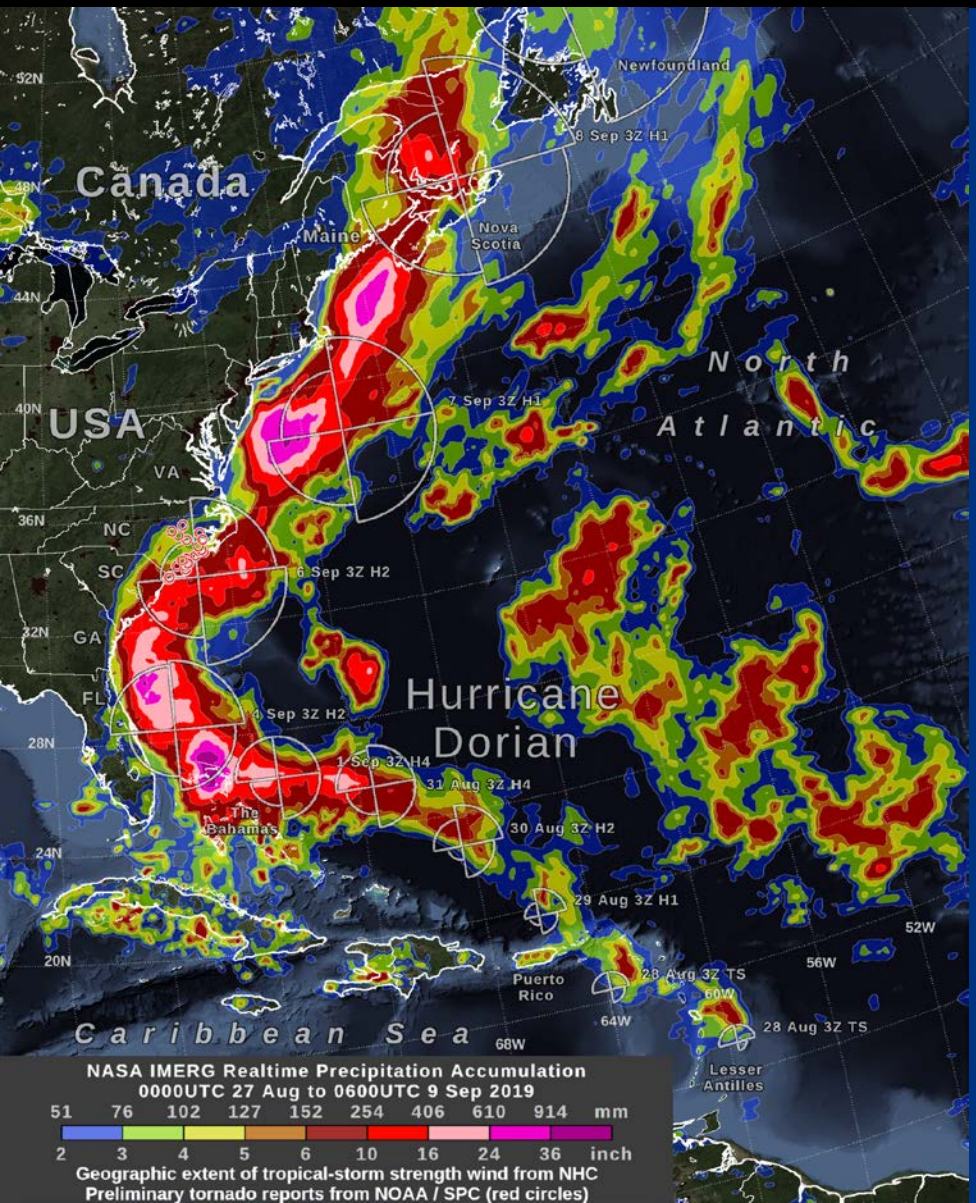
GPM Status and Science



Scott Braun
GPM Project Scientist

NASA Goddard Space Flight Center

Precipitation Measurement Missions Science Team Meeting
November 5, 2019

www.nasa.gov/gpm
Twitter: NASARain
Facebook: NASARain

Notes on Agenda

- 15 minute talks, hold questions until end-of-session discussion
- GV panel discussion
  - Connecting GV and algorithms
  - Four 5-minute talks followed by discussion
- Communications bootcamp (Ask Dalia!)

GPM Management Team

- Program Scientist: Gail Skofronick-Jackson, HQ
- Project Scientist: Scott Braun, GSFC
- Deputy Project Scientists:
  - George Huffman, Science, GSFC
  - Erich Stocker, Data, GSFC/Precipitation Processing System
  - Dalia Kirschbaum, Applications, GSFC
  - Joe Munchak, Ground Validation, GSFC

The GPM Core Observatory

GPM Core Observatory:

Launch: Feb. 27, 2014

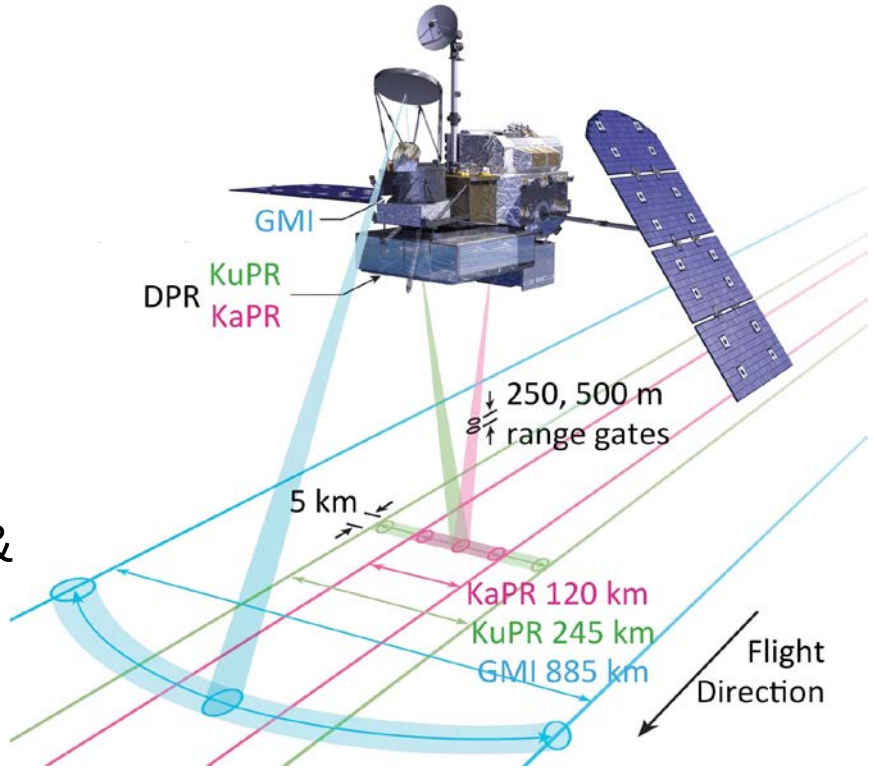
Altitude: 407 km

Orbit inclination: 65˚

3-year design life, extra fuel

Measurement range: 0.2-110 mm/hr &

Snow detection



GPM Microwave Imager (GMI) 13 Channels, (Provided by NASA)

- Passive radiometer with excellent calibration
- 10VH, 19VH, 23, 36VH, 89VH, 166VH, 183±3, ±7
- Provides measurements of precipitation (rain and snow) intensity and distribution over 885 km swath
- High spatial resolution (down to ~5km footprints)

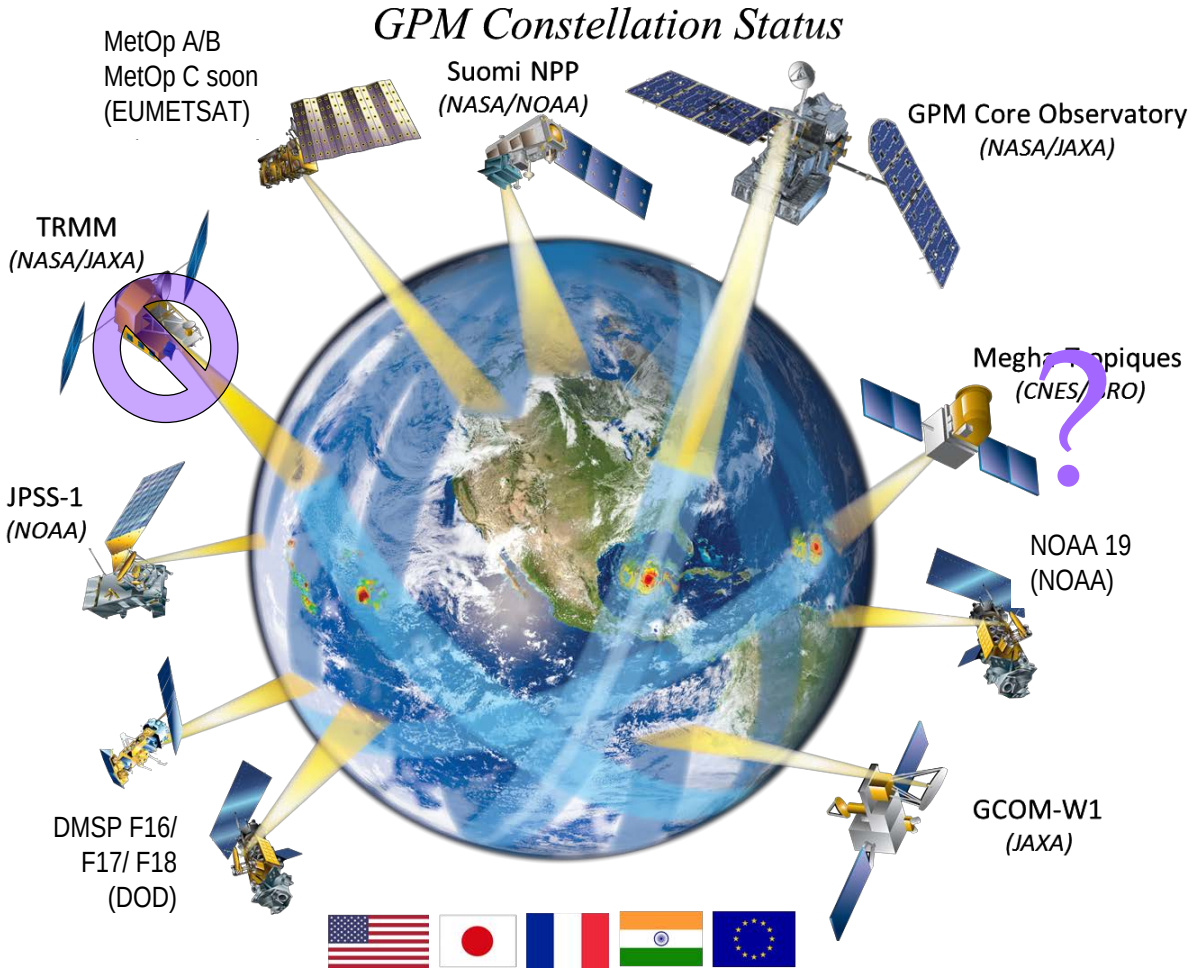
Dual-frequency Precipitation Radar (DPR), (Provided by JAXA)

- KuPR similar to TRMM, KaPR added for GPM
- Provides 3D measurements of precipitation structure, precipitation particle size distribution
- High spatial resolution (5km horiz.; 250m vertical)

The GPM Constellation

GPM Constellation:

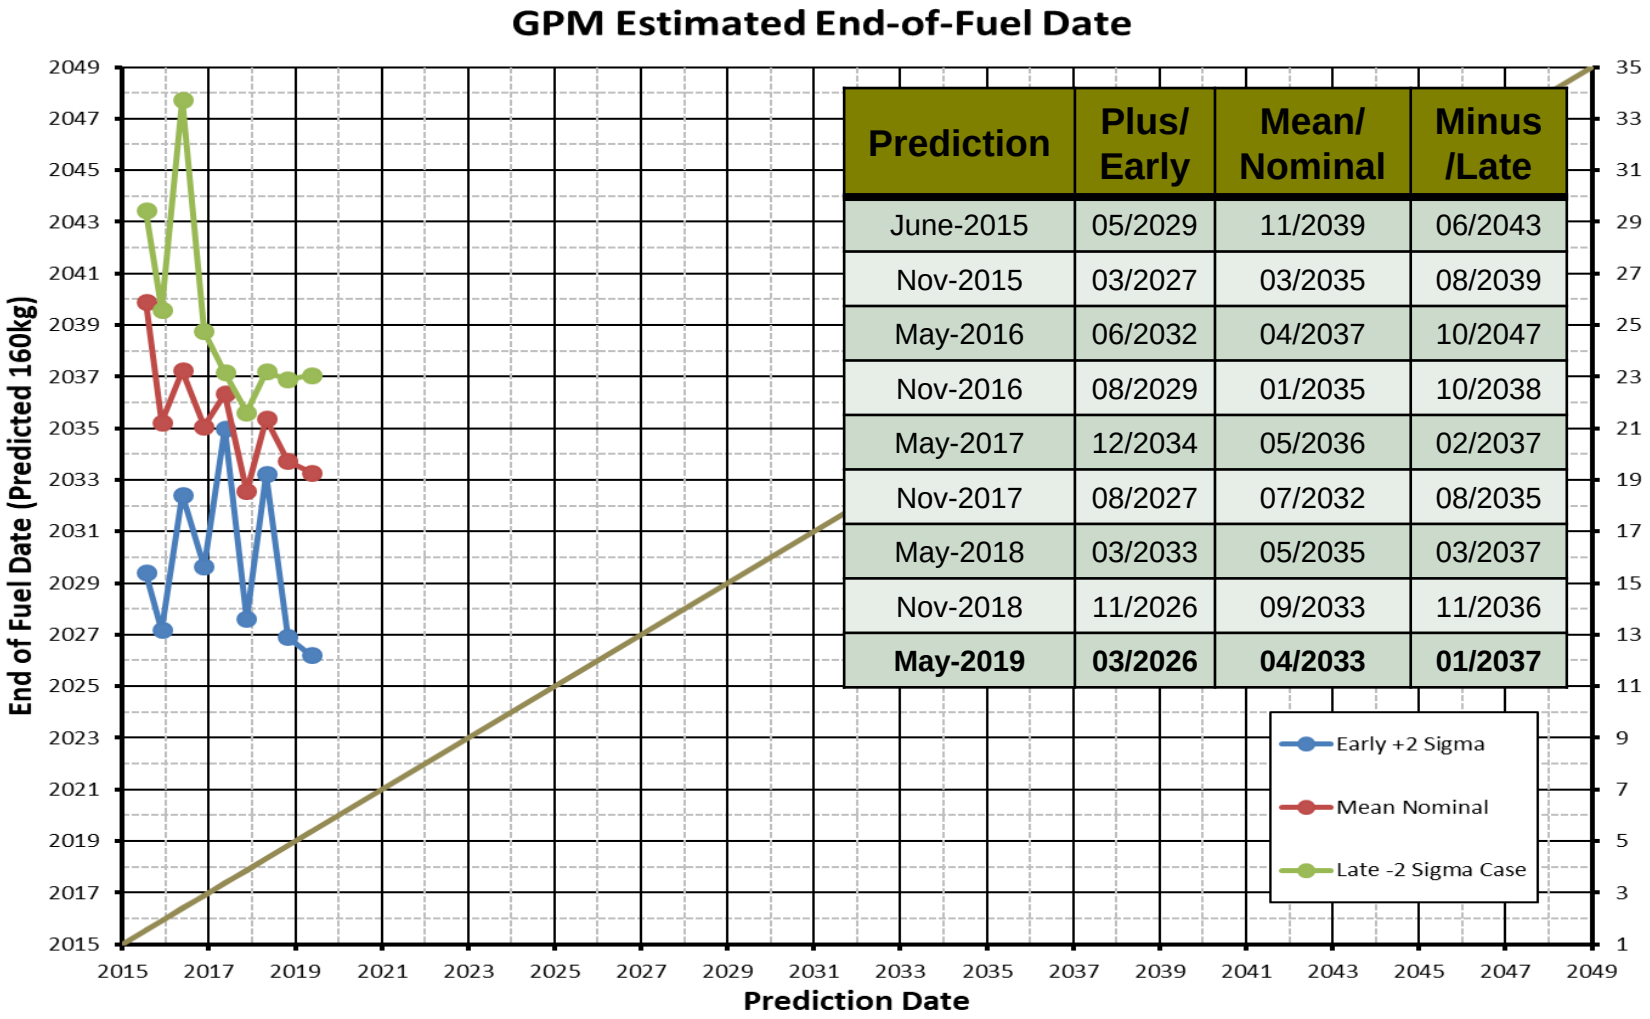
- Improved knowledge of water cycle variability
- Improved prediction of floods, landslides & freshwater resources



11 sensors in current constellation

Fuel Predictions to Date

Current end-of-fuel date is April 2033



Prediction	Plus/ Early	Mean/ Nominal	Minus /Late
June-2015	05/2029	11/2039	06/2043
Nov-2015	03/2027	03/2035	08/2039
May-2016	06/2032	04/2037	10/2047
Nov-2016	08/2029	01/2035	10/2038
May-2017	12/2034	05/2036	02/2037
Nov-2017	08/2027	07/2032	08/2035
May-2018	03/2033	05/2035	03/2037
Nov-2018	11/2026	09/2033	11/2036
May-2019	**03/2026**	**04/2033**	**01/2037**

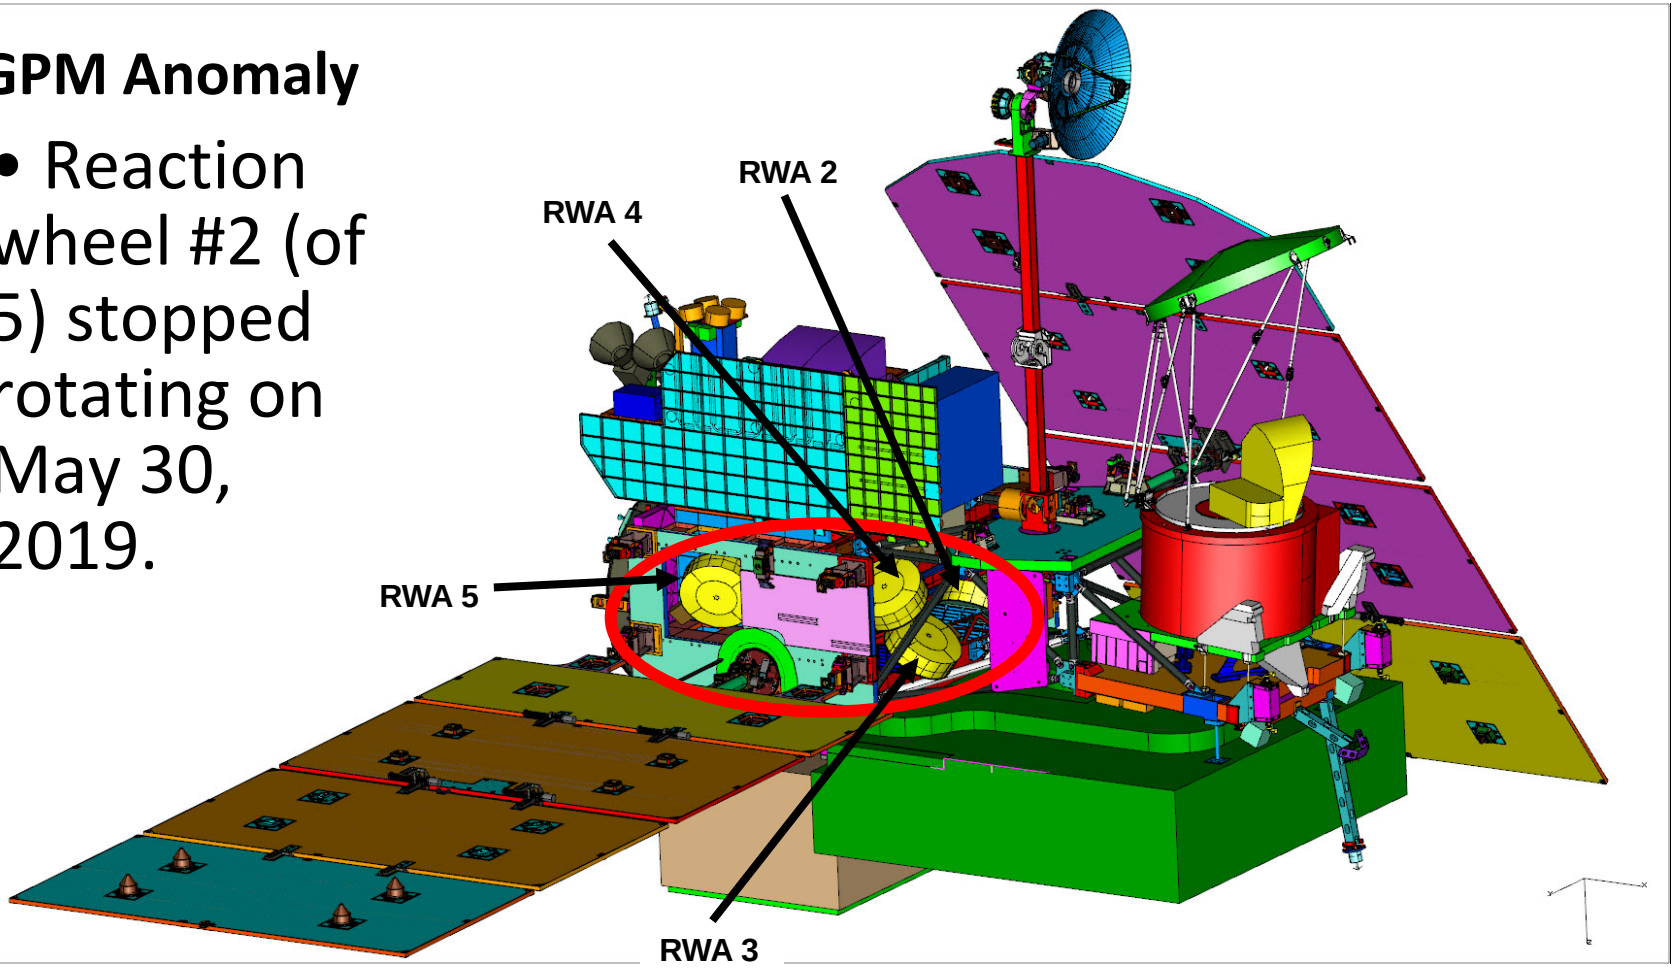
Mission Status

Spacecraft and instrument status: All systems are fully functional

Algorithm status: V05 (radiometers), V06 (radar, combined, IMERG, LH), next reprocessing ~2021

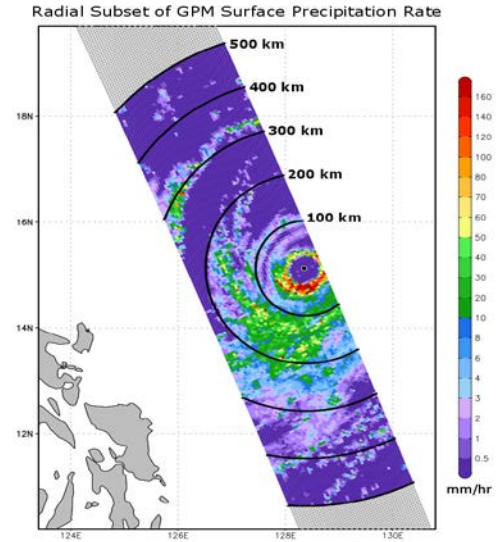
GPM Anomaly

- Reaction wheel #2 (of 5) stopped rotating on May 30, 2019.



GES DISC support to PMM - current status

- Released V06B IMERG (Early, Late, Final) in June;
  - immediately notified 1000s of registered users possibly using V06A
- Services updates:
  - V06B IMERGE in Giovanni for visual exploration
  - Level 2 GPM sub-setter (average download volume reduction >90%)
  - Level 3 re-gridder (re-grids to 33 different gridding schemes)
- Services available:
  - OPeNDAP: Hyrax, THREDDS, GrADS, OGC: WDS
- ICSU World Data System trusted repository:
  - Certified for data citation by high-impact journals (such as Nature)
  - "FAIR" practices: findable, accessible, interoperable, reusable
- User assistance and outreach
  - On-site science expertise providing personal assistance and numerous data recipes on how to understand and access PPM data.
  - User training including webinars, workshops
- Metrics (FY 19 Distribution, GPM & TRMM):

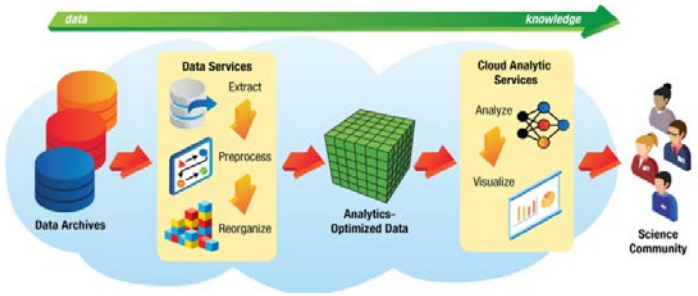


Subset of L2 GPM-DPR within 500 km of Typhoon Mangkhut eye using GrADS.

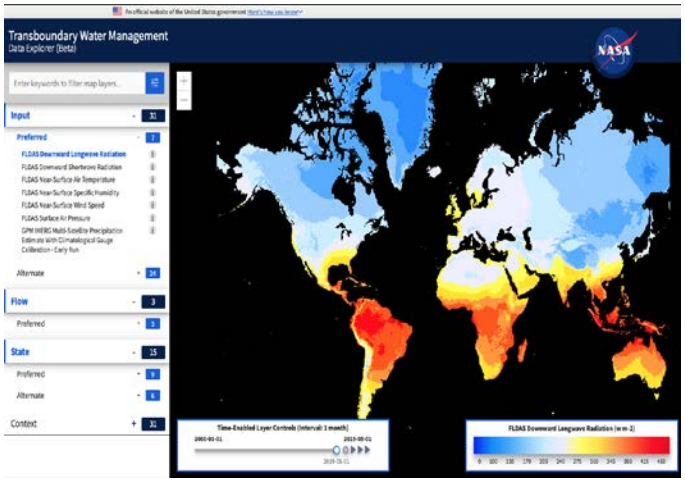
	TRMM	GPM
Users	5918	3302
Files	41 million	71 million
Volume (TB)	113	533

GES DISC support to PMM - in development

- IMERG in the Cloud (Cumulus)
  - Co-located with other DAACs data for integrated discovery, access, analysis in the Amazon cloud
  - MERRA-2, AIRS Level 2 as well in FY20.
- Giovanni in the Cloud
  - Analytics framework for next generation data systems
  - > 500x performance improvements for extraction and analysis of long time series (1000s of time steps)
  - Permits third parties to add data and services to Giovanni analysis framework.
- Other services in development:
  - Time aggregation service for Level 3 data, geoTIFF format conversion for GIS users
- Curation services:
  - Community products - PI's can provide non-mission data sets for distribution from trusted repository.
  - Paper publication mining using machine learning to determine how GPM, TRMM products and related services are being used (collaboration with Oak Ridge, JPL).
- User Engagement:
  - Expand access to PPM data and related services to the Applications community
    - Including access through GIS platforms as part of NASA-wide effort.
    - Collaboration with ARSET in global training program related to water resource management.



Cloud Analytics Reference architecture based on Giovanni model

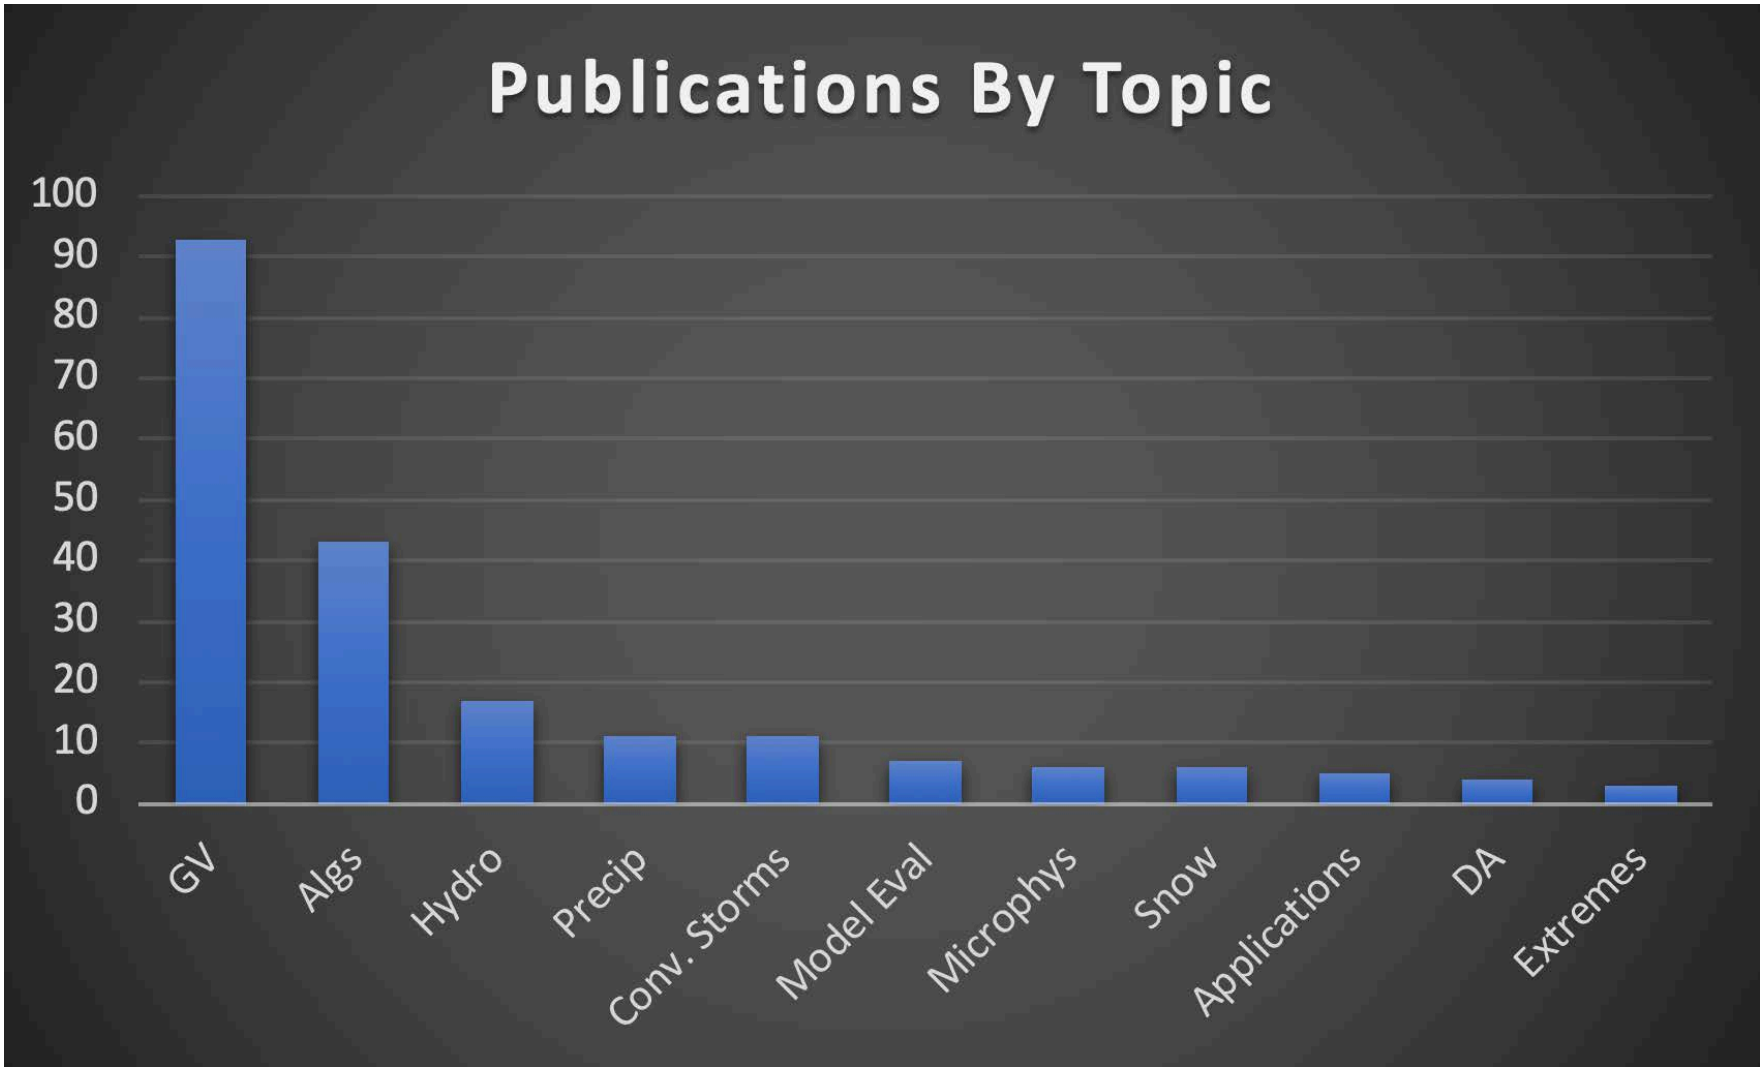


GES DISC support to NASA-led interagency trans-boundary water GIS application development.

GPM Senior Review Proposal

- Senior Review Proposal due March X, 2020
- Should highlight recent accomplishments toward mission objectives:
  - Advancing precipitation measurements from space (including microphysical properties and vertical structure information)
  - Improving knowledge of precipitation systems, water cycle variability, and freshwater availability
  - Improving climate modeling and prediction
  - Improving weather forecasting and 4D reanalysis
  - Improving hydrological modeling and prediction

Publications from Oct. 2017– July 2019

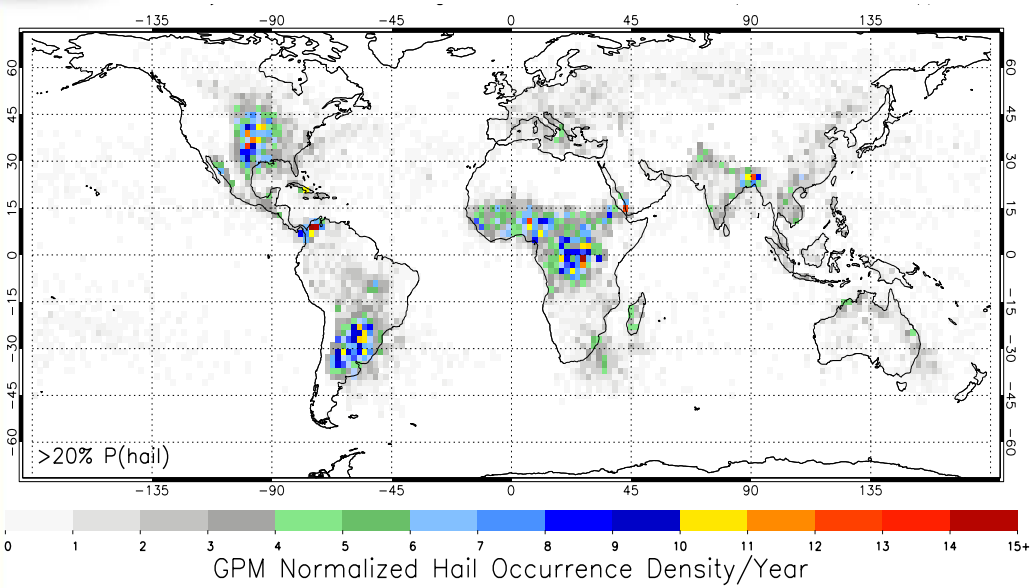


Based on Web of Science survey

GPM Senior Review Proposal

- Senior Review Proposal due March X, 2020
- Should highlight recent accomplishments toward mission objectives:
  - Advancing precipitation measurements from space (including microphysical properties and vertical structure information)
  - Improving knowledge of precipitation systems, water cycle variability, and freshwater availability
  - Improving climate modeling and prediction
  - Improving weather forecasting and 4D reanalysis
  - Improving hydrological modeling and prediction
- Science highlight to scott.a.braun@nasa.gov
- Applications highlight to dalia.b.kirschbaum@nasa.gov

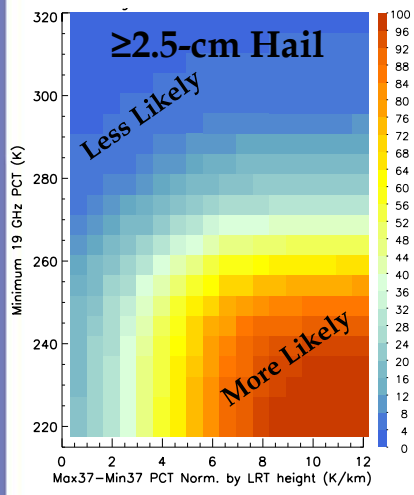
Hail Retrieval and Climatology from GPM

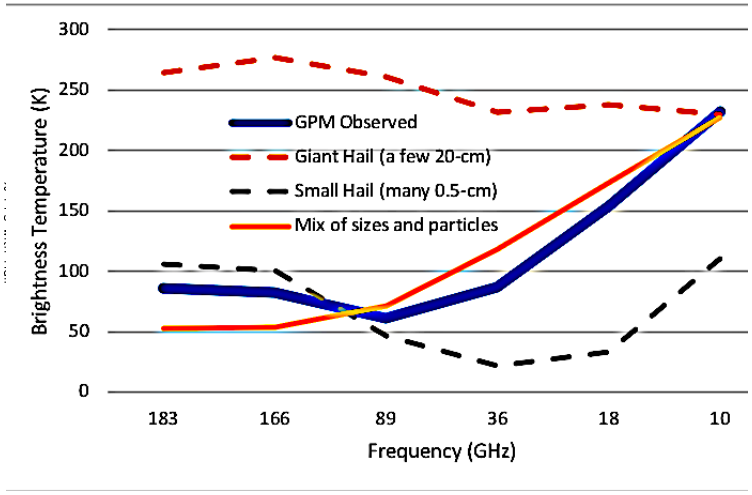


- Bang and Cecil (2019) combine TRMM and GPM 19-GHz and 37-GHz measurements to estimate the likelihood a storm has large hail
- Determined the frequency of occurrence of those storms.
- Scaling by tropopause height used to mitigate overestimation of storms in the tropics.

Above: Map of estimated frequency of large (≥2.5-cm) hail events using GPM 19 and 37 GHz channels, and tropopause height. From Bang and Cecil 2019.

Below-left: Probability of hail as a function of 19- and 37-GHz measurements, normalized using tropopause height. From Bang and Cecil 2019.





- Leppert and Cecil (2019) tested sensitivity to precipitation microphysics for a Texas hail storm with extremely low GPM-observed brightness temperatures.
- Explains why GPM measurements are not highly correlated with hail size – the number of hailstones is more important than their size.

GPM Senior Review Proposal

- Should describe future directions
  - Planned future algorithm advances (from working group leads)
  - New science directions
  - New applications

Extended Mission Algorithm Objectives From 2017

Improve and reprocess the GPM-CO and GPM Constellation (IMERG) retrieval algorithms from Version 05 to Version 06	✓
Reprocess the TRMM data using the GPM-CO as a reference standard to obtain an even longer record (20+ years) of the precipitation data	✓
Develop Level 4 products providing model-assimilated precipitation analyses and analysis for downscaled precipitation estimates	X
Extend IMERG from pole to pole (currently only ±60° latitude)	✓-
Enhance the Lagrangian morphing process used by IMERG	✓
Reduce the discrepancies in over-land retrievals	?
Improve the estimates/reduce the error of falling snow and light rain retrievals	✓-
Fully integrate the cross-track scanning radiometers (sounders) precipitation estimates into the IMERG product	✓
Develop a new product by revising the Ka-band swath scanning operations	✓-

GPM Senior Review Proposal

- Senior Review Proposal due March X, 2020
- Should describe future directions
  - Planned future algorithm advances (from working group leads)
  - New science directions
  - New applications
- Algorithm/working group leads: Describe in bullet form your top 1-3 objectives for the next 3 years, with text providing background and justification
- Data users (science & applications): Send recommendations for priority science areas, with text providing background and justification

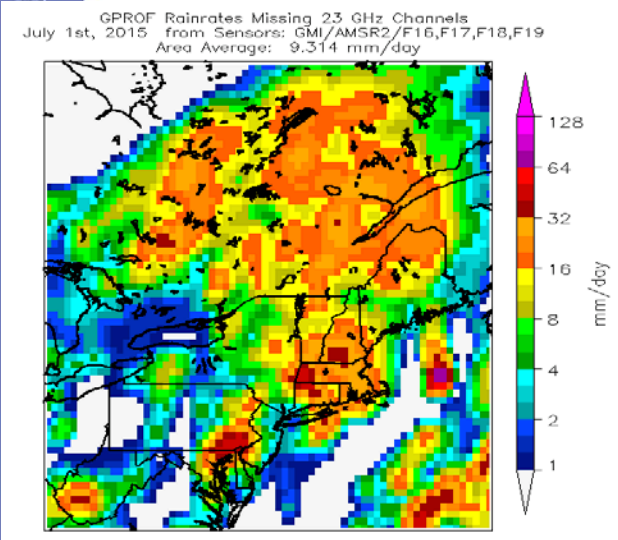
Summary

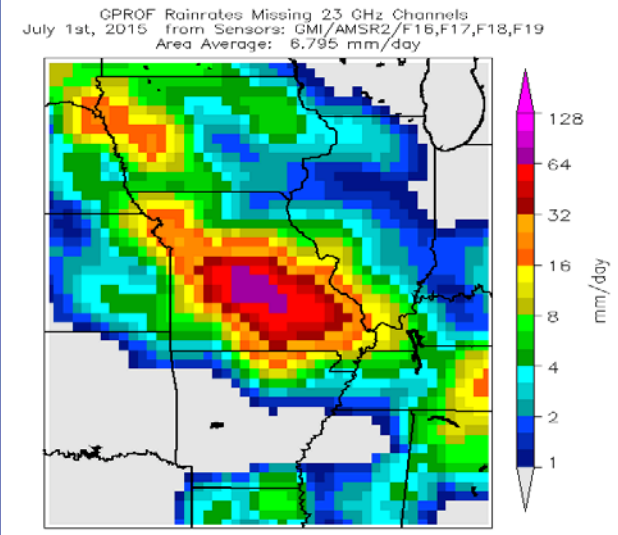
- GPM's systems are all fully functional, with fuel to potentially last until ~2033.
- Next reprocessing expected in 2021 (Erich Stocker presentation). Will provide dual-frequency retrievals across Ku swath.
- GESDIS tools available and in development. Feedback welcome.
- Senior Review Proposal due March 2020. WE NEED YOUR INPUT!

- Extra slides on 23.8 GHz interference by 5G

Two Heavy Rain Events

Derived rain rate
No 23.8 GHz data





Derived rain rate
Includes 23.8 GHz data

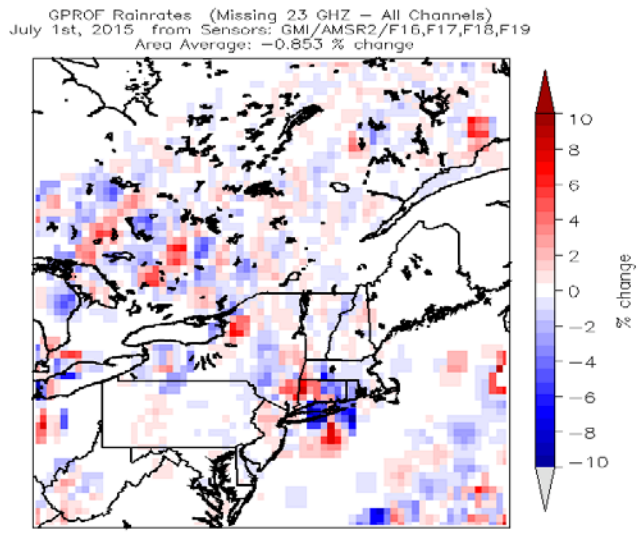
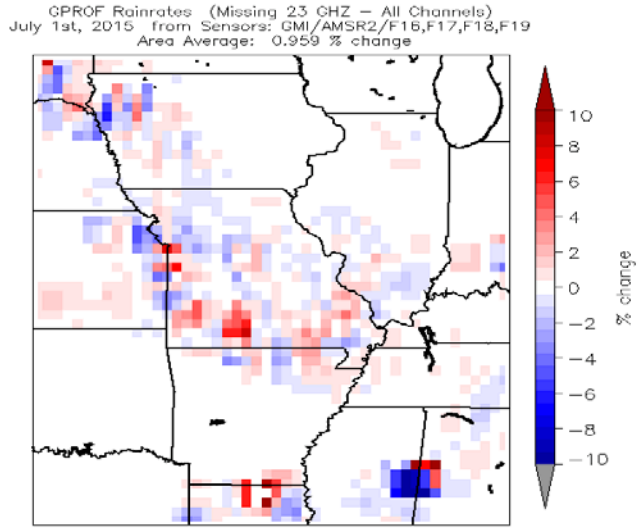
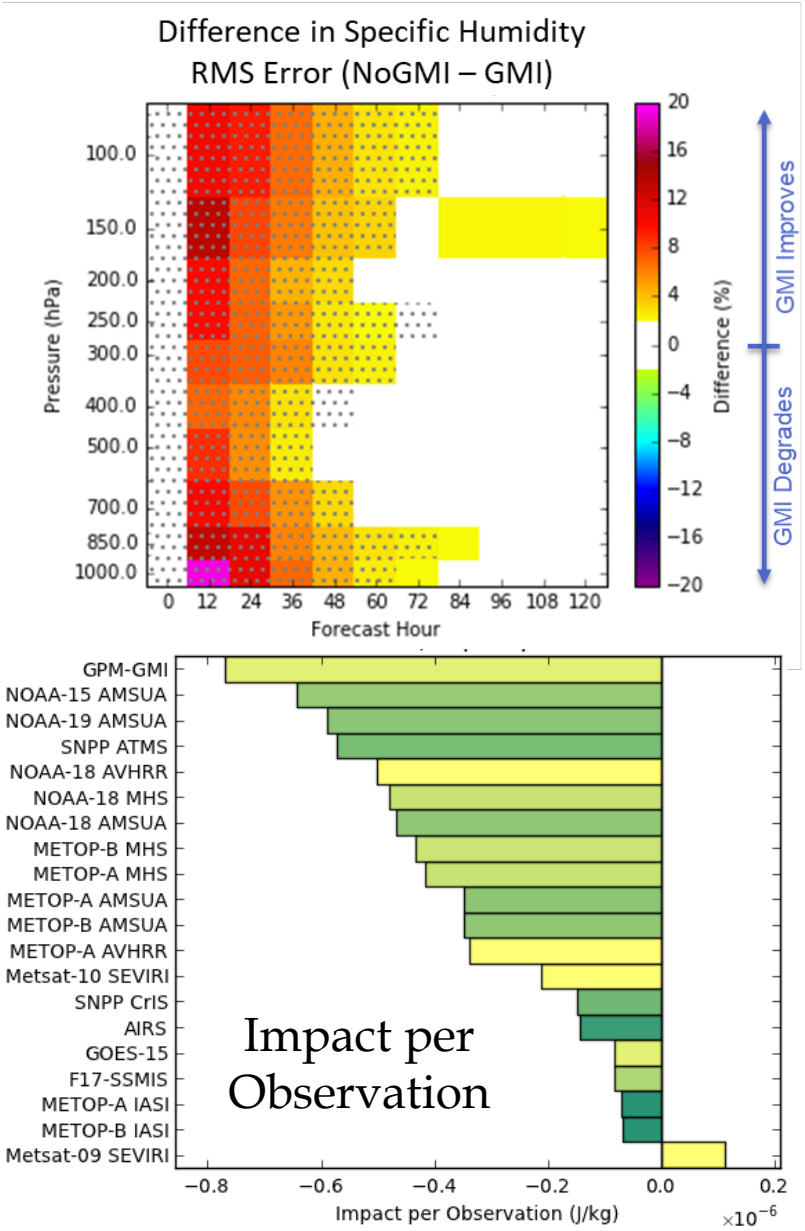
the two estimates





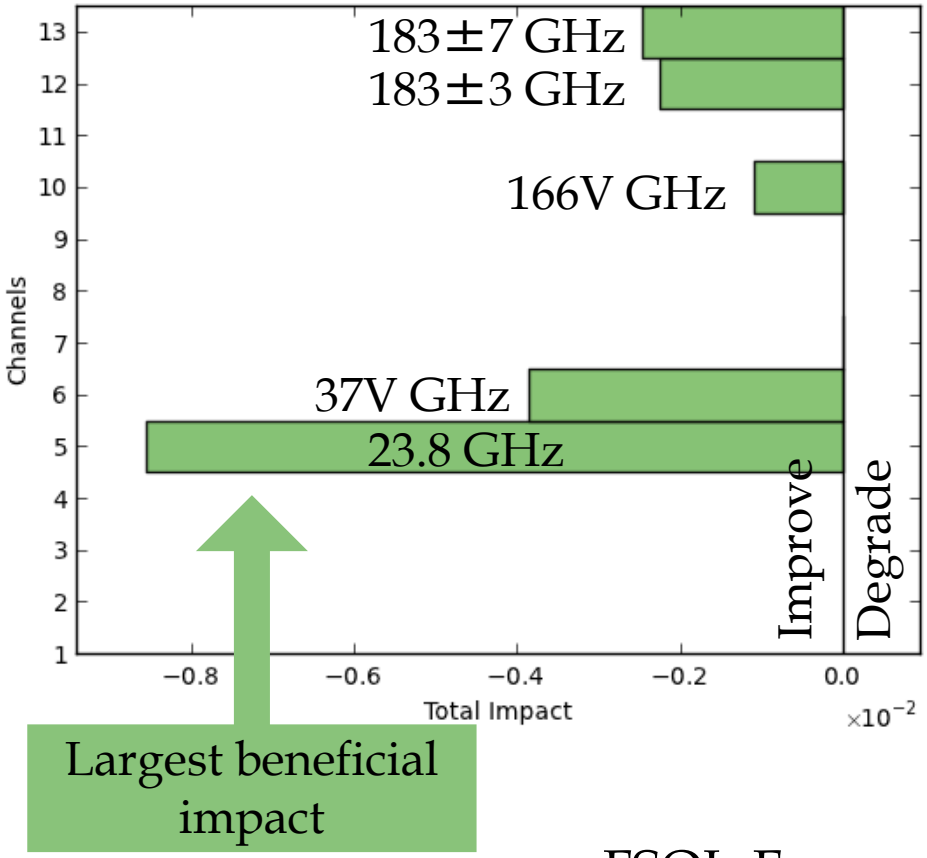
All-Sky GPM Data in GEOS Weather Forecasts

- Largest impact of GMI radiances in the Tropics
  - Specific humidity improved in short term (0-72 hour) forecasts (top, hatched indicates significance)
  - Similar improvements occur in tropical mid and lower tropospheric temperature and winds (not shown)
- Other modeling and initialization improvements included in the GEOS upgrade extend these improvements into the medium range
- **GMI is seen to have the highest impact per observation of all the radiance observation types**, and the total impact of GMI (bottom) is comparable to a single Microwave Humidity Sounder instrument (not shown)



Impact of 23.8 GHz on 24 Hour Forecasts

GPM Microwave Imager FSOI by Band
1 Aug – 30 Nov 2018



The FSOI metric can be used to illustrate the importance of the 23.8 GHz band

- For FSOI, negative (positive) values indicate that the observations contributed to a forecast error reduction (increase)
  - *Negative is good*
- Of the six bands used in our weather forecasting system, the 23.8 GHz band accounts for 47% of the total forecast impact from GPM/GMI

FSOI=Forecast Sensitivity-Observation Impact

Courtesy of W. McCarty

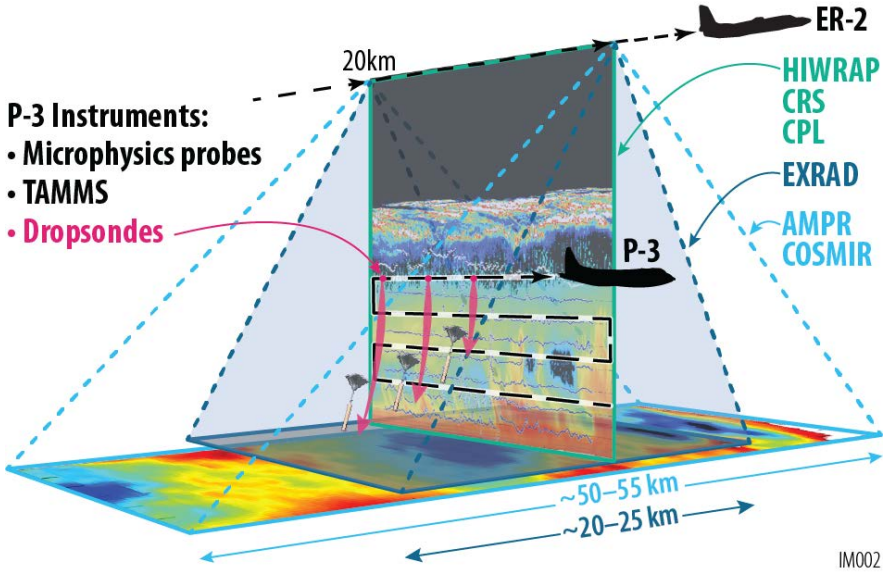
Investigation of Microphysics and Precipitation or Atlantic Coast-Threatening Snowstorms (IMPACTS)

- PI Lynn McMurdie, University of Washington, deputy PIs G. Heymsfield (GSFC), J. Yorks, and S. Braun

IMPACTS Objectives

1. **CHARACTERIZE** the spatial and temporal scales and structures of snow bands in Northeast US winter storms
2. **UNDERSTAND** the dynamical and microphysical processes that produce the observed structures
3. **APPLY** this understanding of the structures and underlying processes to improve remote sensing and modeling of snow

IM055



GPM funded additions:

- Dual-frequency, dual-polarized, Doppler radar (D3R) near UCONN
- Pluvio, disdrometer, other instruments
