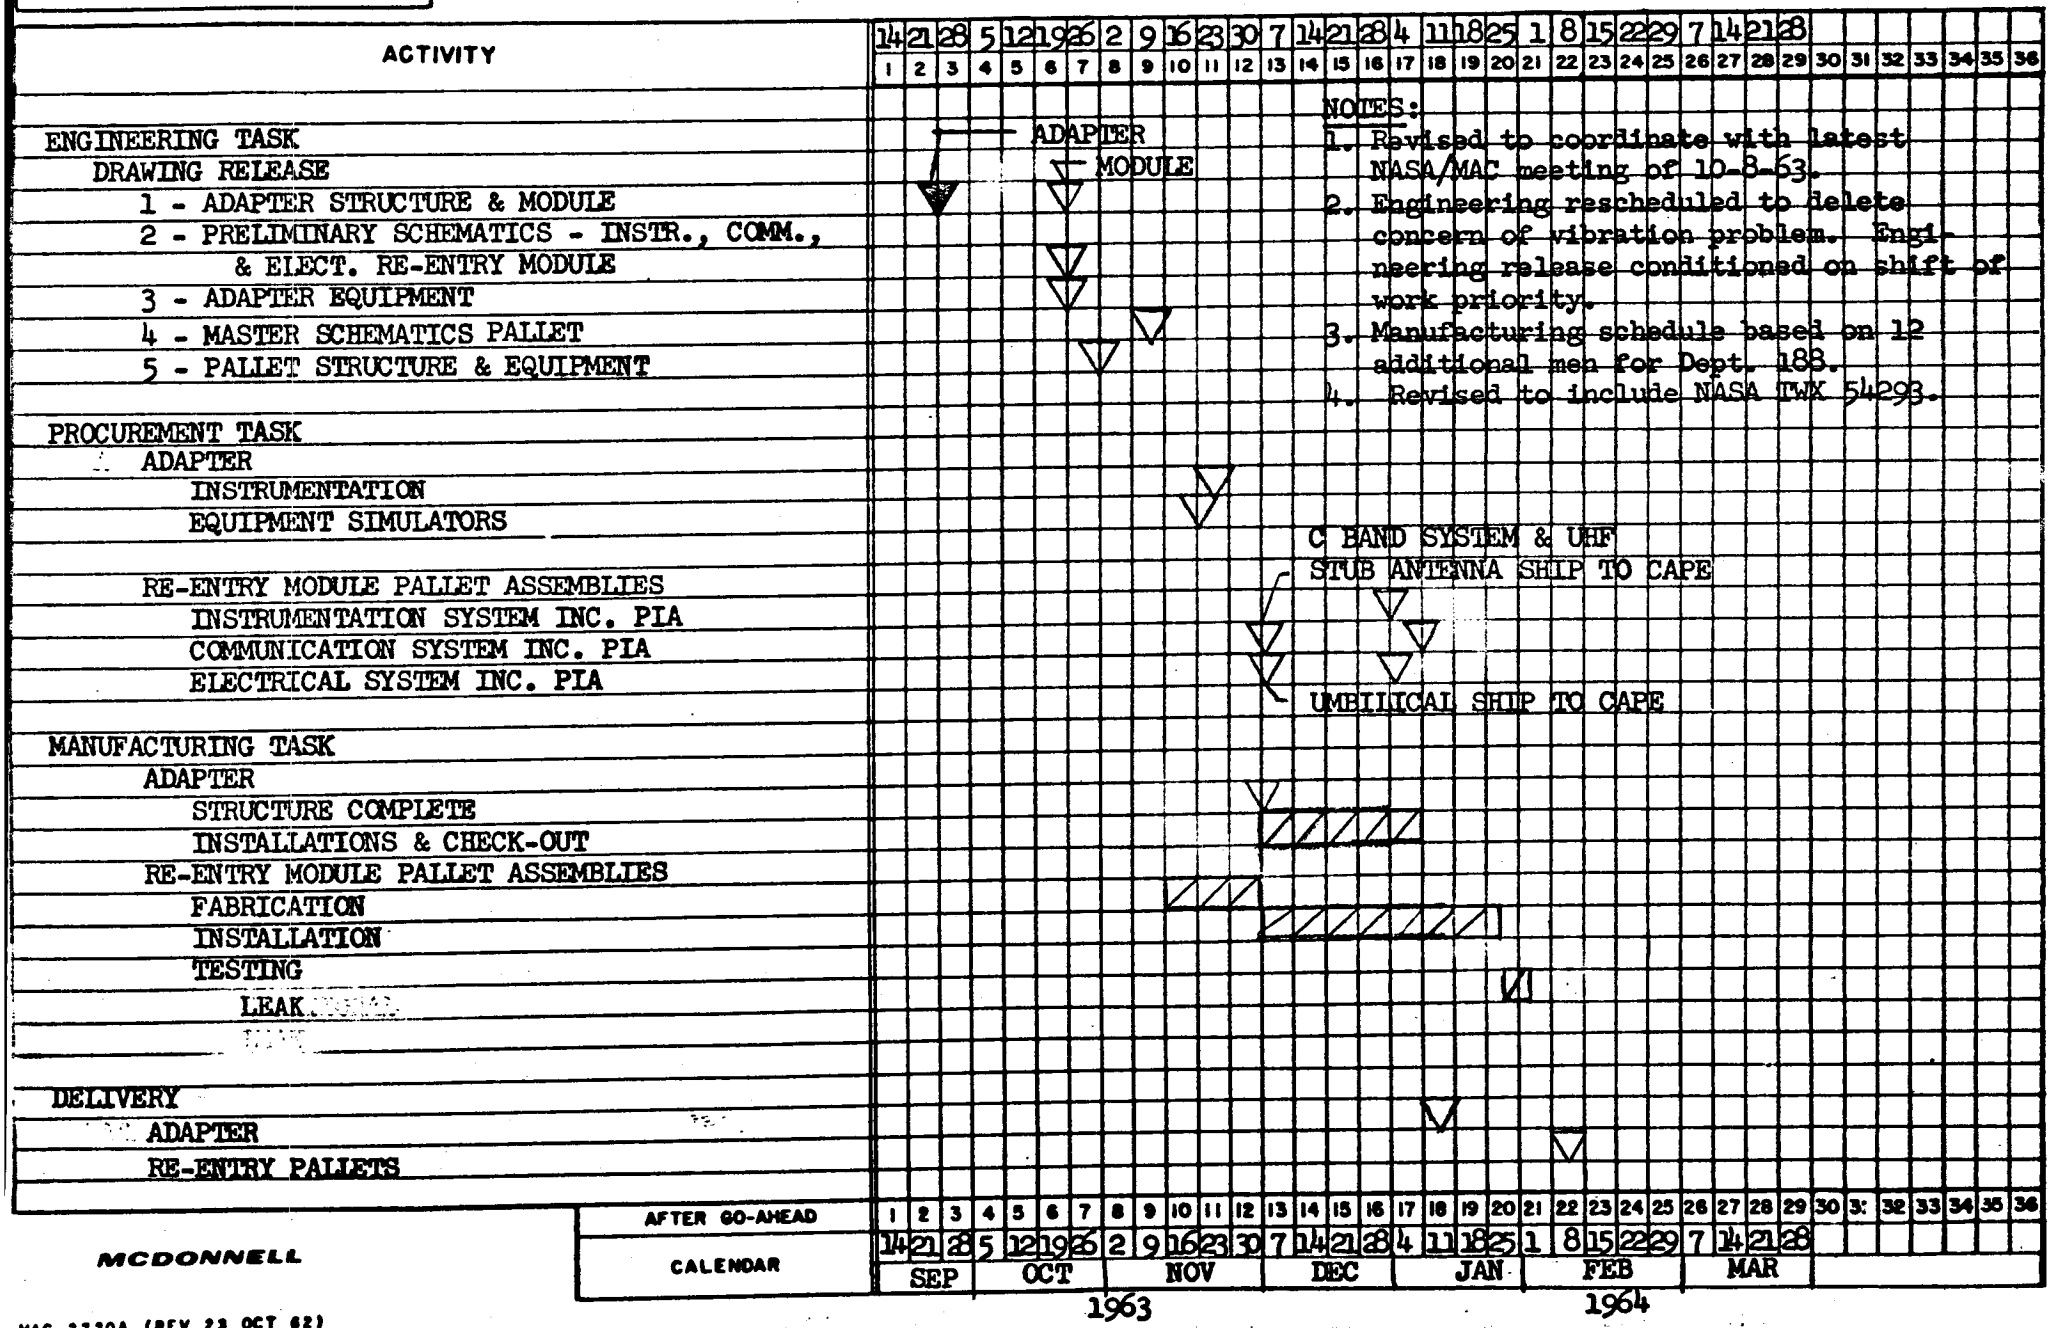
COORDINATION
ENG. [signature] 937
MFG. [signature]
PROC. L. S. Dahl
FLT.

APPROVAL 9-27-63
PREP. BY E. C. Wright
APP. [signature] 9/27
APP.
APP.



NOTES:
1. Revised to coordinate with latest NASA/MAC meeting of 10-8-63.
2. Engineering rescheduled to delete concern of vibration problem. Engineering release conditioned on shift of work priority.
3. Manufacturing schedule based on 12 additional men for Dept. 188.
4. Revised to include NASA TWX 54293.

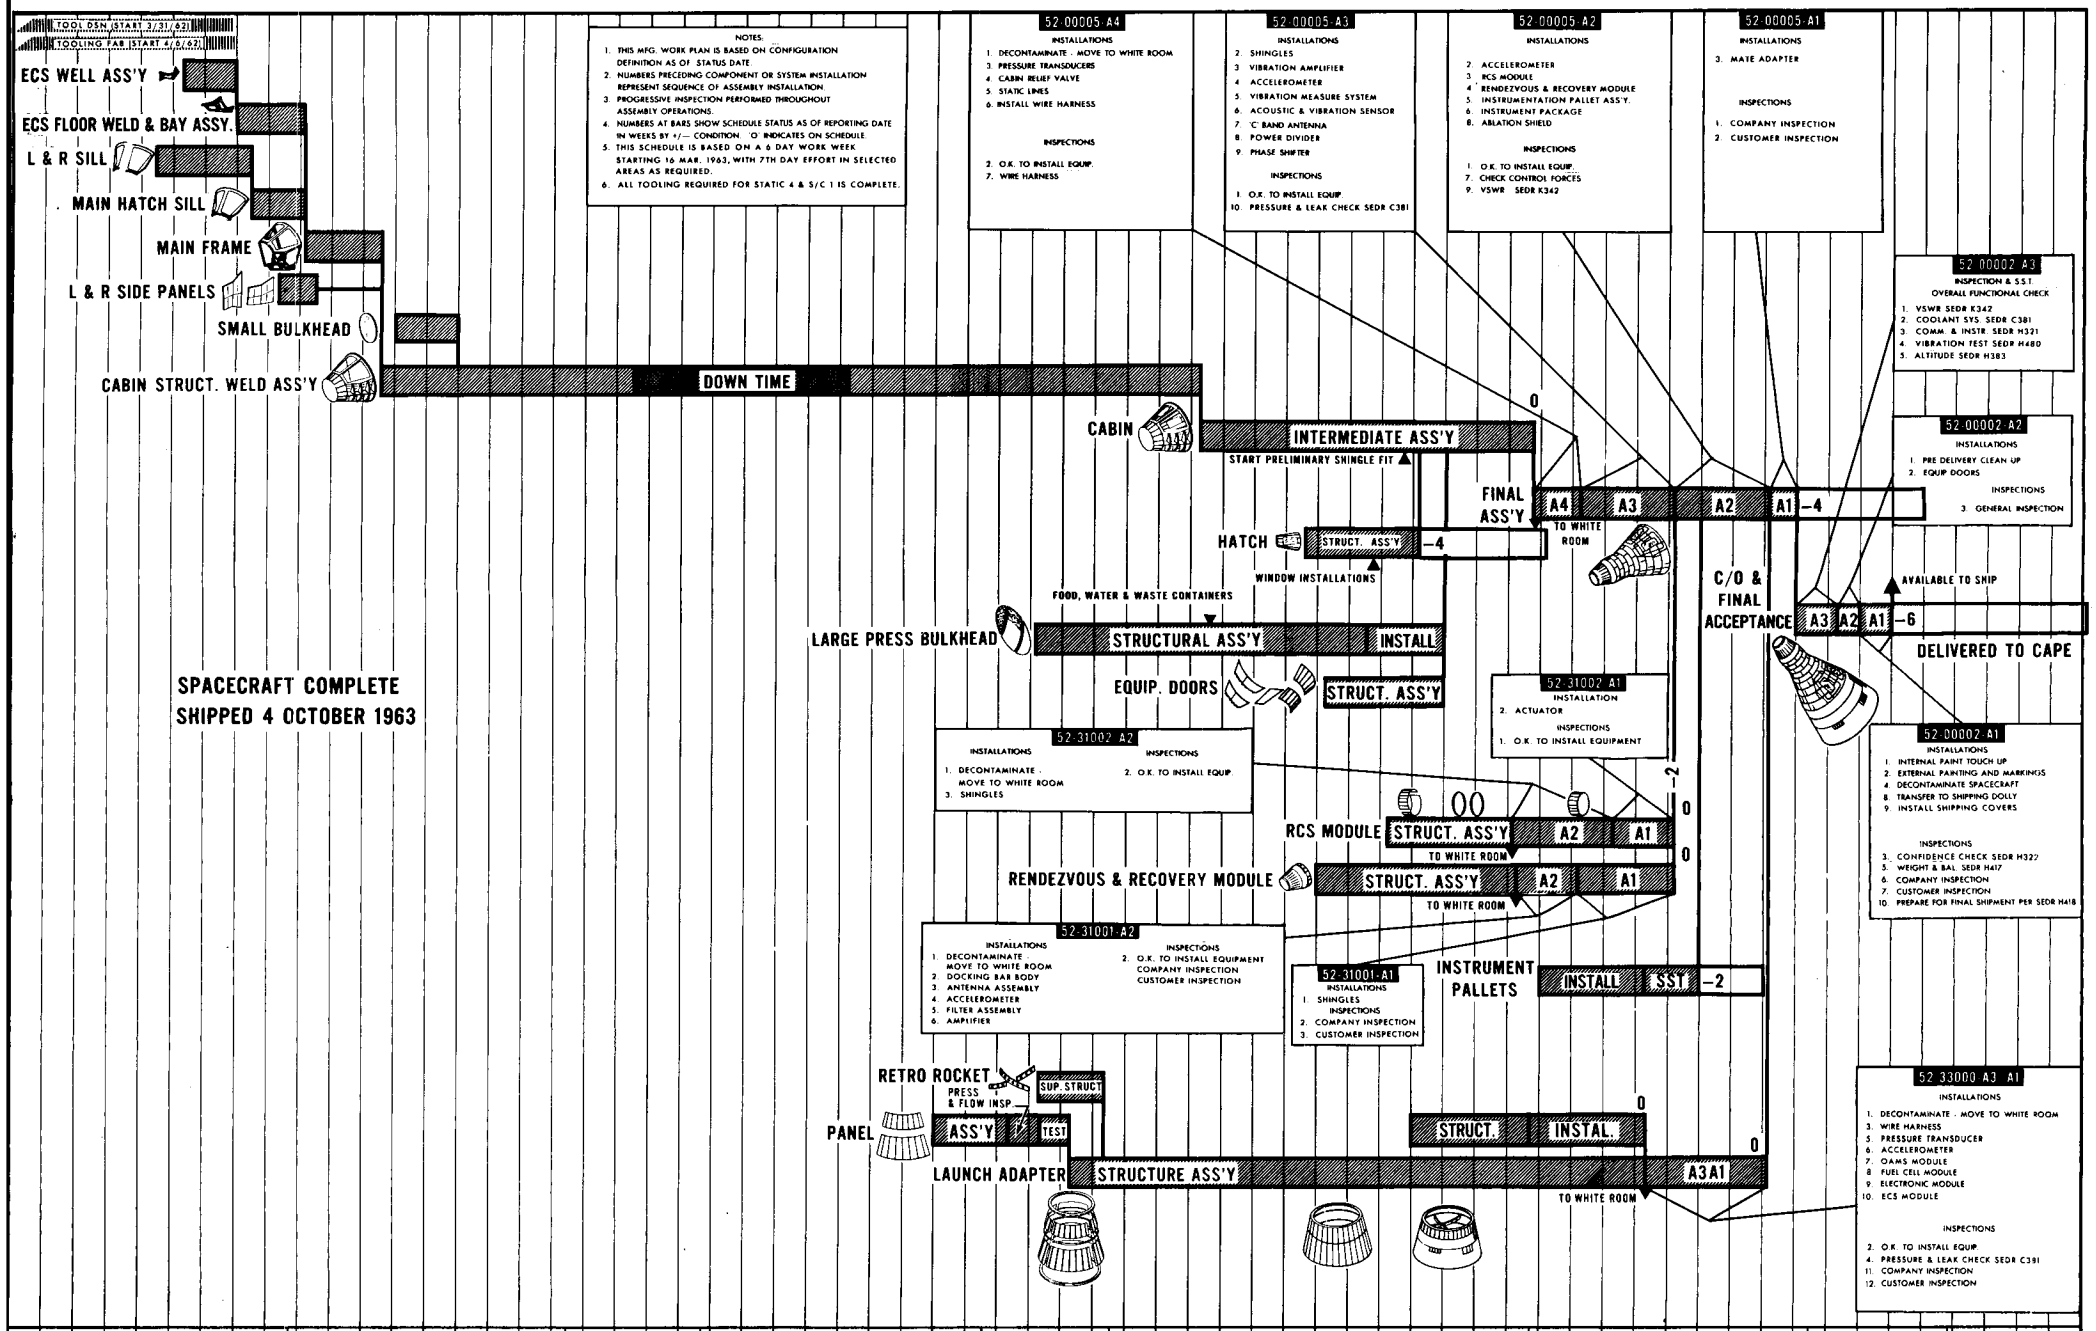
GEMINI MANUFACTURING WORK PLAN – SPACECRAFT NO. 1

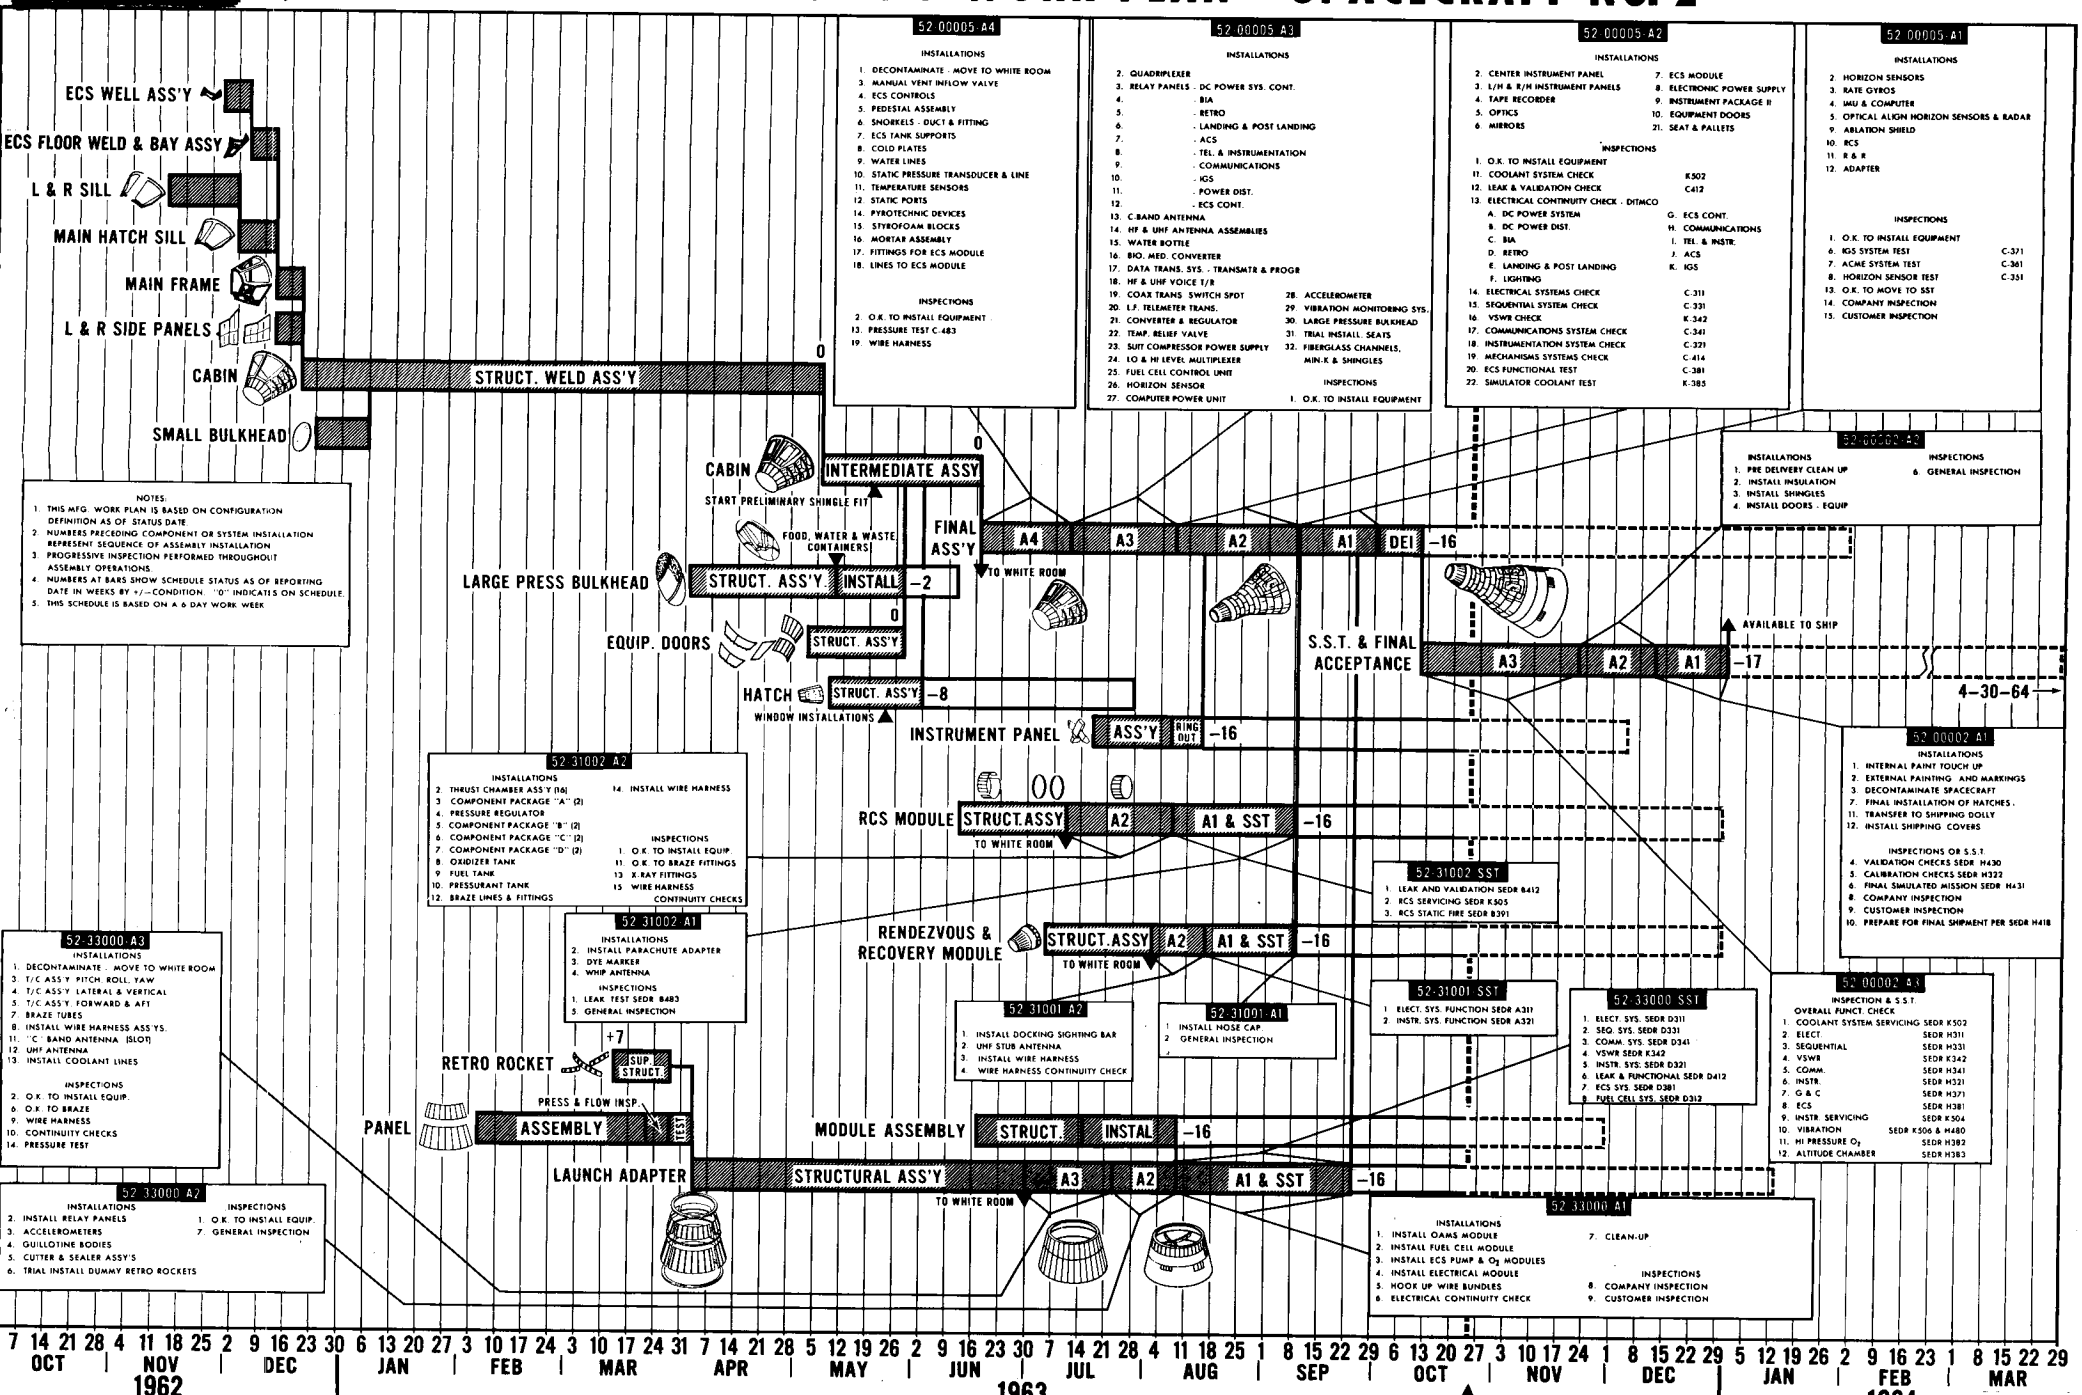


STATUS DATE: 25 OCT. 1963

12-133P-11-01

[redacted]

GEMINI MANUFACTURING WORK PLAN – SPACECRAFT NO. 2



NOTES:
1. THIS MFG. WORK PLAN IS BASED ON CONFIGURATION DEFINITION AS OF STATUS DATE
2. NUMBERS PRECEDING COMPONENT OR SYSTEM INSTALLATION REPRESENT SEQUENCE OF ASSEMBLY INSTALLATION
3. PROGRESSIVE INSPECTION PERFORMED THROUGHOUT ASSEMBLY OPERATIONS
4. NUMBERS AT BARS SHOW SCHEDULE STATUS AS OF REPORTING DATE IN WEEKS BY +/– CONDITION. "0" INDICATES ON SCHEDULE.
5. THIS SCHEDULE IS BASED ON A 6 DAY WORK WEEK

52-00005-A4

INSTALLATIONS
1. DECONTAMINATE - MOVE TO WHITE ROOM
3. MANUAL VENT INFLOW VALVE
4. ECS CONTROLS
5. PEDESTAL ASSEMBLY
6. SNORKELS - DUCT & FITTING
7. ECS TANK SUPPORTS
8. COLD PLATES
9. WATER LINES
10. STATIC PRESSURE TRANSDUCER & LINE
11. TEMPERATURE SENSORS
12. STATIC PORTS
14. PYROTECHNIC DEVICES
15. STYROFOAM BLOCKS
16. MORTAR ASSEMBLY
17. FITTINGS FOR ECS MODULE

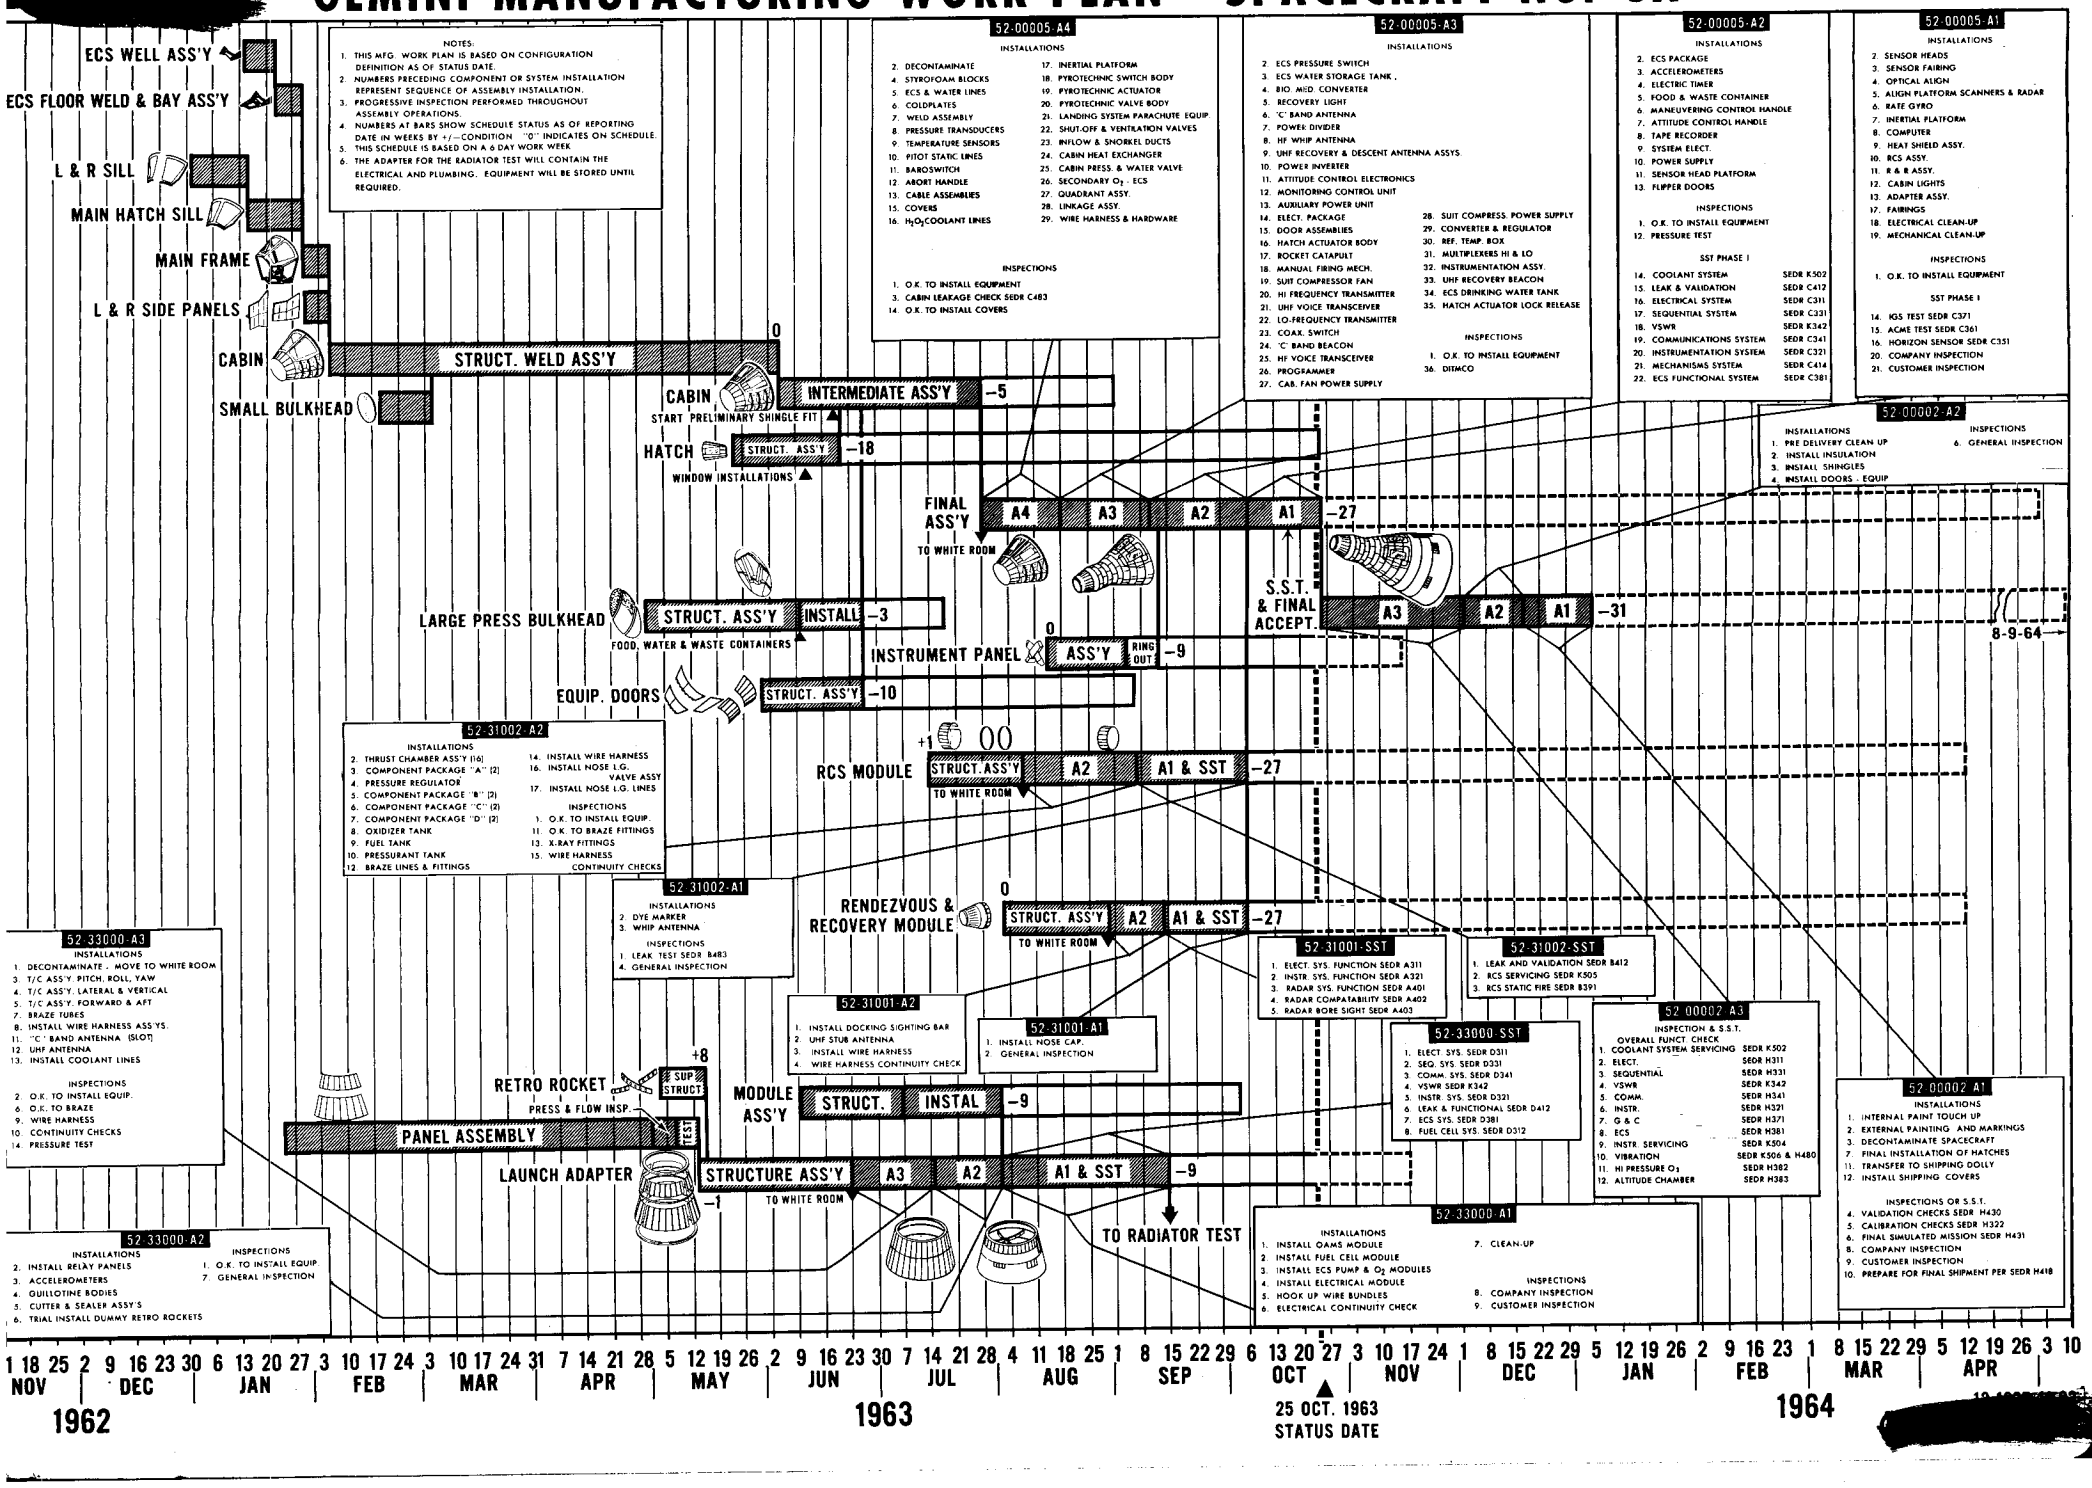
GEMINI MANUFACTURING WORK PLAN—SPACECRAFT NO. 3A



NOTES:
1. THIS MFG. WORK PLAN IS BASED ON CONFIGURATION DEFINITION AS OF STATUS DATE.
2. NUMBERS PRECEDING COMPONENT OR SYSTEM INSTALLATION REPRESENT SEQUENCE OF ASSEMBLY INSTALLATION.
3. PROGRESSIVE INSPECTION PERFORMED THROUGHOUT ASSEMBLY OPERATIONS.
4. NUMBERS AT BARS SHOW SCHEDULE STATUS AS OF REPORTING DATE IN WEEKS BY +/— CONDITION. "0" INDICATES ON SCHEDULE.
5. THIS SCHEDULE IS BASED ON A 6 DAY WORK WEEK.
6. THE ADAPTER FOR THE RADIATOR TEST WILL CONTAIN THE ELECTRICAL AND PLUMBING. EQUIPMENT WILL BE STORED UNTIL REQUIRED.

25 October 1963

SUBJECT: GEMINI STATUS REPORT FOR THE PERIOD 28 SEPTEMBER THRU 25 OCTOBER 1963. SPACECRAFT NUMBER THREE A.

1. RECAPITULATION

The Cabin Assembly for this Spacecraft is in the White Room where final assembly operations and tests are in progress. Final fit of shingles is being accomplished on the Cabin and equipment doors. Fiberglass Channels and Min-"K" are in work. Reworked equipment doors were received 9 October and fitting to the Spacecraft is being accomplished.

The Adapter for this unit was received in the White Room on 19 October and wire bundle build up started on 22 October.

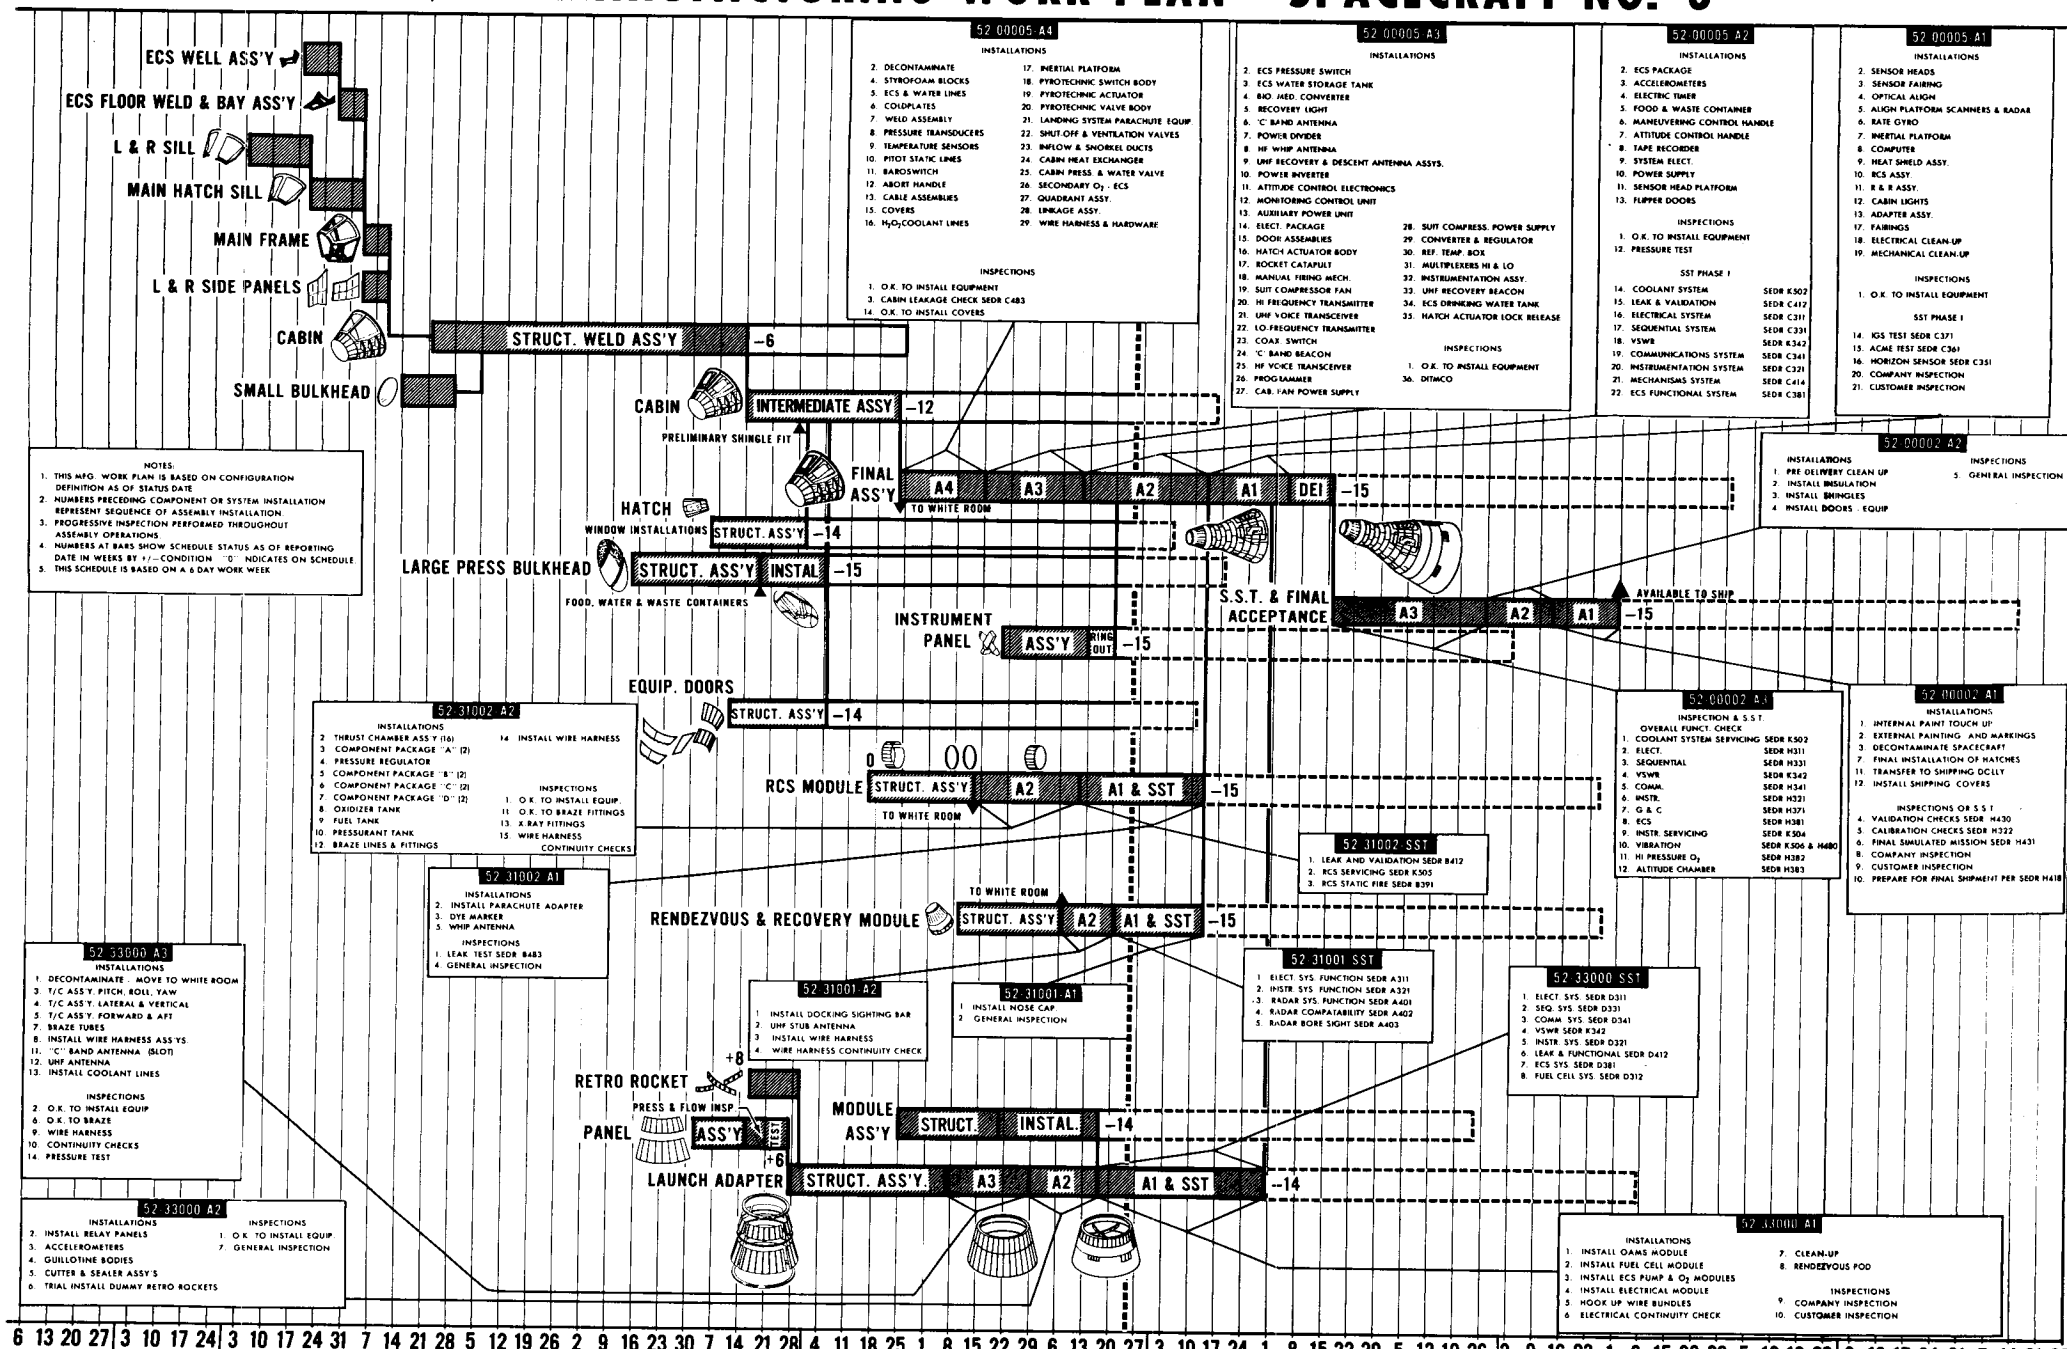
2. FORECAST

New Hatches are to be available for installation the first part of the month. These will be installed and rigged. The five pound Cabin Pressure Test will be worked after hatch rigging. Coldplates and plumbing will be installed this month. The remaining styrofoam in the Z160 bay will be installed. The Static System and pressure will also be accomplished. Wire bundle installation in the Cabin and equipment bays will begin the latter part of the month.

The wire bundles, temperature sensors, and thermocouples will be installed in the Adapter. The Adapter will be available for radiator test 21 November 1963.

Installation of fiberglass channels and Min-"K" will begin late November on the [illegible] Module. [illegible]

GEMINI MANUFACTURING WORK PLAN – SPACECRAFT NO. 3



NOTES:
1. THIS MFG. WORK PLAN IS BASED ON CONFIGURATION DEFINITION AS OF STATUS DATE
2. NUMBERS PRECEDING COMPONENT OR SYSTEM INSTALLATION REPRESENT SEQUENCE OF ASSEMBLY INSTALLATION
3. PROGRESSIVE INSPECTION PERFORMED THROUGHOUT ASSEMBLY OPERATIONS
4. NUMBERS AT BARS SHOW SCHEDULE STATUS AS OF REPORTING DATE IN WEEKS BT +/– CONDITION "0" INDICATES ON SCHEDULE
5. THIS SCHEDULE IS BASED ON A 6 DAY WORK WEEK

SUBJECT: GEMINI STATUS REPORT FOR THE PERIOD 28 SEPTEMBER THRU 25 OCTOBER 1963 - SPACECRAFT NUMBER THREE.

1. RECAPITULATION

The Cabin Assembly for this unit is located in the structure area and installed on the line dolly.

Trial fitting of shingles on the left and right hand equipment Bay Doors was in work on 25 October as well as MWR's on the side panel patch repair and left hand seat rail. Trial fit of the pedestal was completed on 18 October and the unit returned to the sub-assembly area for completion.

The Hatches were delivered to the Spacecraft and an attempt made to Pressure Test the unit. This was not successful due to amount of rigging of Hatches required and the Hatches were returned to the Hatch assembly area for completion.

All Doors for this unit are in final Cleanup status and Doors 32008 and 32009 have been delivered to the assembly area for final fit.

The R & F Section is in final cleanup status and Min-"K" is now being installed. Fiberglass channel installation was completed on 19 October. The Shingle attach holes were drilled complete on 14 October 1963.

Jig work is being accomplished on the PCS Section for this Spacecraft. It is estimated that the unit will be removed from the jig during the week of 28 October and final assembly cleanup be started. This is a replacement unit inasmuch as the original unit was transferred to the Rocketdyne test unit.

The Adapter for this Spacecraft is located in the structure area where final assembly clean up is in progress. Delivery of the complete unit to the X-ray area is forecast for 26 October.

2. FORECAST

The following major events are scheduled for accomplishment during the next 30 day period; delivery of Adapter to White Room, delivery of Cabin to White Room, delivery of R & R and FCS to White Room, start of White Room operations.

GEMINI MANUFACTURING WORK PLAN – SPACECRAFT NO. 4

SUBJECT: GEMINI STATUS REPORT FOR THE PERIOD 28 SEPTEMBER THRU 25 OCTOBER [illegible]

1. RECAPITULATION

The Cabin Assembly for this unit is located in the structure area where jig work is in progress. Hatch fitting setup is in work as well as landing gear fittings and coldplate structure. Pressure vessel welding clean up was completed on 11 October and the structure installed in the assembly fixture for jig station work.

Final Assembly cleanup is in progress on the R & B Section and Fiberglass (hanna) installation was completed on 24 October. Jig work was completed on 11 October.

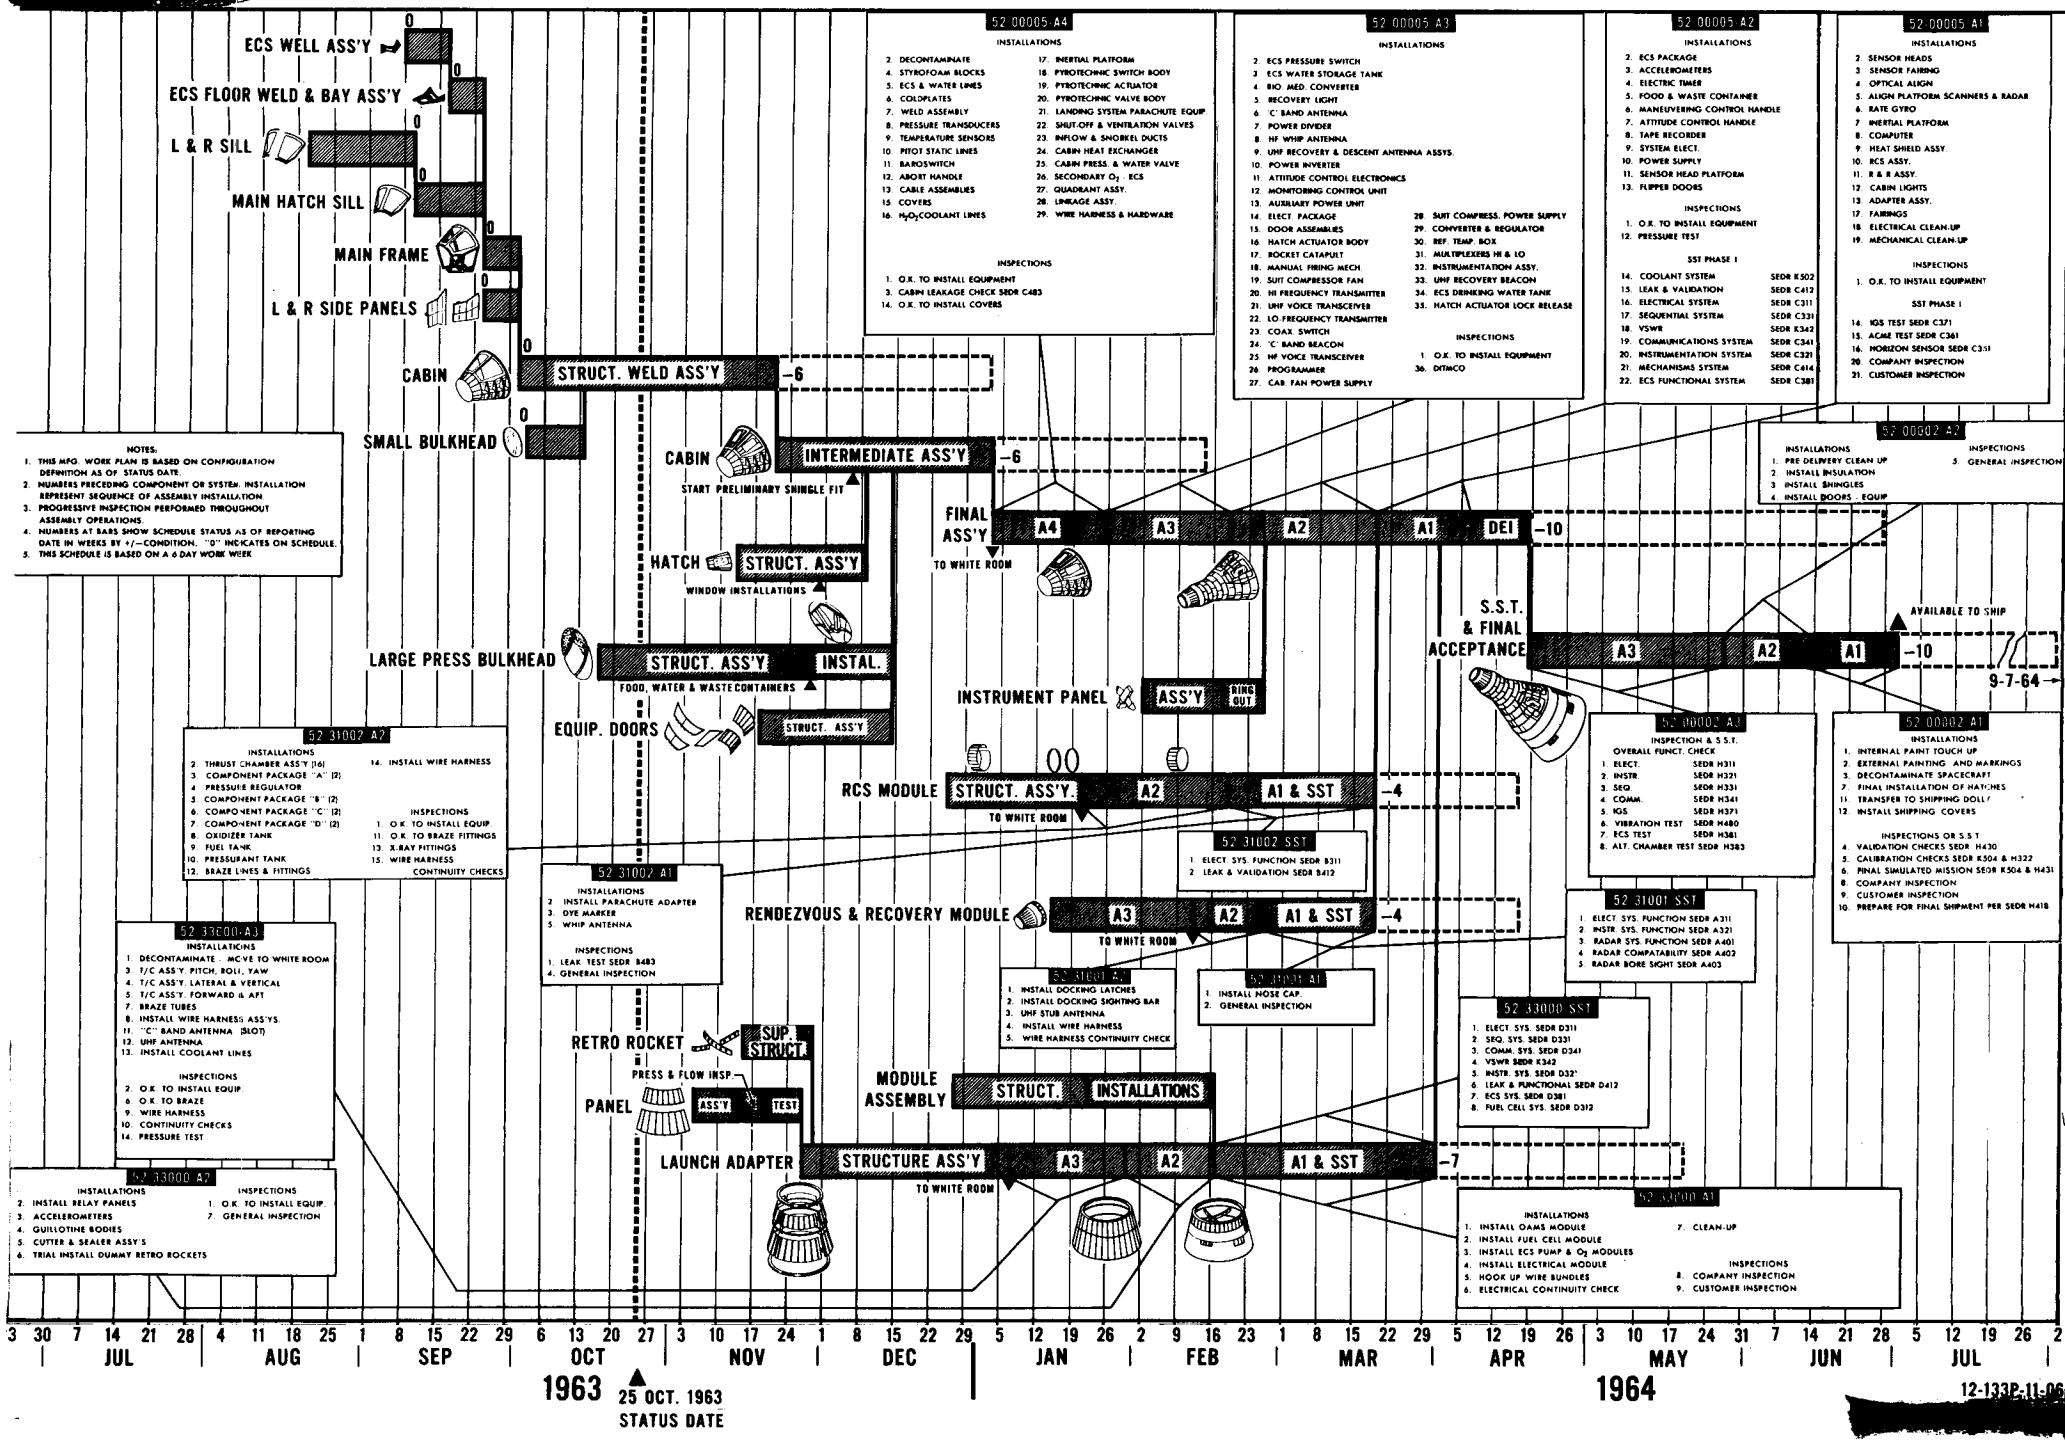
Jig work is in progress on the RCS Section for this Spacecraft. It is estimated that final assembly cleanup will start during the week of 28 October.

Sub-Assembly of the Quarter Panels is in work for the Adapter. The retro-rocket beam was removed from the jig on 24 October and Final Assembly operations started.

2. FORECAST

The following major events are scheduled for accomplishment during the next 30 day period: delivery of RCS to White Room, delivery of Adapter to White Room, completion of Hatches and Large Pressure Bulkhead and installation of Cabin in Line Dolly for assembly operations.

GEMINI MANUFACTURING WORK PLAN – SPACECRAFT NO. 5



NOTES:

1. THIS MFG. WORK PLAN IS BASED ON CONFIGURATION DEFINITION AS OF STATUS DATE.
2. NUMBERS PRECEDING COMPONENT OR SYSTEM. INSTALLATION REPRESENT SEQUENCE OF ASSEMBLY INSTALLATION.
3. PROGRESSIVE INSPECTION PERFORMED THROUGHOUT ASSEMBLY OPERATIONS.
4. NUMBERS AT BARS SHOW SCHEDULE STATUS AS OF REPORTING DATE IN WEEKS BY +/–CONDITION. "0" INDICATES ON SCHEDULE.
5. THIS SCHEDULE IS BASED ON A 6 DAY WORK WEEK

52 00005 A4

INSTALLATIONS

2. DECONTAMINATE
4. STYROFOAM BLOCKS
5. ECS & WATER LINES
6. COLDPLATES
7. WELD ASSEMBLY
8. PRESSURE TRANSDUCERS
9. TEMPERATURE SENSORS
10. PITOT STATIC LINES
11. BAROSWITCH
12. ABORT HANDLE
13. CABLE ASSEMBLIES
15. COVERS
16. H_2O_2 COOLANT LINES
17. INERTIAL PLATFORM
18. PYROTECHNIC SWITCH BODY
19. PYROTECHNIC ACTUATOR
20. PYROTECHNIC VALVE BODY
21. LANDING SYSTEM PARACHUTE EQUIP.
22. SHUT-OFF & VENTILATION VALVES
23. INFLOW & SNORKEL DUCTS
24. CABIN HEAT EXCHANGER
25. CABIN PRESS. & WATER VALVE
26. SECONDARY O_2 ECS
27. QUADRANT ASSY.
28. LINKAGE ASSY.
29. WIRE HARNESS & HARDWARE

INSPECTIONS

1. O.K. TO INSTALL EQUIPMENT
3. CABIN LEAKAGE CHECK SEDR C483
14. O.K. TO INSTALL COVERS

52 00005 A3

INSTALLATIONS

2. ECS PRESSURE SWITCH
3. ECS WATER STORAGE TANK
4. BIO. MED. CONVERTER
5. RECOVERY LIGHT
6. 'C' BAND ANTENNA
7. POWER DIVIDER
8. HF WHIP ANTENNA
9. UHF RECOVERY & DESCENT ANTENNA ASSYS.
10. POWER INVERTER
11. ATTITUDE CONTROL ELECTRONICS
12. MONITORING CONTROL UNIT
13. AUXILIARY POWER UNIT
14. ELECT. PACKAGE
15. DOOR ASSEMBLIES
16. HATCH ACTUATOR BODY
17. ROCKET CATAPULT
18. MANUAL FIRING MECH.
19. SUIT COMPRESSOR FAN
20. HI FREQUENCY TRANSMITTER
21. UHF VOICE TRANSCEIVER
22. LO FREQUENCY TRANSMITTER
23. COAX. SWITCH
24. 'C' BAND BEACON
25. HF VOICE TRANSCEIVER
26. PROGRAMMER
27. CAB. FAN POWER SUPPLY
28. SUIT COMPRESS. POWER SUPPLY
29. CONVERTER & REGULATOR
30. REF. TEMP. BOX
31. MULTIPLEXERS HI & LO
32. INSTRUMENTATION ASSY.
33. UHF RECOVERY BEACON
34. ECS DRINKING WATER TANK
35. HATCH ACTUATOR LOCK RELEASE

INSPECTIONS

1. O.K. TO INSTALL EQUIPMENT
36. DITMCO

SUBJECT: GEMINI STATUS REPORT FOR THE PERIOD 28 SEPTEMBER THRU [illegible] 1965 - SPACECRAFT FORMER [illegible]

1. RECAPITULATION

The Cabin Assembly for this unit is located in the structure area. Spotwelding of details to the Earth Skill was completed on 23 October and spotwelding of the upper and lower panel assemblies started 26 October. Spotwelding of the main frame has been completed.

2. FORECAST

The following major events are [illegible] for accomplishment during the next 30 day period: completion of [illegible] start of intermediate assembly on Cabin Structure, [illegible] of equipment doors, start of structure assembly of Adapter, [illegible] of Hatch sub-assemblies and completion of Large Pressure Bulkhead.

SUBJECT: GEMINI STATUS REPORT FOR THE PERIOD 28 SEPTEMBER 25 OCTOBER 1963 - STATIC NUMBER FIVE MODIFICATION

1. RECAPITULATION

Mod 301 Cat 5 is in work in the Structure Area. A preliminary Pressure Test was made on 24 October and leak repairs are now in work. Installation of dummy parts and styrofoam will start upon completion of leak repairs. Rework of the ECS Section is now being accomplished. Hatches have been installed and rigged sufficient to conduct the Pressure Test. The ECS System and wire bundles are being assembled in the White Horn.

2. FORECAST

Completion of modification of delivery of Spacecraft on 1 December 1963.

GEMINI AGE, MAC IN-HOUSE SUMMARY
Updated 25 October 1963

1. Number of units scheduled to [illegible] Assembly by [illegible]

2. Number of units which started Assembly by 25 October 1963 - [illegible]

3. Number of units scheduled to have completed Assembly by

   25 October 1963 - 917.

   140 of the 917 are fabricated by [illegible] 930 [illegible].

4. Number of units which [illegible] Assembly by

   25 October 1963 - 614.

   57 of the 614 were fabricated by [illegible] 930 [illegible].

5. Number of units which [illegible] by 25 October 1963 - 153.

   4 of the 153 units were fabricated [illegible]

6. Number of units [illegible] 25 October 1963 [illegible]

   162 of the [illegible] units [illegible]

   10 of the [illegible] units [illegible]

7. Number of [illegible]

8. Number of [illegible] 25 October 1963 [illegible]

   5 of the [illegible] units [illegible]

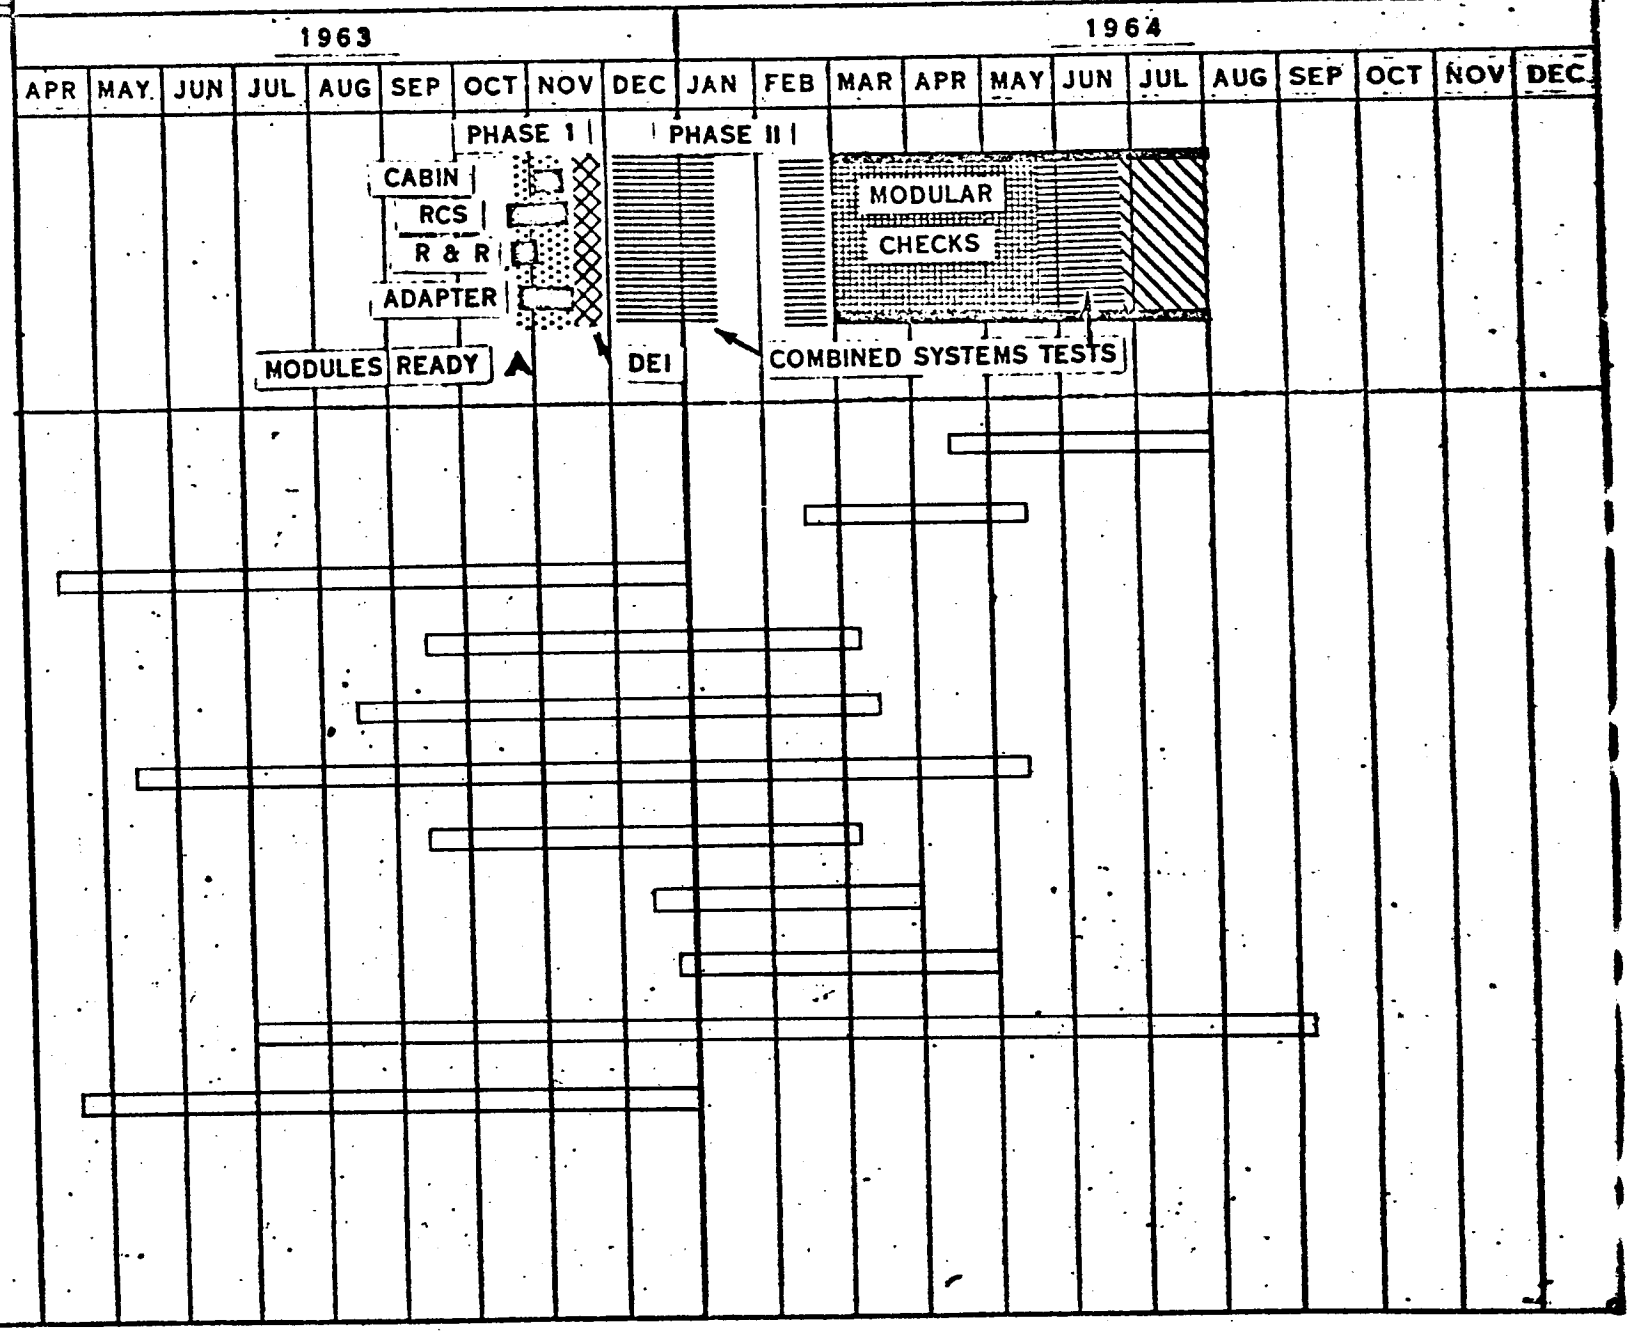
STATUS AS OF: 25 OCTOBER 1963

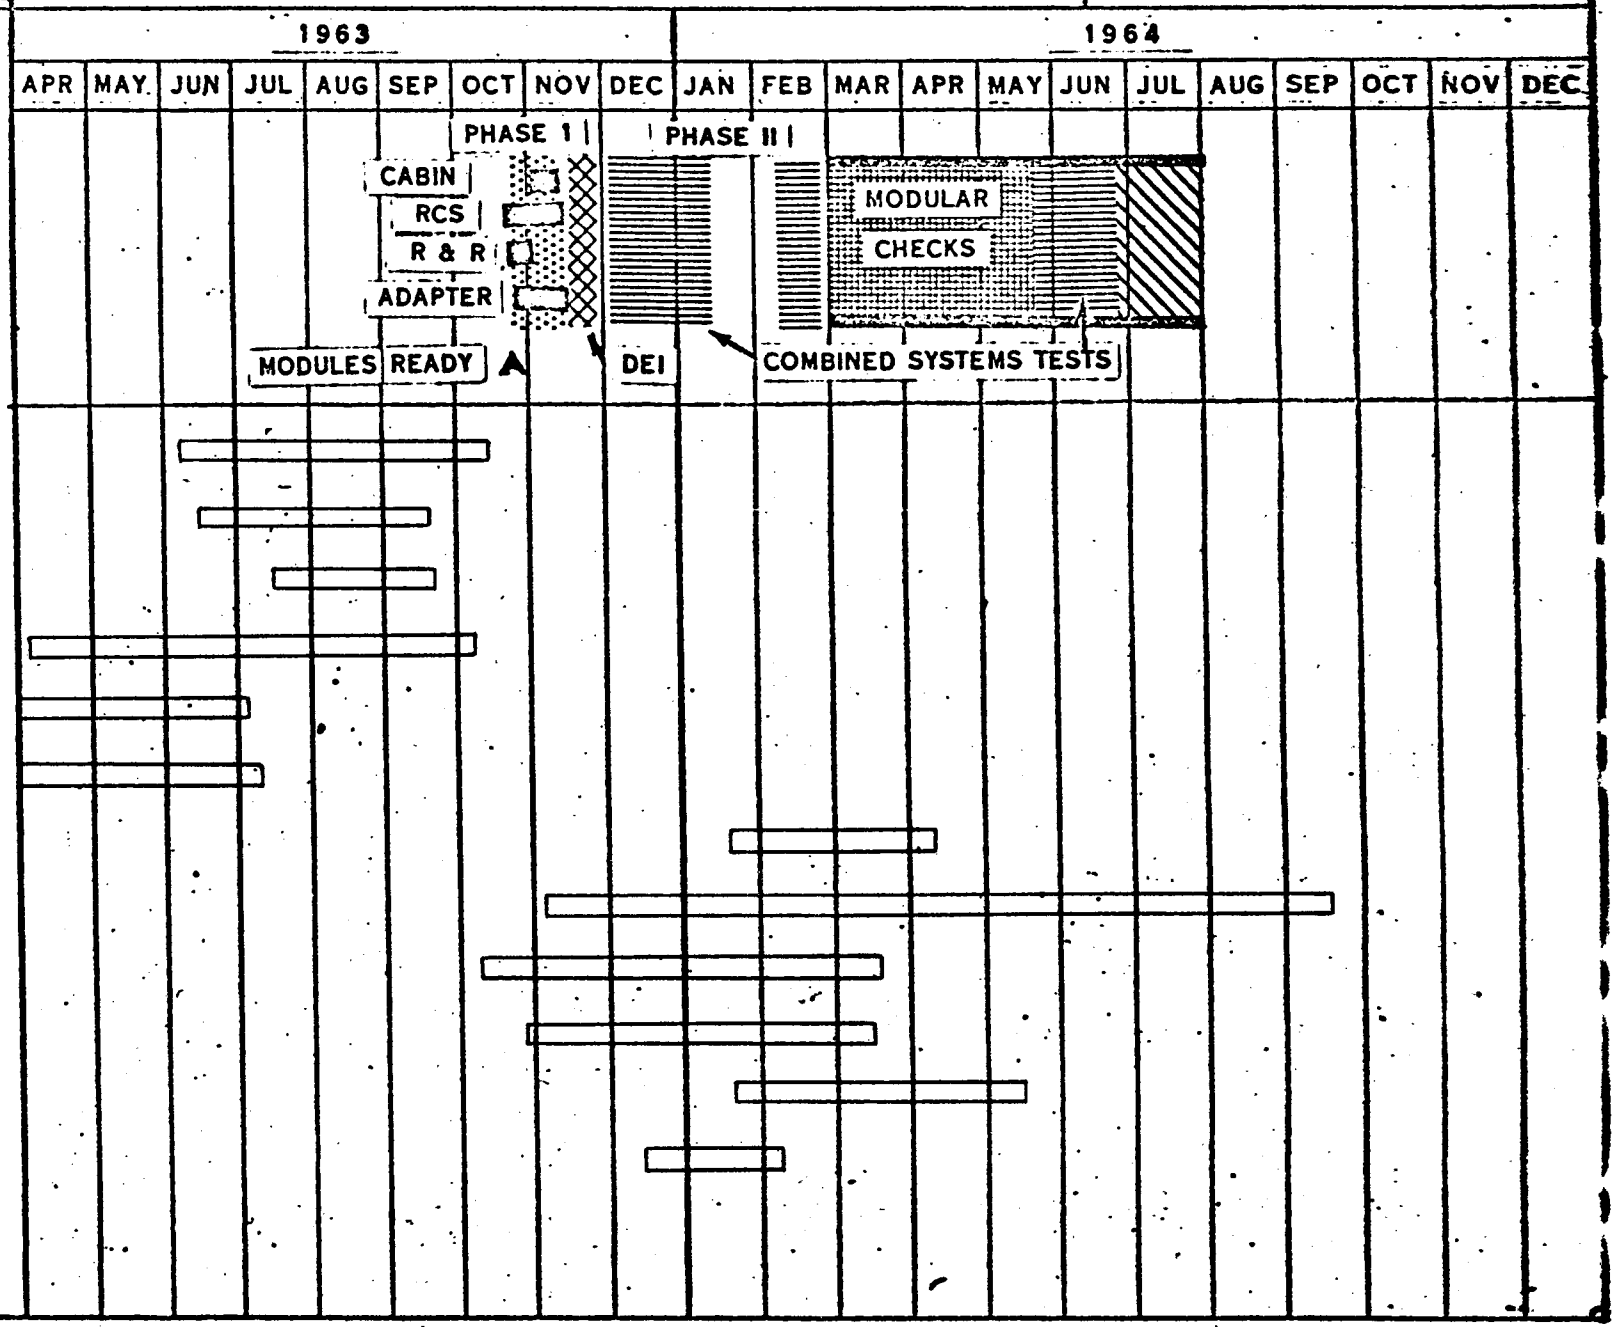


GEMINI SPACECRAFT
CONTRACT NO. NAS 9-170

SYSTEM QUALIFICATION

STATUS CHART

REPORT NO. 8580-1-33
LAST PROGRAM SCHEDULE CHANGE: 1 APRIL 1963
STATUS AS OF: 25 OCTOBER 1963



MONTHLY SUMMARY

SYSTEM: RCS and OAMS
SUBSYSTEM:
VENDOR: Rocketdyne
Canoga Park, California
DATE: 25 October 1963

ENGINEERING STATUS

Rocketdyne and MAC engineers reviewed the entire OAMS-RCS test program at MAC during the month of October. As yet, Rocketdyne has neither formally submitted any test procedures, nor submitted an updated test schedule. The schedules contained in this report are the best estimates MAC can make at this time.

Rocketdyne and MAC engineers met 17 October 1963 at MAC and discussed bladder shedding and cycling problems. An expanded bladder test program will be proposed, the data from which will be used to evaluate overall tank design adequacy. No progress on this subject has been reported by Rocketdyne to date.

To date nine completed and accepted latest configuration 25# RCS injectors have been delivered to department 505 at Rocketdyne for final assembly. Five additional pieces are complete through calibration and hot fire, and are in final machining. In addition, two more pieces have passed calibration and are ready for hot fire. Investigation by Rocketdyne has revealed that the high rejection rate of the injectors at calibration is caused primarily by weld drop-through, and slight radial rotation of the plug manifold. Remedial action has been taken on the subsequent batch of twelve pieces and these should reach calibration by 29 October 1963. Will advise on results. Although Rocketdyne is making no forecast on TCA shipment as yet, MAC feels that with a good effort by Rocketdyne the 25# RCS TCA's for S/C-2 should ship by the end of November 1963.

Rocketdyne has been given go-ahead on the use of hog-outs or forgings in "C" and "D" packages to correct leakage.

PROCUREMENT

25# OAMS shells have not been delivered to Rocketdyne by their suppliers. This is becoming a critical area for the OAMS TCA production.

Although Rocketdyne reports sufficient detail parts on hand to establish and sustain a short term production flow of 25# RCS TCA's, the exact status of TCA final assembly is unknown due to Rocketdyne's failure to make slight changes in status charts as verbally agreed to with MAC system analysts.

While Rocketdyne is experiencing some difficulties in assembling the 25# and 85# OAMS TCA prop. valves, it appears that purchased detail parts are being received in sufficient quantities. The Los Angeles Division of North American is assembling the 25# RCS and 100# OAMS prop. valves and is progressing satisfactorily.

ASSEMBLY AND DELIVERY STATUS

C.T.U.

A. RCS - All items have been shipped to MAC.

B. OAMS- All items with the following exceptions have been shipped:

1. One Package "B": Package was completed and shipped to MAC on 10 September 1963. However, it was found to have a ruptured burst diaphram and has been returned to Rocketdyne for rework. Estimate will-ship to MAC 31 October 1963.

2. One Oxidizer Tank: Unit accepted by MAC QC and estimate will-ship 25 October 1963.

3. Eight-25# TCA: 1 Unit shipped 1 October 1963. Seven units were either unacceptable or scrapped and require replacement. Requirements for and configuration of these units are being reviewed at the present time. No estimate on availability can be made until review is completed.

4. Two-85# TCA: One unit shipped 25 September 1963. Second unit same as 25# TCA above.

5. Six-100# TCA: Four units have been received at MAC. Two remaining units same as 25# TCA above.

S/C-2

A. RCS

1. Three-Pkg. "A": Three units have been shipped

2. Three-Pkg. "B": One unit shipped 22 October 1963. Two units delayed for replacement of check valves. Estimate will-ship 4 November 1963.

3. Two-Pkg. "C": One unit accepted on MRR and estimate will-ship 25 October 1963. Second unit delayed for valve replacement and estimate will-ship 11 November 1963.

4. Two-Pkg."D": Both units shipped.

5. Two-Pressurant Tanks: Both units shipped.

6. Two-Fuel Tanks: One unit shipped 24 October 1963. Second unit accepted by MAC QC and estimate will-ship 25 October 1963.

7. Two-Oxidizer Tanks: One unit shipped 24 October 1963. Second unit accepted by MAC QC and estimate will-ship 25 October 1963.

8. Sixteen-25# TCA's: TCA's are in assembly. MAC estimates that the TCA's should be shipped by 29 November 1963.

9. Ten-Cartridges: Parts will be available to Rocketdyne 15 November 1963 and estimate will-ship 22 November 1963.

10. Three-Pressure Regulators: Two units shipped 11 September 1963. The third unit has been delayed because of internal leakage and weld drop and requires rework. Estimate will-ship 8 November 1963.

11. One-P.T. Indicator - Unit shipped on 16 October 1963.

B. OAMS

1. One-Pkg. "C": Unit has been accepted on NRR and estimate will-ship 25 October 1963.

2. One-Pkg. "D": Unit shipped on 22 October 1963.

3. One-Pkg. "E": Package delayed because of rework required for hole and tube location discrepancy. Estimate will-ship 8 November 1963.

4. One-Pressurant Tank: Delivery of this unit delayed because of leakage in tank weld. Replacement tank required is expected at Rocketdyne 29 October 1963 and estimate will-ship 11 November 1963.

5. One-Oxidizer Tank: Unit shipped 22 October 1963.

6. One-Fuel Tank: Unit is in acceptance test and estimate will-ship 28 October 1963.

7. Eight-25# TCA: Production hold order on all OAMS TCA's is still in effect at Rocketdyne pending final design. Rocketdyne has not made any forecast when TCA's will be shipped. NAC estimates will-ship by 17 January 1964.

8. Two-85# TCA, Six-100# TCA: Same as 25# TCA above.

9. Two-Motor Operated S.O. Valves: Both units shipped 10 September 1963.

10. One-Cartridge: Part will be available to Rocketdyne 15 November 1963 and estimate will-ship 22 November 1963.

TEST STATUS

The following hot fire tests were conducted on flight weight thrust chambers from last report through 25 October 1963.

Thrust & Type	Date	Injector		Wrap		Manifold		%	O/F	Test Type		Burn Time (Sec)	Mt'l	
		006	Con	Hi-Temp	Low	Old	New	C		MDC	SS		H	R

DAT AND RAT:

Rocketdyne has not yet formerly submitted any test procedures or an updated test schedule. Test status charts submitted with this report were made to the best information available. See Engineering Status.

DEVELOPMENT TESTING:

It is estimated by MAC that Rocketdyne is 45% complete with their overall development test program.

AGE

1. The following AGE items from Rocketdyne are outstanding:

System: Rocket System
Subsystem: Retro [illegible]
Vendor: Thiokol
Date: 25 Oct. 1963

MONTHLY SUMMARY

ENGINEERING STATUS

1. The design used in "pop gun" phase II has been approved for resumption of motor development testing.

2. Wind tunnel "pop gun jr." test results were discussed 23 & 24 Oct. 1963 at a meeting between MAC and NASA personnel. It was decided that no further pop gun tests would be required.

PROCUREMENT

1. Thiokol is working with a sub-vendor to obtain the die forgings required by NCI #84738.

A SEMBLY & DELIVERY STATUS

1. The MAC O.K. to resume testing contains a constraining restriction for Thiokol. Only 50% of the motor development testing can use the readily available ring forgings. The remaining tests, and all production units, must be made from die forgings.

2. It is anticipated that availability of rockets made from die forging will still be available as previously scheduled. However, it will be necessary to produce and deliver, prior to completion of the qual tests.

TEST STATUS

1. The second phase of "pop gun" testing, abort firing, was performed at AEDC on 4 Oct. 1963. Since all four rockets fired successfully, the third phase has been deleted.

2. MAC notified Thiokol via NCI #84725 and NCI #84738 to proceed with motor development tests. Prior to commencement, Thiokol must submit their test program to MAC.

3. Motor Development
Thiokol estimates that sufficient hardware will be available, and testing can be resumed 5 Nov. The tentative completion date is 13 Jan. (Ref. Line #7)

4. Initiator Qual
Testing remains in progress and is scheduled to be complete by 6 Nov. (Ref. Line 25). MAC furnished twenty additional wire bundles per Thiokol's request. Pyrogen qual will be conducted upon completion of this test, and accomplished by 7 Jan. 1964.

5. Motor Qual
Testing will begin after motor development completion. The tentative dates are 21 January start and 20 April completion. (Ref Line 9).

MONTHLY SUMMARY

System: Guidance & Control
Subsystem: I.G.S.
Vendor: I.B.M.
Date: 25 Oct. 1963

ENGINEERING STATUS

1. A logic design change was made in the computer/radar interface on computer #7 and will be incorporated in the latter units. The effect on schedule is shown in the Assembly & Delivery section of this report.

2. A second stage engine cut off relay was found to be generating noise. A temporary capacitance fix was installed on computer #7 and a permanent fix is being investigated. This fix will be incorporated on latter units.

3. A meeting is planned for 28 Oct. between IBM and MAC to discuss the technical status of the computers.

PROCUREMENT

1. IBM presently has a complete IMU system for use in IGS SC 2 SST. The Inertial Platform and System Electronics were shipped to IBM from MAC on the 19 Oct. The IGS Power Supply for this system was received by IBM from Honeywell on 24 Oct.

ASSEMBLY & DELIVERY

IGS #5 Exploratory Qual
Computer #5 started vibration test 13 Sept., however, malfunctions occurred during vibration of this unit. A failure was encountered upon vibration at 50% + 75% power. Monitoring lines were added, a circuit module was replaced and the computer was reassembled. On 4 Oct, the computer failed to function when IBM attempted to load diagnostic program. It was found that three pins were bent on one of the edge connectors. This was corrected and the diagnostic program was loaded and verified. However, upon vibration at .1 power in the vertical plane, the computer again malfunctioned. The computer was disassembled and it was discovered that the 25 volt bus bar terminal on panel A4 was loose. This was corrected. Upon vibration, the computer malfunctioned at 10% power showing input output errors. Also the TLA 2 output was going to zero under vibration. On 14 Oct., the computer completed 30 seconds of vertical vibration at 100% power without malfunction with the TLA 2 latch ourput and DACD grounded. However, a failure was encountered in major horizontal vibration. An instrumentation wire was repaired and major and minor vibration at 100% power was performed with the TLA 2 on panel 2 and the DACD grounded. Presently, IBM is investigating the cause of intermittents experienced when the TLA 2 is not grounded.

IGS #4 SC 2 SST
Estimated will ship 17 Nov. This unit slipped two weeks since the last report. This slippage is the result of the late delivery of the IMU and rework required on the computer. Rework was performed on panel #1 of the computer and trimpot adjustments were required to get the proper schmoo curve. It was also discovered that a 960 MFD capacitor was wired

across the 27.2 Volt input in place of a 430 MFD capacitor. This was corrected. The computer started formal acceptance testing 23 Oct.

IGS #6 Formal Qual
Estimated start of Formal Qual 24 Nov. The reason for slippage in this unit is rework performed on the MIB Boards.

IGS #7 SC 2 Fly
Estimated will ship 21 Dec. This unit slipped two weeks since the last report. The reason for this slippage is the addition of a capacitor across the second stage engine cut off relay, rework on MIB Boards, insertion of epoxy into all adapters to prevent intermittence, and a design change to the computer/radar interface.

IGS #8 SC 3
Estimated will ship 1 Jan. 1964. Principal reasons for slippage of this unit is incorporation of the logic design change in the computer/radar interface.

TEST STATUS

Qual 1 IGS #4
The computer started Exploratory Qual 13 Sept. Due to malfunctions which occurred during vibration testing Qual Testing will end the first week of February.

Qual 2 IGS #6
Expected start date of Formal Qual is 24 Nov. 1963.

The start of OSR is constrained by the completion of Formal Qual Test. The expected start of OSR is 7 March 1964.

ACE

1. No ACE has been shipped since the last report.

2. Test console computer system #2, expected to be shipped 4 Oct., was delayed due to problems involved in the 12V Power Supply Circuit. It is expected to be shipped 30 Oct. 1963.

System: Guidance & Control
Subsystem: Inertial Measuring Unit
Vendor: Minneapolis-Honeywell St. Petersburg
Date: 25 Oct. 1963

MONTHLY SUMMARY

ENGINEERING STATUS

1. Tests were performed at MAC using SC 2 SST IMU and a breadboard high frequency pulse width regulator. Enough data was received from these tests to prove out the basic design of a new Power Supply.

2. Honeywell is having high contact bearings placed in the rotary components and is applying stiffeners with epoxy to these components. This is believed to be the solution to the vibration problem that was encountered. If this approach does not work, the gimbles may be weakened to reduce the energy input on the gyros or shock mounts may be placed on the fourth gimble.

PROCUREMENT

1. A strike has occurred at Clifton Precision Products, supplier of rotary components. Presently there is no affect on the IMU program as Honeywell has sufficient rotary components for platforms through Production Article 8.

ASSEMBLY & DELIVERY

Production Article 1 SC 2 SST
This system was shipped to MAC 8 Oct. (see Engineering section of this report). Upon running tests with this system, a malfunction occurred in the IGS Power Supply. It alone was returned to Honeywell and the system electronics and inertial platform was shipped to IBM from MAC on 19 Oct. An IGS Power Supply was shipped to IBM from Honeywell 24 Oct.

Production Article 2 Exploratory Qual
This system will start Qual test 7 Nov. The slippage of this system is a result of a failure encountered in the static inverter and delays due to malfunctions in E.S. Level Test Station.

Production Article 3 SC 2 Fly
Estimated will ship 8 Nov. The slippage of this unit is a result of incorporation of a fix in the Power Supply to solve an oscillation problem and malfunctions in E.S. Level Test Station.

The inertial platform of this system is not a flyable platform due to the fact that vibration fixes are not incorporated in this unit. Also the IGS Power Supply does not have high frequency pulse regulators in it. A decision regarding retrofitting of these items or replacement of the entire system is expected shortly.

Production Article 4 SC 3 Fly
Estimated will ship 22 Nov. A similar situation exists with this system in that it also does not have a flyable platform and a new designed Power Supply.

A decision regarding retrofitting or replacement of the entire system is expected shortly.

AGE

1. No items were shipped since the last report. All shipments of AGE were held pending receipt of revised SCD's. The revision is specifically directed at nameplate and identification of MAC-Minneapolis-Honeywell AGE. These units are expected to be shipped 15 Nov. 1963.

TEST STATUS

Qual 1 PA 2
This unit is expected to start Exploratory Qual 4 Nov. 1963.

Qual 2 PA 5
Formal Qual test is expected to start 7 Dec. 1963.

OSR
This system, consisting of a Power Supply and System Electronics is expected to start OSR test 30 Oct. 1963.

MONTHLY SUMMARY

[illegible]
[illegible]
Vendor: [illegible]
Date: 25 Oct. 1963

ENGINEERING STATUS

1. All power sypply capacitors will be changed to a value of [illegible] UF with 90 volts DC working voltage at 35 degrees C. The reason for this change is to eliminate an overstress application on [illegible] supply capacitors. This change will not affect delivery of the units.

2. The minimum pulse generator was redesigned to eliminate the [illegible] capacitor CI and pulse transformer TI. The minimum pulse generator formerly designed was susceptable to inadvertent [illegible] as a result of transients on the input which cause ringing [illegible] secondary of the input transformer. This change will not [illegible] delivery of the units.

PROCUREMENT

1. Production of rate gyros at Minneapolis-Honeywell's Boston plant is on schedule and no problem is anticipated in this area.

ASSEMBLY & DELIVERY

1. The delivery schedule has slipped because of design changes and test equipment modification. The overall program delivery schedule has been stretched out from 9-30-64 to 6-15-65 by Minneapolis-Honeywell. These new delivery dates are given in the Vendor Delivery Status Report.

2. Only the power inverter has been shipped for S/C 3. The other S/C 3 units have slipped approximately two (2) weeks from dates given in the last monthly report.

TEST STATUS

Qual #1
The start of low temperature tests (Line 15) was delayed to 12 Oct because two modulator modules had to be replaced. During low temperature testing, two rings and two load wires were noted to be [illegible]. These workmanship errors were corrected and testing was resumed. The test is expected to be completed prior to 12 Nov.

Qual #2
The performance test (Line 26) was completed on [illegible] Oct. [illegible] and electronic interference tests (Line 27) have started and [illegible] pre radio frequency interference tests. The pitch primary [illegible] scanner was inoperative on the ACE unit. [illegible] was traced [illegible] transistor and the module will be replaced [illegible] to 26 Oct. [illegible] cause of the failure has not been [illegible].

OSR
Start of [illegible] because of the [illegible]

AGE

1. The only P.I.A. tester available at Minneapolis-Honeywell for post-delivery acceptance testing is down for retrofitting. It is not expected to be available for use before 28 Oct. This is causing a large backlog of equipment to build up which requires over 200 hours of PIA test time to recover.

2. No AGE equipment was shipped since the last report but all AGE equipment is expected to be shipped before the end of this year.

[illegible] SUMMARY

[illegible]
Subsystem: [illegible]
Vendor: ATL
Date: 25 Oct. 1963

ENGINEERING STATUS

1. The positor assembly fix is being evaluated. This positor assembly fix will be incorporated into the production units by 18 Dec. Retrofitting of previous units will be made in between the production of succeeding units after 18 Dec.

PROCUREMENT

1. No procurement problems exist at this time

ASSEMBLY & DELIVERY STATUS

1. The unit for SC 2, serial number 101, was shipped on 15 Oct. and is expected to be available for usage on 27 Oct.

2. To meet the schedule now given by ATL quality problems will have to be resolved. Some sensor head castings show signs of leaching and non-compliance with Quality Control Standards is evident. On the positive side, equipment used for positor alignment was moved into a semi-clean room atmosphere. Also base plate castings were found to be misdrilled, but six base castings were air shipped as a back up in event the misdrilled castings are rejected. In addition, ATL has hired an additional quality control engineer.

3. The delivery of later units have slipped for the following reasons

   a. Two shift operation on mechanical assembly of the sensor head was not possible until the night shift man was first trained by the day shift man. This factor is also slowing up the assembly of the electronics box.

   b. Fit of the filters in the telescopes was too tight and had to be modified.

   c. Rework on the first unit necessitated pulling the only trained personnel off of work on the second and third units.

   d. Clearance in the positor mounting holes was not enough to allow bringing it into alignment. The reason for this is being investigated - at a considerable cost in time.

   e. Two holes for screws holding a module on the base plate are out of position by .050". The holes and corresponding counterbores can be elongated [illegible] but will require [illegible] action.

   f. Experience on the first unit [illegible] that the [illegible] bearing had to be [illegible]

   g. The [illegible] modified for [illegible]

[illegible]

MAC to eliminate the number of retrofits to the sensor heads. This action will reduce the number of retrofits from eight (8) to five (5).

TEST STATUS

Qual #1
Qual Test #1 will start on 30 Oct. which is approximately a two (2) week slip. This slippage is due to the reasons stated in paragraph three (3) under Assembly & Delivery Status. Also the Qual test has been lengthened about nine (9) weeks because of the positor assembly fix.

Qual Life
Qual Life will start on 11 Nov., which is approximately a two (2) week slip. The reason for slippage is the same as about in Qual #1. This test also has been lengthened because of the positor assembly fix

AGE

1. No AGE units were shipped since the last report, but all AGE equipment is expected to be shipped prior to the end of the year.

VENDOR: General Electric
West Lynn, Mass.
DATE: 25 October 1963

MONTHLY SUMMARY

ENGINEERING STATUS

MAC Engineering has given approval to use non-latching valves on Sections 3B and 501. Sections 502 and up will be required to have latching type valves.

Development test equipment was used in lieu of AGE to check Section 501. AGE is in process of being updated to conform to Fuel Cell configuration.

PROCUREMENT

Valcor was to ship latching type valves for Section 502 on 29 October, however, military intermediate type inspection requirements could hold-up shipment. Tear-down of presently constructed valves for dimensional inspection would necessitate a breaking of welds and valves being scrapped. Probable two month slip in delivery if currently built-up valves are scrapped.

Raycem is to provide 1230 type harness wiring in lieu of 1220 wiring. 1230 wiring will meet MIL specifications flammability test where as type 1220 will not.

ASSEMBLY AND DELIVERY STATUS

Section 3B has completed low temperature tests and Section 501 has completed development tests. Both sections are scheduled to be shipped on 28 October 1963 for Power Systems Tests.

Stacks 107 and 108 have completed acceptance test and are awaiting an additional stack for Section 502 build-up.

Stacks 113, 114, 115 and 116 build-ups have been completed and are scheduled for acceptance tests on 26, 27 and 28 October.

Faulty electrical switch shorted out and destroyed Stack 112.

TEST STATUS

Stack 49B now undergoing development tests and has completed 580 hours of testing (4.66 volts at 4.0 amperes).

Stacks 50, 52, 55, 57 and 59 have been completed and are awaiting test facilities.

Stacks 109, 110, 111 currently undergoing acceptance tests.

AGE

The three E230001-1 Test Set Fuel Cell AGE benches, at G. E., are undergoing modifications to increase purge rate and coolant pressure flow.

MONTHLY SUMMARY

ENGINEERING STATUS

The completion of the (-71, -73) long and short mission O2 subsystems have been delayed due to contamination of the fibreglass pads and Mylar insulation of the (-13, -15) containers. Problem resolved by using a higher processing temperature during the evacuation process. Rejection of inner spheres has also caused delay. Defective sensor line seals have also caused delay in the (-15) container. Preprocessing of seals prior to installation should correct this situation.

The completion of the (-77, -81) long and short mission H2 subsystems have been delayed due to defective sensor line seals and leakage through the titanium to stainless steel braze joint in the heater and sensor boss after heat treat in the (-11, -9) containers. The problem has been eliminated by redesign of the boss so that the joint is made after heat treat.

Part numbers were changed as follows: -141 to -71 and -143 to -73 on S/C 2 and up.

The completion of the (-21, -23) hydrogen and oxygen relief valves have been delayed due to redesign of the valve seat. The original valve seat configuration failed to meet leakage requirements during acceptance testing. The redesign consisted of changing the valve seat material and adjusting tolerances to reduce friction.

ASSEMBLY AND DELIVERY STATUS

-57 Valve, Vent, Quick Discon. H2 (FCC) second unit shipped 10 October 1963; (CTU) first unit shipped 10 October 1963 and second unit shipped 23 October 1963.
-59 Valve, Vent, Quick Discon. O2 (FCC) second unit shipped 15 October 1963; (CTU) first unit shipped 15 October 1963, second unit to ship 26 October 1963.

Following are pacing components that have slipped:

-81 H2 L/M (FCC) from 28 November 1963,(TWX #15) to 2 December 1963.
-77 H2 S/M (CTU) from 27 November 1963 (TWX #15) to 2 December 1963.
-77 H2 S/M (S/C 2) from 5 December 1963 (TWX #14) to 20 December 1963.
-71 O2 L/M (S/C 3A) from 27 October 1963 (monthly summary of 27 September 1963) to 30 December 1963.

-135 Valve, Solenoid S/O H.P. (FCC and S/C 2) will not be shipped until 5 November 1963. Delay is due to rework of the electrical wiring to reverse the polarity of the valve.
-95, -97 Oxygen and Hydrogen Check Valves (CTU) are in assembly and test and are to ship 1 November 1963; and (S/C 2) 8 November 1963.
-17, -19 Hydrogen and Oxygen Heat Exchangers (S/C 2, S/C 3A, and S/C 3) are to ship 8 November 1963.
-21 Hydrogen Relief Valve (FCC, CTU and S/C 2) is to ship 8 November 1963; (S/C 3A) is to ship 22 November 1963; and (S/C 3) is to ship 29 November 1963.
-23 Oxygen Relief Valve (FCC, CTU, S/C 2, S/C 3A and S/C 3) is to ship 8 November 1963.

TEST STATUS

-121 Indicator, Qty and Press. H2 (FCC) has been acceptance tested, and delivery will be made with the cryogenic container.

AGE

One E230027-1 RSS PIA Bench was not shipped as reported. Unit to ship 1 November 1963. Delay caused by rust between the table top and instrument panel joint.

Two E230054-1 Dolly RSS O2 and two E230055-1 Dolly RSS H2 were shipped. One E230055-1 Dolly RSS H2 being retained by AiResearch for in house testing.

MONTHLY SUMMARY

SYSTEM: L.C.S.
SUBSYSTEM:
VENDOR: AiResearch
Canoga Park, California
DATE: 25 October 1963

ENGINEERING STATUS

N.C.I. requirements this past month have caused major slippages in will ship date on several key subsystems and components. Drawing changes, hardware revisions and new test information are affecting:

1. MAC-457 Power Supply Pumps S/C 2 up.
2. MAC-253 Suit Subsystem S/C 2 and up.
3. MAC-265 Pump Unit and MAC-241 Reservoir S/C 2 up.
4. MAC-407 Launch Coolant HT EXCH. S/C 3A up.
5. MAC-443 and -444 Egress O2 Kits S/C 3A and up.

MAC Engineering has been expediting ATP's both here and at AiResearch with 5 or 6 in process now. AiResearch has promised to clean up open ATP's by 4 November then process tentative approval test instructions. Heat Transfer Data and MCS 198 Coolant readings are presently involved. Visits of AiResearch personnel to MAC to coordinate changes and resolve problems have taken place this month. W/A on results.

PROCUREMENT

Updating of revisions per N.C.I.'s and ATP's being processed. Further changes required in spares program being reviewed and updated with concerned personnel.

ASSEMBLY AND DELIVERY STATUS

Deliveries to MAC during October were:

MAC-27 Butterfly Valves for B/P 2 - CTU - S/C 2.
MAC-55 Power Supply Pump for S/C 2.
MAC-275 Secondary O2 S/C 2 and 3A.
MAC-277 Secondary O2 S/C 2.
MAC-151 Regen. HT Exch. S/C 2 and 3A.*

Manufacturing problems are delaying MAC-127 and -429 cryogenic containers for both 2 day and 14 day missions. Valve tolerances and leakage problems are a continuing factor in will ship dates, that are being gradually solved but causing slippage. Sub-vendors deliveries and test failures accentuate this situation with better controls and expediting needed.

Both B/P 2 and CTU still lack MAC-145 Heat Exchanger and power supply pumps. Both are in AiResearch's manufacturing responsibility area to bring up to specifications. Test failures and rework are slipping delivery to antestimate of 8 November. For S/C 2 these units are expected to ship about 22 November.

Revision of S/C 3A and up schedule has occured in order to concentrate on assembly and shipping of B/P 2, CTU and S/C 2 subsystems. The Primary O2 (-429) subsystem delivery date slipped a month due to cryogenic container failures of ceramic seals and contamination of fibreglass pads. Unit for S/C 2 started 150 hour AGE Test at Boron 21 October. Redesign of MAC-265 Pump Units for S/C 2 and up and Egress O2 Kits for S/C 3A and up have slipped will ship date to end of November for S/C 2 Pump Unit and middle January for S/C 3A Egress Unit.

MAC 192 Coolant requirements has resulted in rework of some valves th[illegible] pacing components. Several power supply pumps have failed High-Pressure Bench Test. MAC-233 Heat Exchangers have passed performance Map Test but heat transfer data from Acoustica needed before they can be released.

*Late information shows item shipped 25 October 1963.

TEST STATUS

Development -	MAC-147 Temp. Control Valve failed test because of calibration. New housings and valve sleeve replacements being inspected prior to retest for tolerances and finish. Total development testing is approximately 85 to 90 percent complete. Trying to get a list of untested parts from AiResearch with time estimate to complete testing.
Qual - Environmental	MAC-5 and -93 valves completed test. MAC-15, -89 and -95 valves and MAC -67 Power Supply failed humidity test and must be rerun.
Qual - Dynamic	MAC-5, -85, -81, -89, -93, -95, -245 valves have completed test.
Temp. Alt. & OSR	No Qual or Reliability testing has been performed on units to date. Expect test to start early in December.
	Scarcity of units available for testing due to manufacturing difficulties accounts for limited testing to date on Qual. items. Investigating methods to improve reporting of test status by AiResearch.

AGE

All AGE equipment for manufacturing is available for use. All PIA AGE equipment has been delivered. Interim AGE for the Hi-Pressure Bench will be available early in November. This equipment will meet approximately 65% of the firm AGE requirements. Facilities has been the main delay for availability of PIA AGE.

System: Guidance & Control
Subsystem: Attitude Display
Vendor: Lear Siegler
Date: 25 Oct. 1963

MONTHLY SUMMARY

ENGINEERING STATUS

1. Basically, there are no engineering problems for the indicators and/or controllers for SC 2 and 3A. However, there is an engineering change, which is pending, modifying the needle sensitivity, in the GT-3, on the indicators for SC 3 through 12. This change is expected to be approved on or before 1 Nov. 1963.

2. No engineering change anticipated for the controllers for SC 3.

ASSEMBLY & DELIVERY STATUS

1. SC #2 - Controllers
One controller was shipped 17 Oct. 1963. The other controller will be shipped 28 Oct. 1963. Slippage in W/S dates from reported W/S dates, dated 27 Sept. 1963, was due to minor rework. The controller, for S/C #2 , shipped 17 Oct., may be utilized on S/C #3A and the controller for S/C 3A which will be shipped 28 Oct. 1963, will be utilized in its place. Reason being, that the controller for S/C #2 has had more extensive rework than the controller for S/C 3A.

Indicators
One of the indicators has been received. The other indicator has been rejected twice during this month:
2 Oct. 1963 - rejected for excessive leakage
26 Oct. 1963 - rejected for non-smooth needle operation during vibration test.

Rejection problem is under investigation; the new W/S date is now 28 Oct. 1963.

2. S/C 3A - Controllers
These controllers are in the process of being reworked due to the replacing of a leaky oil module. One of these controllers will ship 28 Oct. 1963 and the other will ship 1 Nov. 1963.

Indicators
Both indicators have slipped the last reported W/S date by approximately three weeks. One of the indicators had to be completely reworked due to excessive vibration. The other indicators face plate had out of tolerance dimensions and also slipped its sphere halves. Due to this slippage, the unit had to be re-opened and the slippage corrected. Revised W/S dates are now 28 Oct. 1963 and 1 Nov. 1963.

3. Due to the indicator sensitivity change concerning S/C 3 through 12, it is felt that a slippage in the W/S dates, reported in the Vendor Status Report dated 27 Sept. 1963, will occur. When revised W/S dates are confirmed, MAC will advise.

TEST STATUS

1. Test failures as indicated in "Monthly Summary," dated 27 Sept. 1963, have been corrected.

2. Test rescheduling is as indicated on "Qualification and Development Test Status", dated 25 Oct. 1963.

AGE

1. All PIA Equipment will be available by 25 Oct. 1963.

MONTHLY SUMMARY

System: Spacecraft Structure
Subsystem: Heat Shield
Vendor: McDonnell E.E.D.
Date: 25 October 1963

1. Production work on Heat Shields has remained static for the major portion of the month of October. The only production progress being made was the start of a replacement shield for Spacecraft No. 2, which was held up during ring bonding stage by MRR 103AA79. Disposition received in bonding room 25 October 1963 on this MRR and work has resumed on this assembly only. Several additional MRR's are outstanding on Static No. 4-2, Static No. 3-2, Spacecraft No. 3 with dispositions forth coming in the very near future. Discrepant vendor furnished items are causing further delays in production. Discrepant batches of D-5 material were received which did not meet viscosity requirements and contained contaminated catalyst Also the latest shipment of honeycomb core material (for Spacecraft No. 2R) has failed lab tests. Additional delays have been encountered in excessive time required to make and evaluate lab tests and time required to process MRR's.

2. A review of MAC process spec. 14050 is being conducted and spec. is being updated to include process specifications for nine (9) pound honeycomb core material with alterations in test programs. Curing ovens are being reworked to add additional vacuum lines and manometers to maintain a closer control of vacuum on Heat Shields during entire curing cycle.

S/C 2 Heat Shield complete but not usable, replacement in work.

MONTHLY SUMMARY

System: Communications
Subsystem: UHF Voice T/R
Vendor: Collins Radio
Date: 25 October 1963

ENGINEERING STATUS

During October the following significant problems occurred on the UHF VOICE T/R:

1. The Pencil Triode (8185) tubes cracked when heated because the foam left no room for tube expansion. This problem was solved by the use of a rubber buffer to allow for this expansion.

2. The Pencil Triode (8185) tubes had a low power output problem caused by "tube slump." The 8185 tube is put through a burn-in in Class A by Collins' vendor. However, Collins must operate this tube as a Class C amplifier. To solve this problem Collins is making a special 100-Hour burn-in on this module with the tube in Class C operation to prove its capability. The UHF Voice T/R then receives another 50-hour and 25-hour burn-in prior to the PDA Acceptance Test.

ASSEMBLY AND DELIVERY STATUS

1. The Pencil Triode tube problem, discussed above, caused approximately a two-week delay to Production Articles 1 and up for study of problems.

2. Detuning of transmitters during foaming and other minor initial production assembly problems resulted in approximately a two-week delay in production articles 1 and up.

TEST STATUS (SEE "DETAIL TEST CHART")

1. The Salt Water Immersion (PP-4) was completed 10/12. (Line 28)

2. The Shock (PP-4) was completed 10/14. (Line 29)

3. All Qualification Tests are now complete.

4. The Reliability Assurance Test (PP-3) was run 10/5 to 10/22 but a rerun was necessary because of a mistake in the test procedure which required that the reference data be taken at a temperature below the design limit of the UHF Voice T/R. The rerun of the low temperature (PP-3) portion is scheduled to start on 10/28 (Line 32). The Reliability Assurance (PP-2) (Temperature Portion) and Reliability Assurance (PP-4) (Vibration Portion) Tests are scheduled for 10/30 through 11/8.

5. Because of a CTU schedule change the test on the UHF was not performed. (Line 4, Summary Status Chart)

AGE

The UHF PIA Bench was shipped from Collins Radio Co. on 16 October. The Unit has been calibrated and checked-out; it is now ready for PIA production articles.

MONTHLY SUMMARY

System: Communications
Subsystem: HF VOICE T/R
Vendor: Collins Radio
Date: 25 October 1963

PROCUREMENT

During October Production articles 3 and up were affected by a delay in Collins' receipt of crystal filters from their Vendor. Many filters have been rejected at CRC for extensive center frequency shift over the temperature range. Collins has expedited good crystal filters and no further delay is anticipated.

ASSEMBLY AND DELIVERY STATUS

1. PA-1 (SC-2) was shipped from Collins on 17 October.

2. PA-2 (SC-2) was shipped from Collins on 25 October.

3. PA-3 (SC-3A) was delayed 3 weeks because of crystal filter shortages and minor problems associated with manufacturing start-up. Collins says these latter problems do not cause extensive delays by themselves, but when added up, are responsible for delays in delivery.

4. PA-4 (SC-3A) was delayed 3 weeks by lack of crystal filters and because of noise in the receiver. The noise problem is not consistant on all units, and the cause is under investigation.

5. PA-5 (SC-3) was delayed 4 weeks because there was a delay in Collins' receipt of crystal filters.

6. PA-6 (SC-3) was delayed one week because manpower scheduled to accomplish this activity was assigned to the final test of the first 4 production units.

TEST STATUS (SEE "DETAIL TEST CHART")

1. All Qualification Tests are complete.

2. The Overstress Reliability (PP-3) (PP-4), both Temperature and Vibration, tests are complete.

3. Because of a CTU schedule change the test on the HF Voice T/R was not performed. (Line 4, Summary Status Chart)

AGE

The HF PIA Bench is still scheduled for shipment on 29 October.

MONTHLY SUMMARY

[illegible]
[illegible]
Vendor: Collins Radio
Date: 2[illegible] October [illegible]

ASSEMBLY AND DELIVERY STATUS

1. PA-1 (SC-3A) was shipped [illegible] and was received at NAC on [illegible]

2. PA-2 (SC-3) was delayed one week because a defective [illegible] on the test bench damaged the mating [illegible] of the VCC. This unit [illegible] repaired and is scheduled for PPA testing 20 October. Minor [illegible] problems also caused a [illegible] delay.

3. A two week delay occurred on [illegible] and up [illegible]

   (a) There was a revision on the UHF/[illegible] [illegible] in panel and frame module. A [illegible] of [illegible] parts, necessitated by this revision, [illegible]

   (b) Because of [illegible] the MIC, AMP, [illegible] and Headset [illegible] test [illegible]

   (c) The Alarm Tone [illegible] Test [illegible] on MIC, AMP, Module Test [illegible] AMP, Module Test [illegible] test bench was operative.

TEST STATUS (SEE "Detail Test Chart")

1. The Shock Test (PP-[illegible]) [illegible] (Line [illegible])

2. The [illegible] (Line [illegible])

3. The [illegible] 11 October. (Line [illegible])

4. All [illegible] successfully [illegible]

5. Because of a CTU schedule [illegible] was not performed (see Line [illegible] Chart).

MONTHLY SUMMARY

System: Communications
Subsystem: Digital Command
Vendor: Motorola
Date: 25 October 1965

ASSEMBLY AND DELIVERY STATUS

1. No spacecraft hardware was delivered to MAC in October.
2. There were some minor problems with the test equipment hook-up which delayed completion of the Pre-PDA of PA-1 (SC-2). Also the receiver of PA-1 was replaced because a noise problem developed during low temperature operation of this test. The noise was caused by a bad filter. These problems amounted to a two week delay in the first half of October.
3. PA-1 (SC-2) has been ready for shipment for several weeks but is held up at Motorola because the Air Force Quality Control Representative found some areas where Motorola has not complied with the purchase order and MQA-171. Noncompliance is reported to be in the following areas:
   (a) Certain suppliers whose hardware was used on the project were not surveyed and / or approved by Motorola Quality Assurance.
   (b) Motorola has failed to satisfy the MQA-171 requirement of chemical and physical analysis of raw materials used on the project.
   (c) Motorola has used unauthorized sampling plans without MAC Quality Assurance approval.
4. At the present time MAC Quality Control is awaiting Motorola's intended corrective action and documentation that will assure compliance with the purchase order.
5. Shipment of PA-2 (SC-3A) and up will be restrained because of this Quality Assurance problem.

TEST STATUS (SEE DETAIL TEST CHART)

1. The Acceleration Test (PP-3) was completed on 27 September. (Line 11)
2. The Overstress Reliability Test (Acceleration Portion) was completed on 1 October. (Line 33)
3. Repairs on the Altitude Test Chamber held up the Low Temp. and High Voltage (PP-3) Test and Alt. High Temp. and High Voltage (PP-3) Test for 3 weeks. The test was begun 25 October. (Lines 30 & 31)
4. Installation of a new harness on PP-4 caused a 3 week delay of the Overstress Reliability (Vibration) Test. (Line 32)
5. All Qualification Tests are now complete.
6. Because of a CTU schedule change the test on the Digital Command System were not performed (Line 4, "Summary Status Chart").

ACE

The following ACE was shipped from Motorola on 14 October to the following destinations:

MAC		CAFE	
52-19E0019-1	SN-3	52-19E0019-1	SN-2
52-19E0020-1	SN-3	52-19E0020-1	SN-4
		52-19E0023-1	SN-2
		52-19E0025-1	SN-2
		52-19E0020-301	
		52-19E0025-301	

All Motorola ACE items have now been shipped.

MONTHLY SUMMARY

System: Communications
Subsystem: C & S Band Radar Beacons
Vendor: ACF
Date: 25 October 1963

ENGINEERING STATUS

1. During the month of October ACF completed drawing changes to incorporate the Power Supply Overstressed Capacitor Fix.

2. ACF's Qual Test Report is currently under analysis by MAC Systems Engineering.

ASSEMBLY AND DELIVERY STATUS

1. No deliveries were made to MAC during October.

2. The Vendor Delivery Status Report (17-C & 18-C) now shows firm Vendor ship dates rather than the estimated dates shown previously.

3. Fabrication of the redesigned power supply for the C-Band Radar Beacon was completed. This power supply is being installed in SN-103 (PA-4) which is scheduled for PDA Testing on 29 October 1963. This unit will be shipped directly to the Cape for installation in SC-1.

4. Fabrication of the redesigned S-Band Radar Beacon power supply is in progress.

5. Deliveries of C & S Band Radar Beacons are scheduled for November 1963 (See Vendor Delivery Status Report).

TEST STATUS (See "Detail Test Chart")

1. The Overstress Reliability (PP-1) is now scheduled for 20 November thru 27 December 1963 on the C & S Band Radar Beacons. (Line 30 & 32)

2. Because of a change in the CTU schedule the test on the C-Band Radar Beacon was not performed. (Line 5 "Summary Status Chart")

AGE

1. The C & S Band Radar Beacon PIA Test Bench was received at MAC on 7 October and is now available for use. The antenna probes 52E190011-1 and 52E190012-1 are available for use. The only AGE still needed from ACF is the 2nd 52E19003-1 C & S Band Beacon PIA Test Bench for the Cape.

* PA-2 Containing overstressed capacitors was installed 7-24-63 in S/C-1 for SST use. To be retrofitted later.

PA-3 Containing overstressed capacitors was avail. at NAC 7-29-63 for SST use. To be retrofitted later.

Allocation is estimated and unapproved

MONTHLY SUMMARY

System: Guidance [illegible]
Subsystem: Rendezvous Radar
Vendor: Westinghouse
Date: 25 Oct. 1963

ENGINEERING STATUS

1. The following design problems were illuminated during engineering evaluation tests:

UNIT	FAILURE
a. Radar Video Package	False triggering due to inadequate grounding.
b. Radar Digital Package	Marginal case of triggering on noise.
c. Radar Coat Cabling	Antennas not properly phased.

2. The following action was taken regarding the above failures:

UNIT	FAILURE
a. Radar Video Package	Redesign of three modules.
b. Radar Digital Package	Redesign of one module.
c. Radar Coat Cabling	Development of new coax cable lengths.

PROCUREMENT

The four most critical purchased parts on the radar are the (1) Librascope Encoder, (2) The Electro Lab printed Circuit boards, (3) The LEL receiver and (4) The Sage rotary joint.

1. Librascope Encoder - Six pieces have been received and accepted. Librascope notified WEC on 17 Oct. that all pieces were bad. Librascope had screened the commutator incorrectly. Four pieces were rejected back to Librascope on 18 Oct. Librascope plans to ship the following:
   a. Four pieces on 28 Oct.
   b. Four pieces on 4 Nov.
   c. Fourteen pieces on 2 Dec.
   d. Twelve pieces on 7 Dec.

2. Electro Lab printed circuit boards - This problem appears to be solved. The black and white masters and tapes have been updated to produce the proper spacing between circuit paths.

3. LEL receivers - Three receivers have been accepted by WEC. One receiver at WEC had an electrical intermittent. WEC is performing special tests on the receiver to cause the intermittent to reappear.

4. Sage rotary joint - All but four rotary joints have been returned to Sage for modification. All the returned units will be shipped back to WEC by 15 Nov. 1963.

ASSEMBLY & DELIVERY

1. Additional schedule slippage has been experienced in flight hardware from Westinghouse as a result of procured parts problems especially the electroleb printed circuit boards (see procurement #2) and a lag in manufacturing buildup.

2. A MAC evaluation team is going to Westinghouse 28 Oct. 1963 to evaluate production status and determine solutions for potential problem areas.

TEST STATUS

1. The following test schedules have been slipped due to the unavailability of the necessary hardware:

TEST	FROM	TO
CTU	10-01-63	12-01-63
Qual Test #1	12-13-63	01-24-64
Qual Test #2	12-27-63	02-07-64
Reliability	02-21-64	04-10-64
Operation Life	02-07-64	04-10-64

AGE

1. The AGE Equipment has experienced an additional slippage since last month due to updating the equipment to facilitate testing of the modified radar and transponder.

System: [illegible]
Subsystem: Landing [illegible]
Vendor: Northrop [illegible]
Date: 25 Oct. 1963

MONTHLY SUMMARY

ENGINEERING STATUS

1. A meeting was held at NASA on 30 Sept. to determine which of the two concepts of high altitude redesign to incorporate. It was decided to employ the auxiliary drogue chute. A second meeting held on 14 Oct. 1963, to determine which of the various sequence arrangements would be most suitable. Of the three methods presented, the "Tandem Deployment" method was the one selected. [illegible] EJS 2445, which incorporates the high altitude drogue chute redesign is now in the process of being approved.

2. A meeting is scheduled with Northrop on the 29th and 30th of Oct. to discuss incorporating the high altitude drogue chute changes to the Landing System.

ASSEMBLY & DELIVERY

1. The requirement to incorporate certain parts into Main and Bridle Disconnect Assemblies caused a change in the Available for Installation dates for SC 4 and up. Refer to the Vendor Delivery Status section of this report.

2. If the proposed addition of a high altitude drogue is approved for SC 2 & up, the AFI dates for SC 2, 3A and 3 will slip to either 7 Dec. 1963 or 3 Jan. 1964 depending on whether the mortar assembly breech is reworked or redesigned. In either case, AFI dates for SC 4 and up will slip to 1 Feb. 1964.

TEST STATUS

Development Tests (Bridle Disconnect)

1. Development tests on the bridle disconnect began on 3 Oct. 1963 and were expected to be completed by 18 Oct. 1963. After a number of tests, the correct amount of propellant required to perform its specific function was determined but the piston was not retained. This failure necessitates a minor change in the piston. After this change was incorporated, the piston was retained and the tests were completed on 24 Oct. 1963. (Ref. Line 43)

2. Drogue and Pilot Tandem Deployment (Ref. Line 6)

Due to the proposed addition of a high altitude drogue chute, a series of development tests must be performed. A test-time schedule has been drawn up which indicated a start date of [illegible] Dec. 1963, and a completion date of 31 Jan. 1964 for drogue and pilot tandem deployment development using B/P 6.

3. High Altitude Drogue Chute Bomb Drops (Ref. Line 3)

A tentative schedule has also been drawn up for 20 high altitude drogue chute bomb drops. The estimated start and completion dates for these drops are 1 Jan. 1964 to 15 July 1964.

Qual Tests

4. A series of 10 cold firings and 5 hot firings were performed under drogue mortar verification tests prior to drogue mortar qual testing. These tests were completed on 24 Oct. 1963. The results are being evaluated.

5. Recovery System

Fourteen Recovery System drop tests using Static #7 are tentatively scheduled to start 15 April 1964 and be completed by 15 Sept. 1964. (Ref. Line 12)

6. Complete System

Two complete system drop tests using Static #4 are tentatively scheduled for the last two weeks in July of '64. (Ref. Line 16)

AGE

1. Nothing has been shipped during this reporting period. The packing boxes for the main and drogue chute, which were to be shipped on 1 Nov. 1963, will not be delivered until 2 Dec. 1963 due to the delay in performing FAD at El Centro.

MONTHLY SUMMARY

System: Time Reference System
Subsystem: Electronic & Event Timer
Vendor: McDonnell E.E.D.
Date: 25 October 1963

ENGINEERING STATUS

ELECTRONIC TIMER

1. Regarding the TRS-Radar Interface problem, EED has measured the jitter of the zero pulse to be as much as 130 nanoseconds at 8 cps while Westinghouse requires a maximum of 50 nanoseconds at 8 cps. The pulse spacing between the zero and one pulse in different units could vary as much as 10% with the present design. The Westinghouse requirement is a variance of not more than one per-cent between units. This interface problem is still under investigation.
2. A meeting is scheduled in St. Louis on 28 October to discuss the Data Transmission System-Electronic Timer interface problem. Representatives from EMR, EED and MAC engineering will attend this meeting. The interface document will be reviewed at this meeting and ways to eliminate the 51.2 kc ripple on the DTS request line to the Electronic Timer will be investigated.

EVENT TIMER

1. In response to NASA's RFA on the Toggle Switch Handles, EED is investigating the size of the Toggle Switches used on the Event Timer. As soon as EED completes their investigation of this problem and submits possible solutions, the results will be forwarded to NASA.

PROCUREMENT (ELECTRONIC AND EVENT TIMER)

1. Partial shipment of IRC resistors was received 25 October 1963. This delivery is approximately 12 days ahead of schedule. IRC has indicated that the remainder of the resistors will be delivered on schedule. The partial shipment received 25 October is of insufficient quantity to improve the delivery dates presented in this report.
2. There are no outstanding procurement problems at this time.

ASSEMBLY AND DELIVERY STATUS

ELECTRONIC TIMER

1. EP-2 was delivered to IBM for the in-loop-mission simulation test on 30 September 1963.
2. PP-2 was shipped to Goddard AFB on 3 October for the NASA Fly-Over Test.
3. No other units were delivered during this reporting period.

EVENT TIMER

1. The only Event Timer completed during this reporting period was PP-2 on 11 October 1963. This unit started in Qual Test (RFI) on 16 October 1963.

ELECTRONIC AND EVENT TIMER

1. All scheduled delivery dates are shown on the Vendor Delivery Status Report, Charts 21 C and 22 C.

TEST STATUS

ELECTRONIC TIMER

QUAL

1. PP-5 is scheduled to begin Qual Testing, RFI only, on 28 October.

CTU

1. During CTU testing the Electronic Timer has been interfaced with the computer and the DTS PCM. Data from these tests are being compiled.

ELECTRONIC & EVENT TIMER SUMMARY

NASA FLY-OVER

1. The TRS-Digital Command System interface offered no problems. The Electronic Timer was also interfaced with the Computer Simulator. Several problems existed in the Computer-TRS interface. All of these problems were corrected during the test.

TEST STATUS

EVENT TIMER

QUAL

1. RFI Test began on 16 October and was completed on 25 October. Data from this test are being analyzed at this time.

CTU

1. PP-2 is scheduled to begin testing in CTU on 1 November 1963.

AGE

ELECTRONIC AND EVENT TIMER

1. All AGE items are scheduled to be delivered before 1 November 1963.
2. EED has experienced problems in PIA Testing, which has to date been accomplished on a factory test console. Delays in deliveries have been caused by this console failing during testing. It is anticipated delays of this type will be reduced to a minimum when the PIA Console (Part No. 52E270012-1) is available.

n'thly Summary

System: Instrumentation
Subsystem: Data Transmission
Vendor: Electro-Mechanical Research
Date: 25 October 1963

ENGINEERING STATUS (Airborne Equipment)

A. PCM

1. The interface problem with the time reference system is still being studied by EMR.
2. The low level problem remains the gating factor in PCM Status. The investigation of this problem has precipitated the following changes in design.
   a. Provided accurate signal simulation
   b. Provided circuit shielding to reduce noise
   c. Derived a method of equalizing dynamic impedances
   d. Derived an improved method of switch testing
   e. Provided module shielding to reduce noise in critical areas

   However, there still remains the 2% - 3% rather than 1% out of tolerance off-sets in the low level multiplexer circuits.

B. TAPE RECORDER

RCA presented the following modifications on the tape recorder design as the solution to the vibration problem.

a. Vibration isolators (ball & socket)
b. Modified case and cover
c. Laminated Motor board
d. Dual Capstan tape drive system
e. Moving pressure belt
f. Modified tape path
g. New Tuning Fork
h. New Detection system (one-shot multivibrator)
i. Optimization of bearing loading reels, converters, rollers, etc.
j. Modification of speed converter
   1. Increased shaft sizes

A modified engineering model of the tape recorder was tested and the results showing the jitter encountered as a function of the vibration frequency were presented to the group.

Because of the successful control of vibration at the tape drive mechanism the need for a phase locked oscillator (P.L.O.) detection system no longer exists. This allows the use of a one-shot multivibrator type of detection system which may allow bit jitter in excess of that permitted by the P.L.O. system, but guarantees no bit drop-out.

C. TRANSMITTER

RCA has tried two possible fixes to eliminate the vibration problem in the transmitters with marginal results. The first alternative was the [illegible] bracing of the board structure. The second possibility was using foamed polyurethane. This fix caused a power loss in the coils and capacitors because of a change in the dielectric constant.

The fix they are now investigating to reduce the vibration is bonding a beefed-up cover to the "Times 12" board with four posts.

PROCUREMENT (Airborne Systems)

1. The printed circuit boards which were expected to be the gating item in the production system assemblies have started coming in. It is expected that by 11-15-63 enough boards will be at EMR so the anticipated delay will

2. [illegible] diode [illegible] has [illegible] or yet, for [illegible] successful [illegible] testing.

ASSEMBLY AND DELIVERY STATUS (Airborne [illegible])

1. No hardware has been delivered [illegible].
2. [illegible] 11-21, [illegible] 12-30-63 respectively. The [illegible] will depend upon [illegible] of the engineering problem in the [illegible] because [illegible] for investigation [illegible] only if [illegible] in the system [illegible] has occurred [illegible]. No decision on the acceptability of the [illegible] been reached.

[illegible] (Ground Equipment)

1. [illegible]

   The Qual Test schedule of the [illegible] has slipped from 11-15-63 to [illegible] during the past month because of [illegible] parts shortages and the low [illegible] problems.

2. TAPE RECORDER

   Due to the recent resolution of the vibration problem involving a [illegible] in the tape recorder, drawings [illegible] be revised and new parts [illegible] chased. The time required to acquire the parts, revise the drawings and assemble a new tape recorder for Qual Test has necessitated a [illegible] start of the test from 11-16-63 to 2-10-64.

3. TRANSMITTER

   1. The [illegible] portion of qual was completed 10-7-63.
   2. Because of the difficulties found in the transmitter [illegible] during the vibration test, all other testing has been halted until an acceptable fix can be found. A meeting where [illegible] the solution of the problem to [illegible] and [illegible] has been [illegible] scheduled for 10-31-63. If the solution is acceptable, [illegible] resume the qualification testing 11-2-63 and will follow [illegible] schedule on 23 B (page 2 of 3) providing that the previous [illegible] not invalidated by the design change.

[illegible]

GROUND STATIONS

1. The remaining 3 racks of Oil-1 ground stations scheduled to be [illegible] 10-21-63 has slipped to the first part of November (no exact [illegible]). Of the many discrepancies found in these racks, which originally [illegible] their shipment in September, all but two (1. Display [illegible] not interchangeable 2. Discrete function recorder transistor [illegible]) have been cleared up or accepted as is. A possibility [illegible] is to ship the racks to St. Louis and retrofit [illegible] parts are available.
2. A new delivery schedule was issued to [illegible] on the remaining [illegible]

Station	[illegible] Est. Del. Date
Oil-3	11-29-64
Oil-6	1-10-64
Oil-5	1-22-64
[illegible]	[illegible]
[illegible]	[illegible]

B. C&O TEST SET

A design review meeting between EMR and MAC was held [illegible] during the week of 10-13-63. The primary reason for the [illegible] review exactly the full scope of the changes MAC had directed EMR [illegible] incorporate in the test set at a previous meeting (8-22-63) [illegible]

a. Computer Word Test Provision
b. Overvoltage Programming Revision
c. Worst Case Accuracy Programming
d. Common Mode Rejection Programming Revision
e. Bi-Level Input to Interface
f. Time Reference System Interface
g. Use of SCD Components for Internal PCM's.

will cause a slip in the delivery schedule of the test set. [illegible] estimated delivery of the first C&O-3 for [illegible] in St. [illegible] the second C&O-3 to the Cape on 5-15-63. EMR, however, has not [illegible] released their official estimated delivery dates.

MONTHLY SUMMARY

[illegible]
Subsystem: Escape System
Vendor: [illegible]
Date: [illegible]

ENGINEERING STATUS

1. 52 82153 SCD Revision "A" covering "[illegible]" [illegible] released effective SC 3A & up and estimated [illegible] seat delivery.

2. EJS's 52-727 (Rev. B), 2020 (Rev. A), 20[illegible], 2079, 20[illegible], 20[illegible], 2085, and 2087 have been reviewed and estimated that [illegible] of EJS's will have no affect on schedule at Weber.

3. It has been recommended to NASA by [illegible] be incorporated into space suits to eliminate [illegible] astronauts during seat ejection.

ASSEMBLY & DELIVERY

1. Seats No's 35 and 36 [illegible] pectively.

2. Delivery of seats PA-3-4 (No's 103 & 104) is now [illegible] delayed to approximately 11 Nov. due to [illegible] restraint design at Weber [illegible] will ship date was 28 Oct. [illegible] more feasible to incorporate [illegible] rather than by retrofit. The above seats were originally [illegible] to SC-3A but can now be allocated to SC [illegible] seats shall not be provided at [illegible] GSM-10-252, CFE 53066-5).

3. NCI #66737 has been issued to Weber Aircraft [illegible] of six (6) ejection seats [illegible] These seats were ordered for use in Escape System [illegible] Weber Aircraft is [illegible] of improving delivery schedule.

TEST STATUS

1. Development
   a. Sled Test #5 (Ref. [illegible]) [illegible]

   b. Sled Test #6 (Ref. [illegible]) [illegible]

2. Qualification

   a. [illegible]

completions as follows:
(1) by 8 Nov. and (2) by 15 Nov. Previous estimates were:
(1) by 15 Oct. and (2) [illegible]
detail [illegible]

The delivery on balance of (10) seats [illegible]
(2) on [illegible], (2) on 15 Nov., (2) [illegible], (2) [illegible]
(2) on 25 Jan. 1965. Previous report estimated [illegible]
seats on 25 Oct. Normal fabrication problems [illegible]
slippage.

2. 52E130002-1 Sling Assembly
Final design was received by [illegible] on 8 Oct. [illegible]
delivery of (7) units on order [illegible]
(4) on 30 Oct. and (3) [illegible].

3. 52M660005-1 Fixture, [illegible] Locating
Weber design received by MAC on 25 Sept. and [illegible] in [illegible]
check group. MAC engineering estimates design will be [illegible]
by 22 Nov. Weber's preliminary estimate for delivery [illegible]
on order is approximately (12) weeks after design [illegible]
