SUMMARY

The results of pressure distribution tests conducted in the Langley Unitary Plan wind tunnel are presented without analysis. The data were obtained for three sets of cruciform aft-tail control surfaces on a wingless missile model at Mach numbers of 1.60, 2.36, and 3.70 for angles of attack from -4° to 20° , model roll angles from 0° to 90° , and tail deflections of 0° and -15° . The test Reynolds number used was 6.6×10^6 per meter.

Volume I presents the pressure distributions for a trapezoidal tail; volume II, for a clipped delta tail; and volume III, for a cranked tail.

INTRODUCTION

Theoretical aerodynamicists are continually seeking consistent and accurate experimental data as an aid in the development and evaluation of computational methods. This study was made to provide a complete set of pressure distribution data on three sets of cruciform aft-tail control surfaces for a wingless missile model.

The investigation was conducted in the Langley Unitary Plan wind tunnel at Mach numbers of 1.60, 2.36, and 3.70 at a Reynolds number per meter of 6.6×10^6 . The angle of attack was varied from -4° to 20° , model roll angle was varied from 0° to 90° in 22.5° increments, and tail deflections were 0° to -15° . The model consisted of a body of revolution with interchangeable aft-tail control surfaces. Three sets of model tails with identical root chords and span lengths were used. The pressures were measured on two adjacent tail surfaces (tails 1 and 2) using 91 pressure orifices per tail surface. The results are presented in plotted and tabular form.

SYMBOLS

b exposed tail span, cm

c_p pressure coefficient, $\frac{p_l - p_\infty}{q_\infty}$ (c_p on tables and plots)

c tail local chord, cm

M free-stream Mach number

p_l local pressure, Pa

p_∞ free-stream static pressure, Pa

q_∞	free-stream dynamic pressure, Pa
x	longitudinal distance measured from local chord leading edge, cm
x/c	fraction of local tail chord (see fig. 1)
y	lateral distance measured from root chord, cm
y/b	fraction of exposed tail span (see fig. 1)
α	angle of attack, deg
δ	pitch control deflection (negative with leading edge down; without subscripts, refers to all tails; with subscripts, only to those tails indicated), deg
ϕ	model roll angle, positive clockwise when viewed from rear ($\phi = 0^\circ$ when tail no. 1 is in lower vertical position, see fig. 1), deg

Abbreviations:

L.S.	lower surface (see fig. 1)
U.S.	upper surface (see fig. 1)

APPARATUS AND TESTS

Tunnel

The tests were conducted in both the low and high Mach number test sections of the Langley Unitary Plan wind tunnel which is a variable-pressure, continuous-flow facility. The asymmetric sliding-block nozzles lead to the test sections and permit a continuous variation in Mach number from about 1.5 to 2.9 in the low Mach number test section and from about 2.3 to 4.7 in the high Mach number test section.

Model

The configuration consisted of a simple wingless aft-tail cruciform control missile model with three sets of interchangeable tail surfaces. The pressure tubes were integrally cast into the tail surfaces to permit a greater number of more closely spaced pressure orifices (91 per tail surface). Details of the model and pressure orifice locations are given in figures 1 and 2. The upper- and lower-surface orifices were serviced by the same pressure tube, and thus required the taping of one surface while the other surface was being

tested. The missile model was sting mounted from the rear on the main support system of the tunnel.

Test Conditions

Tests were conducted at the following test conditions:

Mach number	Stagnation temperature, K	Stagnation pressure, kPa	Reynolds number, m^{-1}
1.60	339	54.6	6.6×10^6
2.36	339	75.7	6.6
3.70	339	152.7	6.6

The dew-point temperature measured at stagnation pressures was maintained below 239 K to assure negligible condensation effects. In order to assure a turbulent boundary layer, all tests were conducted with a boundary-layer transition strip on the body 3.05 cm aft of the nose. At a Mach number of 1.60, the transition strip consisted of a 0.16-cm-wide strip of sprinkled No. 60 sand. For the other two Mach numbers, the strip was composed of single-spaced No. 40 sand.

Measurements

The angles of attack have been corrected for tunnel-flow misalignment. Pressures were measured by six scanning valves. All pressure coefficients were referenced to free-stream conditions. The accuracy of the scanning-valve system is within 1 percent of the gage range. When expressed as pressure coefficients C_p , 1 percent of the gage range is 0.030 at Mach 1.60, 0.016 at Mach 2.36, and 0.024 at Mach 3.70.

PRESENTATION OF RESULTS

Due to the large volume of data and for the convenience of the reader, the data are presented as three volumes as follows:

- Volume I Trapezodial tail (planform A)
- Volume II Clipped delta tail (planform B)
- Volume III Cranked tail (planform C)

The pressure coefficients are given in tables I to XXIV, and, to aid the reader, an index of tables follows:

Table	M	ϕ , deg	$\delta_{1,3}$, deg	$\delta_{2,4}$, deg
I	1.60	0	0	0
II		22.5		
III		45		
IV		67.5

Reproduced by NTIS
National Technical Information Service
U.S. Department of Commerce
Springfield, VA 22161

This report was printed specifically for your order from our collection of more than 2 million technical reports.

NTIS does not permit return of items for credit or refund. A replacement will be provided if an error is made in filling your order, if the item was received in damaged condition, or if the item is defective.

For economy and efficiency, NTIS does not maintain stock of its vast collection of technical reports. Rather, most documents are printed for each order. Your copy is the best possible reproduction available from our master archive. If you have any questions concerning this document or any order you placed with NTIS, please call our Customer Services Department at (703)487-4660.

Always think of NTIS when you want:

- Access to the technical, scientific, and engineering results generated by the ongoing multibillion dollar R&D program of the U.S. Government.
- R&D results from Japan, West Germany, Great Britain, and some 20 other countries, most of it reported in English.

NTIS also operates two centers that can provide you with valuable information:

- The Federal Computer Products Center - offers software and datafiles produced by Federal agencies.
- The Center for the Utilization of Federal Technology - gives you access to the best of Federal technologies and laboratory resources.

For more information about NTIS, send for our FREE *NTIS Products and Services Catalog* which describes how you can access this U.S. and foreign Government technology. Call (703)487-4650 or send this sheet to NTIS, U.S. Department of Commerce, Springfield, VA 22161. Ask for catalog, PR-827.
