Industry 4.0 : How the New Interaction Between Man and Machine in Smart Factories Will Help Create More Intelligent Products in the Aerospace Industry Aerospace Innovation Forum 2016

Daniel Schumacher, Ph.D. Deputy Manager, Science and Technology Office

The National Additive Manufacturing Innovation Institute was launched in August 2012 as a result of President Obama's proposed need for a whole-of-government advanced manufacturing effort.

Mission: To accelerate the adoption of additive manufacturing technologies to increase domestic manufacturing competitiveness.

Funding: Five federal agencies - the Departments of Defense, Energy, and Commerce, the National Science Foundation, and NASA – jointly committed to invest \$45 million.

NASA contributes subject matter experts, meaningful data, and use of select facilities.

Introduction to National Additive Manufacturing Innovation

National Maker Faire June 18-19

National Week of Making June 17-23

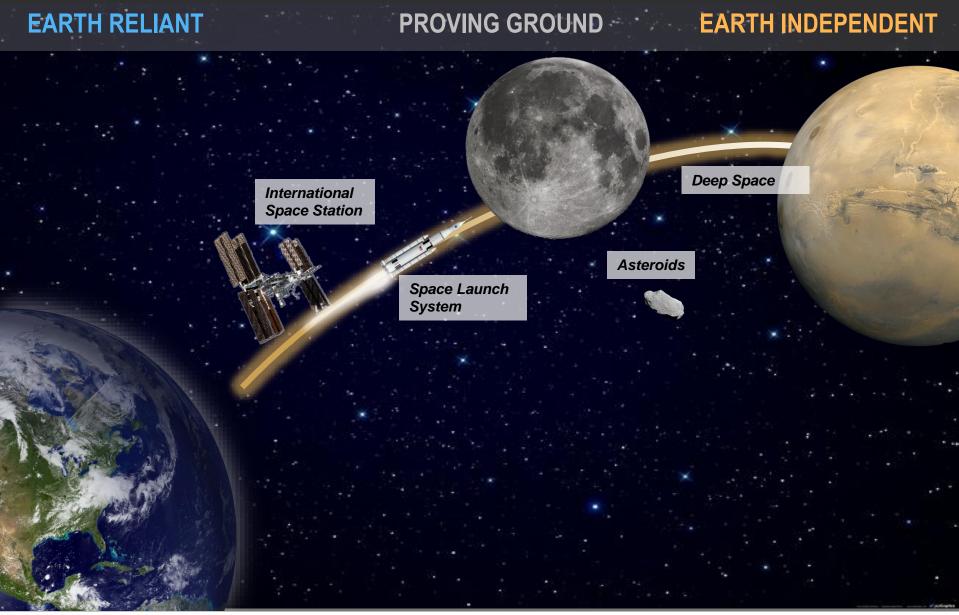

- NASA's Role in Advanced Manufacturing
- In Space Manufacturing Initiative (ISM)
- For Space Manufacturing:
 - Additive Manufacturing of Liquid
 Rocket Engine Components
 - -Additive Manufacturing's Role in the RS-25 Affordability Initiative

Path to Exploration

Michoud, 43-acre facility remains one of the biggest manufacturing facilities in existence.

Woven composite materials provide advanced thermal protection. Additive Manufacturing

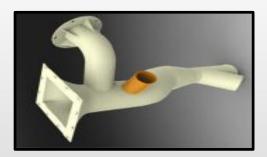

- Enables Mass Production and Customization
- Rapid Manufacturing: Tool-less, Extreme Cycle Time Reductions
- Enables complex designs and unitized structures
- Weight removal increases mission capabilities, saves fuel costs

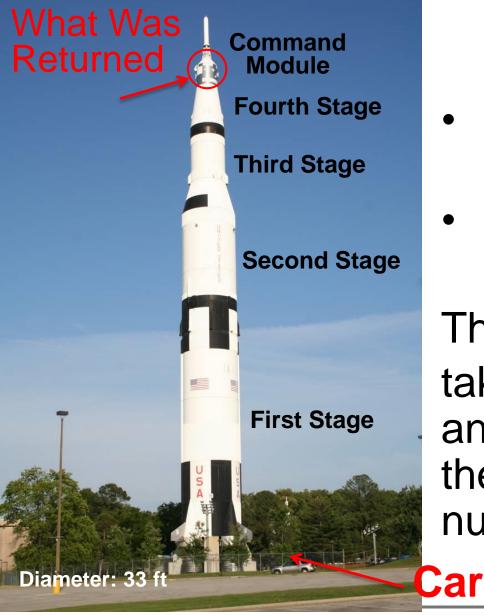

Traditional Part: 19 aluminum parts welded together

Additive Manufacturing Part: 1 part 30 % weight reduction Cost and lead time reductions

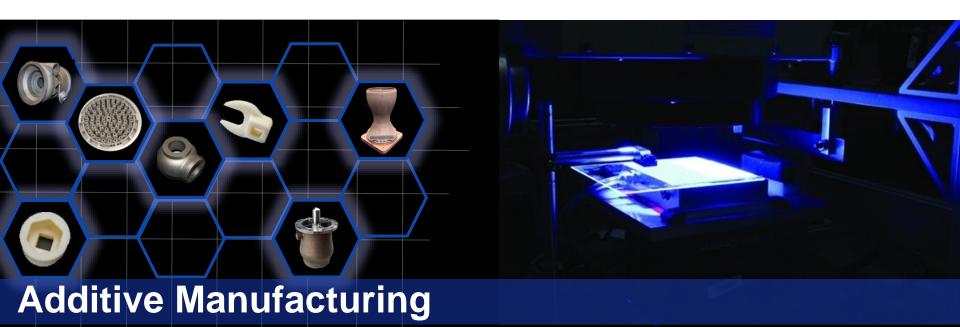

SATURN V

- 6.6M lbs sat on the launch pad.
- But only 12.8K lbs came back.

This is equivalent to taking a road trip in a car and coming back with just the left front wheel's lug nuts!

In Space Manufacturing Initiative

3D Printing and ISS are Helping NASA Get Parts in Space

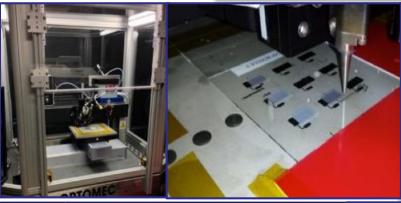

In-space Recycler ISS Tech Demonstration Development

Phase II SBIR was awarded to Tethers Unlimited for a proposed ISS Tech Demo in 2017

In-space Printable Electronics Technology Development

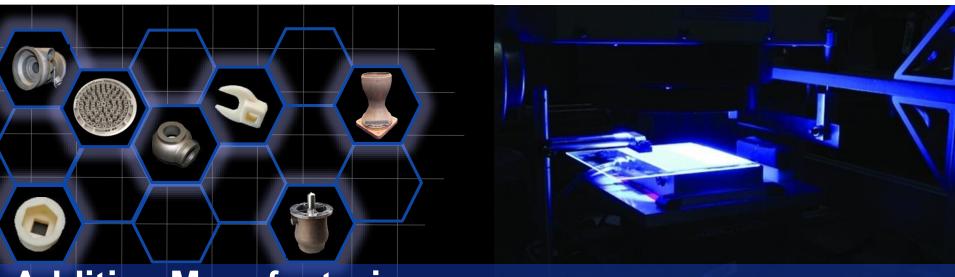

SBIR with Xerox Palo Alto Research Center (PARC), and NASA Ames Research Center, targeting future ISS Tech Demo.

ACME - Additive Construction by Mobile Emplacement

Joint initiative with the U. S. Army Engineer Research and Development Center – Construction Engineering Research Laboratory (ERDC-CERL) Automated Construction of Expeditionary Structures (ACES) Project

Additive Manufacturing

at Marshall Space Flight Center

Advanced Manufacturing Demonstrator - Liquid Propulsion System and Low-Cost Upper Stage Propulsion Project

Typical Engine Developments	Prototype Additive Engine
DDT&E Time	
7-10 Years	2-4 Years
Hardware Lead Times	
3-6 Years	6 Months
Prototype Costs	
\$20-50Million	\$3-5Million

NNOVATIONS. INC.

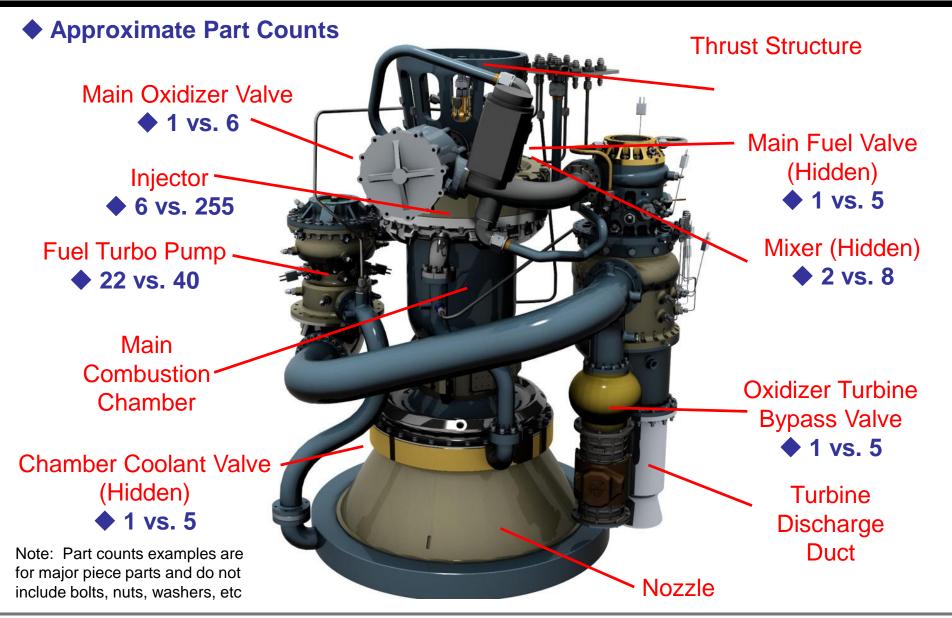

Partner with industry to design and manufacture engine parts.

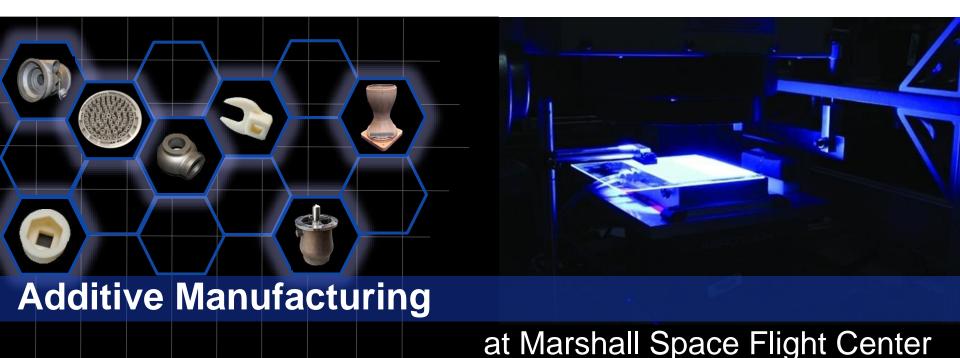

Transferring Material Property Data & Technology to U.S. Industry.

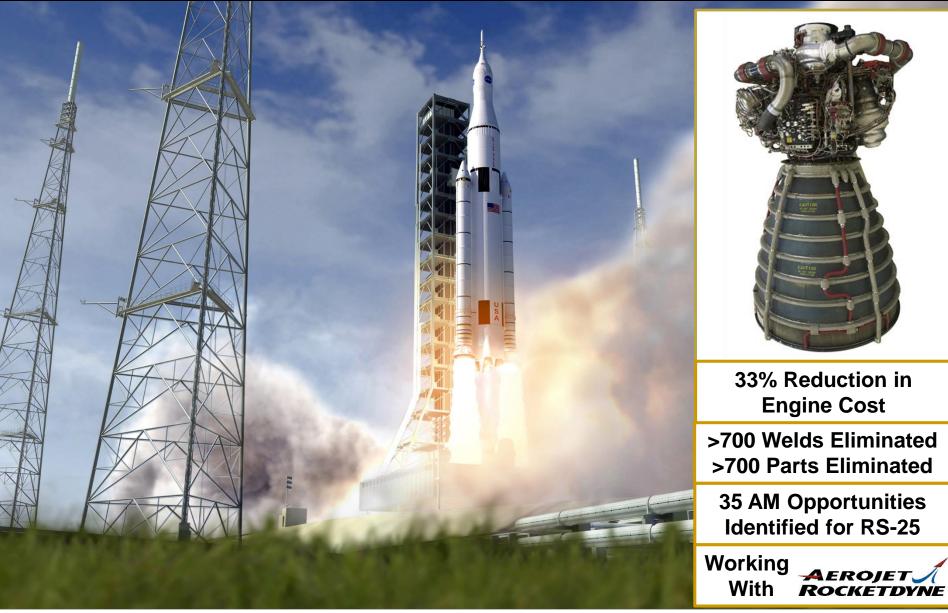

RS-25 Affordability Initiative – Additive Manufacturing's Increasing Role

RS-25 Affordability Strategy

What is the future? What role will you play?

"It is difficult to say what is impossible, for the dream of yesterday is the hope of today, and the reality of tomorrow." Robert H. Goddard
