Outline

- Science
- Mission instruments, spacecraft, mission
- Team Responsibilities
- Backup

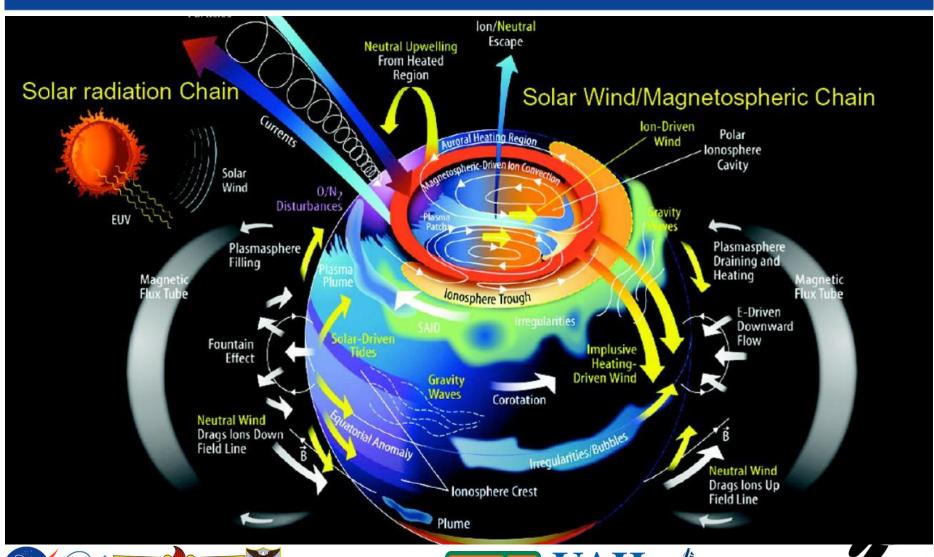

Ionosphere-Thermosphere-Mesosphere

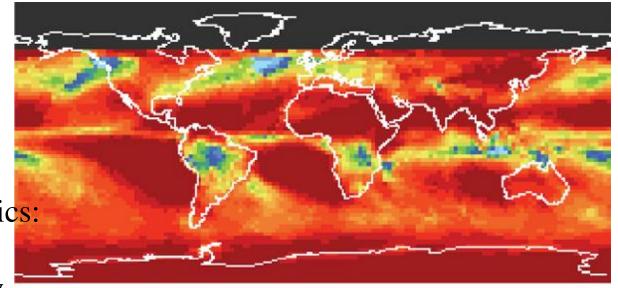

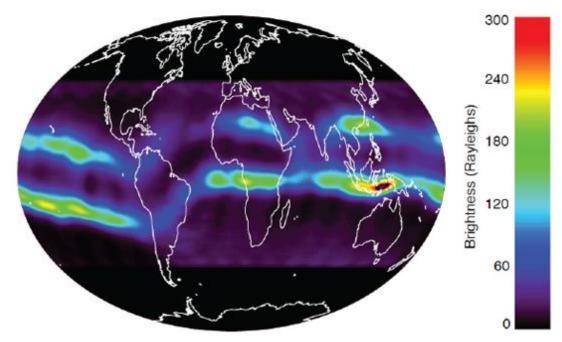

Daytime Convective Clouds Coverage

The US National Academy of Science published a Decadal Survey entitled:

Solar and Space Physics: A Science for a Technological Society (2013)

Chapter 2: Solar and Space Physics: Recent Discoveries, Future Frontiers

Average Ionospheric Equatorial Densities

Top Challenges for the Atmosphere-lonosphere Magnetosphere Interactions

- Understand how the ionosphere-thermosphere system responds to, and regulates, magnetospheric forcing over global, regional, and local scales.
- Understand the plasma-neutral coupling processes that give rise to local, regional, and global-scale structures and dynamics in the AIM system.
- Understand how forcing from the lower atmosphere via tidal, planetary, and gravity waves influences the ionosphere and thermosphere.

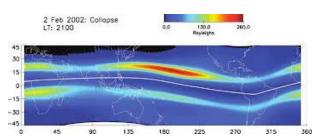

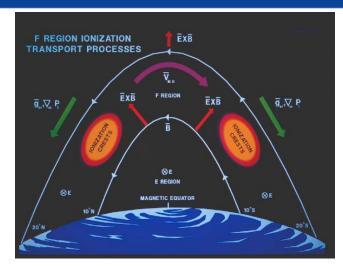

Science

The equatorial ionization anomalies

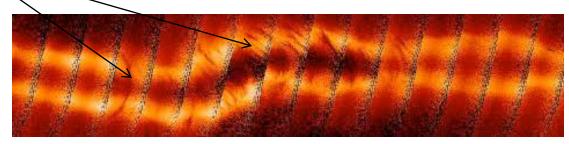

Plasma Bubbles

GUVI (Same Local Time, Different Longitudes)

Why do bubbles sometimes form and sometimes not?

Kil, Hyosub, et al. "Coincident equatorial bubble detection by TIMED/GUVI and ROCSAT-1." Geophysical research letters 31.3 (2004).

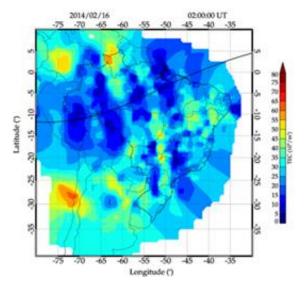

Ground Observations of Total Electron Content

TEC map over South America showing plasma depletion regions (left) and associated regions of scintillation near the anomaly peak. Source: EMBRACE data center.

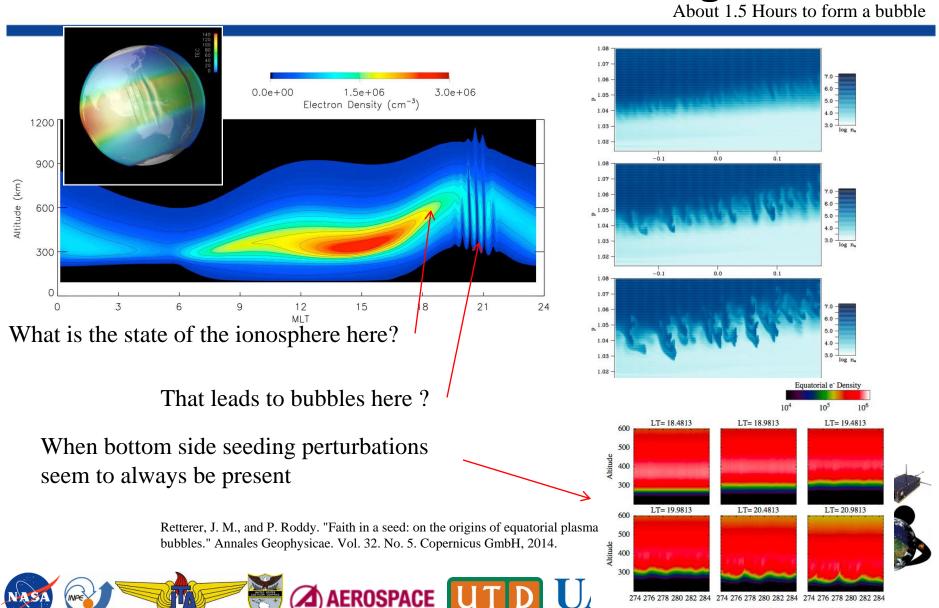

Plasma Bubble Modeling

Longitude

Longitude

Longitude

SPORT Science Goals

- What is the state of the ionosphere that gives rise to the growth of plasma irregularities that extend into and above the F-peak?
- How do plasma irregularities evolve to impact the appearance of radio scintillation at different frequencies?

SPORT Science Traceability

Table 1. Science Objectives to Measurement Requirements Traceability

The Scintillation Prediction Ol	oservation Research Task (SPORT)	Instrumentation	Spacecraft				
Observational Approach	Science Measurement Requirements	Instrument Approach	Space Systems Requirements				
1) What is the state of the ionosphere that gives rise to the growth of plasma irregularities that extend into and above the F-peak?							
Observations in the 1700 to 0100 LT sector over -30° to 30° latitude Height profiles of the plasma density to specify the magnitude and height of the F peak density in the EA Vertical ion drifts at or below the F peak in the EA	Plasma Density Profile 1) 140 to 450 km alt 2) 10 ⁴ to 10 ⁷ p/cm ³ range 3) 20% p/cm ³ accuracy 4) 1000 km along track sampling Ion Drifts (Earth Reference Frame) 1) ±800 m/s Range 2) 20 m/s precision & accuracy 3) 10 km along track sampling	GPS Occultation Observe GPS satellite occultation along and to the sides of the orbit plane to obtain line of site TEC Ion Velocity Meter Observe vertical ion drifts by angle of arrival of heavy ions at	Satellite Orbit 1) ≥1 year mission life 2) 40° to 55° inclination 3) 350 to 450 km altitude 4) ±10 km eccentricity Spacecraft 1) ±15° Ram Pointing 1σ 2) ≤1 km position knowledge 3) ≤10 ms timing				
2) How do plasma irregularities evo	detector ntillation at different frequ	,					
Observations in the 2200 to 0200 LT sector over -30° to 30° latitude Observations of irregularities in electron density and E-field power spectral density in slope from 200 km to 200 m	1) ±45 mV/m range 2) 1.1 mV/m precision & accuracy 3) 1 km along track sampling 4) 10 km - 200 m along track waves 2) 1.2 mV/m range 3) 1 km along track sampling 4) 10 km - 200 m along track waves		Spacecraft Mechanisms 1) ≥0.6 m tip-to-tip booms Attitude (Post Flight Knowledge) 1) ≤ 0.02° 1σ-uncertainty				
	B-field 1) ± 56,000 nT range 2) ±100 nT precision and accuracy 3) 1 km along track sampling	observe irregularities Three Axis Magnetometer Support VxB computation for ion velocity and E-Field measurements

 V_i – ion drift velocities; ΔN_i – relative ion density; ΔN_e – relative electron density; T_e – electron temperature; T_i – ion temperature; V_f – floating potential; V_p – plasma potential; N_e - electron density; B- Magnetic Field; TEC – total electron content; C_i – Ion composition; DC – 1D DC Electric Field; S4 – RF signal amplitude index, σ – RF signal phase index,

SPORT Spacecraft

SPORT CAD drawings: ITA (Lidia Sato)

SPORT Mission

- ISS-like orbit is different from other missions such as COSMIC and C/NOFS
- Provides near conjugacy observations across equatorial anomaly
- Science mission on a CubeSat platform

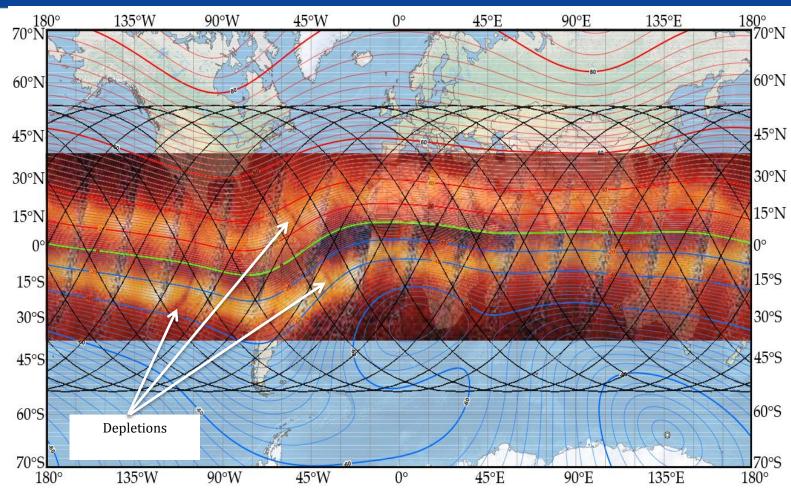

SPORT Orbit

UV Airglow images from TIMED clearly show the equatorial anomaly with embedded depletions that have penetrated the F peak. Green, red, and blue traces show the magnetic equator and positive and negative dip angles. SPORT ground tracks are superimposed in black.

SPORT Team and Functions

MSFC

- PI, PM, Science Co-I, single interface to Brasil, Engineering oversight of instruments and observatory I&T, Launch and DoD coordination
- Instruments Each instrument has a US and Brasil science counterpart
 - Utah State: Deputy PI, Langmuir and Impedance Probe, Star Camera
 - Aerospace Corp Co-I, GPS Occultation
 - University of Texas at Dallas Co-I, Drift Meter
 - GSFC Co-I, Magnetometer, Data Archival at SPDF

UAH

System Engineering Support

ITA

Spacecraft, Observatory I&T

INPE

 Ground observation network, Mission Ops, Data management and distribution/archive

Overall Schedule

Date	Activity/Milestone
March 2016	Mission Initiation and Requirements Definition Review
May 2016 - September 2017	Spacecraft Development
February/May 2017	Instrument/Spacecraft Design Reviews
May 2017	Instrument Delivery
June – September 2017	I&T
February 2018	Mission Readiness Review
May 2018	Launch Readiness Date
Summer 2018	Data Analysis Workshop
Summer 2018 – Spring 2019	Analysis of data, Publication of results
