

# U.S. Air Force Research Laboratory's Need for Flow Physics and Control with Applications Involving Aero-Optics and Weapon Bay Cavities

23 Aug 09

**Dr. Ryan Schmit**  
**Aerospace Engineer**  
**RBAI**  
**Air Force Research Laboratory**

# When the Calculations say it should work sometime the Physics doesn't listen

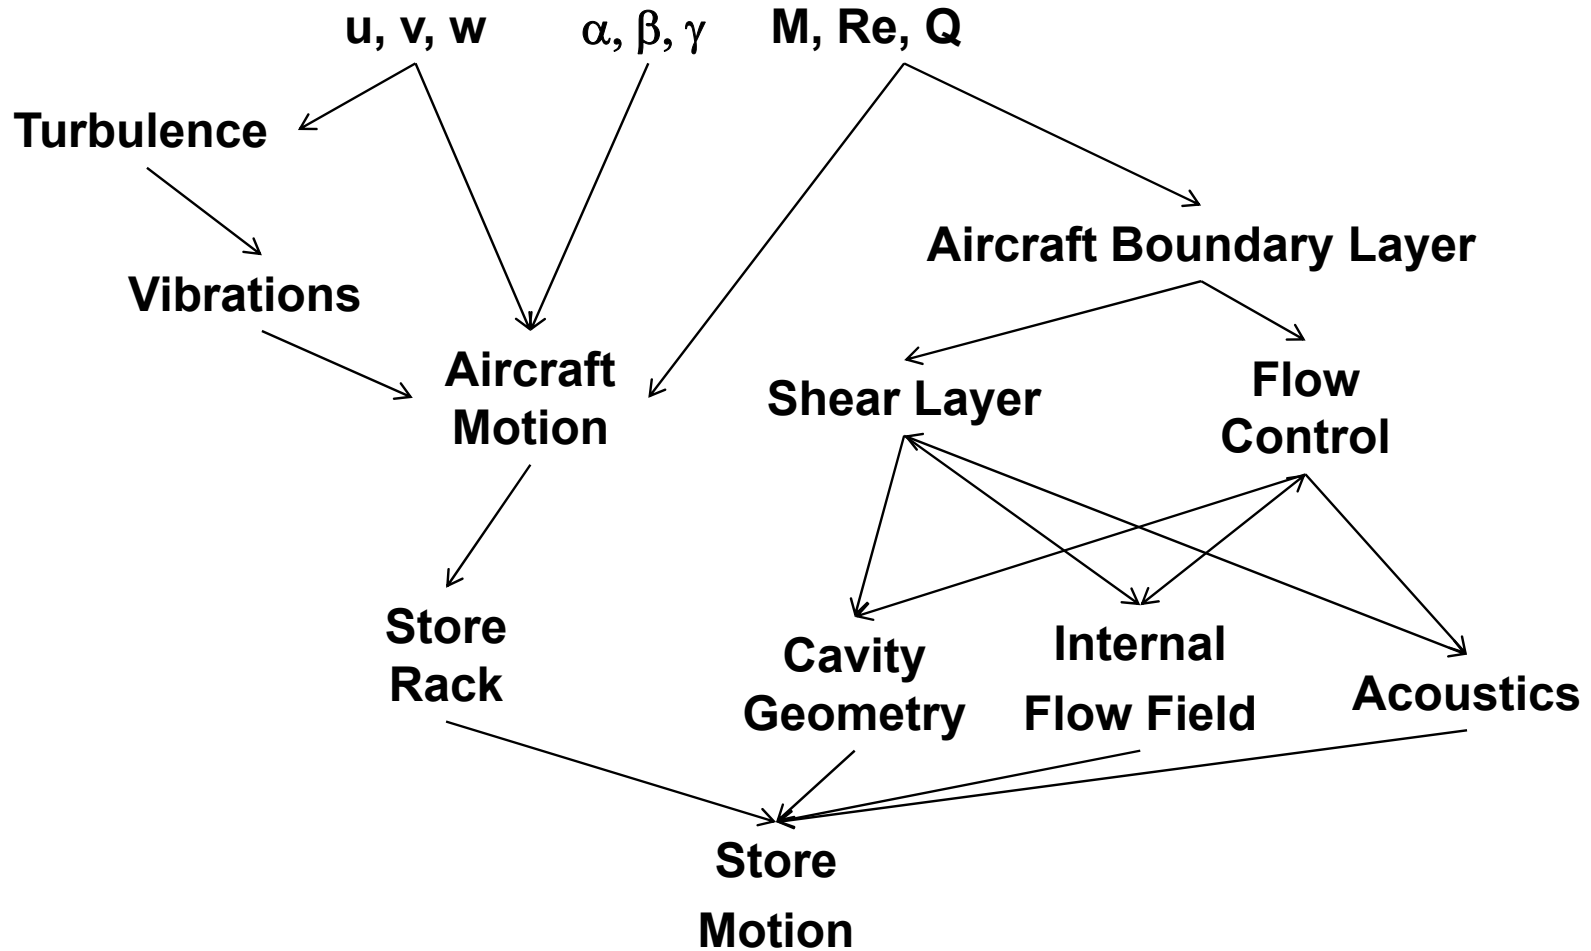

Approved for Public Release; distribution unlimited. Public Release Number 88ABW-2009-3664

filename: 03bomb-bay.mpg

# Consequence

- **Store Motion**
  - **Deploys Properly**
  - **Becomes unstable in flight**
  - **Strike aircraft**
- **Flow Physics**
  - **Damage to Aircraft, Equipment and Store**
    - **Mainly from Acoustic levels**

# Flow Control

- **Geometry Modification**
  - **Fences, Spoilers, Rod-in-Cross Flow**
- **Open Loop Control**
  - **Pulsed Blowing, Suction, Plasma**
- **Closed Loop Control**
  - **Feedback Flow Control with Pulsed Blowing**
  
- **You name it, it has been tried**
  - **The shot gun approach**

# Flow Physics

- **Trisonic Gasdynamic Facility**

- PIV
  - Seeding Methods
    - CO<sub>2</sub>
    - ViCount Fluid
  - Optic Nozzle Blocks
  - Seedless PIV
  - PSP

- **Advance Diagnostic Development Inside a Cavity (ADDICT)**

- Examine how flow control effects the flow physics at 10% scales cavity

Approved for Public Release; distribution unlimited. Public Release Number 88ABW-2009-3664

# Near Field Aero Optics Flow Control

Approved for Public Release; distribution unlimited. Public Release Number 88ABW-2009-3664

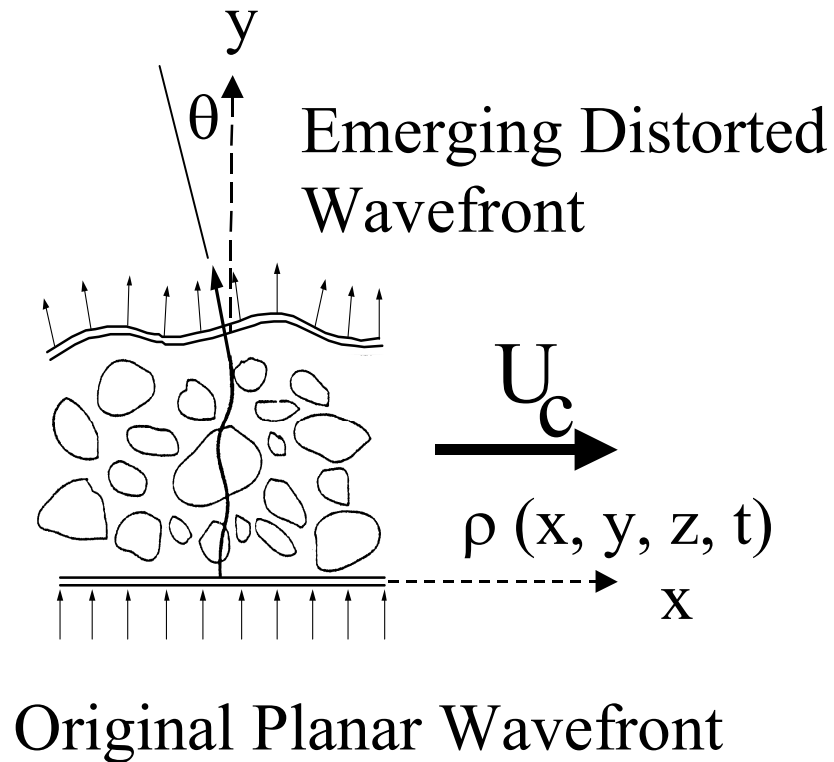

[Click to play animation](#)

filename: 03Light Sheet.mwv

# Background on Aero Optics

## Optical Path Length

$$OPL = \int_{y_1}^{y_2} n(x_o, y) dy$$

## Integration of index over path length

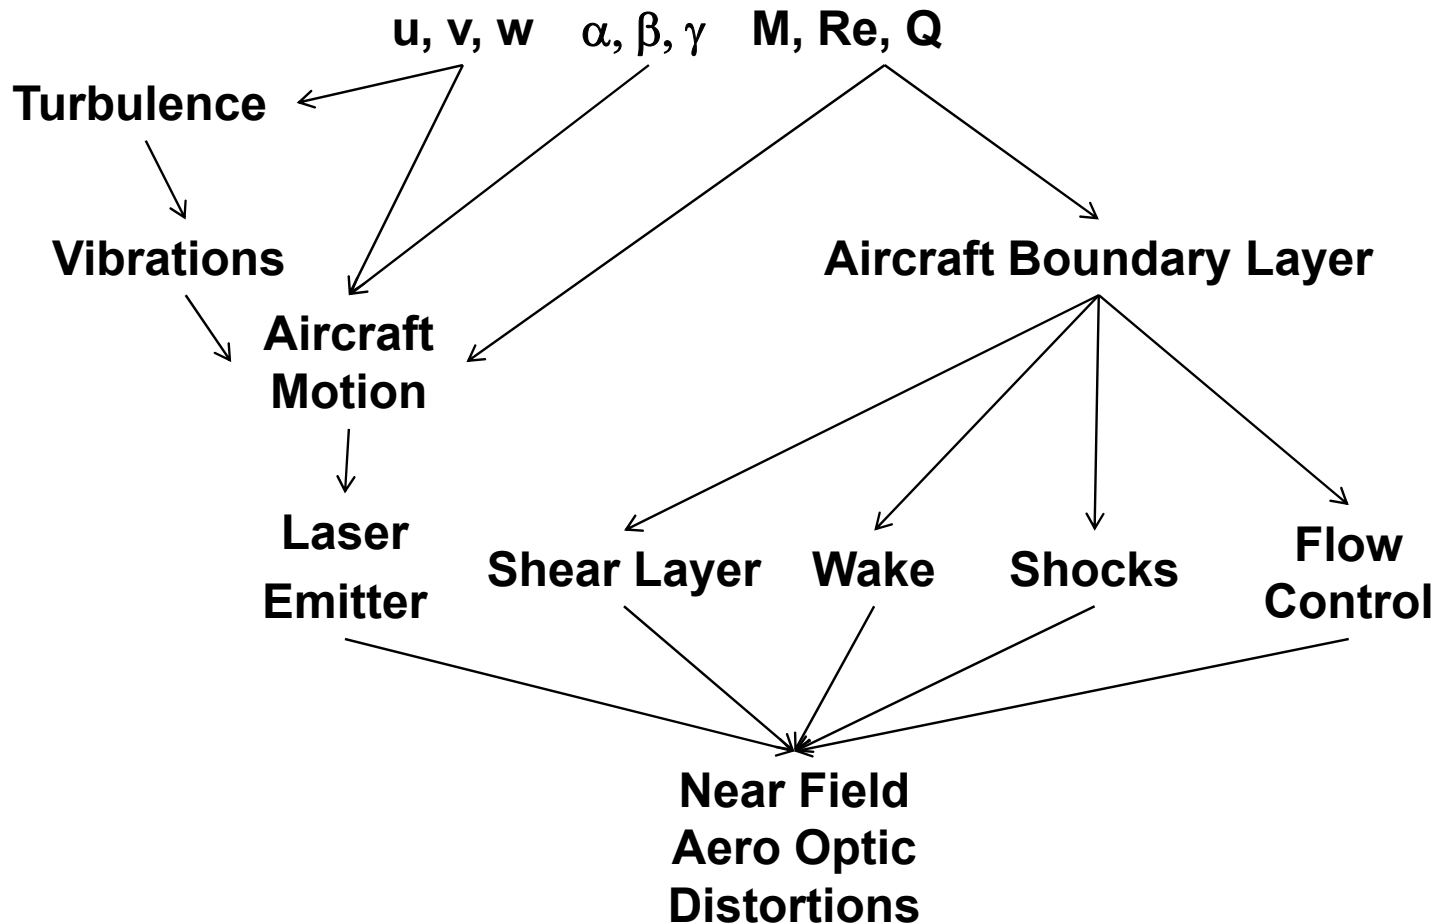

## Optical Path Difference

$$OPD(x_o) = OPL(x_o) - \overline{OPL}$$

The difference between mean and instantaneous OPL

# Aero-Optic Interactions

**Reduce Density Fluctuations to Increase Energy on Target**

Approved for Public Release; distribution unlimited. Public Release Number 88ABW-2009-3664

# Flow Control for Aero-Optics

- **Used Shot Gun Approach for Flow Control**
  - **Pulse Blow, Pins, Combustions, etc.**
- **One of the best but not yet completely proven methods**
  - **Closed Loop Control using Split POD.**
    - **Split POD was developed by Chris Camphouse**
    - **Separate baseline from control flow field properties to produce proper actuation characteristics for Closed Loop Flow Control**
    - **Provides Flow Physics Knowledge to the Flow Control Device**

# Closed Loop Flow Control for Near Field Aero-Optics

**Pressure Time Series**

**Pressure Autocorrelation**

(a) No Control

(d) Split POD

# Conclusions

- **To develop New Flow Control Techniques**
  - **Knowledge of the Flow Physics with and without control**
  - **How does Flow Control Effect Flow Physics**
    - **What Works to Optimize the Design?**
  - **Energy or Work Efficiency of the Control Technique**
    - **Cost - Risk - Benefit Analysis**
  - **Supportability, e.g. (size of equipment, computational power, power supply)**
    - **Allows Designer to include Flow Control in Plans**
