

THE MAKER APPROACH AT NASA

NEW WAYS THE US SPACE AGENCY
BUILDS SPACECRAFT & EMPOWERS
CITIZENS

Doing It Yourself

Participatory Exploration = A type of Hacking?

Hackers= Tinkers = Makers

Just other kinds of explorers

THIS IS NOT A NEW PHENOMENON!

Did it Themselves: Aircraft

**Albert Santos -Dumont
over Paris, France 1909**

**Wright Brothers in
Berlin 1909**

Did it Themselves: Aircraft

- * **1909** British Advisory Committee on Aeronautics
- * **1915** National Advisory Committee on Aeronautics
- * 1939 NACA Ames Aeronautical Laboratory
- * **1918** WWI ends...
...**Barnstorming Begins!**
Hacked Surplus Curtiss Jenny JN-4
- * **1926** Air Commerce Act
Regulation: Safety & Licensing

Elsewhere...

Did it Themselves: Space

- * **1920** Robert Goddard
“A Method of Reaching Extreme Altitudes”
1926 1st liquid fueled rocket launches
- * **1923** Hermann Oberth
“The Rocket into Planetary Space”

But these guys were not the first hackers trying to explore space....

Did it Themselves: Space

Humans have been exploring space...

“El Caracol” Mexico 600~800 AD

...a LONG TIME!

Did It Himself: Space

Galileo Galilei ~ the first documented space hacker.

Hand polished custom built telescope lenses

Discovered Jupiter's moons

Re-ignited interest in building observatories!

Military Space

Royal Greenwich Observatory

Leiden

Paris

Berlin

They Did It For You

* Sad Facts

- * Many of the ancient observatories were built to gain tactical advantage during wartime
- * Airplane development dramatically accelerated due to the World War I effort.
- * As we all know, World War II & the Cold War were drivers of spacecraft development as well.

Military Space

October 1957

- * **Nikolai Kutyrkin**
 - * Designed Sputnik-1

January 1958

- * **Werner Von Braun**
 - * Designed Juno-I rocket
- * **William Pickering**
 - * Designed Explorer-1

Affordable
Access to Space™

We Offer Convenient, Affordable, On-Demand Access to Satellites. [Join the Launch!](#)

Let's Go to Space

Most Space companies think only about the mission—we think about the interaction. We create tools that make it simple for anyone to interact with Space in meaningful and enjoyable ways.

Get Started Today

Learn to program an ArduSat Arduino kit, or go ahead and purchase time to control the satellite while running your very own application, game or experiment in Space.

Want to Learn More?

Space has inspired imaginations for centuries. Don't let any initial questions or concerns hold you back. Find your answers, or pose any additional questions here.

CASIS and MassChallenge Announce Partnership to Send Entrepreneurial Research to the ISS

KENNEDY SPACE CENTER, FL. (February 13, 2013) – The Center for the Advancement of Science in Space (CASIS), the nonprofit organization promoting and managing research on board the International Space Station (ISS) U.S. National Laboratory, today announced it will provide up to \$100,000 [≈ cost of Porsche 911] in grant funding for qualified research projects as part of its partnership with the “MassChallenge Startup Accelerator.”

MassChallenge is the largest-ever startup accelerator, and the first to support high-impact, early-stage entrepreneurs without taking any equity. Its four-month program offers world-class mentorship, free office space, \$1 million [≈ 1965 typical CEO pay] in cash awards, and up to \$10 million through in-kind support. To date, MassChallenge alumni have collectively raised over \$360 million in outside funding, generated nearly \$100 million [≈ Large city office building] in revenue, and created nearly 3,000 jobs since 2010.

As per the agreement with MassChallenge, CASIS will commit up to \$100,000 [≈ cost of Porsche 911] to any winning proposal that is deemed flight-ready for research on board the ISS. CASIS funds for qualified research proposals on Station are not part of the original MassChallenge award, but are offered on top of any other grants received through the contest.

“Through the MassChallenge Startup Accelerator, we strive to provide early-stage entrepreneurs with the mentorship and funding that will allow them to succeed in today’s global economy,” said MassChallenge Director of Partnerships Scott Bailey. “We are incredibly excited to announce this partnership with CASIS, and in doing so believe we are taking our contest to the next emerging market: the ISS.”

NASA Ames SpaceShop

At NASA Ames, we're making a Fab Lab to develop the workforce, train students and eventually standardize spacecraft design

Space Science Gadgets You Can Make for NASA

BY MATTHEW F. REYES

The joint cadre of volunteers at NASA Ames and Google are now hacking Android smartphone components to control robotic rovers, aerial vehicles, and small satellites, and to collect science data from them. Within a limited budget, we're relying on students and the maker community to create and program this new class of universal, open source participatory exploration platforms.

We need immediate help to develop wi-fi, Bluetooth, or USB interfaces that can connect scientific data collection payloads to devices running the Android OS. From there, there's boundless potential for makers to create previously unthinkable gadgets to support NASA's mission, including:

- ▶ "Mini-Hubble" space telescopes that can send space images to amateur astronomers
- ▶ Ruggedized "cellbots" that can explore extreme environments on Earth and on near-Earth asteroids
- ▶ Remote-sensing, environmental-sampling aerial vehicles, such as balloons and helicopters, that can help analyze climate change.

What can you imagine exploring with your smartphone? Let me know at motorbikematt@gmail.com.

Matthew F. Reyes is founder of Exploration Solutions, Inc., an education subcontractor at NASA Ames Research Center. twitter.com/motorbikematt
