

Astrobee Overview

2021

Jose Benavides, Astrobee Facility PM

Astrobee Objectives

- Provide a microgravity robotic research facility in the ISS US Orbital Segment (USOS), which will replace the existing SPHERES facility
- Provide remotely operated mobile camera views of the ISS USOS to enhance the situation awareness of mission control
- Perform mobile sensor tasks in the ISS USOS

Astrobee Purpose

- Objectives
 - Provide a microgravity robotic research facility inside the ISS US Orbital Segment (USOS), which has replaced the existing SPHERES facility
 - Demonstrate feasibility of intra-vehicular robot caretaking for future human exploration vehicles
 - Provide an opportunity for future automation of certain ISS operations
- Driving use cases
 - Guest science experiments
 - Remotely operated mobile camera
 - Sensor surveys

System Description - Hardware

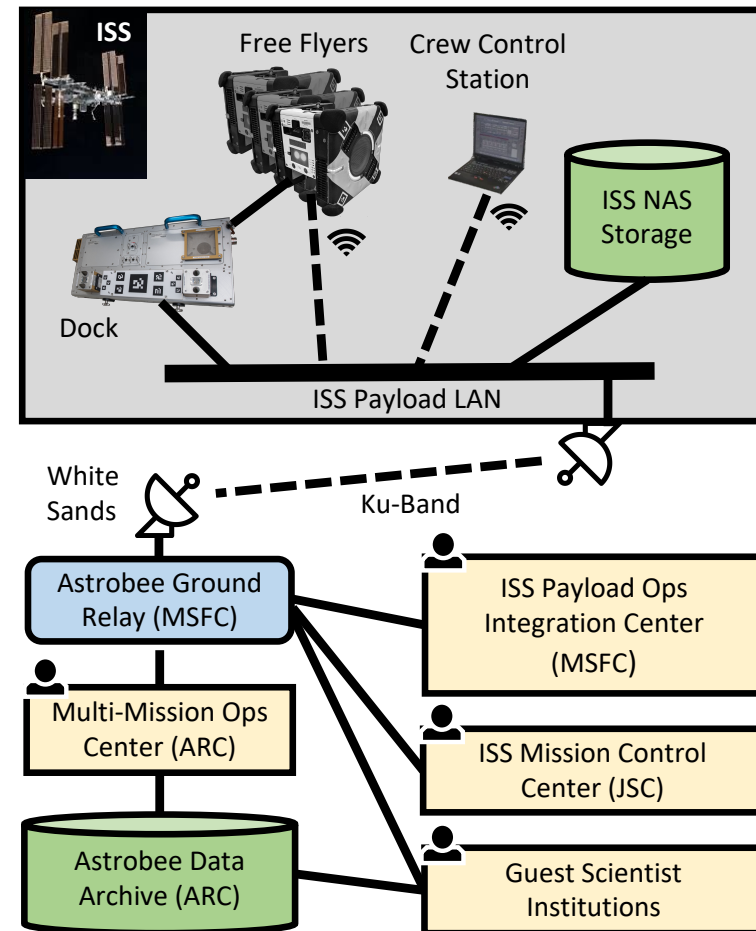

- Free flying robot inside the ISS
- 32 cm wide, ~9.1kg (2 batt., no arm)
- All electric + fan-based propulsion
- Robot arm for “perching”, ~1kg
- Three smartphone computers
- Three payload bays for expansion
- Microphone not currently enabled

System Description - Communications

- Communicates through ISS WiFi when flying
- Single telemetry/video stream to ground
- Multiple ground stations can connect through server
- Large file transfers and software updates through Ethernet on the dock

Astrobee communications path

System Description - Navigation

- Vision-based navigation
 - Compares features with on-board a priori map
 - Incorporates inertial measurements
- Fiducials used for autonomous docking
 - Requires approximately 1 cm position accuracy
- Visual odometry
 - Robot can continue to navigate where no map features are recognized

Feature map of the JEM-PM

System Description - Perching Arm

- Designed to grasp handrails
- Stows completely in payload bay
- Acts as a pan-tilt unit while perched
- Flexible and back-drivable
- May be perched manually

Camera View Direction

Astrobee Perching Arm pan motion

Camera View Direction

Astrobee Perching Arm tilt motion

System Description - Docking Station

- 85 cm x 38 cm x 28 cm
- Berths for 2 free flyers
- Provides power and Ethernet

- Fiducials used for visual servoing to autonomously dock
- Magnets provide retention force

System Description - Ground Data System

- Astrobee Control Station
 - Sortie planning tool
 - Execution monitoring
 - Live telemetry
 - Image and video streams
 - 3D virtual display
 - Supervisory control (run plans or single commands)
 - Typically used by ground operators
- Crew Control Station runs on an EXPRESS Laptop Computer (ELC)
- Server for archiving and distributing Astrobee data
- Suite of engineering tools to support maintenance and software upgrades

Basic Conops

- When an Astrobee is idle, it charges in its dock
- Astrobees can execute complex plans with full autonomy and no astronauts present
 - Including undock, traverse multiple modules, return to dock
- However, Astrobees run with ground operator oversight
 - When an anomaly occurs, an Astrobee generally stops and waits for operator intervention
 - It can continue operating during communication outages until it encounters an anomaly
- The operator can always take over and teleoperate
- Astronauts can also be operators, but this is will likely be a rare occurrence (minimize crew time)

Dock Repair

- Lost communication with the Dock
- Root cause analysis pointed at corrupted memory card
- Dock designed for on-orbit repair
- Spare memory card launched as part of on-orbit spares
- Crew performed replacement
- Dock restored to functionality

Perching Demonstration

- Honey perched autonomously on 07/26/2021
- Perch location was also useful to see how Bumble had become entangled.
- Operator was able to use the view from Honey to free Bumble.

Completed Investigations

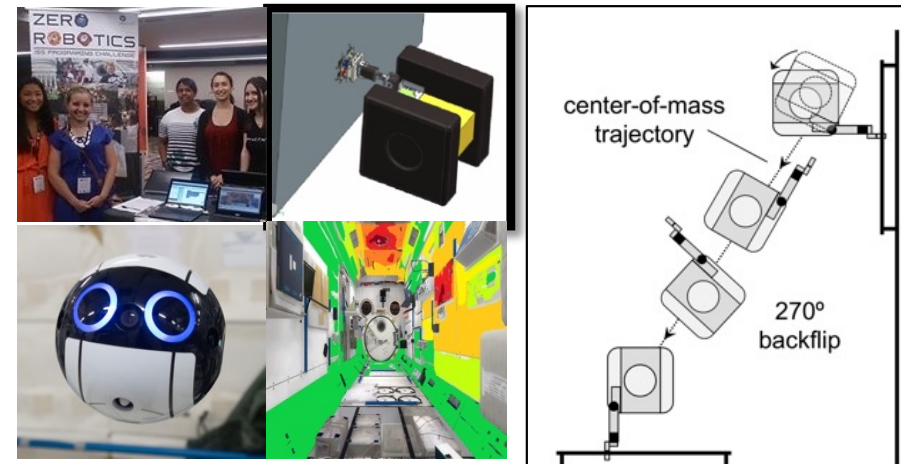

- Kibo Robotic Programming Competition – Year 1 – Completed 10/2020
- The REduced Gravity Gecko Adhesion docking Experiments (REGGAE) – Completed 01/2021
- Stanford Gecko – Phase 1 – Completed 04/2021

Ongoing Investigations

- Astrobatics (Naval Postgraduate School)
- SoundSee (Astrobotic/Bosch)
- Gecko (Stanford)
- RFID Recon (NASA AES/REALM-2)
- JAXA Kibo-RPC
- Astroporter (Tethers Unlimited)
- ISAAC (NASA STMD/GCD)
- ROAM (MIT/DLR)
- ReSWARM
- SVGS (FIT)
- SOARS (Zero-g Horizons)

Achievements

- 3 hours of continuous operation without crew intervention
- One Astrobee unit used to rescue a second
- 20 user sessions
- On-orbit repair of dock
- Autonomous Perching

(a)

(b)

(c)

(d)

So long SPHERES

- SPHERES investigations completed
- Satellites are being down-massed
- Work in progress to have them displayed at the Smithsonian
