

Questions/Issues to be Discussed at the Snow/Ice Workshop

D. K. Hall
Hydrological Sciences Branch
NASA/Goddard Space Flight Center

How soon after acquisition will you need the snow/ice maps?

For the composite maps, which do you prefer, a composite of 7 days, 10 days, other, and why?

What would be the most useful MODIS at-launch and post-launch snow and ice products?

Specifically what would you use the products for?

What metadata should be included with the data products? For example, quality control data are metadata. Image i.d.# and lat/long are also metadata.

What improvements can you suggest to the snow and ice products as currently planned?
