

Improving NASA Earth science data and information access through natural language processing based data analysis and visualization

Zhong Liu^{1,2}, Shimei Pan³, Jianwu Wang³, Angela Li¹, and David Meyer¹

¹NASA Goddard Earth Sciences (GES) Data and Information Services Center (DISC)

²CSISS, George Mason University

³Dept. of Information Systems, UMBC

Motivation

NASA:

- The Research Access initiative is part of the agency's framework for increasing public access to scientific publications and digital scientific data.
- The initiative follows the release of White House Office of Science and Technology Policy's (OSTP) memorandum "[Increasing Access to the Results of Federally Funded Research](#)," to ensure federally funded research is available to the public within one year of publication.
- NASA answered the mandate by creating an agency plan entitled "[NASA Plan for Increasing Access to the Results of Scientific Research](#)" and associated policy, [NPD 2230.1, Research Data and Publication Access](#).

Principles in NASA SMD Strategic Plan for Scientific Data and Computing:

- Continued free and open access to scientific data for any use
- Improved ease of use and discoverability
- Enhanced science applications and new use cases
- Incorporates best practices and "state of the art" through partnerships

Earth Data and Systems are Evolving:

- Increasing archive and file sizes. More complicated data structures
- More user-friendly and data services
- What is the future direction?

Motivation (cont.)

Challenges in data access:

- “Decision Support Systems Analysts, the General Public, and University Undergraduates report the lowest levels of CSI” according to the 2017 CSI (Customer Survey Index). Over 50% of users.
- Surveys reveal that most non-professional users normally do not want to download and handle raw data as well as conduct heavy-duty data processing tasks.

	2016	2016	2016	2017	2017	2017
	%	N	CSI	%	N	CSI
Type of User~						
General Public	14%	1,019	76	14%	1,037	76
Elementary, Middle, High School Teacher	1%	83	76	1%	86	77
University Professor	16%	1,129	80	16%	1,193	81
University Undergraduate Student	36%	2,550	76	9%	656	76
Other Education and Outreach	5%	349	79	5%	355	79
Earth Science Researcher	32%	2,304	79	32%	2,409	79
Earth Science Modeler	8%	574	78	9%	650	79
NASA-affiliated Scientist	2%	167	79	1%	102	80
Non-NASA-affiliated Scientist	4%	304	79	4%	320	78

Solution and Activities

Solution:

- Develop natural language processing (NLP) based data analysis and visualization infrastructure

Input (text, voice)

Processing (text, voice)

Analysis and Visualization

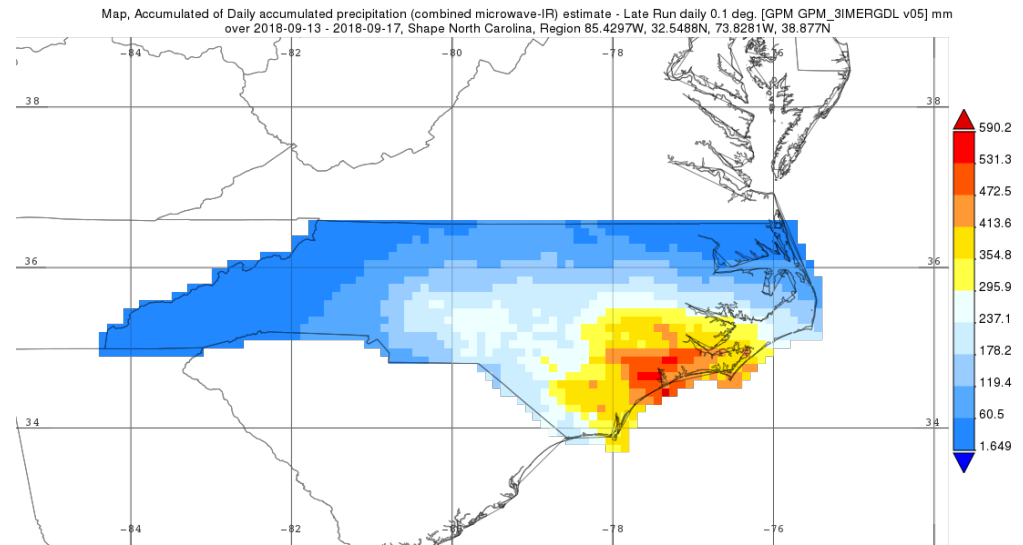

Result (text, voice, graphics)

Ask **NASA**

What is the total rainfall from Hurricane Florence in North Carolina?

- *Collect user input info. about where, when, what, etc. (total rainfall map, Hurricane Florence, North Carolina)*
- *Call a backend system to process the inputs and generate the result (the rainfall map)*

Activities:

- Work with NLP experts at UMBC
- Use case development
- System design and prototyping

Summary

- Many challenges in Earth science data and information access for users at all levels
- NLP provides a simple (but difficult to develop) interface to ordinary users
- NLP provides inputs for backend processing (data analysis and visualization)
- Working with NLP experts to develop a prototype
