NASA STI Program . . . in Profile

Since its founding, NASA has been dedicated to the advancement of aeronautics and space science. The NASA scientific and technical information (STI) program plays a key part in helping NASA maintain this important role.

The NASA STI program operates under the auspices of the Agency Chief Information Officer. It collects, organizes, provides for archiving, and disseminates NASA's STI. The NASA STI program provides access to the NTRS Registered and its public interface, the NASA Technical Reports Server, thus providing one of the largest collections of aeronautical and space science STI in the world. Results are published in both non-NASA channels and by NASA in the NASA STI Report Series, which includes the following report types:

- TECHNICAL PUBLICATION. Reports of completed research or a major significant phase of research that present the results of NASA Programs and include extensive data or theoretical analysis. Includes compilations of significant scientific and technical data and information deemed to be of continuing reference value. NASA counter-part of peerreviewed formal professional papers but has less stringent limitations on manuscript length and extent of graphic presentations.
- TECHNICAL MEMORANDUM. Scientific and technical findings that are preliminary or of specialized interest, e.g., quick release reports, working papers, and bibliographies that contain minimal annotation. Does not contain extensive analysis.
- CONTRACTOR REPORT. Scientific and technical findings by NASA-sponsored contractors and grantees.

- CONFERENCE PUBLICATION. Collected papers from scientific and technical conferences, symposia, seminars, or other meetings sponsored or co-sponsored by NASA.
- SPECIAL PUBLICATION. Scientific, technical, or historical information from NASA programs, projects, and missions, often concerned with subjects having substantial public interest.
- TECHNICAL TRANSLATION. English-language translations of foreign scientific and technical material pertinent to NASA's mission.

Specialized services also include organizing and publishing research results, distributing specialized research announcements and feeds, providing information desk and personal search support, and enabling data exchange services.

For more information about the NASA STI program, see the following:

- Access the NASA STI program home page at <u>http://www.sti.nasa.gov</u>
- E-mail your question to <u>help@sti.nasa.gov</u>
- Phone the NASA STI Information Desk at 757-864-9658
- Write to:

From: ZV/Manager, Orion Project Office & Lockheed Martin/Orion Program Manager

Subject: Orion Landing Strategy Tiger Team - Project Plan and Driving Assumptions

The Orion Project is in the early stages of Design Analysis Cycle #2 (DAC#2) and has been challenged with evaluating current 606C vehicle design capability for nominal water landings and contingency land landings during this DAC#2 cycle. In an effort to integrate this technical effort, an Orion Landing Strategy Tiger Team was established per Orion Project Guidance Memo ZV-07-034.

A Tiger Team Steering Committee (hereby known as Steering Committee) has been assembled to oversee the design and analysis activities being performed during DAC#2 for the landing event. These activities include assessing current vehicle design for both water landing and contingency land landing events, assessing the current vehicle design susceptibility to roll control and tip over, reviewing methods for assessing occupant injury during ascent/aborts/landings, developing an alternate seat/attenuation design solution which improves occupant protection and operability, and testing the seat/attenuation system designs to ensure valid results.

This memo establishes the roles and responsibilities for the Steering Committee and sub-tasks, the schedule/expectations, and primary initial conditions to be used for these tasks within the Orion project. The primary initial conditions listed are in coordination with the Constellation Program Contingency Land Landing Guidance Memo CxPO ZF-07-012. Orion Project will report occupant protection status to CxPO at key sync points throughout DAC#2 such that all parties concur on approach well before Orion Project executes DAC#2 Final ERB (currently 8/1/2007) and PDR Board (currently 9/26/2007). Orion Project plans to status landing strategy and re-design recommendations during Orion Project Landing Strategy out-brief planned for 3/7/2008 CxPO Sync TIM.

The redesign teams will evaluate Orion vehicle performance and crew injury susceptibility based upon G-Loads experienced by the crew through each dynamic phase of flight, the rate of onset, and the experienced time duration.

Steering Committee Membership				
Members:		Advisors:		
Chair:	John Curry	Lockheed Martin:	Blaine Brown (lead)	
Co-Chair:	Irene Piatek	Lockheed Martin:	Les Theard	
VIO/Ops Lead:	Angela Hart	Lockheed Martin:	Matt Carter	
CM SE&I:	Karl Pohl	Level 2 LRS:	Don Pearson	
	CJ Johnson			
CB/Crew:	Lee Morin	Level 2 PSE:	Brian Muirhead	
HMA ITA:	Mark Jernigan	Level 2 SE&I:	Eli Rayos	
	Mihriban		Jeff Loechel (Flt Perf	
CONALITA.	Whitmore		SIG)	
S&MA ITA:	Jeff Cyphert			
EA ITA:	Julie Kramer			
EVA Project:	Miriam			
	Sargusingh			
NESC:	Nancy Currie			

Steering Committee Roles and Responsibilities

- Develop the best occupant protection system possible that maximizes crew safety during ascent, ascent aborts, landing (water as well as contingency land landing), and through the post landing and recovery phase. This includes evaluation of the current 606C vehicle design as well as any alternate configurations of the various systems involved. The end goal of this activity is to recommend an improved Seat/Attenuation Design which supports DAC#2 schedules.
- Provide management direction regarding driving assumptions, scheduling constraints, and sync point guidance to ensure all tasks and TDS work remains synchronized. Approve driving loads cases to be analyzed by the task teams.
- Coordinate and provide recommendations to the following TDSs

Integrated Landing Strategy TDSs:

• TDS-CEVLM-21-1050:	Contingency Land Landing (LM led)
	TDS Lead – Rob Hixson
	Steering Committee Task POC – Blaine Brown
• TDS CEVLM-04-1044:	Roll Control
	TDS Lead – Chris Madsen
	Steering Committee Task POC – Chris Johnson
• TDS CEVLM-11-1043:	Reuse Analysis for Water and Land Landing
	TDS Lead – Chip Woods
	Steering Committee Task POC – John Harrison

Entry and Post-landing recovery TDSs:

Steering Committee Task POC: Angela Hart/Blaine Brown (for each of these TDSs)

• TDS IDAC-4 SIG-06-1006 (Level 2 led TDS)

 36 Hour Post Landing and Comparison of landing regions with environment data

TDS Lead – Robyn Carrasquillo/Ed Rains supported by E&C SIG/Kristine Cummings Steering Committee Task

- TDS CEV-LM-11_1040: ED-01
 - Entry, Descent, & Landing (EDL) Design Analysis (LM led TDS) -Landing Trajectories Based upon Landing Scenarios

TDS Lead - Joey Broome and George Chi/JSC GN&C

- TDS CEV-02-001 (NASA led TDS)
 - Development of Off-Nom Landing Scenarios

TDS Lead - Tom Walker and Ben Sellari/JSC-ZV; Supported by: George Deckhert/SR&QA, Anita Weaver

- TDS CEV LM-11-1028 (LM led)
 - Re-entry Passive Thermal Analysis

TDS Lead - Tim McCartney

The data from these TDS and other baseline vehicle information such as loads are required to perform the other tasks for this Tiger Team.

 Initiate and provide oversight for the following three tasks to be performed during DAC#2:

Task 1:	Modeling Injury Protection (see Appendix A) Task Lead – CB/Mike Gernhardt Steering Committee Task POC – Nancy Currie
Task 2:	Occupant Protection Design Assessment (see Appendix B) Task Lead – NESC/Joe Pellicciotti Steering Committee Task POC – Julie Kramer
Task 3:	Occupant Protection Development Testing (see Appendix C) Task Lead – LaRC/Barry Bryant Steering Committee Task POC – Chris Johnson

- One member of the Steering Committee is responsible for coordinating with each task lead and bringing back status and issues to the regular meeting of the Steering Committee.
- Task leads are responsible for setting up the team with regular membership, expert POCs, advisors, stakeholders etc. They will provide detailed scope and sub-task descriptions and task schedules. They also report to the Steering Committee as noted.
- Each Task Lead participates in meetings at specific times (synch points) with the Steering Committee to provide an extended discussion of their task including accomplishments, issues and task schedule. All task leads are required to attend synch point meetings and be in attendance for the entire meeting, to ensure data exchange between the tasks.

 LM Steering Committee Advisor(s) provide status, issues and data to the Steering Committee for dissemination to the entire Tiger Team and to assist in providing guidance to the entire Tiger Team.

Products

Products of the Steering Committee are primarily those of the Tasks. These will include analysis reports, conceptual designs, test plans and test hardware. In addition, the Steering Committee will develop and maintain an integrated schedule incorporating key activities and milestones from all the tasks.

Steering Committee Meetings

- The Steering Committee will meet weekly on Tuesdays from 2-3 pm Central time (JSC Building 17, Room 2037) to discuss current status and schedule. Goal is to keep meeting duration to no more than 1 hr.
 - Telecon number/Passcode will be provided in the Outlook meeting announcement.
 - Regular Tuesday meetings will begin on Tuesday, January 8th, 2008.
 - All Task Leads (or a designee) should attend to receive coordinating information and provide brief status of their work.
- A member of the Steering Committee will brief status to the CICP each Friday at 9 am CST (17/1066) to summarize TDS and Task Team work and bring key agreements and to status issues. Task Leads should also attend or tie into CICPs to status their work and get key stakeholder feedback. Specific CICP briefings related to Landing Strategy are planned for January 11th and January 18th CICPs as described in the scheduling portion of this memo.
- Steering Committee meetings and team data will be posted at the following WIKI:
 https://ice.exploration.nasa.gov/confluence/display/OrionOpsIntDAC2/Landing+Strategy+Tiger+T
 eams
- WIKI Site and Tiger Team phone/email lists will be maintained by Evelyn Arrington and Angela Hart. Contact information for adding names, contact information, or charts/data to the WIKI site:
 - Evelyn Arrington: JSC
 - Angela Hart: JSC

Additional information and initial guidance

Task 2 is not just a peer review of possible existing alternate concepts. The Task 2 team will be briefed on all alternate concepts that exist today, including the LM baseline. Task 2 team will have the freedom to use any, all, none or any combination of these concepts in their conceptual design.

The Cockpit Working Group will participate as evaluators for all three new tasks as well as evaluation of current ongoing TDS recommendations. The Crew Office and SR&QA input will be incorporated as part of the CWG evaluation.

LM and Task 1/2 teams have flexibility to challenge requirements that may be unnecessarily driving the design. These requirements challenges will be brought to the Steering Committee for discussion.

Vehicle analysis and loads generation shall include driving water impact and contingency land landing cases.

Development Guidelines

The following operability drivers and guidelines will be considered during 606C re-design efforts:

- Occupant protection system should not be dependent on direction of impact (no roll control).
- Develop design that fits within current Outer Mold Line (OML) configuration.
- High priority to leave Operators 1 and 2 in location of 606C (related to windows/Displays and Controls). Current window location allows for horizon viewing post LAS separation/manual steering. Retain design eye point.
- Develop design that fits within current Inner Mold Line (IML) configuration excluding current attenuation system (Pallet, seat, struts). Identification of proposed changes to IML items (subsystem component location, size, etc) are to be brought to the Steering Committee for evaluation.
- Develop design to meet Orion driving requirements (HSIR, SRD, CARD). Identification of changes to requirements will be brought to Steering Committee for evaluation. Not all requirements are completely off limits.
- Occupant protection system design should minimize impacts into the NHV, on-orbit operations and access to stowage/controls. If the proposed design requires reconfiguration for ingress/egress or to access stowage, the reconfiguration needs to be easy/quick with NO tools required.

Schedule/Expectations

DAC#2 Schedule (with important synch points) is as follows:

DAC#2 Duration (11/16/2007 - 6/9/2008), Road to 9/26/08 PDR Board

A 11/16 DAC#2	Image: A matrix of the system Image: A matrix of the system 1/22 1/25 1/29 2/4 E C C S R I P E C C C C B P B B	2/29< Steering > 3/7 E < Committee> L S R <& CPCB > V Y B < Status > L N 2 C	Reassess nom land?	6/9 6/30 SS Reviews 8/1 F E I R N B)/26 Orion PDR
	Evaluate 606C	➡ Model/Trade Options		Select Option: Dev&Test	

1st Third of DAC#2 (11/16/07-1/22/08)

- Orion Vehicle Engineering & Integration Working Group (OVEIWG)
 - Spacecraft redesign options/recommendations will be reviewed by OVEIWG at discreet points during DAC#2 to help ensure an integrated technical solution (e.g. mass allocations).
 - Prior to 1/18 CICP, OVEIWG will review the 20 TDSs coming to 1/22/08 Architecture ERB including each of the Integrated Landing Strategy and Entry/Post Landing TDSs.
 - See Appendix D for a summary of TDS work coming to 1/22/08 ERB
- CEV Integration Control Panel (CICP)
 - Meets every Friday beginning at 9 am CST start (Building 17/1066), Chair: NASA/John Curry, Co-Chair: LM/Brian Cuthbert.
 - Friday, 1/11/08 and 1/18/08 CICP (prior to 1/22/08 ERB), Expectations are as follows:
 - Curry/Cuthbert (Piatek/Brown) will brief stakeholders regarding overall plans for working Landing Strategy during DAC#2
 - CAWG Lead/Jim Geffre will summarize status recommendations for the 20 TDSs coming to 1/22/08 ERB (see Apprendix D - 1/22 TDS Summary)
 - TDS and Task Leads will out-brief Landing Strategy related TDS/Task plans/work so that all stakeholders have a clear understanding of the big picture.
 - OVEIWG (with CAWG/MPCP), Ops IWG/CWG, AV&SW IPT, and Reqts IWG will provide recommendations related to Orion 606C Requirements and Technical Baseline in support of 1/22/08 Architecture ERB
- 1/22/08 LM Architecture Engineering Review Board (ERB)
 - LM Outbrief of DAC#2 Architecture related TDSs (20 total including Landing Strategy)
 - 606C Vehicle performance during nominal water and contingency land landings based upon environments data identified per Level 2 guidance memo or this Tiger Team assumptions memo.

- Emphasis will be on the ISS (Block 1) variant of the Orion spacecraft (6 person de-conditioned crew returning to Earth and landing on water and land).
- 1/25 CICP:
 - Emphasis of reusability will be as it applies to water land landing reuse will be addressed after March 7, 2008.
 - CICP Chair/John Curry will formally poll major stakeholders on GO FORWARD plan and recommendations regarding occupant protection areas of emphasis.
 - Summarize results from 1/22/08 ERB
 - Karl Pohl/CJ Johnson (with Langley LADDERS team) out-brief on recommended areas of emphasis for external vehicle redesign trades (e.g. Heat shield configurations, retros, airbags, parachutes, etc.)
 - Angela Hart outbrief on Entry and Post Landing Recovery TDSs and associated areas of emphasis planned for the remainder of DAC#2
 - CB/Mike Gernhardt outbrief on Task #1 Modeling status and areas of emphasis for providing an updated model to Tiger Team in time for 3/7/08 design downselect.
 - NESC/Joe Pellicciotti outbrief on Task #2 recommended areas of emphasis for occupant protection within cockpit habitable volume.
 - Barry Bryant outbrief on Task #3 status and forward work plans.
- 1/29 CEV Project Control Board: The Orion Project control board, called the CEV Project Control Board (CPCB), meets every Tuesday at 9 am CST (17/1066).
 - CICP Chair/John Curry will status Mark Geyer and the rest of the Orion Project team regarding results of 1/22 Architecture ERB and recommendations from 1/25 CICP regarding areas of emphasis for occupant protection redesign teams.
 - Mr. Curry will also seek approval for recommendations/status to bring forward to SECB.
- Week of 2/4: CxSECB Summary Outbrief (Level 2 sync opportunity)
 - Mr. Curry will status CxSECB regarding current vehicle capabilities as well as forward work recommendations for analyses and potential design modifications which may be assessed during the remainder of DAC#2.
 - Road to 3/7/08 Level 2 Program Sync TIM will also be summarized (Orion plan as well as Ares plans including Thrust Oscillation status)

2nd Third of DAC#2 (2/4 - 3/7/2008)

- Details will be defined during January Tiger Team Steering Committee meeting. Current high level plans are as follows:
 - NASA refine work on 606C capabilities, evaluate structural modifications to improve design (e.g. Retros, Passive Heat Shield)
 - Evaluate parachute designs to allow passive roll control; evaluate structural impacts to eliminate roll control dependency
 - NESC begin to refine Occupant Protection options (No Roll Control, ability to protect crew during tip-over, etc.)
- ERB Outbrief (Mid-Term ERB) on 2/29/2008
- Level 2 Synch TIM on 3/7/2008
 - Summarize 606C vehicle capabilities/limitations (Landings as well as Post Landing Recovery)
 - Summarize Seat/Attenuation Design Downselect to primary option
 - Status Level 2 regarding Orion Project PDR milestones.
 - Development/testing plan for new design
 - Receive CLV status regarding Thrust Oscillation impacts on Orion
 - Discuss Path to Nominal Land Landing (if feasible), which includes reusability and impacts to Life Cycle Cost (LCC)

Last Third of DAC#2 (3/7 - 6/9/2008)

- Manufacture Test Article, Drops Tests to validate design
- NASA Team re-fine structural re-design modifications
- Incorporate Thrust Oscillation effects, validate design works for this
- Evaluate ability to move back to nominal land landing from CLL Re-design. NOTE: Only spend effort on this if folks agree this is worth pursuing at 3/7/2008 TIM

The post 6/9/2008 ERB schedule depends heavily upon agreements made at CxPO TIM and if Orion Project schedule drivers are still 8/1/2008 DAC#2 Final ERB and 9/26/2008 PDR Board.

DAC#2 Landing Event Assumptions

Vehicle Configuration Assumptions

- Orion vehicle design (for initial analysis purposes to support 1/22 Architecture ERB) will be 606C vehicle (6 person configuration) which was approved at the 11/16 DAC#2 POD ERB with the following exception:
 - The heat shield shall remain mated to the vehicle for the landing event. Design options should consider a rigidly attached heat shield with attenuation through the 6 hard points or an unlocked heat shield to allow for more energy attenuation through the heat shield. Analysis should proceed with evaluation of both configurations a hard attach at the 6 hard points or with the ability to attenuate through the hard point(s).
- The DAC#2 (ISS Mission) mass properties constraint is to keep Crew Module (CM) Effective Payload Mass (EPM) below 21,000 lbs including Mass Growth Allowance (MGA) and MR
- For comparison purposes, the 606C Seat and Pallet masses are assumed to be as follows (per OVEIWG/Wayne Jermstad):
 - ISS 6 person pallet (includes frame and struts) 511 lb

- o Lunar 4 person pallet (includes frame and struts) 449 lb
- Seats (operators) 53.2 lb each
- Seats (non-operators) 36.3 lb each
- NOTE: All numbers include Mass Growth Allowance (MGA).
- EVA Suit design configuration is ESR#2 (waist ring eliminated).

Contingency Land Landing (CLL) Assumptions

- Crew Health: For analysis purposes, assume CLL occurs with a de-conditioned long duration crew. H&M ITA ACTION: Provide definition of "Deconditioned crew".
- Contingency Land Landing assessments should utilize the Brinkley Low as default criteria for 1/22 analyses. Post 1/22 analyses will use TBD criteria (NOTE: vehicle will continue to be assessed against Brinkley Low unless a modified criteria is approved by Tiger Team).
- Environmental Conditions and Vehicle Assumptions (Design To drivers for 1/22 assessment):

Horizontal Velocity:	0 to 60 fps in 10 fps increments	
Land Slope:	0 and 5 deg	
Soil:	Hard Packed and Dry Loose Sand per NASA Langley LS/Dyna soil	
	models. Hard Packed representative to hardest dry lake bed conditions.	
	Dry Loose Sand representative to beach conditions.	

Notes:

- 1. Not necessary to assess obstructions, ditches, or ground fires that might result from an abort
- 2. Initial Orion Project contingency land landing evaluations planned (goal is to have analyses available by 1/22 ERB):
 - a. Contingency Land Landing conditions above with nominal vehicle performance (i.e. 3-chutes, 28 deg hang angle, and roll control available with a 6-person configuration).
 - b. Contingency Land Landing conditions above with the following "roll control fail" cases:
 - i. ±90 deg (side impact), and 180 deg (head first)
- 3. Future evaluations may be run for single chute out or additional failure cases depending upon 1/22 architecture status ERB results/recommendations.
- 4. CxPO may also request additional analyses for additional Land Slope/soil/wind speed cases based upon 1/22 ERB results and week of 1/28 or 2/4 SECB Outbrief.
- 5. Vehicle will likely Tip Over at some point during the 0-60 FPS analyses. When this occurs:
 - i. Define what conditions causes it to tip over and provide rationale for the cause of the tip-over (e.g. wind and other environmental constraints and vehicle conditions like 28 deg hang angle) so mitigation methods may be investigated.
 - ii. Design-Goal is to develop a solution that protects the crew in the event the vehicle tips over regardless of tip-over mitigation plan.

- 6. It is desirable to assess a single run where struts may have bottomed out during the run and re-run that same configuration with a different stroke profile such that it doesn't bottom out (so that we can compare results).
- 7. As part of CLL TDS, Orion to review Level 2 environment conditions and work with Level 2 to define proper engineering models/requirements for landing environment and definition of realistic bounding conditions.

Appendix A: Task #1: Modeling Injury Protection

LEAD: CB/Mike Gernhardt

TEAM: NESC, industry and academic experts, key stakeholders (Crew Office, JSC Engineering, JSC Space Medicine and Human Engineering)

STEERING COMMITTEE POC: Nancy Currie, Ph.D.

TASK DESCRIPTION:

Determine appropriate methods for modeling and prediction of potential crew injuries. Activities include conducting data mining of injury databases (NASACAR, CIREN, military, etc); assessment of impact simulation and injury prediction methodologies. Recommend techniques / changes to requirements appropriate for Orion including stated limitations.

- Data Mining of Injury Databases
 - Review automobile, NASCAR, military, and other applicable occupant injury databases
- Review limitations and capabilities of analysis tools/techniques
 - Review impact simulation techniques appropriate for Orion
 - Review occupant injury prediction techniques
- Recommend analysis techniques and models appropriate for use by Orion
- Recommend appropriate human mass properties data for use by Orion
- Provide the necessary mass properties data
- Recommend appropriate impact acceleration/occupant injury criteria
- Given driving load cases, assess current 606C baseline and alternate designs and recommend potential modifications, if required

CORE TEAM MEMBERS

PRODUCTS

- Periodic Briefings to Steering Committee/CEV Project Office
- Given driving load cases (from Orion Project Office)
 - Analyze Orion baseline design (606C) as well as alternate configurations developed by Task #2 team
- Final report to include:
 - Recommendations for standard analysis techniques and models
 - Recommendations for impact acceleration/occupant injury criteria appropriate for use by Orion

Appendix B: Task #2: Seat/Attenuation Design Assessment

LEAD: J. Pellicciotti / NESC

TEAM: NESC (Independent) Team

SUPPORT: Key stake-holders (Crew, CEV Cockpit Working Group, Orion Sys Mgrs, EVA Project Office)

STEERING COMMITTEE POC: Julie Kramer

TASK DESCRIPTION:

Independently develop alternate crew seat/attenuation scheme to increase robustness and minimize risk of crew injuries. Activities include assessment of current and existing alternate designs and investigation of alternative seat/ attenuation systems. Final output will be EDU drawings which will be provided to Task #3 group.

- Assess current CEV 606C and alternative design configurations for occupant protection
 - Review configurations developed to date
 - Develop configuration with emphasis on improving robustness and maximizing crew protection from acceleration forces given requirements / goals. "Improving robustness" defined as:
 - Ability to land without active roll control
 - Ability to withstand/protect against unanticipated conditions such as postlanding tip-over and tumble of the spacecraft
 - Design should be supported by Task #1 analysis
- Recommend occupant protection improvements (if any) by March 7th, 2008 (CxPO Sync TIM)
- Provide Engineering Development Unit (EDU) design to be manufactured by Task #3 Group

The team will consist of vehicle designers and analysts capable of performing design, layout, and performance assessments of alternate seat/attenuation designs. Team will include a physical ergonomist to provide appropriate crew mass and anthropometric data for population range design considerations as well as harness and restraint design. An initial review of concepts explored to date will be provided, but should not limit this task. Due to task scheduling constraints, engineering judgment may be used to allow team to focus on most applicable concepts.

The following crew injury susceptibility metrics should be used as factors in evaluating crew injury susceptibility:

• G-Loads, Rate of Onset, Time Duration

<u>SCHEDULE</u>

This task is necessary to be performed within the ODAC-2 cycle. The outcome of this assessment may change the design and/or analysis approach to occupant protection, and any changes are necessary before Orion PDR to inform design. Even though Orion PDR is currently schedule for September of 2008, the Task#2 team is expected to provide a primary design option to the Steering Committee in time to support the 3/7/2008 Level 2 Sync TIM. Once a primary option(s) are selected during this TIM, Task#2 team will redirect scope to manufacturing and development of a test article which provides proof of concept re-design validation. Scheduled completion of fabrication drawings with associated analyses is planned for May, 2008.

PRODUCTS

- Concept Design Layouts
- Test Hardware Part Drawings
- Alternate Design Evaluation Report

Appendix C: Task #3: Seat Attenuation System Development Testing

LEAD: Barry Bryant, R. Keith Johnson / LaRC TEAM: LaDDERS ADP SUPPORT: Key stake-holders (Task #1 & #2 leads, Orion system managers) STEERING COMMITTEE POC: Chris Johnson

TASK DESCRIPTION:

Conduct early development testing of the seat attenuation system with the following objectives:

- Provide early identification of system-level performance issues
- Assess modeling techniques and develop future analysis strategies
- Explore testing methods and develop future testing approaches to meet system verification objectives

In addition to evaluating the Orion 606C seat attenuation system, alternate configurations from Task #2 may also be tested as permitted by the available schedule and resources.

The basic objectives of the test would be to assess the performance of the crew impact attenuation system. This should be done at the basic level, isolating the unknowns from the test and evaluating the impact attenuation system on its own. This would allow test procedures to be developed, allow basic performance issues to be identified, and allow model correlation of the crew impact attenuation system. The test setup could be very basic. A simple structure could interface the pallet/strut system, and the impacts could be performed on land given that loading profiles would be representative of nominal and off-nominal conditions for both water and land landings.

SCHEDULE

This task is necessary to be performed within the ODAC-2 cycle. The outcome of this assessment may change the design and/or analysis approach to occupant protection, and any changes are necessary before Orion PDR to inform design. The Orion PDR is currently scheduled for September of 2008. Detailed schedules and milestones are currently being derived by the Orion Project Office and the LaDDERS ADP.

PRODUCTS:

Products provided and performed are described as follows:

- Orion Project
 - Provide Orion seat attenuation system strut hardware
 - Provide Orion seat pallet information (stiffness)
 - Provide Orion seat design information
 - \circ $\;$ Provide recommendations for evaluation test matrix and instrumentation
 - Provide recommendations for an alternate seat/attenuation concept
- Task #3 Leads
 - Build test platform for drop testing

- Build seat pallet with necessary 606C properties
- Build seat with necessary 606C properties
- Build additional interfacing hardware as necessary
- Build alternate seat/attenuation hardware from Task #2
- Perform drop tests according to test matrix
- Record instrumentation data and provide to Orion

Appendix D: 1/22 Architecture ERB TDS Status

Identifier	Title
CEVLM-04-1041***	ED-03 Entry, Descent, & Landing Preliminary DAC-2 Trajectories
CEVLM-21-1038	Heatshield Material Selection
CEVLM-21-1049	CEV Stability at Drogue Release Trade Study
CEVLM-21-1050*	Contingency Land Landing Analysis
CEVLM-01-1028*	Use of Existing Heritage OMS Assets on Orion
CEVLM-01-1026	Science Instrument Module Definition
CEVLM-01-1023**	ESM hinge configuration options
CEVLM-11-1043	Reuse Analysis for Water Landing and Land Landing
CEVLM-11-1041	Emergency Scenario Capabilities Development

TDSs with System Impacts, planned complete at 1/22/08 ERB

- * Additional Coordination Required to Assess 1/22 Completion Risk
- ** Evaluating whether this analysis is still required. The initial mass savings potential has been determined to be negligible.
- *** This analysis is merely a data drop of the preliminary trajectories at the 1/22 ERB. The trajectories will be refined over the course of DAC-2, but other trades/analyses can use this data for preliminary assessments.
- x Completed

TDSs Scheduled for update at 1/22 – focus on system level impacts

13. SUPPLEMENTARY NOTES		
14. ABSTRACT		
Dr. Nancy J. Currie, of the NASA Engineering and Safety Center (NESC), Chief Engineer at Johnson Space Center (JSC), requested an assessment of the Crew Exploration Vehicle (CEV) occupant protection as a result of issues identified by the Constellation Program and Orion Project. The NESC, in collaboration with the Human Research Program (HRP), investigated new methods associated with occupant protection for the Crew Exploration Vehicle (CEV), known as Orion. The primary objective of this assessment was to investigate new methods associated with occupant protection for the CEV, known as Orion, that would ensure the design provided minimal risk to the crew during nominal and contingency landings in an acceptable set of environmental and spacecraft failure conditions. This documents contains the Appendices to the main NESC assessment report. NASA/TM-2013-217380, "Application of the Brinkley Dynamic Response Criterion to Spacecraft Transient Dynamic Events." supercedes this document.
