IXO Mirror Technology Development Objectives

• Identify problems unique to IXO mirrors that have not been encountered by, or solved for, previous missions
• Devise solutions to these problems; Demonstrate their validity through analysis and experimentation
• Establish design principles and build prototypes to prove that they meet requirements: angular resolution, effective area, mass, schedule and budget
• Subject the prototypes to X-ray and appropriate environment tests to demonstrate TRL-4, 5, and 6

Demonstrate the feasibility; Find out what’s and who’s out there to engineer and build the telescope!
## Focus of Technology Development

Temporary Bonding - Status
Temporary Bonding - Status

- The temporary bonding process probably has met requirements, at least for smaller mirrors
- More detailed and quantitative analysis is underway
- Need to conduct experimentation with big mirror segments
Alignment - Status

- Achieved excellent focus
- Improvement needed
  - Equipment stability
  - Lab temperature stability
Permanent Bonding - Status

- Active compensation to counter the effects of epoxy injection hydraulic and shrinkage forces
- Achieved single point bonding accuracy of 0.1μm, meeting requirements
Mirror Housing Simulator (MHS) – TRL-4

- Designed and fabricated to hold one pair of mirror segments
- Fully open and accessible to facilitate alignment, bonding, and metrology verification
Mini-Module (TRL-5)

- Capable of handling multiple shells, fully testing the entire process of installing mirror segments into a module
- Capable of undergoing a full battery of tests, performance as well as environment
Flight-Like Module (TRL-6)

- Fully flight-like in every aspect
- Populated with both real mirror segments and mass dummies
- Will undergo a full battery of tests: X-ray, vibration, acoustic, thermal-vacuum, etc.

Angular resolution: 3.8” (half-power diameter or HPD)

Outlook

- Mirror fabrication milestones
  - Consistent at ~5” HPD (two reflections) by December 2010
  - Consistently meeting requirements (~3” HPD two reflections) by December 2011
- Improvement of metrology to identify and isolate sources of error
  - Metrology mount
  - Upgrade null lens
  - Check for systematic effects
  - Cross-check figure quality using both normal and grazing incidence measurements
- Suspension Mount, Alignment, and Transfer (SMAAT)
  - Perfect and understand edge-bonding (December 2010)
  - Streamline and upgrade the alignment setup to improve thermal and structural stability (December 2010)
  - Transfer and bond single pairs of mirrors in mirror housing simulator (MHS) to achieve TRL-4 (July 2010)
  - Co-align and transfer and bond multiple mirror pairs to achieve TRL-5 (May 2011)
- Module
  - Housing material selection by December 2010
  - Design, analysis, and partial tests in 2011
  - Full TRL-6 by November 2012
