NASA WIRING PROGRAM-SURVEY OF NASA EXPERIENCES IN WIRING SYSTEM SAFETY

Mark W. Stavnes Sverdrup Technology, Inc. Lewis Research Center Group Brook Park, Ohio

N94-28700

NASA Wiring Program

Wiring System Technology

OBJECTIVE

To address safety and reliability issues of complete wiring systems.

PLANS

- Determine Wiring System Design Factors
- Investigate Circuit Protection Technologies
- Address Manufacturing and Maintenance
 Procedures

NASA Wiring Program

Wiring System Failure Survey

PURPOSE

Form a comprehensive view of wiring safety, not only including the insulation, but also taking into account the wiring system factors.

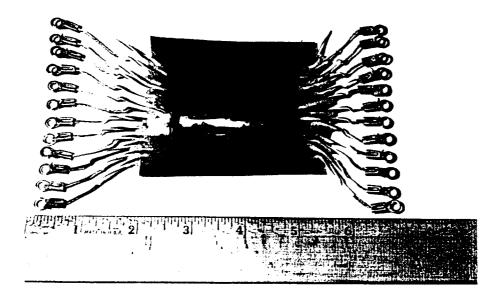

- Apollo 13 Review Board.
- Space Shuttle Program Office and Inspection Teams (NASA Johnson, NASA Kennedy, NASA Marshall, and contractors).
- NASA Payload Inspections (NASA Marshall).

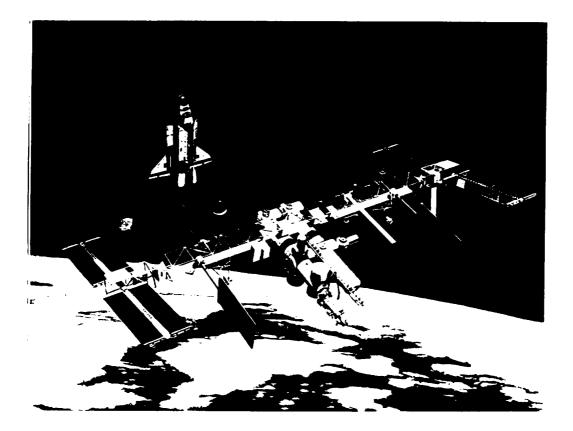

JUSTIFICATION

For failures such as arc tracking and others to happen, insulation degradation of some degree must have occured. The wiring system factors can often lead to degradation.

Overview of Space Missions with Wiring System Failures

Mission	Cause	Result
Gemini 8	Electrical Wiring Short	Shortened Mission - Near Loss of Crew
Apollo 204	Damaged Insulation, Electrical Spark, 100% O ₂	Fire, 3 Astronauts Lost
Apollo 13	Damaged Insulation/Short Circuit/Flawed Design	Oxygen Tank Explosion, Mission Incomplete
STS - 6	Abrasion of Insulation/Arc Tracking	Wire Insulation Pyrolysis 6 Conductors Melted
STS - 28	Damaged Insulation/Arc Tracking	Teleprinter Cable Insulation Pyrolysis
Magellan	Wrong Connection, Wiring Short	Wiring Insulation Pyrolysis - Ground Processing
Spacelab	Damaged Insulation/Arc Tracking	Wiring Insulation Pyrolysis During Maintenance
Delta 178/GOES-G	Mechanical or Electrochemical Insulation Damage	Loss of Vehicle
ESA - Olympus	Electrical Wiring Short	Loss of Solar Array

Electrical Wiring System Failures

Influenced by a Combination of Factors

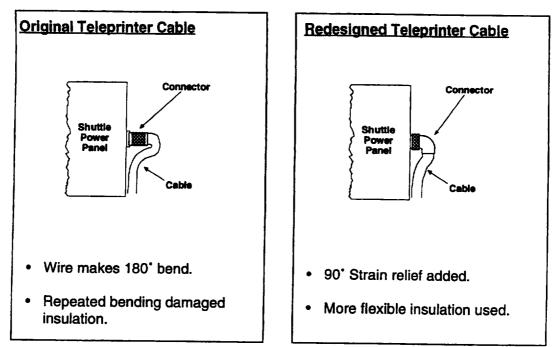

Wiring System Design Circuit Protection Technology Manufacturing/Maintenance Procedures Insulation Construction/Material

Electrical Wiring System Failures

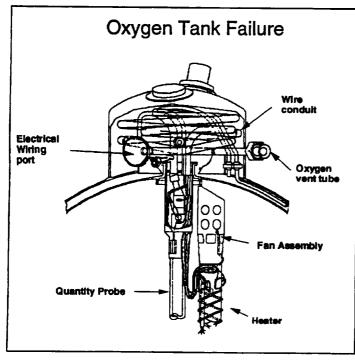

EXAMPLES

Wiring System Design

Space Shuttle (STS-28)

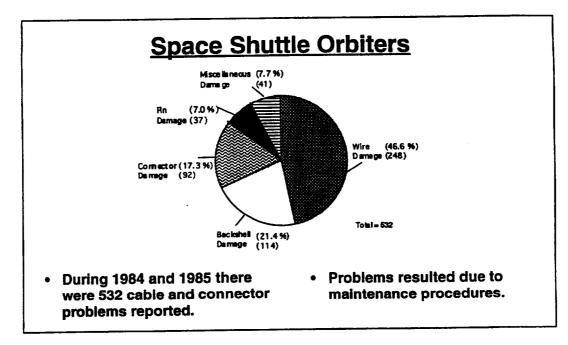

Wiring System Design Command and Service Module (Apollo 13)

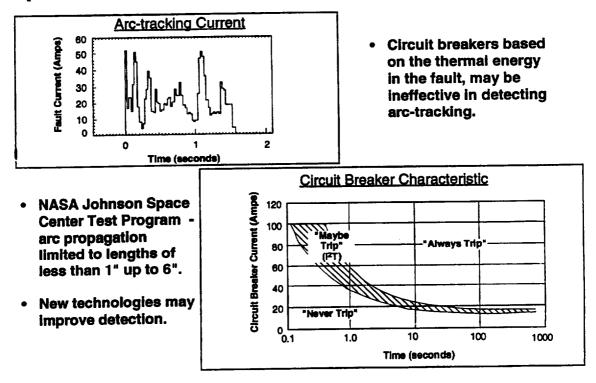

- Tanks contained ignition sources, combustible materials, and oxygen.
- Electrical wiring conduit constrictive.
- Wiring in close proximity to heaters.
- Pressure against sharp edges could lead to "Cold Flow".
- Failure modes were not detectable by normal post assembly testing.

Maintenance Procedures

Circuit Protection Technology Space Shuttle (STS-28)

Electrical Wiring System Improvements

EXAMPLES

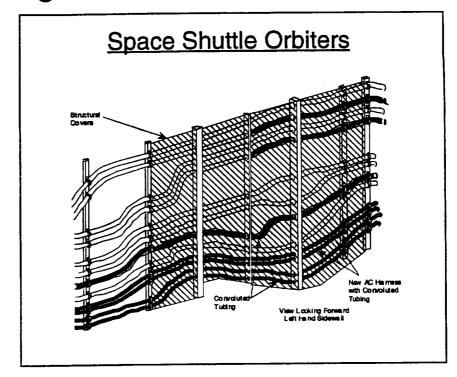

Wiring System Design Improvements

- Awareness of designers to fault mechanisms.
- Specify new insulation constructions and materials for use in NASA spacecraft.

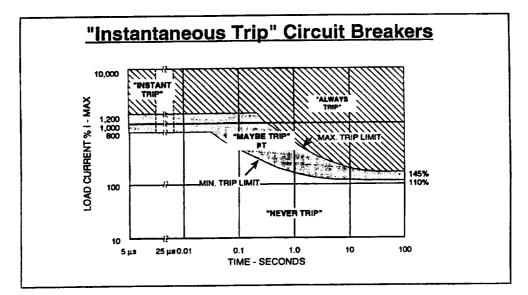

Manufacturing/Maintenance Procedure Improvements

- Improved training of personnel in "Wiring Awareness" techniques
- Routing/Protecting of wiring to avoid physical damage
- Improved quality control, including non-intrusive inspections
- Application of methods such as dynamic system engineering and total quality management.

Wiring Protection Measures

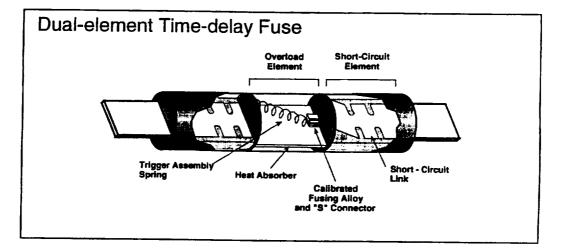

Advanced Protection Technology

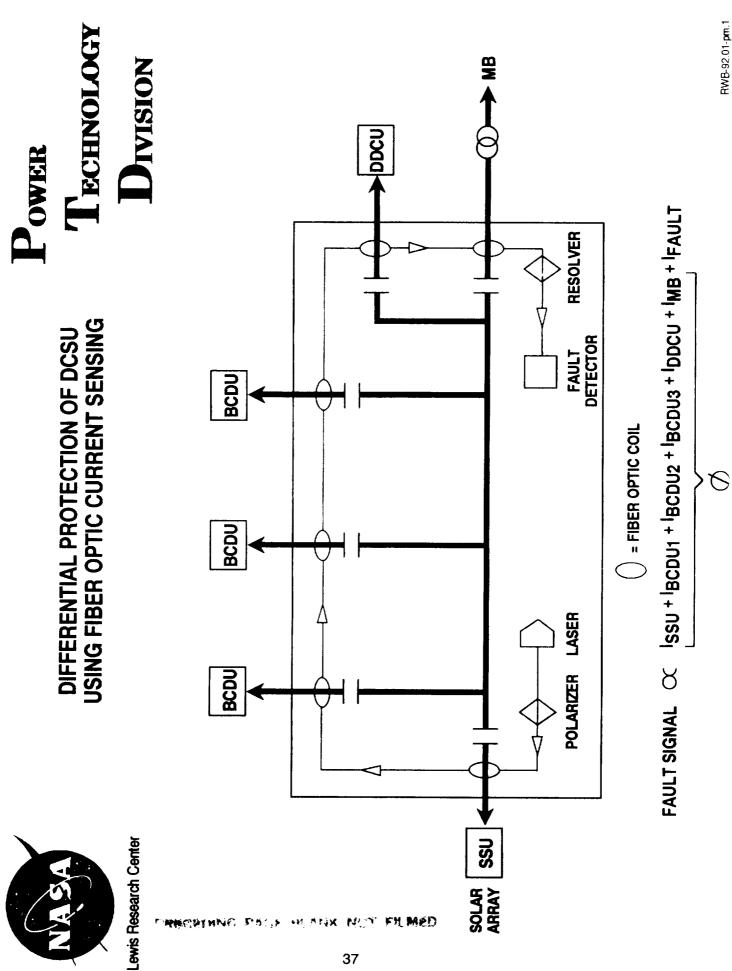

- Commercially Available Solid State Power Controllers (SSPC)
- Air Force 270 VDC SSPC Program

Advanced Protection Technology <u>"Smart" Fuses</u>

• Provide protection against low-level overload current or a short circuit current.

Advanced Protection Technology

"Intelligent" Fault Detection Methods

- Incipient fault detection via "footprint" or "signature"
- Knowledge based expert systems
- Neural network methods
- Fuzzy logic methods

Summary

- The wiring system is an important consideration in designing a spacecraft power system.
- Arc-tracking has recently been identified as a failure mode which may not be completely eliminated through the use of new wiring constructions/materials
- The total wiring system including insulation, system design, handling procedures, and circuit protection need to be considered further.
