**NASA CONTRACT LISTINGS OF PUBLICATIONS
UNDER THE BEHAVIORAL BIOLOGY PROGRAM**

compiled by

**L. A. Kulp, Frances Hong, and
Sheila Rollins**

of the

**Biological Sciences Communication Project
The George Washington University**

work performed under NASA contract
NSR 09 010 027

FEBRUARY 1967

**C. W. Shilling, M.D.
Director, BSCP**

PREFACE

This report lists publications resulting from research supported, at least in part, by the Behavioral Biology Branch of the National Aeronautics and Space Administration's Bioscience Program Division. A few publications, however, predate the establishment of this office but are included because they resulted from efforts which were subsequently subsumed under this program branch. Each project, indexed alphabetically according to principle investigator, reveals the published activity of each contractual endeavor. All of the more than 400 citations contained herein were provided in answer to a letter requesting such information from the principle investigator of the various grants and contracts monitored by this office.

Research programs involving large expenditures of both effort and funding must be subjected to periodic evaluation in order to identify the current state of the art for the respective field and to reveal the direction that such organized activities are taking. By this means, areas of critical need are recognized and remedied, and areas of increasingly limited interest are given appropriate attention. There are various methods for evaluating such programs only one of which is by the quantity of publications ensuing from a given activity or group of related activities. While in itself it is an inaccurate means for appraising either effort or accomplishment, combined with other factors it provides a useful measuring device. Submission of this report is made to provide some assistance in the constructive appraisal of the National Aeronautics and Space Administration's research activities in the field of behavioral science.

Leslie A. Kulp, Ph.D.
Senior Research Scientist
