Independent Orbiter Assessment  
Assessment of the EPD&C/EPG FMEA/CIL

## 1.0 EXECUTIVE SUMMARY

The McDonnell Douglas Astronautics Company (MDAC) was selected in June 1986 to perform an Independent Orbiter Assessment (IOA) of the Failure Modes and Effects Analysis (FMEA) and Critical Items List (CIL). Direction was given by the STS Orbiter and GFE Projects Office to perform the hardware analysis using the instructions and ground rules defined in NSTS 22206, Instructions for Preparation of FMEA and CIL, 10 October 1986.

The IOA effort first completed an analysis of the Electrical Power Distribution and Control/Electrical Power Generation (EPD&C/EPG) hardware, generating draft failure modes and potential critical items. To preserve independence, this analysis was accomplished without reliance upon the results contained within the NASA FMEA/CIL documentation. The IOA results were then compared to the NASA FMEA/CIL baseline with proposed Post 51-L updates included. A resolution of each discrepancy from the comparison was provided through additional analysis as required. This report documents the results of that comparison for the Orbiter EPD&C/EPG hardware.

The IOA product for the EPD&C/EPG analysis consisted of two hundred sixty three failure mode "worksheets" that resulted in forty-two potential critical items being identified. Comparison was made to the NASA baseline (as of 1 January 1988) which consisted of 211 FMEAS and 47 CIL items. The comparison determined if there were any results which had been found by the IOA but were not in the NASA baseline. This comparison produced agreement on all FMEAS. Figure 1 presents a comparison of the Post 51-L baseline, with the IOA recommended baseline, and any issues.

The differences between the NASA and IOA FMEA/CIL totals are due to the process used to assign the failure modes. The IOA analysis assigned failure modes at the component level whereas, the NASA assigned failure modes to the circuit level. After the comparison, it was determined there were no discrepancies that were not already identified by NASA.

# EPD&C / EPG ASSESSMENT OVERVIEW

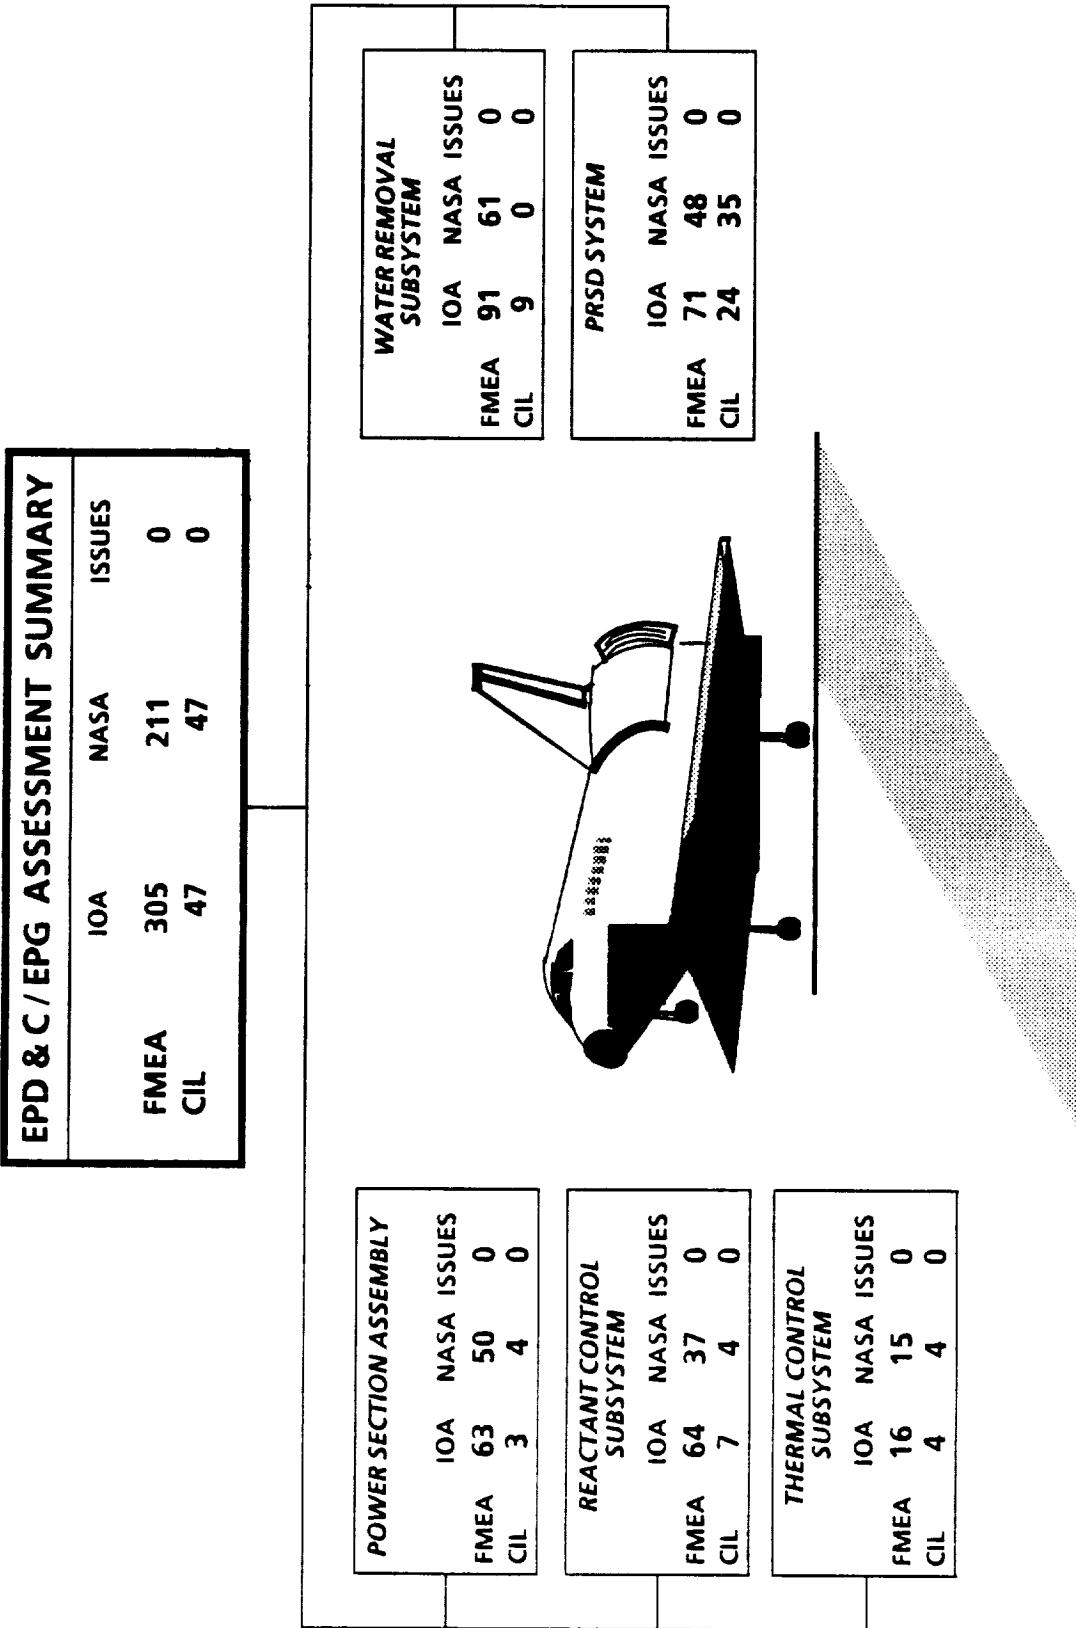

Figure 1 - EPD&C/EPG FMEA/CIL ASSESSMENT OVERVIEW

## **2.0 INTRODUCTION**

### **2.1 Purpose**

The 51-L Challenger accident prompted the NASA to readdress safety policies, concepts, and rationale being used in the National Space Transportation System (NSTS). The NSTS Office has undertaken the task of reevaluating the FMEA/CIL for the Space Shuttle design. The MDAC is providing an independent assessment of the proposed Post 51-L Orbiter FMEA/CIL for completeness and technical accuracy.

### **2.2 Scope**

The scope of the independent FMEA/CIL assessment activity encompasses those Shuttle Orbiter subsystems and GFE hardware identified in the Space Shuttle Independent FMEA/CIL Assessment Contractor Statement of Work. Each subsystem analysis addresses hardware, functions, internal and external interfaces, and operational requirements for all mission phases.

### **2.3 Analysis Approach**

The independent analysis approach is a top-down analysis utilizing as-built drawings to breakdown the respective subsystem into components and low-level hardware items. Each hardware item is evaluated for failure mode, effects, and criticality. These data are documented in the respective subsystem analysis report, and are used to assess the proposed Post 51-L NASA and Prime Contractor FMEA/CIL. The IOA analysis approach is summarized in the following Steps 1.0 through 3.0. Step 4.0 summarizes the assessment of the NASA and Prime Contractor FMEA/CIL which is documented in this report.

#### **Step 1.0 Subsystem Familiarization**

- 1.1 Define subsystem functions
- 1.2 Define subsystem components
- 1.3 Define subsystem specific ground rules and assumptions

#### **Step 2.0 Define subsystem analysis diagram**

- 2.1 Define subsystem
- 2.2 Define major assemblies
- 2.3 Develop detailed subsystem representations

#### **Step 3.0 Failure events definition**

- 3.1 Construct matrix of failure modes
- 3.2 Document IOA analysis results

- Step 4.0 Compare IOA analysis data to NASA FMEA/CIL**
- 4.1 Resolve differences**
  - 4.2 Review in-house**
  - 4.3 Document assessment issues**
  - 4.4 Forward findings to Project Manager**

#### **2.4 Ground Rules and Assumptions**

The ground rules and assumptions used in the IOA are defined in Appendix B.

### **3.0 SUBSYSTEM DESCRIPTION**

#### **3.1 Design and Function**

The EPD&C/EPG consists of hardware that is required for the command and control of electrical power generation, FC operation, and cryogenic reactant distribution and control in the Orbiter. The EPD&C/EPG consists of the following divisions:

1. The Power Section Assembly (PSA) utilizes the cryogenic reactants to produce the necessary electrical power for the Orbiter. By-products of this reaction include excess water and heat. The PSA is composed of cell plates, pressure plates, heater/insulator plates, and cell voltage harnesses. Each stack contains ninety-six cell plates grouped into three substacks connected in series. Analog data outputs from each cell are transmitted to the Orbiter via a cell performance monitor.
2. The Reactant Control Subsystem (RCS) heats the cryogenic reactants from the PRSDS to an acceptable temperature for use in the PSA. The RCS delivers reactants and controls the pressure within the cell plates. Purging of the inert gases from the reactant lines is provided along with the circulation of hydrogen for excess water removal from the PSA. The RCS is composed of preheaters, reactant regulator, hydrogen pump-separator, condenser, and reactant purge/vent lines.
3. The Thermal Control System (TCS) controls operating temperatures and electrolyte concentration in the PSA. Waste heat is used to condense water vapor. Heat is also transferred to the preheaters for the reactant gases and rejected via the Orbiter vehicle cooling system.
4. The Water Removal Subsystem (WRS) removes product water from the PSA during normal operation. The excess water is produced from water vapor which is converted to a liquid by the condenser. The WRS delivers the water to the Orbiter vehicle potable water storage system or to the water relief line. The WRS consists of the condenser, hydrogen pump-separator, water trap, water discharge line, and water purity sensor.
5. The Power Reactant Storage and Distribution System (PRSDS) stores the cryogenic reactants (hydrogen and oxygen) for use in the production of electrical power in the fuel cells. The PRSDS can be configured to include up to five tanks of each of the reactant gases.

Each tank contains redundant heating elements and sensors to maintain the gases at the proper pressure. The PRSDS also provides gases to the Environmental Control and Life Support System (ECLSS).

### **3.2 Interfaces and Locations**

The elements of the EPD&C/EPG are installed in the mid-body of the Orbiter vehicle beneath the payload bay liner. Each of the three fuel cells are located in the forward part of the bay, with FCP 1 on the left-hand side, with FCP 2 and FCP 3 located forward and aft, respectively on the right-hand side. Each of the PRSDS cryogenic reactant storage tanks are located along the outer edges of the payload bay under the liner. Cryogenic reactants (oxygen and hydrogen) are transferred on demand to the FCP and oxygen is transported directly to the ECLSS. Crew command and control is achieved via switches, circuit breakers, or meters located in the Orbiter cabin. Product water from the PSA is transported to the ECLSS for storage and waste heat is rejected to the cooling system. Three-phase AC electrical power is received from the Orbiter by the FCP to power the coolant pump, hydrogen pump-separator, and the water purity sensor. DC power generated by the FCP is distributed by the EPD&C. Reference Figure 5.

### **3.3 Hierarchy**

Figure 2 illustrates the hierarchy of the EPD&C/EPG hardware and the corresponding subcomponents. Figures 3 through 6 comprise the detailed system representation.

#### 4.0 ASSESSMENT RESULTS

The IOA analysis of the EPD&C/EPG hardware initially generated two hundred sixty three failure mode worksheets and identified sixty Potential Critical Items (PCIs) before starting the assessment process. In order to facilitate the comparison, forty-two additional failure mode analysis worksheets were generated. These analysis results were compared to the proposed NASA Post 51-L baseline of 211 FMEAs and 47 CIL items, which was generated using the NSTS 22206 FMEA/CIL instructions. Upon completion of the assessment, all of the 211 FMEAs were in agreement. The difference in the total number of FMEAs between IOA and NASA is due to the analysis level used to assign the failure modes.

A summary of the quantity of NASA FMEAs assessed, versus the recommended IOA baseline, and any issues identified is presented in Table I.

Table I Summary of IOA FMEA Assessment			
Component	NASA	IOA	Issues
ALL	211	305	0

A summary of the quantity of NASA CIL items assessed, versus the recommended IOA baseline, and any issues identified is presented in Table II.

Table II Summary of IOA CIL Assessment			
Component	NASA	IOA	Issues
ALL	47	47	0

Table III presents a summary of IOA recommended failure criticalities for the EPD&C/FCP subsystem for the Post 51-L FMEA baseline.

Table III Summary of IOA Recommended Failure Criticalities						
Criticality:	1/1	2/1R	2/2	3/1R	3/2R	3/3
Number :	4	44	0	110	26	121
						TOTAL
						305

Table IV presents a summary of the IOA recommended CIL items for the EPD&C/FCP subsystem for the Post 51-L baseline.

Table IV Summary of IOA Recommended Critical Items							
Criticality:	1/1	2/1R	2/2	3/1R	3/2R	3/3	TOTAL
Number :	4	33	0	5	3	3	47

Appendix C presents the detailed assessment worksheets for each failure mode identified and assessed.

Appendix D highlights the NASA Critical Items and corresponding IOA worksheet ID.

Appendix E contains new IOA analysis worksheets that cover failure modes that were not included in the original analysis. These worksheets were added in order to make a comparison with the NASA FMEAs on these failure modes.

Appendix F provides a cross reference between the NASA FMEA and corresponding IOA worksheet(s). IOA recommendations are also summarized.

The scheme for assigning IOA assessment (Appendix C) and analysis (Appendix E) worksheet numbers is shown in Table V.

Table V IOA Worksheet Numbers	
Component	IOA ID Number
1. PSA	2000 TO 2052, 2283X, 2285X TO 2288X
2. RCS	2053 TO 2117, 2280X
3. TCS	2118 TO 2131, 2207
4. WRS	2132 TO 2206, 2289X TO 2302X
5. PRSDS	2221 TO 2278, 2310X TO 2315X, 2352X TO 2353X

The five categories are discussed in the following sections along with issues, and the recommendations for the Post 51-L FMEA/CIL.

#### 4.1 ASSESSMENT RESULTS - POWER SECTION ASSEMBLY (PSA)

The seven components included in this category are diodes, event indicators (EI), hybrid driver controllers (HDC), meters, resistors, signal conditioners (SC), and switches. A summary of the quantity of NASA FMEAs assessed for the Power Section Assembly versus the recommended baseline, and any issues identified is presented in Table VI.

TABLE VI POWER SECTION ASSEMBLY (PSA) Summary of IOA FMEA Assessment			
Component	NASA	IOA	Issues
1. DIODES	4	8	0
2. EI	7	7	0
3. HDC	4	4	0
4. METER	1	2	0
5. RESISTOR	14	17	0
6. SC	9	11	0
7. SWITCH	11	14	0
TOTAL	50	63	0

The comparison made between the NASA baseline and the IOA product for the Power Section Assembly resulted in no issues. The thirteen additional IOA FMEAs are the results of the level of analysis. In some cases, IOA's analysis were written at the component level whereas the NASA FMEAs were written at the circuit level. This difference in analysis level resulted in the difference in the total FMEAs defined but due to the criticalities assigned there were no issues.

A summary of the quantity of NASA CILs assessed for the Power Section Assembly (PSA) versus the recommended IOA baseline, and any issues identified is presented in Table VII.

TABLE VII POWER SECTION ASSEMBLY Summary of IOA CIL Assessment			
Component	NASA	IOA	Issues
1. DIODES	0	0	0
2. EI	0	0	0
3. HDC	1	0	0
4. METER	0	0	0
5. RESISTOR	1	1	0
6. SC	0	0	0
7. SWITCH	2	2	0
TOTAL	4	3	0

Table VIII presents a summary of the IOA recommended failure criticalities for the Power Section Assembly for the Post 51-L FMEA baseline.

TABLE VIII POWER SECTION ASSEMBLY Summary of IOA Recommended Failure Criticalities							
Criticality:	1/1	2/1R	2/2	3/1R	3/2R	3/3	TOTAL
1. DIODES	0	0	0	1	0	7	8
2. EI	0	0	0	1	0	6	7
3. HDC	0	0	0	3	0	1	4
4. METER	0	0	0	0	0	2	2
5. RESISTOR	0	1	0	4	0	12	17
6. SC	0	0	0	0	0	11	11
7. SWITCH	0	1	0	7	1	5	14
<b>TOTAL</b>	<b>0</b>	<b>2</b>	<b>0</b>	<b>16</b>	<b>1</b>	<b>44</b>	<b>63</b>

Table IX presents a summary of the IOA recommended CIL items for the Power Section Assembly (PSA) for the Post 51-L baseline.

TABLE IX POWER SECTION ASSEMBLY Summary of IOA Recommended Critical Items							
Criticality:	1/1	2/1R	2/2	3/1R	3/2R	3/3	TOTAL
1. DIODES	0	0	0	0	0	0	0
2. EI	0	0	0	0	0	0	0
3. HDC	0	0	0	0	0	0	0
4. METER	0	0	0	0	0	0	0
5. RESISTOR	0	1	0	0	0	0	1
6. SC	0	0	0	0	0	0	0
6. SWITCH	0	1	0	1	0	0	2
<b>TOTAL</b>	<b>0</b>	<b>2</b>	<b>0</b>	<b>1</b>	<b>0</b>	<b>0</b>	<b>3</b>

#### 4.2 ASSESSMENT RESULTS - REACTANT CONTROL SUBSYSTEM (RCS)

The seven components included in this category are circuit breakers (CB), diodes, fuses, hybrid driver controllers (HDC), remote power controllers (RPC), resistors, switches. A summary of the quantity of NASA FMEAs assessed for the Reactant Control Subsystem the recommended baseline, and any issues identified is presented in Table X.

TABLE X      REACTANT CONTROL SUBSYSTEM (RCS) Summary of IOA FMEA Assessment			
Component	NASA	IOA	Issues
1. CB	2	4	0
2. DIODES	6	6	0
3. FUSE	5	5	0
4. HDC	4	12	0
5. RPC	4	8	0
6. RESISTOR	10	23	0
7. SWITCH	6	6	0
<b>TOTAL</b>	<b>37</b>	<b>64</b>	<b>0</b>

The comparison made between the NASA baseline and the IOA product for the Reactant Control Subsystem resulted in no issues. The twenty-seven additional IOA FMEAs are the results of the level of analysis. In some cases, IOA's analysis were written at the component level whereas the NASA FMEAs were written at the circuit level. This difference in analysis level resulted in the difference in the total FMEAs defined but due to the criticalities assigned there were no issues.

A summary of the quantity of NASA CILs assessed for the Reactant Control Subsystem (RCS) versus the recommended IOA baseline, and any issues identified is presented in Table XI.

TABLE XI      REACTANT CONTROL SUBSYSTEM Summary of IOA CIL Assessment

#### 4.4 ASSESSMENT RESULTS - WATER REMOVAL SUBSYSTEM (WRS)

The seven components included in this category are diodes, fuses, hybrid driver controllers (HDC), reference junctions (RJ), resistors, switches, temperature controllers (TC). A summary of the quantity of NASA FMEAs assessed for the Water Removal Subsystem versus the recommended baseline, and any issues identified is presented in Table XVIII.

TABLE XVIII    WATER REMOVAL SUBSYSTEM (WRS) Summary of IOA FMEA Assessment			
Component	NASA	IOA	Issues
1. DIODES	8	8	0

#### 4.5 ASSESSMENT RESULTS - POWER REACTANTS STORAGE AND DISTRIBUTION SYSTEM

The ten components included in this category are current level detectors (CLD), diodes, hybrid driver controllers (HDC), remote power controllers (RPC), resistors, switches, valves. A summary of the quantity of NASA FMEAs assessed for the Power Reactants Storage and Distribution System versus the recommended baseline, and any issues identified is presented in Table XXII.

TABLE XXII POWER REACTANTS STORAGE AND DISTRIBUTION SYSTEM Summary of IOA FMEA Assessment			
Component	NASA	IOA	Issues
1. CLD	2	2	0
2. DIODE	4	4	0
3. HDC	8	8	0
4. RPC	4	4	0
5. RESISTOR	1	2	0
6. SWITCH	10	18	0
7. VALVE	19	33	0
TOTAL	48	71	0

The comparison made between the NASA baseline and the IOA product for the Power Reactants Storage and Distribution System (PRSDS) resulted in no issues. The twenty-three additional IOA FMEAS are the results of the level of analysis. In some cases, IOA's analysis were written at the component level whereas the NASA FMEAs were written at the circuit level. This difference in analysis level resulted in the difference in the total FMEAs defined but due to the criticalities assigned there were no issues.

A summary of the quantity of NASA CILs assessed for the Power Reactants Storage and Distribution System versus the recommended IOA baseline, and any issues identified is presented in Table XXIII.

TABLE XXIII POWER REACTANTS STORAGE AND DISTRIBUTION SYSTEM Summary of IOA CIL Assessment			
Component	NASA	IOA	Issues
1. CLD	0	0	0
2. DIODE	2	2	0
3. HDC	4	5	0
4. RPC	2	1	0
5. RESISTOR	1	1	0
6. SWITCH	13	15	0
7. VALVE	13	0	0
TOTAL	35	24	0

Table XXIV presents a summary of the IOA recommended failure criticalities for the Power Reactants Storage and Distribution for the Post 51-L FMEA baseline.

TABLE XXIV POWER REACTANTS STORAGE AND DISTRIBUTION SYSTEM Summary of IOA Recommended Failure Criticalities							
Criticality:	1/1	2/1R	2/2	3/1R	3/2R	3/3	TOTAL
1. CLD	0	0	0	2	0	0	2
2. DIODE	0	2	0	0	0	2	4
3. HDC	0	5	0	3	0	0	8
4. RPC	0	0	0	4	0	0	4
5. RESISTOR	0	1	0	0	0	1	2
6. SWITCH	4	11	0	3	0	0	18
7. VALVE	0	0	0	29	0	4	33
<b>TOTAL</b>	<b>4</b>	<b>19</b>	<b>0</b>	<b>41</b>	<b>0</b>	<b>7</b>	<b>71</b>

Table XXV presents a summary of the IOA recommended CIL items for the Power Reactants Storage and Distribution System for the Post 51-L baseline.

TABLE XXV POWER REACTANTS STORAGE AND DISTRIBUTION SYSTEM Summary of IOA Recommended Critical Items							
Criticality:	1/1	2/1R	2/2	3/1R	3/2R	3/3	TOTAL
1. CLD	0	0	0	0	0	0	0
2. DIODE	0	2	0	0	0	0	2
3. HDC	0	5	0	0	0	0	5

## APPENDIX A ACRONYMS

AOA	- Abort Once Around
ATO	- Abort To Orbit
CB	- Circuit Breaker
CIL	- Critical Items List
CLD	- Current Level Detector
CRIT	- Criticality
C&W	- Caution and Warning
ECLSS	- Environmental Control and Life Support System
EI	- Event Indicator
EPD&C	- Electrical Power Distribution and Control
EPG	- Electrical Power Generation
FCP	- Fuel Cell Powerplant
FC	- Fuel Cell
FMEA	- Failure Modes and Effects Analysis
FSSR	- Flight System Software Requirement
GAS	- Get Away Special
GPC	- General Purpose Computer
GSE	- Ground Support Equipment
HDC	- Hybrid Driver Controller
IOA	- Independent Orbiter Assessment
MDAC	- McDonnell Douglas Astronautics Company
MDM	- Multiplexer/Demultiplexer
NASA	- National Aeronautics and Space Administration
NA	- Not Applicable
NSTS	- National Space Transportation System
OF	- Operational Forward
OMRSD	- Operational Maintenance Requirements and Specifications Document
PCA	- Power Control Assembly
PCI	- Potential Critical Item
PLS	- Primary landing Site
PSA	- Power Section Assembly
PRCB	- Program Requirements Control Board
PRSDS	- Power Reactant Storage and Distribution System
RI	- Rockwell International
RCS	- Reactant Control Subsystem
RJ	- Reference Junction
RPC	- Remote Power Controller
RTLS	- Return To Landing Site
SC	- Signal Conditioner
STS	- Space Transportation System
TAL	- Transatlantic Abort Landing
TCS	- Thermal Control Subsystem
TC	- Temperature Controller
WRS	- Water Removal Subsystem

## **APPENDIX B**

### **DEFINITIONS, GROUND RULES, AND ASSUMPTIONS**

- B.1 Definitions**
- B.2 Project Level Ground Rules and Assumptions**
- B.3 Subsystem-Specific Ground Rules and Assumptions**

**APPENDIX B**  
**DEFINITIONS, GROUND RULES, AND ASSUMPTIONS**

**B.1 Definitions**

Definitions contained in NSTS 22206, Instructions For Preparation of FMEA/CIL, 10 October 1986, were used with the following amplifications and additions.

**INTACT ABORT DEFINITIONS:**

RTLS - begins at transition to OPS 6 and ends at transition to OPS 9, post-flight

TAL - begins at declaration of the abort and ends at transition to OPS 9, post-flight

AOA - begins at declaration of the abort and ends at transition to OPS 9, post-flight

ATO - begins at declaration of the abort and ends at transition to OPS 9, post-flight

CREDIBLE (CAUSE) - an event that can be predicted or expected in anticipated operational environmental conditions. Excludes an event where multiple failures must first occur to result in environmental extremes

CONTINGENCY CREW PROCEDURES - procedures that are utilized beyond the standard malfunction procedures, pocket checklists, and cue cards

EARLY MISSION TERMINATION - termination of onorbit phase prior to planned end of mission

EFFECTS/RATIONALE - description of the case which generated the highest criticality

HIGHEST CRITICALITY - the highest functional criticality determined in the phase-by-phase analysis

MAJOR MODE (MM) - major sub-mode of software operational sequence (OPS)

MC - Memory Configuration of Primary Avionics Software System (PASS)

MISSION - assigned performance of a specific Orbiter flight with payload/objective accomplishments including orbit phasing and altitude (excludes secondary payloads such as GAS cans, middeck P/L, etc.)

MULTIPLE ORDER FAILURE - describes the failure due to a single cause or event of all units which perform a necessary (critical) function

OFF-NOMINAL CREW PROCEDURES - procedures that are utilized beyond the standard malfunction procedures, pocket checklists, and cue cards

OPS - software operational sequence

PRIMARY MISSION OBJECTIVES - worst case primary mission objectives are equal to mission objectives

PHASE DEFINITIONS:

PRELAUNCH PHASE - begins at launch count-down Orbiter power-up and ends at moding to OPS Major Mode 102 (liftoff)

LIFTOFF MISSION PHASE - begins at SRB ignition (MM 102) and ends at transition out of OPS 1 (Synonymous with ASCENT)

ONORBIT PHASE - begins at transition to OPS 2 or OPS 8 and ends at transition out of OPS 2 or OPS 8

DEORBIT PHASE - begins at transition to OPS Major Mode 301 and ends at first main landing gear touchdown

LANDING/SAFING PHASE - begins at first main gear touchdown and ends with the completion of post-landing safing operations

**APPENDIX B**  
**DEFINITIONS, GROUND RULES, AND ASSUMPTIONS**

**B.2 IOA Project Level Ground Rules and Assumptions**

The philosophy embodied in NSTS 22206, Instructions for Preparation of FMEA/CIL, 10 October 1986, was employed with the following amplifications and additions.

1. The operational flight software is an accurate implementation of the Flight System Software Requirements (FSSRs).  
RATIONALE: Software verification is out-of-scope of this task.
2. After liftoff, any parameter which is monitored by system management (SM) or which drives any part of the Caution and Warning System (C&W) will support passage of Redundancy Screen B for its corresponding hardware item.  
RATIONALE: Analysis of on-board parameter availability and/or the actual monitoring by the crew is beyond the scope of this task.
3. Any data employed with flight software is assumed to be functional for the specific vehicle and specific mission being flown.  
RATIONALE: Mission data verification is out-of-scope of this task.
4. All hardware (including firmware) is manufactured and assembled to the design specifications/drawings.  
RATIONALE: Acceptance and verification testing is designed to detect and identify problems before the item is approved for use.
5. All Flight Data File crew procedures will be assumed performed as written, and will not include human error in their performance.  
RATIONALE: Failures caused by human operational error are out-of-scope of this task.

6. All hardware analyses will, as a minimum, be performed at the level of analysis existent within NASA/Prime Contractor Orbiter FMEA/CILs, and will be permitted to go to greater hardware detail levels but not lesser.

RATIONALE: Comparison of IOA analysis results with other analyses requires that both analyses be performed to a comparable level of detail.

7. Verification that a telemetry parameter is actually monitored during AOS by ground-based personnel is not required.

RATIONALE: Analysis of mission-dependent telemetry availability and/or the actual monitoring of applicable data by ground-based personnel is beyond the scope of this task.

8. The determination of criticalities per phase is based on the worst case effect of a failure for the phase being analyzed. The failure can occur in the phase being analyzed or in any previous phase, whichever produces the worst case effects for the phase of interest.

RATIONALE: Assigning phase criticalities ensures a thorough and complete analysis.

9. Analysis of wire harnesses, cables, and electrical connectors to determine if FMEAs are warranted will not be performed nor FMEAs assessed.

RATIONALE: Analysis was substantially complete prior to NSTS 22206 ground rule redirection.

10. Analysis of welds or brazed joints that cannot be inspected will not be performed nor FMEAs assessed.

RATIONALE: Analysis was substantially complete prior to NSTS 22206 ground rule redirection.

11. Emergency system or hardware will include burst discs and will exclude the EMU Secondary Oxygen Pack (SOP), pressure relief valves and the landing gear pyrotechnics.

RATIONALE: Clarify definition of emergency systems to ensure consistency throughout IOA project.

**APPENDIX B**  
**DEFINITIONS, GROUND RULES, AND ASSUMPTIONS**

**B.3 \*\*\*-Specific Ground Rules and Assumptions**

1. Component age life will not be considered in the analysis.

RATIONALE: Component age analysis is beyond the scope of this task.

2. An O2 cryo tank will be assumed lost if both heaters in one tank fail to function (i.e., neither heater will function with the delta current sensors enabled).

RATIONALE: Systems failure definition. Flight rule definition.

3. An H2 cryo tank will be assumed lost if neither heater in one tank will function.

RATIONALE: Systems failure definiton. Flight rule definition.

4. An impending loss of all cryo O2 or all cryo H2 tanks will be cause to exercise the highest-priority abort mode the loss/leak will allow.

RATIONALE: Flight rule definition.

5. Continue nominal ascent if 2/3/4 O2 (H2) tanks fail when flying 3/4/5.

Enter next PLS daily go/no-go if two O2 (H2) tanks fail during lift-off and on-orbit.

RATIONALE: Flight rules go/no-go criteria.

6. A fuel cell will be considered failed if the following conditions exist.

- a. Coolant pump or H2 pump/H2O separator is lost.
- b. Coolant pressure >75 (71.4) PSIA and increasing.
- c. Fuel cell unable to discharge water to the ECLSS H2O storage tanks or overboard via the fuel cell H2O relief system.
- d. Fuel cell reactant valve fails closed.
- e. Cannot be connected to a main bus.

- f. Fuel cell O2 reaction chambers cannot be purged.
  - g. Fuel cell end-cell heater failing on.
- 10. Loss of two fuel cells in the first stage of ascent is considered loss of life/vehicle.
  - RATIONALE: SRB loads are too high for one fuel cell to support. Voltage may go <25V which will shut down the GPC's.
- 11. Although the ECLSS product-water storage is a separate system from EPD&C/EPG, it will be considered as a failable redundant product-water relief line for purposes of the EPG functional criticality scenarios.
  - RATIONALE: This assumption violates general ground rule 2.3.2.d in NSTS 22206 but is essential for evaluating failures associated with the water relief line.
- 12. The start/sustaining heater on the left-hand FCP (FCP #1) is assumed to be disconnected. Thus, this FCP cannot be maintained operational at no-load, and will be considered shutdown if the load cannot be maintained at greater than 2 KW.
  - RATIONALE: Load needed to maintain operating temperature. RH FCP uses sustain heater to maintain temps at no-load.
- 13. For all "failed open" failure modes for valves which are normally open, redundancy screen B will be assumed failed.
  - RATIONALE: The failure is not detectable until the valve is required to be closed.
- 14. Five O2 and H2 tanks are being used as the baseline configuration under study.
  - RATIONALE: The configuration for all redundant components is being considered for this analysis.
- 15. Inadvertant Fuel Cell shutdown during RTLS and TAL abort is considered loss of crew/vehicle.
  - RATIONALE: Loss of FCP 1/Main Bus A is loss of OMS Engine Purge Capability (required for TAL) and Aft Compartment MPS Helium Purge capability (required for RTLS and TAL).

## APPENDIX C DETAILED ASSESSMENT

This section contains the IOA assessment worksheets generated during the assessment of this subsystem. The information on these worksheets facilitates the comparison of the NASA FMEA/CIL (Pre and Post 51-L) to the IOA detailed analysis worksheets included in Appendix E. Each of these worksheets identifies the NASA FMEA being assessed, corresponding MDAC Analysis Worksheet ID (Appendix E), hardware item, criticality, redundancy screens, and recommendations. For each failure mode, the highest assessed hardware and functional criticality is compared and discrepancies noted as "N" in the compare row under the column where the discrepancy occurred.

### LEGEND FOR IOA ASSESSMENT WORKSHEETS

---

#### Hardware Criticalities:

- 1 = Loss of life or vehicle
- 2 = Loss of mission or next failure of any redundant item (like or unlike) could cause loss of life/vehicle
- 3 = All others

#### Functional Criticalities:

- 1R = Redundant hardware items (like or unlike) all of which, if failed, could cause loss of life or vehicle
- 2R = Redundant hardware items (like or unlike) all of which, if failed, could cause loss of mission

#### Redundancy Screens A, B and C:

- P = Passed Screen
- F = Failed Screen
- NA = Not Applicable

#### NASA Data :

- Baseline = NASA FMEA/CIL
- New = Baseline with Proposed Post 51-L Changes

#### CIL Item :

- X = Included in CIL

#### Compare Row :

- N = Non compare for that column (deviation)

NASA	[ 3 /3 ]	[ ]	[ ]	[ ]	[ ] *
IOA	[ 3 /3 ]	[ ]	[ ]	[ ]	[ ]
COMPARE	[ / ]	[ ]	[ ]	[ ]	[ ]

RECOMMENDATIONS: (If different from NASA)

[ / ] [ ] [ ] [ ] [ ]  
(ADD/DELETE)

\* CIL RETENTION RATIONALE: (If applicable)

ADEQUATE [ ]  
INADEQUATE [ ]

**REMARKS:**

IOA CONCURS WITH NASA'S REEVALUATION. AN INTERNAL SHORT OF A FILM RESISTOR IS A NONCREDIBLE FAILURE. NASA HAS DELETED THIS FMEA.

**APPENDIX C**  
**ASSESSMENT WORKSHEET**

ASSESSMENT DATE: 1/08/87  
ASSESSMENT ID: EPD&C-2057  
NASA FMEA #: 05-6MA-2032-1

NASA DATA:  
BASELINE [ ]  
NEW [ X ]

SUBSYSTEM: EPD&C  
MDAC ID: 2057  
ITEM: SWITCH, FUEL CELL PURGE HEATER

LEAD ANALYST: J. PATTON

**ASSESSMENT:**

	CRITICALITY FLIGHT HDW/FUNC	REDUNDANCY SCREENS			CIL ITEM
		A	B	C	
NASA	[ 2 /2 ]	[ ]	[ ]	[ P ]	[ X ] *
IOA	[ 3 /1R ]	[ P ]	[ P ]	[ P ]	[ ]
COMPARE	[ N /N ]	[ N ]	[ N ]	[ N ]	[ N ]

**RECOMMENDATIONS:** (If different from NASA)

[ ] [ ] [ ] [ ] [ ]  
(ADD/DELETE)

\* CIL RETENTION RATIONALE: (If applicable)

ADEQUATE [ ]  
INADEQUATE [ ]

**REMARKS:**

IOA CONCURS WITH NASA's REEVALUATION.  
LOSS OF BOTH GPC AND MANUAL PURGE HEATER CAPABILITY. POSSIBLE  
LOSS OF MISSION OR CREW/VEHICLE WITH DEGRADATION OF FCP  
PERFORMANCE.

IOA [ 3 /1R ]	[ P ]	[ P ]	[ P ]	[ ]
COMPARE [ N / ]	[ ]	[ ]	[ ]	[ N ]

RECOMMENDATIONS: (If different from NASA)

[ / ] [ ] [ ] [ ] [ ]  
(ADD/DELETE)

\* CIL RETENTION RATIONALE: (If applicable)

ADEQUATE [ X ]  
INADEQUATE [ ]

**REMARKS:**

IOA CONCURS WITH NASA'S REEVALUATION.

**APPENDIX C**  
**ASSESSMENT WORKSHEET**

ASSESSMENT DATE: 2/18/87  
 ASSESSMENT ID: EPD&C-2289X  
 NASA FMEA #: 05-6MA-2307-1

NASA DATA:  
 BASELINE [ ]  
 NEW [ X ]

SUBSYSTEM: EPD&C  
 MDAC ID: 2289  
 ITEM: REFERENCE JUNCTION, H2O NOZZLE A CONTROLLER  
 LEAD ANALYST: J. PATTON

**ASSESSMENT:**

CRITICALITY FLIGHT HDW/FUNC	REDUNDANCY SCREENS			CIL ITEM
	A	B	C	
NASA [ 3 /3 ]	[ ]	[ NA ]	[ NA ]	[ ] *
IOA [ 3 /3 ]	[ ]	[ N ]	[ N ]	[ ]
COMPARE [ / ]	[ ]	[ ]	[ ]	[ ]

RECOMMENDATIONS: (If different from NASA)

[ / ] [ ] [ ] [ ] [ ]  
 (ADD/DELETE)

\* CIL RETENTION RATIONALE: (If applicable)

ADEQUATE [ ]  
 INADEQUATE [ . ]

REMARKS:  
 IOA CONCURS WITH NASA'S REEVALUATION. A FAILED LOW REFERENCE JUNCTION WILL CAUSE AN INCORRECT SIGNAL TO THE SIGNAL CONDITIONER. HEATERS WILL FAIL ON. HOWEVER TESTS AT ROCKWELL SHOWED THIS TO BE A 3/3 FAILURE.

05-6MB-2028-2	2314	SWITCH, O2 TANK 1-4 TEST/RESET CONTROL	SHORTS, IN "TEST" POSITION INADVERTENTLY CLOSES IN "TEST" POSITION

## APPENDIX E DETAILED ANALYSIS

This section contains the IOA analysis worksheets generated during the analysis of this subsystem. The information on these worksheets is intentionally similar to the NASA FMEA's. Each of these sheets identifies the hardware item being analyzed, and parent assembly, as well as the function. For each failure mode, the possible causes are outlined, and the assessed hardware and functional criticality for each mission phase is listed, as described in the NSTS 22206 Instructions for Preparation of FMEA and CIL, 10 October 1986. Finally, effects are entered at the bottom of each sheet, and the worst case criticality is entered at the top.

### LEGEND FOR IOA ANALYSIS WORKSHEETS

---

#### Hardware Criticalities:

- 1 = Loss of life or vehicle
- 2 = Loss of mission or next failure of any redundant item (like or unlike) could cause loss of life/vehicle
- 3 = All others

#### Functional Criticalities:

- 1R = Redundant hardware items (like or unlike) all of which, if failed, could cause loss of life or vehicle.
- 2R = Redundant hardware items (like or unlike) all of which, if failed, could cause loss of mission.

#### Redundancy Screen A:

- 1 = Is Checked Out PreFlight
- 2 = Is Capable of Check Out PreFlight
- 3 = Not Capable of Check Out PreFlight
- NA = Not Applicable

#### Redundancy Screens B and C:

- P = Passed Screen
- F = Failed Screen
- NA = Not Applicable

## APPENDIX F

### NASA FMEA TO IOA WORKSHEET CROSS REFERENCE/RECOMMENDATIONS

This section provides a cross reference between the NASA FMEA and corresponding IOA analysis worksheet(s) included in Appendix E. The Appendix F identifies: NASA FMEA Number, IOA Assessment Number, NASA criticality and redundancy screen data, and IOA recommendations.

#### Appendix F Legend

##### Code Definition

- 1    IOA issue.
- 2    IOA recommends generating a FMEA for the subject failure mode.
- 3    IOA concurs with NASA's reevaluation.
- 4    IOA recommends deleting the IOA failure mode.
