

Terms and Conditions of Use

Receipt of this product indicates the customer's acceptance of the following terms and conditions:

- NASA does not grant exclusive use rights with respect to this product or the data contained therein.
- This product and the data contained therein are intended for the sole use of the customer. The data may not be installed on any system with public Internet access. The customer may not reproduce the data for distribution to any third party. Additional requests should be directed to the NASA Center for AeroSpace Information (help@sti.nasa.gov).
- The distribution of this product shall not be construed to constitute the grant of exclusive rights in the data contained therein or any form of license to the customer under a NASA or Government patent, patent application, or invention.
- The recipient will not assert any proprietary rights to any portion of the data, or attribute the data to any source other than NASA.
- With respect to data contained in this product, neither the U.S. Government, NASA, nor any of its employees or contractors make any representations or warranties, express, implied, or statutory, as to the validity, accuracy, completeness, or fitness for a particular purpose; nor assume any liability resulting from the use of such data and shall in no way be liable for any costs, expenses, claims, or demands arising out of the use of such data.

NASA STI Program ... in Profile

Since its founding, NASA has been dedicated to the advancement of aeronautics and space science. The NASA scientific and technical information (STI) program plays a key part in helping NASA maintain this important role.

The NASA STI program operates under the auspices of the Agency Chief Information Officer. It collects, organizes, provides for archiving, and disseminates NASA's STI. The NASA STI program provides access to the NASA Aeronautics and Space Database and its public interface, the NASA Technical Reports Server, thus providing one of the largest collections of aeronautical and space science STI in the world. Results are published in both non-NASA channels and by NASA in the NASA STI Report Series, which includes the following report types:

- **TECHNICAL PUBLICATION.** Reports of completed research or a major significant phase of research that present the results of NASA Programs and include extensive data or theoretical analysis. Includes compilations of significant scientific and technical data and information deemed to be of continuing reference value. NASA counterpart of peer-reviewed formal professional papers but has less stringent limitations on manuscript length and extent of graphic presentations.
- **TECHNICAL MEMORANDUM.** Scientific and technical findings that are preliminary or of specialized interest, e.g., quick release reports, working papers, and bibliographies that contain minimal annotation. Does not contain extensive analysis.
- **CONTRACTOR REPORT.** Scientific and technical findings by NASA-sponsored contractors and grantees.
- **CONFERENCE PUBLICATION.** Collected papers from scientific and technical conferences, symposia, seminars, or other meetings sponsored or co-sponsored by NASA.
- **SPECIAL PUBLICATION.** Scientific, technical, or historical information from NASA programs, projects, and missions, often concerned with subjects having substantial public interest.
- **TECHNICAL TRANSLATION.** English-language translations of foreign scientific and technical material pertinent to NASA's mission.

Specialized services also include organizing and publishing research results, distributing specialized research announcements and feeds, providing information desk and personal search support, and enabling data exchange services.

For more information about the NASA STI program, see the following:

Introduction

The *Rotated Term Display* is made available as a ready-reference tool to provide better access to the terms in *NASA Thesaurus, Volume 1 – Hierarchical Listing With Definitions*. The *Rotated Term Display* is essentially a key-word-in-context (KWIC) index that provides access to every word in postable terms and nonpostable USE references. Once the desired postable term has been located, the complete hierarchical information for that term should be consulted in the *Hierarchical Listing*.

USE References

Full cross references from nonpostable to postable terms are provided as part of the rotated display; for example, the USE reference leading to the term **launch vehicles** below:

carrier rockets
use launch vehicles

Stopwords

Certain words having questionable access value (such as *and, of, in, etc.*) are not included in the rotated term sort. For the same reason, purely numeric strings and non-alphanumeric characters are not included in the sort.

Glosses

A gloss is a word or words enclosed in parentheses at the end of a term. Glosses serve to disambiguate homographs (i.e., terms that are spelled alike but have different meanings), as in **outliers (landforms)** and **outliers (statistics)**. In addition, glosses may indicate the general scope of a term, for example **activity cycles (biology)**.

In the *Rotated Term Display*, parentheses are ignored in the basic sort so that gloss words are displayed with similar words, as in the following example:

geometrical theory of diffraction
analytic **geometry**
angles **(geometry)**
Bose **geometry**
chords **(geometry)**
variable **geometry** structures

Uppercase and Lowercase Authority

As with Volume 1, the *Rotated Term Display* provides upper/lowercase authority for all of its terms and cross references.

16. Abstract The <i>NASA Thesaurus</i> contains the authorized subject terms by which the documents in the NASA Aeronautics and Space Database are indexed and retrieved. The scope of this controlled vocabulary includes, not only aerospace engineering, but all supporting areas of engineering and physics, the natural space sciences (astronomy, astrophysics, planetary science), Earth sciences, and to some extent, the biological sciences. It contains over 18,300 subject terms and approximately 4,500 USE references. <i>Volume 2 – Rotated Term Display</i> , is made available as a ready-reference tool to provide better access to the terms in the <i>Hierarchical Listing With Definitions (Volume 1)</i> . The <i>Rotated Term Display</i> is essentially a key-word-in-context (KWIC) index that provides access to every word in postable terms and nonpostable USE references. It provides approximately 52,000 additional 'access points' to the thesaurus terminology.
