GUIDE TO THE SUBJECT INDEXES FOR SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS

Introduction

This revision of the *Guide to the Subject Indexes for STAR* contains a listing of subject terms and cross references for use with the indexes to *Scientific and Technical Aerospace Reports (STAR)*, *Classified Scientific and Technical Aerospace Reports (CSTAR)*, *Aerospace Medicine and Biology (NASA SP-7011)*, and *International Aerospace Abstracts (IAA)*. It is published to enable persons searching the literature to use the subject indexes efficiently and rapidly and supersedes the *Guide to the Subject Indexes for STAR (NASA SP-7016, Rev. 2)*, published in June, 1965 and all previous editions.

The subject terms in this publication are arranged alphabetically and supplemented with cross-references which are intended to serve as directions to enable a user to modify, enlarge, or narrow his search in accordance with his specific interests. Four types of cross references are used:

1. "See" ("S") is used to relate broad concepts, too general to be useful index terms, to the specific terms used in the Index. For example:

ATTENUATION

S ACOUSTIC ATTENUATION
S MICROWAVE ATTENUATION
S RADIO ATTENUATION

"S" is also used to indicate which of a pair of synonyms has been used in this Index. For example:

COLUMBIUM

S NIOBIUM

2. "See also" ("SA") directs a search from a general to a specific term for postings under the specific term that are not repeated under the general heading. For example:

HEAT

SA ENTROPY
SA SOLAR HEAT
SA SPECIFIC HEAT

tells a searcher that postings under SPECIFIC HEAT are different from those under HEAT.

"SA" is also used to relate associated concepts usually having different groups of postings. For example:

PLASMA PHYSICS

SA CYCLOTRON RESONANCE
SA MAGNETOHYDRODYNAMICS
SA NUCLEAR PHYSICS

tells a searcher that, while these terms are related in subject matter, postings under each term are different.

3. "See From" ("SF") is used as the inverse of the "See" reference to indicate the synonym or broad term under which the "See" reference is shown. For example:

ACOUSTIC ATTENUATION
SF ATTENUATION

4. "See Also From" ("SAF") is used as the inverse of the "See Also" reference to indicate the associated concept or general term from which the "See Also" reference is made. For example:

MAGNETOHYDRODYNAMICS
SAF PLASMA PHYSICS

The listing of subject terms in current issues of *STAR*, *CSTAR*, *Aerospace Medicine and Biology*, and *IAA* may differ from the listing here because of the rapidly changing terminology.

Suggestions for the improvement of this publication are welcomed. Information regarding its publication and availability may be obtained from the National Aeronautics and Space Administration, Scientific and Technical Information Division, Code USS, Washington, D.C. 20546.
