ABSTRACT AND KEY WORDS LIST

ABSTRACT

The improved Lunar Orbiter state vector solutions, when projected ahead using a simplified lunar gravitational model, show characteristic residual (calculated minus observed) doppler patterns. These patterns are presented as plots of residuals vs. time for all data arcs processed in the photo site accuracy analysis contract.

KEY WORDS

Lunar Orbiter

Orbit Determination

Residuals

1.0 INTRODUCTION

1.1 PURPOSE

The purpose of this document is to present plots of doppler residuals from the L.O. photo phase data arcs, obtained by using the production state vectors and projecting forward with a simplified lunar gravitational model.

1.2 SCOPE

This document is part of the final report documentation for the"Lunar Orbiter Photo Site Accuracy Analysis" contract, NAS1-7954, Task A. The entire report follows the document numbering system indicated on page v.

2.0 DISCUSSION

The state vectors obtained for improved photo support data were generated using orbit determination procedures which included solutions for a set of higher-order spherical harmonics. This was done to obtain a superior fit to the tracking data, thereby getting small residuals (actual minus calculated doppler). To demonstrate the variation of residuals on a simpler basis, residuals were later calculated based on projection of the solved state vectors, but using a simplified triaxial lunar gravitational model:

$$J20 = 2.073 \times 10^{-4}$$

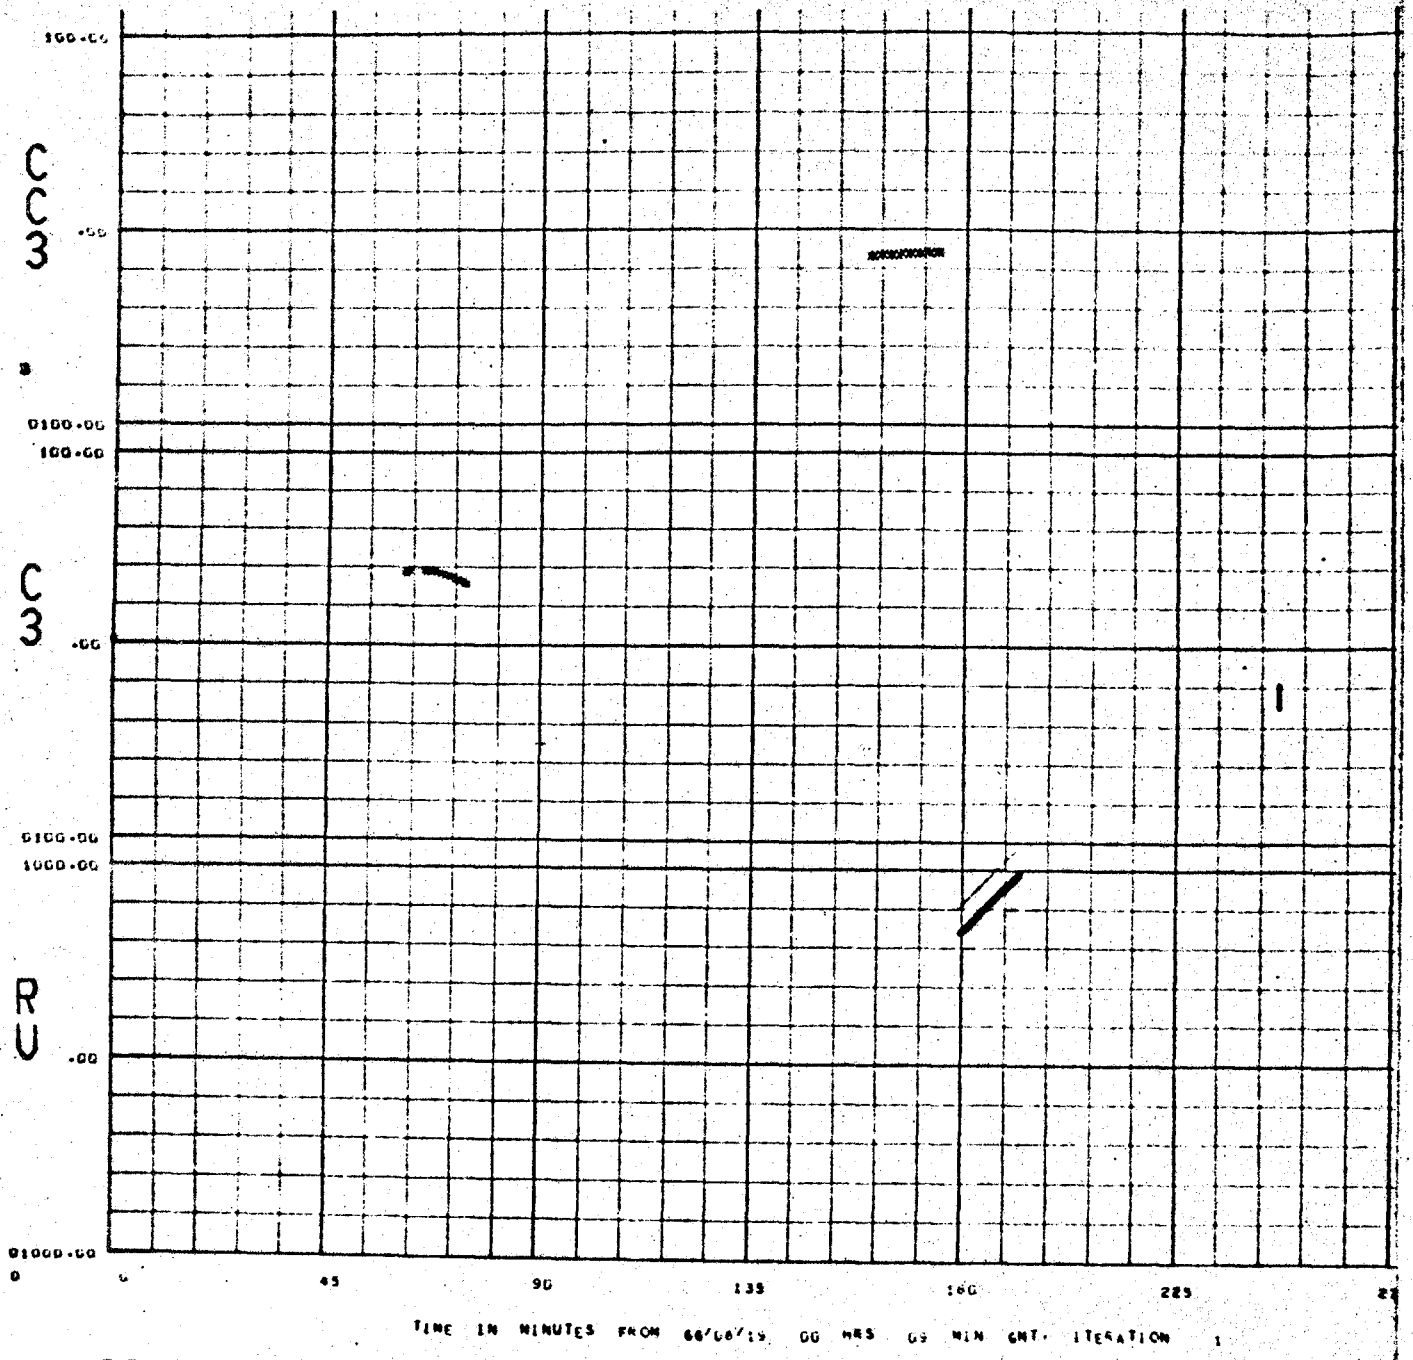

$$C22 = 0.203 \times 10^{-4}$$

The residuals, plotted vs. time, are presented in the following pages.
