Ariel II Engineering Data Analysis

Phase I Report

Volume II of Two Volumes

23 June 1965

Contract No. NAS5-9104

Prepared by

Westinghouse Electric Corporation

Aerospace Division

Baltimore, Maryland

for

Goddard Space Flight Center

Greenbelt, Maryland

TABLE OF CONTENTS

VOLUME II

Title	Page
Description of Graphs	1
Composite Orbit Graphs (378)	5
Percent Sunlight Graphs (25)	383
200-Day Graphs (16)	409
Special Purpose Graphs (63)	427

LIST OF GRAPHS

VOLUME II

Title	Page No.
Composite Orbit Graphs	5
Percent Sunlight Graphs	383
200-Day Graphs	
a. Performance Parameters	409
b. Percent Sunlight	423
c. Spin Rate	425
Special Purpose Graphs	
a. Temperatures (Special)	427
b. 10-Orbit Thermal Stabilization	447
c. Ozone (Special)	455
d. Galactic Noise Responses	463
e. Ozone Spectrum Responses	473
f. Micrometeorite Responses	481

DESCRIPTION OF GRAPHS

I. Composite Orbit Graphs (378)

A composite graph containing 2-4 orbits is presented approximately each 100 orbits. The orbit with the most data was taken as the base orbit. Zero-time for the composite graph is taken from the base orbit and is identified in days, hours and minutes (GMT).

A point-by-point plot of a five-minute interval is included for the signals of Dump Current and Solar Current to show the effects of spin modulation. For these two signals maximum and minimum points were plotted. For all other signals, the points plotted were the values at the five-minute interval. A listing of the composite orbits is provided by Table II.

II. Percent Sunlight Graphs (25)

One plot for each base orbit (except the last two for which insufficient data was available) shows entrance and exit times.

III. 200-Day Graphs (16)

a. One graph for each of the 14 performance parameters shows maximum and minimum points for sunlight (⊡—□) and darkness (○—⊙) for Battery Current. All other parameters are orbit maximum and minimum points regardless of whether in sunlight or darkness.

b. A Percent Sunlight Graph

c. A Spin Rate Graph

IV. Special Purpose Graphs (63)

a. Plots for maximum sunlight (100%) orbits (#409 and #1391), minimum sunlight (62.9% for orbit #2629 and 63.2% for orbit #100), the hottest day, and the coldest day were made using the following combinations:

1. Both ozone temperatures

2. Spectrometer A and upper shelf temperatures

3. Battery and lower shelf temperatures

4. Spectrometer A and lower shelf temperatures

b. Ten-Orbit Thermal Stabilization Graphs, one graph for each temperature.

c. Sunrise, Pure Sunlight, and Sunset Graphs of both Ozone Spectrometer and Broadband Ozone Data. Ordinates are in GSFC frequency printout units. Abscissas are time with the time markers on the left hand edge. Eight pulses make up one complete revolution of the satellite.

d. High Speed (HS) and Low Speed (LS) Galactic Noise Graphs. Ordinates are in GSFC frequency printout units.

HS - Swept oscillator 0.75-3 mc. Sequence numbers refer to 1/6 of range being swept.

LS - Ferrite core antenna tuned to approximately 2 mc.

e. Sample Ozone Spectrometer responses illustrate sensor degradation with time.

f. Sample Micrometeorite responses show the effects of attitude variations.

TABLE II

COMPOSITE ORBIT LISTING

Base orbit	Composite orbits	Day of Year	Days from Launch*
10	08, 10, 11	88	1
100	100, 106, 107	94	7
190	190, 191, 198	101	14
293	293, 293, 294, 301	107	20
409	409, 415	116	29
