

COMPARISON OF COMPUTER ANIMATION METHODS FOR LUNAR SURFACE SOLAR ARRAYS

Luke Cargill

Richard Pappa

NASA LaRC

Structural Dynamics Branch

- ❖ Smithfield High School & Governor's School for Science and Technology – Class of 2020
- ❖ Dartmouth College 2020-2024
- ❖ Previous internship experience with Richard Pappa through GSST mentorship program Fall 2019 – Spring 2020

ABOUT LUKE CARGILL

GOAL

Animate deployment of lunar solar array model
and compare capabilities of various software

MODEL OVERVIEW

LSSA V2

- Four 1.5 m wide Arrays
- Four Housings
- Twelve Panels per Housing
- Twelve Mast Segments
- Three Leg Stand

12,710,866 Triangles

Housings

Legs

Mast

Panels

A CLOSER LOOK

SOFTWARE

KeyShot

Blender

Maya

KEYSHOT ANIMATION METHODS

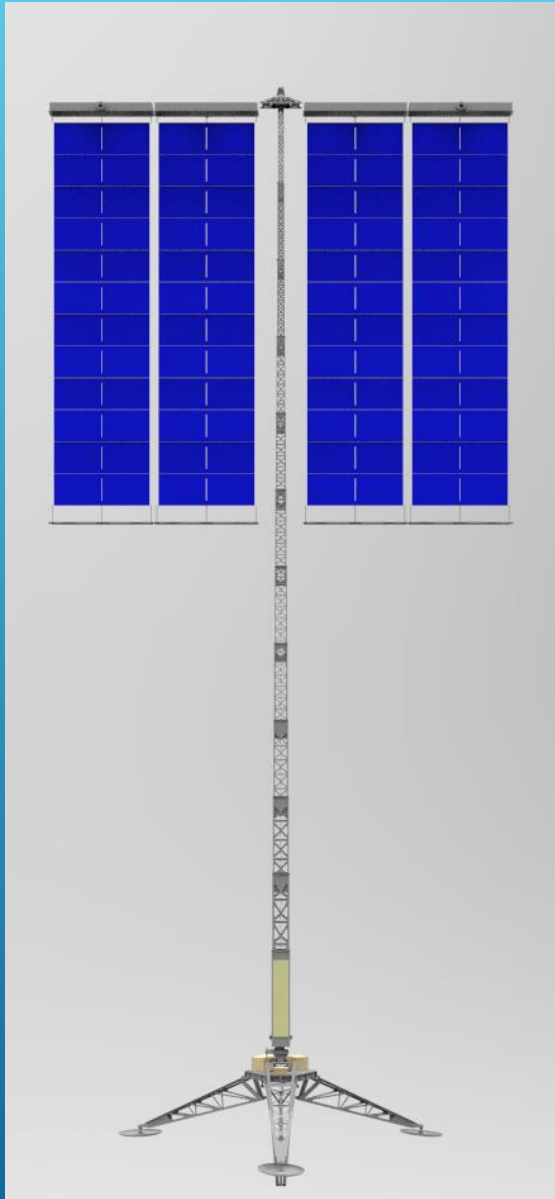

GENERAL ANIMATION NOTES

- ▶ To Add Animation, right click item in scene tree
- ▶ Select animation type (rotation, translation, turntable, fade)
- ▶ Green bar representing the animation will appear in Animation Wizard Menu
- ▶ Green animation bars appear in the order that they were added
- ▶ All objects share the same animation menu
- ▶ Adjust time and value (i.e. distance, degrees) of animation in properties, or
 - ▶ Adjust the time duration by clicking and dragging an edge of a green animation bar
 - ▶ Click in the middle of a green animation bar and move it to start at a different time stamp
- ▶ All animations applied to a group are applied to every item in the group

Note: Imported animations appear as purple bars in the Animation Wizard Menu

Animation Properties

Name: 1289037-103 rotation 114

Rotation

Degrees: -90.00°

Axis: X Y Z

Axis Orientation: Original Local Global

Pivot Point

Self

Origin Center

Pivot Point Object Axis

Dynamic Pivot Point

Time Settings

Motion Ease: Linear

Start: 0 m 0 s 0 ms

End: 0 m 1 s 0 ms

Duration: 0 m 1 s 0 ms

▶ Legs:

- ▶ pivot objects created using "add geometry" > "cylinder"
- ▶ pivots placed between base of mast and top of leg
- ▶ rotated each leg around pivot object up 115 deg. according to its local axis

▶ Panels:

- ▶ every odd/even panel rotated about self 90 deg./-90 deg.

▶ Housings:

- ▶ pivot objects created using "add geometry" > "cylinder"
- ▶ pivots placed between top of mast and inside edge of housing

Item

- #10 Segment
 - #10 Segment translation 109
- #9 Segment
 - #9 Segment translation 108
- #8 Segment
 - #8 Segment translation 107
- #7 Segment
 - #7 Segment translation 106
- #6 Segment
 - #6 Segment translation 105
- #5 Segment
 - #5 Segment translation 104

- ▶ Mast: Each segment grouped to include self and every segment above it

Animation Timeline

Animation Wizard FPS: 30

00:00:00 / Frame 1

- 1289037-103 translati...
- 1289037-103 rotation...
- 1289037-103 translati...
- 1289032-1_ASM trans...
- #2 Segment translati...
- #3 Segment translati...
- #4 Segment translati...
- #5 Segment translati...

Pivots

- ❖ Pivot objects visible
- ❖ Difficult to position
- ❖ Unrealistic positions

- ❖ Panels clip each other
- ❖ Adjusting time creates too much distance between panels

- ❖ New pivots needed for hinges regardless of grouping
- ❖ Pivot object clutter
- ❖ Time consuming

BLENDER ANIMATION METHODS

GENERAL ANIMATION NOTES

- ▶ Solid View mode is best for animation (as opposed to Render View mode)
- ▶ Insert a key frame at a location
- ▶ Move the part
- ▶ Insert a frame at the new location
- ▶ Adjust the interpolation mode (e.g. linear, exponential, constant) to change the acceleration of the auto-keying between frames

Note: a yellow bar will appear between key frames if nothing changes between or at those frames

▶ Housings:

- ▶ empty (pivot) objects created using “Add” > “Empty”>”Plain Axes
- ▶ empties placed between top of mast and inside edge of housing

▶ Panels:

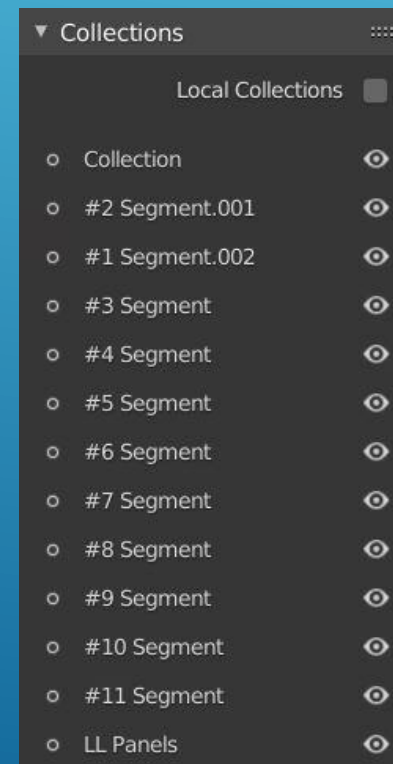

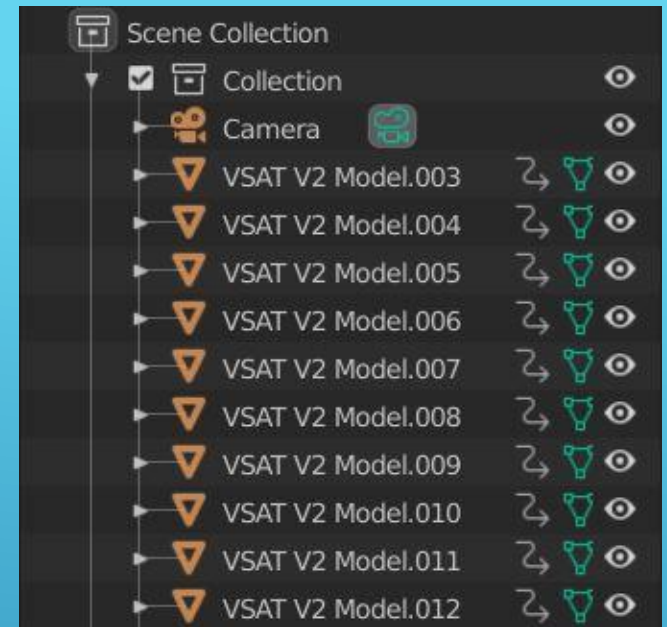

- ▶ placed 3D cursor at midpoint of the top edge of the panel
- ▶ set origin for each panel to 3D cursor at that point
- ▶ every odd/even panel rotated about self 90 deg./-90 deg.

▶ Mast:

- ▶ each segment collection parents the group of segments below it to create a telescoping deployment method

▶ Legs:

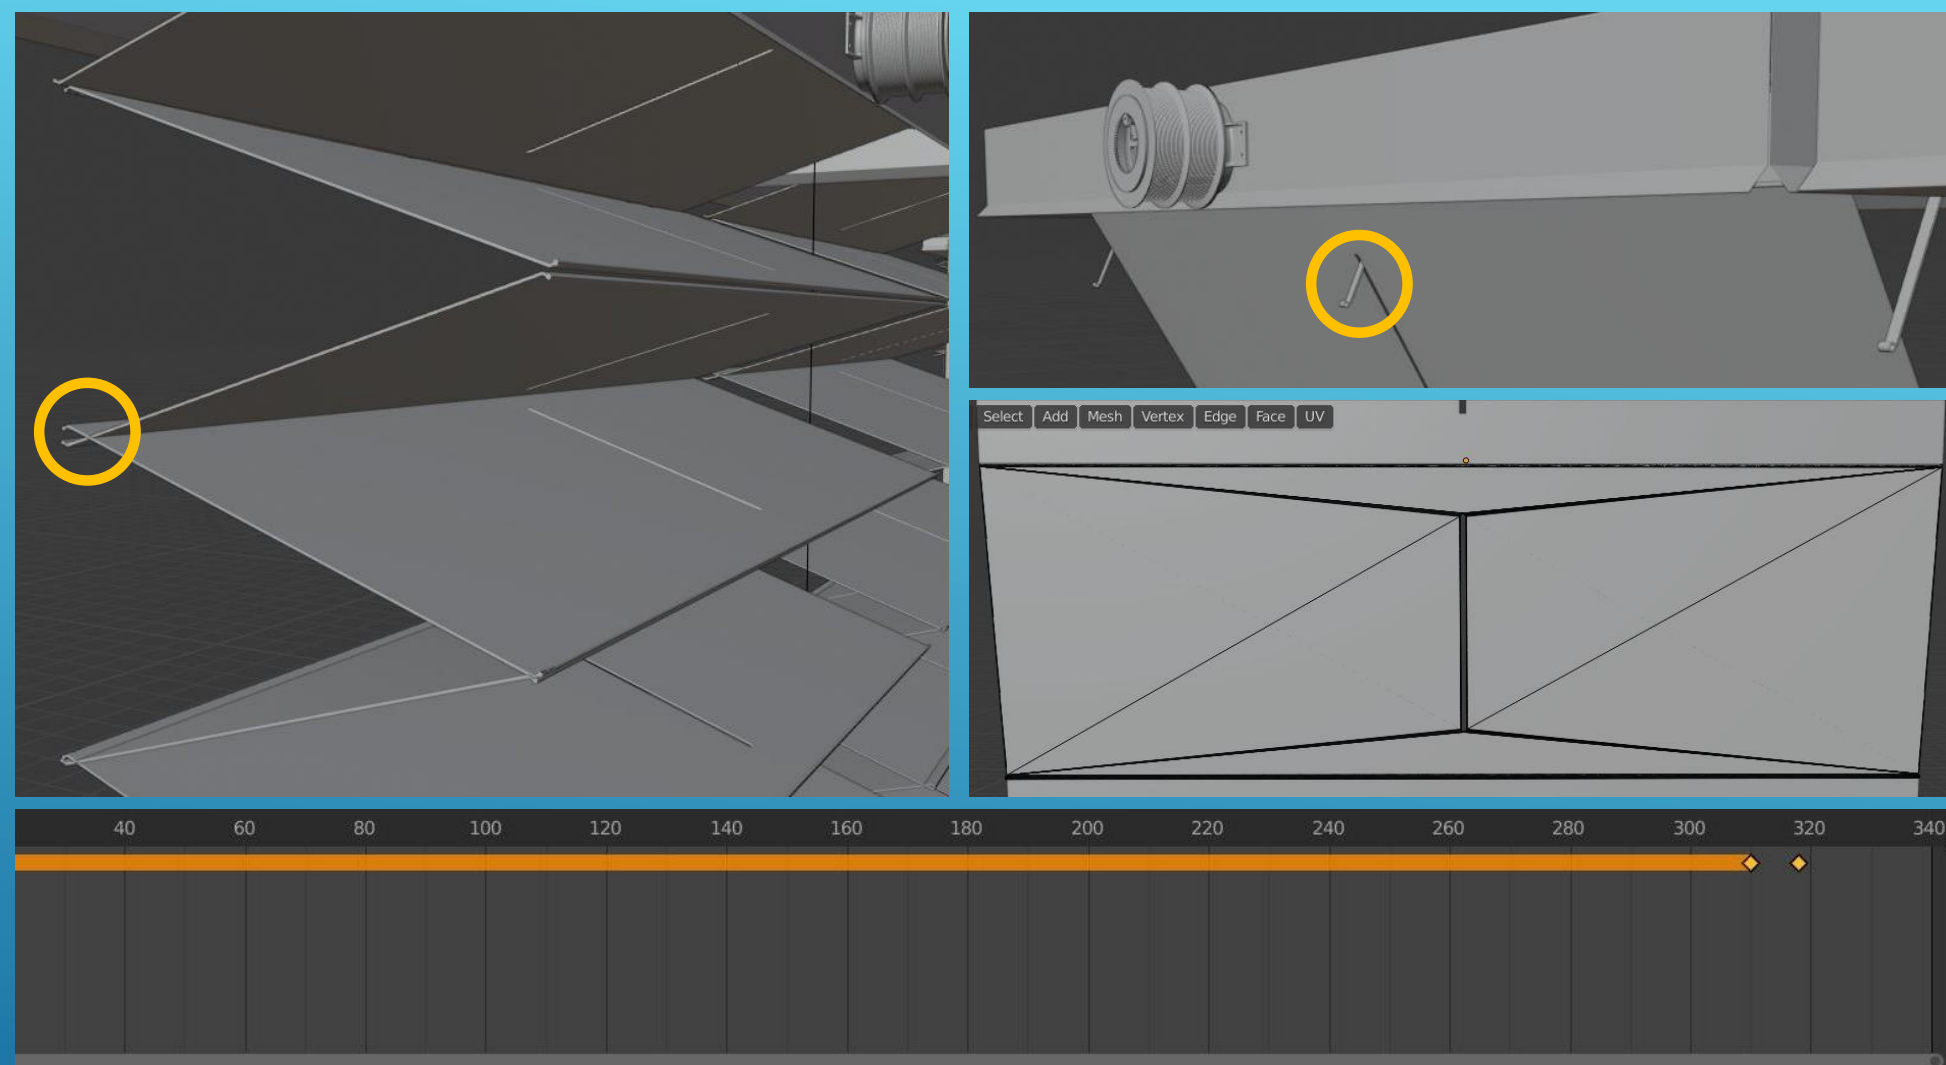

- ▶ empty (pivot) objects created using “Add” > “Empty”>”Plain Axes
- ▶ empties placed between base of mast and top of leg
- ▶ rotated each leg around empty up 115 deg. according to its local axis

Pivots

- ▶ Panel origin positioning imprecise
- ▶ Slight separation between some panels
- ▶ Incorrect hinge animation

- ▶ Moon shifts despite no key frames apparent on timeline
- ▶ All possible parent constraints cleared
- ▶ Counter animation inserted to avoid movement

- ▶ Very capable of solar array animation
- ▶ Intricate display of features
- ▶ Cross between KeyShot and Blender:
 - ▶ heavy usage of grouping like in KeyShot
 - ▶ key frame based animation like in Blender
- ▶ Image shows array partially animated
- ▶ Hinges made parent objects of top panels

MAYA ANIMATION PLANS

CONCLUSION

Blender is best

- 1.) Easy to learn
- 2.) Massive Animation Toolset
- 3.) Free

KeyShot

Blender

Maya

Thank you, Mr. Pappa!
