

Airspace Technology Demonstration 2 (ATD-2)

CDM CAT NTML Lessons Learned

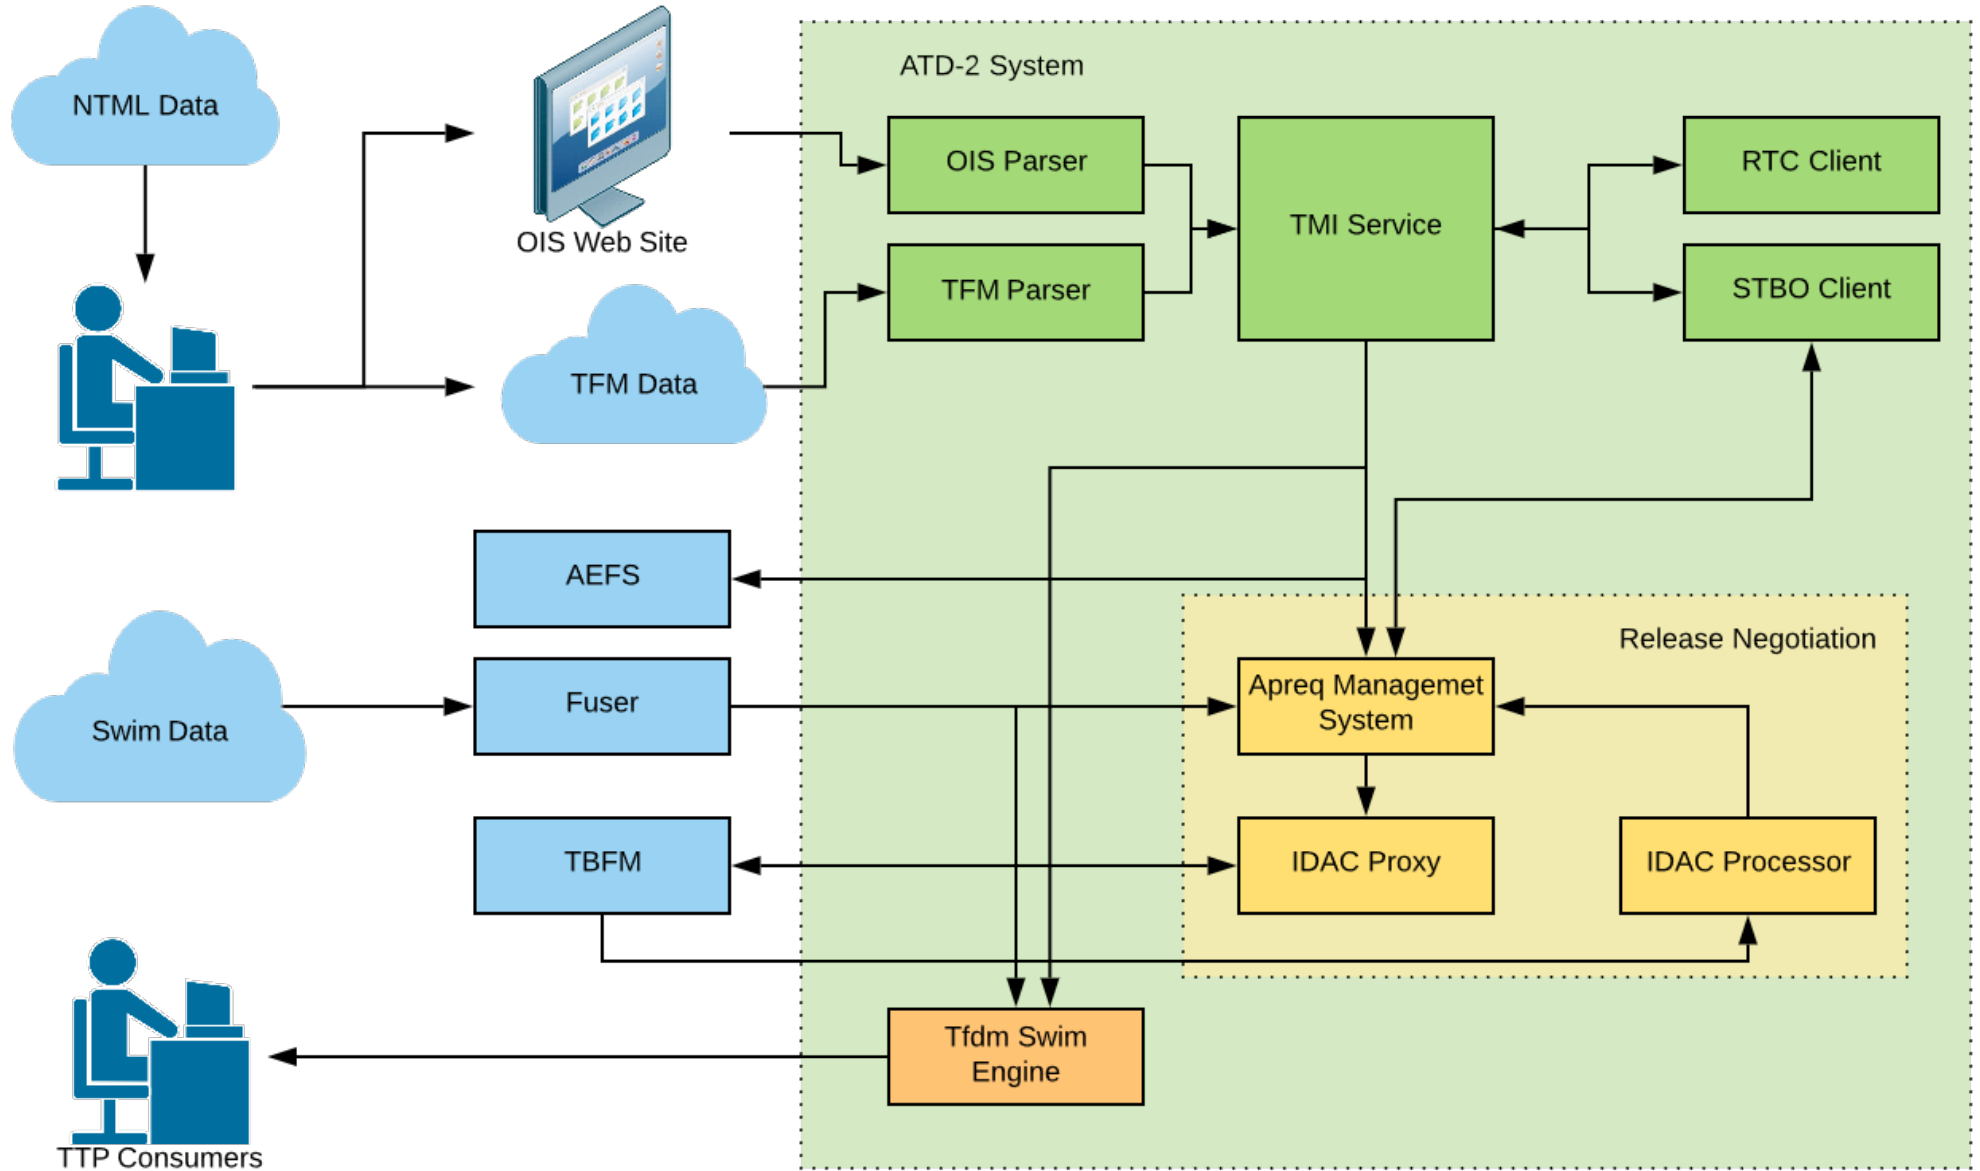

October 9, 2019

Bob Staudenmeier

Reduce verbal communication and streamline restriction compliance in the NAS by:

1. Automatic utilization of electronic Traffic Management Initiatives (TMIs)
2. Providing situational awareness of TMIs
3. Providing tools to manage TMIs within the ATD-2 system
4. Interfacing with existing FAA systems to improve the speed and accuracy of decisions related to TMI affected flights
5. Distributing flight and TMI data via TFDM Terminal Publication (TTP) SWIM feed

- Restriction column in OIS table is free text
 - Typos in keywords
 - Keywords out of expected order (e.g. start/end time values before APREQ/MIT keyword when they are expected after)
 - Precision matters!

Example: STOP CLT to CLT via NORTH JOJJO 1834-1930 WX:TSTMS ZTL:CLT

- NORTH was interpreted as the closure with JOJJO marked as an inclusion constraint
- Resulted in all fixes in the NORTH departure gate being closed
- TMI was intended to only close JOJJO

- Not all restriction types are available from OIS
- Not all airports/centers publish data to OIS
- OIS page does not display future restrictions
- Restriction only show after they have started
- Lag time between when a restriction goes into affect and when it shows on the OIS page (9 min. average lag)
- Occasional OIS page down time results in missing restrictions
- Unexpected changes to page URL, format, or permissions could result in a loss of data

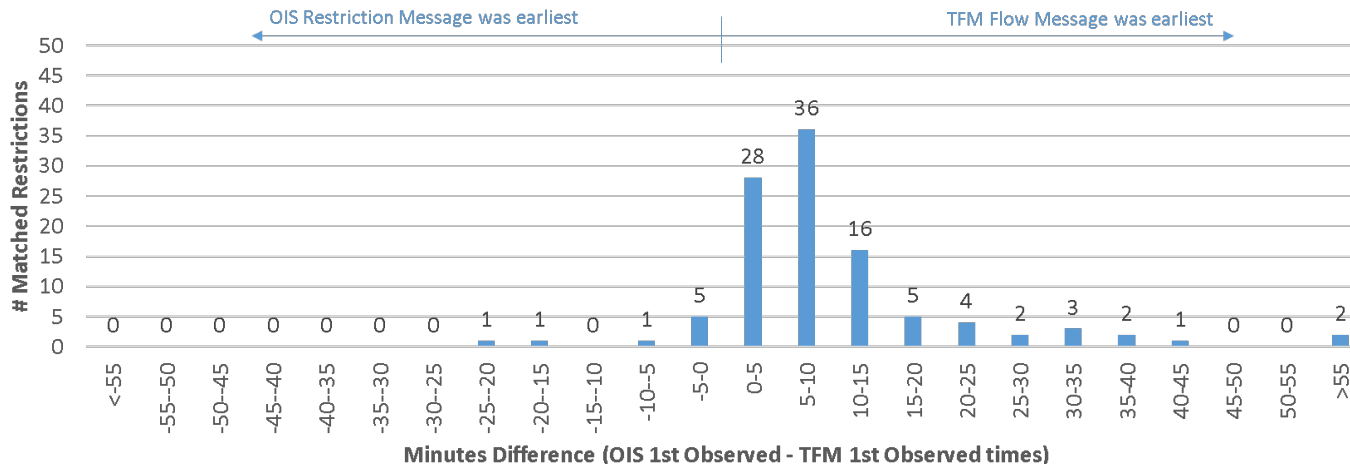

- APREQs are not currently observed in TFM Flow.
- Manual entry of the restrictions can result in typos that cause difficulties in parsing or dropped data.
- If TMIs are not entered into NTML, they may not end up in TFM Flow. FDIO, phone, or internal systems may be used to distribute TMI information.
- If ATC makes a free text log entry rather than using NTML's restriction panel the automated publishing of the restriction data may not happen.
- Ground Stop advisories are usually generated automatically when a Ground Stop is entered into FSM. However, some stops are initiated verbally with a free-text advisory manually created. These stops will not follow the same format as the automated Ground Stop advisories.
- Requires a well defined and consistent process of generating the TFM messages
- Value added qualifier and remarks fields contain center specific formatting
- Refresh messages are difficult to decipher and match

TMI	OIS	TFM Flow	NTML
Airport Information	NO	YES	YES
Airspace Flow Programs	NO	YES	YES
Ground Delay Programs	NO	YES	YES
Ground Stops	NO	YES	YES
Miles/Minutes in Trail	YES	YES	YES
Altitude Restrictions	YES	YES	YES
APREQs	YES	NO	YES
Advisories	NO	YES	YES
Closures (Fixes, etc.)	YES	YES	YES
FADT	NO	YES	NO
RAPT	NO	YES	NO
CTOP	NO	YES	NO
DICE	NO	YES	NO
REROUTEs	NO	YES	NO
TMI FLIGHT LIST	NO	YES	NO

- ← A source comparison was conducted, looking at several days' data from the OIS restrictions page, TFM Flow, and NTML entries
- A combination of OIS restrictions page and TFM Flow data was the recommended source
- Later, comparison between TFM Flow and the OIS restrictions page revealed restrictions in TFM Flow messages typically arrived several minutes before the appearing OIS restrictions page. Also, that restrictions only appeared on the OIS page at or after the restriction start time.

Difference Between TFM and OIS
September - November 2017

- Authoritative TMI repository across all ATD-2 components
- Processes, stores, de-conflict, and distribute TMI's
- Automatically recognizes and tags flights constrained by an active or future TMI event.
- Support persistent TMI's spanning multiple days (e.g. taxiway closures)
- Handles the following TMI data:

TMI Type	Possible Sources
Runway Utilization	User
APREQs	User, OIS
Surface Metering Programs	Scheduler
Departure Fix Closures	User, TFM, OIS
Departure Gate Closures	User, TFM, OIS
Ground Delay Programs	TFM
Ground Stops	User, TFM
MITs	User, TFM, OIS
Ramp Closures	User
Runway Closures	User
Scheduled Metering Modes	User
Taxiway Closures	User

- The process of TMIs getting to TFM Flow messages is currently being investigated (by observation at D10)
- In general, the process appears to be:
 - TRACON/ARTCC TMC determines need for TMI
 - Requesting facility TMC enters restriction in NTML using the Restriction Panel
 - Automation broadcasts the restriction via TFM Flow

The screenshot shows a software interface for creating a TMI restriction. On the left is a vertical menu with options: Misc, RSTN, MRSTN, Delay, RWY, Sum, EQ, Log, MyEntry, SISO, Count, ICE, INFO, MA, PIREP, SUA, SWAP, Telcon, and Pending. The main window has a 'Request Type' section with radio buttons for 'Initiate' (selected), 'Modify', 'Cancel', and 'Clear on Submit'. Below this is an 'Entry Time' field with the value '1936'. A 'Type' dropdown menu is set to 'Initial' and an 'MIT' field is empty. The 'Aircraft Type' section has radio buttons for 'All' (selected), 'Jet', 'Prop', and 'Other'. The 'Requesting' field contains 'ZTL' and the 'Providing (())' field is empty. 'Start Time' and 'End Time' fields are empty. A 'Causal Factor...' field is empty. The 'Restriction' section has radio buttons for 'En Route' (selected), 'Departure', and 'Arrival'. The 'Airport (())' field is empty, the 'Via (())' field contains 'WHITE', and the 'Location (())' field is empty. On the right side, 'Altitude', 'Speed', and 'Qualifier (())' (set to 'NONE') fields are empty. There is a checkbox for 'Severe Weather Rep'. At the bottom, there are two text areas: 'Justification/Remarks' and 'ATCSCC Remarks/Critique'. A 'Send To...' button is followed by input fields for 'ESIS:', 'Pos:', and 'Fac:'. On the far right, there are labels for 'Coordination Comp', 'Reminder (Z)', and 'Entry #:'.

Restriction messages by facility, Sep-Nov 2017
 Some messages had multiple types in the same message (e.g. MIT and SPD),
 A facility was counted if it was requesting or providing, excluded DCC and ARTCCs.

MISC and SWAP tab entries do not show up in TFM data. Also, the SWAP tab only allows 1 entry at a time.

RSTN tab is used for all restrictions including SWAP entries

“TXT” under the TYPE does not work. Just like the “CFR” does not come through TFM Flow

A MIT entered under the RSTN tab does come through to TFM flow prior to the TRACON acknowledgement

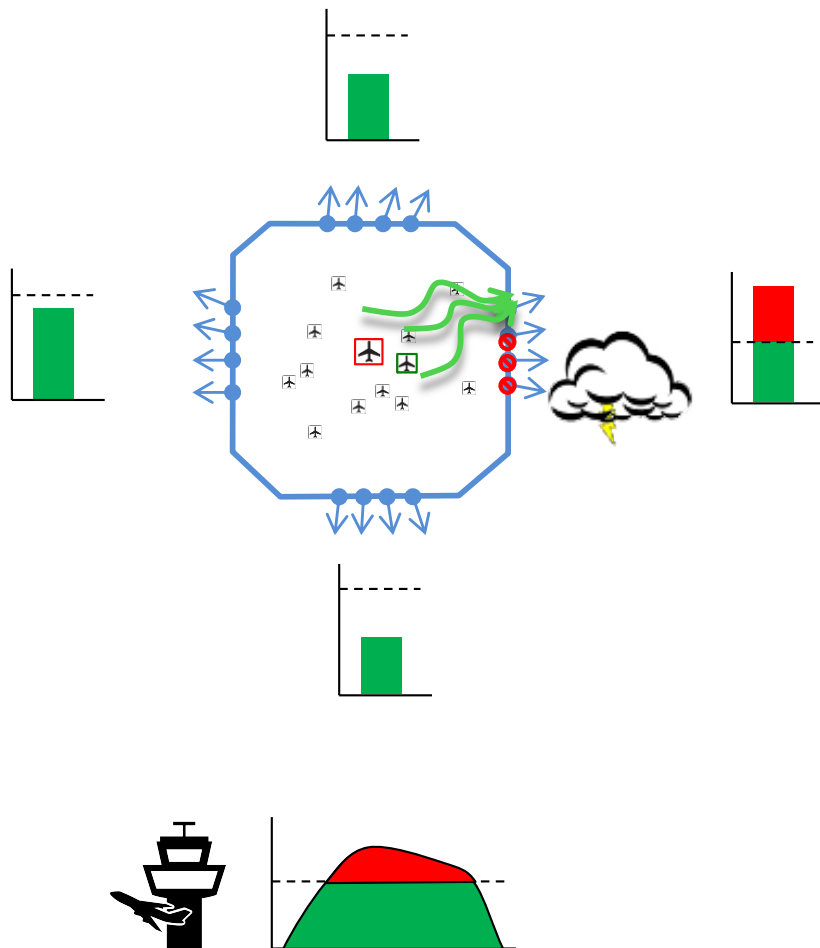

Have not tested all entries

ESIS Training may be necessary-”different look”

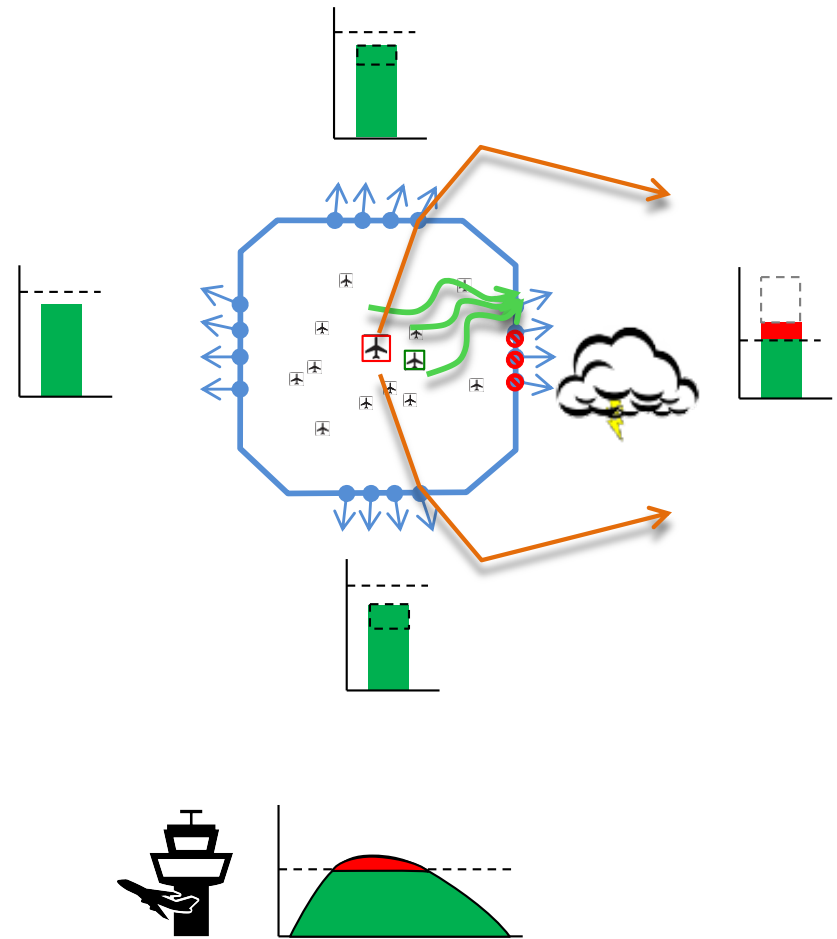

Demand Capacity Imbalances in D10 TRACON Airspace

Fix compression caused by weather events near TRACON airspace

Currently

Load Balancing With TOS (Trajectory Option Set)

Questions?

NASA and the FAA are collaborating to provide a prototype TFDM Terminal Publication (TTP) feed via SWIM R&D network as part of the ATD-2 Field Demonstration

Applications that Leverage the TTP Prototype Feed

The ATD2 Prototype TTP feed will include these services:

- Flight Data
- Airport Information
- Traffic Management Restrictions
- Flight Delay
- Surface Metering Program
- Operational Metrics

TTP is now available on SWIM R&D for CLT. You are welcome to onboard now!

- Web page managed by ATCSCC that provides information about current restrictions in the NAS including:
 - APREQs
 - MITS
 - Fix Closures
- Accessible at <http://www.fly.faa.gov/ois> > Current Restrictions
- Filter by requesting and providing facilities

ATCSCC
