Data Products

Data Type	Naming Convention	File Type
Uncalibrated full frame image	tessyyyydddhhmmss-ssctr-cam-ccd-scid-cr_ffir.fits.gz	FITS+GZIP
Calibrated full frame image	tessyyyydddhhmmss-ssctr-cam-ccd-scid-cr_ffic.fits.gz	FITS+GZIP
Target pixels	tessyyyydddhhmmss-ssctr-tid-scid-cr_tp.fits.gz	FITS+GZIP
Light curves	tessyyyydddhhmmss-ssctr-tid-scid-cr_lc.fits.gz	FITS+GZIP
Collateral target pixel files	tessyyyydddhhmmss-ssctr-type-cam-ccd-output-scid-cr_col.fits.gz	FITS+GZIP
Cotrending basis vectors	tessyyyydddhhmmss-ssctr-cam-ccd-scid-cr_cbv.fits	FITS
Full data validation report	tessyyyydddhhmmss-sstartsctr-sendsctr-tid-pin_dvr.pdf	PDF
TCE summary report	tessyyyydddhhmmss-sstartsctr-sendsctr-tid-pn-pin_dvs.pdf	PDF
Data validation results	tessyyyydddhhmmss-sstartsctr-sendsctr-tid-pin_dvr.xml.gz	XML
DV Results XML Schema Definition	tessyyyydddhhmmss_dvr.xsd	XML Schema
Data validation time series	tessyyyydddhhmmss-sstartsctr-sendsctr-tid-pin_dvt.fits.gz	FITS+GZIP

ssctr, sstartsctr, sendsctr := sector, start/end sector
 cam, ccd := Camera #, CCD #
 scid := spacecraft configuration
 cr := cosmic ray mitigation performed? 'x': no, 's': spacecraft, 's': SPOC pipeline, 'b': both
 output := CCD output # 'A', 'B', 'C' or 'D'
 pin := monotonically increasing index for each SPOC pipeline run
 pn := planet number for each target star system
 tid := TESS input catalog number
 type := type of collateral data included: "lvcoll", "tvcoll", "smrow", or "vrow".

Date Stamp in UTC	
yyyy	4 digit year
ddd	3 digit day of year [001,366]
hh	2 digit hour [00,23]
mm	2 digit minute [00,59]
ss	2 digit second [00,60]

See the Science Data Products Description Document

Full Frame Images (FFIs)

Uncalibrated and Calibrated 30-minute FFIs supplied

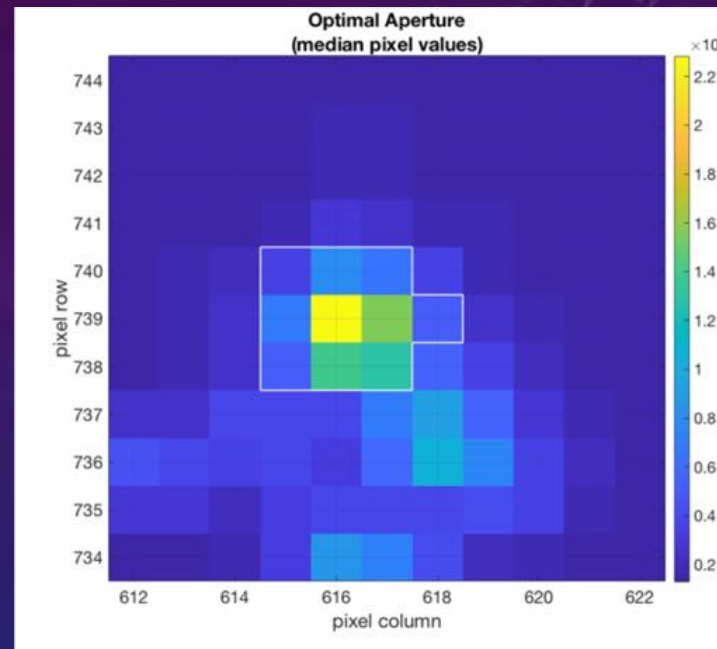

- Calibrated includes uncertainties
- No background correction, but all the pixel calibrations
- Collateral pixels included in the FFIs
- One file for calibrated/uncertainties and one file for raw
- Includes WCS

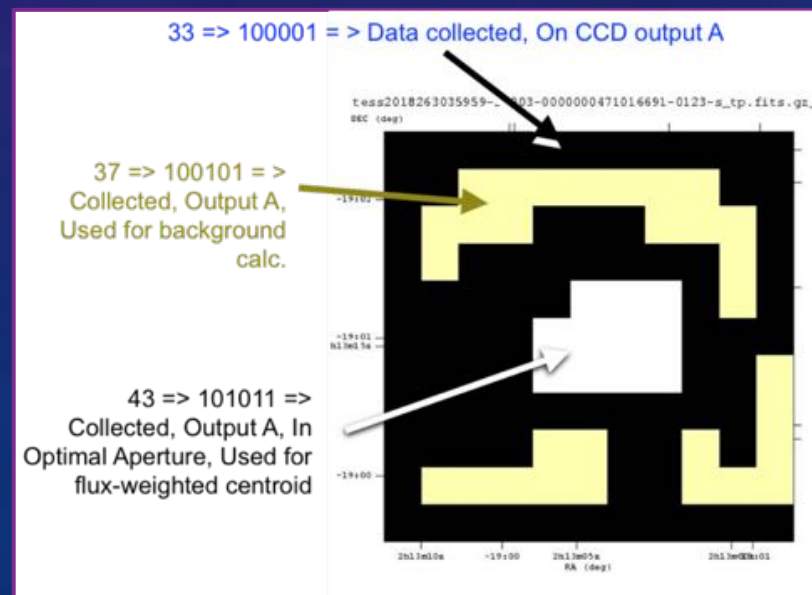

Target Pixel Files and Collateral Data

- Contains calibrated, background-subtracted pixel data time series for each 2-minute target
- One file per sector, per target
- Number of pixels collected per target (typically 11x11) and the aperture HDU is always a bounding box around the collected pixels
- Collateral Pixels:
 - Leading virtual Column (lvcol): Measures bias voltage
 - Trailing virtual Column (tvcol): Measures bias
 - Smear row (smrow): Measures shutterless smear and dark current
 - Virtual row (vrow): Measures shutterless smear charge and dark current during readout

Bit	Value	Description
1	1	Pixel was collected by the spacecraft.
2	2	Pixel was in optimal aperture.
3	4	Pixel was used in background calculation.
4	8	Pixel was used to calculate the flux weighted centroid.
5	16	Pixel was used to calculate the PRF centroid.
6	32	Pixel is on CCD output A
7	64	Pixel is on CCD output B
8	128	Pixel is on CCD output C
9	256	Pixel is on CCD output D

Cotrending Basis Vectors (CBVs)

CBVs represent the systematic trends present in the data per CCD.

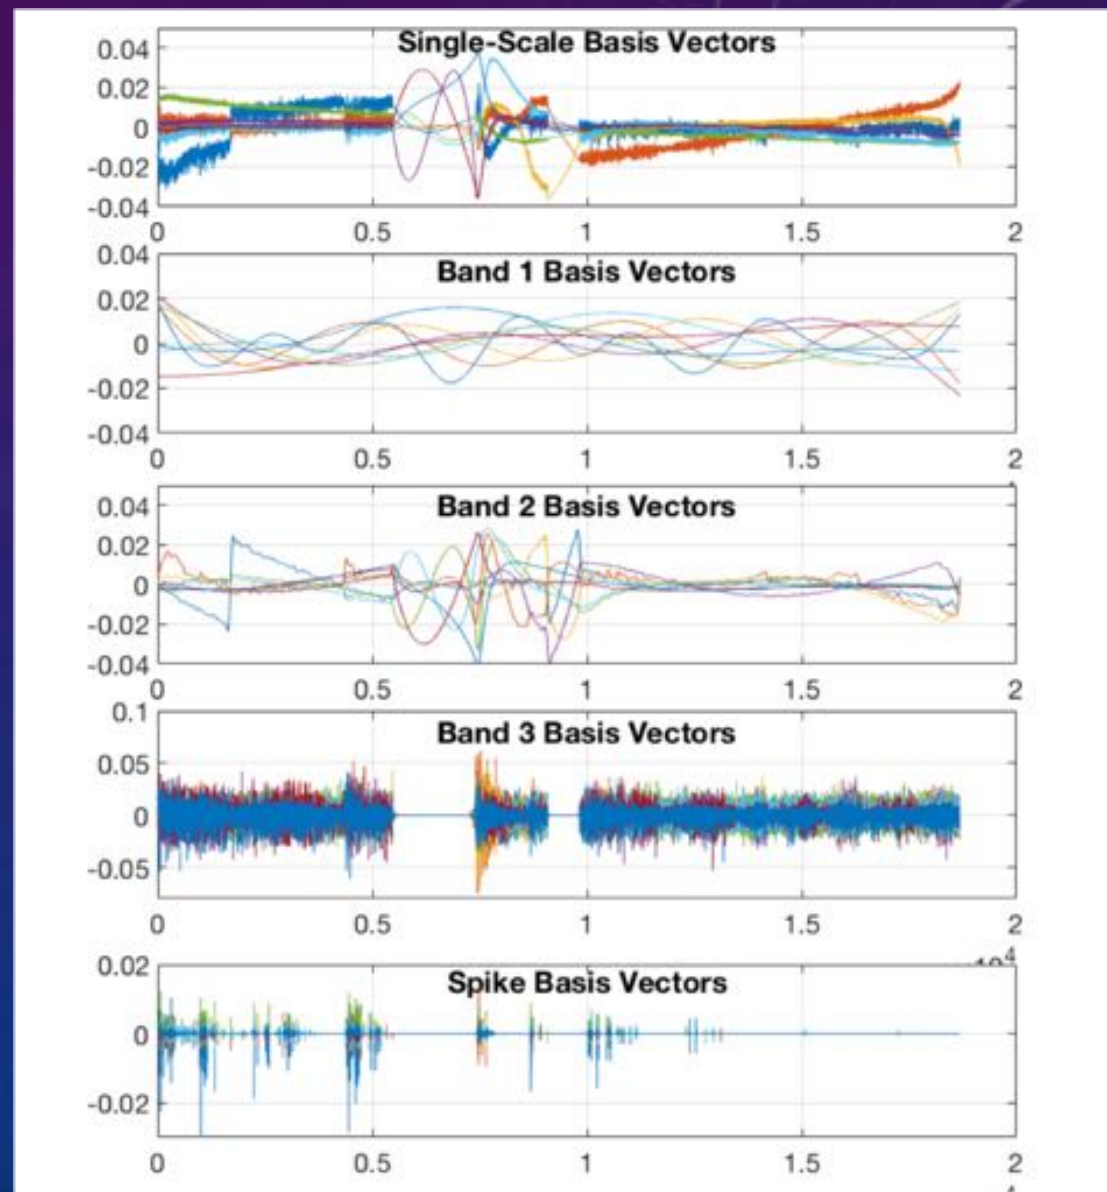

- Singular vectors from an SVD analysis

Several types of CBVs available:

- Single-Scale
- Multi-Scale
- Spike

Every effort made so that the CBVs only contain systematic signals (“Entropy Cleaning”) and Bayesian Priors used to regularize the fits in PDC

- But overfitting *can* still occur.
- You can perform your own fit to CBVs if PDC did not perform well on your target.

Coming soon for FFIs!

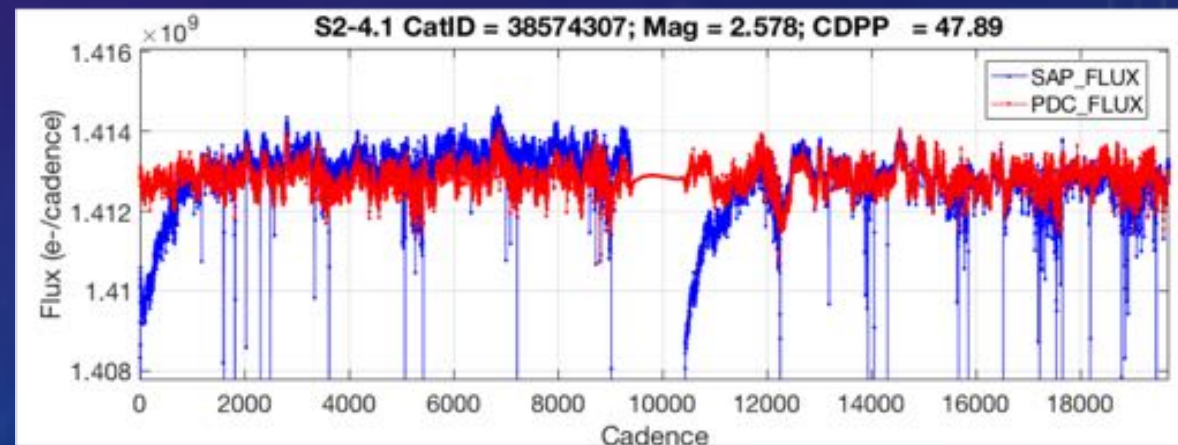

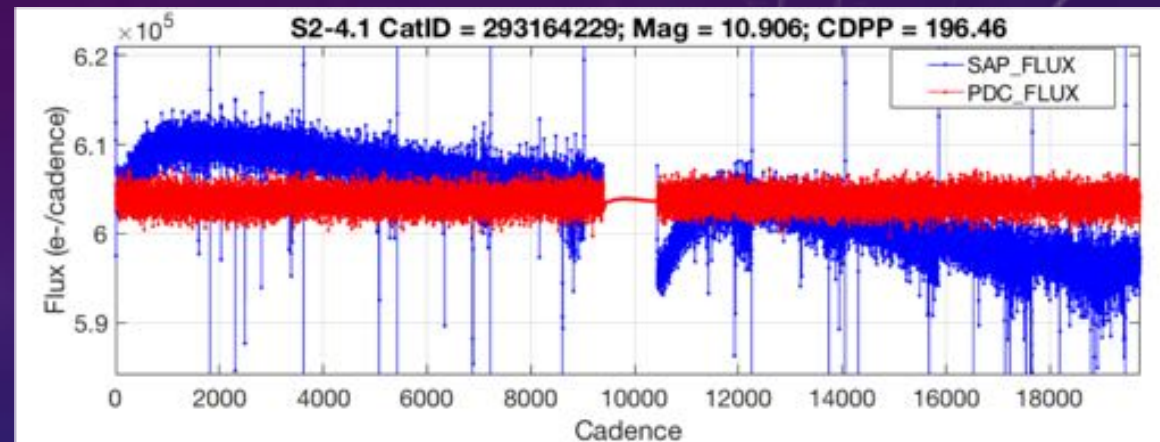

Light Curves

- SAP_FLUX: Simple Aperture Photometry, background subtracted
- PDC_FLUX: Pre-search Data Conditioning: removal of instrumental systematics
 - Goodness metrics
 - CDP
 - other quality metrics
- PSF_CENTR#: PSF-fitted centroids (only for PPA targets)
 - Better, but not for every target
- MOM_CENTR#: Flux-weighted (moment-derived) centroid motion
 - Available for (almost) every target

Coming soon for FFIs!

Pixel Response Function (PRF) Models

- Discrete PRF models for all 16 CCDs generated during commissioning.
- Updated in November 25 models per CCD
- Can be interpolated to any focal plane location

Data Quality Flags

Bit	Value	FFI	Description
1	1	Y	Attitude Tweak
2	2	N	Safe Mode
3	4	Y	Spacecraft is in Coarse Point
4	8	Y	Spacecraft is in Earth Point
5	16	Y	Argabrightening event
6	32	Y	Reaction Wheel desaturation Event
7	64	N	Cosmic Ray in Optimal Aperture pixel
8	128	Y	Manual Exclude. The cadence was excluded because of an anomaly.
9	256	N	Discontinuity corrected between this cadence and the following one.
10	512	N	Impulsive outlier removed before cotrending.
11	1024	Y	Cosmic ray detected on collateral pixel row or column.
12	2048	Y	Straylight from Earth or Moon in camera FOV.

Data Quality Flags are bit-encoded – each bit represents a separate event/issue

Other Important Considerations

FITS files keep track of data releases via keywords:

- “DATAREL”: data release number,
- “PROCOVER”: SPOC pipeline release version.

Timestamps are in TJD = $JD(TDB) - 2,457,000$

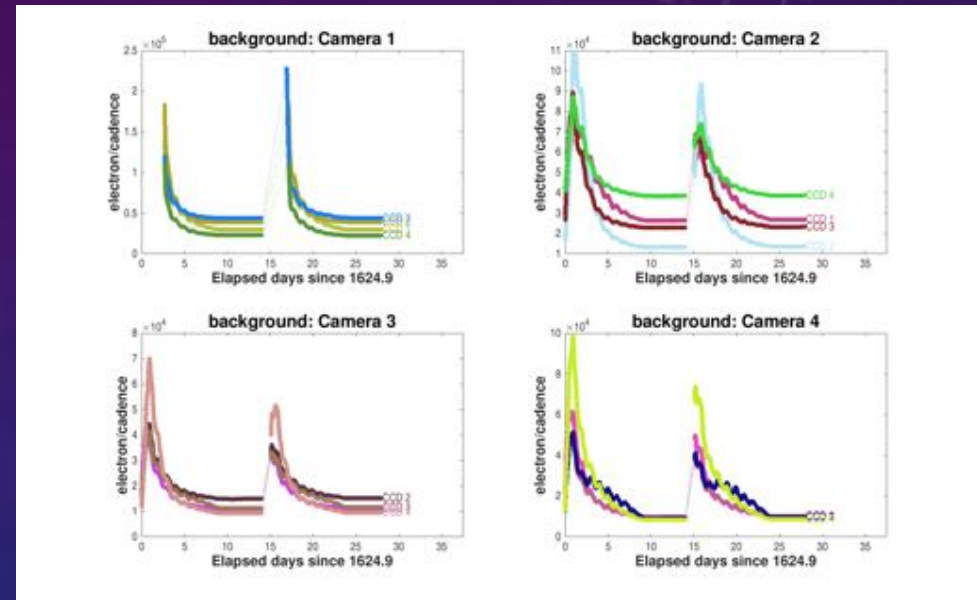

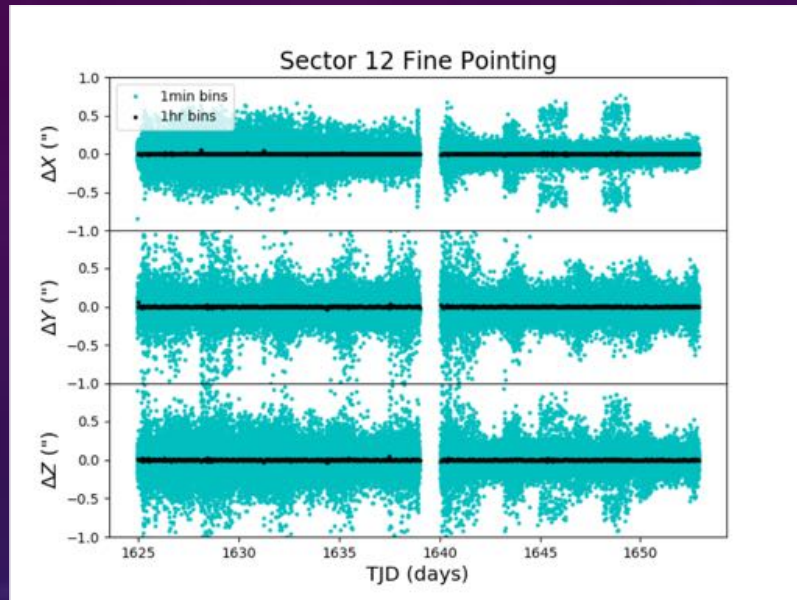

Pipeline is evolving as we respond to the spacecraft and data characteristics

- Continue to tune parameters
- Bug fixes
- Algorithm improvements
- ***Please read Data Release Notes!***
- ***Sector 1 DRN most complete as a reference for future DRNs***

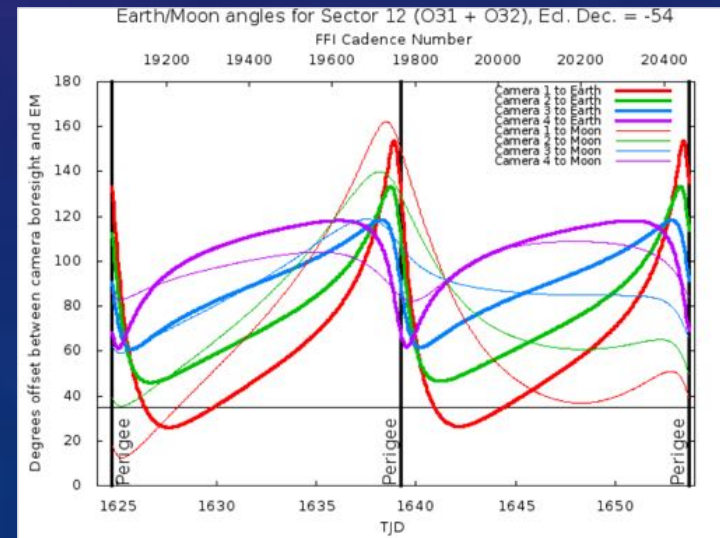

Data Release Notes: Pointing Quality, Background, Scattered Light

Cadences affected by fireflies/fireworks noted.
Cadences excluded due to scattered light also noted:

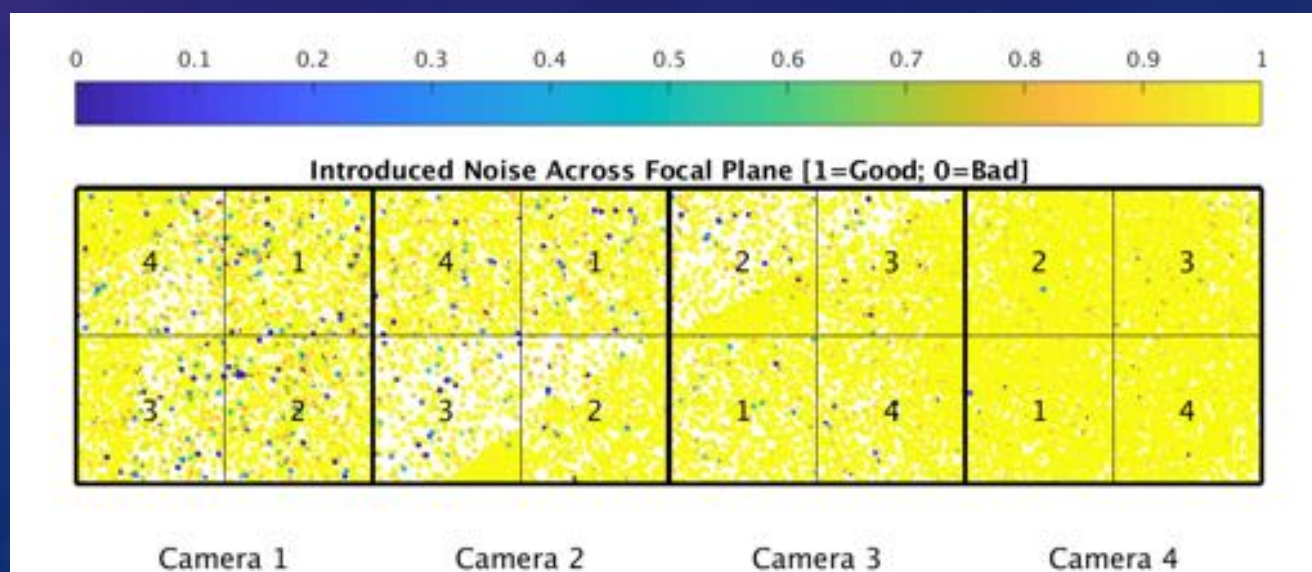

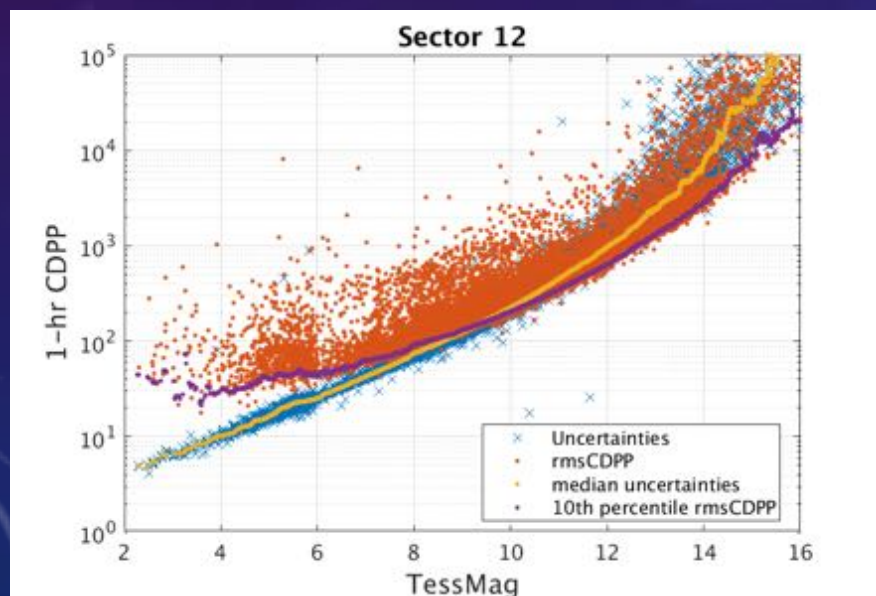

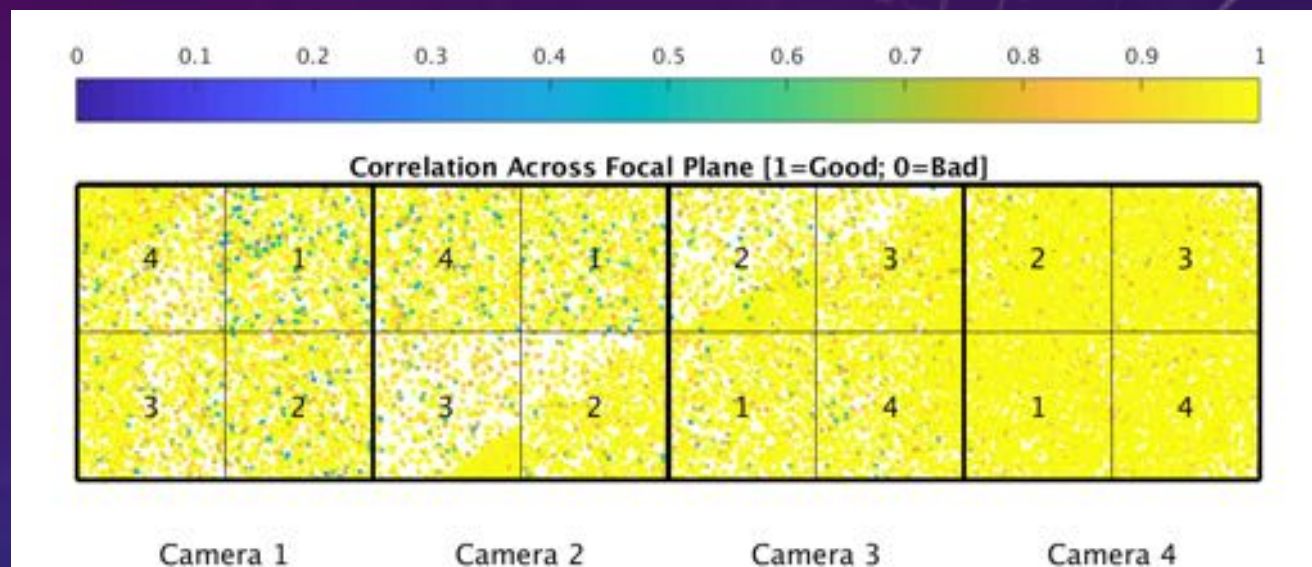

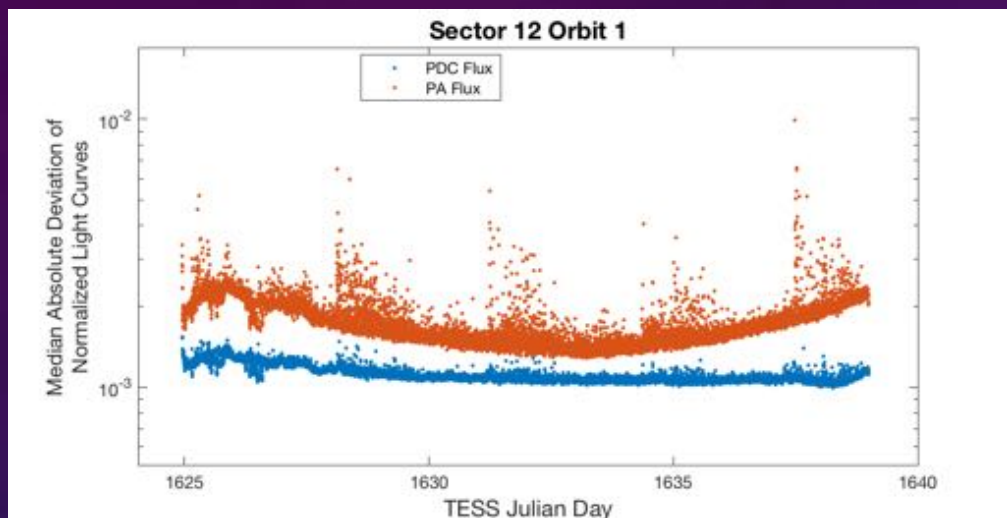

Table 2: Cadence ranges for data excludes due to scattered light

Cam	CCD	Orbit 31	Orbit 32
1	1	286196–288125	297056–298530
1	2	286196–288125	297056–298542
1	3	286196–288125	297056–298375
1	4	286196–288125	297056–298543

Data Release Notes: Quality of Flux Time Series

Summary

- TESS Science Pipeline is modeled after the *Kepler* pipeline
- TESS Data products are closely modeled after *Kepler's*
- FFIs, Target Pixel files, Light Curve files, Transit search products are available at MAST
- Calibration models also available at MAST (PRFs, etc.)
- Documentation available at MAST:
 - Science Data Products Description Document
 - Kepler Data Processing Handbook
 - Data Release Notes
 - TESS Instrument Handbook
