EXECUTIVE SUMMARY

This Annual Performance Monitoring Report (PMR) for the Dense Non-Aqueous Phase Liquid (DNAPL) Source Zone (DSZ) and Hot Spot 6 (HS 6) Air Sparge (AS) System presents the results of Year 12 operation of the hydraulic containment (HC) Interim Measure (IM), the results of performance monitoring direct-push technology (DPT) sampling and monitoring well sampling conducted in the DSZ, and the results of operations and performance sampling of the HS 6 AS IM at Launch Complex 34 (LC34), located at Cape Canaveral Space Force Station (CCSFS), Florida. Site-wide biennial LTM sampling was not conducted during this reporting period and is scheduled to be conducted in December 2022. The timeframe for activities documented in this PMR extends from April 1, 2021 to March 31, 2022. LC34 has been designated Solid Waste Management Unit CC054 under the Kennedy Space Center (KSC) Resource Conservation and Recovery Act Corrective Action Program.

The objective of the HC IM at LC34 is to contain the DSZ and deep dissolved-phase trichloroethene (TCE) high concentration plume via operation of a hydraulic containment system (HCS). The pre-IM design 300 micrograms per liter (µg/L) TCE groundwater contour was used to establish the deep zone capture area for deep recovery wells, and the shallow zone capture area was defined by the DSZ. The system began operating in 2010, and in 2015, the system was expanded to provide HC for areas within the 300 µg/L TCE groundwater isocontours of HS 3 and 4. In 2018 and 2019, an investigation was conducted to re-characterize the DSZ, which included investigating TCE mass in Layer 7. This data was subsequently used to optimize the pumping rates of the HCS to more adequately capture residual contaminant mass.

The operational period for Year 12 of the HCS was from April 1, 2021 to March 31, 2022. Operational runtime for the system was 94 percent during Year 12, with downtime events attributed to planned maintenance, system repairs, and power outages. As of March 31, 2022, a total of 285,712,801 gallons of groundwater containing 84,933 pounds of VOCs have been removed by the HCS. Influent concentrations of TCE have decreased since startup from approximately 280,000 µg/L (January 2010) to 12,000 µg/L (March 2022). During the reporting period, all effluent concentrations from the HCS (aqueous and vapor) were below regulatory reporting limits, indicating the system continues to operate as intended.

Performance monitoring was conducted in December 2021 within the DSZ to evaluate TCE contamination. Groundwater samples were collected via DPT at nine locations, consistent with previous events in 2017, 2018, 2019, and 2020. Full vertical profile sampling was completed at each DPT from 8 to 98 ft bls, at 5 foot intervals. The DPT performance monitoring results are summarized in this PMR. The results revealed TCE remains at concentrations greater than 11,000 µg/L in the DSZ (1-percent solubility, indicative of DNAPL) at eight of the nine DPT locations at depths ranging from 8 to 98 ft bls. An overall increasing trend of TCE concentrations was observed in DPT samples during this reporting period, which may be due to several recovery wells that were turned off during the AS Pilot Study in the DSZ that operated from July 2021 to February 2022 (documented separately from this report). The maximum TCE concentration in 2021 was 15,400,000 µg/L in the 58 ft bls depth interval at DPT597 (previous maximum result in 2020 was 1,690,000 at 48 ft bls at DPT596). During the 2021 DPT event, the overall majority of TCE contamination was identified in the 58 ft bls interval (below Layer 4), where in the previous year the majority of mass was observed in Layer 4. This trend appears to indicate continued mass discharge from Layer 4 (fine-grained unit). In addition to DPT sampling, monitoring well samples were collected from deep wells in the DSZ area (Layers 7 and 8) to verify vertical delineation. All monitoring well results were non-detect or below cleanup levels, with exception of one well (IW0162, screened 105 to 115 ft bls, which is below the existing recovery well capture zone) where TCE was identified above cleanup target levels.

The HS 6 AS system remained operational during the reporting period covered under this report. The HS 6 AS IM was initiated in 2018 with 160 AS wells, and expanded in 2019 with an additional 140 AS wells. Quarterly performance monitoring was reduced to semi-annual prior to this operational period. The results of the HS 6 system operation and semi-annual performance monitoring are summarized in this report. Semi-annual monitoring results collected in April and October 2021 show concentrations of contaminants of concern (cis-1,2-dichloroethene, trans-1,2-dichloroethene, and vinyl chloride) are generally decreasing and not impacting the surface water drainage canal, indicating the HS 6 IM is meeting objectives.

Overall, the tasks associated with Year 12 operation of the HC IM and operation of the HS 6 AS IM were performed in accordance with the recommendations of the 2020 LC34 (Year 11)

Operations, Maintenance, and Monitoring Report for DNAPL Source Zone, Site Wide Long-Term Monitoring, and Hot Spot 6 Air Sparging System PMR (NASA, 2021c). Evaluation of results from the HC IM and HS 6 IM show that these systems are operating as designed and meeting performance objectives.

The following items are recommended for Year 13 of operation of the HCS (April 1, 2022 through March 31, 2023):

- Continue site-wide LTM on a biennial frequency and conduct the next LTM event in December 2022.
- Continue operation of the HCS with the following actions:
  - Installation of a new recovery well , screened from 90 to 100 ft bls, in the vicinity of RW20C (screened 80 to 95 ft bls) to manage recent TCE detections in monitoring well, IW0162. Pumping rates will be tested and adjusted to maximize new recovery well influence and recovery;
  - Continued operation of the catalytic oxidizer for offgas treatment;
  - Monthly sampling of aqueous effluent from the air strippers, and liquid phase granular activated carbon when online;
  - Quarterly sampling of combined system influent and individual recovery well influent;
  - Annual vapor-phase sampling;
  - Annual sampling in the DSZ at the same nine DPT locations (DPT593 to DPT601) and depth intervals as the 2021 event; and
  - Annual sampling at 11 Layer 7/8 wells (IW0001D2, IW0042D2, IW0043D2, IW0044D2, IW0045D2, IW0160, IW0161, IW0162, IW0163, IW0164, IW0165).
- Continue operation of the HS 6 AS system with the following actions:

- Weekly inspection of flow meters, transmitters, and AS system components for leakage and excessive vibration, noise, or abnormal temperatures;
- Weekly inspection of oil levels and lubrication;
- Weekly inspection of condensate treatment systems and refrigerated air dryer;
- Assessment of differential pressure across filtration units and process equipment;
- Recording of system operational data and comparing data to design conditions and previous operating data;
- Repairing and cleaning equipment as needed;
- Routine maintenance and housekeeping as needed; and
- Semi-annual performance monitoring at the same 28 wells and three surface water locations as 2021.

The results and recommendations summarized in this PMR were presented to the KSC Remediation Team on June 28, 2022, and Team concurrence was received on the path forward.

SECTION I
INTRODUCTION

This Annual Performance Monitoring Report (PMR) for the Dense Non-Aqueous Phase Liquid (DNAPL) Source Zone (DSZ) and Hot Spot 6 (HS) 6 Air Sparge (AS) System presents the results of Year 12 operation of the hydraulic containment (HC) Interim Measure (IM), the results of performance monitoring direct-push technology (DPT) sampling and monitoring well sampling conducted in the DSZ, and the results of operations and performance sampling of the HS 6 AS IM at Launch Complex 34 (LC34), located at Cape Canaveral Space Force Station (CCSFS), Florida. This site has been designated Solid Waste Management Unit (SWMU) CC054 under the Kennedy Space Center (KSC) Resource Conservation and Recovery Act (RCRA) Corrective Action Program. This PMR was prepared by Tetra Tech, Inc., for the National Aeronautics and Space Administration (NASA) under Indefinite Delivery Indefinite Quantity Contract 80KSC019D0011-80KSC019F0067.

Site-wide Long-Term Monitoring (LTM) at LC34 is conducted on a biennial basis to evaluate the dissolved-phase low concentration plume (LCP) and high concentration plume (HCP) at the site. Site-wide biennial LTM sampling was not conducted during this reporting period and is scheduled to be conducted in December 2022.

The Year 12 operational period for the HC IM was from April 1, 2021 to March 31, 2022. The following activities were completed during Year 12 of the HC IM:

- Continued operation and maintenance (O&M) of the hydraulic containment system (HCS);
- Monthly sampling of primary and secondary air stripper effluent;
- Monthly sampling of the liquid-phase granular activated carbon (LPGAC) when online;
- Quarterly sampling of combined system influent, individual recovery well influent;
- Annual vapor-phase sampling (pre- and post-catalytic oxidation unit [CatOx] treatment);

- Performance monitoring of the HCS via groundwater sample collection at nine DPT locations and 11 monitoring well locations in the DSZ for volatile organic compound (VOC) analysis (Table 1-1).

The HS 6 IM AS system was implemented in 2018 to prevent plume expansion and migration into the drainage canal and to contain and remediate the HS 6 area located downgradient to the east of the HC IM at LC34. The HS 6 AS system is currently in the operational phase in accordance with the Implementation Work Plan (IWP) (NASA, 2017b) and expansion IWP (NASA, 2018). The second phase of HS 6 AS expansion is currently pending implementation (NASA, 2021b).

The following HS 6 IM activities were completed during the reporting period covered under this report:

- Semi-annual sampling of the HS 6 performance monitoring network, which includes 28 monitoring wells and three surface water locations (Table 1-1); and

- O&M of the HS 6 AS system.

1.1 BACKGROUND

LC34 is located at CCSFS in Section 6, Township 23 South, and Range 38 East, in the False Cape Quadrangle. CCSFS was previously named Cape Canaveral Air Force Station, with formal name change occurring in December 2020. LC34 is bordered to the north by Launch Complex 37, to the south by Launch Complex 20, to the west by ICBM Road (Samuel Phillips Parkway), and to the east by the Atlantic Ocean. The launch pad and associated facilities at LC34 were built in the late 1950s and used by NASA's Apollo Space Program for the launching of Saturn rockets from 1960 to 1968. The Apollo 1 tragedy occurred on the launch pad on January 27, 1967.

Historical information suggests that rocket engines and other parts were cleaned at the site using solvent degreasers, most notably trichloroethene (TCE). It is speculated that releases of solvents occurred during cleaning operations through both intentional and unintentional discharges to nearby areas. Based on groundwater and soil sampling data, these releases occurred primarily in

the immediate vicinity of the former Engineering Support Building (ESB) located southwest of the Blockhouse and identified on Figure 1-1. Since shutdown of the launch pad in 1968, LC34 has remained largely inactive, although several site features (e.g., Blockhouse, camera pad, etc.) are still present. Most operational equipment (service towers, fuel storage tanks, piping, etc.) has been dismantled, and the majority of previous on-site buildings and structures were abandoned in place. Native and invasive vegetation has overgrown the majority of the site, and dense wooded areas currently surround the site. Figure 1-1 shows the site location and major site features.

1.2 SITE CHARACTERIZATION

Beginning in 1993, a number of site investigations, engineering studies, and pilot-scale in-situ remedial technology demonstrations were conducted at LC34. Extensive soil and groundwater contamination was identified and characterized during these investigations into seven HS areas (Figure 1-2). Chlorinated compounds TCE, cis-1,2-dichloroethene (cDCE), trans-1,2-dichloroethene (tDCE), and vinyl chloride (VC) are the primary contaminants of concern (COCs) and have been detected at trace to high concentrations in groundwater and soil. TCE is also present as a DNAPL in the ESB area, and is currently being contained by the HCS.

The majority of the mass of TCE at LC34 is present upgradient (west) of HS 6 within the DSZ. The overall mass of TCE released at the site is unknown. Modeling performed in 2005 estimated the mass of TCE DNAPL at the time as 40,500 pounds in the shallow zone (0 to 50 feet [ft] below land surface [bls]) and an additional 33,300 pounds in the lower zone (50 to 120 ft bls) of the surficial aquifer. In 2019, data collected in support of the source area re-characterization study indicated the approximate total TCE mass has been reduced to 32,000 pounds. At HS 6, the TCE daughter products cDCE, tDCE and VC are the primary COCs. The tDCE results only exceeded State of Florida Groundwater Cleanup Target Levels (GCTLs) and cDCE and VC were the only constituents that exceeded Florida Department of Environmental Protection (FDEP) Natural Attenuation Default Concentrations (NADCs), representing 1,500 pounds and 430 pounds, respectively. Currently, the extent of the overall groundwater contaminant plume where COCs exceed GCTLs is approximately 322 acres. Within the overall plume, the hydraulic capture zone currently covers approximately 10 acres and the HS 6 treatment area is approximately 14.4 acres.

1.3 LITHOLOGY

Subsurface materials have been subdivided into nine facies (layers) in the LC34 area. Layers 1, 2, 3, 6, and 8 are considered the primary water-transmitting units in the site area and are the focus of the LTM and performance monitoring program. The lithologies of Layers 1 through 8, illustrated on Figure 1-3, are as follows:

Layer 1 – tan/gray fine sand with shell fragments (approximately 25 feet thick from 0 to 25 ft bls);

Layer 2 – gray silty clayey fine sand (approximately 5 feet thick from 25 to 30 ft bls);

Layer 3 – gray silty fine sand with shell fragments (approximately 12 to 15 feet thick from 30 to 45 ft bls);

Layer 4 – (shallow confining unit) – greenish gray sandy clay unit (less than 1 to 5 ft thick from 45 to 50 ft bls);

Layer 5 – medium to coarse sand with shell fragments (approximately 12 to 15 feet thick from 50 to 65 ft bls);

Layer 6 – gray fine to medium “salt and pepper” sand (approximately 15-20 feet thick from 65 to 80-85 ft bls);

Layer 7 – fine silty gray sand with abundant shell fragments (approximately 15-20 feet thick from 80-85 to 100 ft bls); and

Layer 8 – fine to coarse sand with shell fragments (approximately 20 feet thick from 100 to 120 ft bls).

The Hawthorn Group (Layer 9), which directly underlies the lower sand unit (Layer 8) and ranges from 120 to 140 ft bls, is a thick green sandy clay and is considered a regional confining unit.

1.4 SITE HISTORY

This section provides a summary of investigation activities, documents, and Engineering Evaluation (EE) Process and reports for LC34. LC34 was transitioned into the EE Multi-Step Process following installation of the original HC IM in 2008. The EE Multi-Step Process includes Site Characterization (formerly referred to as Step 1), Remedial Alternatives Evaluation (RAE) (formerly referred to as Step 2), IM Design and Implementation (formerly referred to as Step 3), and IM Optimization and Monitoring (formerly referred to as Step 4), and the results of these steps are presented as advance data packages (ADPs) at KSC Remediation Team (KSCRT) Meetings. The EE Process is being used to address groundwater contamination at LC34 and allows input from all KSCRT members for confirmation of contaminated groundwater delineation, evaluation of remedial technologies, review of preliminary designs, and evaluation and optimization of remediation systems following installation and operation. Site activities and document submittals are summarized in the following sections.

1.4.1 RCRA FACILITY INVESTIGATION. The RCRA Facility Investigation (RFI) Report for LC34 was submitted in 1999 and included human health and ecological risk assessments (NASA, 1999).

1.4.2 RCRA FACILITY INVESTIGATION ADDENDUM. The RFI Report Addendum for LC34, prepared in July 2003, summarized remediation demonstration projects conducted at the site by the Interagency DNAPL Consortium and RFI Addendum activities conducted in 2002 and 2003 (NASA, 2003). Six demonstration projects were performed at LC34 using the following technologies: chemical oxidation, Six-Phase Heating™, steam injection, emulsified zero-valent iron, bioaugmentation, and sequential oxidation/enhanced bioremediation. RFI Addendum field activities included collection of membrane interface probe (MIP) data, soil cores, groundwater level measurements, and groundwater samples.

1.4.3 CORRECTIVE MEASURES STUDY REPORT. The Corrective Measures Study (CMS) identified and evaluated potential remedial technologies based on existing site conditions and contamination identified during RFI and RFI Addendum activities. The selected alternative was hydraulic containment of the DSZ and TCE HCP, monitored natural attenuation (MNA)

with IMs in the HCP, and MNA of the LCP (NASA, 2007). The HCP has concentrations of COCs greater than FDEP NADCs, and the LCP has concentrations of COCs greater than GCTLs.

1.4.4 INTERIM MEASURE DESIGN. The design details for the proposed IM remediation system were provided in the 2008 LC34 Interim Measures Design for Hydraulic Containment of the DNAPL Source Zone and Deep TCE Groundwater Plume (NASA, 2008). Additional assessment activities, including MIP and DPT sampling, were conducted in 2008 to refine the horizontal and vertical extent of TCE contamination in the vicinity of the ESB. The deep zone results were used to determine the limits of the capture area for the proposed HCS.

1.4.5 HOT SPOT 1 SITE CHARACTERIZATION ADP. The HS 1 Site Characterization for LC34, presented at the April 2009 KSCRT Meeting, summarized field investigations conducted to delineate the TCE plume to the NADC (300 micrograms per liter [µg/L]). MIP results, cone penetrometer test (CPT) and lithology data, and DPT and monitoring well sampling results were included in the Site Characterization. Team consensus was reached to install a monitoring well screened from 70 to 80 ft bls in the area of well cluster IW0002, to install piezometers within the capture zone in Layer 5, and to conduct a slug test in the area of the IW0002 well cluster. Team consensus was also reached on the alternatives for the RAE, which included bioremediation, thermal treatment, large-diameter augering, and excavation (Meeting Minute 0904-M4, Decisions 0904-D09 through D12).

1.4.6 INTERIM MEASURE WORK PLAN. The DSZ Interim Measure Work Plan (IMWP) presented the activities required to install, operate, and monitor the HC IM (NASA, 2009b).

1.4.7 HOT SPOT 1 SITE CHARACTERIZATION ADDENDUM. The HS 1 Site Characterization Addendum presented at the October 2009 KSCRT Meeting summarized follow-up field activities completed as proposed at the April 2009 meeting. Slug testing was performed at four Layer 5 monitoring wells. Team consensus was reached to proceed with an Environmental Security Technology Certification Program pilot study to evaluate bioremediation with a partitioning electron donor (PED) in HS 1, beginning with preparation of an IMWP (Meeting Minute 0910-M11, Decision 0910-D34).

1.4.8 HOT SPOT 2 PERFORMANCE MONITORING ADP. A Performance Monitoring ADP was presented at the July 2010 KSCRT Meeting to summarize IM activities conducted since startup of the HCS on December 7, 2009. At the time of the presentation, due to an involved troubleshooting phase, the system had only been operational 65 percent of the time since startup, increasing to an operational runtime of 80 percent following troubleshooting. The treatment system was installed to treat influent groundwater at a peak flow rate of 50 gallons per minute (gpm). The primary components included groundwater recovery via three shallow (screened interval of 15 to 45 ft bls) and six deep recovery wells (screened interval of 50 to 80 ft bls) for DSZ and deep TCE plume containment, primary treatment via air stripping, air stripper offgas treatment via catalytic oxidation, and treated groundwater discharge to an infiltration gallery and 12 deep injection wells (screened interval of 50 to 80 ft bls). The approved path forward was to install piezometers where performance monitoring data gaps were present; perform a hydraulic capture study in Layers 1, 2, 3, and 6 using pressure transducers; adjust pumping rates to increase hydraulic capture; install additional extraction wells (as needed); and test the use of condensate from the quench as an acid source to lower pH in the air stripper aqueous effluent.

1.4.9 INTERIM MEASURE COMPLETION REPORT. The LC34 HC IM Completion Report, dated April 2011, presented the activities associated with implementation of the HS 2 IM, including construction, commissioning, and startup (NASA, 2011a).

1.4.10 HOT SPOTS 3 AND 4 SITE CHARACTERIZATION ADP. The HSs 3 and 4 Site Characterization ADP for LC34, presented at the December 2011 KSCRT Meeting, summarized delineation of TCE contamination to the NADC (300 µg/L), MIP results, CPT, and lithology data, and DPT and monitoring well sampling results. Team consensus was reached to install monitoring wells in HS 4 to evaluate TCE concentrations exceeding the NADC in the 6- to 10-foot and 11- to 15-foot bls intervals. Additionally, Team consensus was reached to evaluate expanding the HCS as an optimization in the Performance Monitoring ADP, without first preparing an RAE and IMWP for HSs 3 and 4 (Meeting Minute 1112-M14, Decisions 1112-D20 and D21).

1.4.11 HOT SPOT 1 INTERIM MEASURES IMPLEMENTATION ADP. The HS 1 IM Implementation ADP for the PED demonstration was presented at the December 2012 KSCRT Meeting. The PED demonstration was the first field implementation using n-butyl acetate (nBA), and the PED was successfully injected into the low-permeability zone. During the pilot test, over 1 million gallons of groundwater were recirculated, with an approximately 92-percent reduction in the mass of chlorinated volatile organic compounds (CVOCs) observed in two recovery wells after 12 months of operation. Team consensus was reached to collect groundwater samples in March 2013 at BW-01B, BW-01C, and BW-01D for analysis of CVOCs, nBA, and methane, ethane, and ethene to evaluate the potential for a second injection event (Meeting Minute 1212-M4, Decision 1212-D5).

1.4.12 PUMPING OPTIMIZATION AND HOT SPOTS 3 AND 4 EXPANSION ADP. The Pumping Optimization and HSs 3 and 4 Expansion ADP, presented at the March 2013 KSCRT Meeting, described a proposed IM pumping optimization and HCS expansion to address HSs 3 and 4. The presentation also included results from a MIP investigation performed to evaluate contaminant magnitude and a hydraulic profiling tool (HPT) investigation performed to evaluate hydraulic permeability variations. The results of the MIP and HPT investigations were correlated to distinguish mobile and stored mass signatures within the HC zone, particularly within the DSZ, and to provide pumping optimization recommendations. Team consensus was reached on recovery well optimizations at select wells, including adjusting of pump intake invert elevations and isolating screened intervals via water-inflated packers (Meeting Minute 1303-M3, Decision 1303-D9). For the HCS expansion, Team consensus was reached for modification and retrofitting of the treatment system, proposed recovery well locations, pumping rates, and expansion construction plans (Meeting Minute 1303-M4, Decisions 1303-D10 through D14). Of note, HS 4 is no longer within the current HCS capture zone boundary (see Figure 1-2). This is because of the reduction of TCE concentrations in HS 4 over the years and the resulting optimization of the HCS pumping scheme.

1.4.13 HYDRAULIC CONTAINMENT EXPANSION IMPLEMENTATION WORK PLAN. The Hydraulic Containment Expansion Implementation Work Plan described the activities for expansion of the existing HCS to HSs 3 and 4 in the shallow surficial aquifer and

additional source zone recovery in the deep surficial aquifer. The expansion included seven new shallow recovery wells and one deep recovery well, 11 new monitoring wells, and installation of infrastructure and treatment equipment required to accommodate expansion of the hydraulic containment footprint (NASA, 2014).

1.4.14 HYDRAULIC CONTAINMENT EXPANSION CONSTRUCTION COMPLETION ADP. The LC34 Hydraulic Containment IM Expansion Construction Completion ADP, dated September 2015, presented the activities associated with implementation of the expansion of the HC IM, including installation of new recovery wells, installation of packers in selected recovery wells, installation of a new air stripper, refurbishment of the catalytic oxidizer, commissioning, and startup (Meeting Minute 1509-M05 and NASA, 2015).

1.4.15 HOT SPOT 6 AREA OF INVESTIGATION SITE CHARACTERIZATION ADP. The HS 6 Area of Investigation Site Characterization ADP dated December 2016, summarized delineation, and refinement of the TCE, cDCE, and VC HCPs and HS downgradient of HS 1 using DPT and monitoring well sampling results. Team consensus was reached to collect additional samples at depth at DPT418 and surface water samples from the drainage canal within HS 6 (Meeting Minute 1612-M2, Decisions 1612-D2 through D4).

1.4.16 HOT SPOT 6 AREA IMPLEMENTATION WORK PLAN. The Implementation Work Plan for HS 6, dated November 2017, describes the AS system installed to remediate contaminated groundwater within the treatment zone and support transition to MNA (NASA, 2017b).

1.4.17 HOT SPOT 6 AREA EXPANSION IMPLEMENTATION WORK PLAN. The Implementation Work Plan for HS 6 Expansion, dated October 2018, describes the AS system expansion installed to remediate contaminated groundwater within the treatment zone and support transition to MNA (NASA, 2018).

1.4.18 2018 OPERATIONS, MAINTENANCE AND MONITORING REPORT AND HOT SPOT 6 CONSTRUCTION COMPLETION REPORT. The 2018 Operations, Maintenance, and Monitoring Report (OMMR) and Hot Spot 6 Construction Completion Report (CCR), dated June 2019, describes the Year 9 operation and performance monitoring of the HCS, results of the

biennial long-term monitoring event and provides construction completion details for the HS 6 AS system, which was installed in two stages. Construction of the initial stage of the HS 6 AS system included the installation of 160 AS wells and 11 monitoring wells between February 19, 2018 and July 7, 2018. The initial system operated from July 9, 2018 through January 7, 2019, when it was shut down for the expansion. Construction for the expanded AS system was conducted from November 9, 2018, through April 2, 2019. An additional 140 AS wells and 14 monitoring wells were installed (NASA, 2019a). The expanded system was fully operational in May 2019.

1.4.19 HOT SPOT 5 SITE CHARACTERIZATION ENGINEERING EVALUATION ADP. The HS 5 Site Characterization ADP, dated June 2019, summarized delineation of the cDCE and VC HS located downgradient (south-southwest) of the DSZ using DPT sampling results, as well as HCP and LCP conditions along and to the south of Phillips Parkway. Team consensus was reached that HS 5 was adequately delineated horizontally and vertically, and to also implement a HS 5 air sparge barrier wall north of Phillips Parkway (Meeting Minute 1906-M12, Decisions 1906-D70 and D71).

1.4.20 SOIL INTERIM MEASURE REPORT. The Soil Interim Measure Report, dated January 2019, describes the removal of soils contaminated with polychlorinated biphenyls (PCBs), dioxins/furans, and total recoverable petroleum hydrocarbons from 20 different areas around the site. No Further Action was approved for all 20 areas (NASA, 2019c).

1.4.21 HYDRAULIC CAPTURE SYSTEM INVESTIGATION WORK PLAN. The HCS Investigation Work Plan dated June 2019, describes the activities proposed to re-characterize the DSZ, to include investigating and delineating TCE in the Layer 7 lithologic zone. The activities included soil and groundwater sampling at discrete depth intervals to delineate TCE, installation of monitoring wells in the source area and a pump test to determine the effectiveness of the HCS in Layer 7 (NASA, 2019b).

1.4.22 DSZ SITE CHARACTERIZATION ENGINEERING EVALUATION ADP. The DSZ Site Characterization Engineering Evaluation ADP, dated October 2019, presented the results of the HCS Investigation including site characterization sampling, TCE delineation, well

installation and sampling, updated mass calculations, results of the Layer 7 aquifer testing and HCS revised pumping rates. During the DSZ site characterization, a Layer 7 recovery well was installed (RW17C screened from 80 to 95 ft bls). Six monitoring wells (IW0160 through IW0165, screened from 105 to 115 ft bls) were installed in Layer 8 in the source area outside the TCE >11,000 µg/L area. Team consensus was reached that TCE is adequately delineated in the source area and the path forward includes the preparation of an RAE to evaluate the next phase of the treatment train (Meeting Minute 1910-M02, Decision 1910-D02-D22).

1.4.23 ELECTRICAL SUBSTATION T-2 AREA SOIL INTERIM MEASURE REPORT. The Soil Interim Measure Report, dated January 2020, describes the sampling and removal of PCB-contaminated soil and concrete in the area of a former electrical substation located along the southeast side of the LC34 launch pad. A monitoring well was installed in this area (IW0122) and groundwater sampling for PCBs was incorporated into the site's biennial long-term monitoring program (NASA, 2020a).

1.4.24 REMEDIAL ALTERNATIVES EVALUATION AND DNAPL SOURCE ZONE AIR SPARGE PILOT STUDY WORK PLAN. A DSZ RAE Discussion and Pilot Study was presented to the KSCRT in the October 2020 meeting. The plume within the DSZ was compared between the 2019 Site Characterization to the historical plume in 2009. It was concluded that the DSZ was relatively the same size, perhaps slightly larger, different configuration, and that it extended into Layer 7. In addition, mass calculations showed that a majority of the mass was trapped within the fine-grained units, Layer 4, and Layer 7. The on-going RAE was discussed to determine the next implementable step for the treatment train for the DSZ. The preliminary alternatives presented included large-diameter auger with steam and zero-valent iron, in-situ thermal treatment, pump-and-treat with microbial amendments, and expansion of the HCS to control Layer 7. A Pilot Study was developed to determine the feasibility of using AS as a technology to treat groundwater contamination, within and below, confining lithology units. Consensus was reached to conduct the AS Pilot Study with a Work Plan developed and submitted for review (Meeting Minute 2010-M4, Decisions 2010-D8). The DSZ Air Sparging Pilot Study Work Plan (NASA, 2021a) included details of the Pilot Study design, which included installation of AS wells at various depths between 43 and 82 ft bls, installation of piezometers,

vapor monitoring points, and vertical distribution columns, to collect data in support of determining whether AS is a viable alternative to treat mass in the fine-grained units. The Work Plan was submitted and approved by FDEP in April 2021. The Pilot Study operated between July 2021 to February 2022, which consisted of seven tests to evaluate goals and objectives for determining if AS should be included as a viable technology for the RAE. Results are scheduled to be presented to the KSCRT in Fall 2022, and documented in a separate report.

1.4.25 HOT SPOT 6 AREA EXPANSION PHASE 2 IMPLEMENTATION WORK PLAN.

The Hot Spot Area 6 Expansion – Phase Two Implementation Work Plan, dated January 2021 (NASA, 2021b), describes the design of an expanded area of the HS 6 AS system. The design includes installation of 76 AS wells to depths of approximately 35 ft bls, to remediate contaminated groundwater within a 4-acre area located north of the existing HS 6 treatment area. The expansion targets “hot spot” concentrations of cDCE and VC. Elements of the implementation work plan were presented during the December 2020 KSCRT meeting, and consensus was reached to proceed with development of the work plan and implement the project. The Hot Spot Area 6 Expansion – Phase Two Implementation Work Plan was approved by FDEP on June 18, 2021.

Implementation of the expansion was delayed while the U.S. Fish and Wildlife Service reviewed information regarding threatened and endangered species at LC34. Planning for the next expansion proceeded, and in May 2022 the FDEP was briefed on the additional expansion that would include 116 air sparge wells and 10 performance monitoring wells over an area of 5.7 acres. FDEP concurred with proceeding without an additional Implementation Work Plan on the condition that the further expansion will be documented with as-builts in the Construction Completion Report. The proposed additional expansion was documented in a revised ADP dated March 2022. Once the HS6 AS expansion is operational, operation, maintenance, and monitoring (OM&M) and performance data will be incorporated into LC34 Annual PMRs.

1.5 PURPOSE

The purpose of this PMR is to present various activities conducted at LC34 during the Year 12 operational period of the HC IM (April 1, 2021 – March 31, 2022). The activities discussed in

this PMR include operation of the HCS and performance monitoring of the HCS IM, and O&M and performance monitoring of the HS 6 AS System IM.

Note:

Samples are analyzed for VOCs by EPA Method 8260B.

1 - Biennial wells are shown for reference, but were not sampled during this reporting period, the next biennial sampling event is December 2022.

2 - well IW0122 is only analyzed for PCBs by Method 8082 to monitor the T2 Area.

Annual sampling occurred in December 2021.

Semi-annual sampling occurred in April and October 2021.

At each DPT location 19 depth intervals are sampled; from 8 to 98 ft bls.

SECTION II
HCS IM OPERATIONS, EVALUATION, AND PERFORMANCE MONITORING

This section summarizes the performance of the HCS during this reporting period (April 1, 2021, to March 31, 2022) and discusses the performance monitoring sampling results for the overall HC IM. System performance includes evaluation of system runtime, system sampling results, condition of process components, and volume and mass recovery. Sampling logs and field documentation are provided in Appendix A.

2.1 INTERIM MEASURE OBJECTIVES

The primary objective of the HC IM is to contain the shallow DSZ and deep dissolved-phase TCE HCP via operation of the HCS. The pre-IM design 300 µg/L TCE groundwater contour was used to establish the deep zone capture area for deep recovery wells, and the shallow zone capture area was defined by the DSZ. In 2015, the original system providing hydraulic containment in the HS 2 area was expanded to provide hydraulic containment of HS 3 and 4. The expanded containment system includes areas within the 300 µg/L TCE groundwater isocontours of HSs 3 and 4. Secondary IM objectives include maintaining treatment standards for aqueous and air discharges, maintaining system equipment to sustain plume containment, and maximizing contaminant mass removal.

2.2 HCS OVERVIEW

The following sections provide an overview of the treatment process of the HCS. Sections 2.2.2 and 2.2.3 give a summary of modifications to the process components and O&M procedures during the lifetime of the system including any changes made during this reporting period.

2.2.1 PROCESS DESCRIPTION. This section provides a process description of the LC34 HCS, as operated at the end of this reporting period. The HCS layout is shown on Figure 2-1. The piping and instrumentation diagrams are provided in Figures 2-2 through 2-4.

Groundwater is extracted from eight shallow zone recovery wells (RW01A, RW02A, RW03A, RW09A, RW12A, RW13A, RW14A, and RW15A), five deep zone recovery wells (RW01B,

RW02B, RW03B, RW05B, and RW16B), and four Layer 7 zone recovery wells (RW17C, RW18C, RW19C, and RW20C). The shallow and deep recovery wells each use a dedicated, single-phase, 240-volt, 0.75-horsepower (hp), electric, submersible pump. The Layer 7 recovery wells use a submersible compressed air-driven pump (AP4 AutoPump manufactured by QED). The pumping rates for the recovery wells have changed over the course of the project based on concentrations and mass recovery. The most recent change to the flow rate was during the Pilot Study when RW1A, 1B, 3A, and 3B were shut off between July 2021 and February 2022. Subsequently, the flow rate on RW2A, 9A, 12A, 13A, 14A, 15A, 16B was maximized to achieve a flow rate of 75 gpm. Following the pilot study, the system was returned to normal operation.

Pumps in each recovery well convey contaminated groundwater (influent) to the treatment system located on the former ESB concrete slab. Flow rates of extracted fluids from individual recovery wells are individually totalized prior to being manifolded. Two 25-micron bag filters, plumbed in parallel arrangement, remove sediment from the water prior to entry into a 500-gallon, 304-stainless-steel, double-walled, equalization tank. A chemical metering pump doses groundwater from the equalization tank with a biodispersant in 15-minute dosage cycles every 8 hours to prevent biological accumulation within treatment system components.

A three-phase, 240-volt, 1.5-hp, pump transfers groundwater from the equalization tank into the primary horizontal four-tray air stripper that strips most of the CVOCs from groundwater into the vapor phase. The air strippers are equipped with a three-phase, 240-volt, 20-hp blower rated for 600 standard cubic feet per minute (scfm) that conveys atmospheric air into the secondary air stripper, which then flows into the primary air stripper. Treated groundwater is pumped from the primary air stripper sump to the secondary horizontal four-tray air stripper via a three-phase, 240-volt, 1.5-hp, transfer pump where most if not all of the remainder of the CVOCs are removed from the liquid into the vapor phase. The treated water from the secondary air stripper sump is pumped by a three-phase, 240-volt, 7.5-hp, transfer pump through two 50-micron bag filters plumbed in parallel. The treated water is then pumped through two available 1,500-pound LPGAC vessels in series to provide secondary treatment, when necessary. The water is then discharged into 12 deep zone injection wells and an infiltration gallery consisting of two 300-foot-long infiltration gallery laterals. Treated groundwater is metered and injected into the 12

injection wells at flow rates of 2 gpm per well at pressures less than 5 pounds per square inch (psi), and the remaining flow is discharged to the infiltration gallery located southeast of the ESB area.

Moisture in the CVOC-laden primary air stripper exhaust is removed via a moisture separator. Moisture condensate accumulated in the moisture separator is pumped via a three-phase, 240-volt, 0.5-hp, centrifugal, transfer pump into the equalization tank. Following moisture separation, the exhaust air undergoes treatment via a CatOx rated for an air flow of 600 scfm. The unit contains a 50 percent efficient air-to-air heat exchanger, a three-phase, 480-volt, 112-kilowatt, air heater with a watt density of 29 watts per square inch, and specialized catalyst media for destruction of CVOCs. A quench tower reduces the air temperature of the CatOx discharge to less than 130 degrees Fahrenheit (°F) by injecting a fine droplet water aerosol. An acid gas scrubber neutralizes the acidic process stream generated during oxidation of CVOCs in the CatOx. As part of the acid gas scrubbing process, 20-percent sodium hydroxide (NaOH) is injected into a recirculation line via a chemical metering pump connected to a 3,000-gallon double-walled storage tank. The chemical metering pump is controlled by a pH sensor and controller that adjusts the NaOH dosage rates to maintain a near neutral pH within the scrubber sump. Quench and scrubber makeup water is provided via CCSFS potable water service. A 2,000-gallon reservoir tank and booster pump provide continuous flow (3 to 4 gpm) and pressure (60 psi) to the quench and scrubber makeup water feeds. Process water from the air scrubber blow-down is discharged into the infiltration gallery at an average rate of 3 to 4 gpm.

2.2.2 SUMMARY OF COMPONENT MODIFICATIONS. This section gives an overview of the changes to the HCS process components. The original system was built in 2009 and full-scale O&M began in May 2010. In February 2015, the system was expanded which added seven shallow recovery wells (RW09A through RW015A) screened 15 to 45 ft bls and one deep recovery well (RW016B) screened 50 to 80 ft bls, removed the air stripper and installed two new air strippers, removed the DNAPL separator, replaced the control system with Siemens Human Machine Interface (HMI)/Programmable Logic Controller (PLC), and the CatOx was refurbished with refurbished metal housing and a new catalyst module. The system was operated without significant modification between 2015 and 2019. In August 2019, a new recovery well (RW17C) screened

from 80 to 95 ft bls was installed which started extracting groundwater at 1 gpm from Layer 7. During the initial startup of RW17C, the two 1,500-pound LPGAC vessels were returned online from August 2019 to November 2019 to ensure system effluent met GCTLs. In January 2021, three additional recovery wells were installed (RW18C, 19C, 20C) in Layer 7 with the same screen interval as RW17C. The LPGAC vessels were operated during startup of these recovery wells and have since operated through March 2022.

2.2.3 SUMMARY OF O&M MODIFICATIONS. This section gives an overview of the changes to the O&M schedule. Further details related to the original commissioning, startup, and prove-out of the system are provided in the 2010 Annual Groundwater Monitoring and Interim Measure Performance Report (NASA, 2011b), and details related to the commissioning, startup, and prove-out of the expanded system are provided in the 2015 CCR (NASA, 2015). The O&M phase initially involved weekly influent and effluent sampling and daily system monitoring. The system sampling frequency transitioned to monthly after the September 22, 2010 sampling event, and this frequency was maintained during 2011 and 2012 O&M activities. Team consensus was reached at the May 2013 KSCRT Meeting to reduce the system influent and air stripper effluent sampling frequencies to quarterly (Meeting Minute 1305-M10, Decision Item 1305-D27). The system was shut down on February 10, 2015, for expansion and modification and startup of the modified system began in May 2015, and full-scale treatment was resumed on June 15, 2015. After resumption, quarterly influent and effluent sampling continued until the November 2017 increase in overall flow rate to 83 gpm, after which sampling of air stripper effluent was conducted monthly. The recovery wells installed in Layer 7 (RW17C, 18C, 19C, 20C) are also sampled monthly, as opposed to quarterly with the rest of the recovery wells. Since installation of the Layer 7 recovery wells, the LPGAC effluent has been sampled on a monthly frequency as well.

Since the HCS came online in 2010, the boundaries of the deep and shallow capture zones have changed over time based on expansion and optimization. The capture zones are continually optimized to ensure IM objectives are met and mass removal is maximized. Of note, HS 4 is no longer within the current HCS capture zone boundaries. This is because of the reduction of TCE concentrations in HS 4 over the years and the resulting optimization of the HCS pumping

scheme. Currently, the 1-year capture zones cover about 7.8 acres (shallow) and 9.5 acres (deep). The Layer 7 recovery wells have an estimated radius of influence of 25-feet, which is based on initial modeling efforts of RW17C.

2.3 YEAR 12 OPERATIONAL PERFORMANCE

This section presents operational performance of the HCS during the reporting period, which represents Year 12 of system operation. System operational data are recorded on a weekly basis and used to evaluate performance parameters such as treated volume. Table 2-1 presents the system operational data recorded during the reporting period.

System down time is recorded for periods where the system is not operating due to planned and unplanned circumstances. System runtime (i.e., system availability) is then calculated relating the down time to the total possible runtime of the system. Table 2-2 presents the system runtime data for Year 12. From April 1, 2021 to March 31, 2022, the system availability was 94 percent, which is higher than the normal operating range when compared to historical system runtimes. Minor downtime events occurred throughout the reporting period including planned maintenance, system repairs due to wear and tear, and power outages. Any significant maintenance activities are listed in Table 2-3 where the issue and resolution are specified for the affected process component.

2.4 YEAR 12 TREATMENT PERFORMANCE

System sampling results are discussed in this section. The treatment system monitoring plan is provided in Table 2-4. Samples are collected from the aqueous and vapor treatment processes of the HCS. Aqueous sampling consists of sampling the system influent (combined and from individual recovery wells), primary and secondary air stripper effluents, and LPGAC effluent. Vapor sampling includes collection of samples of air stripper exhaust and CatOx scrubber exhaust.

Laboratory analytical aqueous results are summarized in Tables 2-5, 2-6, 2-7, 2-8, and 2-11 for recovery well-specific influent, combined influent, primary air stripper effluent, secondary air stripper effluent, and LPGAC effluent, respectively. Destruction efficiencies of the CatOx were

monitored via weekly photoionization detector (PID) readings and vapor process sampling. Influent and effluent CatOx laboratory analytical vapor results are summarized in Tables 2-9 and 2-10, respectively. System laboratory analytical reports are included in Appendix B.

2.4.1 INFLUENT RESULTS. During the reporting period, the influent from the individual recovery wells and the combined influent were sampled on a quarterly basis and analyzed for CVOCs by United States Environmental Protection Agency (USEPA) Method 8260B. The Layer 7 recovery wells (RW17C, 18C, 19C, 20C) are sampled on a monthly basis for CVOCs by USEPA Method 8260B. Individual recovery well influent data are presented in Table 2-5 and shown on Figure 2-5 (quarterly events only), and the combined influent data are presented in Table 2-6. The data trends are summarized in tables below which present the fourth quarterly TCE results for each reporting period.

2.4.1.1 Combined Influent. Samples of the combined influent are collected to evaluate mass recovery and system CVOC loading. Quarterly sampling of the combined influent was conducted on June 23, 2021; September 14, 2021; December 14, 2021; and March 22, 2022. Overall, influent TCE concentrations have decreased since full-scale system startup (January 2010) to Year 12 (March 2022) from 280,000 µg/L to 12,000 µg/L, respectively. Due to the introduction of the Layer 7 recovery wells, higher TCE concentrations have been introduced to the system which has increased the combined influent concentrations during certain periods. Fluctuations in the combined influent continued in Year 12 with the highest result in June 2021 at 22,500 µg/L. The TCE concentration stabilized at the end of the reporting period in March 2022 at 12,000 µg/L, a trend that was observed during the last reporting period. The combined influent concentrations continue to show an overall decrease; however, the decrease from Year 11 to Year 12 is less than previous years.

The table below presents the fourth quarter combined influent result for TCE, cDCE and VC for each reporting period since startup of the HCS.

Reporting Period	Date	TCE	cDCE	VC
Startup	1/25/2010	191,000	41,100	6,530
Prove-Out	3/20/2010	164,000	40,100	6,460
Year 1	3/10/2011	67,100	16,800	1,600
Year 2	3/1/2012	59,800	9,670	1,100
Year 3	1/29/2013	45,600	7,820	939
Year 4	4/3/2014	45,000	6,570	5,510
Year 5	12/30/2014	31,800	4,370	399
Year 6	3/4/2016	18,400	9,040	1,110
Year 7	3/15/2017	17,000	6,510	833
Year 8	3/19/2018	16,100	3,730	551
Year 9	3/12/2019	15,600	3,990	684
Year 10	3/12/2020	13,300	2,160	236
Year 11	3/11/2021	12,100	2,450	476
Year 12	3/22/2022	12,000	3,900	360

Table shows primary COCs concentrations (µg/L) at end of reporting periods

2.4.1.2 Shallow Recovery Wells – ESB Area. The fourth quarter TCE results for the three original shallow recovery wells in the ESB area are summarized in the table below.

Reporting Period	Date	RW01A	RW02A	RW03A
Startup	1/20/2010	240,000	280,000	41,000
Year 1	5/18/2011	46,800	50,400	2,940
Year 2	2/2/2012	85,000	42,500	427
Year 3	3/11/2013	91,900	39,000	80
Year 4	4/3/2014	91,800	33,600	60 U
Year 5	12/30/2014	60,200	26,600	371
Year 6	3/4/2016	81,600	35,000	7,150
Year 7	3/15/2017	71,900	27,200	16,300
Year 8	3/19/2018	66,000	17,900	186
Year 9	3/12/2019	58,100	21,600	825
Year 10	3/12/2020	36,800	11,800	262
Year 11	3/11/2021	45,400	14,900	0.35 U
Year 12	3/22/2022	35,000	36,000	34,000

Table shows TCE concentrations (µg/L) at end of reporting periods
U – Not detected at associated detection limit.

In Year 12, TCE concentrations have fluctuated in the shallow capture zone at the ESB area. At RW01A, TCE has decreased from the previous year (Year 11) from 45,400 to 35,000 µg/L; in contrast, RW02A and RW03A have increased from the previous year from 14,900 to 36,000

µg/L and 0.35 U to 34,000 µg/L, respectively. RW02A recorded the highest TCE concentration out of the eight shallow recovery wells operated during this reporting period. The concentration trends at RW01A, RW02A, and RW03A indicate possible influence from Pilot Study operations since RW01A and RW03A were turned off during that time period. However, the result at RW03A is consistent with historical trends where concentrations have fluctuated between non-detect and greater than 10xNADC. Considering these trends at RW01A, RW02A, and RW03A, a sustained mass dissolution is observed within the ESB area shallow capture zone.

2.4.1.3 Shallow Recovery Wells – Outside ESB Area. The results for the recovery wells near HS 4 (RW13A, RW14A, and RW15A) are discussed separately from the other four wells (RW09A, RW10A, RW11A, and RW12A) on the eastern side of the HS 3. TCE concentrations for RW09A, RW10A, RW11A, and RW12A are summarized in the table below.

Reporting Period	Date	RW09A	RW10A	RW11A	RW12A
Pre-startup	5/27/2015	5,500	3 U	400 U	100 U
Startup	6/4/2015	62,100	67 U	400 U	17,800
Year 6	3/4/2016	8,610	11.6	5.4 U	1,200
Year 7	3/15/2017	158	29	30	346
Year 8	3/19/2018	108 I	39	33	164
Year 9	3/12/2019	37 I	25	19 I	129 I
Year 10	3/20/2020	17 U	NS	NS	7 U
Year 11	3/11/2021	35 U	NS	NS	129
Year 12	3/22/2022	44 U	NS	NS	44 U

Table shows TCE concentrations (µg/L) at end of reporting periods
U – Not detected at associated detection limit.
I – Report value is between method detection limit and quantitation limit.
NS – Not sampled due to recovery well taken offline

TCE was not detected at RW09A for three consecutive sample events and continues to show an overall decrease in TCE concentrations since start-up from 62,100 µg/L. RW10A and RW11A continue to not operate as a result of system optimization conducted in August 2019. TCE concentrations at RW12A remain stable at low levels and have shown an overall decrease since start-up from 17,800 µg/L. It is noted that the elevated non-detect values for TCE are likely due to sample dilutions from high concentrations of cDCE and VC.

TCE concentrations for RW13A, RW14A, and RW15A are summarized in the table below.

Reporting Period	Date	RW13A	RW14A	RW15A
Pre-startup	5/27/2015	50 U	67 U	470
Startup	6/4/2015	5,000	400 U	3,700
Year 6	3/4/2016	150	14 U	83.7
Year 7	3/15/2017	35 U	19.4	35 U
Year 8	3/19/2018	34.9	32.7 I	56.5 I
Year 9	3/12/2019	21.3 I	25.6 I	35 U
Year 10	3/12/2020	35 U	35 U	17 U
Year 11	3/11/2021	35 U	59 I	17 U
Year 12	3/22/2022	89 U	44 U	22 U

Table shows TCE concentrations (µg/L) at end of reporting periods
U – Not detected at associated detection limit.
I – Report value is between method detection limit and quantitation limit.

TCE concentrations in RW13A, RW14A, and RW15A remain stable in Year 12 with TCE not detected at any of the locations; however, as previously noted for RW09A and RW12A, the elevated non-detect values for TCE in these three recovery wells are likely due to sample dilutions from high concentrations of cDCE and VC. An overall decrease in TCE was observed at all three recovery wells since system start-up with exception to RW14A where TCE has been observed at either low level or non-detect.

2.4.1.4 Deep Recovery Wells. TCE data for deep recovery wells in the ESB area are summarized in the table below.

Reporting Period	Date	RW01B	RW02B	RW03B
Startup	1/20/2010	130,000	940,000	16,000
Year 1	5/18/2011	186,000	152,000	4,840
Year 2	2/2/2012	176,000	126,000	3,210
Year 3	3/11/2013	73,800	66,300	2,220
Year 4	4/3/2014	62,400	59,900	2,140
Year 5	12/30/2014	42,500	72,100	2,520
Year 6	3/4/2016	38,500	35,100	2,270
Year 7	3/15/2017	42,600	33,800	2,370
Year 8	3/19/2018	20,300	34,700	1,850
Year 9	3/12/2019	19,600	38,900	2,320
Year 10	3/12/2020	12,700	22,100	5,470
Year 11	3/11/2021	20,700	20,200	8,960
Year 12	3/22/2021	6,700	19,000	4,700

Table shows TCE concentrations (µg/L) at end of each reporting period.

The TCE concentrations at RW01B, RW02B, and RW03B have decreased significantly since startup and have decreased compared to Year 11. RW01B and RW03B were shut down during the Pilot Study and restarted following completion of the study. Significant fluctuations in TCE from Pilot Study operations were not observed in the deep recovery wells. As noted in the previous annual report, TCE concentrations were monitored at RW03B due to significant increases observed in January and March 2021. In June 2021, TCE at RW03B remained higher at 11,400 µg/L, but concentrations decreased to 4,700 µg/L in March 2022 indicating that TCE has stabilized.

The table below summarizes TCE influent in deep recovery wells outside of the groundwater source area.

Reporting Period	Date	RW04B	RW05B	RW06B	RW16B
Startup	1/20/2010	250,000	250,000	270,000	NP
Year 1	5/18/2011	43,200	77,700	26,600	NP
Year 2	2/2/2012	16,100	57,000	9,320	NP
Year 3	3/11/2013	2,640	47,300	1,360	NP
Year 4	4/3/2014	517	9,050	455	NP
Year 5	12/30/2014	331	2,860	NA	NP
Year 6	3/4/2016	40	456	52	2,880
Year 7	3/15/2017	85	544	91	1,540
Year 8	3/19/2018	76	178	157	497
Year 9	3/12/2019	77	108	43	159
Year 10	3/12/2020	NS	19	NS	65
Year 11	3/11/2021	NS	7	NS	35
Year 12	3/22/2022	NS	6.6	NS	22

Table shows TCE concentrations (µg/L) at end of reporting periods
NA – Not analyzed (deactivated in November 2013 and restarted in June 2015)
NP – Well was not present.
NS – Not sampled due to recovery well taken offline

TCE concentrations in recovery wells in the deep dissolved-phase plume have significantly decreased since system startup. As a result of the system optimization in August 2019, RW04B and RW06B were shut off due to low TCE concentrations. TCE concentrations at RW05B continue to show a decreasing trend since startup. TCE concentrations at RW16B have also shown a decreasing trend since the first sampling event in March 2016.

2.4.1.5 Layer 7 Recovery Wells. Four recovery wells are currently operating in the TCE source zone in Layer 7. RW17C began operation in late August 2019 and was sampled during start-up, September, December, and on a monthly basis after December 2019. RW18C, 19C, and 20C began operation in February 2021 and are also sampled monthly. TCE concentrations have significantly decreased in all Layer 7 recovery wells from Year 11 to Year 12. TCE concentrations at RW17C, 18C, and 20C are now below 1,000-times NADC levels and TCE has decreased by half of the Year 11 concentration at RW19C. The Layer 7 recovery wells will continue to be monitored for decreasing trends during next year. The TCE data is presented below for all Layer 7 recovery wells.

Reporting Period	Date	RW17C	RW18C	RW19C	RW20C
Start-up	8/23/2019	475,000	NP	NP	NP
Year 10	3/12/2020	489,000	NP	NP	NP
Year 11	3/11/2021	429,000	556,000	959,000	593,000
Year 12	3/22/2022	130,000	240,000	470,000	98,000

Table shows TCE concentrations (µg/L) at end of reporting periods
NP – Well was not present.

2.4.2 AIR STRIPPER TREATMENT RESULTS. Air stripper aqueous samples are taken from the effluent at the aqueous discharge of each air stripper and analyzed for CVOCs by USEPA Method 8260B. Primary and secondary air stripper effluent data are presented in Tables 2-7 and 2-8, respectively. During Year 12, effluent from the secondary air stripper was less than the GCTLs in all monthly samples except for September and November 2021. The LPGAC stage has operated during the entire reporting period and sampled monthly which ensured discharge standards were met. The LPGAC effluent concentrations are discussed in the section below.

2.4.3 LPGAC TREATMENT RESULTS. The LPGAC vessels remained online during the entire reporting period and continue to operate past March 2022. The LPGAC effluent data are presented in Table 2-11. There were no exceedances of GCTLs in any the monthly samples collected during the reporting period.

2.4.4 AIR STRIPPER OFFGAS RESULTS. Vapor samples were collected for laboratory analysis on December 20, 2021 from the CatOx influent (air stripper exhaust) and effluent. Laboratory results indicate that emissions from the CatOx have been consistently less than

Hazardous Air Pollutant (HAP) requirements specified in the KSC Title V Air Permit for Remedial Activities. Annual air sampling results for CatOx influent and effluent are presented in Tables 2-9 and 2-10, respectively. The results of offgas treatment performance calculations are provided in Table 2-12. The vapor sampling results are further discussed in Section 2.5.2.2 under the HC IM evaluation.

2.5 HC IM OPERATION EVALUATION

The evaluations discussed in this section were completed to ensure the HC IM objectives are being achieved based on data from this reporting period. The evaluations include proper functioning of system components, performance of the water and vapor treatment processes, and total volume and mass recovery.

2.5.1 HC EVALUATION. A hydraulic capture study was conducted from December 20, 2010, through January 5, 2011, to evaluate the efficacy of hydraulic containment in the shallow and deep zones of the surficial aquifer at LC34. The results of the evaluation determined that the HC IM objective for hydraulic containment was achieved. Results and conclusions of the hydraulic capture study were provided in Appendix D of the 2010 LC34 Annual Groundwater Monitoring and Interim Measure Performance Report (NASA, 2011b). The hydraulic influence of pumping rate optimization at RW01B, RW02B, RW03B, and RW06B was modeled in 2013 and the modified pumping rates were expected to increase containment relative to existing site conditions. Based on the MIP and HPT study performed in 2013, seven new shallow recovery wells, RW09A through RW015A, were installed in HSs 3 and 4, and one new deep recovery well, RW016B, was installed in HS 2 to further improve plume containment and contaminant removal.

Performance sampling of monitoring wells in the DSZ was suspended beginning in Year 8 of operation based on significant differences between maximum TCE concentrations in recovery well influent and samples collected from the performance monitoring network. In lieu of sampling monitoring wells to evaluate the system's performance, DPT samples were collected in 2017 and 2018. The 2018 DPT results showed an increase in the maximum TCE concentration from 2017, which indicated a significant amount of remaining TCE mass in the 50 to 80 ft bls

zone. The TCE concentrations in this area were investigated as part the 2018-2019 DSZ Site Characterization. As part of this effort, pumping tests were conducted to determine the feasibility of extracting mass from deeper layers in the area. As a result, RW17C (screened from 80 to 95 ft bls) was installed with the intent of operating as a pilot study to determine mass removal over time. Based on the results of RW17C, three additional Layer 7 recovery wells were installed in February 2021. During this reporting period, the four Layer 7 recovery wells recovered 1,870,056 gallons of groundwater with 5,092 pounds of TCE out of 5,161 total pounds of VOCs treated. To date, 2,270,063 gallons of groundwater have been recovered from the four Layer 7 recovery wells with 6,834 pounds TCE out of 6,956 pounds of total VOCs treated.

In 2020, DPT sampling was extended to 98 ft (adding three additional sample depths) to evaluate the Layer 7 recovery wells. In addition, 11 monitoring wells screened in Layer 7 and Layer 8 were added to the annual sampling plan to ensure vertical delineation of the plume. Annual DPT sampling continues to be conducted to evaluate the performance of the HCS, and monitoring well sampling in Layer 7 and Layer 8 is also conducted on an annual basis. Results from these sampling events are further discussed in Section 2.7.

2.5.2 SYSTEM EVALUATION. The operation of major treatment components and treatment performance are discussed in this section.

2.5.2.1 Evaluation of Major System Components. The following provides an overview of the current conditions and maintenance conducted during this reporting period of the major system process components:

Recovery Wells – Recovery wells are performing at the intended groundwater recovery rates. The flow totalizers were cleaned to ensure accurate readings. Recovery wells RW04B, RW06B, RW10A, RW11A remained shut off. During the AS Pilot Study, RW01A, 01B, 03A, and 3B were shut off to prevent air bubbles from entering the pumps. Those recovery wells resumed operation after the Pilot Study was completed. Future activities include normal maintenance and inspection.

Groundwater Recovery Pumps – The submersible pump heads have operated effectively since initial startup, although intermittent pump head or motor replacement is required due to

mechanical and chemical degradation over time. Recovery wells RW17C, 18C, 19C, 20C operate with submersible pneumatic pumps designed with more chemical resistance. No evidence of sediment, mineral, or biological pump head fouling has been observed. Future activities include continued monitoring conditions of pumps and normal maintenance.

Filtration System – There are two influent bag filters upstream of the equalization tank and two bag filters upstream of the injection wells. The influent bag filters are replaced approximately weekly, and the bag filters upstream of the injection wells are replaced approximately monthly. With the addition of RW18C, 19C, and 20C, an influx of clay/fine particulates was observed that required more bag filter changeouts on the influent side; otherwise, there was no impact on the system during this reporting period. Future activities include continuing the biocide program and filter maintenance.

Equalization Tank – No issues were encountered with the equalization tank this reporting period. Future activities include normal maintenance.

Air Strippers – Factors influencing treatment efficiency, such as biofouling, are controlled to the maximum extent possible to maintain removal efficiencies. The trays were washed monthly to remove solids. Continued operation of two air strippers in series is necessary to ensure that discharge compliance is maintained. Future activities include normal maintenance.

Blowers – No issues were encountered during this reporting period. Future activities include normal maintenance.

Transfer Pumps – No issues were encountered during this reporting period. Future activities include normal maintenance.

Moisture Separator – The original moisture separator was replaced with a 1,650-gallon holding tank from the decommissioned Components Cleaning Facility groundwater treatment system. The holding tank was modified to operate as a cyclonic moisture separator and is used to reduce friction losses and increase liquid droplet removal efficiency following

installation of the new air stripper units in 2015. No issues were encountered during this reporting period. Future activities include normal maintenance.

LPGAC – The LPGAC vessels have operated since February 2021 following installation of the Layer 7 recovery wells and remained online through the entire reporting period. No issues were encountered with the LPGAC vessels. The LPGAC effluent is sampled to monitor concentrations of CVOCs prior to discharge. Secondary treatment via LPGAC has resulted in no discharge exceedances to the infiltration gallery or injection wells during the system's operational period. Future activities include normal maintenance during operation of the vessels.

Catalytic Oxidation Unit – During this reporting period, the CatOx operated as expected with normal maintenance and repairs. Normal maintenance during this period included replacing the heater elements and the temperature sensor. Future activities include continued maintenance of heater elements and additional insulation every six months with the heater.

Quench Tower – The quench tower operated as normal during this reporting period. The quench nozzle was replaced and minor repairs to the flow fittings were performed. Future activities include normal maintenance and inspection of corrosion/material degradation.

Scrubber – The scrubber has operated normally. During this reporting period, the temperature nozzle was replaced with a permanent stainless-steel nozzle and the scrubber pump was replaced. Future activities include normal maintenance and visual inspection.

Injection Wells – During this reporting period, the injection well flow totalizers were cleaned to ensure accurate readings. No other issues were encountered; future activities include normal maintenance. If the injection pressure exceeds 5 pounds per square inch gauge (psig) at the system manifold, the need for injection well maintenance is evaluated.

Infiltration Gallery – No issues were encountered with the infiltration gallery during this reporting period. Future activities include normal maintenance and monitoring which includes quarterly inspections to ensure that discharge does not result in surface water

accumulation. No evidence of surface water has been observed from infiltration gallery discharges.

2.5.2.2 Treatment Performance Evaluation. Evaluation of the water and vapor treatment processes is conducted to ensure the HC IM objectives are being achieved. Below are evaluations for both processes for the data collected during this reporting period.

Aqueous Treatment – Treatment of the aqueous process stream has resulted in no discharge exceedances (CVOC concentrations less than GCTLs), and overall treatment performance has been consistent. Overall, the efficiency of the aqueous treatment process is nearly 100 percent. The average removal efficiency of the strippers since operations began is greater than 99.9 percent. The LPGAC, which has been online since February 2021, has provided an effective polishing step for aqueous treatment.

Offgas Treatment – Treatment of offgas from the air stripper has resulted in total HAP and individual HAP emissions less than the limits in the KSC Title V Operating Air Permit. Based on the most recent sample collected on December 20, 2021, offgas treatment efficiencies for TCE, cDCE, and VC were greater than 99.5 percent. The same set of data was used to evaluate emissions loading. Based on the annual sample, the individual HAP emission rate for TCE was 0.051 pounds per day. This value was less than the KSC Title V permit requirements for individual HAP emissions of less than 2.7 pounds per day (1,000 pounds per year). The total HAP emission rate for all VOCs was 0.055 pounds per day, which is less than the Title V permit requirement of 6.8 pounds per day (2,500 pounds per year).

2.5.3 VOLUME AND MASS RECOVERY. As of March 31, 2022, a total of 285,712,801 gallons of groundwater containing 84,933 pounds of CVOCs have been removed by the HCS. Influent concentrations of TCE have decreased since startup from approximately 280,000 (January 2010) to 12,000 µg/L (March 2022). Groundwater recovery volumes and CVOC mass recoveries are summarized in Table 2-13 and listed in Appendix C.

2.6 HCS PERFORMANCE MONITORING FIELD ACTIVITIES

To assess the groundwater conditions in the DSZ and evaluate the performance of the HCS, annual performance monitoring was conducted at nine DPT boring locations and 11 monitoring well locations in and around the source area. All DPT and monitoring well sampling was conducted in accordance with applicable portions of the NASA Sampling and Analysis Plan (SAP) for the RCRA Corrective Action Program at KSC (NASA, 2017a) and FDEP Standard Operating Procedures (SOPs) (FDEP, 2017).

In December 2021, samples were collected from nine DPT boring locations (DPT593 to DPT601). At each boring location, the upper 5 feet of soil was excavated using a stainless-steel hand auger to verify the absence of underground utilities. Groundwater grab samples were collected by DPT methods via a 4-foot-long stainless-steel retractable screen. Samples were collected at 5-foot intervals from 8 to 98 ft bls, corresponding to the midpoints of the 4-foot screens, via a peristaltic pump through Teflon tubing terminating at the midpoint of the well screen, for a total of 171 samples. DPT samples were delivered under chain-of-custody to SGS North America, Inc, in Orlando, Florida, for analysis of VOCs by USEPA Method 8260B. Note, samples were collected from the same nine locations and depth intervals as the previous annual DPT sampling event in November 2020.

In December 2021, groundwater samples were collected from one monitoring well in Layer 7 (IW0042D2) and 10 monitoring wells in Layer 8 (IW0001D2, IW0043D2, IW0044D2, IW0045D2, IW0160, IW0161, IW0162, IW0163, IW0164, and IW0165). Peristaltic pumps were used for the purging of wells prior to sampling, and samples were collected using the low-flow purge technique. After collection, groundwater samples were shipped under proper chain-of-custody protocols to Enco Laboratories in Orlando, Florida, for analysis of VOCs by USEPA Method 8260B.

Groundwater sampling logs and field documentation are provided in Appendix A. Laboratory analytical reports are provided in Appendix B. The following section discusses the DPT and monitoring well analytical results.

2.7 HCS PERFORMANCE MONITORING RESULTS

2.7.1 DPT – CONCENTRATION TRENDS. A summary of the analytical results for the DPT groundwater samples collected in December 2021 is provided in Table 2-14. Figure 2-6 presents the DPT groundwater results for TCE, cDCE and VC. The TCE results shaded in yellow exceed 11,000 µg/L (1-percent solubility of TCE), and is where potential DNAPL is suspected to be present in relation to the DSZ boundary (the area in which the HCS treatment is focused). TCE concentrations greater than 11,000 µg/L were detected at eight of the nine DPT locations at depths ranging from 8 to 98 ft bls.

For discussion purposes, the DPT depth intervals are being compared to the shallow, deep, and Layer 7 captures zones of the HCS. These depth intervals correlate with the screened intervals of the recovery wells. The shallow capture zone of the HCS is from 15 to 45 ft bls and the deep capture zone is from 50 to 80 ft bls; therefore, the DPT depth intervals between 8 ft bls and 43 ft bls correlate with the shallow capture zone and the depth intervals between 53 ft bls and 78 ft bls correlate with the deep capture zone. The 48 ft bls depth interval (DPT sample screened 46 to 50 ft bls) is between the shallow and deep capture zones and represents Layer 4 which is a fine-grained layer. This layer has been considered a shallow -confining unit; however, results of re-characterization showing concentrations of CVOCs below Layer 4 suggest this layer has semi-confining properties. The Layer 7 depth intervals are between 83 and 93 ft bls, which correlate to the depths of recovery wells RW17C, RW18C, RW19C, and RW20C. The 98 ft bls depth interval is below the Layer 7 capture zone.

In December 2021, the maximum TCE concentration in the shallow zone was detected in DPT594, located in the north central portion of the DSZ. The TCE concentration at this location was 1,900,000 µg/L at 43 ft bls, which is immediately above the confining layer. The TCE concentration at this location and depth interval has increased each year since 2018. In 2020, the TCE concentration at this location was 1,100,000 µg/L, and in 2019, the maximum TCE concentration in the shallow capture zone was 414,000 µg/L.

In the 48 ft bls depth interval (Layer 4), the maximum TCE concentration was 2,030,000 µg/L at DPT596 in the east central area of the DSZ. At this location and depth interval, TCE

concentrations have increased since 2019. The December 2021 concentration was an increase since the November 2020 value of 1,690,000 µg/L; however, the DNAPL observed in 2020 was not present in this depth interval during the 2021 sampling event.

In the deep capture zone (between 53 and 78 ft bls), the maximum TCE concentration was 15,400,000 µg/L in the 58 ft bls depth interval at DPT597, which is about 20 feet above the Layer 7 fine-grained unit. This represents an increase since the previous events in 2019 (571,000 µg/L) and 2020 (1,440,000 µg/L). There were four other DPT locations with TCE greater than 11,000 µg/L in the 58 ft bls depth interval: 632,000 µg/L in DPT594, located in the northern center of the DSZ, 15,700 µg/L at DPT593, located in the northeast portion of the DSZ, 70,200 µg/L at DPT596, located in the east portion of the DSZ, and 86,800 µg/L at DPT599, located in the southern center for the DSZ. Of these DPT locations, DPT597 (maximum TCE concentration) and DPT594 are in the area where the Layer 7 RWs were installed (Figure 2-6).

In the Layer 7 capture zone (83 to 93 ft bls), TCE concentrations were greater than 11,000 µg/L in the 83 ft bls (23,400 µg/L), 88 ft bls (116,000 u/L) and 93 ft bls (229,000 µg/L) intervals at DPT594, located in the north central portion of the DSZ. At DPT597 the 83 ft bls interval had the maximum TCE concentration (472,000 µg/L), and the 88 ft bls interval was 11,800 µg/L. Other DPT locations with TCE results greater than 11,000 µg/L in the Layer 7 capture zone included the 93 ft bls interval in DPT596 (14,100 µg/L), the 83 ft bls interval at DPT598 (230,000 µg/L), and the 83 ft bls interval at DPT599 (14,400 µg/L).

In the 98 ft bls interval, which is below the Layer 7 capture zone, the maximum TCE concentration was 2,630,000 µg/L in DPT594. In this depth interval, all but one of the nine DPT locations had TCE greater than the GCTL, and three of them were greater than 11,000 µg/L, with the DPT594 result being the maximum. The DPT locations with the highest concentrations of TCE in the Layer 7 capture zone and below (DPT594, DPT597, and DPT598) are all located in the area where the Layer 7 RWs are located (Figure 2-6).

2.7.2 DPT – PERCENT TCE COMPOSITION. The table below shows the DPT performance sampling results as percent composition for each year. The capture zones are specified for the sample depths that are within the recovery well screen intervals. In 2021, the

overall majority of the TCE contamination (35.6 percent) was observed within the deep capture zone at 58 ft bls, an increase from 10.9 percent in 2017. During the previous year, the majority of TCE was located within Layer 4 (48 ft bls) although a significant percentage still exists between 43 to 58 ft bls. TCE composition at 48 ft bls decreased from 32.3 percent last year to 14.2 percent this year. The trends observed between the depths of 43 and 58 ft bls continue to show the stored mass and sustained mass are located within Layer 4; however, the increase in mass in the 58 ft depth interval may suggest semi-confining properties in Layer 4. The TCE composition in other depths within the shallow and deep capture zone remain relatively stable. At 78 ft bls, the TCE composition remains relatively stable at 11.3 percent still indicating stored mass at the interval immediately above the Layer 7 fine-grained unit.

	Depth	2017	2018	2019	2020	2021
	8	0.0 %	0.0%	0.0 %	0.0 %	0.1 %
	13	0.0 %	0.0 %	0.0 %	0.0 %	0.3 %
Shallow	18	0.0 %	0.0 %	0.0 %	0.0 %	0.6 %
Shallow	23	0.1 %	0.4 %	0.0 %	0.0 %	1.2 %

Table shows average TCE composition as percentages for each annual DPT event
TCE composition determined by averaging the TCE concentrations for each interval and dividing by the total concentration for that year
Bold indicates the depth interval with highest percent TCE composition
NS – Not Sampled

2.7.3 DPT – TOTAL TCE CONCENTRATION TREND. The table below shows the total TCE concentration trend over time for the capture zones. The values are calculated by summing

the individual DPT concentrations from within each zone. The total TCE concentration in the shallow capture zone increased from 2,701 milligrams per liter (mg/L) to 6,336 mg/L, a significant increase compared to historical trends. Historical trends had shown an overall decrease in TCE concentrations from 2017 to 2020; however, TCE in 2021 shows an overall increase from 2017. The highest increases in TCE concentrations were at DPT597 (1,687 mg/L), DPT594 (938 mg/L), and DPT599 (319 mg/L), likely due to RWs 1A, 1B, 3A, and 3B being turned off during the Pilot Study with a majority of the TCE located at 48 ft bls. The highest total TCE concentrations observed were at DPT594, 597, and 599.

Zone	2017	2018	2019	2020	2021
Shallow Capture Zone (15 – 45 ft bls)	5,914	3,786	1,990	2,701	6,336
Deep Capture Zone (50 – 80 ft bls)	8,764	7,856	5,741	9,373	28,044
Layer 7 Capture Zone (80 – 95 ft bls)	159	88	182	104	1,147
All Capture Zones	14,839	11,731	7,914	12,179	35,529

Table shows total TCE concentration (mg/L) for all DPT locations for that year.
In 2020, TCE concentrations in Layer 7 included additional deeper intervals that were added during this reporting period.

In the deep capture zone, TCE concentrations have significantly increased since 2020 from 9,373 mg/L to 28,044 mg/L. Historical trends have shown an overall decrease in TCE from 2017 to 2019; however, concentrations increased in 2020 and 2021. The highest increases observed during the current reporting period were at DPT597 (17,147 mg/L), DPT598 (2,241 mg/L), and DPT599 (132 mg/L). Similar to the shallow capture zone, the trend of TCE in the deep zone is attributed to RWs 1A, 1B, 3A, and 3B being turned off during the Pilot Study. The majority of TCE within the deep zone is at 58 ft bls which could also be influenced by the potential mass discharge from Layer 4.

In the Layer 7 capture zone, the total TCE concentration increased from 104 mg/L to 1,147 mg/L, the largest increase observed in the capture zone since 2017. The majority of contamination is located at 83 ft bls; however, TCE concentrations are relatively low compared to the depths outside the capture zone. Directly above the Layer 7 capture zone at 78 ft bls, significant TCE concentrations are observed with the highest concentration of 3,070 mg/L at

DPT598. Significant concentrations are also observed directly below the Layer 7 zone at 98 ft bls at 2,630 mg/L at DPT594. The trends above and below Layer 7 indicate potential mass storage surrounding the Layer 7 capture zone.

Overall, the total TCE concentration trends show significant increases in TCE across the DPT sample area. Based on TCE composition results, mass stored in and around the fine-grained units may be contributing to the added TCE mass observed in 2021. DNAPL found in certain intervals could also impact the volatility of sample concentrations (e.g., DPT598 at 78 ft bls in 2018). As noted during the previous reporting period, macro trends continue to indicate mass storage and discharge from the fine-grained units. Results from future DPT annual sampling will continue to be evaluated to identify macro trends within the performance monitoring area.

2.7.4 DPT – CDCE AND VC TRENDS. The cDCE and VC concentration trends are similar to the trends observed for TCE. Historical cDCE and VC trends have shown an overall decrease in total concentrations over all DPT locations from 2017 to 2020; however, concentrations have significantly increased from 2020 to 2021. The maximum cDCE concentration in December 2021 in the shallow capture zone was 150,000 µg/L in the 43 ft bls interval at DPT594. This is an increase from the 2020 concentration of 56,600 µg/L and an increase from the 2017 concentration of 134,000 µg/L. In the 48 ft bls interval (between shallow and deep), the maximum cDCE concentration was 255,000 µg/L at DPT596. This is an increase from the 2020 concentration of 125,000 µg/L and an increase from the 2017 concentration of 191,000 µg/L. In the deep capture zone, the maximum cDCE result was 338,000 µg/L in the 58 ft bls sample at location DPT597, a significant increase over the 2017 concentration of 17,000 µg/L. The maximum VC concentrations in December 2021 were 64,600 µg/L in the shallow capture zone (43 ft bls at DPT593), 26,800 µg/L in the 48 ft bls interval (DPT596), and 20,600 µg/L in the deep capture zone (58 ft bls at DPT597). The increase in total concentrations from 2020 to 2021 have shown that the cDCE and VC trends have changed since the decreasing trend from 2017 to 2020. Results from the next DPT sampling event will be evaluated to determine whether the current increasing trend continues.

2.7.5 EVALUATION OF PERFORMANCE MONITORING USING DPT. Concentrations of TCE, cDCE, and VC in DPT groundwater samples collected in December 2021 are still

significantly greater than concentrations last observed in performance monitoring well samples collected in December 2016 (prior to implementing performance monitoring via DPT). In December 2016, the maximum TCE concentration was 22,700 µg/L at IW0121, screened from 38 to 43 ft bls. This well was located near DPT597, which currently has a TCE concentration of 1,260,000 µg/L in that depth interval. This indicates that the high resolution DPT approach to performance monitoring is continuing to provide a more accurate picture of current conditions in the aquifer and a better indication of where high mass storage remains, than what performance monitoring well data was previously providing.

2.7.6 DPT PERFORMANCE MONITORING AND RECOVERY WELL RESULTS COMPARISON. The recovery well sample results are shown on Figure 2-5. The individual results indicate that the recovery wells continue to adequately capture contamination. The influent from each recovery well is sampled quarterly to evaluate HCS operational performance, as discussed in Section 2.4. The recovery wells in Layer 7 are sampled on a monthly basis to monitor the concentrations during their initial operation. For comparison purposes, the DPT results are being compared to the December 2021 recovery well results because the sample dates are closest to each other. In the case of RW1A, 1B, 3A, and 3B where those wells were shut off during the Pilot Study, the DPT results were compared to the March 2022 data.

In the northwestern portion of the DSZ, locations DPT595 and DPT598 are near recovery wells RW02A, RW02B, and RW19C. In the shallow capture zone, TCE had low-level detections in DPT595 and the maximum TCE concentration at DPT598 was 105,000 µg/L at 43 ft bls. In comparison, the December 2021 concentration was 45,000 µg/L at RW02A. In the deep capture zone, the maximum TCE concentrations were 2,310 µg/L in the 78 ft bls depth interval at DPT595 and 3,070,000 µg/L in the 78 ft bls depth interval at DPT598, which were greater than the December 2021 concentration of 27,000 µg/L at RW02B. The Layer 7 recovery wells in the northwest portion of the DSZ had TCE results of 130,000 µg/L (RW17C) and 550,000 µg/L (RW19C). These wells are screened from 80 to 95 ft bls and were designed to capture the contamination below the deep zone (greater than 85 feet). The TCE results for Layer 7 at 83 to 93 ft bls and 98 ft bls depth intervals at DPT595 were low-level detections, and the highest TCE

results at DPT598 were 230,000 µg/L at the 83 ft bls interval and 82,000 µg/L in the 98 ft bls interval.

In the northeastern portion of the DSZ, the locations of DPT593 and DPT594 are near recovery wells RW03A and RW03B and RW20C. In the shallow capture zone, at DPT594, the TCE result of 1,900,000 µg/L at 43 ft bls was the maximum concentration in December 2021. The highest shallow zone result at DPT593 was 61,700 µg/L in the 43 ft bls interval. The TCE concentration in March 2022 for RW03A was 34,000 µg/L. The maximum TCE concentration for the deep capture zone at DPT593 and DPT594 was 170,000 µg/L (53 ft bls) and 1,560,000 µg/L (53 ft bls), respectively. The TCE concentration at RW03B in March 2022 was 4,700 µg/L. The maximum TCE concentrations at DPT593 and DPT594 for the Layer 7 capture zone are 8,860 µg/L (83 ft bls) and 229,000 µg/L (93 ft bls), respectively. The TCE concentration at RW20C for December 2021 was 410,000 µg/L. The results in the DPT samples were significantly greater for the shallow and deep capture zone for the northeastern portion wells. Results were greater at RW20C compared to the DPT samples collected within the Layer 7 capture zone.

In the southern portion of the DSZ, the maximum TCE concentration from DPT locations DPT596, DPT597, DPT599, DPT600, and DPT601 in the shallow zone was 1,260,000 µg/L at DPT597 at 43 ft bls. The TCE concentrations at RW12A and RW01A were non-detect and 35,000 µg/L, respectively. The maximum TCE concentration at the DPTs in the deep zone was 15,400,000 µg/L at 58 ft bls (DPT597) compared to the nearby recovery wells RW01B and RW16B, which had TCE concentrations of 6,700 and 340 µg/L, respectively. The maximum TCE concentration at the DPTs in the Layer 7 zone was 472,000 µg/L at 83 ft bls (DPT597) compared to the nearby recovery well RW18C, which had a TCE concentration of 510,000 µg/L in December 2021. For the southern portion wells, the results in the DPT samples were significantly greater for the shallow and deep capture zone, with maximum concentrations for Layer 7 recovery wells and DPT intervals within the same order of magnitude.

Overall, the shallow, deep, and Layer 7 capture zones are represented by higher DPT concentrations compared to concentrations observed in the nearby recovery wells. The higher TCE concentrations are partially attributed to spikes in specific locations and intervals - for example, at DPT594 at 43 ft bls (1,900,000 µg/L), DPT594 at 83 ft bls (2,630,000 µg/L), and

DPT597 at 58 ft bls (15,400,000 µg/L). These spikes in TCE concentrations could be attributed to contamination trapped in and above the fine-grained units. The amounts of CVOCs still being detected in recovery wells indicates the HCS is still effectively removing mass from the source area.

2.7.7 LAYER 7 AND LAYER 8 MONITORING WELL RESULTS. One monitoring well in Layer 7 (IW0042D2) and 10 monitoring wells in Layer 8 (IW0001D2, IW0043D2, IW0044D2, IW0045D2, IW0160, IW0161, IW0162, IW0163, IW0164, and IW0165) are sampled on an annual basis to confirm vertical delineation of the DSZ area. Analytical results are summarized in Table 2-15 and Figure 2-7. These wells were all sampled in December 2021, with one well (IW0162) re-sampled again in February and re-developed and re-sampled March 2022 due to a TCE detection of 2.4 µg/L, just below the GCTL of 3 µg/L. The February and March detections of 7.4 µg/L and 33 µg/L, respectively, indicate potential migration of TCE in this area. Results from the remaining 10 wells showed no detections or GCTL exceedances and only a low-level detection of cDCE in IW0043D2. The results show that the DSZ is still vertically delineated, with the exception of the area around IW0162.

Note:
Readings were not recorded during certain weeks. During those weeks, the system was inspected and ensured to be operating properly

°F = Degrees Fahrenheit
gal = Gallons
gpm = Gallons per minute
hertz = Hertz
in. w.c. = Inches of water column
ppmv = Parts per million by volume
psi = Pounds per square inch
psig = Pounds per square inch gauge
scfm = Standard cubic feet per minute

Table 2-2. Hydraulic Containment System Run Time Summary

Year	Month	Days In Month	Days System Down	Run Time	Downtime Contributing Factor
2021	April	30	1.00	97%	Routine system cleaning; Inlet 1 totalizer cleaned
	May	31	3.50	89%	Routine system cleaning; Scrubber temperature nozzle was replaced with permanent stainless steel nozzle. Equalization tank, air stripper, and influent flow meters cleaned
	June	30	0.50	98%	Routine system cleaning
	July	31	0.50	98%	Routine system cleaning
	August	31	2.50	92%	Routine system cleaning; Heater wires repaired after lightning storm
	September	30	1.00	97%	Routine system cleaning; Quench nozzle flange eroded and replaced
	October	31	1.00	97%	Routine system cleaning; Scrubber pump repaired
	November	30	0.50	98%	Routine system cleaning
	December	31	2.50	92%	Routine system cleaning; Replaced recirculation pump
2022	January	31	0.50	98%	Routine system cleaning
	February	28	1.00	96%	Routine system cleaning; Recirculation pump replaced second time
	March	31	8.75	72%	Routine system cleaning; Scheduled power outage; CatOx temperature sensor malfunctioned and replaced
Total		**365**	**23.25**	**94%**	

Note:
Runtime indicated is from April 1, 2021 to March 31, 2022

Table 2-3. Hydraulic Containment System Issues and Resolutions

System Component	Issue	Issue Date	Resolution	Resolution Date
Inlet totalizer	Inlet 1 totalizer not functioning properly	4/23/2021	Taken apart and cleaned	4/23/2021
Recovery Well	RW12 is having controller issues and is being worked on	5/14/2021	Controller replaced. No downtime with system	5/14/2021
Recovery Well	RW18 has sediment problem in well and is being worked on	5/14/2021	RW18 redeveloped and running. This was done for 17,18,19,20	5/28/2021
Scrubber	Nozzle replacement	5/21/2021	Scrubber temperature nozzle was swapped out for more permanent stainless nozzle	5/21/2021
Flow meters	Cleaning meters	5/21/2021	EQ tank and AS2 flow meters were cleaned. Influent meters cleaned	5/21/2021
Recovery Well	Air supply to pneumatic pumps	6/25/2021	HS6 air compressor is now supplying compressed air to penumatic pumps	6/25/2021
Recovery Well	RW modifications needed for pilot study	7/9/2021	RW1A,1B, RW3A,3B turned off. RW2B has a new motor at 15 gpm. Increased flow at RW2A, 5B, 9A, 12A, 13A, 14A, 15A, 1B, 2B, 3B, 5B, 16B. Total flow approximated at 60-65 gpm. Everything back to normal and rebalanced on 2/25/2022	2/25/2022
Quench nozzle	Quench nozzle flange is eroded	9/2/2021	The quench nozzle was replaced.	9/2/2021
Compressor/ Pneumatic pumps	VSD broke down	10/4/2021	10/5 - Atlas Copco onsite to inspect VSD issue. Found the unit is continuously tripping on Earth Fault. Tested motor leads, no issues found. Tried to reset the alarm to no avail. 10/8 - Removed Earth Fault error from drive program and tested for functionality. Tested motor and tested all leads for shorts. Unit runs normally now.	10/8/2021
Scrubber Pump	Cooling fan on scrubber motor broke	10/28/2021	Cooling fan was repaired	10/28/2021
Recirculation Pump	Recirculation pump malfunctioned	12/25/2021	Recirculation pump was replaced	12/27/2021
Recirculation Pump	Bearings malfunctioned on recirculation pump	2/24/2022	Recirculation pump was replaced again	2/24/2022
CatOx	CatOx temperature sensor malfunctioned	3/25/2022	CatOx temperature sensor replaced	3/28/2022

AS = Air Stripper
CatOx = Catalytic Oxidizer
EQ = Equilibrium
gpm = gallons per minute
HS6 = Hot Spot 6
RW = Recovery Well
VSD = Variable Speed Drive

Table 2-4. Hydraulic Containment System Performance Monitoring Plan

Sampling Location	Analysis	Frequency	Analytes
			CVOCs
Aqueous System Sampling			
Combined Influent	USEPA Method 8260B	Quarterly	✔
AS1 Effluent	USEPA Method 8260B	Monthly	✔
AS2 Effluent	USEPA Method 8260B	Monthly	✔
LPGAC Effluent	USEPA Method 8260B	Monthly	✔
Recovery Wells	USEPA Method 8260B	Quarterly[1]	✔
Vapor System Sampling			
AS Exhaust	USEPA Method TO-15	Annually	✔
	Draeger Tube/PID	Monthly	✔
CatOx Exhaust	USEPA Method TO-15	Annually	✔
	Draeger Tube/PID	Monthly	✔

[1] RW17C, 18C, 19C, and 20C were sampled monthly during the reporting period

AS1 = Secondary air stripper
AS2 = Primary air stripper
CatOx = Catalytic oxidizer
CVOCs = Chlorinated volatile organic compounds
LPGAC = Liquid phase granular activated carbon
PID = Photoionization detector
RW = Recovery Well
USEPA = United States Environmental Protection Agency

	22-Mar-22	**98,000**	**8,100**	730 U	710 U

Concentrations in µg/L

RWs designated with "A" are screened from 15 to 40 ft bls; RWs designated with "B" are screened from 50 to 80 ft bls; and RWs designated with "C" are screened from 80 to 95 ft bls

Bolding indicates a concentration greater than the MDL but less than the NADC

Shading indicates a concentration exceeding the NADC: TCE = 300 µg/L, cDCE = 700 µg/L, tDCE = 1,000 µg/L, and VC = 100 µg/L

NADC = Natural Attenuation Default Concentration
NS = Not Sampled
RW = Recovery Well
TCE = Trichloroethene
cDCE = cis-1,2-Dichloroethene
tDCE = trans-1,2-Dichloroethene
VC = Vinyl chloride
I = Reported value is between MDL and practical quantitation limit
J = Estimated value
L = Indicates value exceeds calibration range
Q = Sample exceeded the accepted holding time
U = Not detected at method detection limit (MDL) (associated value)

1 Location resampled due to suspect result on March 11, 2013. The April 1, 2013, result was used for mass calculations.

2 System was down in December due to Programmable Logic Controller replacement. Sampling pushed to January 2021.

Concentrations in µg/L

Bolding indicates a concentration greater than the MDL but less than the GCTL

Shading indicates a concentration exceeding the GCTL: TCE = 3 µg/L, cDCE = 70 µg/L, tDCE = 100 µg/L, and VC = 1 µg/L

GCTL = Groundwater Cleanup Target Level
MDL = Method Detection Limit
TCE = Trichloroethene
cDCE = cis-1,2-Dichloroethene
tDCE = trans-1,2-Dichloroethene
VC = Vinyl chloride
U = Not detected at method detection limit (MDL) (associated value).
J = Estimated concentration.
I = Reported value is between MDL and practical quantitation limit.

Concentrations in µg/L

Bolding indicates a concentration greater than the MDL but less than or equal to the GCTL.

Shading indicates at or exceeding the GCTL: TCE = 3 µg/L, cDCE = 70 µg/L, tDCE = 100 µg/L, and VC = 1 µg/L.

MDL = Method Detection Limit
GCTL = Groundwater Cleanup Target Level
TCE = Trichloroethene
tDCE = trans-1,2-Dichloroethene
cDCE = cis-1,2-Dichloroethene
VC = Vinyl chloride
I = Reported value is between MDL and practical detection limit
U = Not detected at or above MDL (associated value)

20-Dec-21	230,000 V	65,000	1,800 U	14,000

Concentrations in $\mu g/m^3$

TCE = Trichloroethene.
cDCE = cis-1,2-Dichloroethene.
tDCE = trans-1,2-Dichloroethene.
VC = Vinyl chloride.
I = Reported value is between method detection limit and practical quantitation limit.
V = Indicate that the analyte was detected in both the sample and the associated method blank

GAC was removed in July 2018. It was reinstated in September 2019 through December 2019 during RW17C startup. It was reinstated in February 2021 and sampled monthly since then.

Bolding indicates a concentration greater than the method detection limit (MDL) but less than the GCTL

Concentrations in µg/L

TCE = Trichloroethene
cDCE = cis-1,2-Dichloroethene
tDCE = trans-1,2-Dichloroethene
VC = Vinyl chloride
I = Reported value between method detection limit and practical quantitation limit.
U = Not detected at or above method detection limit (associated value).

Table 2-12. Catalytic Oxidizer Emission Loading and Destruction Efficiencies

Parameter	Influent				Parameter	Effluent				
	Result ($\mu g/m^3$)	Calculated Loading				Result ($\mu g/m^3$)	Calculated Loading			Destruction Efficiency
		(lb/day)	(lb/month)	(lb/year)			(lb/day)	(lb/month)	(lb/year)

Vinyl chloride	**14,000**	**0.75**	**22.6**	**275**	Vinyl chloride	8.9 U	0.0002	0.01	0.09	99.9%

TCE and total VOC emission rates are 0.051 and 0.055 pound per day, respectively, which are less than the daily HAP level of 2.7 and 6.8 pounds per day, respectively.
Influent results show system loading for TCE is 12.4 lb/day and for total VOCs is 17.2 lb/day.
Loading calculated based on the operational flow rate of 600 standard cubic feet per minute.
Table includes all analytes that were detected for influent and effluent samples (collected 12/20/2021); all other tested parameters are non-detect.
Bolding indicates a detected parameter above the laboratory method detection limit

I = The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
V = Indicates that the analyte was detected in both the sample and the associated method blank.
HAP = Hazardous Air Pollutant.
lb = Pounds.
NA = Not applicable.
TCE = Trichloroethene.
µg/m3 = Micrograms per cubic meter.
VOC = Volatile organic compound.

Table 2-13. Mass and Volume Recovery Data

Year	Date	TCE (µg/L)	cDCE (µg/L)	tDCE (µg/L)	VC (µg/L)	Total Influent VOCs (µg/L)	Volume Recovered (gal)		VOC Mass Recovered (lb)

Note:
DPT results are considered screening-level only and were reviwed in accordance with internal data review protocols; appropriate qualifiers were applied to the data as deemed necessary by the quality reviewer.
Concentrations reported in micrograms per liter (µg/L)
Shading indicates > Groundwater Cleanup Target Level (GCTL): TCE = 3 µg/L, cDCE = 70 µg/L, and VC = 1 µg/L
TCE = Trichloroethene
cDCE = cis-1,2-Dichloroethene
VC = Vinyl chloride
J = Estimated concentration
U = Not detected at or above MDL (associated value)

Table 2-15. Layer 7 and 8 Monitoring Well Results (Continued)

Well (LC34-)/ Screened Interval	Layer	Sample Date	TCE	cDCE	tDCE	VC
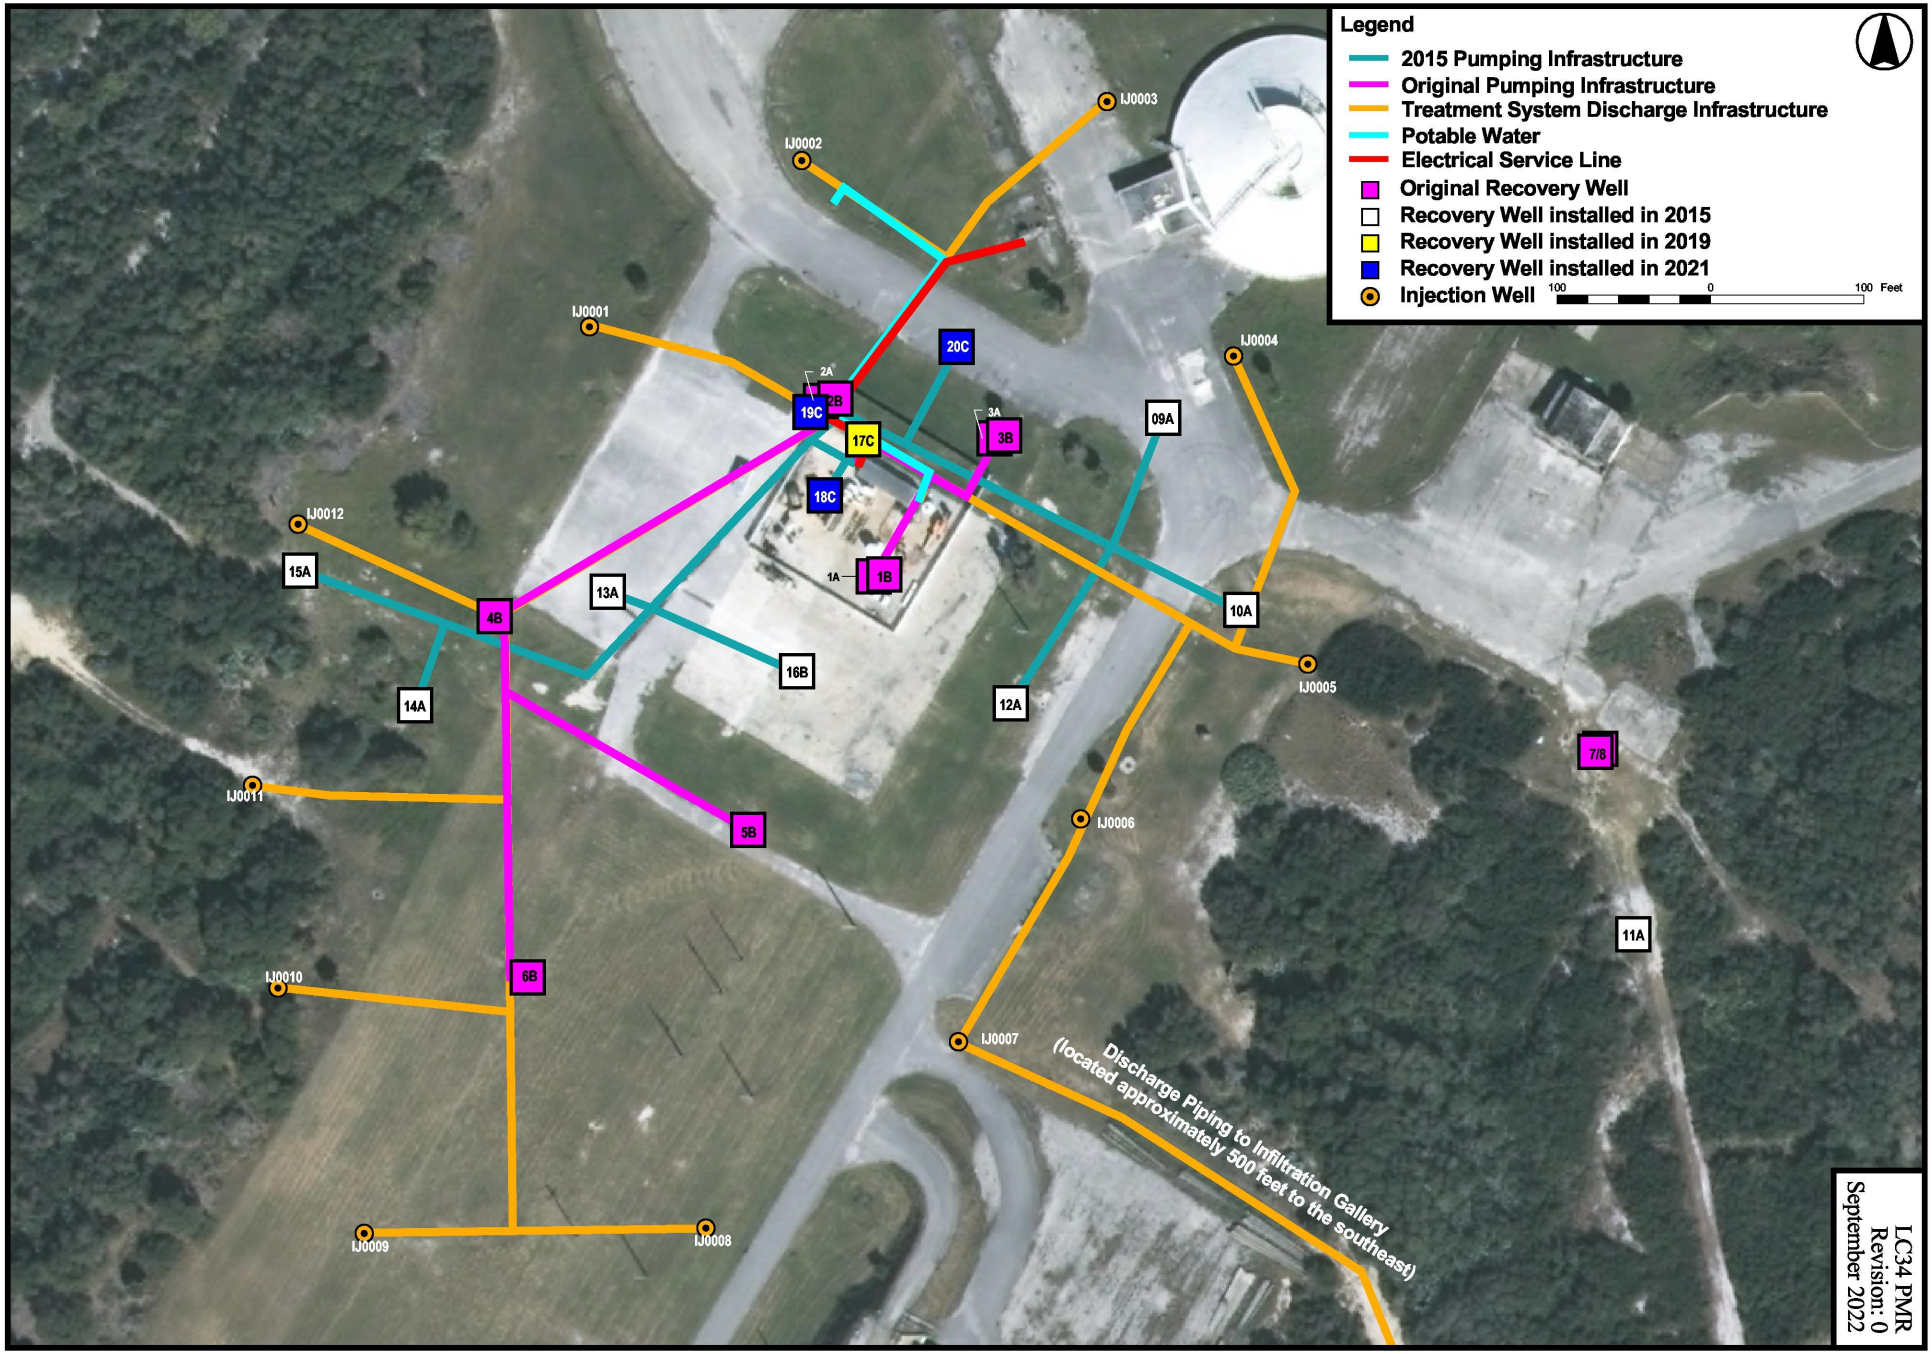
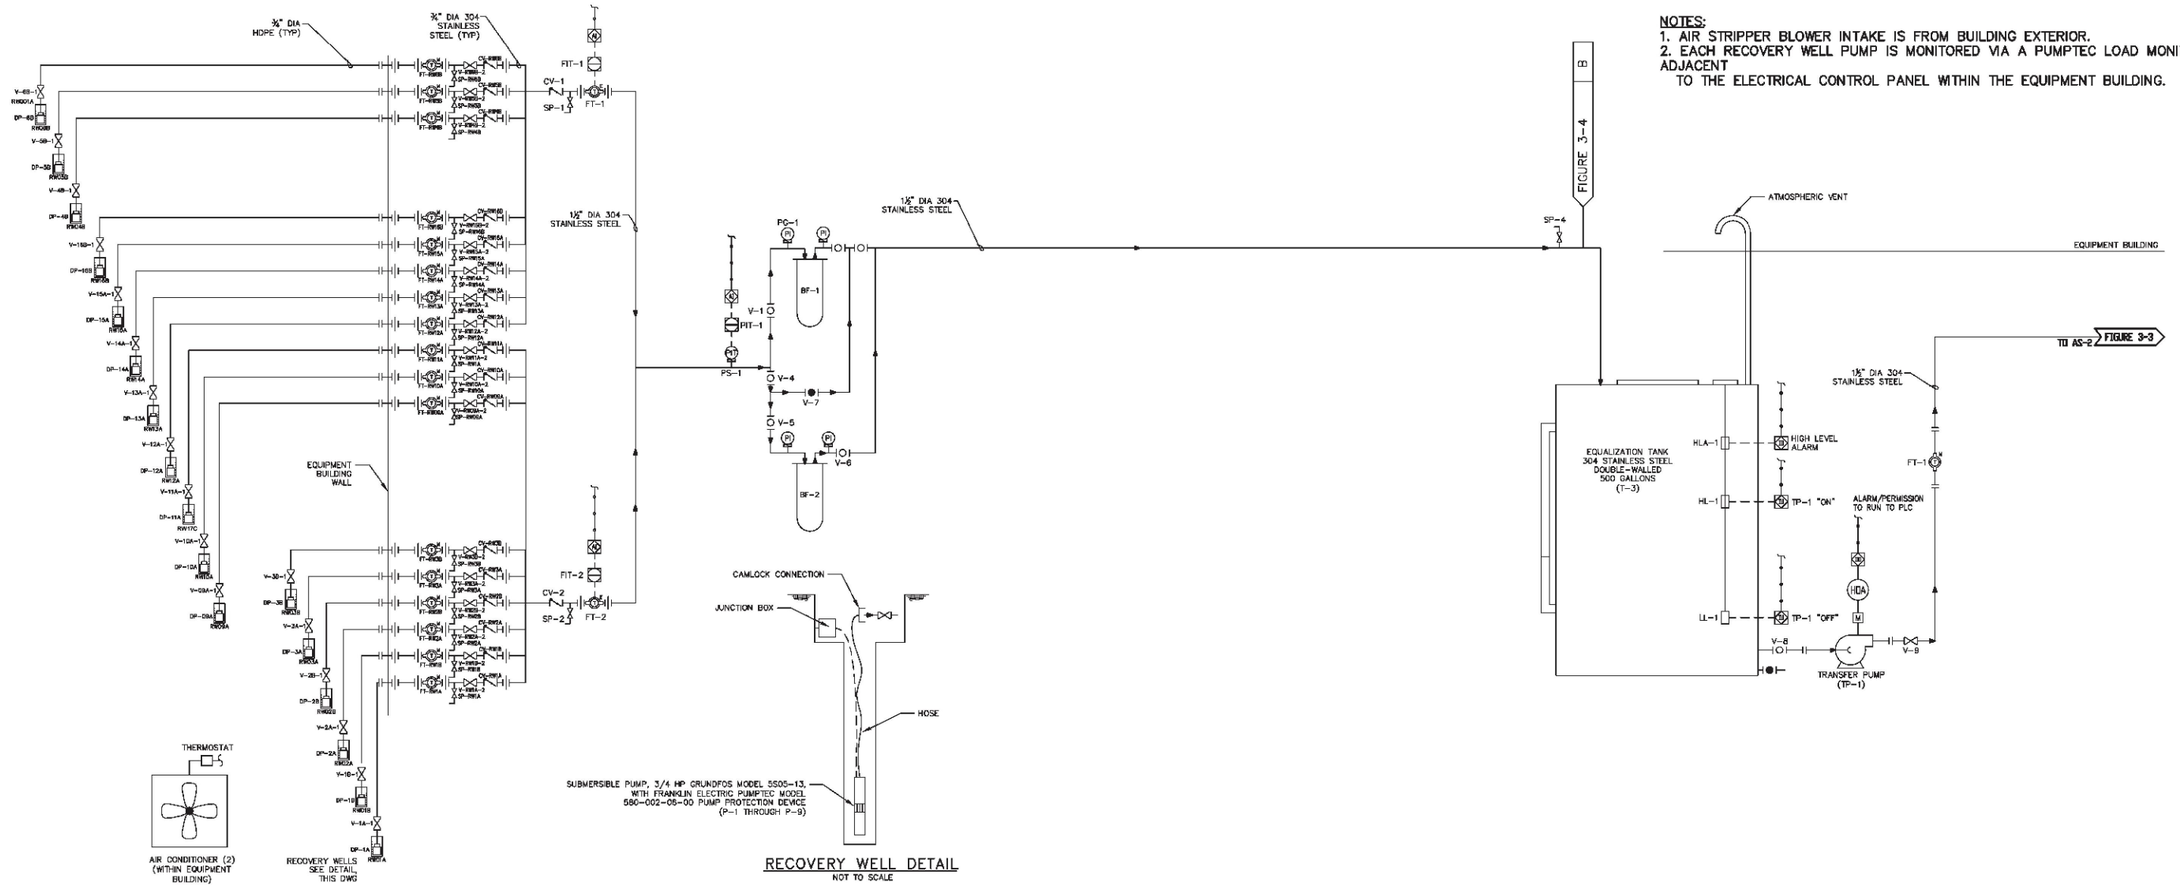
IW0165 (105 - 115)	8	21-Aug-19	0.45 I	0.28 U	0.22 U	0.41 U
		18-Dec-20	0.35 U	0.28 U	0.22 U	0.41 U
		23-Dec-21	0.89 U	0.53 U	0.73 U	0.71 U

Concentrations in µg/L.
TCE = Trichloroethene
tDCE = trans-1,2-Dichloroethene.
cDCE = cis-1,2-Dichloroethene.
VC = Vinyl chloride.
Shading indicates exceeding Groundwater Cleanup Target Level (GCTL), TCE = 3 µg/L,
cDCE = 70 µg/L, tDCE = 100 µg/L, and VC = 1 µg/L.
I = Reported value is between method detection limit (MDL) and practical quantitation limit.
U = Not detected at or above MDL (associated value).

FIGURE 2-1 HYDRAULIC CONTAINMENT SYSTEM LAYOUT
LAUNCH COMPLEX 34, CAPE CANAVERAL SPACE FORCE STATION, FLORIDA





NOTES:
1. AIR STRIPPER BLOWER INTAKE IS FROM BUILDING EXTERIOR.
2. EACH RECOVERY WELL PUMP IS MONITORED VIA A PUMPTEC LOAD MONITOR INSTALLED ADJACENT TO THE ELECTRICAL CONTROL PANEL WITHIN THE EQUIPMENT BUILDING.

KEY EQUIPMENT ITEMS

P&ID Symbol	Description	Model Info	Qty.
DP-1A through DP-16B	Extraction well pump	Grundfos model 5S07-18 (with teflon seals), Franklin motor model 2145074916S, with Pumptec model 580-002-006-00 motor protection 5 gpm at 340' TDH, ¾ hp	16
FT-1A through FT-16B	Flow totalizer for each extraction well	ISTEC model 1740, 3/4" inlet/outlet	16
FS-1 and FIC-1, FS-2 and FIC-2	Flow sensor and transmitter with digital display	Signet 525 METLEX	2
FS-3 and FIC-3, FS-4 and FIC-4	Flow sensor and transmitter	Signet 38550-1	2
BF-1 to BF-4	Bag filter	KRYSTIL KLEAR model 66-30 (304SS)	2
MP-1, MP-2	Biocide, sequestering agent metering pumps	LMI model AA971-155HV	2
FT-1	Flow totalizer	ISTEC model 1740, 1 1/2" inlet/outlet	1
AS-1, AS-2	4-tray low profile air stripper	QED model EZ Tray 12.4SS, rated for 125 gpm, 600 SCFM at <30" w.c.	1
LGAC-1, LGAC-2	Liquid phase granular activated carbon vessels, located outside	Carbon services model AQ1500, 1500# of carbon each, 50 gpm, <150 psi rating	1
TP-1	Air stripper inlet transfer pump	AMT model 490D-98, 50 gpm at 75' TDH, 1.5 hp	1
TP-2	Air stripper effluent transfer pump	Goulds SSH 5SH, 5.5 inch impeller, 125 gpm at 23 feet, 1.5 hp, VFD controlled	1
TP-3	Air stripper effluent transfer pump	Goulds SSH 4SH, 6-1/16 inch impeller, 125 gpm at 115 feet, 7.5 hp, VFD controlled	1
B-1	Air stripper blower	New York Blower model 29006, 600 scfm at 62" wg, 20 hp, VFD controlled	1
MV-1	Flow dividing motorized valve controlled by PLC signal	?	1
SP-1	Sump Pump	ARD PD air operated pump	1

FIGURE 2-6
YEAR 12 DSZ DPT
GROUNDWATER RESULTS

LAUNCH COMPLEX 34
CAPE CANAVERAL SPACE FORCE STATION, FLORIDA

Legend

- Annual DSZ Performance Sampling DPT Location
- Shallow Recovery Well
- Deep Recovery Well
- Layer 7 Recovery Well
- Shallow Capture Zone
- Deep Capture Zone
- DNAPL Source Zone
- 100 mg/kg TCE Saturated Soil Isoconcentration Contour
- >NADC/HCP (300 ug/L)
- >10xNADC (3,000 ug/L)
- >1% solubility (11,000 ug/L)

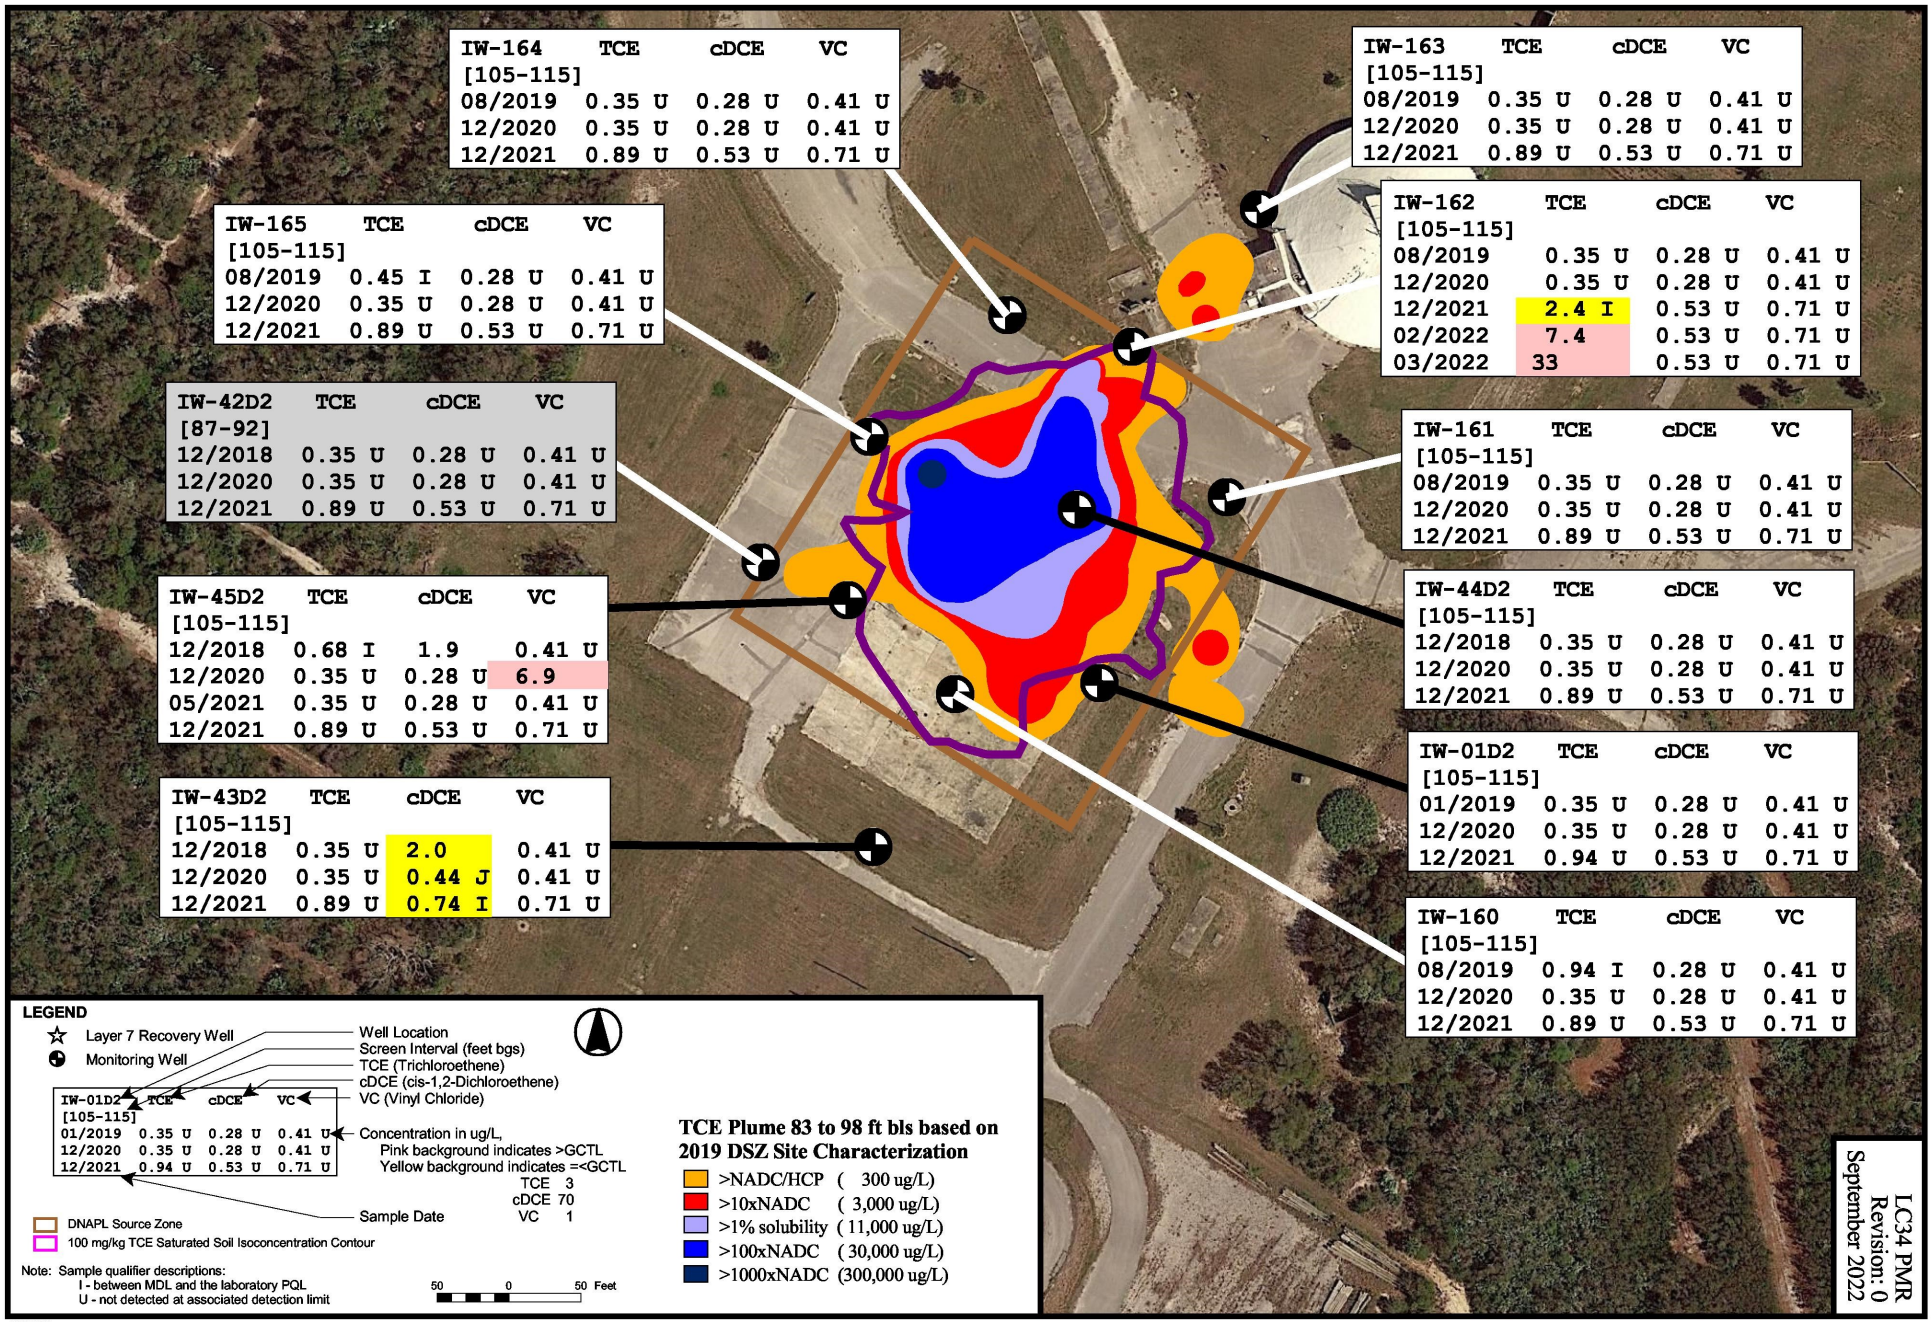
LAUNCH COMPLEX 34, CAPE CANAVERAL SPACE FORCE STATION, FLORIDA



SECTION III
HS 6 AS IM OPERATIONS, EVALUATION AND PERFORMANCE MONITORING

This section discusses activities conducted during the reporting period (April 1, 2021 to March 31, 2022) for the HS 6 AS IM and summarizes the results of evaluations conducted regarding system performance.

The HS 6 AS system was installed in two phases. The first phase was the construction of the initial system to prevent further discharge into the drainage canal and to prevent the HS from expanding. The second phase was system expansion after six months of operation to contain and remediate the HS 6 area located down/side-gradient of the HC IM at LC34. The initial HS 6 AS system, which consisted of 160 AS wells in five zones (zones 1 through 5), was installed between February 19, 2018 and July 7, 2018, in accordance with the approved LC34 HS 6 IWP (NASA, 2017b). The full-scale O&M phase for the initial system began on July 9, 2018.

After six months of operation, based on rapid contaminant reductions seen in performance monitoring, the HS 6 AS system was expanded to provide greater spatial coverage in the HS 6 area. The expanded system consisted of 140 AS wells in four zones (zones 6 through 9). Installation activities associated with the expanded system were performed in accordance with the approved LC34 HS 6 Expansion IWP (NASA, 2018) between November 9, 2018 through April 2, 2019 and full-scale operation resumed in May 2019. The 300 AS wells over the first and second phase were installed beneath the CVOC contamination on the top of Layer 4, approximately 40 ft bls. The design included an AS well flow rate of 5.0 scfm and wells spaced 50 feet apart with a 25 ft radius of influence and no overlap. The system was designed to operate in nine treatment zones with compressed air supplied from a 75-hp variable frequency drive rotary screw air compressor. Detailed information about the HS 6 AS system design, startup, prove-out and initial operations and O&M activities are provided in the 2018 OMMR and HS 6 CCR (NASA, 2019a). Figure 3-1 depicts the HS 6 trenching, air sparging, and monitoring well layout.

A second phase of system expansion is planned for HS 6, as discussed in Section 1.4. The design includes 197 additional air sparge wells installed to a depth of 35 ft bls, spaced approximately 50 feet apart with a 25-foot radius of influence, and will utilize the existing air compressor. The expansion is proposed to treat approximately 9.7-acres of cDCE and VC with "hot spot" concentrations in the northern area. Once the expansion is complete, OM&M and performance monitoring data will be included in subsequent annual reports.

3.1 INTERIM MEASURE SCOPE AND OBJECTIVE

The objective for the HS 6 AS IM is to remediate contaminated groundwater within the treatment zone, to prevent impacts to drainage canals, and support transition to MNA. The overall corrective action objective at HS 6 is to reduce concentrations of the HS 6 COCs (cDCE, tDCE and VC) to less than FDEP NADCs. The HS 6 AS IM objective was developed to provide a flexible treatment train approach for which certain metrics such as remedial performance, plume dynamics, and natural attenuation characteristics can be evaluated to determine remedial objectives and ultimately an endpoint to the IM. Based on the treatment performance of the IM, AS operations may be modified, as appropriate, to achieve the HS 6 AS IM objective.

3.2 AS SYSTEM OPERATION, MAINTENANCE AND EVALUATION

Table 3-1 presents runtime data for the HS 6 AS system. Pressure and flow data for each manifold and zone is included in Appendix D. From April 1, 2021 to March 31, 2022, the cumulative runtime was 89 percent. Most of the system down time was planned such as performance sampling and system maintenance. Unplanned down time included approximately 16 days in April for replacement of bearings and motor fan on top of scheduled performance monitoring. In October, the system was shut down for approximately 10 days because the compressor drive supplying air to the HCS, and Pilot Study malfunctioned during the performance monitoring event. During this time, Atlas Copco conducted an onsite inspection and resolved the problem. During the reporting period, routine maintenance activities included an 8,000-hour service in August and a scheduled power outage in March 2022.

In April 2019, zone 1 and zone 2 were turned off consisting of 48 AS wells. In January and February 2020, select wells in zone 3 and zone 4 were turned off which included 53 AS wells

(35 wells in zone 3 and 18 wells in zone 4), which increased the individual AS well flow rate from 5.0 to 5.9 scfm per AS well. These AS wells in zones 1 to 4 were shut off because performance monitoring results showed IM objectives had been achieved.

During this reporting period, 199 AS wells operated (out of the installed 300 AS wells at the site). The combined system is currently operating on a cycling schedule alternating operation between the zones, as summarized in the following table:

Zone	Cycle Time
1	Off
2	Off
3	00:00 – 06:00
4	06:00 – 12:00
5	12:00 – 00:00
6	00:00 – 06:00
7	06:00 – 12:00
8	12:00 – 18:00
9	18:00 – 00:00

During full-scale operation, the system is monitored remotely. System evaluations and maintenance activities are conducted to evaluate the operational parameters of the system. Monthly site visits were conducted during the reporting period, which included the following activities for system evaluation:

- Inspection of flow meters, transmitters, and AS system components for leakage and excessive vibration, noise, or abnormal temperatures;
- Inspection of oil levels and lubrication;
- Inspection of condensate treatment systems and refrigerated air dryer;
- Assessment of differential pressure across filtration units and process equipment;

- Recording of system operational data and comparing data to design conditions and previous operating data;
- Repairing and cleaning equipment as needed; and
- Perform housekeeping.

Maintenance will continue to be executed in a manner that minimizes emergencies or unscheduled shutdowns. Maintenance activities were conducted as planned during the monthly site visits, which included the following activities:

- Balancing individual sparging well flows within each manifold zone;
- Redevelop sparge wells as needed if fouling occurs;
- Change air compressor oil every 8,000 hours;
- Drain condensate treatment system on a quarterly basis or as needed; and
- Replace filters as needed and/or based on manufacturer's recommendations.

3.3 HS 6 PERFORMANCE MONITORING FIELD ACTIVITIES

Performance monitoring results are used to evaluate the effectiveness of the HS 6 AS IM in reducing concentrations of CVOCs in groundwater by comparing current results to baseline results collected prior to installation of the AS system. Following the 2020 monitoring period, the Annual PMR recommended reducing the performance monitoring frequency from quarterly to semi-annual (NASA, 2021c). Semi-annual performance monitoring was conducted in April 2021 and October 2021. Note that the Annual PMR recommended the semi-annual sampling events be conducted in July 2021 and January 2021; however, at the time of the report, a sampling event had already been conducted in April 2021, so the subsequent semi-annual event was aligned in October 2021. Because of this, future events are planned to occur during those months.

There are 28 wells and three surface water locations included in the HS 6 performance monitoring network. Because the system was installed in two phases (original design and expansion), there were 12 performance monitoring wells designated to monitor the original system (IW0108 and IW0123 through IW133) and then 16 performance monitoring wells were added after the expansion (IW0057S, IW0057I and IW0134 through IW0147). Note, wells IW0108, IW0057S and IW0057I existed prior to construction of the HS 6 AS system as part of site-wide long-term monitoring of the CVOC plume and were incorporated into the HS 6 performance monitoring network after system installation because of their proximity within the HS 6 plume. The baseline event for the original wells was in June 2018 and the baseline event for the expansion wells was in March 2019. In addition to monitoring of the groundwater, there are three surface water locations in the drainage canal (SW1001, SW1002, SW1004) sampled during each event. The monitoring network was sampled on a quarterly basis until January 2021 when it transitioned to a semi-annual frequency. Sample locations are shown on Figure 3-2.

Peristaltic pumps were used for the purging of wells prior to sampling, and samples were collected using the low-flow purge technique. Monitoring well purging and sampling activities and surface water collection were conducted in accordance with the KSC SAP (NASA, 2017a) and FDEP SOPs FS 2100 and 2200 (FDEP, 2017).

Temperature, pH, specific conductance, dissolved oxygen, turbidity, and oxidation-reduction potential were measured and recorded in the field during monitoring well sampling activities (see sample log sheets in Appendix A). Field measurements for each well were generally consistent with historical values. A summary of water quality parameter data recorded during monitoring well and surface water sampling is provided in Table 3-2.

During the April and October 2021 sampling events, groundwater and surface water samples were shipped under chain-of-custody to Enco Laboratories, in Orlando, Florida, for analysis of CVOCs by USEPA Method 8260B.

3.4 HS 6 PERFORMANCE MONITORING RESULTS

Summaries of TCE, cDCE, tDCE and VC results for baseline and all performance monitoring events to date are presented in Table 3-3 (groundwater) and Table 3-4 (surface water) and on

Figure 3-2. Groundwater and surface water sampling log sheets and field documentation are provided in Appendix A, and laboratory analytical reports are provided in Appendix B. Groundwater and surface water results for each semi-annual sampling event during the operational period are discussed in the remainder of this section.

3.4.1 APRIL 2021. During the first semi-annual performance monitoring event in April 2021, 28 wells and three surface water locations were sampled. TCE was not detected in any wells or surface water locations; however, it is noted that IW0134 and IW0135 had an elevated non-detect value greater than the GCTL of 3 µg/L. tDCE was detected at a concentration greater than the GCTL of 100 µg/L in two of the 28 wells sampled. At the other 26 wells, tDCE was non-detect or less than the GCTL. The tDCE concentrations were 175 µg/L in IW0134 and 228 µg/L in IW0135. The maximum concentration, located outside the treatment area to the west near the DSZ, is a significant decrease from the baseline value of 1,100 µg/L in March 2019. All surface water samples were non-detect for tDCE in April 2021. cDCE was detected at a concentration greater than the GCTL of 70 µg/L in three of the 28 wells sampled. The concentrations were 90.7 µg/L in well IW0123, 5,230 µg/L in well IW0135, and 14,200 µg/L in well IW0134. The concentration of 90.7 µg/L in well IW0123, located outside the treatment area to the north, is a significant decrease since the June 2018 baseline concentration of 4,530 µg/L. The maximum concentration in well IW0134 exceeded the 10xNADC value of 7,000 µg/L for cDCE. This well and IW0135 are located along the edge of the treatment zone closest to the DSZ and HCS. Although these results represent the highest concentrations in the area, these are significant decreases since each well's respective baseline concentration. At the other 25 well locations, cDCE was not detected or was detected at a concentration less than the GCTL. In the surface water samples, cDCE was detected at two locations. The concentrations were 0.42 µg/L at SW001 and 1.2 µg/L at SW1002. cDCE does not have a Florida Freshwater Surface Water cleanup value; however, this concentration is low-level and does not represent a significant impact to the canal. VC was detected at a concentration greater than the GCTL of 1 µg/L in eight of the 28 wells. The concentrations ranged from 1.5 µg/L in IW0145 to 1,230 µg/L in IW0134, which was also the location of the highest cDCE concentration, located along the edge of the treatment area to the west. This value exceeded the 10xNADC value of 1000 µg/L and represents an increase since the previous year's sampling events, but represents a decrease since the

baseline value of 8,900 µg/L in March 2019. The VC result of 284 µg/L in IW0135 is greater than the NADC of 100 µg/L, but represents a decreased concentration compared to the previous year's sampling events and the baseline result of 1,230 µg/L in March 2019. On the east (downgradient) side of the canal, VC exceeded the GCTL in wells IW0125 (3.6 µg/L), IW0129 (9.5 µg/L), and IW0130 (20.9 µg/L). These wells are located outside to the north and south of the treatment area and within the footprint of the LC34 LCP (see Figure 1-2). No other CVOC compounds exceeded GCTLs in the samples collected from wells on the downgradient side of the canal. VC was not detected in any of the surface water samples, which is a significant decrease from the June 2018 baseline event where the concentrations of 79.2 µg/L, 93.7 µg/L, and 212 µg/L at locations SW1001, SW1002 and SW1004, respectively, exceeded the Florida Freshwater Surface Water criterion of 2.4 µg/L.

3.4.2 OCTOBER 2021. During the second semi-annual performance monitoring event in October 2021, the same 28 wells and three surface water locations were sampled. TCE was not detected in any wells or surface water locations in October 2021; however, similar to April 2021, the non-detect values for TCE in wells IW0134 and IW0135 were elevated to a concentration greater than the GCTL. tDCE was detected in well IW0135 at a concentration of 150 µg/L, which is greater than the GCTL. This concentration represents a decrease since the April 2021 result of 228 µg/L, and a significant decrease from the March 2019 baseline value of 1,110 µg/L. At the other 27 well locations, tDCE was not detected or was detected at a concentration less than the GCTL. tDCE was not detected in any surface water locations in October 2021. cDCE concentrations exceeded the GCTL in three of the 28 wells. The concentrations were 97 µg/L in well IW0123, 2,700 µg/L in well IW0135, and 9,700 µg/L in well IW0134. The IW0134 result exceeded the 10xNADC level, and IW0134 exceeded the NADC of 700 µg/L. Wells IW0134 and IW0135 are located along the edge of the treatment area to the west (on the edge of the DSZ HCS capture zone) and IW0123 is located outside the treatment area to the north. The three wells with concentrations greater than the GCTL all show decreasing concentrations from their baseline values. In all other wells cDCE was not detected or was detected at a concentration less than the GCTL. cDCE was detected in surface water sample SW1002 at a concentration of 2.1 µg/L, slightly greater than the April 2021 result. cDCE does not have a Florida Freshwater Surface Water cleanup value; however, this concentration is low-level and does not represent a

significant impact to the canal. VC was detected in 7 of the 28 wells at a concentration greater than the GCTL and of these, two results also exceeded the NADC, and one result was equal to the 10xNADC level. The concentrations ranged from 2.6 µg/L in IW0057I to 1,000 µg/L in IW0134. Well IW0134 is located along the treatment area to the west, and also had the maximum concentration of cDCE and a GCTL exceedance of tDCE in October 2021. On the east side of the canal, VC exceeded the GCTL in wells IW0125 (2.9 µg/L), IW0129 (6.6 µg/L), and IW0130 (23 µg/L). These wells are located outside of the treatment area and within the footprint of the LC34 LCP. VC was not detected in the surface water samples. No other CVOC concentrations exceeded GCTLs on the east side of the canal.

Overall, the two semi-annual data sets show no detections of TCE and decreasing concentrations of tDCE, cDCE and VC over the course of the monitoring period. Performance monitoring sampling results indicate the IM is meeting the objectives of reducing concentrations of the COCs in groundwater associated with HS 6 (cDCE, tDCE, VC), and preventing impacts to the drainage canal in support of a future transition to MNA.

Table 3-1. HS 6 AS System Run Time

Year	Month	Days In Month	Downtime (Days)	Run Time	Downtime Contributing Factor
2021	April	30	16	47%	Performance monitoring sampling; Atlas Copco replaced bearings and motor fan
	May	31	0	100%	
	June	30	0	100%	
	July	31	0	100%	
	August	31	0.5	98%	8,000 hour maintenance performed by Atlas Copco
	September	30	3.75	88%	General maintenance and rust repairs inside the compressor cabinet; Performance monitoring sampling
	October	31	10.25	67%	Performance monitoring sampling. Compressor drive malfunctioned while performance monitoring sampling (system was supplying air to Hydraulic Capture System and Pilot Study); Atlas Copco inspected Variable Speed Drive, tested, and fixed the issue.
	November	30	0	100%	
	December	31	0	100%	
2022	January	31	4.5	85%	Performance monitoring sampling
	February	29	0	100%	
	March	31	4.5	85%	Scheduled power outage
	Total	**365**	**39.5**	**89%**	

Note:

Reporting period is from April 1, 2021 to March 31, 2022.

Note:

SC = Specific conductance in microSiemens per centimeter (µS/cm).

S.U. = pH in standard units

DO = Dissolved oxygen in milligrams per liter (in mg/L).

Turb. = Turbidity in nephelometric turbidity units (NTUs).

ORP = Oxidation/reduction potential in millivolts (mV).

NM = Not measured

Note:

Concentrations in µg/L.

TCE = Trichloroethene.

tDCE = trans-1,2-Dichloroethene.

cDCE = cis-1,2-Dichloroethene.

VC = Vinyl chloride.

Shading indicates greater than the Groundwater Cleanup Target Level (GCTL):

TCE = 3 µg/L, cDCE = 70 µg/L, tDCE = 100 µg/L, and VC = 1 µg/L.

I = Reported value is between method detection limit (MDL) and practical quantitation limit.

L = Actual value is known to be greater than value given.

U = Not detected at or above MDL (associated value).

D = Result was obtained from the analysis of a dilution.

V = Analyte was detected in both the sample and associated method blank.

Note:
The baseline event for the HS6 performance monitoring was June 2018
Concentrations in µg/L.
TCE = Trichloroethene.
tDCE = trans-1,2-Dichloroethene.
cDCE = cis-1,2-Dichloroethene.
VC = Vinyl chloride.
Shading indicates at or exceeding the Florida Freshwater Surface Water Criteria (FAC 62-777):
TCE = 80.7 µg/L, cDCE = no value, tDCE = 11,000 µg/L, and VC = 2.4 µg/L.
U = Not detected at method detection limit (MDL) (associated value).
I = Reported value is between MDL and practical quantitation limit.

SECTION IV
RECOMMENDATIONS

4.1 SITE-WIDE LONG-TERM MONITORING STRATEGY

It is recommended that site-wide monitoring under the LTM program be continued on a biennial frequency. The next biennial LTM event is scheduled for December 2022 at the locations listed in Table 4-1 and Figure 4-1. These recommendations were presented in the June 2022 KSCRT meeting and received concurrence from the Team (Meeting Minute 2206-M04). The meeting minutes are provided in Appendix E.

4.2 HYDRAULIC CONTAINMENT SYSTEM

Continued operation of the HC IM as conducted to date is recommended. The IM objectives continue to be achieved, and optimizations have resulted in increased treatment and recovery efficiencies. The following items were recommended at the June 2022 KSCRT meeting for the next year of operations and received concurrence from the Team (2206-M04, Decisions D02 and D03):

- Installation of a new recovery well, screened from 90 to 100 ft bls, in the vicinity of RW20C (screened 80 to 95 ft bls) to manage recent TCE detections in monitoring well, IW0162. Pumping rates will be tested and adjusted to maximize new recovery well influence and recovery;
- Continued operation of the oxidizer for offgas treatment;
- Monthly sampling of aqueous effluent from the air strippers, and LPGAC when online;
- Quarterly sampling of combined system influent and individual recovery well influent;
- Annual sampling of vapor-phase CatOx influent and effluent;
- Annual sampling at the nine DPT locations in the DSZ (DPT593 to DPT601) at the same depth intervals as the 2021 event; and

- Annual sampling at 11 Layer 7/8 wells (IW0001D2, IW0042D2, IW0043D2, IW0044D2, IW0045D2, IW0160, IW0161, IW0162, IW0163, IW0164, IW0165). The next annual event is scheduled for December 2022.

4.3 HOT SPOT 6 AIR SPARGE SYSTEM

The HS 6 AS system is meeting performance criteria and IM objectives. Continued optimization of the current AS system is recommended to enhance and maintain operational objectives and flow rates will be adjusted as determined by performance monitoring. Once the Phase Two expansion is complete, construction completion information, OM&M, and quarterly performance monitoring data will be incorporated into subsequent Annual LC34 PMRs (2206-M04, Decision D05). The following items were recommended at the June 2022 KSCRT meeting for the next year of operation and received concurrence from the Team (2206-M04, Decision D04):

- Continued operation of 199 ASWs that are currently active (with some ASWs to be turned off when the Phase Two Expansion is installed and comes online);

- Continued routine O&M of the system; and

- Semi-annual performance monitoring at the 28 wells and 3 surface water locations (Table 4-1). The semi-annual samples will be collected in April and October 2022.

Note:
Samples are analyzed for VOCs by EPA Method 8260B.
1 - well IW0122 is only analyzed for PCBs by Method 8082 to monitor the T2 Area.
At each DPT location 19 depth intervals are sampled; from 8 to 98 ft bls.
The next biennial sampling is December 2022.
The next annual sampling is December 2022.
The next semi-annual events are April 2022 and October 2022.

April 23, 2021 LC34 HS6 GW Sampling

Site	LC34 HS6
Objective	GW Sampling
Personnel	MB, Melissa Bennett, Env Engineer.
Weather	84°F
PPE	Level D

0630 MB at Cocoa office, gathering + dropping off various field supplies.
0700 MB head to NASA
0725 MB at KMFN, gathering supplies + Calibrating equipment.
0810 Calibration complete. MB to LC34.
0840 MB onsite LC34, talk with Chuck Soiden about sampling event and confirm I have everything needed. MB prep paperwork.
0905 MB initiate purge at IW0136
0930 MB collect LC34-IW0136-024.0-20210423 - 3 VOA vials with HCl - VOC
0940 MB initiate purge at IW0137
1010 MB collect LC34-IW0137-024.0-20210423
1020 MB initiate purge at IW0138
1040 MB collect LC34-IW0138-031.5-20210423
1050 MB returning emails / phone calls
1125 MB initiating purge at IW0134
1150 MB collect LC34-IW0134-024.0-20210423
1210 MB initiate purge at IW0140
1245 MB collect LC34-IW0140-024.0-20210423
1300 MB initiate purge at IW0139
1325 MB collect LC34-IW0139-018.0-20210423
1340 MB initiate purge at MW0006I
1420 MB collect LC34-IW0006I-025.5-20210423
1425 MB to fenced in area to put purge water into the system
1440 MB initiate purge at IW0135
1500 MB collect LC34-IW0135-024.0-20210423
1515 MB to fenced in area to put purge water through system + top off cooler with ice.
1530 MB offsite to CRCA to clean + put away equipment.

April 23, 2021

1600 MB at KSC badging waiting for SGS courier.

1620 Samples relinquished to SGS.

1630 MB offsite

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Tetra Tech NUS **Job No:** FA91859

Site: NASA-LC 34, Freedom Rd, CCAFS, FL **Report Date:** 1/19/2022 11:19:48

On 12/20/2021, 38 Sample(s), 0 Trip Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 2.2 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of FA91859 was Assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V1A1662

V1A1662-BS: No MS/MSD available for this run.

For Sample(s) FA91859-1, FA91859-2, FA91859-3, FA91859-4, FA91859-5, FA91859-6 are associated with an CCV that has a recovery for Dichlorodifluoromethane outside high control limit.

FA91859-1 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-1 for Dichlorodifluoromethane: Associated CCV outside of control limits high.

FA91859-1 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-1: Sample was not preserved to a pH < 2.

FA91859-2 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-2 for Dichlorodifluoromethane: Associated CCV outside of control limits high.

FA91859-2 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-2: Sample was not preserved to a pH < 2.

FA91859-3 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-3 for Dichlorodifluoromethane: Associated CCV outside of control limits high.

FA91859-3 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-3: Sample was not preserved to a pH < 2.

FA91859-4 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-4 for Dichlorodifluoromethane: Associated CCV outside of control limits high.

FA91859-4 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-4: Sample was not preserved to a pH < 2.

FA91859-5 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-5 for Dichlorodifluoromethane: Associated CCV outside of control limits high.

FA91859-5 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-5: Sample was not preserved to a pH < 2.

FA91859-6 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-6 for Dichlorodifluoromethane: Associated CCV outside of control limits high.

FA91859-6 for trans-1,2-Dichloroethylene: No sample available for reanalysis.

FA91859-6 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-6: Sample was not preserved to a pH < 2.

FA91859-7 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-7 for Dichlorodifluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-7: Sample was not preserved to a pH < 2.

FA91859-8 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-8 for Dichlorodifluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-8: Sample was not preserved to a pH < 2.

Matrix: AQ **Batch ID:** V1A1673

Sample(s) FA91890-1MS, FA91890-1MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91859-12

Matrix Spike Recovery(s) for Trichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

Sample(s) FA91859-10, FA91859-11, FA91859-12, FA91859-9 have surrogates outside control limits.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V1A1673

FA91859-9: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values. Confirmation run.

FA91859-10: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values. Confirmation run.

FA91859-11: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values. Confirmation run.

FA91859-12: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

Matrix: AQ **Batch ID:** V1P3364

Sample(s) FA91702-5MS, FA91702-5MSD were used as the QC samples indicated.

Blank Spike Recovery(s) for Methyl Bromide are outside control limits.

FA91859-33 for Methyl Bromide: Associated ICV, CCV, and BS recovery outside control limits high, sample was ND.

FA91859-33: Sample was not preserved to a pH < 2.

FA91859-34 for Methyl Bromide: Associated ICV, CCV, and BS recovery outside control limits high, sample was ND.

FA91859-34: Sample was not preserved to a pH < 2.

FA91859-35 for Methyl Bromide: Associated ICV, CCV, and BS recovery outside control limits high, sample was ND.

FA91859-35: Sample was not preserved to a pH < 2.

FA91859-36 for Methyl Bromide: Associated ICV, CCV, and BS recovery outside control limits high, sample was ND.

FA91859-36: Sample was not preserved to a pH < 2.

FA91859-37 for Methyl Bromide: Associated ICV, CCV, and BS recovery outside control limits high, sample was ND.

FA91859-37: Sample was not preserved to a pH < 2.

FA91859-38 for Methyl Bromide: Associated ICV, CCV, and BS recovery outside control limits high, sample was ND.

FA91859-38: Sample was not preserved to a pH < 2.

Matrix: AQ **Batch ID:** V1P3380

No MS/MSD available for this run.

The following samples were run outside of holding time for method SW846 8260B: FA91859-14, FA91859-15, FA91859-16, FA91859-23, FA91859-24

FA91859-14: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91859-15: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91859-16: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91859-17: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91859-18: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91859-19: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91859-20: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91859-21: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91859-23: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91859-24: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

Matrix: AQ **Batch ID:** V2A1657

V2A1657-BS: No MS/MSD available for this run.

FA91859-13 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%).

FA91859-13 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-13: Sample was not preserved to a pH < 2.

FA91859-14 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-14 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-14: Sample was not preserved to a pH < 2.

FA91859-15 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-15 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-15: Sample was not preserved to a pH < 2.

FA91859-16 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-16 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V2A1657

FA91859-16: Sample was not preserved to a pH < 2.

FA91859-17 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-17 for cis-1,2-Dichloroethylene: Suspected carry-over. Confirmed by reanalysis beyond hold-time.

FA91859-17 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-17: Sample was not preserved to a pH < 2.

FA91859-18 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-18 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-18 for Vinyl Chloride: Results confirmed by re-analysis beyond hold time.

FA91859-18: Sample was not preserved to a pH < 2.

FA91859-19 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-19 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-19: Sample was not preserved to a pH < 2.

FA91859-20 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-20 for Trichloroethylene: Suspected carry-over. Confirmed ND beyond holdtime.

FA91859-20 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-20: Sample was not preserved to a pH < 2.

FA91859-21 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-21 for Trichloroethylene: Suspected carry-over. Confirmed ND by reanalysis beyond hold-time.

FA91859-21 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-21: Sample was not preserved to a pH < 2.

FA91859-22 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%).

FA91859-22 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-22: Sample was not preserved to a pH < 2.

FA91859-23 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-23 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-23: Sample was not preserved to a pH < 2.

FA91859-24 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-24 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-24: Sample was not preserved to a pH < 2.

FA91859-25 for Chloroethane: Associated Initial Calibration outside control limits (%RSD > 15%); sample is ND.

FA91859-25 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-25: Sample was not preserved to a pH < 2.

FA91859-26 for Chloroethane: Associated Initial Calibration outside control limits.

FA91859-26 for cis-1,2-Dichloroethylene: Compound was below calibration range in higher dilution.

FA91859-26 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91859-26: Sample was not preserved to a pH < 2.

Matrix: AQ **Batch ID:** VC6187

Sample(s) FA91699-3MS, FA91699-3MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91859-35

FA91859-35: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

Matrix: AQ **Batch ID:** VI2437

Sample(s) FA91823-5MS, FA91823-5MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91859-2

FA91859-2: Sample re-analyzed beyond hold time and was not preserved to a pH < 2; reported results are considered minimum values.

Matrix: AQ **Batch ID:** VI2440

Sample(s) FA91859-28MS, FA91859-28MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91859-1, FA91859-10, FA91859-11, FA91859-12, FA91859-27, FA91859-28, FA91859-29, FA91859-3, FA91859-30, FA91859-31, FA91859-32, FA91859-4, FA91859-5, FA91859-6, FA91859-7, FA91859-8, FA91859-9

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Methyl Bromide are outside control limits. Probable cause is due to matrix interference.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** VI2440

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Trichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

For Sample(s) FA91859-10, FA91859-11, FA91859-12, FA91859-27, FA91859-28, FA91859-29, FA91859-30, FA91859-31, FA91859-32, FA91859-9 are associated with an CCV that has a recovery for Chloroethane outside low control limits.

FA91859-1: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91859-3: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91859-4: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91859-5: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91859-6: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91859-7: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91859-8: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91859-9: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91859-10: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91859-11: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91859-12: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91859-26: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91859-27: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91859-28: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91859-29: Sample vial(s) contained significant headspace and were not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91859-30: Sample vial(s) contained bubbles greater than 6mm. Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91859-31: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91859-32: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91859-8 for Trichloroethylene: Insufficient sample available for reanalysis.

FA91859-9 for Acetone: Associated ICV outside control limits high, however sample ND.

FA91859-9 for Chloroethane: Associated CCV outside of control limits low.

FA91859-9 for Methyl Bromide: Associated CCV outside of control limits high, sample was ND.

FA91859-10 for Acetone: Associated ICV outside control limits high, however sample ND.

FA91859-10 for Chloroethane: Associated CCV outside of control limits low.

FA91859-10 for Methyl Bromide: Associated CCV outside of control limits high, sample was ND.

FA91859-11 for Acetone: Associated ICV outside control limits high, however sample ND.

FA91859-11 for Chloroethane: Associated CCV outside of control limits low.

FA91859-11 for Methyl Bromide: Associated CCV outside of control limits high, sample was ND.

FA91859-12 for Acetone: Associated ICV outside control limits high, however sample ND.

FA91859-12 for Chloroethane: Associated CCV outside of control limits low.

FA91859-12 for Methyl Bromide: Associated CCV outside of control limits high, sample was ND.

FA91859-27 for Acetone: Associated ICV outside control limits high, however sample ND.

FA91859-27 for Chloroethane: Associated CCV outside of control limits low.

FA91859-27 for Methyl Bromide: Associated CCV outside of control limits high, sample was ND.

FA91859-28 for Acetone: Associated ICV outside control limits high, however sample ND.

FA91859-28 for Chloroethane: Associated CCV outside of control limits low.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** VI2440

FA91859-28 for Methyl Bromide: Associated CCV outside of control limits high, sample was ND.

FA91859-29 for Acetone: Associated ICV outside control limits high, however sample ND.

FA91859-29 for Chloroethane: Associated CCV outside of control limits low.

FA91859-29 for Methyl Bromide: Associated CCV outside of control limits high, sample was ND.

FA91859-29 for Trichloroethylene: Insufficient sample available for reanalysis.

FA91859-31 for Acetone: Associated ICV outside control limits high, however sample ND.

FA91859-31 for Chloroethane: Associated CCV outside of control limits low.

FA91859-31 for Methyl Bromide: Associated CCV outside of control limits high, sample was ND.

FA91859-31 for Trichloroethylene: Suspected carry-over.

FA91859-32 for Acetone: Associated ICV outside control limits high, however sample ND.

FA91859-32 for Chloroethane: Associated CCV outside of control limits low.

FA91859-32 for Methyl Bromide: Associated CCV outside of control limits high, sample was ND.

Matrix: AQ **Batch ID:** VY2526

Sample(s) FA91859-28MS, FA91859-28MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91859-28

FA91859-28: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

(a) Sample was not preserved to a pH < 2.
(b) Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.
(c) Associated Initial Calibration outside control limits (%RSD > 15%); however sample is ND.
(d) Result is from Run# 2
(e) Associated CCV outside of control limits high, sample was ND.

U = Not detected MDL = Method Detection Limit
PQL = Practical Quantitation Limit
L = Indicates value exceeds calibration range
I = Result > = MDL but < PQL J = Estimated value
V = Indicates analyte found in associated method blank
N = Indicates presumptive evidence of a compound

(a) Sample vial(s) contained significant headspace and were not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.
(b) Associated ICV outside control limits high, however sample ND.
(c) Associated CCV outside of control limits low.
(d) Associated CCV outside of control limits high, sample was ND.
(e) Insufficient sample available for reanalysis.

U = Not detected MDL = Method Detection Limit I = Result > = MDL but < PQL J = Estimated value
PQL = Practical Quantitation Limit V = Indicates analyte found in associated method blank
L = Indicates value exceeds calibration range N = Indicates presumptive evidence of a compound

460-00-4	4-Bromofluorobenzene	98%		83-118%

(a) Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.
(b) Associated ICV outside control limits high, however sample ND.
(c) Associated CCV outside of control limits low.
(d) Associated CCV outside of control limits high, sample was ND.

U = Not detected MDL = Method Detection Limit I = Result > = MDL but < PQL J = Estimated value
PQL = Practical Quantitation Limit V = Indicates analyte found in associated method blank
L = Indicates value exceeds calibration range N = Indicates presumptive evidence of a compound

SGS Sample Receipt Summary

Job Number: FA91859 **Client:** TETRA TECH **Project:** 112G08985

Date / Time Received: 12/20/2021 6:18:00 PM **Delivery Method:** COURIER **Airbill #'s:**

Therm ID: IR 1; **Therm CF:** 0.2; **# of Coolers:** 1

Cooler Temps (Raw Measured) °C: Cooler 1: (2.0);

Cooler Temps (Corrected) °C: Cooler 1: (2.2);

Cooler Information	Y	or	N
1. Custody Seals Present	☑		☐
2. Custody Seals Intact	☑		☐
3. Temp criteria achieved	☑		☐
4. Cooler temp verification	IR Gun		
5. Cooler media	Ice (Bag)		

Trip Blank Information	Y	or	N	N/A
1. Trip Blank present / cooler	☐		☑	☐
2. Trip Blank listed on COC	☐		☑	☐

	W	or	S	N/A
3. Type Of TB Received	☐		☐	☑

Sample Information	Y	or	N	N/A
1. Sample labels present on bottles	☑		☐	
2. Samples preserved properly	☑		☐	
3. Sufficient volume/containers recvd for analysis:	☑		☐	
4. Condition of sample	Intact			
5. Sample recvd within HT	☑		☐	
6. Dates/Times/IDs on COC match Sample Label	☑		☐	
7. VOCs have headspace	☐		☑	☐
8. Bottles received for unspecified tests	☐		☑	
9. Compositing instructions clear	☐		☐	☑
10. Voa Soil Kits/Jars received past 48hrs?	☐		☐	☑
11. % Solids Jar received?	☐		☐	☑
12. Residual Chlorine Present?	☐		☐	☑

Misc. Information

Number of Encores: 25-Gram _____ 5-Gram _____ Number of 5035 Field Kits: _____ Number of Lab Filtered Metals: _____

Test Strip Lot #s: pH 0-3 230315 pH 10-12 219813A Other: (Specify) _____ _____

Residual Chlorine Test Strip Lot #: _____

RE: SGS North America Inc. - Orlando job FA91890 Reissue

Dear Mr. Jonnet,

The final report for job number FA91890 has been edited to reflect requested corrections. These edits have been incorporated into the revised report.

The Y data qualifiers have been removed per your request.

SGS North America Inc. - Orlando apologies for any inconvenience this may have caused. Please feel free to contact us if we can be of further assistance.

Sincerely,

SGS North America, Inc. - Orlando

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Tetra Tech NUS **Job No:** FA91890

Site: NASA-LC 34, Freedom Rd, CCAFS, FL **Report Date** 1/19/2022 11:36:47

On 12/21/2021, 59 Sample(s), 0 Trip Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 2 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of FA91890 was Assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V1A1668

Sample(s) FA91823-20MS, FA91823-20MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91890-47, FA91890-48, FA91890-49, FA91890-50, FA91890-51, FA91890-52, FA91890-53, FA91890-54, FA91890-55, FA91890-56

Sample(s) FA91890-48, FA91890-50, FA91890-51, FA91890-52, FA91890-54, FA91890-56 are associated with an CCV that has a recovery for Bromochloromethane, Carbon Disulfide, Freon 113, Trichlorofluoromethane, outside high control limit.

FA91890-47: Sample was not preserved to pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91890-47 for Bromochloromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-48: Sample was not preserved to pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91890-48 for Bromochloromethane: Associated CCV outside of control limits high.

FA91890-49: Sample was not preserved to pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91890-49 for Bromochloromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-50 for Bromochloromethane: Associated CCV outside of control limits high.

FA91890-50: Sample was not preserved to pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91890-51 for Bromochloromethane: Associated CCV outside of control limits high.

FA91890-51: Sample was not preserved to pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91890-52 for Bromochloromethane: Associated CCV outside of control limits high.

FA91890-52: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91890-53 for Bromochloromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-53: Sample was not preserved to pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91890-54 for Bromochloromethane: Associated CCV outside of control limits high.

FA91890-54: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91890-55 for Bromochloromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-55: Sample was not preserved to pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91890-56: Sample analyzed beyond hold time and was not preserved to a pH < 2; reported results are considered minimum values.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V1A1673

Sample(s) FA91890-1MS, FA91890-1MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91890-1, FA91890-14, FA91890-15, FA91890-17

Matrix Spike Recovery(s) for Trichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

Sample(s) FA91890-14, FA91890-15 have surrogates outside control limits.

FA91890-1: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-15: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-14: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-17: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

Matrix: AQ **Batch ID:** V1P3366

Sample(s) FA91890-23MS, FA91890-23MSD were used as the QC samples indicated.

Blank Spike Recovery(s) for Methyl Bromide are outside control limits.

Matrix Spike Recovery(s) for Methyl Bromide are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for Methyl Bromide are outside control limits. Probable cause is due to matrix interference.

FA91890-20: Sample was not preserved to pH < 2.

FA91890-7: Sample was not preserved to pH < 2.

FA91890-22: Sample was not preserved to a pH < 2.

FA91890-9: Sample was not preserved to pH < 2.

FA91890-18: Sample was not preserved to pH < 2.

FA91890-6: Sample was not preserved to pH < 2.

FA91890-21: Sample was not preserved to a pH < 2.

FA91890-19: Sample was not preserved to pH < 2.

FA91890-8: Sample was not preserved to pH < 2.

FA91890-3: Sample was not preserved to pH < 2.

FA91890-5: Sample was not preserved to pH < 2.

FA91890-10: Sample was not preserved to pH < 2.

FA91890-2: Sample was not preserved to pH < 2.

FA91890-12: Sample was not preserved to pH < 2.

FA91890-13: Sample was not preserved to pH < 2.

FA91890-23: Sample was not preserved to a pH < 2.

FA91890-4: Sample was not preserved to pH < 2.

FA91890-11: Sample was not preserved to pH < 2.

FA91890-18 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-10 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-4 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-4 for Methyl Bromide: Associated ICV, BS, CCV, and, ECC recovery outside control limits high, sample is ND.

FA91890-19 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND.

FA91890-18 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND.

FA91890-22 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-3 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-12 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND.

FA91890-2 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND.

FA91890-12 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-2 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-23 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND.

FA91890-20 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-13 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND.

FA91890-21 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-3 for Methyl Bromide: Associated ICV, BS, CCV, and, ECC recovery outside control limits high, sample is ND.

FA91890-11 for Trichloroethylene: Results from different vials are not consistent; higher results were reported.

FA91890-11 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND.

FA91890-19 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-10 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND.

FA91890-21 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND.

FA91890-13 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-5 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-20 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND.

FA91890-6 for Methyl Bromide: Associated ICV, BS, CCV, and, ECC recovery outside control limits high, sample is ND.

FA91890-7 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-7 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND.

FA91890-22 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND.

FA91890-5 for Methyl Bromide: Associated ICV, BS, CCV, and, ECC recovery outside control limits high, sample is ND.

FA91890-8 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-9 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND.

FA91890-8 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND.

FA91890-9 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-6 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91890-11 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

Matrix: AQ **Batch ID:** V1P3372

Sample(s) FA91933-14MS, FA91933-14MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91890-57, FA91890-58, FA91890-59

Blank Spike Recovery(s) for Methyl Bromide are outside control limits.

Matrix Spike Recovery(s) for Methyl Bromide, Methylene Chloride are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for Methyl Bromide, Methylene Chloride are outside control limits. Probable cause is due to matrix interference.

For Sample(s) FA91890-57, FA91890-58, FA91890-59 are associated with an CCV that has a recovery for Methyl Chloride, outside low control limit.

For Sample(s) FA91890-59 are associated with an CCV that has a recovery for Bromoform, Trichlorofluoromethane outside high control limit.

FA91890-57: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91890-58: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

FA91890-59: Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.

Matrix: AQ **Batch ID:** V1P3376

Sample(s) FA91890-8MS, FA91890-8MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91890-2, FA91890-3, FA91890-4, FA91890-5, FA91890-6, FA91890-7, FA91890-8

Matrix Spike Recovery(s) for Trichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

Matrix Spike Duplicate Recovery(s) for Trichloroethylene are outside control limits. Probable cause is due to matrix interference.

FA91890-2: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-3: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-4: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-5: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-6: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-7: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-8: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

Matrix: AQ **Batch ID:** V2P3359

Sample(s) FA91689-1MS, FA91689-1MSD were used as the QC samples indicated.

V2P3359-MB: Sample was treated with an anti-foaming agent.

FA91890-1 for 4-Methyl-2-pentanone (MIBK): Associated CCV outside of control limits high, sample was ND.

FA91890-1: Sample was not preserved to a pH < 2.

FA91890-14 for 4-Methyl-2-pentanone (MIBK): Associated CCV outside of control limits high, sample was ND.

FA91890-14: Sample was not preserved to a pH < 2.

FA91890-15 for 4-Methyl-2-pentanone (MIBK): Associated CCV outside of control limits high, sample was ND.

FA91890-15: Sample was not preserved to a pH < 2.

FA91890-16 for 4-Methyl-2-pentanone (MIBK): Associated CCV outside of control limits high, sample was ND.

FA91890-16: Sample was not preserved to a pH < 2.

FA91890-17 for 4-Methyl-2-pentanone (MIBK): Associated CCV outside of control limits high, sample was ND.

FA91890-17: Sample was not preserved to a pH < 2.

Matrix: AQ **Batch ID:** V2P3361

Sample(s) FA91890-41MS, FA91890-41MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Trichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

Matrix Spike Duplicate Recovery(s) for Trichloroethylene are outside control limits. Probable cause is due to matrix interference.

Sample(s) FA91890-24, FA91890-25, FA91890-26, FA91890-27, FA91890-28, FA91890-29, FA91890-30, FA91890-31, FA91890-32, FA91890-33, FA91890-34, FA91890-35, FA91890-36, FA91890-37, FA91890-38, FA91890-39, FA91890-40, FA91890-41 are associated with an CCV that has a recovery for Methylene Chloride outside low control limit.

FA91890-24 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-24: Sample was not preserved to a pH < 2.

FA91890-25 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-25: Sample was not preserved to a pH < 2.

FA91890-26 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-26: Sample was not preserved to a pH < 2.

FA91890-27 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-27: Sample was not preserved to a pH < 2.

FA91890-28 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-28: Sample was not preserved to a pH < 2.

FA91890-29 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-29: Sample was not preserved to a pH < 2.

FA91890-30 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-30: Sample was not preserved to a pH < 2.

FA91890-31 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-31: Sample was not preserved to a pH < 2.

FA91890-32 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-32: Sample was not preserved to a pH < 2.

FA91890-33 for cis-1,2-Dichloroethylene: Suspected carry-over. Confirmed ND by reanalysis beyond hold-time.

FA91890-33 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-33 for Trichloroethylene: Suspected carry-over. Confirmed by reanalysis beyond hold-time.

FA91890-33: Sample was not preserved to a pH < 2.

FA91890-34 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-34: Sample was not preserved to a pH < 2.

FA91890-35 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-36 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-36: Sample was not preserved to a pH < 2.

FA91890-37 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-37: Sample was not preserved to a pH < 2.

FA91890-38 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-38: Sample was not preserved to a pH < 2.

FA91890-39 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-39: Sample was not preserved to a pH < 2.

FA91890-40 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-40: Sample was not preserved to a pH < 2.

FA91890-41 for Methylene Chloride: Associated CCV outside of control limits low.

FA91890-41: Sample was not preserved to a pH < 2.

Matrix: AQ **Batch ID:** V2P3369

Sample(s) FA91890-20MS, FA91890-20MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91890-9 FA91890-10, FA91890-12, FA91890-13, FA91890-19, FA91890-20, FA91890-42, FA91890-44, FA91890-45, FA91890-46,

Matrix Spike Recovery(s) for cis-1,2-Dichloroethylene, Trichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

Matrix Spike Duplicate Recovery(s) for Trichloroethylene are outside control limits. Probable cause is due to matrix interference.

FA91890-9: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-10: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-11: Sample was not preserved to pH < 2. Confirmation run beyond holdtime. Results from different vials are not consistent; higher results were reported.

FA91890-12: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-13: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-18: Sample was not preserved to pH < 2. Confirmation run beyond holdtime.

FA91890-19: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-20: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-42: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-43: Sample was not preserved to pH < 2. Confirmation run beyond holdtime. Results from different vials are not consistent; higher results were reported.

FA91890-44: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-45: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-46: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

Matrix: AQ **Batch ID:** V2P3370

FA91890-59: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

Matrix: AQ **Batch ID:** V2P3374

FA91890-48: Sample was not preserved to a pH < 2. Confirmation run.

FA91890-51: Sample was not preserved to a pH < 2. Confirmation run.

FA91890-50: Sample was not preserved to a pH < 2. Confirmation run.

Matrix: AQ **Batch ID:** VC6187

Sample(s) FA91699-3MS, FA91699-3MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91890-21, FA91890-22, FA91890-23

FA91890-21: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-22: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-23: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

Matrix: AQ **Batch ID:** VC6189

Sample(s) FA91890-24MS, FA91890-24MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91890-24, FA91890-27, FA91890-28, FA91890-29, FA91890-30, FA91890-31, FA91890-32, FA91890-34, FA91890-35, FA91890-36, FA91890-37, FA91890-38.

For Sample(s) FA91890-35 are associated with an CCV that has a recovery for Vinyl Chloride outside high control limit.

FA91890-24: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-26: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91890-27: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-28: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered

minimum values.

FA91890-29: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-30: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-31: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-32: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-33: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91890-34: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-35: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-36: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-37: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-38: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

Matrix: AQ **Batch ID:** VI2417

Sample(s) FA91974-15MS, FA91974-15MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Methyl Bromide are outside control limits. Probable cause is due to matrix interference.

RPD(s) for MSD for Methyl Bromide are outside control limits for sample FA91974-15MSD. Probable cause is due to sample non-homogeneity.

For Sample(s) FA91890-42, FA91890-43, FA91890-44, FA91890-45, FA91890-46 are associated with an CCV that has a recovery for Methyl Bromide outside low control limit.

VI2417-MB: Sample was treated with an anti-foaming agent.

FA91890-42 for Chloroethane: Associated CCV outside of control limits high, sample was ND.

FA91890-42 for Methyl Bromide: Associated CCV outside of control limits low.

FA91890-42: Sample was not preserved to pH < 2.

FA91890-43 for Chloroethane: Associated CCV outside of control limits high, sample was ND.

FA91890-43 for Methyl Bromide: Associated CCV outside of control limits low.

FA91890-43 for Trichloroethylene: Results from different vials are not consistent; higher results were reported.

FA91890-43: Sample was not preserved to pH < 2.

FA91890-44 for Chloroethane: Associated CCV outside of control limits high, sample was ND.

FA91890-44 for Methyl Bromide: Associated CCV outside of control limits low.

FA91890-44: Sample was not preserved to pH < 2.

FA91890-45 for Chloroethane: Associated CCV outside of control limits high, sample was ND.

FA91890-45 for Methyl Bromide: Associated CCV outside of control limits low.

FA91890-45: Sample was not preserved to pH < 2.

FA91890-46 for Chloroethane: Associated CCV outside of control limits high, sample was ND.

FA91890-46 for Methyl Bromide: Associated CCV outside of control limits low.

FA91890-46: Sample was not preserved to pH < 2.

Matrix: AQ **Batch ID:** VI2437

Sample(s) FA91823-5MS, FA91823-5MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91890-56

FA91890-56: Sample analyzed beyond hold time and was not preserved to a pH < 2; reported results are considered minimum values.

Matrix: AQ **Batch ID:** VI2440

Sample(s) FA91859-28MS, FA91859-28MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91890-16

Matrix Spike Recovery(s) for Trichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

Matrix Spike Duplicate Recovery(s) for Trichloroethylene are outside control limits. Probable cause is due to matrix interference.

FA91890-16: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

Matrix: AQ **Batch ID:** VI2443

Sample(s) FA91890-54MS, FA91890-54MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91890-52, FA91890-54

For Sample(s) FA91890-52 are associated with an CCV that has a recovery for cis-1,2-Dichloroethylene outside low control limit.

FA91890-52: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91890-54: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

460-00-4	4-Bromofluorobenzene	100%	109%	83-118%

(a) Sample was not preserved to a pH < 2.
(b) Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.
(c) Result is from Run# 2
(d) Associated CCV outside of control limits low.
(e) No sample available for reanalysis.

U = Not detected MDL = Method Detection Limit I = Result > = MDL but < PQL J = Estimated value
PQL = Practical Quantitation Limit V = Indicates analyte found in associated method blank
L = Indicates value exceeds calibration range N = Indicates presumptive evidence of a compound

CAS No.	Surrogate Recoveries	Run# 1	Run# 2	Limits
1868-53-7	Dibromofluoromethane	104%	102%	83-118%
17060-07-0	1,2-Dichloroethane-D4	104%	114%	79-125%
2037-26-5	Toluene-D8	100%	101%	85-112%
460-00-4	4-Bromofluorobenzene	105%	100%	83-118%

(a) Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.
(b) Sample was not preserved to a pH < 2. Sample analyzed beyond hold time; reported results are considered minimum values.
(c) Result is from Run# 2
(d) Associated CCV outside of control limits high.
(e) Associated ICV, BS, CCV recovery outside control limits high, sample was ND.
(f) Associated CCV outside of control limits low.

U = Not detected MDL = Method Detection Limit I = Result > = MDL but < PQL J = Estimated value
PQL = Practical Quantitation Limit V = Indicates analyte found in associated method blank
L = Indicates value exceeds calibration range N = Indicates presumptive evidence of a compound

SGS Sample Receipt Summary

Job Number: FA91890 **Client:** TETRA TECH **Project:** 112G08985

Date / Time Received: 12/21/2021 4:00:00 PM **Delivery Method:** COURIER **Airbill #'s:**

Therm ID: IR 1; **Therm CF:** 0.2; **# of Coolers:** 2

Cooler Temps (Raw Measured) °C: Cooler 1: (1.8); Cooler 2: (0.2);

Cooler Temps (Corrected) °C: Cooler 1: (2.0); Cooler 2: (0.4);

Cooler Information	Y	or	N
1. Custody Seals Present	☑		☐
2. Custody Seals Intact	☑		☐
3. Temp criteria achieved	☑		☐
4. Cooler temp verification	IR Gun		
5. Cooler media	Ice (Bag)		

Trip Blank Information	Y	or	N	N/A
1. Trip Blank present / cooler	☐		☑	☐
2. Trip Blank listed on COC	☐		☑	☐

	W	or	S	N/A
3. Type Of TB Received	☐		☐	☑

Sample Information	Y	or	N	N/A
1. Sample labels present on bottles	☑		☐	
2. Samples preserved properly	☑		☐	
3. Sufficient volume/containers recvd for analysis:	☑		☐	
4. Condition of sample	Intact			
5. Sample recvd within HT	☑		☐	
6. Dates/Times/IDs on COC match Sample Label	☑		☐	
7. VOCs have headspace	☑		☐	☐
8. Bottles received for unspecified tests	☐		☑	
9. Compositing instructions clear	☐		☐	☑
10. Voa Soil Kits/Jars received past 48hrs?	☐		☐	☑
11. % Solids Jar received?	☐		☐	☑
12. Residual Chlorine Present?	☐		☐	☑

Misc. Information

Number of Encores: 25-Gram _____ 5-Gram _____ Number of 5035 Field Kits: _____ Number of Lab Filtered Metals: _____

Test Strip Lot #s: pH 0-3 230315 pH 10-12 219813A Other: (Specify) _____ _____

Residual Chlorine Test Strip Lot #: _____

Comments SAMPLES #10, #11, AND #28 RECEIVED ONE 40ml VOA VIAL WITH HEADSPACE EACH
SAMPLES #25, #50, AND #58 RECEIVED TWO 40ml VOA VIALS WITH HEADSPACE EACH

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Tetra Tech NUS **Job No:** FA91974

Site: NASA-LC 34, Freedom Rd, CCAFS, FL **Report Date:** 1/19/2022 11:21:29

On 12/22/2021, 56 Sample(s), 0 Trip Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 4.6 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of FA91974 was Assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V1A1665

Sample(s) FA91974-37MS, FA91974-37MSD were used as the QC samples indicated.

FA91974-18: Sample was not preserved to a pH < 2.

FA91974-19: Sample was not preserved to a pH < 2.

FA91974-20: Sample was not preserved to a pH < 2.

FA91974-21: Sample was not preserved to a pH < 2.

FA91974-22: Sample was not preserved to a pH < 2.

FA91974-23: Sample was not preserved to a pH < 2.

FA91974-24: Sample was not preserved to a pH < 2.

FA91974-25: Sample was not preserved to a pH < 2.

FA91974-26: Sample was not preserved to a pH < 2.

FA91974-30: Sample was not preserved to a pH < 2.

FA91974-31: Sample was not preserved to a pH < 2.

FA91974-32: Sample was not preserved to a pH < 2. Results from different vials are not consistent; higher results were not consistent; higher results were reported.

FA91974-33: Sample was not preserved to a pH < 2.

FA91974-34: Sample was not preserved to a pH < 2.

FA91974-35: Sample was not preserved to a pH < 2. Results from different vials are not consistent; higher results were not consistent; higher results were reported.

FA91974-36: Sample was not preserved to a pH < 2.

FA91974-37: Sample was not preserved to a pH < 2.

Matrix: AQ **Batch ID:** V2A1660

Sample(s) FA91974-56MS, FA91974-56MSD were used as the QC samples indicated.

FA91974-38 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA91974-38: Sample was not preserved to a pH < 2.

FA91974-39 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA91974-39: Sample was not preserved to a pH < 2.

FA91974-40 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA91974-40: Sample was not preserved to a pH < 2.

FA91974-41 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA91974-41: Sample was not preserved to a pH < 2.

FA91974-42 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA91974-42: Sample was not preserved to a pH < 2.

FA91974-43 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA91974-43: Sample was not preserved to a pH < 2.

FA91974-44 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA91974-44: Sample was not preserved to a pH < 2.

FA91974-45 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA91974-45: Sample was not preserved to a pH < 2.

FA91974-46 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V2A1660

FA91974-46: Sample was not preserved to a pH < 2.

FA91974-47 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA91974-47: Sample was not preserved to a pH < 2.

FA91974-48 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA91974-48: Sample was not preserved to a pH < 2.

FA91974-49 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA91974-49: Sample was not preserved to a pH < 2.

FA91974-50 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA91974-50: Sample was not preserved to a pH < 2.

FA91974-54 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA91974-54: Sample was not preserved to a pH < 2.

FA91974-55 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA91974-55: Sample was not preserved to a pH < 2.

FA91974-56 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA91974-56: Sample was not preserved to a pH < 2.

Matrix: AQ **Batch ID:** V2P3362

Sample(s) FA91974-13MS, FA91974-13MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for 1,1,1,2-Tetrachloroethane, 1,1,1-Trichloroethane, 1,1,2,2-Tetrachloroethane, 1,1,2-Trichloroethane, 1,1-Dichloroethane, 1,1-Dichloroethylene, 1,2,4-Trichlorobenzene, 1,2-Dibromoethane, 1,2-Dichlorobenzene, 1,2-Dichloroethane, 1,2-Dichloropropane, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, Benzene, Bromochloromethane, Bromodichloromethane, Bromoform, Carbon Disulfide, Carbon Tetrachloride, Chlorobenzene, Chloroform, cis-1,3-Dichloropropene, Cyclohexane, Dibromochloromethane, Ethylbenzene, Freon 113, Isopropylbenzene, Methylene Chloride, Styrene, Tetrachloroethylene, Toluene, trans-1,2-Dichloroethylene, trans-1,3-Dichloropropene, Trichloroethylene, Xylene (total) are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for 1,1,1,2-Tetrachloroethane, 1,1,1-Trichloroethane, 1,1,2,2-Tetrachloroethane, 1,1,2-Trichloroethane, 1,1-Dichloroethane, 1,1-Dichloroethylene, 1,2-Dibromo-3-chloropropane, 1,2-Dibromoethane, 1,2-Dichlorobenzene, 1,2-Dichloroethane, 1,2-Dichloropropane, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, Benzene, Bromochloromethane, Bromodichloromethane, Bromoform, Carbon Disulfide, Carbon Tetrachloride, Chlorobenzene, Chloroform, cis-1,2-Dichloroethylene, cis-1,3-Dichloropropene, Cyclohexane, Dibromochloromethane, Ethylbenzene, Freon 113, Isopropylbenzene, Methyl Tert Butyl Ether, Methylene Chloride, Styrene, Tetrachloroethylene, Toluene, trans-1,2-Dichloroethylene, trans-1,3-Dichloropropene, Trichloroethylene, Xylene (total) are outside control limits. Probable cause is due to matrix interference.
Matrix Spike/Matrix Spike Duplicate Recovery(s) for cis-1,2-Dichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

For Sample(s) FA91974-10, FA91974-11, FA91974-12, FA91974-13, FA91974-5, FA91974-6, FA91974-7, FA91974-8, FA91974-9 are associated with an CCV that has a recovery for Carbon Disulfide, Methylene Chloride outside low control limit.

FA91974-1: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91974-5 for Carbon Disulfide: Associated CCV outside of control limits low.

FA91974-5 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91974-5: Sample was not preserved to a pH < 2.

FA91974-6 for Carbon Disulfide: Associated CCV outside of control limits low.

FA91974-6 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91974-6: Sample was not preserved to a pH < 2.

FA91974-7 for Carbon Disulfide: Associated CCV outside of control limits low.

FA91974-7 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91974-7: Sample was not preserved to a pH < 2.

FA91974-8 for Carbon Disulfide: Associated CCV outside of control limits low.

FA91974-8 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91974-8: Sample was not preserved to a pH < 2.

FA91974-9 for Carbon Disulfide: Associated CCV outside of control limits low.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V2P3362

FA91974-9 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91974-9: Sample was not preserved to a pH < 2. Sample vial(s) contained bubbles greater than 6mm.

FA91974-10 for Carbon Disulfide: Associated CCV outside of control limits low.

FA91974-10 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91974-10: Sample was not preserved to a pH < 2.

FA91974-11 for Carbon Disulfide: Associated CCV outside of control limits low.

FA91974-11 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91974-11: Sample was not preserved to a pH < 2.

FA91974-12 for Carbon Disulfide: Associated CCV outside of control limits low.

FA91974-12 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91974-12: Sample was not preserved to a pH < 2.

FA91974-13 for Carbon Disulfide: Associated CCV outside of control limits low.

FA91974-13 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA91974-13: Sample was not preserved to a pH < 2.

Matrix: AQ **Batch ID:** V2P3369

Sample(s) FA91890-20MS, FA91890-20MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91974-17

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Trichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

FA91974-4: Sample was not preserved to pH < 2. Confirmation run beyond holdtime. Results from different vials are not consistent; higher results were reported.

FA91974-17: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

Matrix: AQ **Batch ID:** V2P3374

FA91974-5: Sample was not preserved to a pH < 2. Confirmation run.

FA91974-7: Sample was not preserved to a pH < 2. Confirmation run.

FA91974-8: Sample was not preserved to a pH < 2. Confirmation run.

FA91974-9: Sample was not preserved to a pH < 2. Sample vial(s) contained bubbles greater than 6mm. Confirmation run.

FA91974-10: Sample was not preserved to a pH < 2. Confirmation run.

FA91974-11: Sample was not preserved to a pH < 2. Confirmation run.

FA91974-12: Sample was not preserved to a pH < 2. Confirmation run.

Matrix: AQ **Batch ID:** VC6188

Sample(s) FA91974-28MS, FA91974-28MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91974-18, FA91974-20, FA91974-21, FA91974-26, FA91974-28, FA91974-29, FA91974-30, FA91974-31, FA91974-33, FA91974-34, FA91974-35, FA91974-36

FA91974-18: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-19: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91974-20: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-21: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-22: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91974-23: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91974-24: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91974-25: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91974-26: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-27: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91974-28: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-29: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

MS Volatiles By Method SW846 8260B

FA91974-30: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-31: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-32: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime. Results from different vials are not consistent; higher results were reported.

FA91974-33: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-34: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-35: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values. Results from different vials are not consistent; higher results were reported.

FA91974-36: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-37: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

Matrix: AQ **Batch ID:** VI2417

Sample(s) FA91974-15MS, FA91974-15MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Methyl Bromide are outside control limits. Probable cause is due to matrix interference.

RPD(s) for MSD for Methyl Bromide are outside control limits for sample FA91974-15MSD. Probable cause is due to sample non-homogeneity.

For Sample(s) FA91974-1, FA91974-14, FA91974-15, FA91974-16, FA91974-17, FA91974-2, FA91974-3, FA91974-4 are associated with an CCV that has a recovery for Methyl Bromide outside low control limit.

VI2417-MB: Sample was treated with an anti-foaming agent.

FA91974-1 for Chloroethane: Associated CCV outside of control limits high, sample was ND.

FA91974-1 for Methyl Bromide: Associated CCV outside of control limits low.

FA91974-1: Sample was not preserved to a pH < 2.

FA91974-14 for Chloroethane: Associated CCV outside of control limits high, sample was ND.

FA91974-14 for Methyl Bromide: Associated CCV outside of control limits low.

FA91974-14: Sample was not preserved to a pH < 2.

FA91974-15 for Chloroethane: Associated CCV outside of control limits high, sample was ND.

FA91974-15 for Methyl Bromide: Associated CCV outside of control limits low.

FA91974-15: Sample was not preserved to a pH < 2.

FA91974-16 for Chloroethane: Associated CCV outside of control limits high, sample was ND.

FA91974-16 for Methyl Bromide: Associated CCV outside of control limits low.

FA91974-16: Sample was not preserved to a pH < 2.

FA91974-17 for Chloroethane: Associated CCV outside of control limits high, sample was ND.

FA91974-17 for Methyl Bromide: Associated CCV outside of control limits low.

FA91974-17: Sample was not preserved to pH < 2.

FA91974-2 for Chloroethane: Associated CCV outside of control limits high, sample was ND.

FA91974-2 for Methyl Bromide: Associated CCV outside of control limits low.

FA91974-2: Sample was not preserved to a pH < 2.

FA91974-3 for Chloroethane: Associated CCV outside of control limits high, sample was ND.

FA91974-3 for Methyl Bromide: Associated CCV outside of control limits low.

FA91974-3: Sample was not preserved to a pH < 2.

FA91974-4 for Chloroethane: Associated CCV outside of control limits high, sample was ND.

FA91974-4 for Methyl Bromide: Associated CCV outside of control limits low.

FA91974-4 for Trichloroethylene: Results from different vials are not consistent; higher results were reported.

FA91974-4: Sample was not preserved to pH < 2.

Matrix: AQ **Batch ID:** VI2443

Sample(s) FA91890-54MS, FA91890-54MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91974-38, FA91974-39, FA91974-40, FA91974-41, FA91974-42, FA91974-47, FA91974-48, FA91974-51, FA91974-52, FA91974-53.

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Trichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** VI2443

FA91974-41: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-51: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-52: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-49: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91974-48: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-43: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91974-40: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-42: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-55: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91974-54: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91974-39: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-38: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-47: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91974-45: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91974-44: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91974-53: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

SGS Sample Receipt Summary

Job Number: FA91974 **Client:** TETRA TECH **Project:** 112G08985

Date / Time Received: 12/22/2021 6:35:00 PM **Delivery Method:** COURIER **Airbill #'s:**

Therm ID: IR 1; **Therm CF:** 0.2; **# of Coolers:** 2

Cooler Temps (Raw Measured) °C: Cooler 1: (4.4); Cooler 2: (1.6);

Cooler Temps (Corrected) °C: Cooler 1: (4.6); Cooler 2: (1.8);

Cooler Information	Y	or	N
1. Custody Seals Present	☑		☐
2. Custody Seals Intact	☑		☐
3. Temp criteria achieved	☑		☐
4. Cooler temp verification	IR Gun		
5. Cooler media	Ice (Bag)		

Trip Blank Information	Y	or	N	N/A
1. Trip Blank present / cooler	☐		☑	☐
2. Trip Blank listed on COC	☐		☑	☐

	W	or	S	N/A
3. Type Of TB Received	☐		☐	☑

Sample Information	Y	or	N	N/A
1. Sample labels present on bottles	☑		☐	
2. Samples preserved properly	☑		☐	
3. Sufficient volume/containers recvd for analysis:	☑		☐	
4. Condition of sample	Intact			
5. Sample recvd within HT	☑		☐	
6. Dates/Times/IDs on COC match Sample Label	☑		☐	
7. VOCs have headspace	☐		☑	☐
8. Bottles received for unspecified tests	☐		☑	
9. Compositing instructions clear	☐		☐	☑
10. Voa Soil Kits/Jars received past 48hrs?	☐		☐	☑
11. % Solids Jar received?	☐		☐	☑
12. Residual Chlorine Present?	☐		☐	☑

Misc. Information

Number of Encores: 25-Gram _____ 5-Gram _____ Number of 5035 Field Kits: _____ Number of Lab Filtered Metals: _____

Test Strip Lot #s: pH 0-3 230315 pH 10-12 219813A Other: (Specify) _____ _____

Residual Chlorine Test Strip Lot #: _____

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Tetra Tech NUS **Job No:** FA91983

Site: NASA-LC 34, Freedom Rd, CCAFS, FL **Report Date:** 1/19/2022 11:22:13

On 12/23/2021, 18 Sample(s), 0 Trip Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 1.4 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of FA91983 was Assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V2P3365

Sample(s) FA91913-3MS, FA91913-3MSD were used as the QC samples indicated.

Matrix Spike Duplicate Recovery(s) for Methylene Chloride are outside control limits. Probable cause is due to matrix interference.

For Sample(s) FA91983-1, FA91983-11, FA91983-12, FA91983-13, FA91983-2, FA91983-3 are associated with an CCV that has a recovery for Methylene Chloride outside low control limit.

For Sample(s) FA91983-1, FA91983-11, FA91983-12, FA91983-13, FA91983-2 are associated with an CCV that has a recovery for Chloroethane, Trichlorofluoromethane, Chloroethane outside high control limit.

FA91983-1 for Chloroethane: Associated CCV outside of control limits high.

FA91983-1 for Methylene Chloride: Associated CCV outside of control limits low.

FA91983-1: Sample was not preserved to a pH < 2; reported results are considered minimum values.

FA91983-2 for Chloroethane: Associated CCV outside of control limits high.

FA91983-2 for Methylene Chloride: Associated CCV outside of control limits low.

FA91983-2: Sample was not preserved to a pH < 2; reported results are considered minimum values.

FA91983-3 for Chloroethane: Associated CCV outside of control limits high, sample was ND.

FA91983-3 for Methylene Chloride: Associated CCV outside of control limits low.

FA91983-3: Sample was not preserved to a pH < 2; reported results are considered minimum values.

FA91983-11 for Chloroethane: Associated CCV outside of control limits high.

FA91983-11 for Methylene Chloride: Associated CCV outside of control limits low.

FA91983-11: Sample was not preserved to a pH < 2; reported results are considered minimum values.

FA91983-12 for Chloroethane: Associated CCV outside of control limits high.

FA91983-12 for Methylene Chloride: Associated CCV outside of control limits low.

FA91983-12: Sample was not preserved to a pH < 2; reported results are considered minimum values.

FA91983-13 for Chloroethane: Associated CCV outside of control limits high.

FA91983-13 for Methylene Chloride: Associated CCV outside of control limits low.

FA91983-13: Sample was not preserved to a pH < 2; reported results are considered minimum values.

Matrix: AQ **Batch ID:** V2P3368

V2P3368-BS: No MS/MSD available for this run.

The following samples were run outside of holding time for method SW846 8260B: FA91983-10, FA91983-15, FA91983-5, FA91983-7, FA91983-9

FA91983-5: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91983-7: Sample was not preserved to a pH < 2 and contained bubbles > 6mm. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91983-8: Sample was not preserved to a pH < 2 and contained significant headspace. Confirmation run beyond

FA91983-9: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91983-10 for Trichloroethylene: No sample available for reanalysis.

FA91983-10: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91983-14: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91983-15: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V2P3369

Sample(s) FA91890-20MS, FA91890-20MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91983-17, FA91983-18

Matrix Spike Recovery(s) for cis-1,2-Dichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Trichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

FA91983-16: Sample vial contained significant headspace and was not preserved to pH < 2. Confirmation run beyond holdtime. Results from different vials are not consistent; higher results were reported.

FA91983-17: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91983-18: Sample was not preserved to pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

Matrix: AQ **Batch ID:** VC6189

Sample(s) FA91890-24MS, FA91890-24MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA91983-1, FA91983-2

FA91983-1: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91983-2: Sample was not preserved to a pH < 2. Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA91983-3: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91983-11: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91983-12: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

FA91983-13: Sample was not preserved to a pH < 2. Confirmation run beyond holdtime.

Matrix: AQ **Batch ID:** VY2510

Sample(s) FA91983-18MS, FA91983-18MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for 1,1-Dichloroethane, 1,2-Dichloropropane, Benzene, Bromodichloromethane, cis-1,2-Dichloroethylene, cis-1,3-Dichloropropene are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for 1,1-Dichloroethane, 1,2-Dichloropropane, Benzene, cis-1,2-Dichloroethylene, cis-1,3-Dichloropropene, trans-1,3-Dichloropropene are outside control limits. Probable cause is due to matrix interference.

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Trichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

RPD(s) for MSD for Methyl Bromide, trans-1,3-Dichloropropene are outside control limits for sample FA91983-18MSD. Probable cause is due to sample non-homogeneity.

For Sample(s) FA91983-10, FA91983-14, FA91983-15, FA91983-16, FA91983-17, FA91983-18, FA91983-4, FA91983-5, FA91983-6, FA91983-7, FA91983-8, FA91983-9 are associated with an CCV that has a recovery for 1,2-Dibromo-3-chloropropane outside low control limit.

FA91983-4 for 1,1-Dichloroethane: Associated CCV outside of control limits high, sample was ND.

FA91983-4 for 1,2-Dibromo-3-chloropropane: Associated CCV outside of control limits low.

FA91983-4: Sample was not preserved to a pH < 2.

FA91983-5 for 1,1-Dichloroethane: Associated CCV outside of control limits high, sample was ND.

FA91983-5 for 1,2-Dibromo-3-chloropropane: Associated CCV outside of control limits low.

FA91983-5: Sample was not preserved to a pH < 2.

FA91983-6 for 1,1-Dichloroethane: Associated CCV outside of control limits high, sample was ND.

FA91983-6 for 1,2-Dibromo-3-chloropropane: Associated CCV outside of control limits low.

FA91983-6: Sample was not preserved to a pH < 2.

FA91983-7 for 1,1-Dichloroethane: Associated CCV outside of control limits high, sample was ND.

FA91983-7 for 1,2-Dibromo-3-chloropropane: Associated CCV outside of control limits low.

FA91983-7: Sample was not preserved to a pH < 2.

FA91983-8 for 1,1-Dichloroethane: Associated CCV outside of control limits high, sample was ND.

FA91983-8 for 1,2-Dibromo-3-chloropropane: Associated CCV outside of control limits low.

FA91983-8 for Trichloroethylene: No sample available for reanalysis.

FA91983-8: Sample was not preserved to a pH < 2.

FA91983-9 for 1,1-Dichloroethane: Associated CCV outside of control limits high, sample was ND.

FA91983-9 for 1,2-Dibromo-3-chloropropane: Associated CCV outside of control limits low.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** VY2510

FA91983-9: Sample was not preserved to a pH < 2.
FA91983-10 for 1,1-Dichloroethane: Associated CCV outside of control limits high, sample was ND.
FA91983-10 for 1,2-Dibromo-3-chloropropane: Associated CCV outside of control limits low.
FA91983-10: Sample was not preserved to a pH < 2.
FA91983-14 for 1,1-Dichloroethane: Associated CCV outside of control limits high, sample was ND.
FA91983-14 for 1,2-Dibromo-3-chloropropane: Associated CCV outside of control limits low.
FA91983-14: Sample was not preserved to a pH < 2.
FA91983-15 for 1,1-Dichloroethane: Associated CCV outside of control limits high, sample was ND.
FA91983-15 for 1,2-Dibromo-3-chloropropane: Associated CCV outside of control limits low.
FA91983-15: Sample was not preserved to a pH < 2.
FA91983-16 for 1,1-Dichloroethane: Associated CCV outside of control limits high, sample was ND.
FA91983-16 for 1,2-Dibromo-3-chloropropane: Associated CCV outside of control limits low.
FA91983-16 for Trichloroethylene: Results from different vials are not consistent; higher results were reported.
FA91983-16: Sample was not preserved to pH < 2.
FA91983-17 for 1,1-Dichloroethane: Associated CCV outside of control limits high, sample was ND.
FA91983-17 for 1,2-Dibromo-3-chloropropane: Associated CCV outside of control limits low.
FA91983-17: Sample was not preserved to pH < 2.
FA91983-18 for 1,1-Dichloroethane: Associated CCV outside of control limits high, sample was ND.
FA91983-18 for 1,2-Dibromo-3-chloropropane: Associated CCV outside of control limits low.
FA91983-18: Sample was not preserved to pH < 2.

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Tetra Tech NUS **Job No:** FA84994

Site: NASA-LC 34, Freedom Rd, CCAFS, FL **Report Date** 5/13/2021 11:02:17

7 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were collected on 04/22/2021 and were received at SGS North America Inc - Orlando on 04/23/2021 properly preserved, at 1 Deg. C and intact. These Samples received an SGS Orlando job number of FA84994. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section. Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** VC5976

All samples were analyzed within the recommended method holding time.

Sample(s) FA84970-16MS, FA84970-16MSD were used as the QC samples indicated.

All method blanks for this batch meet method specific criteria.

Blank Spike Recovery(s) for Methyl Bromide are outside control limits.

Matrix Spike Recovery(s) for 1,1-Dichloroethane are outside control limits. Probable cause is due to matrix interference.

VC5976-MB: Sample was treated with an anti-foaming agent.

FA84994-1 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND.

FA84994-2 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND.

FA84994-3 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND. Associated CCV outside of control limits high, sample was ND.

FA84994-4 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND. Associated CCV outside of control limits high, sample was ND.

FA84994-6 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND. Associated CCV outside of control limits high, sample was ND.

FA84994-7 for Methyl Bromide: Associated ICV, CCV, and BS outside control limits high, however sample ND. Associated CCV outside of control limits high, sample was ND.

Matrix: AQ **Batch ID:** VP3215

All method blanks for this batch meet method specific criteria.

Sample(s) FA84970-54MS, FA84970-54MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA84994-4, FA84994-6, FA84994-7 Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA84994-4: Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA84994-6: Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA84994-7: Sample re-analyzed beyond hold time; reported results are considered minimum values.

Matrix: AQ **Batch ID:** VY2371

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA84780-7MS, FA84780-7MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for cis-1,2-Dichloroethylene, Vinyl Chloride are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for cis-1,2-Dichloroethylene, Vinyl Chloride are outside control limits. Probable cause is due to matrix interference.

FA84994-5: Sample vial(s) contained bubbles greater than 6mm; reported results are considered minimum values. Sample was not preserved to a pH < 2.

SGS Orlando certifies that this report meets the project requirements for analytical data produced for the samples as received at SGS Orlando and as stated on the COC. SGS Orlando certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the SGS Orlando Quality Manual except as noted above. This report is to be used in its entirety. SGS Orlando is not responsible for any assumptions of data quality if partial data packages are used.

SGS Sample Receipt Summary

Job Number: FA84994 **Client:** TETRA TECH **Project:** CC34

Date / Time Received: 4/23/2021 5:49:00 PM **Delivery Method:** COURIER **Airbill #'s:**

Therm ID: IR 1; **Therm CF:** -1.8; **# of Coolers:** 1

Cooler Temps (Raw Measured) °C: Cooler 1: (2.8);

Cooler Temps (Corrected) °C: Cooler 1: (1.0);

Cooler Information	Y	or	N
1. Custody Seals Present	☑		☐
2. Custody Seals Intact	☑		☐
3. Temp criteria achieved	☑		☐
4. Cooler temp verification	IR Gun		
5. Cooler media	Ice (Bag)		

Trip Blank Information	Y	or	N	N/A
1. Trip Blank present / cooler	☐		☐	☑
2. Trip Blank listed on COC	☐		☐	☑

	W	or	S	N/A
3. Type Of TB Received	☐		☐	☑

Sample Information	Y	or	N	N/A
1. Sample labels present on bottles	☑		☐	
2. Samples preserved properly	☑		☐	
3. Sufficient volume/containers recvd for analysis:	☑		☐	
4. Condition of sample	Intact			
5. Sample recvd within HT	☑		☐	
6. Dates/Times/IDs on COC match Sample Label	☑		☐	
7. VOCs have headspace	☐		☑	☐
8. Bottles received for unspecified tests	☐		☑	
9. Compositing instructions clear	☐		☐	☑
10. Voa Soil Kits/Jars received past 48hrs?	☐		☐	☑
11. % Solids Jar received?	☐		☐	☑
12. Residual Chlorine Present?	☐		☐	☑

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Tetra Tech NUS **Job No:** FA85719

Site: NASA-LC 34, Freedom Rd, CCAFS, FL **Report Date** 5/31/2021 8:47:51 PM

9 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were collected on 05/19/2021 and were received at SGS North America Inc - Orlando on 05/20/2021 properly preserved, at 1.8 Deg. C and intact. These Samples received an SGS Orlando job number of FA85719. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section. Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V5E1307

All samples were analyzed within the recommended method holding time.

Sample(s) FA85654-2MS, FA85654-2MSD were used as the QC samples indicated.

All method blanks for this batch meet method specific criteria.

Matrix Spike Recovery(s) for 2-Hexanone are outside control limits. Probable cause is due to matrix interference.

SGS Orlando certifies that this report meets the project requirements for analytical data produced for the samples as received at SGS Orlando and as stated on the COC. SGS Orlando certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the SGS Orlando Quality Manual except as noted above. This report is to be used in its entirety. SGS Orlando is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Tetra Tech NUS **Job No:** FA86691

Site: NASA-LC 34, Freedom Rd, CCAFS, FL **Report Date:** 7/14/2021 12:10:00

21 Sample(s) were collected on 06/23/2021 and were received at SGS North America Inc - Orlando on 06/24/2021 properly preserved, at -1 Deg. C and intact. These Samples received an SGS Orlando job number of FA86691. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V1A1543

Sample(s) FA86691-15MS, FA86691-15MSD were used as the QC samples indicated.

Matrix: AQ **Batch ID:** V5E1350

Sample(s) FA86966-28MS, FA86966-28MSD were used as the QC samples indicated.

The following samples were run outside of holding time for method SW846 8260B: FA86691-5, FA86691-6, FA86691-20.

Matrix Spike Recovery(s) for Trichloroethylene are outside control limits. Probable cause is due to matrix interference.

V5E1350-MB: Sample was treated with an anti-foaming agent.

FA86691-5: Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA86691-6: Sample re-analyzed beyond hold time; reported results are considered minimum values.

FA86691-20: Sample re-analyzed beyond hold time; reported results are considered minimum values.

Matrix: AQ **Batch ID:** VC6044

Sample(s) FA86691-13MS, FA86691-13MSD were used as the QC samples indicated.

Sample(s) FA86691-1, FA86691-3, FA86691-7, FA86691-2, FA86691-4 have compound(s) reported with a "V" qualifier, indicating analyte is found in the associated method blank.

Matrix Spike Recovery(s) for 1,1,1,2-Tetrachloroethane, 1,1,1-Trichloroethane, 1,1,2,2-Tetrachloroethane, 1,1,2-Trichloroethane, 1,1-Dichloroethane, 1,1-Dichloroethylene, 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, 1,2-Dibromo-3-chloropropane, 1,2-Dibromoethane, 1,2-Dichlorobenzene, 1,2-Dichloroethane, 1,2-Dichloropropane, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone (MIBK), Benzene, Bromochloromethane, Bromodichloromethane, Bromoform, Carbon Disulfide, Carbon Tetrachloride, Chlorobenzene, Chloroform, cis-1,3-Dichloropropene, Cyclohexane, Dibromochloromethane, Ethylbenzene, Freon 113, Isopropylbenzene, Methyl Acetate, Methyl Bromide, Methyl Tert Butyl Ether, Methylene Chloride, Styrene, Tetrachloroethylene, Toluene, trans-1,2-Dichloroethylene, trans-1,3-Dichloropropene, Trichloroethylene, Trichlorofluoromethane, Vinyl Chloride, Xylene (total), cis-1,2-Dichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.
Matrix Spike Duplicate Recovery(s) for 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, Isopropylbenzene, Styrene are outside control limits. Probable cause is due to matrix interference.

RPD(s) for MSD for 1,1,1,2-Tetrachloroethane, 1,1,1-Trichloroethane, 1,1,2,2-Tetrachloroethane, 1,1,2-Trichloroethane, 1,1-Dichloroethane, 1,1-Dichloroethylene, 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, 1,2-Dibromo-3-chloropropane, 1,2-Dibromoethane, 1,2-Dichlorobenzene, 1,2-Dichloroethane, 1,2-Dichloropropane, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone (MIBK), Acetone, Benzene, Bromochloromethane, Bromodichloromethane, Bromoform, Carbon Disulfide, Carbon Tetrachloride, Chlorobenzene, Chloroethane, Chloroform, cis-1,2-Dichloroethylene, cis-1,3-Dichloropropene, Cyclohexane, Dibromochloromethane, Dichlorodifluoromethane, Ethylbenzene, Freon 113, Isopropylbenzene, Methyl Acetate, Methyl Bromide, Methyl Chloride, Methyl Tert Butyl Ether, Methylene Chloride, Styrene, Tetrachloroethylene, Toluene, trans-1,2-Dichloroethylene, trans-1,3-Dichloropropene, Trichloroethylene, Trichlorofluoromethane, Vinyl Chloride, Xylene (total) are outside control limits for sample FA86691-13MSD. Probable cause is due to sample non-homogeneity.

FA86691-3 for Methyl Bromide: Suspected instrument contaminant. Associated ICV outside control limits high, however sample ND.

FA86691-1 for 1,2,3-Trichlorobenzene: Associated CCV outside of control limits high, sample was ND.

FA86691-1 for 1,2,4-Trichlorobenzene: Associated CCV outside of control limits high, sample was ND.

FA86691-1 for Bromoform: Associated CCV outside of control limits high, sample was ND.

FA86691-1 for Isopropylbenzene: Associated CCV outside of control limits high, sample was ND.

FA86691-1 for Styrene: Associated CCV outside of control limits high, sample was ND.

FA86691-1 for Tetrachloroethylene: Associated CCV outside of control limits high, sample was ND.

FA86691-1 for Methyl Chloride: Suspected instrument contaminant.

FA86691-1 for Xylene (total): Associated CCV outside of control limits high, sample was ND.

FA86691-1 for Freon 113: Associated ICV outside control limits low.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** VC6044

FA86691-1 for Methyl Bromide: Suspected instrument contaminant. Associated ICV outside control limits high, however sample ND.

FA86691-2 for Bromoform: Associated CCV outside of control limits high, sample was ND.

FA86691-2 for Styrene: Associated CCV outside of control limits high, sample was ND.

FA86691-2 for Tetrachloroethylene: Associated CCV outside of control limits high, sample was ND.

FA86691-2 for Xylene (total): Associated CCV outside of control limits high, sample was ND.

FA86691-2 for Freon 113: Associated ICV outside control limits low.

FA86691-2 for Methyl Bromide: Suspected instrument contaminant. Associated ICV outside control limits high, however sample ND.

FA86691-2 for Isopropylbenzene: Associated CCV outside of control limits high, sample was ND.

FA86691-2 for 1,2,4-Trichlorobenzene: Associated CCV outside of control limits high, sample was ND.

FA86691-2 for 1,2,3-Trichlorobenzene: Associated CCV outside of control limits high, sample was ND.

FA86691-3 for Bromoform: Associated CCV outside of control limits high, sample was ND.

FA86691-3 for 1,2,3-Trichlorobenzene: Associated CCV outside of control limits high, sample was ND.

FA86691-3 for 1,2,4-Trichlorobenzene: Associated CCV outside of control limits high, sample was ND.

FA86691-3 for Methyl Chloride: Suspected instrument contaminant.

FA86691-3 for Xylene (total): Associated CCV outside of control limits high, sample was ND.

FA86691-3 for Isopropylbenzene: Associated CCV outside of control limits high, sample was ND.

FA86691-3 for Tetrachloroethylene: Associated CCV outside of control limits high, sample was ND.

FA86691-13 for Methyl Bromide: Suspected instrument contaminant.

SGS Orlando certifies that this report meets the project requirements for analytical data produced for the samples as received at SGS Orlando and as stated on the COC. SGS Orlando certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the SGS Orlando Quality Manual except as noted above. This report is to be used in its entirety. SGS Orlando is not responsible for any assumptions of data quality if partial data packages are used.

460-00-4	4-Bromofluorobenzene	104%		83-118%

(a) Associated CCV outside of control limits high, sample was ND.
(b) Associated ICV outside control limits low.
(c) Suspected instrument contaminant. Associated ICV outside control limits high, however sample ND.
(d) Suspected instrument contaminant.

U = Not detected MDL = Method Detection Limit I = Result > = MDL but < PQL J = Estimated value
PQL = Practical Quantitation Limit V = Indicates analyte found in associated method blank
L = Indicates value exceeds calibration range N = Indicates presumptive evidence of a compound

10061-02-6	trans-1,3-Dichloropropene	540 U	2500	540	ug/l	
100-41-4	Ethylbenzene	890 U	2500	890	ug/l	
76-13-1	Freon 113	1200 U	2500	1200	ug/l	
591-78-6	2-Hexanone	5000 U	25000	5000	ug/l	
98-82-8	Isopropylbenzene	550 U	2500	550	ug/l	
79-20-9	Methyl Acetate	13000 U	50000	13000	ug/l	

U = Not detected MDL = Method Detection Limit I = Result > = MDL but < PQL J = Estimated value
PQL = Practical Quantitation Limit V = Indicates analyte found in associated method blank
L = Indicates value exceeds calibration range N = Indicates presumptive evidence of a compound

Report of Analysis

Client Sample ID:	LC34-RW20C-20210623		
Lab Sample ID:	FA86691-21	**Date Sampled:**	06/23/21
Matrix:	AQ - Surface Water	**Date Received:**	06/24/21
Method:	SW846 8260B	**Percent Solids:**	n/a
Project:	NASA-LC 34, Freedom Rd, CCAFS, FL		

VOA Special List

CAS No.	Compound	Result	PQL	MDL	Units	Q
74-83-9	Methyl Bromide	5000 U	13000	5000	ug/l	
74-87-3	Methyl Chloride	1300 U	5000	1300	ug/l	
75-09-2	Methylene Chloride	5000 U	13000	5000	ug/l	
108-10-1	4-Methyl-2-pentanone (MIBK)	2500 U	13000	2500	ug/l	
1634-04-4	Methyl Tert Butyl Ether	570 U	2500	570	ug/l	
100-42-5	Styrene	560 U	2500	560	ug/l	
630-20-6	1,1,1,2-Tetrachloroethane	690 U	2500	690	ug/l	
79-34-5	1,1,2,2-Tetrachloroethane	750 U	2500	750	ug/l	
127-18-4	Tetrachloroethylene	540 U	2500	540	ug/l	
108-88-3	Toluene	750 U	2500	750	ug/l	
87-61-6	1,2,3-Trichlorobenzene	1500 U	5000	1500	ug/l	
120-82-1	1,2,4-Trichlorobenzene	1300 U	5000	1300	ug/l	
71-55-6	1,1,1-Trichloroethane	620 U	2500	620	ug/l	
79-00-5	1,1,2-Trichloroethane	1200 U	2500	1200	ug/l	
79-01-6	Trichloroethylene	221000	2500	860	ug/l	
75-69-4	Trichlorofluoromethane	1300 U	5000	1300	ug/l	
75-01-4	Vinyl Chloride	1000 U	2500	1000	ug/l	
1330-20-7	Xylene (total)	1800 U	7500	1800	ug/l	

CAS No.	Surrogate Recoveries	Run# 1	Run# 2	Limits
1868-53-7	Dibromofluoromethane	98%		83-118%
17060-07-0	1,2-Dichloroethane-D4	98%		79-125%
2037-26-5	Toluene-D8	96%		85-112%
460-00-4	4-Bromofluorobenzene	94%		83-118%

U = Not detected MDL = Method Detection Limit
PQL = Practical Quantitation Limit
L = Indicates value exceeds calibration range
I = Result > = MDL but < PQL J = Estimated value
V = Indicates analyte found in associated method blank
N = Indicates presumptive evidence of a compound
