Independent Test Capability (ITC) Introduction
Acquire, develop, and manage adaptable test environments that enable the dynamic analysis of software behaviors for multiple NASA missions.

Dynamic Analysis is performed on flight software to verify software behavior.

Simulation-to-Flight (STF-1)
Introduction
Simulation-to-Flight (STF-1)

NASA IV&V ITC & West Virginia University (WVU) 3U Cubesat

- NASA Cubesat Launch Initiative (CLI) proposal submitted and accepted – NASA will pay manifest for future launch
- First WV Cubesat
- ITC is responsible for C&DH hardware/software, integration (hw/sw), and all testing
- WVU is responsible for payload hardware and software
- STF-1 is a “GSFC Cubesat” – partnering with GSFC/WFF and Dellingr Cubesat Team
- Current Launch Ready Date is August 2016 – not yet manifested – prefer polar orbit

Simulation-to-Flight (STF-1)

- **Primary Objective** – Showcase simulation technologies developed at IV&V
- **Secondary Objectives** – WVU Research into space weather, rad-hard materials, navigation instruments (GPS and IMUs), and camera
Simulation-to-Flight (STF-1)

**STF-1 Flight Software / Hardware Design**

- Working closely with the GSFC Dellingr 6U cubesat team
- FSW is Core Flight System (cFS)
  - Dellingr reuse, specifically on the radio cFS application
- ITC designed solar panel PCBs (Dellingr-based)
- Most hardware same as other GSFC cubesats

Anatomy of STF-1

**Camera**
- Mounted to a PC104 protoboard
- Optional filters to provide earth science data

**CADET Radio**
- Half duplex UHF
- Low power design
- Store and Forward architecture
- 4GB memory buffer
- Up to 22 Mbps data rate

**ISISpace UHF/VHF Antennas**
- Deployable antenna system
- Four alloy tape antennas
- Up to 55cm in length
- Includes 30mm diameter center through-hole for pass-through

**ISISpace Chassis**
- Modular structure
- Each unit can be assembled independently
- COTS component
- Compatible with P-POD Cal-Poly specifications

**Inertial Measurement Unit (IMU)**
- Micro Electro-Mechanical Systems
- Accounts for errors through calibration
- High quality inertial sensing with a MEMs IMU cluster

**LCSEE**
- Two PC104 Boards
- Fits directly into stack without modification
- Three different LED carriers with different shielding levels

**Physics Payload**
- Particle detector
- VLF receiver
- Plasma Probe

**GomSpace Nanomind A3200**
- High-performance AVR32
- 512KB build-in flash
- 125Mb NOR flash
- 32MB SDRAM
- I²C, UART, CAN-Bus

**Novatel OEM625 GPS**
- On-orbit reprogrammable
- Precise orbit determination
- Open loop tracking
- Science data products: 100-Hz phase, TEC, S4

**2 x ClydeSpace Batteries**
- Lithium Polymer
- 80 Watt Hours Total
- Two independent boards for redundancy
- Internal heaters

**ClydeSpace Electrical Power System (EPS)**
- 10 command-able power switches
- Provides 3.3V, 5V, and 12V
- Optimized for Low Earth Orbit (LEO)
- Three independent battery charge regulators

NASA Operational Simulator for Small Satellites (NOS$^3$) Introduction
What is NOS$^3$?

- A software test bed for small satellites
- Based upon STF-1 hardware, but sufficiently generic
- Easily-interfaces to cFS FSW, but cFS not required
- Currently open-loop, closed loop planned
- Openly distributed solution Ready-to-Run (RTR) – Looking for Users!
- A collection of Linux executable and libraries

What is it used for?

- FSW early-development – NOS$^3$ provides real-world inputs to FSW
- FSW V&V – Testing FSW, invalid inputs, behavior, stress conditions
- FSW Integration – Used for early-app development and payload team integration
- Mission Planning – Example: power analysis
NOS$^3$ Ready-to-Run (RTR)

Leverage ITC virtual deployment technologies

- ITC does NOT distribute virtual machines
- Virtual machines are built on-the-fly by the user
- Deployment Steps
  - Obtain files ITC
  - Install virtual machine provisioner such as Virtual Box
  - Run 1 Command – generates virtual machine
  - Login to virtual machine and build cFS with RTR script

Ready-to-Run (RTR) for...

- cFS development environment
- NOS$^3$ environment
- Ground system software
- Software integration testing
## NOS³ v1 Included Simulators

<table>

### NOS³ Components

<table>
<thead>
<tr>
<th>Component</th>
<th>What is it?</th>
<th>How is it used?</th>
</tr>
</thead>
<tbody>
<tr>
<td>NASA Operational Simulator (NOS) Engine</td>
<td>Engine is ITC-developed message passing middleware designed specifically for use in simulation. Includes time synchronization, data manipulation, and fault injection.</td>
<td>Serves as the NOS³ glue to tie all components together into a common interface to FSW</td>
</tr>
<tr>
<td>Hardware Model</td>
<td>A model for a specific piece of flight hardware, often focusing on the inputs/outputs of the device from the FSW perspective.</td>
<td>Serves as virtual hardware in order to provide FSW with an accurate representation of its data</td>
</tr>
<tr>
<td>42</td>
<td>42 is an open-source general purpose simulator developed at NASA Goddard Space Flight Center for spacecraft attitude and orbit dynamics.</td>
<td>Serves as an Environment Data Provider – chosen to provide magnetic field data and positional data as inputs to the magnetometer and GPS simulators</td>
</tr>
</tbody>
</table>
