BASTION TECHNOLOGIES

# Space Launch Reliability History

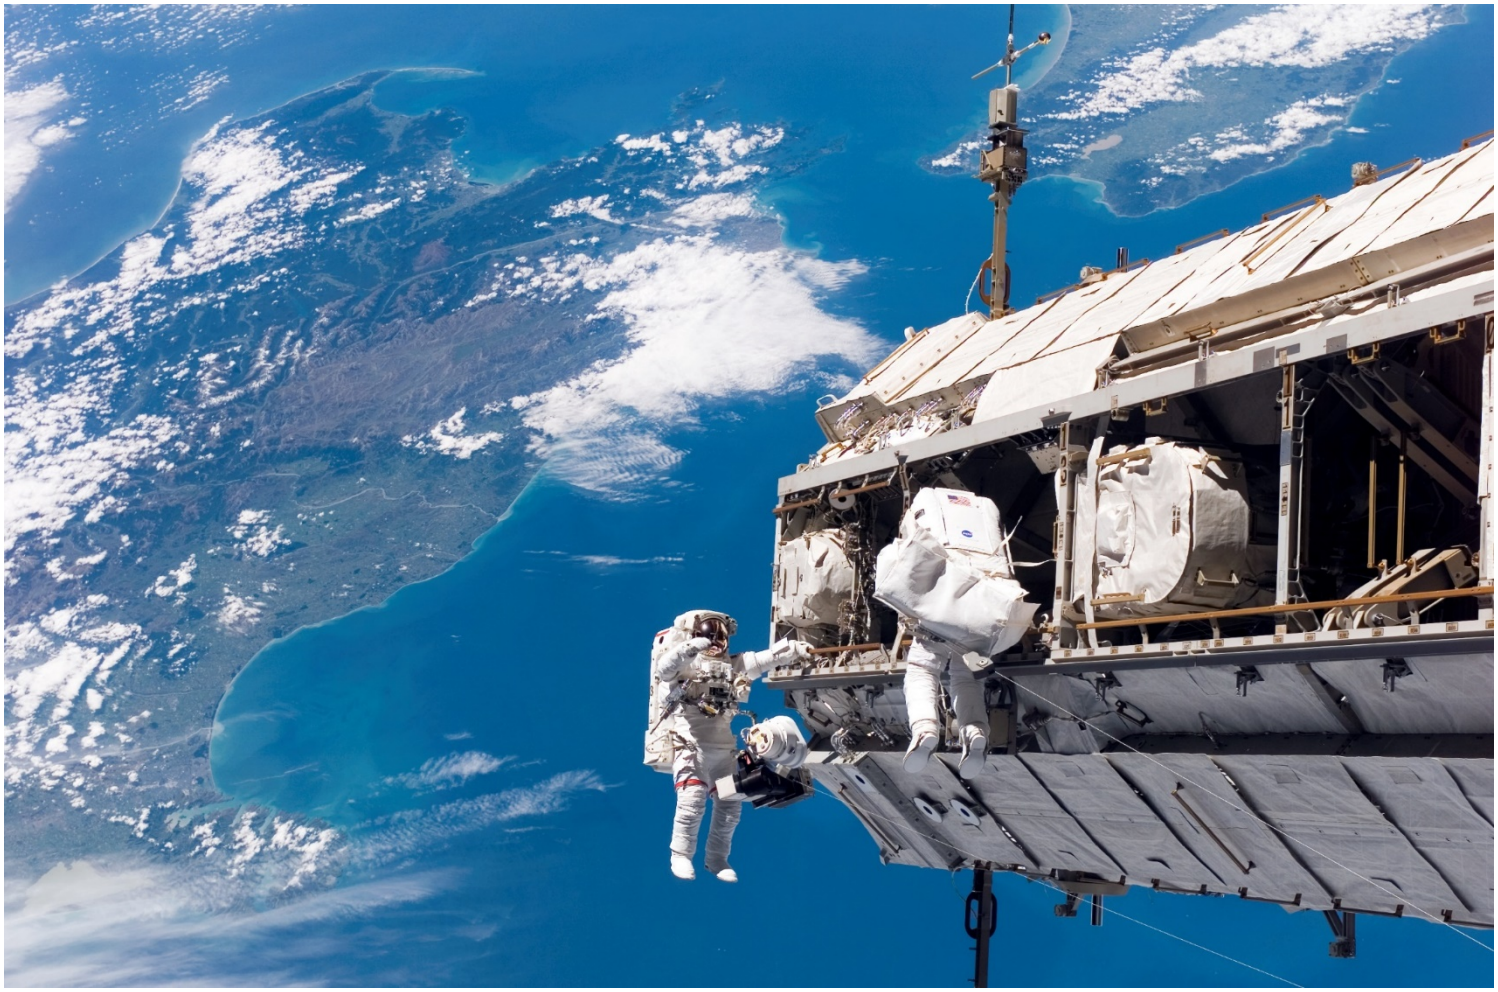
Tymon Sharp, Bastion Technologies Intern, BS Physics UAH, MS 2020

Frank Hark, Bastion Technologies, QD35, Marshall Space Flight Center

Prepared for RAMS XII Training Summit

Huntsville, November 13th and 14th

- A little bit of history



# History

- Robert H. Goddard
  - Inspired Wernher Von Braun
- The V-2 rocket (1942)
- R-7 (1957)
- The Space Race
  - 1957
  - Sputnik 1 and Explorer 1
  - Apollo 11

BASTION
TECHNOLOGIES

# Past

# Past

- Learning
  - Mostly accidents such as: fires, new technology, vacuum of space, space suits, rocket failures
- Russia and USA

BASTION
TECHNOLOGIES

# Present

# Present

- Space flight is becoming increasingly popular
  - The first 8 months of 2019 had more launches than 2004 had in a year
- Worldwide safety has remained constant
  - Iran and China
  - USA at <1% failure rate since 2017
- 2018 was the busiest in history and 2019 is set up to take the lead

All data is open source

# Present

- As time progresses, things become more controlled
  - Consistent downward trend for most countries
- Facing different troubles in spaceflight
  - Separation and attitude

BASTION
TECHNOLOGIES

# Future

# Future

- Downward trend in failures for countries that institute safety and reliability tactics
- 2019 and 2018 both have zero failures thus far and the US is averaging about 1 in 102 failure rate using the 1/3 rule

# Future

- Interplanetary travel
  - New and unknown hazards
- New unknown unknowns

# Future

- Next challenge in Reliability and Maintainability
  - New environmental hazards
    - Extended periods of time in space
  - Predictability
    - The corona of the sun
    - Parker waves
    - Parker Solar Probe

BASTION TECHNOLOGIES

# Conclusion

# Conclusion

- Reliability over the past 6 decades
  - Launch rate is increasing
    - Commercialization and space exploration
  - Reliability has remained relatively constant
    - Recent data indicates possible improvement in reliability
- Reliability in the new era of spaceflight
  - Key to safe spaceflight as we return to unknowns
