# Unmanned Autonomous Systems (UAS) Traffic Management

# What is UAS Traffic Management?

- UTM is an “air traffic management” ecosystem for small UAS in low altitude airspace
- UTM utilizes industry’s ability to supply services under FAA’s regulatory authority where these services do not exist.
- UTM development will ultimately identify services, roles/responsibilities, information architecture, data exchange protocols, software functions, infrastructure, and performance requirements to enable the management of low-altitude UAS operations.

**Security**

**Safety**

**Commerce**

**Scalability**

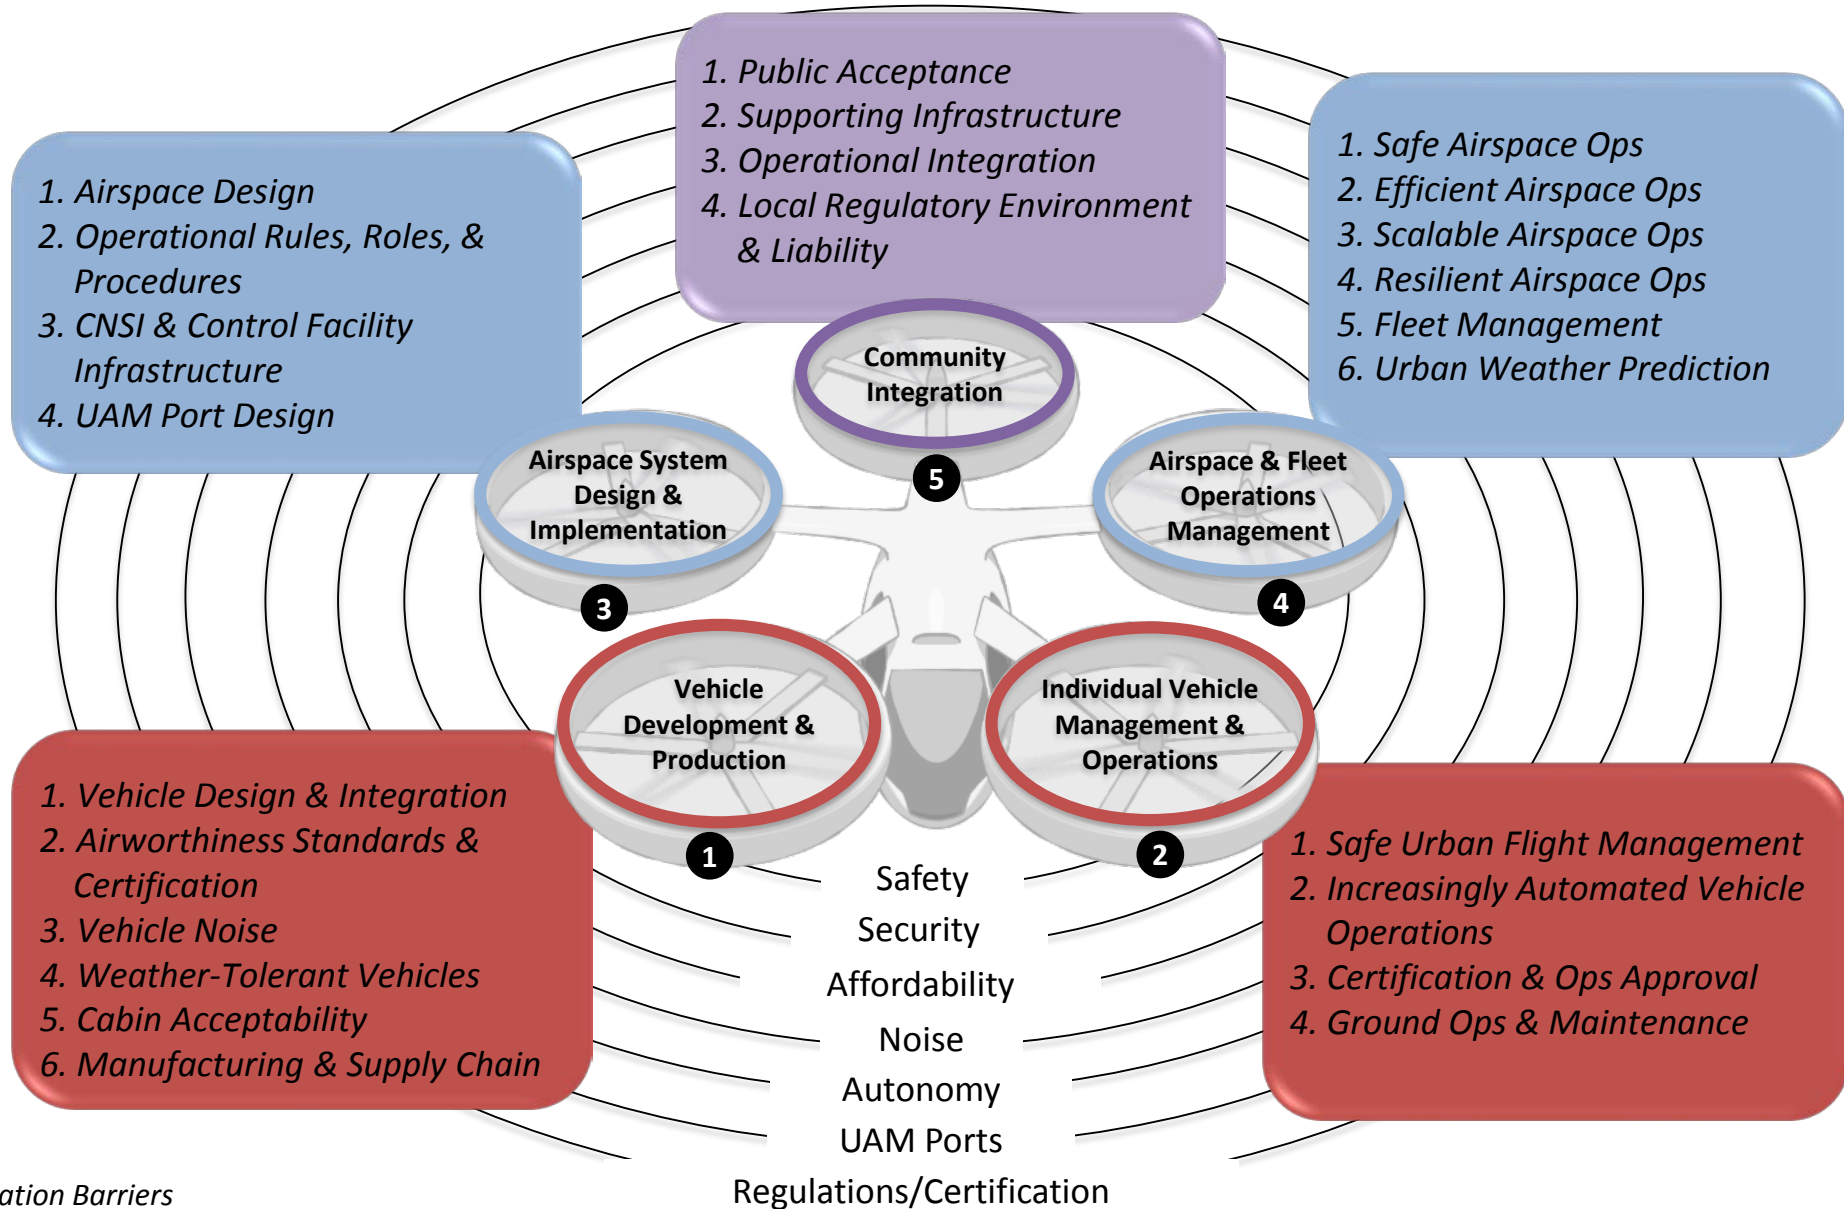

# Urban Air Mobility

# UAM Framework and Barriers

# Grand Challenge (GC) Series Overview

## Vehicles

functional UAM vehicles with threshold level of demonstrated airworthiness

## Airspace Management

airspace and air traffic management technologies and services built and simulated to a threshold level of UAM ATM requirements

## Safety and Integration Scenarios

airworthiness processes and scalable scenarios designed in concert with the FAA, with range(s) and Testbeds as a UAM proving ground

## Stakeholder Integration

societal integration and acceptance of UAM Operations including public acceptance, supporting infrastructure, operational integration, standards organizations, the local regulatory environment, etc.

 Industry Provided

 NASA Provided

 Ecosystem Wide Support

# Initial Grand Challenge Objectives

## Goal

Support requirements and system development for UAM through integrated Demonstrations of vehicle and operational scenarios critical to scalable UAM commercialization

## Objectives

- **Accelerate Certification and Approval.** Develop and assess an integrated approach to vehicle certification and operational approval
- **Develop Flight Procedure Guidelines.** Develop preliminary guidelines for flight procedures and related airspace design criteria
- **Evaluate the CNS Trade-Space.** Explore and evaluate communication, navigation, and surveillance requirements, options, and trade-offs
- **Demonstrate an Airspace Management Architecture.** Demonstrate and document an airspace system architecture, based on the UTM construct, capable of safely managing scalable UAM operations without burdening the current ATM system
- **Develop Autonomy Methods of Compliance.** Create and evaluate standardized flight test scenarios and candidate methods of compliance supporting certification of autonomous flight and airspace systems
- **Characterize Community Considerations.** Conduct initial characterization of passenger and community considerations through vehicle ground noise, cabin noise, and on-board ride quality measurements
