06/12/14 LC34 112G08069

Personnel : Chuck Sorden (CS) Geologist Tg
Weather : Clear/Fog 81°F Humid
PPE : Level D
Objective : Begin 48 hr pump test on RW0017

0800 CS/Dan Forester (DF) @ LC34; pulling pump up 5' in RW0017
Per Scott Andersen Recommendation
-Goal: Set pump 5' above previous Depth (93' to bottom of pump
92' @ pump intake; New Depth 88' to Bottom of Meter 87' to pump
intake; Pump to attempt to sustain @ 1.5 gpm
0815 System off... DF resetting LC34; may take ~0.5 hr
CS Begins to collect Static DTWs
0915 Static water levels complete; will Begin pump test @ 0930
0930 Begin Pump test; CS adjusting Flow to 1.5 gpm
0935 Fitting Blew; repairing; New Target time 1000
1000 Flow meter not ready
1110 Spoke w/ Scott Andersen; will turn today into a ~~pump~~ Step test
Since pump issues; new projected start time @ 1130
1130 Begin Step Test - Target 3hr test
1210 Pump paused; Flow meter failed
1400 Flow meter failed; using totalizer; allowing formation to recover
then resume pump tomorrow

RE: NASA LC34, KSC, FL - Final Data Report
KB Labs Project # 08-122

Dear Mr. Langenbach:

Enclosed is the final report of the on-site analysis performed by KB Labs, Inc. at the above referenced site. Samples were collected and analyzed on June 26, 2008. Included are a brief project narrative, data report narrative, tables listing quality control results, final analytical results, and sample chain-of-custody form. This information will also be sent electronically.

KB Labs' mobile laboratories have been inspected by the FDOH Bureau of Laboratories and are NELAP Certified as of April 1, 2003. Our personnel, methodology, proficiency testing, and quality assurance requirements comply with the guidelines of Chapter 62-160 of the Florida Administrative Code and with the consensus standards adopted at the National Environmental Laboratory Accreditation Conference (NELAC). Data for the site referenced above were determined in accordance with published procedures under Test Methods for Evaluating Solid Waste (EPA SW-846, Update III Revised May 1997). Unless otherwise indicated on the quality control narrative accompanying the data report, the quality assurance and quality control procedures performed in conjunction with analysis of groundwater samples demonstrated that the reported data met our requirements for accuracy and precision under NELAC Standards.

If you have any questions, please do not hesitate to call me or Kelly Bergdoll, President of KB Labs, at (352) 367-0073.

Sincerely,

KB Labs, Inc.

Todd Romero
Director of Operations

PROJECT NARRATIVE

Project Scope

On June 26, 2008, a total of 4 water samples were analyzed for GeoSyntec Consultants at NASA LC34, KSC, FL. The samples were analyzed for vinyl chloride, 1,1-dichloroethene, cis- and trans-1, 2-dichloroethene, trichloroethene, and tetrachloroethene.

NELAP Certification

KB Mobile Labs Unit KB1: FDOH NELAP Certification Number E82815

Analytical Procedure

All samples were analyzed using SW846 Method 5030/8260 for waters. Ten (10) milliliters (mL) of water or air (air samples) were purged with helium and the volatile organic compounds (VOCs) were collected on a solid-phase adsorption trap. The adsorption trap was heated and back-purged with helium. The components were then separated by capillary column gas chromatography and measured with a mass spectrometer (GC/MS) operated in the electron impact full-scan mode. The individual VOCs in the samples were measured against corresponding VOC standards.

Analytical Results

Laboratory results were provided to the client on an as-completed or next-day basis. Final results of the on-site analyses are provided in a hardcopy report. The data produced and reported in the field has been reviewed and approved for this final report by the Director of Operations for KB Labs.

Uncertainty of Reported Values

All measurement data presented in this report are subject to a degree of uncertainty and the degree of uncertainty varies with each compound of interest. KB Labs estimates the uncertainty of each measurement using a statistical evaluation of the standard deviation from the mean percent recovery of a number of trials of a given measurement. More specifically, KB Labs maintains historical percent recovery control limits at the 99% confidence level for each analyte of interest. These are calculated as $\pm$ 3 times the standard deviation from the mean of historical measurements of the percent recovery of spikes of the analytes of interest into actual and control sample matrices. For example, if the lower and upper percent recovery control limits for a specific analyte of interest have been determined to be 70 and 100 percent respectively, a reported value of 10.0

ug/L will be with 99% confidence 7.0 to 13.0 ug/L.For more information about KB Labs estimation of uncertainty, contact KB Labs' quality assurance officer and/or request a copy of KB Labs' SOP for determining measurement uncertainty.

Quality Control (QC) Data

Surrogate Recoveries – Table 1 lists the daily analytical sequence and percent recovery results for surrogate compounds, which were added to all analyses. Four (4) surrogate compounds were added to each analysis in order to continually monitor general method performance.

VOC Spike Recoveries – Table 2 lists the percent recovery results for matrix spike and laboratory control samples. A known amount of each target compound was added to selected field samples and to laboratory reagent water in order to monitor the performance of each of the target compounds in the actual matrix and in laboratory reagent water.

Method Blanks – Daily analysis of laboratory reagent water samples was performed in order to monitor the cleanliness of the analytical system.

DATA REPORT NARRATIVE

1. All sample data has been reviewed and, if required, updated in the Final Data Report for rounding and significant figures.

2. As per client specifications, all samples diluted are reported for both non-detects and detects to KB Labs MDL level or neat level reporting unit (<1.0 ug/L). Following FDEP protocol, data is reported with "I" Data Qualifier.

U = Indicates that the compound was analyzed for but not detected at the quantitation limit. The value associated with the qualifier shall be the method detection limit.
J = Estimated value due to sample response greater than calibration curve.

U = Indicates that the compound was analyzed for but not detected at the quantitation limit. The value associated with the qualifier shall be the method detection limit.
J = Estimated value due to sample response greater than calibration curve or detected at less than lowest standard but value requested by client. Estimated values < quantitation limit do not meet NELAC.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Geosyntec Consultants **Job No:** F66732

Site: LC34 Dynamic Testing; CCAFS, FL **Report Date** 7/28/2009 3:51:22 PM

6 Samples were collected on 07/16/2009 and received at Accutest on 07/18/2009 properly preserved, at 3.6 Deg. C and intact. These Samples received an Accutest job number of F66732. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: SO **Batch ID:** VG2226

All samples were analyzed within the recommended method holding time.

Sample(s) F66522-2MS, F66522-2MSD were used as the QC samples indicated.

Sample(s) F66732-3 have compound(s) reported with a "V" qualifier, indicating analyte is found in the associated method blank.

Matrix Spike Recovery(s) for 1,1,2-Trichloroethane, 4-Methyl-2-pentanone are outside control limits. Probable cause due to matrix interference.

Matrix Spike Duplicate Recovery(s) for 1,1,2-Trichloroethane, 2-Hexanone are outside control limits. Probable cause due to matrix interference.

Wet Chemistry By Method SM19 2540B M

Matrix: SO **Batch ID:** GN35914

Sample(s) F66692-1DUP were used as the QC samples for Solids, Percent.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used

RE: LC34, KSC, FL - Final Data Report
KB Labs Project # 09-43

Dear Ms. Guyer:

Enclosed is the final report of the on-site analysis performed by KB Labs, Inc. at the above referenced site. Samples were collected and analyzed from July 16 to August 16, 2009. Included are a brief project narrative, data report narrative, tables listing quality control results, final analytical results, and sample chain-of-custody form.

KB Labs' mobile laboratories have been inspected by the FDOH Bureau of Laboratories and are NELAP Certified as of April 1, 2003. Our personnel, methodology, proficiency testing, and quality assurance requirements comply with the guidelines of Chapter 62-160 of the Florida Administrative Code and with the consensus standards adopted at the National Environmental Laboratory Accreditation Conference (NELAC). Data for the site referenced above were determined in accordance with published procedures under Test Methods for Evaluating Solid Waste (EPA SW-846, Update III Revised May 1997). Unless otherwise indicated on the quality control narrative accompanying the data report, the quality assurance and quality control procedures performed in conjunction with analysis of groundwater samples demonstrated that the reported data met our requirements for accuracy and precision under NELAC Standards.

If you have any questions, please do not hesitate to call me or Kelly Bergdoll, President of KB Labs, at (352) 367-0073.

Sincerely,

KB Labs, Inc.

Todd Romero

PROJECT NARRATIVE

Project Scope

From July 16 to August 16, 2009, a total of 1 water sample was analyzed for GeoSyntec Consultants at Wilson Corners, KSC, FL. The samples were analyzed for vinyl chloride, 1,1-dichloroethene, cis- and trans-1, 2-dichloroethene, trichloroethene, and tetrachloroethene.

NELAP Certification

KB Mobile Labs Unit KB3: FDOH NELAP Certification Number E82815

Analytical Procedure

All samples were analyzed using SW846 Method 5030/8260 for waters. Ten (10) milliliters (mL) of water or air (air samples) were purged with helium and the volatile organic compounds (VOCs) were collected on a solid-phase adsorption trap. The adsorption trap was heated and back-purged with helium. The components were then separated by capillary column gas chromatography and measured with a mass spectrometer (GC/MS) operated in the electron impact full-scan mode. The individual VOCs in the samples were measured against corresponding VOC standards.

Analytical Results

Laboratory results were provided to the client on an as-completed or next-day basis. Final results of the on-site analyses are provided in a hardcopy report. The data produced and reported in the field has been reviewed and approved for this final report by the Director of Operations for KB Labs.

Uncertainty of Reported Values

All measurement data presented in this report are subject to a degree of uncertainty and the degree of uncertainty varies with each compound of interest. KB Labs estimates the uncertainty of each measurement using a statistical evaluation of the standard deviation from the mean percent recovery of a number of trials of a given measurement. More specifically, KB Labs maintains historical percent recovery control limits at the 99% confidence level for each analyte of interest. These are calculated as $\pm$ 3 times the standard deviation from the mean of historical measurements of the percent recovery of spikes of the analytes of interest into actual and control sample matrices. For example, if the lower and upper percent recovery control limits for a specific analyte of interest have been determined to be 70 and 100 percent respectively, a reported value of 10.0

ug/L will be with 99% confidence 7.0 to 13.0 ug/L.For more information about KB Labs estimation of uncertainty, contact KB Labs' quality assurance officer and/or request a copy of KB Labs' SOP for determining measurement uncertainty.

Quality Control (QC) Data

Surrogate Recoveries – Table 1 lists the daily analytical sequence and percent recovery results for surrogate compounds, which were added to all analyses. Four (4) surrogate compounds were added to each analysis in order to continually monitor general method performance.

VOC Spike Recoveries – Table 2 lists the percent recovery results for matrix spike and laboratory control samples. A known amount of each target compound was added to selected field samples and to laboratory reagent water in order to monitor the performance of each of the target compounds in the actual matrix and in laboratory reagent water.

Method Blanks – Daily analysis of laboratory reagent water samples was performed in order to monitor the cleanliness of the analytical system.

DATA REPORT NARRATIVE

1. All sample data has been reviewed and, if required, updated in the Final Data Report for rounding and significant figures.

RE: NASA MLP-VAB/LC-34, KSC, FL - Final Data Report
KB Labs Project # 09-104

Dear Ms. DaPrato:

Enclosed is the final report of the on-site analysis performed by KB Labs, Inc. at the above referenced site. Samples were collected and analyzed from September 14 to October 16, 2009. Included are a brief project narrative, data report narrative, tables listing quality control results, final analytical results, and sample chain-of-custody form.

KB Labs' mobile laboratories have been inspected by the FDOH Bureau of Laboratories and are NELAP Certified as of April 1, 2003. Our personnel, methodology, proficiency testing, and quality assurance requirements comply with the guidelines of Chapter 62-160 of the Florida Administrative Code and with the consensus standards adopted at the National Environmental Laboratory Accreditation Conference (NELAC). Data for the site referenced above were determined in accordance with published procedures under Test Methods for Evaluating Solid Waste (EPA SW-846, Update III Revised May 1997). Unless otherwise indicated on the quality control narrative accompanying the data report, the quality assurance and quality control procedures performed in conjunction with analysis of groundwater samples demonstrated that the reported data met our requirements for accuracy and precision under NELAC Standards.

If you have any questions, please do not hesitate to call me or Kelly Bergdoll, President of KB Labs, at (352) 367-0073.

Sincerely,

KB Labs, Inc.

Todd Romero
Director of Operations

PROJECT NARRATIVE

Project Scope

From September 14 to October 16, 2009, a total of 431 water samples were analyzed for GeoSyntec Consultants at NASA MLP-VAB & LC34 KSC, FL. The samples were analyzed for vinyl chloride, 1,1-dichloroethene, cis- and trans-1, 2-dichloroethene, trichloroethene, and tetrachloroethene.

NELAP Certification

KB Mobile Labs Unit KB3: FDOH NELAP Certification Number E82816
KB Mobile Labs Unit KB1: FDOH NELAP Certification Number E82815

Analytical Procedure

All samples were analyzed using SW846 Method 5030/8260 for waters. Ten (10) milliliters (mL) of water or air (air samples) were purged with helium and the volatile organic compounds (VOCs) were collected on a solid-phase adsorption trap. The adsorption trap was heated and back-purged with helium. The components were then separated by capillary column gas chromatography and measured with a mass spectrometer (GC/MS) operated in the electron impact full-scan mode. The individual VOCs in the samples were measured against corresponding VOC standards.

Analytical Results

Laboratory results were provided to the client on an as-completed or next-day basis. Final results of the on-site analyses are provided in a hardcopy report. The data produced and reported in the field has been reviewed and approved for this final report by the Director of Operations for KB Labs.

Uncertainty of Reported Values

All measurement data presented in this report are subject to a degree of uncertainty and the degree of uncertainty varies with each compound of interest. KB Labs estimates the uncertainty of each measurement using a statistical evaluation of the standard deviation from the mean percent recovery of a number of trials of a given measurement. More specifically, KB Labs maintains historical percent recovery control limits at the 99% confidence level for each analyte of interest. These are calculated as $\pm$ 3 times the standard deviation from the mean of historical measurements of the percent recovery of spikes of the analytes of interest into actual and control sample matrices. For example, if the lower and upper percent recovery control limits for a specific analyte of interest

have been determined to be 70 and 100 percent respectively, a reported value of 10.0 ug/L will be with 99% confidence 7.0 to 13.0 ug/L.For more information about KB Labs estimation of uncertainty, contact KB Labs' quality assurance officer and/or request a copy of KB Labs' SOP for determining measurement uncertainty.

Quality Control (QC) Data

Surrogate Recoveries – Table 1 lists the daily analytical sequence and percent recovery results for surrogate compounds, which were added to all analyses. Four (4) surrogate compounds were added to each analysis in order to continually monitor general method performance.

VOC Spike Recoveries – Table 2 lists the percent recovery results for matrix spike and laboratory control samples. A known amount of each target compound was added to selected field samples and to laboratory reagent water in order to monitor the performance of each of the target compounds in the actual matrix and in laboratory reagent water.

Method Blanks – Daily analysis of laboratory reagent water samples was performed in order to monitor the cleanliness of the analytical system.

DATA REPORT NARRATIVE

1. All sample data has been reviewed and, if required, updated in the Final Data Report for rounding and significant figures.

2. Sample ID MLPV-DPT0436-038.0-20090929 has an "L" qualifier for vinyl chloride indicating the Concentration exceeded Calibration range.

3. Sample ID MLPV-DPT0449-043.0-20091002 has an "L" qualifier for vinyl chloride indicating the concentration exceeded Calibration range.

4. Sample ID MLPV-DPT0450-033.0-20091002 reported c-1, 2-dichloroethene 1.0 changed to <1.0ug/L.

5. Changes for sample ID MLPV-DPT0468-043.0-20091008 reported:
   t-1,2-dichloroethene 39.9 changed to <1.0ug/L.
   c-1,2-dichloroethene 13.2 changed to 39.9ug/L.
   trichloroethene <1.0 changed to 13.2ug/L.

RE: NASA CCAFS LC34, KSC, FL - Final Data Report-Revision A
KB Labs Project # 10-49

Dear Ms DaPrato:

Enclosed is the final report of the on-site analysis performed by KB Labs, Inc. at the above referenced site. Samples were collected and analyzed from March 10, 15 to 17, 2010. Included are a brief project narrative, data report narrative, tables listing quality control results, final analytical results, and sample chain-of-custody form.

KB Labs' mobile laboratories have been inspected by the FDOH Bureau of Laboratories and are NELAP Certified as of April 1, 2003. Our personnel, methodology, proficiency testing, and quality assurance requirements comply with the guidelines of Chapter 62-160 of the Florida Administrative Code and with the consensus standards adopted at the National Environmental Laboratory Accreditation Conference (NELAC). Data for the site referenced above were determined in accordance with published procedures under Test Methods for Evaluating Solid Waste (EPA SW-846, Update III Revised May 1997). Unless otherwise indicated on the quality control narrative accompanying the data report, the quality assurance and quality control procedures performed in conjunction with analysis of groundwater samples demonstrated that the reported data met our requirements for accuracy and precision under NELAC Standards.

If you have any questions, please do not hesitate to call me or Kelly Bergdoll, President of KB Labs, at (352) 367-0073.

Sincerely,

KB Labs, Inc.

Todd Romero
Director of Operations

PROJECT NARRATIVE

Project Scope

From March 10, 15 to 19, 2010, a total of 72 water samples were analyzed for GeoSyntec Consultants at NASA CCAFS LC34, KSC, FL. The samples were analyzed for vinyl chloride, 1,1-dichloroethene, cis- and trans-1, 2-dichloroethene, trichloroethene, and tetrachloroethene.

NELAP Certification

KB Mobile Labs Unit KB1: FDOH NELAP Certification Number E82815

Analytical Procedure

All samples were analyzed using SW846 Method 5030/8260 for waters. Ten (10) milliliters (mL) of water or air (air samples) were purged with helium and the volatile organic compounds (VOCs) were collected on a solid-phase adsorption trap. The adsorption trap was heated and back-purged with helium. The components were then separated by capillary column gas chromatography and measured with a mass spectrometer (GC/MS) operated in the electron impact full-scan mode. The individual VOCs in the samples were measured against corresponding VOC standards.

Analytical Results

Laboratory results were provided to the client on an as-completed or next-day basis. Final results of the on-site analyses are provided in a hardcopy report. The data produced and reported in the field has been reviewed and approved for this final report by the Director of Operations for KB Labs.

Uncertainty of Reported Values

All measurement data presented in this report are subject to a degree of uncertainty and the degree of uncertainty varies with each compound of interest. KB Labs estimates the uncertainty of each measurement using a statistical evaluation of the standard deviation from the mean percent recovery of a number of trials of a given measurement. More specifically, KB Labs maintains historical percent recovery control limits at the 99% confidence level for each analyte of interest. These are calculated as $\pm$ 3 times the standard deviation from the mean of historical measurements of the percent recovery of spikes of the analytes of interest into actual and control sample matrices. For example, if the lower and upper percent recovery control limits for a specific analyte of interest have been determined to be 70 and 100 percent respectively, a reported value of 10.0

ug/L will be with 99% confidence 7.0 to 13.0 ug/L.For more information about KB Labs estimation of uncertainty, contact KB Labs' quality assurance officer and/or request a copy of KB Labs' SOP for determining measurement uncertainty.

Quality Control (QC) Data

Surrogate Recoveries – Table 1 lists the daily analytical sequence and percent recovery results for surrogate compounds, which were added to all analyses. Four (4) surrogate compounds were added to each analysis in order to continually monitor general method performance.

VOC Spike Recoveries – Table 2 lists the percent recovery results for matrix spike and laboratory control samples. A known amount of each target compound was added to selected field samples and to laboratory reagent water in order to monitor the performance of each of the target compounds in the actual matrix and in laboratory reagent water.

Method Blanks – Daily analysis of laboratory reagent water samples was performed in order to monitor the cleanliness of the analytical system.

DATA REPORT NARRATIVE

1. All sample data has been reviewed and, if required, updated in the Final Data Report for rounding and significant figures.

2. Sample ID LC34-DPT0281-025.0-20100310 reported vinyl chloride 309 J changed to 390 I.

3. Sample ID LC34-DPT0289-025.0-02100315 reported vinyl chloride 2100 changed to 830ug/L.

4. As per client request, all diluted samples with values between the RL and MDL are reported and identified with FDEP Data Qualifier "I".

5. Reporting limits if the Field Report were adjusted to the instrument MDL. To be consistent, the Final Data Report reporting limits are set at the usual PQL of 1 ppb, which is our lowest standard.

6. Trichloroethene values at 1000x dilution changed to less than the MDL 260ug/L. Data flagged with" I" code as per client request.

RE: NASA LC34, KSC, FL - Final Data Report-Revision A
KB Labs Project # 10-55

Dear Mr. Langenbach:

Enclosed is the final report of the on-site analysis performed by KB Labs, Inc. at the above referenced site. Samples were collected and analyzed from July 6 to 16, 2010. Included are a brief project narrative, data report narrative, tables listing quality control results, final analytical results, and sample chain-of-custody form.

KB Labs' mobile laboratories have been inspected by the FDOH Bureau of Laboratories and are NELAP Certified as of April 1, 2003. Our personnel, methodology, proficiency testing, and quality assurance requirements comply with the guidelines of Chapter 62-160 of the Florida Administrative Code and with the consensus standards adopted at the National Environmental Laboratory Accreditation Conference (NELAC). Data for the site referenced above were determined in accordance with published procedures under Test Methods for Evaluating Solid Waste (EPA SW-846, Update III Revised May 1997). Unless otherwise indicated on the quality control narrative accompanying the data report, the quality assurance and quality control procedures performed in conjunction with analysis of groundwater samples demonstrated that the reported data met our requirements for accuracy and precision under NELAC Standards.

If you have any questions, please do not hesitate to call me or Kelly Bergdoll, President of KB Labs, at (352) 367-0073.

Sincerely,

KB Labs, Inc.

Todd Romero
Director of Operations

PROJECT NARRATIVE

Project Scope

From July 6 to 16, 2010, a total of 192 water samples were analyzed for Geosyntec Consultants at NASA LC34, KSC, FL. The samples were analyzed for vinyl chloride, 1,1-dichloroethene, cis- and trans-1, 2-dichloroethene, trichloroethene, and tetrachloroethene.

NELAP Certification

KB Mobile Labs Unit KB3: FDOH NELAP Certification Number E82816

Analytical Procedure

All samples were analyzed using SW846 Method 5030/8260 for waters. Ten (10) milliliters (mL) of water or air (air samples) were purged with helium and the volatile organic compounds (VOCs) were collected on a solid-phase adsorption trap. The adsorption trap was heated and back-purged with helium. The components were then separated by capillary column gas chromatography and measured with a mass spectrometer (GC/MS) operated in the electron impact full-scan mode. The individual VOCs in the samples were measured against corresponding VOC standards.

Analytical Results

Laboratory results were provided to the client on an as-completed or next-day basis. Final results of the on-site analyses are provided in a hardcopy report. The data produced and reported in the field has been reviewed and approved for this final report by the Director of Operations for KB Labs.

Uncertainty of Reported Values

All measurement data presented in this report are subject to a degree of uncertainty and the degree of uncertainty varies with each compound of interest. KB Labs estimates the uncertainty of each measurement using a statistical evaluation of the standard deviation from the mean percent recovery of a number of trials of a given measurement. More specifically, KB Labs maintains historical percent recovery control limits at the 99% confidence level for each analyte of interest. These are calculated as $\pm$ 3 times the standard deviation from the mean of historical measurements of the percent recovery of spikes of the analytes of interest into actual and control sample matrices. For example, if the lower and upper percent recovery control limits for a specific analyte of interest have been determined to be 70 and 100 percent respectively, a reported value of 10.0

ug/L will be with 99% confidence 7.0 to 13.0 ug/L.For more information about KB Labs estimation of uncertainty, contact KB Labs' quality assurance officer and/or request a copy of KB Labs' SOP for determining measurement uncertainty.

Quality Control (QC) Data

Surrogate Recoveries – Table 1 lists the daily analytical sequence and percent recovery results for surrogate compounds, which were added to all analyses. Four (4) surrogate compounds were added to each analysis in order to continually monitor general method performance.

VOC Spike Recoveries – Table 2 lists the percent recovery results for matrix spike and laboratory control samples. A known amount of each target compound was added to selected field samples and to laboratory reagent water in order to monitor the performance of each of the target compounds in the actual matrix and in laboratory reagent water.

Method Blanks – Daily analysis of laboratory reagent water samples was performed in order to monitor the cleanliness of the analytical system.

DATA REPORT NARRATIVE

1. All sample data has been reviewed and, if required, updated in the Final Data Report for rounding and significant figures.

2. Sample ID LC34-DPT0308-025.0-20100707 dilutions are 50x and 5000x not 50x and 500x.

3. Sample ID LC34-DPT0233-038.0-20100709 reported vinyl chloride 5.0 changed to 2.5ug/L.

4. Sample ID LC34-DPT0154-038.0-20100716 has an "L" qualifier for vinyl chloride indicating the Concentration exceeded Calibration range.

5. As per NASA Client request for diluted samples between the lab RL and MDL are reported with FDEP Data Qualifier "I". Some results were changed from the Field Report to the Final Report to reflect this requirement.

RE: NASA LC34, KSC, FL - Final Data Report
KB Labs Project # 10-234

Dear Ms. DaPrato:

Enclosed is the final report of the on-site analysis performed by KB Labs, Inc. at the above referenced site. Samples were collected and analyzed from December 13 to 20, 2010. Included are a brief project narrative, data report narrative, tables listing quality control results, final analytical results, and sample chain-of-custody form.

KB Labs' mobile laboratories have been inspected by the FDOH Bureau of Laboratories and are NELAP Certified as of April 1, 2003. Our personnel, methodology, proficiency testing, and quality assurance requirements comply with the guidelines of Chapter 62-160 of the Florida Administrative Code and with the consensus standards adopted at the National Environmental Laboratory Accreditation Conference (NELAC). Data for the site referenced above were determined in accordance with published procedures under Test Methods for Evaluating Solid Waste (EPA SW-846, Update III Revised May 1997). Unless otherwise indicated on the quality control narrative accompanying the data report, the quality assurance and quality control procedures performed in conjunction with analysis of groundwater samples demonstrated that the reported data met our requirements for accuracy and precision under NELAC Standards.

If you have any questions, please do not hesitate to call me or Kelly Bergdoll, President of KB Labs, at (352) 367-0073.

Sincerely,

KB Labs, Inc.

Todd Romero
Director of Operations

PROJECT NARRATIVE

Project Scope

From December 13 to 20, 2010, a total of 96 water samples were analyzed for GeoSyntec Consultants at NASA LC34, KSC, FL. The samples were analyzed for vinyl chloride, 1,1-dichloroethene, cis- and trans-1, 2-dichloroethene, trichloroethene, and tetrachloroethene.

NELAP Certification

KB Mobile Labs Unit KB1: FDOH NELAP Certification Number E82815

Analytical Procedure

All samples were analyzed using SW846 Method 5030/8260 for waters. Ten (10) milliliters (mL) of water or air (air samples) were purged with helium and the volatile organic compounds (VOCs) were collected on a solid-phase adsorption trap. The adsorption trap was heated and back-purged with helium. The components were then separated by capillary column gas chromatography and measured with a mass spectrometer (GC/MS) operated in the electron impact full-scan mode. The individual VOCs in the samples were measured against corresponding VOC standards.

Analytical Results

Laboratory results were provided to the client on an as-completed or next-day basis. Final results of the on-site analyses are provided in a hardcopy report. The data produced and reported in the field has been reviewed and approved for this final report by the Director of Operations for KB Labs.

Uncertainty of Reported Values

All measurement data presented in this report are subject to a degree of uncertainty and the degree of uncertainty varies with each compound of interest. KB Labs estimates the uncertainty of each measurement using a statistical evaluation of the standard deviation from the mean percent recovery of a number of trials of a given measurement. More specifically, KB Labs maintains historical percent recovery control limits at the 99% confidence level for each analyte of interest. These are calculated as $\pm$ 3 times the standard deviation from the mean of historical measurements of the percent recovery of spikes of the analytes of interest into actual and control sample matrices. For example, if the lower and upper percent recovery control limits for a specific analyte of interest have been determined to be 70 and 100 percent respectively, a reported value of 10.0

ug/L will be with 99% confidence 7.0 to 13.0 ug/L.For more information about KB Labs estimation of uncertainty, contact KB Labs' quality assurance officer and/or request a copy of KB Labs' SOP for determining measurement uncertainty.

Quality Control (QC) Data

Surrogate Recoveries – Table 1 lists the daily analytical sequence and percent recovery results for surrogate compounds, which were added to all analyses. Four (4) surrogate compounds were added to each analysis in order to continually monitor general method performance.

VOC Spike Recoveries – Table 2 lists the percent recovery results for matrix spike and laboratory control samples. A known amount of each target compound was added to selected field samples and to laboratory reagent water in order to monitor the performance of each of the target compounds in the actual matrix and in laboratory reagent water.

Method Blanks – Daily analysis of laboratory reagent water samples was performed in order to monitor the cleanliness of the analytical system.

DATA REPORT NARRATIVE

1. All sample data has been reviewed and, if required, updated in the Final Data Report for rounding and significant figures.

2. Sample ID LC34-DPT0325-025.0-20101217 reported vinyl chloride 1000 changed to 3500ug/L.

3. Sample ID LC34-DPT0325-025.0-20101217 reported vinyl chloride 40J changed to 40ug/L.

4. Sample ID LC34-DPT0324-018.0-20101217 reported 1,1-dichloroethene 20J changed to 20ug/L.

5. As per NASA client request for diluted samples between the lab RL and MDL are reported with FDEP Data Qualifier "I". Some results were changed from the Field Report to the Final Report to reflect this requirement.

6. Trichloroethene results for diluted DPT0322 and DPT0323 samples were estimated to meet FDEP GCTL levels. Data has been identified with J Data Qualifier.

7. Results for DPT0322 25' and 38' were reversed in the Field Results.

RE: NASA LC34, KSC, FL - Final Data Report
KB Labs Project # 11-46

Dear Ms. DaPrato:

Enclosed is the final report of the on-site analysis performed by KB Labs, Inc. at the above referenced site. Samples were collected and analyzed on June 8, 2011. Included are a brief project narrative, data report narrative, tables listing quality control results, final analytical results, and sample chain-of-custody form.

KB Labs' mobile laboratories have been inspected by the FDOH Bureau of Laboratories and are NELAP Certified as of April 1, 2003. Our personnel, methodology, proficiency testing, and quality assurance requirements comply with the guidelines of Chapter 62-160 of the Florida Administrative Code and with the consensus standards adopted at the National Environmental Laboratory Accreditation Conference (NELAC). Data for the site referenced above were determined in accordance with published procedures under Test Methods for Evaluating Solid Waste (EPA SW-846, Update III Revised May 1997). Unless otherwise indicated on the quality control narrative accompanying the data report, the quality assurance and quality control procedures performed in conjunction with analysis of groundwater samples demonstrated that the reported data met our requirements for accuracy and precision under NELAC Standards.

If you have any questions, please do not hesitate to call me or Kelly Bergdoll, President of KB Labs, at (352) 367-0073.

Sincerely,

KB Labs, Inc.

PROJECT NARRATIVE

Project Scope

On June 8, 2011, a total of 6 water samples were analyzed for GeoSyntec Consultants at NASA LC34, KSC, FL. The samples were analyzed for vinyl chloride, 1,1-dichloroethene, cis- and trans-1, 2-dichloroethene, trichloroethene, and tetrachloroethene.

NELAP Certification

KB Mobile Labs Unit KB3: FDOH NELAP Certification Number E82816

Analytical Procedure

All samples were analyzed using SW846 Method 5030/8260 for waters. Ten (10) milliliters (mL) of water or air (air samples) were purged with helium and the volatile organic compounds (VOCs) were collected on a solid-phase adsorption trap. The adsorption trap was heated and back-purged with helium. The components were then separated by capillary column gas chromatography and measured with a mass spectrometer (GC/MS) operated in the electron impact full-scan mode. The individual VOCs in the samples were measured against corresponding VOC standards.

Analytical Results

Laboratory results were provided to the client on an as-completed or next-day basis. Final results of the on-site analyses are provided in a hardcopy report. The data produced and reported in the field has been reviewed and approved for this final report by the Director of Operations for KB Labs.

Uncertainty of Reported Values

All measurement data presented in this report are subject to a degree of uncertainty and the degree of uncertainty varies with each compound of interest. KB Labs estimates the uncertainty of each measurement using a statistical evaluation of the standard deviation from the mean percent recovery of a number of trials of a given measurement. More specifically, KB Labs maintains historical percent recovery control limits at the 99% confidence level for each analyte of interest. These are calculated as $\pm$ 3 times the standard deviation from the mean of historical measurements of the percent recovery of spikes of the analytes of interest into actual and control sample matrices. For example, if the lower and upper percent recovery control limits for a specific analyte of interest have been determined to be 70 and 100 percent respectively, a reported value of 10.0

ug/L will be with 99% confidence 7.0 to 13.0 ug/L.For more information about KB Labs estimation of uncertainty, contact KB Labs' quality assurance officer and/or request a copy of KB Labs' SOP for determining measurement uncertainty.

Quality Control (QC) Data

Surrogate Recoveries – Table 1 lists the daily analytical sequence and percent recovery results for surrogate compounds, which were added to all analyses. Four (4) surrogate compounds were added to each analysis in order to continually monitor general method performance.

VOC Spike Recoveries – Table 2 lists the percent recovery results for matrix spike and laboratory control samples. A known amount of each target compound was added to selected field samples and to laboratory reagent water in order to monitor the performance of each of the target compounds in the actual matrix and in laboratory reagent water.

Method Blanks – Daily analysis of laboratory reagent water samples was performed in order to monitor the cleanliness of the analytical system.

DATA REPORT NARRATIVE

1. All sample data has been reviewed and, if required, updated in the Final Data Report for rounding and significant figures.

Comments:	Although some surrogates may be out of the control percent recovery range, other supporting QC, such as matrix spikes, matrix spike duplicates, method blanks, and laboratory control samples, are performed by KB Labs to further validate reported data. Detergent in 9/16 IDW sample causing low surrogate recovery.

Re: PDF - Analytical Data Package

Analytical Laboratories of Florida, Inc. (ALF) office located at 2265 Leaside Court, Merritt Island, Florida provided laboratory services for TetraTech NUS, Inc. at the Launch Complex 34 (LC34) area of Kennedy Space Center during direct push temporary well sample collection. The site is located at NASA's Kennedy Space Center, Florida complex. The laboratory contact is Dale Schamp at 321-258-1355. The laboratory project name is TT050718. Analysis was performed utilizing EPA8260C methodology. A total of 320 ground water samples were analyzed by Dale Schamp (Chemist) over a period of fifteen days from May 7 - 25, 2018. The project utilized one mobile laboratories over the duration of the project. The mobile laboratories are certified (Certification Number E83934 or E831090) by the Florida Department of Health using the guidelines of the national NELAC certification program. TetraTech's Information System's Group (http://isg.ttnus.com) specified the excel spreadsheet format utilized to transport environmental analytical data to TetraTech in an electronic format. ALF's data was submitted to TetraTech under file name EDD.NASA.LC34.050718total on May 25, 2018.

TetraTech/NUS' Project Manager is Mark Jonnet out of the Pittsburgh, Pa. office. The Prime Contact's subcontract number is S1102677. The mobile laboratory was utilized to perform laboratory analysis to delineate volatile organic contamination in the groundwater at various NASA sites. The contaminants of concern included vinyl chloride, cis/trans-1,2-DCE, and trichloroethene . The sample analysis load was expected to be up to 25 samples per day.

ALF performed the sample extraction with a Teledyne Stratum sample concentrator utilizing a purge and trap technique. The EPA 5030 method was used as a guideline for this procedure. The process involved is done by purging a gas (UHP helium) through a known sample volume (10 ml – undiluted) at a constant flow rate and specific time. This process transfers the contaminants of concern (COC) from the liquid matrix (groundwater) onto the trap. The trap is then heated to 250C releasing the compounds from the trap into the GC/MS system. An electronic value inside

P.O. Box 349, Cape Canaveral, Florida 32920
E mail: dale.schamp@alf1992.info
Cell phone: 321–258-1355

the Stratum sample concentrator is electronically moved from the load position to the inject position to transfer the COCs to the GC/MS.

ALF's GC/MS system consists of a Stratum PTC hooked up to an Agilent 6890 (or Model 7890) Gas Chromatograph in series with an Agilent 5973 (or Model 5975C) MS detector. The COCs are separated by the gradual increase of temperature of GC oven from 45C to 200C and the column's internal coating. ALF's column of choice is a J&W DB-VRX 20 meter, 0.18mm ID, 1um df. This setup closely follows the requirements of EPA Method 8260C for identification and quantification.

The target compound list had a very wide range of project specific detection limit requirements between 1 and 100 ppb to meet the Florida GCTLs. The lab settled on a method detection level for all compounds of 1 ppb. This detection level allowed the compounds to be analyzed in the scan sensitivity mode only.

The compounds are identified by two ways: retention time and ion spectrum. Simply under repetitive flow rates and consistent oven variation of temperatures a compound will pass through a detector at the same time for unknown samples and known calibration standards. The time, after the start of a run, the compound passes through a detector to give a peak type response is known as the retention time. This is how any Gas Chromatograph with a detector identifies a compound. The MS detector has the additional power of compound ion spectrums which occur when the compounds are bombarded with electrons as they pass into the detector which causes the compounds to fragment. Each COC fragments differently from all other compounds thus this is an additional aid in identifying compounds. In the SIM mode, the detector looks for specific compound fragments which increase detector sensitivity.

The compounds are quantified by comparing area responses of unknown sample concentrations to known calibration standards. The greater the peak area response the greater the concentration of the COC present.

Dale Schamp was the designated Field Chemist for this project. Each day on the Field Activity Form (FAF), the sample analyst would document the sample field description, matrix, sample's date and collection time for each sample received. The FAF also recorded the date and time the sample was received by the mobile laboratory.

The FAF was also used to record the sample analysis time and volume utilized to perform the analysis. The GC/MS system is linear to 500 ppb for the COCs. Mr. Schamp may have utilized one or two SRI GC systems to determine the sample size which was required to run the sample on the GC/MS. This sample pre-screening process prevented the field chemist from doing multiple runs due to high COC concentrations in the groundwater sample which in turn allowed him to get the final data to the contractor quicker.

Quality Assurance (QA) is an important part of sample analysis. QA is utilized to aid in the measurement of the data quality generated. The FDEP and EPA methods require the mobile laboratory run: a calibration curve, laboratory duplicates, laboratory matrix spikes, daily instrument tune checks, daily method blanks, internal standards, surrogate standards and calibration check standards. Other than the initial calibration standards curves and tune checks, this information can be found in the Excel Data Summary Tables provided and/or the overall Project EDD table required by TetraTech.

Once the sample's analysis was completed, the chemist entered the data into an Excel Data Summary Table spreadsheet. ALF analyzed 13 sample(s) for matrix spike analysis to determine whether the samples themselves cause interferences with the data generation. Project requirements specify 5 % while ALF's frequency was 7.8 % (13/320). ALF analyzed 13 sample duplicate(s) to check analysis reproducibility. This is also required at a frequency of 5% while ALF did this at a rate of 7.8 % (13/320).

The following information is attached or included in the electronic deliverables:

1. TetraTech EDD Data Summary Tables which includes QC data
2. Field Activities Forms
3. A Copy of this Project Summary

The data generated has been reviewed and submitted under TetraTech's EDD format and the data has been reviewed by TetraTech personnel for errors. I can be reached at 321-258-1355, if you have any follow-up questions.

Sincerely,

ANALYTICAL LABORATORIES OF FLORIDA

FIELD ACTIVITIES FORM

Project Name: LC34 ALF Project: TT110617

Address: KSC, Fl.

PROJECT NOTES:

Method: EPA8260; Target Compounds: Vinyl chloride, 1,1-DCE, Freon 113, c/t-12,DCE, and TCE. (Lab#2/GC#8 and Lab#1/GC#5)

11/10/17 Activities:

1214 (GC#5) Remove 1 ml GW sample W-102 from VOA vial W-102C-2. Add int/surr stds. Load onto PT-3. FN: LC34-DPT598@83' / Lab ID:TT110617-W-102DUP. 1224 Inject

1328 Rec 12 GW samples on ice (2 @ 40 ml VOA vials) from CS: Temp = 76F. DPT597@8'(1030)/W103 ;@13'(1040)/W104 ; @18' (1050)/W105 ; @23(1100)/W106 ;

1004 (GC#8) Remove 1 ml GW sample W-97 from VOA vial W-97C-1. Add int/surr stds. Load onto PT-3. FN: LC34-DPT598@58' / Lab ID:TT110617-W-97. 1014 Inject

1020 (GC#8) Remove 2 ml GW sample W-98 from VOA vial W-98C-1. Add int/surr stds. Load onto PT-3. FN: LC34-DPT598@63' / Lab ID:TT110617-W-98. 1030 Inject

1036 (GC#8) Remove 0.1 ml GW sample W-97 from VOA vial W-97C-2. Add int/surr stds. Load onto PT-3. FN: LC34-DPT598@58' / Lab ID:TT110617-W-97R. 1046 Inject

1052 (GC#8) Remove 10 ml GW sample W-99 from VOA vial W-99C-1. Add int/surr stds. Load onto PT-3. FN: LC34-DPT598@68' / Lab ID:TT110617-W-99. 1102 Inject

1109 (GC#8) Remove 10 ml GW sample W-100 from VOA vial W-100C-1. Add int/surr stds. Load onto PT-3. FN: LC34-DPT598@73' / Lab ID:TT110617-W-100. 1119 Inject

1127 (GC#8) Remove 0.005 ml GW sample W-101 from VOA vial W-101C-1. Add int/surr stds. Load onto PT-3. FN: LC34-DPT598@78' / Lab ID:TT110617-W-101. 1137 Inject

1143 (GC#8) Remove 10 ml GW sample W-100 from VOA vial W-100C-2. Add 100ng,int/surr stds. Load onto PT-3. FN: LC34-DPT598@73' / Lab ID:TT110617-W-100MS. 1153 Inject

1156 (GC#5) Remove 1 ml GW sample W-102 from VOA vial W-102C-1. Add int/surr stds. Load onto PT-3. FN: LC34-DPT598@83' / Lab ID:TT110617-W-102. 1206 Inject

1159 (GC#8) Remove 5 ml GW sample W-98 from VOA vial W-98C-2. Add int/surr stds. Load onto PT-3. FN: LC34-DPT598@63' / Lab ID:TT110617-W-98dup. 1209 Inject

Re: PDF - Analytical Data Package

Analytical Laboratories of Florida, Inc. (ALF) office located at 2265 Leaside Court, Merritt Island, Florida provided laboratory services for TetraTech NUS, Inc. at the Launch Complex 34 (LC34) area of Kennedy Space Center during direct push temporary well sample collection. The site is located at NASA's Kennedy Space Center, Florida complex. The laboratory contact is Dale Schamp at 321-258-1355. The laboratory project name is TT092418. Analysis was performed utilizing EPA8260D methodology. A total of 181 ground water samples were analyzed by Dale Schamp (Chemist) over a period of ten days from September 24, 2018 to October 5, 2018. The project utilized two mobile laboratories over the duration of the project. The mobile laboratories are certified (Certification Number E83934 or E831090) by the Florida Department of Health using the guidelines of the national NELAC certification program. TetraTech's Information System's Group (http://isg.ttnus.com) specified the excel spreadsheet format utilized to transport environmental analytical data to TetraTech in an electronic format. ALF's data was submitted to TetraTech under file name EDD.NASA.LC34.092418total on October 10, 2018.

TetraTech/NUS' Project Manager is Mark Jonnet out of the Pittsburgh, Pa. office. The Prime Contact's subcontract number is S1157415. The mobile laboratory was utilized to perform laboratory analysis to delineate volatile organic contamination in the groundwater at various NASA sites. The contaminants of concern included vinyl chloride, 1,1-DCE, Freon 113, cis/trans-1,2-DCE, and trichloroethene . The sample analysis load was expected to be up to 25 samples per day.

ALF performed the sample extraction with a Teledyne Stratum sample concentrator utilizing a purge and trap technique. The EPA 5030 method was used as a guideline for this procedure. The process involved is done by purging a gas (UHP helium) through a known sample volume (10 ml – undiluted) at a constant flow rate and specific time. This process transfers the contaminants of concern (COC) from the liquid matrix (groundwater) onto the trap. The trap is then heated to 250C releasing the compounds from the trap into the GC/MS system. An electronic value inside

the Stratum sample concentrator is electronically moved from the load position to the inject position to transfer the COCs to the GC/MS.

ALF's GC/MS system consists of a Stratum PTC hooked up to an Agilent 6890 (or Model 7890) Gas Chromatograph in series with an Agilent 5973 (or Model 5975C) MS detector. The COCs are separated by the gradual increase of temperature of GC oven from 45C to 200C and the column's internal coating. ALF's column of choice is a J&W DB-VRX 20 meter, 0.18mm ID, 1um df. This setup closely follows the requirements of EPA Method 8260D for identification and quantification.

The target compound list had a very wide range of project specific detection limit requirements between 1 and 100 ppb to meet the Florida GCTLs. The lab settled on a method detection level for all compounds of 1 ppb. This detection level allowed the compounds to be analyzed in the scan sensitivity mode only.

The compounds are identified by two ways: retention time and ion spectrum. Simply under repetitive flow rates and consistent oven variation of temperatures a compound will pass through a detector at the same time for unknown samples and known calibration standards. The time, after the start of a run, the compound passes through a detector to give a peak type response is known as the retention time. This is how any Gas Chromatograph with a detector identifies a compound. The MS detector has the additional power of compound ion spectrums which occur when the compounds are bombarded with electrons as they pass into the detector which causes the compounds to fragment. Each COC fragments differently from all other compounds thus this is an additional aid in identifying compounds. In the SIM mode, the detector looks for specific compound fragments which increase detector sensitivity.

The compounds are quantified by comparing area responses of unknown sample concentrations to known calibration standards. The greater the peak area response the greater the concentration of the COC present.

Dale Schamp was the designated Field Chemist for this project. Each day on the Field Activity Form (FAF), the sample analyst would document the sample field description, matrix, sample's date and collection time for each sample received. The FAF also recorded the date and time the sample was received by the mobile laboratory.

Analytical Laboratories of Florida, Inc.

The FAF was also used to record the sample analysis time and volume utilized to perform the analysis. The GC/MS system is linear to 500 ppb for the COCs. Mr. Schamp may have utilized one or two SRI GC systems to determine the sample size which was required to run the sample on the GC/MS. This sample pre-screening process prevented the field chemist from doing multiple runs due to high COC concentrations in the groundwater sample which in turn allowed him to get the final data to the contractor quicker.

Quality Assurance (QA) is an important part of sample analysis. QA is utilized to aid in the measurement of the data quality generated. The FDEP and EPA methods require the mobile laboratory run: a calibration curve, laboratory duplicates, laboratory matrix spikes, daily instrument tune checks, daily method blanks, internal standards, surrogate standards and calibration check standards. Other than the initial calibration standards curves and tune checks, this information can be found in the Excel Data Summary Tables provided and/or the overall Project EDD table required by TetraTech.

Once the sample's analysis was completed, the chemist entered the data into an Excel Data Summary Table spreadsheet. ALF analyzed 11 sample(s) for matrix spike analysis to determine whether the samples themselves cause interferences with the data generation. Project requirements specify 5 % while ALF's frequency was 6.1 % (11/181). ALF analyzed 10 sample duplicate(s) to check analysis reproducibility. This is also required at a frequency of 5% while ALF did this at a rate of 5.5 % (10/181).

The following information is attached or included in the electronic deliverables:

1. TetraTech EDD Data Summary Tables which includes QC data
2. Field Activities Forms
3. A Copy of this Project Summary

The data generated has been reviewed and submitted under TetraTech's EDD format and the data has been reviewed by TetraTech personnel for errors. I can be reached at 321-258-1355, if you have any follow-up questions.

FIELD ACTIVITIES FORM

Project Name: LC34 ALF Project: TT092418

Address: KSC, FL.

PROJECT NOTES:

Method: EPA8260D; Target Compounds: Vinyl chloride, 1,1-dce, F113, c/t-12,DCE and TCE. Lab#1/GC#5 and Lab#2/GC#8

9/24/18 Activities: Calibrate GC#5/Lab#1 Ref#2 Temperature: < 5C 0700 hrs.

Method (soil/water) Blank(s): All responses < 5% of Lowest reported Reg Limit

Cal(water/soil)Curve(s): fn: 092418DRY5FCB.M All % RF RSD < 20 %

Cal(water/soil)Curve(s): All standards ion ratios are within 30% of mid level standard. All compound Response Factor ratios are > 0.1 or >0.2

Cal(water/soil)Curve(s): Second Source expected % Recovery met +/- 30 % of expected response (ng)

Lowest Concen level: Recalibrated Detection level standard meet +/- 30 % expected response (10ng level)

Cal(water)Curve(s): Blank passed tune acceptance criteria of EPA 8260C Section 11.3.1

Quant Limit: 10 ng for all. Linear range to 1000ng (tce),2000NG (VC), others 3000ng.

0648 Run BFB Dynamic hardware tune ; Refrigerator # 9 temp < -5C ; Ambient temp 76 F. JG Finneran C#340024-2895 lot# 7939173101V

1117 Remove 3 ml GW sample W-88 from VOA vial W-88C-1. Add int/surr stds. Load onto PT-5. FN: DPT646@53' / Lab ID: TT092418-W-88. 1127 Inject.
1129 (L#2) Remove 1 ml GW sample W-82 from VOA vial W-82C-1. Add int/surr stds. Load onto PT-5. FN: DPT646@23' / Lab ID: TT092418-W-82. 1139 Inject.
1134 Remove 3 ml GW sample W-87 from VOA vial W-87C-1. Add int/surr stds. Load onto PT-5. FN: DPT646@48' / Lab ID: TT092418-W-87. 1144 Inject.
1145 (L#2) Remove 0.25 ml GW sample W-83 from VOA vial W-83C-1. Add int/surr stds. Load onto PT-5. FN: DPT646@28' / Lab ID: TT092418-W-83. 1155 Inject.
1202 Remove 1 ml GW sample W-86 from VOA vial W-86C-1. Add int/surr stds. Load onto PT-5. FN: DPT646@43' / Lab ID: TT092418-W-86. 1212 Inject.
1204 (L#2) Remove 0.1 ml GW sample W-84 from VOA vial W-84C-1. Add int/surr stds. Load onto PT-5. FN: DPT646@33' / Lab ID: TT092418-W-84. 1214 Inject.
1220 Remove 0.251 ml GW sample W-85 from VOA vial W-85C-1. Add int/surr stds. Load onto PT-5. FN: DPT646@38' / Lab ID: TT092418-W-85. 1230 Inject.
1250 Received 6 GW samples from Chuck on ice. Temp = 67F. LC34-DPT647@73'(0805)/W111; @78'(0830)/W112 ; @83'(0905)/W113 ; @88'(0930)/W114 ; @93(1005)/W115
1250 Received 6 GW samples from Chuck on ice. LC34-DPT647@98'(1040)/W116
1342 Remove 5 ml GW sample W-93 from VOA vial W-93C-1. Add int/surr stds. Load onto PT-5. FN: DPT646@78' / Lab ID: TT092418-W-93. 1352 Inject.
1400 Remove 10 ml GW sample W-94 from VOA vial W-94C-1. Add int/surr stds. Load onto PT-5. FN: DPT646@83' / Lab ID: TT092418-W-94. 1410 Inject.
1418 Remove 10 ml GW sample W-95 from VOA vial W-95C-1. Add int/surr stds. Load onto PT-5. FN: DPT646@88' / Lab ID: TT092418-W-95. 1428 Inject.
1435 Remove 3 ml GW sample W-96 from VOA vial W-96C-1. Add int/surr stds. Load onto PT-5. FN: DPT646@93' / Lab ID: TT092418-W-96. 1445 Inject.
1454 Remove 10 ml GW sample W-97 from VOA vial W-97C-1. Add int/surr stds. Load onto PT-5. FN: DPT646@98' / Lab ID: TT092418-W-97. 1504 Inject.
1511 Remove 10 ml GW sample W-98 from VOA vial W-98C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@8' / Lab ID: TT092418-W-98. 1521 Inject.
1529 Remove 10 ml GW sample W-99 from VOA vial W-99C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@13' / Lab ID: TT092418-W-99. 1539 Inject.
1547 Remove 10 ml GW sample W-100 from VOA vial W-100C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@18' / Lab ID: TT092418-W-100. 1557 Inject.
1603 Remove 0.5 ml GW sample W-101 from VOA vial W-101C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@23' / Lab ID: TT092418-W-101. 1613 Inject.
1621 Remove 0.035 ml GW sample W-102 from VOA vial W-102C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@28' / Lab ID: TT092418-W-102. 1631 Inject.
1638 Remove 0.1 ml GW sample W-103 from VOA vial W-103C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@33' / Lab ID: TT092418-W-103. 1648 Inject.
1656 Remove 3 ml GW sample W-104 from VOA vial W-104C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@38' / Lab ID: TT092418-W-104. 1706 Inject.
1724 Run method blank in (fn: 100218blk2.d) 10 ml H20. All analyte responses equal to or < 50% of lowest quantitation calibration standard.
1730 Received 15 GW samples from Chuck on ice. Temp = 69F. LC34-DPT648@8'(1330)/W117; @13'(1340)/W118 ; @18'(1350)/W119 ; @23'(1400)/W120 ; @28(1410)/W121
1730 Received 15 GW samples from Chuck on ice. LC34-DPT648@33'(1425)/W122; @38'(1440)/W123 ; @43'(1455)/W124 ; @48'(1510)/W125 ; @53(1530)/W126
1730 Received 15 GW samples from Chuck on ice. LC34-DPT648@58'(1550)/W127; @63'(1615)/W128 ; @68'(1640)/W129 ; @73'(1650)/W130 ; @78(1740)/W131
1741 Run 10ml H20 with 100ng spike (fn: 100218ccv2.d). All compound responses between within 20 % expected response and ion ratios within 30% expected ratio.
1747 Remove 10 ml GW sample W-105 from VOA vial W-105C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@43' / Lab ID: TT092418-W-105. 1757 Inject.
1804 Remove 10 ml GW sample W-105 from VOA vial W-105C-2. Add 100ng,int/surr stds. Load onto PT-5. FN: DPT647@43' / Lab ID: TT092418-W-105MS. 1814 Inject.
1822 Remove 10 ml GW sample W-106 from VOA vial W-106C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@48' / Lab ID: TT092418-W-106. 1832 Inject.
1839 Remove 10 ml GW sample W-107 from VOA vial W-107C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@53' / Lab ID: TT092418-W-107. 1849 Inject.
1855 Remove 10 ml GW sample W-107 from VOA vial W-107C-2. Add int/surr stds. Load onto PT-5. FN: DPT647@53' / Lab ID: TT092418-W-107dup. 1905 Inject.
1912 Remove 10 ml GW sample W-108 from VOA vial W-108C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@58' / Lab ID: TT092418-W-108. 1922 Inject.
1929 Remove 10 ml GW sample W-109 from VOA vial W-109C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@63' / Lab ID: TT092418-W-109. 1939 Inject.
1945 Remove 10 ml GW sample W-110 from VOA vial W-110C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@68' / Lab ID: TT092418-W-110. 1955 Inject.
2002 Remove 10 ml GW sample W-111 from VOA vial W-111C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@73' / Lab ID: TT092418-W-111. 2012 Inject.
2019 Remove 10 ml GW sample W-112 from VOA vial W-112C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@78' / Lab ID: TT092418-W-112. 2029 Inject.
2035 Remove 10 ml GW sample W-113 from VOA vial W-113C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@83' / Lab ID: TT092418-W-113. 2045 Inject.
2048 Remove 10 ml GW sample W-114 from VOA vial W-114C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@88' / Lab ID: TT092418-W-114. 2058 Inject.
2105 Remove 3 ml GW sample W-115 from VOA vial W-115C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@93' / Lab ID: TT092418-W-115. 2115 Inject.
2123 Remove 10 ml GW sample W-116 from VOA vial W-116C-1. Add int/surr stds. Load onto PT-5. FN: DPT647@98' / Lab ID: TT092418-W-116. 2133 Inject.

10/3/18 Activities: Lab#1/GC#5

0752 Run BFB Dynamic hardware tune ; Refrigerator # 9 temp < -5C ; Ambient temp 75 F. JG Finneran C#340024-2895 lot# 7939162781V1
0754 Run method blank in (fn: 100318blk1.d) 10 ml H20. All analyte responses equal to or < 50% of lowest quantitation calibration standard.Tune Good.
0810 Run 10ml H20 with 100ng spike (fn: 100318ccv1.d). All compound responses between within 20 % expected response and ion ratios within 30% expected ratio.
0935 Received 4 GW samples from Chuck on ice. Temp = 72F. LC34-DPT648@83'(0755)/W132; @88'(0830)/W133 ; @93'(0900)/W134 ; @98'(0930)/W135
0959 Remove 10 ml GW sample W-117 from VOA vial W-117C-1. Add int/surr stds. Load onto PT-5. FN: DPT648@8' / Lab ID: TT092418-W-117. 1009 Inject.
1018 Remove 10 ml GW sample W-118 from VOA vial W-118C-1. Add int/surr stds. Load onto PT-5. FN: DPT648@13' / Lab ID: TT092418-W-118. 1028 Inject.
1037 Remove 10 ml GW sample W-118 from VOA vial W-118C-2. Add 100ng,int/surr stds. Load onto PT-5. FN: DPT648@13' / Lab ID: TT092418-W-118MS. 1047 Inject.
1055 Remove 10 ml GW sample W-119 from VOA vial W-119C-1. Add int/surr stds. Load onto PT-5. FN: DPT648@18' / Lab ID: TT092418-W-119. 1105 Inject.
1113 Remove 10 ml GW sample W-120 from VOA vial W-120C-1. Add int/surr stds. Load onto PT-5. FN: DPT648@23' / Lab ID: TT092418-W-120. 1123 Inject.
1130 Remove 10 ml GW sample W-119 from VOA vial W-119C-2. Add int/surr stds. Load onto PT-5. FN: DPT648@18' / Lab ID: TT092418-W-119dup. 1140 Inject.

ANALYTICAL LABORATORIES OF FLORIDA

FIELD ACTIVITIES FORM

Project Name: LC34 ALF Project: TT092418

Address: KSC, FL.

PROJECT NOTES:

Method: EPA8260D; Target Compounds: Vinyl chloride, 1,1-dce, F113, c/t-12,DCE and TCE.

10/4/18 Activities: Lab#1/GC#5

1650 Remove 3 ml GW sample W-159 from VOA vial W-159C-2. Add int/surr stds. Load onto PT-5. FN: DPT650@33' / Lab ID: TT092418-W-159r. 1700 Inject.
1706 Remove 0.25 ml GW sample W-160 from VOA vial W-160C-1. Add int/surr stds. Load onto PT-5. FN: DPT650@38' / Lab ID: TT092418-W-160. 1716 Inject.
1722 Remove 0.035 ml GW sample W-161 from VOA vial W-161C-1. Add int/surr stds. Load onto PT-5. FN: DPT650@43' / Lab ID: TT092418-W-161. 1732 Inject.
1736 Remove 0.035 ml GW sample W-162 from VOA vial W-162C-1. Add int/surr stds. Load onto PT-5. FN: DPT650@48' / Lab ID: TT092418-W-162. 1746 Inject.
1730 Received 4 GW samples from Chuck on ice. Temp = 76F. LC34-DPT650@53'(1630)/W163; @58'(1645)/W164 ; @63'(1710)/W165 ; @68'(1730)/W166

10/5/18 Activities:

0743 Run BFB Dynamic hardware tune ; Refrigerator # 9 temp < -5C ; Ambient temp 79F. JG Finneran C#340024-2895 lot# 7939162781V1
0748 Run method blank in (fn: 100518blk1.d) 10 ml H20. All analyte responses equal to or < 50% of lowest quantitation calibration standard.Tune Good.
0804 Run 10ml H20 with 100ng spike (fn: 100518ccv1.d). All compound responses between within 20 % expected response and ion ratios within 30% expected ratio.
0807 Rec 1 GW sample (2 @ 40 ml VOA vials) from CS on ice. Field No. LC34-DPT650@73' (0800); LabID TT092418-W167
0811 Remove 0.010 ml GW sample W-163 from VOA vial W-163C-1. Add int/surr stds. Load onto PT-5. FN: DPT650@53' / Lab ID: TT092418-W-163. 0821 Inject.
0829 Remove 0.005 ml GW sample W-164 from VOA vial W-164C-1. Add int/surr stds. Load onto PT-5. FN: DPT650@58' / Lab ID: TT092418-W-164. 0839 Inject.

Re: PDF - Analytical Data Package

Analytical Laboratories of Florida, Inc. (ALF) office located at 2265 Leaside Court, Merritt Island, Florida provided laboratory services for TetraTech NUS, Inc. at the Launch Complex 34 (LC34) area of Kennedy Space Center during direct push temporary well sample collection. The site is located at NASA's Kennedy Space Center, Florida complex. The laboratory contact is Dale Schamp at 321-258-1355. The laboratory project name is TT092418. Analysis was performed utilizing EPA8260D methodology. A total of 167 ground water samples were analyzed by Dale Schamp (Chemist) over a period of ten days from October 8 – 19, 2018. The project utilized one mobile laboratories over the duration of the project. The mobile laboratories are certified (Certification Number E83934 or E831090) by the Florida Department of Health using the guidelines of the national NELAC certification program. TetraTech's Information System's Group (http://isg.ttnus.com) specified the excel spreadsheet format utilized to transport environmental analytical data to TetraTech in an electronic format. ALF's data was submitted to TetraTech under file name EDD.NASA.LC34.100818total on October 24, 2018.

TetraTech/NUS' Project Manager is Mark Jonnet out of the Pittsburgh, Pa. office. The Prime Contact's subcontract number is S1157415. The mobile laboratory was utilized to perform laboratory analysis to delineate volatile organic contamination in the groundwater at various NASA sites. The contaminants of concern included vinyl chloride, 1,1-DCE, Freon 113, cis/trans-1,2-DCE, and trichloroethene . The sample analysis load was expected to be up to 25 samples per day.

ALF performed the sample extraction with a Teledyne Stratum sample concentrator utilizing a purge and trap technique. The EPA 5030 method was used as a guideline for this procedure. The process involved is done by purging a gas (UHP helium) through a known sample volume (10 ml – undiluted) at a constant flow rate and specific time. This process transfers the contaminants of concern (COC) from the liquid matrix (groundwater) onto the trap. The trap is then heated to 250C releasing the compounds from the trap into the GC/MS system. An electronic value inside

the Stratum sample concentrator is electronically moved from the load position to the inject position to transfer the COCs to the GC/MS.

ALF's GC/MS system consists of a Stratum PTC hooked up to an Agilent 6890 (or Model 7890) Gas Chromatograph in series with an Agilent 5973 (or Model 5975C) MS detector. The COCs are separated by the gradual increase of temperature of GC oven from 45C to 200C and the column's internal coating. ALF's column of choice is a J&W DB-VRX 20 meter, 0.18mm ID, 1um df. This setup closely follows the requirements of EPA Method 8260D for identification and quantification.

The target compound list had a very wide range of project specific detection limit requirements between 1 and 100 ppb to meet the Florida GCTLs. The lab settled on a method detection level for all compounds of 1 ppb. This detection level allowed the compounds to be analyzed in the scan sensitivity mode only.

The compounds are identified by two ways: retention time and ion spectrum. Simply under repetitive flow rates and consistent oven variation of temperatures a compound will pass through a detector at the same time for unknown samples and known calibration standards. The time, after the start of a run, the compound passes through a detector to give a peak type response is known as the retention time. This is how any Gas Chromatograph with a detector identifies a compound. The MS detector has the additional power of compound ion spectrums which occur when the compounds are bombarded with electrons as they pass into the detector which causes the compounds to fragment. Each COC fragments differently from all other compounds thus this is an additional aid in identifying compounds. In the SIM mode, the detector looks for specific compound fragments which increase detector sensitivity.

The compounds are quantified by comparing area responses of unknown sample concentrations to known calibration standards. The greater the peak area response the greater the concentration of the COC present.

Dale Schamp was the designated Field Chemist for this project. Each day on the Field Activity Form (FAF), the sample analyst would document the sample field description, matrix, sample's date and collection time for each sample received. The FAF also recorded the date and time the sample was received by the mobile laboratory.

The FAF was also used to record the sample analysis time and volume utilized to perform the analysis. The GC/MS system is linear to 500 ppb for the COCs. Mr. Schamp may have utilized one or two SRI GC systems to determine the sample size which was required to run the sample on the GC/MS. This sample pre-screening process prevented the field chemist from doing multiple runs due to high COC concentrations in the groundwater sample which in turn allowed him to get the final data to the contractor quicker.

Quality Assurance (QA) is an important part of sample analysis. QA is utilized to aid in the measurement of the data quality generated. The FDEP and EPA methods require the mobile laboratory run: a calibration curve, laboratory duplicates, laboratory matrix spikes, daily instrument tune checks, daily method blanks, internal standards, surrogate standards and calibration check standards. Other than the initial calibration standards curves and tune checks, this information can be found in the Excel Data Summary Tables provided and/or the overall Project EDD table required by TetraTech.

Once the sample's analysis was completed, the chemist entered the data into an Excel Data Summary Table spreadsheet. ALF analyzed 10 sample(s) for matrix spike analysis to determine whether the samples themselves cause interferences with the data generation. Project requirements specify 5 % while ALF's frequency was 6.0 % (10/167). ALF analyzed 10 sample duplicate(s) to check analysis reproducibility. This is also required at a frequency of 5% while ALF did this at a rate of 6.0 % (10/167).

The following information is attached or included in the electronic deliverables:

1. TetraTech EDD Data Summary Tables which includes QC data
2. Field Activities Forms
3. A Copy of this Project Summary

The data generated has been reviewed and submitted under TetraTech's EDD format and the data has been reviewed by TetraTech personnel for errors. I can be reached at 321-258-1355, if you have any follow-up questions.

Sincerely,

FIELD ACTIVITIES FORM

Project Name: LC34 Batch #2 ALF Project: TT100818

Address: KSC, FL.

PROJECT NOTES:

Method: EPA8260D; Target Compounds: Vinyl chloride, 1,1-dce, F113, c/t-12,DCE and TCE. Lab#1/GC#5

10/8/18 Activities: Calibrate GC#5/Lab#1 Ref#2 Temperature: < 5C 0700 hrs.

Method (soil/water) Blank(s): All responses < 5% of Lowest reported Reg Limit

Cal(water/soil)Curve(s): fn: 100818DRY5F.M All % RF RSD < 20 %

Cal(water/soil)Curve(s): All standards ion ratios are within 30% of mid level standard. All compound Response Factor ratios are > 0.1 or >0.2

Cal(water/soil)Curve(s): Second Source expected % Recovery met +/- 30 % of expected response (ng)

Lowest Concen level: Recalibrated Detection level standard meet +/- 30 % expected response (10ng level)

Cal(water)Curve(s): Blank passed tune acceptance criteria of EPA 8260C Section 11.3.1

Quant Limit: 10 ng for all. Linear range to 2000NG (VC), others 3000ng.

0842 Run BFB Dynamic hardware tune ; Refrigerator # 9 temp < -5C ; Ambient temp 78 F. JG Finneran C#340024-2895 lot# 7939162781v1

0959 Rec 1 GW sample (2 @ 40 ml VOA vials) from Chuck Sorden on ice. Field No. DPT653@38' (0955); LabID TT100818-W217

1000 Remove 10 ml GW sample W-214 from VOA vial W-214C-1. Add int/surr stds. Load onto PT-5. FN: DPT653@23' / Lab ID: TT100818-W-214. 1010 Inject.

1015 Rec 1 GW sample (2 @ 40 ml VOA vials) from Chuck Sorden on ice. Field No. DPT653@43' (1010); LabID TT100818-W218

1020 Remove 10 ml GW sample W-214 from VOA vial W-214C-2. Add int/surr stds. Load onto PT-5. FN: DPT653@23' / Lab ID: TT100818-W-214dup. 1030 Inject.

1037 Remove 10 ml GW sample W-215 from VOA vial W-215C-1. Add int/surr stds. Load onto PT-5. FN: DPT653@28' / Lab ID: TT100818-W-215. 1047 Inject.

1040 Rec 1 GW sample (2 @ 40 ml VOA vials) from Chuck Sorden on ice. Field No. DPT653@48' (1030); LabID TT100818-W219

Re: PDF - Analytical Data Package

Analytical Laboratories of Florida, Inc. (ALF) office located at 2265 Leaside Court, Merritt Island, Florida provided laboratory services for TetraTech NUS, Inc. at the Launch Complex 34 (LC34) area of Kennedy Space Center during direct push temporary well sample collection. The site is located at NASA's Kennedy Space Center, Florida complex. The laboratory contact is Dale Schamp at 321-258-1355. The laboratory project name is TT110518. Analysis was performed utilizing EPA8260D methodology. A total of 208 ground water samples were analyzed by Dale Schamp (Chemist) over a period of twelve days from November 5 – November 21, 2018. The project utilized one mobile laboratory over the duration of the project. The mobile laboratories are certified (Certification Number E83934 or E831090) by the Florida Department of Health using the guidelines of the national NELAC certification program. TetraTech's Information System's Group (http://isg.ttnus.com) specified the excel spreadsheet format utilized to transport environmental analytical data to TetraTech in an electronic format. ALF's data was submitted to TetraTech under file name EDD.NASA.LC34.110518total on November 27, 2018.

TetraTech/NUS' Project Manager is Mark Jonnet out of the Pittsburgh, Pa. office. The Prime Contact's subcontract number is S1157415. The mobile laboratory was utilized to perform laboratory analysis to delineate volatile organic contamination in the groundwater at various NASA sites. The contaminants of concern included vinyl chloride, 1,1-DCE, Freon 113, cis/trans-1,2-DCE, and trichloroethene . The sample analysis load was expected to be up to 25 samples per day.

ALF performed the sample extraction with a Teledyne Stratum sample concentrator utilizing a purge and trap technique. The EPA 5030 method was used as a guideline for this procedure. The process involved is done by purging a gas (UHP helium) through a known sample volume (10 ml – undiluted) at a constant flow rate and specific time. This process transfers the contaminants of concern (COC) from the liquid matrix (groundwater) onto the trap. The trap is then heated to 250C releasing the compounds from the trap into the GC/MS system. An electronic value inside

the Stratum sample concentrator is electronically moved from the load position to the inject position to transfer the COCs to the GC/MS.

ALF's GC/MS system consists of a Stratum PTC hooked up to an Agilent 6890 (or Model 7890) Gas Chromatograph in series with an Agilent 5973 (or Model 5975C) MS detector. The COCs are separated by the gradual increase of temperature of GC oven from 45C to 200C and the column's internal coating. ALF's column of choice is a J&W DB-VRX 20 meter, 0.18mm ID, 1um df. This setup closely follows the requirements of EPA Method 8260D for identification and quantification.

The target compound list had a very wide range of project specific detection limit requirements between 1 and 100 ppb to meet the Florida GCTLs. The lab settled on a method detection level for all compounds of 1 ppb. This detection level allowed the compounds to be analyzed in the scan sensitivity mode only.

The compounds are identified by two ways: retention time and ion spectrum. Simply under repetitive flow rates and consistent oven variation of temperatures a compound will pass through a detector at the same time for unknown samples and known calibration standards. The time, after the start of a run, the compound passes through a detector to give a peak type response is known as the retention time. This is how any Gas Chromatograph with a detector identifies a compound. The MS detector has the additional power of compound ion spectrums which occur when the compounds are bombarded with electrons as they pass into the detector which causes the compounds to fragment. Each COC fragments differently from all other compounds thus this is an additional aid in identifying compounds. In the SIM mode, the detector looks for specific compound fragments which increase detector sensitivity.

The compounds are quantified by comparing area responses of unknown sample concentrations to known calibration standards. The greater the peak area response the greater the concentration of the COC present.

Dale Schamp was the designated Field Chemist for this project. Each day on the Field Activity Form (FAF), the sample analyst would document the sample field description, matrix, sample's date and collection time for each sample received. The FAF also recorded the date and time the sample was received by the mobile laboratory.

The FAF was also used to record the sample analysis time and volume utilized to perform the analysis. The GC/MS system is linear to 500 ppb for the COCs. Mr. Schamp may have utilized one or two SRI GC systems to determine the sample size which was required to run the sample on the GC/MS. This sample pre-screening process prevented the field chemist from doing multiple runs due to high COC concentrations in the groundwater sample which in turn allowed him to get the final data to the contractor quicker.

Quality Assurance (QA) is an important part of sample analysis. QA is utilized to aid in the measurement of the data quality generated. The FDEP and EPA methods require the mobile laboratory run: a calibration curve, laboratory duplicates, laboratory matrix spikes, daily instrument tune checks, daily method blanks, internal standards, surrogate standards and calibration check standards. Other than the initial calibration standards curves and tune checks, this information can be found in the Excel Data Summary Tables provided and/or the overall Project EDD table required by TetraTech.

Once the sample's analysis was completed, the chemist entered the data into an Excel Data Summary Table spreadsheet. ALF analyzed 12 sample(s) for matrix spike analysis to determine whether the samples themselves cause interferences with the data generation. Project requirements specify 5 % while ALF's frequency was 5.8 % (12/208). ALF analyzed 12 sample duplicate(s) to check analysis reproducibility. This is also required at a frequency of 5% while ALF did this at a rate of 5.8 % (12/208).

The following information is attached or included in the electronic deliverables:

1. TetraTech EDD Data Summary Tables which includes QC data
2. Field Activities Forms
3. A Copy of this Project Summary

The data generated has been reviewed and submitted under TetraTech's EDD format and the data has been reviewed by TetraTech personnel for errors. I can be reached at 321-258-1355, if you have any follow-up questions.

Sincerely,

Project Name: LC34 Batch #4 ALF Project: TT110618

Address: KSC, FL.

PROJECT NOTES:

Method: EPA8260D; Target Compounds: Vinyl chloride, 1,1-dce, F113, c/t-12,DCE and TCE. Lab#1/GC#5

11/8/18 Activities:

1640 DPT595@78' (1720 11/7)/W598 ; @83' (0815 11/8)/W599 ; DPT596@8'(1010 11/8)/W600 ; @13'(1020 11/8)/W601 ; @18'(1030)/W602 ; @23' (1040 11/8)/W603

1640 DPT596@28' (1050 11/8)/W604 ; @33' (1105 11/8)/W606 ; @38'(1120 11/8)/W607 ; @43'(1135 11/8)/W608 ; @48'(1230)/W609 ; @53' (1250 11/8)/W610

1640 DPT596@58' (1310 11/8)/W611 ; @63' (1355 11/8)/W612 ; @68'(1435 11/8)/W613 ; @47'(1500 11/8)/W614 ; @78'(1525)/W615 ; @83' (1550 11/8)/W616

11/9/18 Activities: Lab#1/GC#5

0532 Run BFB Dynamic hardware tune ; Refrigerator # 9 temp < -5C ; Ambient temp 72 F. JG Finneran C#340024-2895 lot# 793917017v1

0535 Run method blank in (fn: 110918blk1.d) 10 ml H20. All analyte responses equal to or < 50% of lowest quantitation calibration standard.Tune Good.

0553 Run 10ml H20 with 100ng spike (fn: 110918ccv1.d). All compound responses between within 20 % expected response and ion ratios within 30% expected ratio.

0606 Remove 0.035 ml GW sample W-560 from VOA vial W-560C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT593@48' / Lab ID: TT110518-W-560. 0616 Inject.

0624 Remove 0.035 ml GW sample W-561 from VOA vial W-561C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT593@53' / Lab ID: TT110518-W-561. 0634 Inject.

0641 Remove 0.05 ml GW sample W-562 from VOA vial W-562C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT593@58' / Lab ID: TT110518-W-562. 0651 Inject.

0701 Remove 0.1 ml GW sample W-563 from VOA vial W-563C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT593@63' / Lab ID: TT110518-W-563. 0711 Inject.

0723 Remove 1 ml GW sample W-564 from VOA vial W-564C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT593@68' / Lab ID: TT110518-W-564. 0733 Inject.

0741 Remove 10 ml GW sample W-564 from VOA vial W-564C-2. Add int/surr stds. Load onto PT-5. FN: LC34-DPT593@68' / Lab ID: TT110518-W-564dup. 0751 Inject.

0759 Remove 10 ml GW sample W-565 from VOA vial W-565C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT593@73' / Lab ID: TT110518-W-565. 0809 Inject.

0818 Remove 0.5 ml GW sample W-566 from VOA vial W-566C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT593@78' / Lab ID: TT110518-W-566. 0828 Inject.

0836 Remove 0.035 ml GW sample W-567 from VOA vial W-567C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT593@83' / Lab ID: TT110518-W-567. 0846 Inject.

0855 Remove 10 ml GW sample W-568 from VOA vial W-568C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@8' / Lab ID: TT110518-W-568. 0905 Inject.

0914 Remove 10 ml GW sample W-568 from VOA vial W-568C-2. Add 100ng,int/surr stds. Load onto PT-5. FN: LC34-DPT594@8' / Lab ID: TT110518-W-568ms. 0924 Inject.

0932 Remove 5 ml GW sample W-569 from VOA vial W-569C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@13' / Lab ID: TT110518-W-569. 0942 Inject.

0950 Remove 5 ml GW sample W-570 from VOA vial W-570C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@18' / Lab ID: TT110518-W-570. 1000 Inject.

1008 Remove 10 ml GW sample W-571 from VOA vial W-571C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@23' / Lab ID: TT110518-W-571. 1018 Inject.

1027 Remove 10 ml GW sample W-572 from VOA vial W-572C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@28' / Lab ID: TT110518-W-572. 1037 Inject.

1046 Remove 10 ml GW sample W-573 from VOA vial W-573C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@33' / Lab ID: TT110518-W-573. 1056 Inject.

1104 Remove 0.05 ml GW sample W-574 from VOA vial W-574C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@38' / Lab ID: TT110518-W-574. 1114 Inject.

1123 Remove 0.035 ml GW sample W-575 from VOA vial W-575C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@43' / Lab ID: TT110518-W-575. 1133 Inject.

1144 Remove 0.02 ml GW sample W-576 from VOA vial W-576C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@48' / Lab ID: TT110518-W-576. 1154 Inject.

1203 Remove 0.002 ml GW sample W-575 from VOA vial W-575C-2. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@43' / Lab ID: TT110518-W-575r. 1213 Inject.

1221 Remove 0.035 ml GW sample W-577 from VOA vial W-577C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@53' / Lab ID: TT110518-W-577. 1231 Inject.

1240 Remove 0.010 ml GW sample W-578 from VOA vial W-578C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@58' / Lab ID: TT110518-W-578. 1250 Inject.

1259 Remove 0.050 ml GW sample W-579 from VOA vial W-579C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@63' / Lab ID: TT110518-W-579. 1309 Inject.

Lab#2/GC#8

0618 Run BFB Dynamic hardware tune ; Refrigerator # 2 temp < -5C ; Ambient temp 72 F. JG Finneran C#340024-2895 lot# 793917017v1

0625 Run method blank in (fn: 110918blk1.d) 10 ml H20. All analyte responses equal to or < 50% of lowest quantitation calibration standard.Tune Good.

0643 Run 10ml H20 with 100ng spike (fn: 110918ccv1.d). All compound responses between within 20 % expected response and ion ratios within 30% expected ratio.

0651 Remove 3 ml GW sample W-580 from VOA vial W-580C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@68' / Lab ID: TT110518-W-580. 0701 Inject.

0709 Remove 0.1 ml GW sample W-580 from VOA vial W-580C-12 Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@68' / Lab ID: TT110518-W-580r. 0719 Inject.

0727 Remove 0.05 ml GW sample W-581 from VOA vial W-581C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@73' / Lab ID: TT110518-W-581. 0737 Inject.

0747 Remove 0.05 ml GW sample W-582 from VOA vial W-582C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@78' / Lab ID: TT110518-W-582. 0757 Inject.

0805 Remove 0.1 ml GW sample W-583 from VOA vial W-583C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT594@83' / Lab ID: TT110518-W-583. 0815 Inject.

0823 Remove 10 ml GW sample W-584 from VOA vial W-584C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT595@8' / Lab ID: TT110518-W-584. 0833 Inject.

0841 Remove 10 ml GW sample W-585 from VOA vial W-585C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT595@13' / Lab ID: TT110518-W-585. 0851 Inject.

0859 Remove 10 ml GW sample W-586 from VOA vial W-586C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT595@18' / Lab ID: TT110518-W-586. 0909 Inject.

0917 Remove 10 ml GW sample W-586 from VOA vial W-586C-2. Add 100ng,int/surr stds. Load onto PT-5. FN: LC34-DPT595@18' / Lab ID: TT110518-W-586ms. 0927 Inject.

0935 Remove 10 ml GW sample W-587 from VOA vial W-587C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT595@23' / Lab ID: TT110518-W-587. 0945 Inject.

0952 Remove 10 ml GW sample W-588 from VOA vial W-588C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT595@28' / Lab ID: TT110518-W-588. 1002 Inject.

1012 Remove 3 ml GW sample W-589 from VOA vial W-589C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT595@33' / Lab ID: TT110518-W-589. 1022 Inject.

1030 Remove 0.1 ml GW sample W-590 from VOA vial W-590C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT595@38' / Lab ID: TT110518-W-590. 1040 Inject.

1050 Remove 0.05 ml GW sample W-591 from VOA vial W-591C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT595@43' / Lab ID: TT110518-W-591. 1100 Inject.

1110 Remove 0.04 ml GW sample W-592 from VOA vial W-592C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT595@48' / Lab ID: TT110518-W-592. 1120 Inject.

1128 Remove 0.25 ml GW sample W-592 from VOA vial W-592C-2. Add int/surr stds. Load onto PT-5. FN: LC34-DPT595@48' / Lab ID: TT110518-W-592r. 1138 Inject.

1150 Remove 1 ml GW sample W-593 from VOA vial W-593C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT595@53' / Lab ID: TT110518-W-593. 1200 Inject.

1209 Remove 0.25 ml GW sample W-594 from VOA vial W-594C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT595@58' / Lab ID: TT110518-W-594. 1219 Inject.

Re: PDF - Analytical Data Package

Analytical Laboratories of Florida, Inc. (ALF) office located at 2265 Leaside Court, Merritt Island, Florida provided laboratory services for TetraTech NUS, Inc. at the Launch Complex 34 (LC34) area of Kennedy Space Center during direct push temporary well sample collection. The site is located at NASA's Kennedy Space Center, Florida complex. The laboratory contact is Dale Schamp at 321-258-1355. The laboratory project name is TT1210 18. Analysis was performed utilizing EPA8260D methodology. A total of 180 ground water samples were analyzed by Dale Schamp (Chemist) over a period of twelve days from December 10 – 21, 2018. The project utilized two mobile laboratories over the duration of the project. The mobile laboratories are certified (Certification Number E83934 or E831090) by the Florida Department of Health using the guidelines of the national NELAC certification program. TetraTech's Information System's Group (http://isg.ttnus.com) specified the excel spreadsheet format utilized to transport environmental analytical data to TetraTech in an electronic format. ALF's data was submitted to TetraTech under file name EDD.NASA.LC34.121018total on December 26, 2018.

TetraTech/NUS' Project Manager is Mark Jonnet out of the Pittsburgh, Pa. office. The Prime Contact's subcontract number is S1157415. The mobile laboratory was utilized to perform laboratory analysis to delineate volatile organic contamination in the groundwater at various NASA sites. The contaminants of concern included vinyl chloride, 1,1-DCE, Freon 113, cis/trans-1,2-DCE, and trichloroethene . The sample analysis load was expected to be up to 25 samples per day.

ALF performed the sample extraction with a Teledyne Stratum sample concentrator utilizing a purge and trap technique. The EPA 5030 method was used as a guideline for this procedure. The process involved is done by purging a gas (UHP helium) through a known sample volume (10 ml – undiluted) at a constant flow rate and specific time. This process transfers the contaminants of concern (COC) from the liquid matrix (groundwater) onto the trap. The trap is then heated to 250C releasing the compounds from the trap into the GC/MS system. An electronic value inside

the Stratum sample concentrator is electronically moved from the load position to the inject position to transfer the COCs to the GC/MS.

ALF's GC/MS system consists of a Stratum PTC hooked up to an Agilent 6890 (or Model 7890) Gas Chromatograph in series with an Agilent 5973 (or Model 5975C) MS detector. The COCs are separated by the gradual increase of temperature of GC oven from 45C to 200C and the column's internal coating. ALF's column of choice is a J&W DB-VRX 20 meter, 0.18mm ID, 1um df. This setup closely follows the requirements of EPA Method 8260D for identification and quantification.

The target compound list had a very wide range of project specific detection limit requirements between 1 and 100 ppb to meet the Florida GCTLs. The lab settled on a method detection level for all compounds of 1 ppb. This detection level allowed the compounds to be analyzed in the scan sensitivity mode only.

The compounds are identified by two ways: retention time and ion spectrum. Simply under repetitive flow rates and consistent oven variation of temperatures a compound will pass through a detector at the same time for unknown samples and known calibration standards. The time, after the start of a run, the compound passes through a detector to give a peak type response is known as the retention time. This is how any Gas Chromatograph with a detector identifies a compound. The MS detector has the additional power of compound ion spectrums which occur when the compounds are bombarded with electrons as they pass into the detector which causes the compounds to fragment. Each COC fragments differently from all other compounds thus this is an additional aid in identifying compounds. In the SIM mode, the detector looks for specific compound fragments which increase detector sensitivity.

The compounds are quantified by comparing area responses of unknown sample concentrations to known calibration standards. The greater the peak area response the greater the concentration of the COC present.

Dale Schamp was the designated Field Chemist for this project. Each day on the Field Activity Form (FAF), the sample analyst would document the sample field description, matrix, sample's date and collection time for each sample received. The FAF also recorded the date and time the sample was received by the mobile laboratory.

The FAF was also used to record the sample analysis time and volume utilized to perform the analysis. The GC/MS system is linear to 500 ppb for the COCs. Mr. Schamp may have utilized one or two SRI GC systems to determine the sample size which was required to run the sample on the GC/MS. This sample pre-screening process prevented the field chemist from doing multiple runs due to high COC concentrations in the groundwater sample which in turn allowed him to get the final data to the contractor quicker.

Quality Assurance (QA) is an important part of sample analysis. QA is utilized to aid in the measurement of the data quality generated. The FDEP and EPA methods require the mobile laboratory run: a calibration curve, laboratory duplicates, laboratory matrix spikes, daily instrument tune checks, daily method blanks, internal standards, surrogate standards and calibration check standards. Other than the initial calibration standards curves and tune checks, this information can be found in the Excel Data Summary Tables provided and/or the overall Project EDD table required by TetraTech.

Once the sample's analysis was completed, the chemist entered the data into an Excel Data Summary Table spreadsheet. ALF analyzed 10 sample(s) for matrix spike analysis to determine whether the samples themselves cause interferences with the data generation. Project requirements specify 5 % while ALF's frequency was 5.6 % (10/180). ALF analyzed 10 sample duplicate(s) to check analysis reproducibility. This is also required at a frequency of 5% while ALF did this at a rate of 5.6 % (10/180).

The following information is attached or included in the electronic deliverables:

1. TetraTech EDD Data Summary Tables which includes QC data
2. Field Activities Forms
3. A Copy of this Project Summary

The data generated has been reviewed and submitted under TetraTech's EDD format and the data has been reviewed by TetraTech personnel for errors. I can be reached at 321-258-1355, if you have any follow-up questions.

Sincerely,

Re: PDF - Analytical Data Package

Analytical Laboratories of Florida, Inc. (ALF) office located at 2265 Leaside Court, Merritt Island, Florida provided laboratory services for TetraTech NUS, Inc. at the Launch Complex 34 (LC34) area of Kennedy Space Center during direct push temporary well sample collection. The site is located at NASA's Kennedy Space Center, Florida complex. The laboratory contact is Dale Schamp at 321-258-1355. The laboratory project name is TT030419. Analysis was performed utilizing EPA8260D methodology. A total of 67 ground water samples were analyzed by Dale Schamp (Chemist) over a period of five days from March 3-8, 2019. The project utilized one of two mobile laboratories over the duration of the project. The mobile laboratories are certified (Certification Number E83934 or E831090) by the Florida Department of Health using the guidelines of the national NELAC certification program. TetraTech's Information System's Group (http://isg.ttnus.com) specified the excel spreadsheet format utilized to transport environmental analytical data to TetraTech in an electronic format. ALF's data was submitted to TetraTech under file name EDD.NASA.LC34.030419total on March 12, 2019.

TetraTech/NUS' Project Manager is Mark Jonnet out of the Pittsburgh, Pa. office. The Prime Contact's subcontract number is S1157415. The mobile laboratory was utilized to perform laboratory analysis to delineate volatile organic contamination in the groundwater at various NASA sites. The contaminants of concern included vinyl chloride, 1,1-DCE, Freon 113, cis/trans-1,2-DCE, and trichloroethene . The sample analysis load was expected to be up to 25 samples per day.

ALF performed the sample extraction with a Teledyne Stratum sample concentrator utilizing a purge and trap technique. The EPA 5030 method was used as a guideline for this procedure. The process involved is done by purging a gas (UHP helium) through a known sample volume (10 ml – undiluted) at a constant flow rate and specific time. This process transfers the contaminants of concern (COC) from the liquid matrix (groundwater) onto the trap. The trap is then heated to 250C releasing the compounds from the trap into the GC/MS system. An electronic value inside

the Stratum sample concentrator is electronically moved from the load position to the inject position to transfer the COCs to the GC/MS.

ALF's GC/MS system consists of a Stratum PTC hooked up to an Agilent 6890 (or Model 7890) Gas Chromatograph in series with an Agilent 5973 (or Model 5975C) MS detector. The COCs are separated by the gradual increase of temperature of GC oven from 45C to 200C and the column's internal coating. ALF's column of choice is a J&W DB-VRX 20 meter, 0.18mm ID, 1um df. This setup closely follows the requirements of EPA Method 8260D for identification and quantification.

The target compound list had a very wide range of project specific detection limit requirements between 1 and 100 ppb to meet the Florida GCTLs. The lab settled on a method detection level for all compounds of 1 ppb. This detection level allowed the compounds to be analyzed in the scan sensitivity mode only.

The compounds are identified by two ways: retention time and ion spectrum. Simply under repetitive flow rates and consistent oven variation of temperatures a compound will pass through a detector at the same time for unknown samples and known calibration standards. The time, after the start of a run, the compound passes through a detector to give a peak type response is known as the retention time. This is how any Gas Chromatograph with a detector identifies a compound. The MS detector has the additional power of compound ion spectrums which occur when the compounds are bombarded with electrons as they pass into the detector which causes the compounds to fragment. Each COC fragments differently from all other compounds thus this is an additional aid in identifying compounds. In the SIM mode, the detector looks for specific compound fragments which increase detector sensitivity.

The compounds are quantified by comparing area responses of unknown sample concentrations to known calibration standards. The greater the peak area response the greater the concentration of the COC present.

Dale Schamp was the designated Field Chemist for this project. Each day on the Field Activity Form (FAF), the sample analyst would document the sample field description, matrix, sample's date and collection time for each sample received. The FAF also recorded the date and time the sample was received by the mobile laboratory.

The FAF was also used to record the sample analysis time and volume utilized to perform the analysis. The GC/MS system is linear to 500 ppb for the COCs. Mr. Schamp may have utilized one or two SRI GC systems to determine the sample size which was required to run the sample on the GC/MS. This sample pre-screening process prevented the field chemist from doing multiple runs due to high COC concentrations in the groundwater sample which in turn allowed him to get the final data to the contractor quicker.

Quality Assurance (QA) is an important part of sample analysis. QA is utilized to aid in the measurement of the data quality generated. The FDEP and EPA methods require the mobile laboratory run: a calibration curve, laboratory duplicates, laboratory matrix spikes, daily instrument tune checks, daily method blanks, internal standards, surrogate standards and calibration check standards. Other than the initial calibration standards curves and tune checks, this information can be found in the Excel Data Summary Tables provided and/or the overall Project EDD table required by TetraTech.

Once the sample's analysis was completed, the chemist entered the data into an Excel Data Summary Table spreadsheet. ALF analyzed 5 sample(s) for matrix spike analysis to determine whether the samples themselves cause interferences with the data generation. Project requirements specify 5 % while ALF's frequency was 7.5 % (5/67). ALF analyzed 5 sample duplicate(s) to check analysis reproducibility. This is also required at a frequency of 5% while ALF did this at a rate of 7.5 % (5/67).

The following information is attached or included in the electronic deliverables:

1. TetraTech EDD Data Summary Tables which includes QC data
2. Field Activities Forms
3. A Copy of this Project Summary

The data generated has been reviewed and submitted under TetraTech's EDD format and the data has been reviewed by TetraTech personnel for errors. I can be reached at 321-258-1355, if you have any follow-up questions.

Sincerely,

ANALYTICAL LABORATORIES OF FLORIDA

FIELD ACTIVITIES FORM

Project Name: LC34 ALF Project: TT030419

Address: KSC, FL.

PROJECT NOTES:

Method: EPA8260D; Target Compounds: Vinyl chloride, 1,1-dce, F113, c/t-12,DCE and TCE. Lab#1/GC#5

03/07/19 Activities:

1735 Receive 1 GW sample (2 @ 40 ml VOA vials) from Chuck Sorden on ice. Field No. DPT697@78' (1730); LabID TT030419-W061

1742 Remove 3 ml GW sample W-060 from VOA vial W-060C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT696@73' / Lab ID: TT030419-W-060. 1752 Inject.

1819 Remove 10 ml GW sample W-061 from VOA vial W-061C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT697@78' / Lab ID: TT030419-W-061. 1829 Inject.

03/08/19 Activities:

0835 Run BFB Dynamic hardware tune ; Refrigerator # 9 temp < -5C ; Ambient temp 63 F. JG Finneran C#340024-2895 lot# 7939181551V1

0836 Run method blank in (fn: 030819blk1.d) 10 ml H20. All analyte responses equal to or < 50% of lowest quantitation calibration standard.Tune Good.

0850 Receive 1 GW sample (2 @ 40 ml VOA vials) from Chuck Sorden on ice. Field No. DPT698@33' (0845); LabID TT030419-W062

0905 Receive 1 GW sample (2 @ 40 ml VOA vials) from Chuck Sorden on ice. Field No. DPT698@38' (0900); LabID TT030419-W063

0915 Run 10ml H20 with 100ng spike (fn: 030819ccv1.d). All compound responses within 20 % expected response and ion ratios within 30% expected ratio.

0925 Remove 0.5 ml GW sample W-062 from VOA vial W-062C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT698@33' / Lab ID: TT030419-W-062. 0935 Inject.

0943 Remove 0.05 ml GW sample W-062 from VOA vial W-062C-2. Add int/surr stds. Load onto PT-5. FN: LC34-DPT698@33' / Lab ID: TT030419-W-062DUP. 0953 Inject.

0950 Receive 1 GW sample (2 @ 40 ml VOA vials) from Chuck Sorden on ice. Field No. DPT699@33' (0945); LabID TT030419-W064

1000 Receive 1 GW sample (2 @ 40 ml VOA vials) from Chuck Sorden on ice. Field No. DPT699@38' (0955); LabID TT030419-W065

1002 Remove 5 ml GW sample W-063 from VOA vial W-063C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT698@38' / Lab ID: TT030419-W-063. 1012 Inject.

1021 Remove 5 ml GW sample W-063 from VOA vial W-063C-2. Add 100NG,int/surr stds. Load onto PT-5. FN: LC34-DPT698@38' / Lab ID: TT030419-W-063MS. 1031 Inject.

1043 Remove 0.1 ml GW sample W-064 from VOA vial W-064C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT699@33' / Lab ID: TT030419-W-064. 1053 Inject.

1100 Receive 1 GW sample (2 @ 40 ml VOA vials) from ZP. Field No. DPT700@73' (1055); LabID TT030419-W066

1101 Remove 0.035 ml GW sample W-065 from VOA vial W-065C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT699@38' / Lab ID: TT030419-W-065. 1111 Inject.

1119 Remove 0.035 ml GW sample W-064 from VOA vial W-064C-2. Add int/surr stds. Load onto PT-5. FN: LC34-DPT699@33' / Lab ID: TT030419-W-064r. 1129 Inject.

1137 Remove 10 ml GW sample W-066 from VOA vial W-066C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT700@73' / Lab ID: TT030419-W-066. 1147 Inject.

1140 Receive 1 GW sample (2 @ 40 ml VOA vials) from ZP. Field No. DPT700@78' (1130); LabID TT030419-W066

1157 Remove 10 ml GW sample W-067 from VOA vial W-067C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT700@78' / Lab ID: TT030419-W-067. 1207 Inject.

1230 Discard samples in IDW drum.

FIELD ACTIVITIES FORM

Project Name: LC34.3 (2019) ALF Project: TT041219

Address: KSC, FL.

PROJECT NOTES:

Method: EPA8260D; Target Compounds: Vinyl chloride, 1,1-dce, F113, c/t-12,DCE and TCE. Lab#1/GC#5

04/16/19 Activities:

1440 Rec 1 GW sample (2 @ 40 ml VOA vials) from Chuck Sorden on ice. Field No. DPT756@32' (1435); LabID TT041219-W110

1456 Remove 10 ml GW sample W-106 from VOA vial W-106C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT756@8' / Lab ID: TT041219-W-106. 1506 Inject.

1505 Rec 1 GW sample (2 @ 40 ml VOA vials) from Chuck Sorden on ice. Field No. DPT757@8' (1500); LabID TT041219-W111

1510 Remove 3 ml GW sample W-107 from VOA vial W-107C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT756@13' / Lab ID: TT041219-W-107. 1520 Inject.

1515 Rec 1 GW sample (2 @ 40 ml VOA vials) from Chuck Sorden on ice. Field No. DPT757@13' (1510); LabID TT041219-W112

1526 Remove 0.5 ml GW sample W-108 from VOA vial W-108C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT756@18' / Lab ID: TT041219-W-108. 1536 Inject.

1530 Rec 1 GW sample (2 @ 40 ml VOA vials) from Chuck Sorden on ice. Field No. DPT757@18' (1525); LabID TT041219-W113

1543 Remove 10 ml GW sample W-109 from VOA vial W-109C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT756@25' / Lab ID: TT041219-W-109. 1553 Inject.

1545 Rec 1 GW sample (2 @ 40 ml VOA vials) from Chuck Sorden on ice. Field No. DPT757@25' (1540); LabID TT041219-W114

1600 Remove 10 ml GW sample W-110 from VOA vial W-110C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT756@32' / Lab ID: TT041219-W-110. 1615 Inject.

1600 Rec 1 GW sample (2 @ 40 ml VOA vials) from Chuck Sorden on ice. Field No. DPT757@32' (1555); LabID TT041219-W115

1622 Remove 10 ml GW sample W-111 from VOA vial W-111C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT757@8' / Lab ID: TT041219-W-111. 1641 Inject.

1647 Remove 10 ml GW sample W-112 from VOA vial W-112C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT757@13' / Lab ID: TT041219-W-112. 1657 Inject.

1703 Remove 5 ml GW sample W-113 from VOA vial W-113C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT757@18' / Lab ID: TT041219-W-113. 1713 Inject.

1719 Remove 5 ml GW sample W-114 from VOA vial W-114C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT757@25' / Lab ID: TT041219-W-114. 1729 Inject.

1736 Remove 10 ml GW sample W-115 from VOA vial W-115C-1. Add int/surr stds. Load onto PT-5. FN: LC34-DPT757@32' / Lab ID: TT041219-W-115. 1746 Inject.

1745 discard samples in IDW drum.
