SGS Sample Receipt Summary

Job Number: FA86691 **Client:** TETRA TECH **Project:** LC34

Date / Time Received: 6/24/2021 9:30:00 AM **Delivery Method:** COURIER **Airbill #'s:**

Therm ID: IR 1; **Therm CF:** -1.8; **# of Coolers:** 1

Cooler Temps (Raw Measured) °C: Cooler 1: (0.8);

Cooler Temps (Corrected) °C: Cooler 1: (-1.0);

Cooler Information	Y	or	N
1. Custody Seals Present	☑		☐
2. Custody Seals Intact	☑		☐
3. Temp criteria achieved	☑		☐
4. Cooler temp verification	IR Gun		
5. Cooler media	Ice (Bag)		

Trip Blank Information	Y	or	N	N/A
1. Trip Blank present / cooler	☐		☐	☑
2. Trip Blank listed on COC	☐		☐	☑

	W	or	S	N/A
3. Type Of TB Received	☐		☐	☑

Sample Information	Y	or	N	N/A
1. Sample labels present on bottles	☑		☐	
2. Samples preserved properly	☑		☐	
3. Sufficient volume/containers recvd for analysis:	☑		☐	
4. Condition of sample	Intact			
5. Sample recvd within HT	☑		☐	
6. Dates/Times/IDs on COC match Sample Label	☑		☐	
7. VOCs have headspace	☑		☐	☐
8. Bottles received for unspecified tests	☐		☑	
9. Compositing instructions clear	☐		☐	☑
10. Voa Soil Kits/Jars received past 48hrs?	☐		☐	☑
11. % Solids Jar received?	☐		☐	☑
12. Residual Chlorine Present?	☐		☐	☑

Misc. Information

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Tetra Tech NUS **Job No:** FA87472

Site: NASA-LC 34, Freedom Rd, CCAFS, FL **Report Date** 8/4/2021 10:01:36 PM

7 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were collected on 07/22/2021 and were received at SGS North America Inc - Orlando on 07/22/2021 properly preserved, at 2.6 Deg. C and intact. These Samples received an SGS Orlando job number of FA87472. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section. Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** VC6056

FA87472-7: Sample vial(s) contained significant headspace; reported results are considered minimum values. Confirmation run.

Matrix: AQ **Batch ID:** VI2265

Sample(s) FA87472-4MS, FA87472-4MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for cis-1,2-Dichloroethylene, Trichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

Matrix Spike Duplicate Recovery(s) for cis-1,2-Dichloroethylene, Trichloroethylene are outside control limits. Probable cause is due to matrix interference.

Matrix: AQ **Batch ID:** VP3264

Sample(s) FA87301-4MS, FA87301-4MSD were used as the QC samples indicated.

Blank Spike Recovery(s) for Dibromochloromethane are outside control limits.

Matrix Spike Duplicate Recovery(s) for cis-1,2-Dichloroethylene are outside control limits. Probable cause is due to matrix interference.

RPD(s) for MSD for Chloroethane are outside control limits for sample FA87301-4MSD. Probable cause is due to sample non-homogeneity.

Sample(s) FA87472-1, FA87472-2, FA87472-3, FA87472-4, FA87472-5, FA87472-6, FA87472-7 are associated with an CCV that has a recovery for Bromoform outside low control limit.

VP3264-MB: Sample was treated with an anti-foaming agent.

FA87472-1 for Bromoform: Associated CCV outside of control limits low.

FA87472-1 for Dibromochloromethane: Associated BS recovery outside control limits low.

FA87472-1 for Trichlorofluoromethane: Associated Initial Calibration outside control limits (%RSD > 15%).

FA87472-2 for Bromoform: Associated CCV outside of control limits low.

FA87472-2 for Dibromochloromethane: Associated BS recovery outside control limits low.

FA87472-2 for Trichlorofluoromethane: Associated Initial Calibration outside control limits (%RSD > 15%).

FA87472-3 for Bromoform: Associated CCV outside of control limits low.

FA87472-3 for Dibromochloromethane: Associated BS recovery outside control limits low.

FA87472-3 for Trichlorofluoromethane: Associated Initial Calibration outside control limits (%RSD > 15%).

FA87472-4 for Bromoform: Associated CCV outside of control limits low.

FA87472-4 for Dibromochloromethane: Associated BS recovery outside control limits low.

FA87472-4 for Trichlorofluoromethane: Associated Initial Calibration outside control limits (%RSD > 15%).

FA87472-5 for Bromoform: Associated CCV outside of control limits low.

FA87472-5 for Dibromochloromethane: Associated BS recovery outside control limits low.

FA87472-5 for Trichlorofluoromethane: Associated Initial Calibration outside control limits (%RSD > 15%).

FA87472-6 for Bromoform: Associated CCV outside of control limits low.

FA87472-6 for Dibromochloromethane: Associated BS recovery outside control limits low.

FA87472-7 for Bromoform: Associated CCV outside of control limits low.

FA87472-7 for Dibromochloromethane: Associated BS recovery outside control limits low.

SGS Orlando certifies that this report meets the project requirements for analytical data produced for the samples as received at SGS Orlando and as stated on the COC. SGS Orlando certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the SGS Orlando Quality Manual except as noted above. This report is to be used in its entirety. SGS Orlando is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Tetra Tech NUS **Job No:** FA88388

Site: NASA-LC 34, Freedom Rd, CCAFS, FL **Report Date:** 9/3/2021 3:41:26 PM

On 08/26/2021, 7 Sample(s), 0 Trip Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 2.4 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of FA88388 was Assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V1P3288

Sample(s) FA88211-2MS, FA88211-2MSD were used as the QC samples indicated.

Sample(s) FA88388-2, FA88388-4 have compound(s) reported with a "V" qualifier, indicating analyte is found in the associated method blank.

Matrix Spike Recovery(s) for 1,4-Dichlorobenzene, Chloroethane, Methylene Chloride are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for 1,4-Dichlorobenzene, Chloroethane, Methylene Chloride are outside control limits. Probable cause is due to matrix interference.

Matrix Spike /Matrix Spike Duplicate Recovery(s) for Benzene, Chlorobenzene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

FA88388-1 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA88388-2 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA88388-2 for Methylene Chloride: Suspected laboratory contaminant.

FA88388-3 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA88388-4 for Carbon Disulfide: Associated CCV outside of control limits high, sample was ND.

FA88388-4 for Methylene Chloride: Suspected laboratory contaminant.

Matrix: AQ **Batch ID:** V2P3290

Sample(s) FA88418-1MS, FA88418-1MSD were used as the QC samples indicated.

Matrix: AQ **Batch ID:** VC6082

Sample(s) FA88207-4MS, FA88207-4MSD were used as the QC samples indicated.

VC6082-MB: Sample was treated with an anti-foaming agent.

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

74-83-9	Methyl Bromide	5000 U	13000	5000	ug/l	
74-87-3	Methyl Chloride	1300 U	5000	1300	ug/l	
75-09-2	Methylene Chloride	5000 U	13000	5000	ug/l	
108-10-1	4-Methyl-2-pentanone (MIBK)	2500 U	13000	2500	ug/l	
1634-04-4	Methyl Tert Butyl Ether	570 U	2500	570	ug/l	
100-42-5	Styrene	560 U	2500	560	ug/l	
630-20-6	1,1,1,2-Tetrachloroethane	690 U	2500	690	ug/l	
79-34-5	1,1,2,2-Tetrachloroethane	750 U	2500	750	ug/l	
127-18-4	Tetrachloroethylene	540 U	2500	540	ug/l	
108-88-3	Toluene	750 U	2500	750	ug/l	
87-61-6	1,2,3-Trichlorobenzene	1500 U	5000	1500	ug/l	
120-82-1	1,2,4-Trichlorobenzene	1300 U	5000	1300	ug/l	
71-55-6	1,1,1-Trichloroethane	620 U	2500	620	ug/l	
79-00-5	1,1,2-Trichloroethane	1200 U	2500	1200	ug/l	
79-01-6	Trichloroethylene	126000	2500	860	ug/l	
75-69-4	Trichlorofluoromethane	1300 U	5000	1300	ug/l	
75-01-4	Vinyl Chloride	1000 U	2500	1000	ug/l	
1330-20-7	Xylene (total)	1800 U	7500	1800	ug/l	

CAS No.	Surrogate Recoveries	Run# 1	Run# 2	Limits
1868-53-7	Dibromofluoromethane	94%		83-118%
17060-07-0	1,2-Dichloroethane-D4	99%		79-125%
2037-26-5	Toluene-D8	100%		85-112%
460-00-4	4-Bromofluorobenzene	104%		83-118%

U = Not detected MDL = Method Detection Limit
PQL = Practical Quantitation Limit
L = Indicates value exceeds calibration range
I = Result > = MDL but < PQL J = Estimated value
V = Indicates analyte found in associated method blank
N = Indicates presumptive evidence of a compound

SGS Sample Receipt Summary

Job Number: FA88388 **Client:** TETRA TECH **Project:** 112G08985

Date / Time Received: 8/26/2021 6:55:00 PM **Delivery Method:** ALSE **Airbill #'s:**

Therm ID: IR 1; **Therm CF:** 0.2; **# of Coolers:** 1

Cooler Temps (Raw Measured) °C: Cooler 1: (2.2);

Cooler Temps (Corrected) °C: Cooler 1: (2.4);

Cooler Information	Y	or	N
1. Custody Seals Present	☑		☐
2. Custody Seals Intact	☑		☐
3. Temp criteria achieved	☑		☐
4. Cooler temp verification	IR Gun		
5. Cooler media	Ice (Bag)		

Trip Blank Information	Y	or	N	N/A
1. Trip Blank present / cooler	☐		☑	☐
2. Trip Blank listed on COC	☐		☑	☐

	W	or	S	N/A
3. Type Of TB Received	☐		☐	☑

Sample Information	Y	or	N	N/A
1. Sample labels present on bottles	☑		☐	
2. Samples preserved properly	☑		☐	
3. Sufficient volume/containers recvd for analysis:	☑		☐	
4. Condition of sample	Intact			
5. Sample recvd within HT	☑		☐	
6. Dates/Times/IDs on COC match Sample Label	☑		☐	
7. VOCs have headspace	☐		☑	☐
8. Bottles received for unspecified tests	☐		☑	
9. Compositing instructions clear	☐		☐	☑
10. Voa Soil Kits/Jars received past 48hrs?	☐		☐	☑
11. % Solids Jar received?	☐		☐	☑
12. Residual Chlorine Present?	☐		☐	☑

RE: Laboratory Results for
Project Number: 112G08985, Project Name/Desc: NASA KSC LC34
ENCO Workorder(s): AE05696

Dear Mark Jonnet,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Tuesday, September 14, 2021.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

ANALYTICAL RESULTS

Description: LC34-RW9A-20210914 **Lab Sample ID:** AE05696-08 **Received:** 09/14/21 15:00

Matrix: Ground Water **Sampled:** 09/14/21 09:10 **Work Order:** AE05696

Project: NASA KSC LC34 **Sampled By:** Chuck Sorden/Dan Forester

Volatile Organic Compounds by GCMS

^ - ENCO Orlando certified analyte [NELAC E83182]

Analyte [CAS Number]	Results	Flag	Units	DF	MDL	PQL	Batch	Method	Analyzed	By	Notes
1,1,1-Trichloroethane [71-55-6]^	40	U	ug/L	50	40	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
1,1,2,2-Tetrachloroethane [79-34-5]^	27	U	ug/L	50	27	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
1,1,2-Trichloroethane [79-00-5]^	38	U	ug/L	50	38	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
1,1-Dichloroethane [75-34-3]^	31	U	ug/L	50	31	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
1,1-Dichloroethene [75-35-4]^	47	U	ug/L	50	47	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
1,2,4-Trichlorobenzene [120-82-1]^	35	U	ug/L	50	35	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
1,2-Dibromo-3-chloropropane [96-12-8]^	48	U	ug/L	50	48	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
1,2-Dibromoethane [106-93-4]^	39	U	ug/L	50	39	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
1,2-Dichlorobenzene [95-50-1]^	36	U	ug/L	50	36	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
1,2-Dichloroethane [107-06-2]^	32	U	ug/L	50	32	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
1,2-Dichloropropane [78-87-5]^	40	U	ug/L	50	40	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
1,3-Dichlorobenzene [541-73-1]^	38	U	ug/L	50	38	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
1,4-Dichlorobenzene [106-46-7]^	38	U	ug/L	50	38	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
2-Butanone [78-93-3]^	220	U	ug/L	50	220	620	1I22007	EPA 8260D	09/22/21 14:02	nmc	
2-Hexanone [591-78-6]^	120	U	ug/L	50	120	620	1I22007	EPA 8260D	09/22/21 14:02	nmc	
4-Methyl-2-pentanone [108-10-1]^	120	U	ug/L	50	120	620	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Acetone [67-64-1]^	500	U	ug/L	50	500	1200	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Benzene [71-43-2]^	36	U	ug/L	50	36	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Bromodichloromethane [75-27-4]^	26	U	ug/L	50	26	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Bromoform [75-25-2]^	38	U	ug/L	50	38	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Bromomethane [74-83-9]^	48	U	ug/L	50	48	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	QV-01
Carbon disulfide [75-15-0]^	120	U	ug/L	50	120	620	1I22007	EPA 8260D	09/22/21 14:02	nmc	QL-02, QV-01
Carbon Tetrachloride [56-23-5]^	47	U	ug/L	50	47	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Chlorobenzene [108-90-7]^	36	U	ug/L	50	36	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Chloroethane [75-00-3]^	49	U	ug/L	50	49	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	QV-01
Chloroform [67-66-3]^	40	U	ug/L	50	40	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Chloromethane [74-87-3]^	41	U	ug/L	50	41	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	QV-01
cis-1,2-Dichloroethene [156-59-2]^	**4200**		ug/L	50	26	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
cis-1,3-Dichloropropene [10061-01-5]^	30	U	ug/L	50	30	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Cyclohexane [110-82-7]^	46	U	ug/L	50	46	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Dibromochloromethane [124-48-1]^	25	U	ug/L	50	25	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Dichlorodifluoromethane [75-71-8]^	37	U	ug/L	50	37	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	QV-01
Ethylbenzene [100-41-4]^	34	U	ug/L	50	34	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Freon 113 [76-13-1]^	36	U	ug/L	50	36	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Isopropylbenzene [98-82-8]^	34	U	ug/L	50	34	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Methyl acetate [79-20-9]^	48	U	ug/L	50	48	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Methylene Chloride [75-09-2]^	120	U	ug/L	50	120	620	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Methyl-tert-Butyl Ether [1634-04-4]^	30	U	ug/L	50	30	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Styrene [100-42-5]^	30	U	ug/L	50	30	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Tetrachloroethene [127-18-4]^	38	U	ug/L	50	38	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
Toluene [108-88-3]^	36	U	ug/L	50	36	120	1I22007	EPA 8260D	09/22/21 14:02	nmc	
trans-1,2-Dichloroethene [156-60-5]^	**86**	I	ug/L	50	36	120	1I22007	EPA 8260D	09/22/21 14:02	nmc

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
QL-02	The associated laboratory control sample exhibited high bias; since the result is ND, there is no impact.
QM-19	The spike recovery was outside acceptance limits for the MS and/or MSD.
QV-01	The associated continuing calibration verification standard exhibited high bias; since the result is ND, there is no impact.

RE: Laboratory Results for
Project Number: 112G08985, Project Name/Desc: NASA KSC LC34
ENCO Workorder(s): AE08059

Dear Mark Jonnet,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Thursday, October 7, 2021.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
QB-02	The method blank contains analyte at a concentration above the MDL and/or greater than one-half the MRL. The analyte was not detected in the sample.
QL-02	The associated laboratory control sample exhibited high bias; since the result is ND, there is no impact.
QM-11	Precision between duplicate matrix spikes of the same sample was outside acceptance limits.
QM-19	The spike recovery was outside acceptance limits for the MS and/or MSD.
QV-01	The associated continuing calibration verification standard exhibited high bias; since the result is ND, there is no impact.

RE: Laboratory Results for
Project Number: 112G08985, Project Name/Desc: NASA KSC LC34
ENCO Workorder(s): AE07280

Dear Mark Jonnet,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Thursday, November 11, 2021.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
QL-02	The associated laboratory control sample exhibited high bias; since the result is ND, there is no impact.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QM-17	Matrix spike recovery was outside acceptance limits due to high concentrations of analyte in source sample.
QM-19	The spike recovery was outside acceptance limits for the MS and/or MSD.
QV-01	The associated continuing calibration verification standard exhibited high bias; since the result is ND, there is no impact.

RE: Laboratory Results for
Project Number: 112G08985, Project Name/Desc: NASA KSC LC34
ENCO Workorder(s): AE09872

Dear Mark Jonnet,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Tuesday, December 14, 2021.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QV-01	The associated continuing calibration verification standard exhibited high bias; since the result is ND, there is no impact.

RE: Laboratory Results for
Project Number: 112G08985, Project Name/Desc: NASA KSC LC34
ENCO Workorder(s): AE09870

Dear Mark Jonnet,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Tuesday, December 21, 2021.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*****	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
J-01	Result may be biased high due to positive results in the associated method blank at a concentration above the MDL and/or greater than one-half the MRL.
O-01	This compound is a common laboratory contaminant.
QB-01	The method blank had a positive result for the analyte; however, the concentration in the method blank is less than 10% of the sample result. There is minimal impact to the data.

RE: Laboratory Results for
Project Number: 112G08985, Project Name/Desc: NASA KSC LC34
ENCO Workorder(s): AE10221

Dear Mark Jonnet,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Monday, January 17, 2022.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
QL-02	The associated laboratory control sample exhibited high bias; since the result is ND, there is no impact.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QV-01	The associated continuing calibration verification standard exhibited high bias; since the result is ND, there is no impact.

RE: Laboratory Results for
Project Number: 112G08985, Project Name/Desc: NASA KSC LC34
ENCO Workorder(s): AF00827

Dear Mark Jonnet,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Monday, February 14, 2022.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
QL-02	The associated laboratory control sample exhibited high bias; since the result is ND, there is no impact.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QV-01	The associated continuing calibration verification standard exhibited high bias; since the result is ND, there is no impact.

RE: Laboratory Results for
Project Number: 112G08985, Project Name/Desc: NASA KSC LC34
ENCO Workorder(s): AF02214

Dear Mark Jonnet,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Tuesday, March 22, 2022.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
A-07	Analyte biased low in LCS but detected in the reporting limit standard. Since the analyte in the associated sample was not detected, there is no impact on data quality.
QB-02	The method blank contains analyte at a concentration above the MDL and/or greater than one-half the MRL. The analyte was not detected in the sample.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QM-11	Precision between duplicate matrix spikes of the same sample was outside acceptance limits.
QV-01	The associated continuing calibration verification standard exhibited high bias; since the result is ND, there is no impact.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client:	Tetra Tech NUS	**Job No:**	FA84993
Site:	NASA-LC 34, Freedom Rd, CCAFS, FL	**Report Date**	5/7/2021 3:31:25 PM

8 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were collected on 04/23/2021 and were received at SGS North America Inc - Orlando on 04/23/2021 properly preserved, at 1 Deg. C and intact. These Samples received an SGS Orlando job number of FA84993. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section. Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V1A1461

All samples were analyzed within the recommended method holding time.

Sample(s) FA84993-8MS, FA84993-8MSD were used as the QC samples indicated.

All method blanks for this batch meet method specific criteria.

For Sample(s) FA84993-1, FA84993-2, FA84993-3, FA84993-4, FA84993-5, FA84993-6, FA84993-7, FA84993-8 are associated with an CCV that has a recovery for 2-Butanone (MEK), Acetone, Dichlorodifluoromethane, 2-Butanone (MEK) outside low control limit.

FA84993-1 for 2-Butanone (MEK): Associated CCV outside of control limits low.

FA84993-1 for Acetone: Associated CCV outside of control limits low.

FA84993-1 for Dichlorodifluoromethane: Associated CCV outside of control limits low.

FA84993-2 for 2-Butanone (MEK): Associated CCV outside of control limits low.

FA84993-2 for Acetone: Associated CCV outside of control limits low.

FA84993-2 for Dichlorodifluoromethane: Associated CCV outside of control limits low.

FA84993-3 for 2-Butanone (MEK): Associated CCV outside of control limits low.

FA84993-3 for Acetone: Associated CCV outside of control limits low.

FA84993-3 for Dichlorodifluoromethane: Associated CCV outside of control limits low.

FA84993-4 for 2-Butanone (MEK): Associated CCV outside of control limits low.

FA84993-4 for Acetone: Associated CCV outside of control limits low.

FA84993-4 for Dichlorodifluoromethane: Associated CCV outside of control limits low.

FA84993-5 for 2-Butanone (MEK): Associated CCV outside of control limits low.

FA84993-5 for Acetone: Associated CCV outside of control limits low.

FA84993-5 for Dichlorodifluoromethane: Associated CCV outside of control limits low.

FA84993-6 for 2-Butanone (MEK): Associated CCV outside of control limits low.

FA84993-6 for Acetone: Associated CCV outside of control limits low.

FA84993-6 for Dichlorodifluoromethane: Associated CCV outside of control limits low.

FA84993-7 for 2-Butanone (MEK): Associated CCV outside of control limits low.

FA84993-7 for Acetone: Associated CCV outside of control limits low.

FA84993-7 for Dichlorodifluoromethane: Associated CCV outside of control limits low.

FA84993-8 for 2-Butanone (MEK): Associated CCV outside of control limits low.

FA84993-8 for Acetone: Associated CCV outside of control limits low.

FA84993-8 for Dichlorodifluoromethane: Associated CCV outside of control limits low.

SGS Orlando certifies that this report meets the project requirements for analytical data produced for the samples as received at SGS Orlando and as stated on the COC. SGS Orlando certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the SGS Orlando Quality Manual except as noted above. This report is to be used in its entirety. SGS Orlando is not responsible for any assumptions of data quality if partial data packages are used.

SGS Sample Receipt Summary

Job Number: FA84993 **Client:** TETRA TECH **Project:** CC34

Date / Time Received: 4/23/2021 5:49:00 PM **Delivery Method:** COURIER **Airbill #'s:**

Therm ID: IR 1; **Therm CF:** -1.8; **# of Coolers:** 1

Cooler Temps (Raw Measured) °C: Cooler 1: (2.8);

Cooler Temps (Corrected) °C: Cooler 1: (1.0);

Cooler Information	Y	or	N
1. Custody Seals Present	☑		☐
2. Custody Seals Intact	☑		☐
3. Temp criteria achieved	☑		☐
4. Cooler temp verification	IR Gun		
5. Cooler media	Ice (Bag)		

Trip Blank Information	Y	or	N	N/A
1. Trip Blank present / cooler	☐		☐	☑
2. Trip Blank listed on COC	☐		☐	☑

	W	or	S	N/A
3. Type Of TB Received	☐		☐	☑

Sample Information	Y	or	N	N/A
1. Sample labels present on bottles	☑		☐	
2. Samples preserved properly	☑		☐	
3. Sufficient volume/containers recvd for analysis:	☑		☐	
4. Condition of sample	Intact			
5. Sample recvd within HT	☑		☐	
6. Dates/Times/IDs on COC match Sample Label	☑		☐	
7. VOCs have headspace	☐		☑	☐
8. Bottles received for unspecified tests	☐		☑	
9. Compositing instructions clear	☐		☐	☑
10. Voa Soil Kits/Jars received past 48hrs?	☐		☐	☑
11. % Solids Jar received?	☐		☐	☑
12. Residual Chlorine Present?	☐		☐	☑

Technical Report for

Tetra Tech NUS

NASA-LC 34, Freedom Rd, CCAFS, FL

112G08985

SGS Job Number: FA85173

Sampling Dates: 04/28/21 - 04/29/21

Report to:

Tetra-Tech, Inc.
661 Andersen Dr Foster Plaza 7
Pittsburgh, PA 15220
mark.jonnet@tetratech.com

ATTN: Mark Jonnet

Total number of pages in report: **58**

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Program and/or state specific certification programs as applicable.

Norm Farmer
Technical Director

Client Service contact: Andrea Colby 407-425-6700

Certifications: FL(E83510), LA(03051), KS(E-10327), NC(573), NJ(FL002), NY(12022), SC(96038001) DoD ELAP(ANAB L2229), AZ(AZ0806), CA(2937), TX(T104704404), PA(68-03573), VA(460177), AL, AK, AR, CT, IA, KY, MA, MI. MS, ND, NH, NV, OK, OR, UT, VT, WA, WV

Test results relate only to samples analyzed.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Tetra Tech NUS **Job No:** FA85173

Site: NASA-LC 34, Freedom Rd, CCAFS, FL **Report Date** 5/25/2021 3:24:25 PM

16 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were collected on between 04/28/2021 and 04/29/2021 and were received at SGS North America Inc - Orlando on 04/30/2021 properly preserved, at 0.4 Deg. C and intact. These Samples received an SGS Orlando job number of FA85173. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section. Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V1A1467

All samples were analyzed within the recommended method holding time.

Sample(s) FA85072-8MS, FA85072-8MSD were used as the QC samples indicated.

All method blanks for this batch meet method specific criteria.

V1A1467-BS for Freon 113: Sporadic marginal failure.

Blank Spike Recovery(s) for Freon 113 are outside control limits.

FA85173-1 for Freon 113: Associated BS recovery outside control limits low.

FA85173-2 for Freon 113: Associated BS recovery outside control limits low.

FA85173-3 for Freon 113: Associated BS recovery outside control limits low.

FA85173-4 for Freon 113: Associated BS recovery outside control limits low.

FA85173-5 for Freon 113: Associated BS recovery outside control limits low.

FA85173-6 for Freon 113: Associated BS recovery outside control limits low.

FA85173-7 for Freon 113: Associated BS recovery outside control limits low.

FA85173-8 for Freon 113: Associated BS recovery outside control limits low.

FA85173-9 for Freon 113: Associated BS recovery outside control limits low.

Matrix: AQ **Batch ID:** V1A1470

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

V1A1470-MB: Sample was treated with an anti-foaming agent.

Sample(s) FA85182-2MS, FA85182-2MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for 1,1,1,2-Tetrachloroethane, 1,1,1-Trichloroethane, 1,1,2,2-Tetrachloroethane, 1,1-Dichloroethane, 1,1-Dichloroethylene, 1,2,3-Trichlorobenzene, 1,2-Dibromo-3-chloropropane, 1,2-Dibromoethane, 1,2-Dichlorobenzene, 1,2-Dichloropropane, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone (MIBK), Acetone, Benzene, Bromodichloromethane, Bromoform, Carbon Disulfide, Carbon Tetrachloride, Chlorobenzene, Chloroethane, Chloroform, cis-1,2-Dichloroethylene, Cyclohexane, Ethylbenzene, Isopropylbenzene, Methyl Acetate, Methylene Chloride, Styrene, Tetrachloroethylene, Toluene, trans-1,2-Dichloroethylene, Trichloroethylene, Trichlorofluoromethane, Xylene (total) are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for 1,1,1-Trichloroethane, 1,1,2,2-Tetrachloroethane, 1,1-Dichloroethane, 1,1-Dichloroethylene, 1,2,3-Trichlorobenzene, 1,2-Dibromo-3-chloropropane, 1,2-Dibromoethane, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone (MIBK), Acetone, Benzene, Bromoform, Carbon Tetrachloride, Chlorobenzene, Chloroethane, Chloroform, cis-1,2-Dichloroethylene, Ethylbenzene, Isopropylbenzene, Methyl Acetate, Methyl Tert Butyl Ether, Styrene, Tetrachloroethylene, Toluene, trans-1,2-Dichloroethylene, Trichloroethylene, Xylene (total) are outside control limits. Probable cause is due to matrix interference.

RPD(s) for MSD for Benzene, Chlorobenzene, Ethylbenzene, Toluene, Trichloroethylene, Trichlorofluoromethane are outside control limits for sample FA85182-2MSD. Probable cause is due to sample non-homogeneity.

Sample(s) FA85173-16 have surrogates outside control limits.

Sample(s) FA85173-10, FA85173-11, FA85173-12, FA85173-13, FA85173-14, FA85173-15, FA85173-16 are associated with an CCV that has a recovery for 2-Butanone (MEK), 2-Hexanone, Acetone, 2-Butanone (MEK) outside low control limit.

FA85173-10 for 2-Butanone (MEK): Associated CCV outside of control limits low.

FA85173-10: Sample was treated with an anti-foaming agent.

FA85173-11 for 2-Butanone (MEK): Associated CCV outside of control limits low.

FA85173-11: Sample was treated with an anti-foaming agent.

FA85173-12 for 2-Butanone (MEK): Associated CCV outside of control limits low.

FA85173-12: Sample was treated with an anti-foaming agent.

FA85173-13 for 2-Butanone (MEK): Associated CCV outside of control limits low.

FA85173-13: Sample was treated with an anti-foaming agent.

FA85173-14 for 2-Butanone (MEK): Associated CCV outside of control limits low.

FA85173-14: Sample was treated with an anti-foaming agent.

FA85173-15 for 2-Butanone (MEK): Associated CCV outside of control limits low.

FA85173-15: Sample was treated with an anti-foaming agent.

FA85173-16 for 1,2-Dichloroethane-D4: Outside control limits. Confirmed by reanalysis.

FA85173-16: Sample was treated with an anti-foaming agent. No ECC available for this run.

Matrix: AQ **Batch ID:** VY2382

FA85173-16: Sample re-analyzed beyond hold time; reported results are considered minimum values. Confirmation run for surrogate recoveries.

SGS Orlando certifies that this report meets the project requirements for analytical data produced for the samples as received at SGS Orlando and as stated on the COC. SGS Orlando certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the SGS Orlando Quality Manual except as noted above. This report is to be used in its entirety. SGS Orlando is not responsible for any assumptions of data quality if partial data packages are used.

2037-26-5	Toluene-D8	103%		85-112%
460-00-4	4-Bromofluorobenzene	100%		83-118%

(a) Sample was treated with an anti-foaming agent.
(b) Associated CCV outside of control limits low.

U = Not detected MDL = Method Detection Limit I = Result > = MDL but < PQL J = Estimated value
PQL = Practical Quantitation Limit V = Indicates analyte found in associated method blank
L = Indicates value exceeds calibration range N = Indicates presumptive evidence of a compound

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Tetra Tech NUS **Job No:** FA85181

Site: NASA-LC 34, Freedom Rd, CCAFS, FL **Report Date** 5/26/2021 6:24:11 PM

9 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were collected on 04/30/2021 and were received at SGS North America Inc - Orlando on 04/30/2021 properly preserved, at 1.8 Deg. C and intact. These Samples received an SGS Orlando job number of FA85181. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section. Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V5E1299

All samples were analyzed within the recommended method holding time.

Sample(s) FA85181-9MS, FA85181-9MSD were used as the QC samples indicated.

All method blanks for this batch meet method specific criteria.

Blank Spike Recovery(s) for Acetone, Methyl Acetate are outside control limits.

Matrix Spike Recovery(s) for 1,1,1-Trichloroethane, 1,1-Dichloroethane, 1,1-Dichloroethylene, 1,2-Dichloroethane, Acetone, Methyl Acetate, Trichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

Matrix Spike Duplicate Recovery(s) for 1,1,1-Trichloroethane, 1,2-Dichloroethane, Carbon Tetrachloride, Trichloroethylene are outside control limits. Probable cause is due to matrix interference.

RPD(s) for MSD for 1,2,3-Trichlorobenzene, 2-Butanone (MEK), Acetone, Bromoform, Methyl Acetate are outside control limits for sample FA85181-9MSD. Probable cause is due to sample non-homogeneity.

Sample(s) FA85181-7, FA85181-9 have surrogates outside control limits.

FA85181-2 for Methyl Acetate: Associated BS recovery outside control limits high; however sample is ND.

FA85181-7 for Acetone: Associated CCV and BS recovery outside control limits high; however sample is ND. Associated CCV outside of control limits high, sample was ND.

FA85181-1 for 1,1,1-Trichloroethane: Associated CCV outside of control limits high, sample was ND.

FA85181-1 for Methyl Acetate: Associated BS recovery outside control limits high; however sample is ND.

FA85181-1 for Acetone: Associated BS recovery outside control limits high; however sample is ND. Associated CCV outside of control limits high, sample was ND.

FA85181-4 for Carbon Tetrachloride: Associated CCV outside of control limits high, sample was ND.

FA85181-7 for Carbon Tetrachloride: Associated CCV outside of control limits high, sample was ND. Associated CCV outside of control limits high, sample was ND.

FA85181-4 for 1,1,1-Trichloroethane: Associated CCV outside of control limits high, sample was ND.

FA85181-2 for Acetone: Associated BS recovery outside control limits high; however sample is ND. Associated CCV outside of control limits high, sample was ND.

FA85181-2 for 1,1,1-Trichloroethane: Associated CCV outside of control limits high, sample was ND.

FA85181-2 for Carbon Tetrachloride: Associated CCV outside of control limits high, sample was ND.

FA85181-2 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA85181-3 for Methyl Acetate: Associated BS recovery outside control limits high; however sample is ND.

FA85181-3 for Acetone: Associated BS recovery outside control limits high; however sample is ND. Associated CCV outside of control limits high, sample was ND.

FA85181-3 for 1,1,1-Trichloroethane: Associated CCV outside of control limits high, sample was ND.

FA85181-3 for Carbon Tetrachloride: Associated CCV outside of control limits high, sample was ND.

MS Volatiles By Method SW846 8260B

Matrix: AQ **Batch ID:** V5E1299

FA85181-3 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA85181-4 for Methyl Acetate: Associated BS recovery outside control limits high; however sample is ND.

FA85181-1 for Carbon Tetrachloride: Associated CCV outside of control limits high, sample was ND.

FA85181-7 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND. Associated CCV outside of control limits high, sample was ND.

FA85181-4 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA85181-5 for Methyl Acetate: Associated BS recovery outside control limits high; however sample is ND.

FA85181-5 for Acetone: Associated CCV and BS recovery outside control limits high; however sample is ND.

FA85181-5 for 1,1,1-Trichloroethane: Associated CCV outside of control limits high, sample was ND.

FA85181-5 for Carbon Tetrachloride: Associated CCV outside of control limits high, sample was ND.

FA85181-5 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA85181-6 for Methyl Acetate: Associated BS recovery outside control limits high; however sample is ND.

FA85181-6 for Acetone: Associated BS recovery outside control limits high; however sample is ND. Associated CCV outside of control limits high, sample was ND.

FA85181-6 for 1,1,1-Trichloroethane: Associated CCV outside of control limits high, sample was ND.

FA85181-6 for Carbon Tetrachloride: Associated CCV outside of control limits high, sample was ND.

FA85181-6 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA85181-7 for Methyl Acetate: Associated BS recovery outside control limits high; however sample is ND.

FA85181-9 for 1,2-Dichloroethane-D4: Outside control limits. Confirmed by reanalysis.

FA85181-1 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA85181-8 for Acetone: Associated BS recovery outside control limits high; however sample is ND. Associated CCV outside of control limits high, sample was ND.

FA85181-9 for Carbon Tetrachloride: Associated CCV outside of control limits high, sample was ND.

FA85181-9 for 1,1,1-Trichloroethane: Associated CCV outside of control limits high, sample was ND.

FA85181-9 for Acetone: Associated BS recovery outside control limits high; however sample is ND. Associated CCV outside of control limits high, sample was ND.

FA85181-9 for Methyl Acetate: Associated BS recovery outside control limits high; however sample is ND.

FA85181-8 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA85181-7 for 1,1,1-Trichloroethane: Associated CCV outside of control limits high, sample was ND. Associated CCV outside of control limits high, sample was ND.

FA85181-8 for 1,1,1-Trichloroethane: Associated CCV outside of control limits high, sample was ND.

FA85181-4 for Acetone: Associated CCV and BS recovery outside control limits high; however sample is ND.

FA85181-8 for Methyl Acetate: Associated BS recovery outside control limits high; however sample is ND.

FA85181-7 for 1,2-Dichloroethane-D4: Outside control limits. Confirmed by reanalysis.

FA85181-9 for Trichlorofluoromethane: Associated CCV outside of control limits high, sample was ND.

FA85181-8 for Carbon Tetrachloride: Associated CCV outside of control limits high, sample was ND.

Matrix: AQ **Batch ID:** VY2382

FA85181-6: Sample re-analyzed beyond hold time; reported results are considered minimum values. Confirmation run.

FA85181-7: Sample re-analyzed beyond hold time; reported results are considered minimum values. Confirmation run for surrogate recoveries.

FA85181-9: Sample re-analyzed beyond hold time; reported results are considered minimum values. Confirmation run.

SGS Orlando certifies that this report meets the project requirements for analytical data produced for the samples as received at SGS Orlando and as stated on the COC. SGS Orlando certifies that the data meets the Data Quality Objectives for precision,accuracy and completeness as specified in the SGS Orlando Quality Manual except as noted above. This report is to be used in its entirety. SGS Orlando is not responsible for any assumptions of data quality if partial data packages are used.

Job Number: FA85181 **Client:** TETRA TECH **Project:** 112G08985

Date / Time Received: 4/30/2021 5:09:00 PM **Delivery Method:** COURIER **Airbill #'s:**

Therm ID: IR 1; **Therm CF:** -1.8; **# of Coolers:** 1

Cooler Temps (Raw Measured) °C: Cooler 1: (3.6);

Cooler Temps (Corrected) °C: Cooler 1: (1.8);

Cooler Information	Y	or	N
1. Custody Seals Present	☑		☐
2. Custody Seals Intact	☑		☐
3. Temp criteria achieved	☑		☐
4. Cooler temp verification	IR Gun		
5. Cooler media	Ice (Bag)		

Trip Blank Information	Y	or	N	N/A
1. Trip Blank present / cooler	☐		☐	☑
2. Trip Blank listed on COC	☐		☐	☑

	W	or	S	N/A
3. Type Of TB Received	☐		☐	☑

Sample Information	Y	or	N	N/A
1. Sample labels present on bottles	☑		☐	
2. Samples preserved properly	☑		☐	
3. Sufficient volume/containers recvd for analysis:	☑		☐	
4. Condition of sample	Intact			
5. Sample recvd within HT	☑		☐	
6. Dates/Times/IDs on COC match Sample Label	☑		☐	
7. VOCs have headspace	☐		☑	☐
8. Bottles received for unspecified tests	☐		☑	
9. Compositing instructions clear	☐		☐	☑
10. Voa Soil Kits/Jars received past 48hrs?	☐		☐	☑
11. % Solids Jar received?	☐		☐	☑
12. Residual Chlorine Present?	☐		☐	☑

RE: Laboratory Results for
Project Number: 112G08985, Project Name/Desc: NASA KSC LC34
ENCO Workorder(s): AE07771

Dear Mark Jonnet,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Tuesday, October 5, 2021.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
QL-02	The associated laboratory control sample exhibited high bias; since the result is ND, there is no impact.
QM-19	The spike recovery was outside acceptance limits for the MS and/or MSD.
QV-01	The associated continuing calibration verification standard exhibited high bias; since the result is ND, there is no impact.

RE: Laboratory Results for
Project Number: 112G08985, Project Name/Desc: NASA KSC LC34
ENCO Workorder(s): AE08058

Dear Mark Jonnet,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Thursday, October 7, 2021.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
QL-02	The associated laboratory control sample exhibited high bias; since the result is ND, there is no impact.
QM-11	Precision between duplicate matrix spikes of the same sample was outside acceptance limits.
QM-19	The spike recovery was outside acceptance limits for the MS and/or MSD.
QS-03	Surrogate recovery outside acceptance limits
QV-01	The associated continuing calibration verification standard exhibited high bias; since the result is ND, there is no impact.

RE: Laboratory Results for
Project Number: 112G08985, Project Name/Desc: NASA KSC LC34
ENCO Workorder(s): AE08103

Dear Mark Jonnet,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Friday, October 8, 2021.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
QL-02	The associated laboratory control sample exhibited high bias; since the result is ND, there is no impact.
QM-11	Precision between duplicate matrix spikes of the same sample was outside acceptance limits.
QM-19	The spike recovery was outside acceptance limits for the MS and/or MSD.
QV-01	The associated continuing calibration verification standard exhibited high bias; since the result is ND, there is no impact.

RE: Laboratory Results for
Project Number: 112G08985, Project Name/Desc: NASA KSC LC34
ENCO Workorder(s): AE10179

Dear Mark Jonnet,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Thursday, December 23, 2021.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
QV-01	The associated continuing calibration verification standard exhibited high bias; since the result is ND, there is no impact.

RE: Laboratory Results for
Project Number: 112G08985, Project Name/Desc: NASA KSC LC34
ENCO Workorder(s): AF00910

Dear Mark Jonnet,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Friday, February 4, 2022.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QV-01	The associated continuing calibration verification standard exhibited high bias; since the result is ND, there is no impact.

Laboratory data qualifers not shown

TCE = trichloroethene
cDCE = cis-1,2-dichloroethene
tDCE = trans-1,2-dichloroethene
VC = vinyl chloride
VOCs = volatile organic compounds
µg/L = micrograms per liter

APPENDIX E

JUNE 2022 KSCRT MEETING MINUTES AND DECISIONS

(PROVIDED IN ELECTRONIC VERSION ONLY)

Revision 1 Meeting Minutes for June 28th, 2022

Attendees:

1. Bruce Moore/FDEP
2. Mike Deliz/NASA
3. Ryan O'Meara/NASA
4. Deda Johansen/NASA
5. Anne Chrest/NASA
6. Natasha Darre/NASA
7. Michelle Moore/NEMCON
8. Mark Jonnet/Tetra Tech
9. Chris Pike/Tetra Tech
10. James Lloyd/ Tetra Tech
11. Sarah Damphousse/Tetra Tech
12. Chris Neumann/Tetra Tech
13. Jennifer Joyal/AECOM
14. Richard Smith/HGL
15. Carol Cady/HGL
16. Robert Lynch/HGL
17. Tim Jellett/HGL
18. Jason Bublitz/HGL

2206-M01 Michelle Moore/NEMCON

Meeting Minutes and Miscellaneous Items

Team consensus was reached that Revision 1 of the meeting minutes and action/decision items for the May 2022 Team meeting will become final. Team members acknowledged and did not object to the fact that these meeting minutes may become public as part of a final report at a later date **(2206-D01).**

Open action items were reviewed and updated. The following action items were closed:

Center-Wide Per- and Polyfluoroalkyl Substances (PRL #237) Phase III Solid Waste Management Unit Site Assessment and Confirmatory Sampling Report Summary, January 2022: NASA owes FDEP an update on Q6 Radar Station (SWMU #112), so they will put together an ADP to review the RFI they completed.

The contract was modified and NASA will present results for this in a future presentation **(2201-A03).**

Wilson Corners (SWMU #001) 2021 Annual Long-Term Monitoring Update, May 2022: FDEP stated that VOC concentrations are increasing to the west but the natural attenuation default concentrations (NADC) footprint hasn't changed much. AECOM confirmed that was correct. Based predominantly on DPT data, the existing wells are appropriate for the extent of the low-concentration plume (LCP). The performance monitoring wells are

more on the interior of the plume and will give us a better idea of what is going on with the high concentration plume (HCP). FDEP inquired what the vertical head difference of the zones are that are being referred to. AECOM will look into this question and provide the information.

AECOM provided vertical head data for 2019, 2020 and 2021 to FDEP on May 5, 2022 **(2205-A02).**

Results: Decision Item 2206-D01

2206-M02 Bruce Moore /FDEP

FDEP Program Update, May 2022

Goal: The objective is to summarize any changes at the Florida Department of Environmental Protection (FDEP) and provide pertinent news since the last Kennedy Space Center (KSC) Remediation Team (KSCRT) meeting.

Discussion: Bruce Moore provided a quick update on the program.

Update provided regarding FDEP staff: The Federal Facilities Branch hired Billy Hessman internally and he will take over Homestead BRAC (Base Realignment and Closure) sites and the active Homestead Air Force Reserve Base from Bruce. The Department also hired a Remediation Project Manager (RPM) named Crystal Boutwell, and still needs to fill a professional engineer 3 vacancy. FDEP received approval by the governor to hire a Professional Geologist II and Environmental Consultant (senior positions). A contract employee, Annie Paladino, is updating and improving the Environmental Restoration Integrated Cleanup (ERIC) database.

FDEP continues to use Geosyntec, Arcadis, and CDM Smith to review documents. FDEP just received a sizeable amount of document to review. During the month of July there should be a lot of reviews completed.

The Florida governor signed a bill for titled "Cleanup of Perfluoroalkyl and Polyfluoroalkyl Substances" (PFAS). The bill states that if EPA has not finalized standards for PFAS by January 1, 2025, then FDEP must adopt statewide cleanup target levels (CTLs).

The new rules cannot take effect until ratified by legislature. Until they are ratified, FDEP cannot compel, impose penalties, etc., to public or private entities. FDEP will continue to work with the KSC Remediation Program to the best degree they can as CTLs are under development. KSC has been proactive in identification and sharing of information.

NASA inquired if FDEP would be revising their provisional values at this time based on the Environmental Protection Agency's (EPA) May 2022 Regional Screening Levels. Bruce could not say definitively, but there is no emphasis in changing them at this time. NASA will be watching for an update of the dynamic plan.

2206-M03 Anne Chrest / NASA

Update on NASA KSC Program

Hoping to backfill a position within the Remediation Program by September 2022.

Regarding per- and polyfluoroalkyl substances (PFAS), NASA management has advised the NASA KSC Remediation group to use the EPA regional screening levels at this time. In our Phase III SWMU Assessment, our transmittal letter will state which sites exceed the regional screening levels. NASA will address this in a cover letter and submit to FDEP in July 2022. This will need to be routed through legal and the review department.

NASA will need the Department of Health involvement with the off-site well surveys. NASA is not aware of any active consumptive use wells on center. KSC is updating the PFAS communications plan to address more of our workforce and outside parties.

FDEP noted they are addressing circumstance where a District may issue a permit for dewatering without having information about contamination that may be influenced. The Department is trying to get land use controls (LUCs) placed into their maps and have inquired with the Air Force and Navy to provide shape files of their LUC layers; responses to this request have varied. FDEP is unsure what Geographic Information System (GIS) information they have on hand from NASA.

NASA responded they can provide the LUC map. That information is available for KSC Master Planning and other KSC users to reference for projects taking place on KSC. For PFAS, NASA made a commitment to provide an update to this GIS layer semiannually. NASA will consider providing the GIS layer and will follow up with FDEP on this request **(2206-A01).**

Results: Action Item 2206-A01

2206-M04 Mark Jonnet / Tetra Tech

Annual Update on Launch Complex 34

Goal: The goal of this ADP is to summarize groundwater interim measures (IMs) and monitoring results for chlorinated volatile organic compounds (CVOCs) at Launch Complex 34 (LC34), Data from April 1, 2021, through March 31, 2022, will be documented in the 2021 Performance Monitoring Report.

Discussion:

LC34 is located on Cape Canaveral Space Force Station, a barrier island bounded by the Banana River and Atlantic Ocean. There is a 322-acre CVOC groundwater plume exceeding State of Florida Groundwater Cleanup Target Levels (GCTLs), referred to as a Low Concentration Plume (LCP). Within the LCP is an area of 163 acres that exceeds Florida Department of Environmental Protection (FDEP) Natural Attenuation Default Concentrations (NADCs); 53.6 acres that exceed 10-times NADCs. referred to as Hot Spots; 9.5 acres that exceed 100-times NADCs; and a two-acre trichloroethene (TCE) source zone referred to as the dense non-aqueous phase liquid (DNAPL) Source Zone (DSZ). The DSZ Hydraulic Containment System (HCS) and Hot Spot 6 (HS6) Air Sparging IM were operational during this reporting period.

A brief site history and background were provided on LC34. FDEP inquired if the part of the plume that is above GCTLs discharges to the Atlantic Ocean. Tetra Tech stated they had temporary wells along the ocean. They can go back and pull together the data if this would be helpful. FDEP agreed this would be helpful to understand the history of the site **(2206-A02).**

The geology at LC34 was shown with the recovery wells intervals. Generally speaking, Layers 1, 2, 3, 5, 6, and 8 are sandy, Layer 4 is clayey, Layer 7 is silty, and Layer 9 is the Hawthorn Group. Layers 4 and 7 have sorbed mass in addition to dissolved mass. Sitewide groundwater contours indicate mounding near the HCS compound in the shallow intervals (Layers 1, 2, 3), and flow generally to the southeast, southwest, and west in deeper intervals (Layers 6 and 8).

Hydraulic Containment System (HCS)

The IM objective for the HCS is to attain hydraulic control of the DSZ and TCE HCP within Hot Spots 2, 3, and 4 via hydraulic containment and ex-situ treatment. The HCS began full-scale operation in May 2010. The system was expanded in 2015, and in August 2019 a new recovery well was installed 80 to 95 feet below land surface (ft bls). Three additional recovery wells (80 to 95 ft bls) were installed in February 2021. The current HCS includes 10 shallow recovery wells (15 to 45 ft bls), 7 deep recovery wells (50 to 80 ft bls), 4 deeper recovery wells (80 to 95 ft bls), equalization tank and discharge pump, 2 air strippers, discharge pump, and liquid-phase granular activated carbon (LPGAC) treatment for polishing (if needed), catalytic oxidizer, quench tower, scrubbing unit, and 12 deep injection wells (50 to 80 ft bls) and an infiltration gallery for discharge of treated water.

The HCS hydraulically controls the DSZ by utilizing recovery wells to extract contaminated groundwater. The extracted groundwater flows into an equalization tank, which is then treated by two air strippers in series and subsequently pumped to injection wells and an infiltration gallery. The contaminants in the air stream from the air strippers are destroyed by a catalytic oxidizer. The catalytic oxidizer effluent is cooled in a quench tower and then neutralized by using acid in the gas scrubber prior to discharge to the atmosphere. During the Year 12 operational period (April 1, 2021, through March 31, 2022), system runtime was 94%. Over 32 million gallons of groundwater were treated during Year 12 with 6,195 pounds of CVOCs destroyed. Since HCS operation began, over 285 million gallons of groundwater have been treated with 84,933 pounds of CVOCs destroyed.

FDEP referenced Slide 15, which gives an overview of the HCS. Are there groundwater flow maps available that present the depth to groundwater and groundwater flow within the capture zone? NASA

requested this be captured as an action item to follow up on **(2206-A03).**

The configuration of the DSZ based on 2019 recharacterization was discussed. FDEP pointed out that the groundwater flow directions in the deeper zones were east, southeast, and west (Slide 12). The northeasterly lobe of the DSZ (Slide 17) is contradictory. Tetra Tech responded that there are direct push technology (DPT) groundwater results used for characterization of hot spots that did not indicate the DSZ extends to the other side of the blockhouse. This contradicts groundwater flow, but the transition might be downhill in this area. FDEP speculated that it is DNAPL migration versus groundwater migration, and Tetra Tech concurred; it seems like it is riding on top of layer 7.

FDEP inquired if it was possible the northeasterly DSZ finger had been present prior to the 2019 recharacterization, but had been missed by earlier DPT points? Tetra Tech stated that it is possible and they will take an action item to look at the 2019 recharacterization for DPT coverage in that area. Whether it was missed or moved, sampling indicates the plume has not come out from under the blockhouse **(2206-A04).**

FDEP stated that the TCE plume footprint is showing a good reduction. How much of TCE reduction is due to transition/breakdown into daughter products? Tetra Tech responded that they do not see a lot of degradation. The recovery well influent is primarily TCE and without a lot of dichloroethene (DCE) or vinyl chloride (VC). Looking at influent results (Slide 21), cis-1,2-DCE (cDCE) and VC results are fairly constant while TCE has been more variable. If degradation was occurring, we would have expected to see an increase in the amount of VC here.

FDEP noted the system is actually reducing concentrations due to the pump and treat. Tetra Tech confirmed the system has pulled out 85,000 lbs. of TCE. Based on the initial site characterization, the Corrective Measures Study mass calculation estimated 86,000 lbs. of TCE in the DSZ. What we can glean from this is that there is still a mass in the ground. It is very difficult to quantify DNAPL.

Performance sampling is conducted to evaluate the HCS operations. The air stripper's effluent and LPGAC (when online) are sampled monthly, individual recovery wells and combined influent are

sampled quarterly, and catalytic oxidation influent and effluent (vapor) are sampled annually. In addition, nine locations are sampled annually via direct-push technology (DPT) to evaluate aquifer conditions within the DSZ. At each location, samples were collected in five-foot intervals from 8 to 98 ft bls (83 to 98 ft bls interval added this year to monitor Layer 7/8).

Influent system concentrations showed a stable trend over the reporting period. Sample results, as shown on Slide 22, indicate that contaminants in groundwater were reduced to less than GCTLs in the effluent of the secondary air stripper during all sampling events in the reporting period with the exception of TCE exceeding GCTL during the September and November events. The effluent from the GAC was all less than GCTLs.

The catalytic oxidizer influent and effluent sample results were shown on Slide 23. The influent results translate to 17.2 lb/day for total VOCs and 12.4 lb/day for TCE, and the effluent results translate to 0.055 lb/day for Total VOCs and 0.051 lb/day for TCE. Based on the effluent results, the catalytic oxidizer continues to meet the permissible daily hazardous air pollutants (HAP) levels of 6.8 lb/day for Total VOCs and 2.7 lb/day for TCE.

Individual recovery wells results, flow rates, and mass recovery rates were summarized on Slide 25. The total recovery well flow rate was reduced from 86 gpm to 75 gpm during the Air Sparging Pilot Study then returned back to 86 gpm upon completion of the study. The highest TCE results were detected in RW02A (shallow capture zone), RW02B (deep capture zone), and RW19C (deeper zone), with the highest overall TCE result of 827,000 ug/L from RW19C during this reporting period during the June 2021 sampling event. The four recovery wells in the deeper zone (Layer 7; RWs 17C, 18C, 19C, 20C) are each operating at 1 gpm due to the silty lithology in this layer. As of March 2022, these four deeper zone wells have recovered 2,270,063 gallons of groundwater with 6,956 pounds of VOCs treated.

Annual DPT sampling was conducted in December 2021 to evaluate aquifer conditions within the DSZ. An evaluation of the results by extraction zone was summarized on Slide 28, with the highest TCE results of 1,900,000 ug/L (shallow capture zone), 2,030,000 ug/L (between shallow and deep capture zones), 15,400,000 ug/L (deep capture zone), and 472,000 ug/L (Layer 7 capture zone). Sampling

results were compared to previous sample events and tabulated to show TCE concentrations in percent composition over all sample intervals in relation to recovery well capture zone (Slides 29 to 31). Data shows that the majority of contamination is located at 48 ft bls (above/within Layer 4), 58 ft bls (Layer 5), and 83 ft bls (Layer 7).

Groundwater samples from Layer 7 and 8 monitoring wells were also collected in December 2021 to confirm vertical migration of contamination is not occurring. All wells sampled were below detection limits, except IW43D2 and IW162. IW43D2 had a cDCE detection of 0.74 ug/L and no other analytes were detected, which is consistent with prior results. IW162 had a cDCE detection of 0.74 I ug/L and a TCE detection of 2.4 I ug/L, respectively. The cDCE detection was less than the GCTL of 70 ug/L. The TCE detection was below the GCTL of 3 ug/L. IW162 was resampled in February 2022 to confirm the presence of TCE then redeveloped and sampled again in March 2022. The results from each resampling were 7.4 and 33 ug/L, respectively, both above the GCTL. Slides 33 and 34 present information from the 2019 Site Characterization to evaluate the presence of TCE in the vicinity of IW-162, with Layer 7 recovery wells were added to the cross-section. The 98 ft bls sample (deeper than RW20C) at DPT0645 had TCE at 521,000 µg/L. TCE appears to flow towards IW-162 from the high concentration plume around DPT0645. The increase between the February and March samples from IW-162 appear to have been enhanced by well redevelopment, possibly drawing TCE in the DPT0645 98 ft bls vicinity towards IW-162. A new recovery screened from 90 to 100 ft bls adjacent to RW20C is recommended to capture the TCE impacting IW-162.

The Team reached consensus to continue IM OM&M of the HCS for Year 13, the operational period of April 1, 2022, to March 31, 2023, consistent with the current approach that includes: monthly sampling of the air stripper's effluent (aqueous), quarterly sampling of the combined influent and individual RW influent (aqueous), and annual sampling of the influent and effluent of the CatOx (vapor), DPT (aqueous), and Layer 7/8 monitoring wells (aqueous) **(2206-D02).**

The Team reached consensus on the installation of a new recovery well screened 90 to 100 ft bls adjacent to recovery well RW20C **(2206-D03).**

NASA stated that this recovery well installation would be contracted this year.

Hot Spot 6 Air Sparging:

The IM objective for the HS6 Air Sparging IM is to remediate contaminated groundwater within the treatment zone to prevent impacts to the drainage ditch and support transition to monitored natural attenuation (MNA). The initial phase of the HS6 IM began full scale operations in July 2018, and was then expanded from 160 air sparging wells (ASWs) to 300 ASWs with full scale operations beginning in May 2019. The 300 ASWs were installed beneath the VOC contamination on the top of Layer 4 (approximately 40 feet bls). The design included an ASW flow rate of 5.0 CFM, and 25 ft radius of influence with ASWs spaced 25 feet apart with no overlap. The system operates in nine treatment zones with compressed air supplied from a 75-horsepower rotary screw compressor.

Slide 37 showed cycle times for the nine zones associated with the system. Zones 1 and 2 remained off during the operational period as cleanup objectives have been met in this area. System run time was 89% over the reporting period. The system is monitored remotely, and if any issues arise a technician is dispatched to troubleshoot and resume operations. Monthly site visits are conducted to ensure the system is operating properly and the system is balanced.

Semi-annual performance sampling was conducted at 28 monitoring wells and 3 surface water locations in the nearby canal/drainage ditch. Performance results were shown on Slides 41 and 42. From the October 2021 event, 21 wells are less than GCTLs and 7 wells exceed GCTLs, IW135 exceeded cDCE and VC NADCs, and IW134 exceeded 10-times cDCE and VC NADCs. IW135 and IW134 are located closest to the DSZ.

Slide 39 displayed the Hot Spot 6 plume configurations from June 2018 (prior to system startup) and present. As of October 2021, 13.8 acres of treatment area are less than GCTLs and 1.9 acres continue to exceed GCTLs. COC concentrations have been drastically reduced since system startup with maximum cDCE reducing from 53,800 ug/L (baseline) to 9,700 ug/L (Oct 2021) and maximum VC reducing from 13,600 (baseline) to 1,000 ug/L (Oct 2021). Surface water results were all non-detect during the 2021 semi-annual events, showing that impacts to the drainage ditch have been eliminated.

An expansion of the air sparge system is planned once a Biological Opinion is received from the US Fish and Wildlife Service.

The Team reached consensus to continue operation of the HS6 air sparging system of the active 199 air sparge wells for the operational period of April 1, 2022, to March 31, 2023 **(2206-D04).**

The Team reached consensus that HS6 performance monitoring semi-annual sampling will continue to be completed at the same 28 monitoring wells and 3 surface water locations for VOC analysis and field parameters. Tetra Tech stated the upcoming expansion will be sampled quarterly in accordance with its Work Plan once installed **(2206-D05).**

There was a question about whether the new expansion will be in hot spot 6. Based on previous designation, the expansion will be in hot spot 7, which more or less encircles the DSZ. However, it is an expansion of the Hot Spot 6 system. NASA is nibbling away at hot spot 7 and next year will contract further around, plus an area by the blockhouse.

Path Forward:
In summary, the path forward will include: (1) Monthly System Sampling will include HCS effluent samples collected from air strippers, and LPGAC when online; (2) Quarterly Sampling will include HCS total system influent, and HCS individual recovery wells (18 RWs); (3) Semi-annual Hot Spot 6 performance sampling (28 MWs and 3 SWs); (4) Annual Sampling (December 2022) will include HCS CatOx influent and effluent, HCS DPT samples from 9 locations (8 to 98 ft bls at each boring), and Layer 8 Performance MWs; (5) Biennial Site-Wide LTM Sampling (December 2022) will include sampling of 56 MWs for VOCs and one MW for PCBs; and, (6) Install and operate of a new recovery well screened 90 to 100 ft bls adjacent to RW20C.

Action Item 2206-A02 – A04

2206-M05 Carol Cady/Jason Bublitz /HGL

Fluid Servicing Road Area Interim Groundwater Monitoring Summary, June 2022

Goal: The objective of the advance data presentation (ADP) is to summarize the site description and history, discuss sampling results, present recommendations, and obtain consensus for both the Propellants Support Building Area (PSBA) and the Former Drum Storage Area (FDSA).

Discussion:

IGWM at PSBA

The site-wide interim groundwater monitoring (IGWM) activities at PSBA were completed in November/December 2021 and results are presented along with a summary of the site assessment history and background. The sampling and analysis plan specified the sampling of 22 monitoring wells (8 annual wells and 14 biennial wells) for the contaminants of concern (COC) (trichloroethene [TCE], cis-1,2-dichloroethene [cDCE], trans-1,2-dichloroethene [tDCE], and vinyl chloride [VC]). Groundwater level measurements were collected from 37 wells. Direct-push technology (DPT) samples were also collected at 47 locations for the first phase of the 5-year plume assessment. Additionally, three groundwater samples were collected from monitoring wells and analyzed for per- and polyfluoroalkyl substances (PFAS) analysis.

NASA inquired when referencing that the 2012 groundwater model indicated that the plume would not migrate "north to the outstanding Florida waters (OFW)" (Slide 5), does that mean north of the former drum storage area? HGL confirmed that was correct.

The data evaluation indicates that concentrations of VC are stable or decreasing in the north and east/west plumes at all depth intervals sampled. The low concentration plume has migrated to the west/southwest and direct push technology (DPT) results have not completely delineated the western boundary. COC concentrations increased along the western edge of the east/west plume at the 40-50 feet (ft) depth interval in 2019 exceeding the Natural Attenuation Default Concentration (NADC) for VC. Following the 2019 event, concentrations have decreased below the NADC but exceed the groundwater cleanup target level (GCTL).

Three monitoring wells were sampled for PFAS. There were no detections above the State of Florida provisional GCTLs.

The following recommendations were made:

- Continue annual/biennial interim groundwater monitoring.
- Conduct 2nd phase of 5-year plume monitoring (DPT event) in fall of 2022.
- Based on DPT data, additional monitoring wells are likely to be recommended. Proposed locations will be brought back to the Team for consensus.
- Based upon NADC exceedances in the east-west plume, installation of an air sparge barrier on the west side of the east-west plume is recommended.

The Team reached consensus on the 2022-2023 Sampling Plan: 1) Annual sampling event (8 annual wells in December 2022 for TCE, cDCE, tDCE and VC); collect depth to water measurements from 37 site-wide monitoring wells **(2206-D06).**

The Team reached consensus on the Exit Strategy, which includes continuation of monitoring to evaluate natural attenuation and concentration trends, and evaluation of optimization of monitoring program on an annual basis **(2206-D07).**

The necessity of installing an air sparge system was discussed. The farther the plume travels west the more into the wetlands area it gets. The scrub jay habitat impacts our ability to clear. NASA figures they have the infrastructure nearby because of the inactive FDSA air sparge system and can tie into the old line and run a line over. The path forward is an additional DPT assessment evaluation, after which they will bring to the team for a recommendation before moving forward. NASA is contracting a design for next year or maybe 2024. The air sparge wells will be installed as far west as possible.

<u>IGWM at FDSA</u>

The site-wide IGWM activities at FDSA were completed from April 2021 through March 2022 and results are presented along with a summary of the site assessment history and background. The sampling and analysis plan specified quarterly sampling (4 monitoring wells in July 2022 and 1 well in other quarterly events), biennial sampling of 43 monitoring wells, and groundwater level measurements were collected from 72 wells.

Prior to the biennial sampling event, results have remained below the NADC since the air sparge system was shut down in 2016/2018.

COC concentrations are stable or decreasing in the 0-10 ft interval and 30-40 ft intervals. COC concentrations in the 20-30 ft depth interval have slightly increased since the annual 2021 sampling event. Cis-DCE concentrations have increased in the 40-50 ft depth interval while other site COCs have deceased. One sample (MW03S2) reported a TCE result (667 ug/L) exceeding the NADC in the 10-20 ft depth interval. This well is upgradient and outside the source area. The TCE result had a "J" data qualifier, signifying an estimated value. FDEP observed that this was the highest TCE result for the sampling event.

NASA pointed out there was an uptick in COC concentrations in 2019 and then a significant increase in 2021 for MW03S2, but the TCE result is an estimated value. To investigate the TCE detection at MW03S2, the monitoring well was resampled in June 2022, and results are pending. If the NADC exceedance is confirmed, DPT groundwater samples will be collected during Phase 2 of the PSBA DPT sampling (if time permits). If groundwater samples are not collected during the PSBA Phase 2 DPT sampling, samples will be collected at a later date. Samples will be collected from three borings at 10, 15, 20, 25, and 30 ft bgs. NASA inquired will HGL present results at the next meeting? HGL will provide the 2020 DPT results for this site to the Team at the next meeting **(2206-A05).**

FDEP referenced the well just north of the one being discussed (MW40); is that roughly screened the same? Tetra Tech responded that the southern well is at a lower elevation since the pavement steps down into a swale. While the screen intervals are the same relative to land surface, the part of the aquifer monitored is a little different.

MW03S2) is just on the western edge of the air sparge system radius of influence. Historically, we did not see TCE in this location. FDEP noted that just in looking at the data presented, it does not look like there is a bounding sample location to the west. HGL will present results from 2020 DPTs at the next meeting as part of their action item, which will show a location just west of MW03S2 that was a non-detect.

NASA summarized that the June MW03S2 re-sample data will be reviewed. If the TCE result is above NADC, then DPT sampling will be performed in the vicinity to develop more information. If the

NADC exceedance is not confirmed, no additional investigations will be performed.

Tetra Tech confirmed there is a Statement of Basis dated 2009 for this site. It needs to be revised to include more recent work.

Recommendations were made as follows 1) continue Annual/Biennial IGWM of TCE, cDCE, tDCE, and VC; and 2) recommend optimization of monitoring schedule of 1 monitoring well (MW0061) from quarterly to semi-annual based upon analytical results (stable COCs from last three quarterly events).

Regarding MW0061, FDEP inquired if there is data from below its screened interval? HGL replied that MW0061 was installed based on DPT results from 2020 (DPT0370). TCE was detected at 41 ug/L in the 3-7 ft. interval and about the same at the 13-17 ft. interval. That is why we put the well in that location. Adjacent MW0029 is a deeper well (10-20 ft. screen) and addresses the deeper TCE detection. The 2021 result was 8.9 ug/L. There was a co-located 2021 surface water sample.

Should FDSA be a long-term monitoring (LTM) site rather than an IGWM site? A Team member replied that this is not really as much an IGWM as it is a post-remediation monitoring status. NASA stated that there is no expectation of reactivating any part of the air sparge system at FDSA. Next year we can evaluate whether an LTM plan is appropriate for this site. FDEP concurred that remediation is progressing and it doesn't look like the site is ready for LTM just yet. Let's see how we do with the OFW wells and this single well above NADC.

The Team reached consensus to continue annual/biennial IGWM activities at FDSA with the following modifications: 1) Recommend optimization of monitoring schedule of 1 well (MW0061) from quarterly to semi-annual; 2) Semi-annual sampling of 1 well (MW0061) for TCE, cDCE, tDCE, and VC – July and December 2022; 3) Annual Event sampling of 27 wells for TCE, cDCE, tDCE, and VC in December 2022 (fiscal year 2023); 4) Annual water level data from 72 wells **(2206-D08).**

The Team reached consensus on Exit Strategy, which includes continuation of monitoring to evaluate natural attenuation and concentration trends, and evaluation and optimization of the monitoring program on annual basis **(2206-D09).**

Action Item 2206-A05

2206-M06 Chris Neumann / Tetra Tech

KSC HQ Area Soil Interim Measure, June 2022

Goal: The purpose of the ADP is to present the results of the soil Interim Measure (IM) for polychlorinated biphenyl (PCB)-contaminated soil at Location of Concern (LOC) 2D and LOC 2E at the KSC Headquarters Building Area (KHQA). A RCRA Facility Investigation (RFI) was completed in 2009 and identified media contaminated with polychlorinated biphenyls (PCBs) above the State of Florida residential soil cleanup target levels (R-SCTLs) (0.5 mg/kg) at LOC 2D and LOC 2E.

Discussion: Accessible contaminated media at the former Headquarters Building was excavated during IMs in 2011 and 2015 and a LUCIP was in place for remaining contaminated media. An IMWP was prepared in 2016 for the removal of contaminated media in tandem with the demolition of the Headquarters Building. The IMWP for LOC 2D and LOC 2E was updated in 2018 to include additional contaminated areas. The IMWP was prepared in accordance with NASA's Generic Work Plan for the Investigation and Cleanup of PCB-Contaminated Sites Under Toxic Substances Control Act (TSCA) (NASA, 2007) and due to the presence of PCB concentrations greater than or equal to 50 mg/kg, coordination with and approval by the United States Environmental Protection Agency (EPA) was required. EPA provided an approval letter for the IMWP on August 3, 2018.

The IM objective was to excavate vadose-zone soil in LOC 2D and LOC 2E with PCB concentrations greater than the State of Florida RSCTL (0.5 mg/kg). The IM included 9 areas with depths ranging from 0.5 to 4.0 feet below land surface. The total area was approximately 5,186 square feet and the total volume of soil and concrete removed was 347 cubic yards. The IM was conducted from November 2021 to May 2022, with active excavation and transportation and disposal occurring from January to February

2022. A total of 13 truckloads, 343 tons of contaminated material was disposed at JED Landfill and a total of 6 truckloads, 135 tons of contaminated material was disposed at the Emelle, AL Landfill. An additional roll-off box (4.2 tons) was disposed at JED Landfill and an additional drum (300 pounds) was disposed at the Emelle, AL Landfill during the verification sampling effort. The excavation removed all material with PCBs exceeding 0.5 mg/kg.

FDEP inquired if the confirmatory sampling was conducted post removal of the exceedance or pre removal of the exceedance? Tetra Tech stated they sampled pre and post removal. They removed media to designated boundaries (green or red dots on the slides) and then collected samples. If the result was above 0.5 mg/kg PCBs, then additional material (concrete or soil) was removed and sampling was repeated. Referencing Slide 30 for example, the result for the "N" location (Sample CO0054) was above 0.5 mg/kg, so additional concrete was removed and "Q" (CO0057) was collected at the same horizontal location as "N" but at the new surface. The "Q" sample was below 0.5 mg/kg as were lateral samples, so no further removal was needed.

Three monitoring wells were installed following completion of the IM. The wells were installed at the locations of maximum PCB concentrations during previous Perimeter IM, and the LOC 2D, and LOC 2E IM. Groundwater samples were collected for analysis of PCBs and select VOCs, including tetrachloroethene (PCE), trichloroethene (TCE) and daughter products, benzene, and chlorobenzene compounds. All PCB and VOC results were non-detect.

Per- and polyfluorinated alkyl substances (PFAS) were also analyzed in the monitoring well samples to provide information regarding PFAS distribution in the KSC Industrial Area. PFAS had been detected in earlier KHQA investigation derived waste (IDW). NASA has not identified a source at or near the former Headquarters Building. NASA would like to close out SWMU #104 because we do not have a known source of PFAS. Further PFAS investigation will be performed under one of the known PFAS sites in the industrial area. NASA expects that there will be commingled PFAS plumes in the industrial area, particularly in light of the EPA Regional Screening Levels issued in May 2022. FDEP

recommended for NASA to discuss that the PFAS is not likely associated with the former Headquarters Building in the IM Report.

The path forward for this site is to prepare and submit the Interim Measure Report. NASA will submit separate Site Rehabilitation Completion Order request documentation for SWMU 104 to support an NFA without controls recommendation.

The Team reached consensus that remediation is complete for 9 excavation areas at LOC 2D and LOC 2E, delineated to residential SCTL (0.5 mg/kg) **(2206-D10).**

The Team reached consensus for No further action for soil and concrete at the KHQA (SWMU 104) **(2206-D11).**

The Team reached consensus for No further action for PCBs and VOCs in groundwater at the KHQA (SWMU 104) **(2206-D12).**

The Team reached consensus to continue investigation of PFAS in groundwater either through expansion of an existing site with ongoing PFAS investigation or by adding a new site for PFAS investigation in this area. Additional SWMU Assessment activities will be performed to investigate for a PFAS source in this area **(2206-D13).**

FDEP agrees with all the consensus statements pending review of the Interim Measure Report. Please convey as simply as possible where the contamination was, and why it is no longer a problem.

Results: Decision Items 2206-D10 through D13

2206-M07 Deda Johansen / NASA

SLERA Conclusions and Recommendations for the Un-numbered Operational Area (UNOA), PRL #229, June 2022

HGL completed the food web analysis as an addition to the screening level ecological risk analysis. It concluded that risk to birds from PAHs associated with the railroad tie disposal area pond is unlikely. No further study will be recommended at the UNOA pond. NASA understands that the ecology folks at FDEP will have to take a look at this.

FDEP stated that they will farm this out to University of Florida (UF) for review. NASA responded that this report is already drafted and will submit the report for review with the details **(2206-A06).**

Results: Action Item 2206-A06

2205-M08 Anne Chrest / NASA

CAMP Deliverables Look-Ahead and Document Requirements, June 2022

Goal: To provide an update on the CAMP submittal look-ahead.

Discussion: Anne presented the latest CAMP. An opportunity was provided during the meeting to follow up with any questions on what was provided. If any questions or concerns after the fact, please reach out.

For the former Headquarters Building, NASA may need to submit the Interim Measure (IM) Report and then put together a site closure report with all the remediation history. This is the fourth IM conducted at the site, and the current report does not cover the history of the other three IMs. NASA will submit a separate summary document for the formal closure of this site.

FDEP noted that the look-ahead is appreciated. It helps with planning contractor reviews.

2206-M09 Howard Fowler /HGL

Stand Alone Electrical Equipment Confirmation Sampling Report Addendum and Interim Measure Work Plan, June 2022.

Goal: The objective of the ADP is to summarize the site description and history, discuss sampling results, discuss the Interim Measure (IM) Work Plan, and obtain consensus for the Stand-Alone Electrical Equipment (SAEE) Potential Release Location (PRL) 227a path forward. SAEE PRL 227a was formerly known as PRL 227 Location of Concern (LOC) 3.

Discussion: Eighty-seven pieces of electrical equipment were evaluated in the September 2015 PRL 227 SWMU Assessment (SA) and 49 LOCs were identified. The August 2019 Confirmatory Sampling Report (CSR) recommended No Further Action (NFA) at 45 LOCs. NFA was not recommended at:

- PRL 227a (PRL 227, LOC 3) - Addressed by this CSR Addendum (CSRA)
- PRL 227b (PRL 227, LOC 16) - Addressed by Soil IM
- PRL 227c (PRL 227, LOC 29) - Addressed by Soil IM
- PRL 227d (PRL 227, LOC 30) - Addressed by separate CSRA and approved for No Further Action (NFA)

NASA clarified that the ground slopes to the west, which explains why we have further migration of the dielectric fluid that is the source of the PCBs to the west than the east.

PRL 227a is located to the southeast of the industrial area on the north side of 10th Street SE, west of the former Vertical Processing Facility. The site consists of the Load Break Switch (LBS) 35 and associated concrete pad which is surrounded by road rock and grass. A small building (Communications Terminal #11) is located to the north of the LBS 35 concrete pad and a driveway is located to the east.

The KSC Power Distribution System was established in the 1960s with the construction of the first facilities at KSC. The former LBS is suspected to have used oil that contained polychlorinated biphenyls (PCBs). LBS 35 was replaced in 1994 with a new LBS that does not use PCBs. The site is not considered ecological habitat. The area to the east of PRL 227a was formerly the Vertical Processing Facility (VPF) and the site has been extensively reworked since 2008. Three soil excavations were completed in the vicinity of PRL 227a in October 2009 as part of remedial measures associated with the VPF. Excavations were completed to a depth of 0.5 foot and were performed to mitigate risks associated with copper and chromium in soil.

<u>Confirmatory Sampling Overview</u>

Initial Confirmatory Sampling (CS) at PRL 227a was performed between August 2018 and April 2019 and was documented in the August 2019 CSR for PRL 227 (Tetra Tech, 2019). Seventy-five soil samples were collected from 44 locations. PCBs concentrations above the residential soil cleanup target level (SCTL) were detected

in multiple locations and the extent of PCBs impacts were not delineated after the initial CS activities. PCBs concentrations above 50 parts per million (ppm) were detected in 1 sample (SB0012 0.5'-2'). A re-sample of this location and interval yielded a result below 50 ppm. Five concrete samples were collected from 5 locations. The greatest PCBs concentration in concrete was 0.1 mg/kg. One asphalt sample was collected from 1 location. PCBs were not detected in the sample. One shallow monitoring well (MW0001, screened 5'-15') was installed and sampled in the area with the greatest PCBs concentration. PCBs were not detected in the sample.

CSRA Sample Collection Methodologies

Initial CS samples were analyzed using the USEPA approved Ultrasonic Extraction Method (3550C). Since PCB concentrations equal to or greater than 50 ppm were detected, and previous HGL discussions with EPA confirmed their preference for using the USEPA approved Soxhlet Extraction Method (3540C), HGL chose this method for additional analyses. The initial CS samples were used to guide sample location placement but not used to delineate PCBs impacts. In general, samples collected at depths of less than 5' were collected via hand auger and samples collected at depths of greater than 5' were collected with a direct push technology (DPT) rig.

Samples collected at depths greater than 5' down to 20' bls were collected to confirm that PCBs did not migrate to a less permeable zone. Delineation sample locations are spaced approximately 20 feet apart. After the first round of CSRA sampling (June 2020), the shallow depth intervals were changed from 0-0.5' and 0.5'-2' to 0-0.5', 0.5'-1' and 1'-2'. In March 2021, a PCB Notification Letter was sent to the Florida Department of Environmental Protection (FDEP) to initiate the PCB Coordinated Cleanup Process.

CSRA Soil Sampling

A total of 299 soil samples were collected between 2020 and 2022 from 82 locations at depths ranging from 0-0.5 to 19'-20' bls. One sample (SB0012-1'-2') exceeded 50 ppm which confirmed the earlier detection above 50 ppm at this location. Fifty-eight samples exceeded the residential SCTL of 0.5 mg/kg. Twenty-three samples exceeded the industrial SCTL of 2.6 mg/kg. Three samples exceeded the leachability SCTL of 17 mg/kg. PCBs were not detected in the sample collected beneath the LBS 35 concrete pad (0-

0.5' and 0.5'-2'). Due to restricted access, samples could not be collected beneath the Communications Terminal #11 building. PCBs were not detected in the samples collected beneath the driveway.

FDEP inquired if the depth to groundwater is mentioned? HGL responded that it was not. It is around 5ft if you are up by the driveway.

The deepest depth of PCB concentrations above the residential SCTL was detected at SB0356 (4'-5' and 5'-6'). PCB concentrations at SB0356 were below the rSCTL at 6'-7' and 7'-8'. Samples were collected at depths greater than 6' at six locations to confirm that PCBs did not migrate to a less permeable zone. All six soil PCB results were less than 0.5 mg/kg. Boring logs indicate a hardpan semi-peat layer at 10' bls. Samples collected below 10' confirm PCB contamination did not migrate vertically beneath this hardpan layer. Overall complete horizontal and vertical delineation was achieved.

IM Work Plan

An IM Work Plan for the excavation of PCBs-impacted soil is being submitted with the CSRA. Based on the CSRA sampling, the total volume of the excavation is approximately 739.7 cubic yards. Approximately 9.3 cubic yards of soils with PCBs greater than or equal to 50 ppm will be segregated and disposed of separately. The driveway will be used as the eastern boundary of the excavation. Soil will not be excavated beneath the LBS 35 concrete pad (results below the residential SCTL) or the Communications Terminal #11 building concrete pad (not sampled due to access constraints). Land Use Controls (LUCs) will be required for soils beneath the Communications Terminal #11 building. To confirm no LUCs are required beneath the LBS pad, wall samples will be collected from the edge of the excavation nearest SB12 and SB356 at depths below 2', since PCBs above the residential SCTL were found deeper than the prior under-slab samples. A post-IM groundwater sample will be collected from MW0001 (or its replacement) and analyzed for PCBs.

IM Work Plan Implementation Issues

Due to the presence of underground utilities, a ground penetrating radar survey is recommended to identify all underground utilities. The IM Contractor will need to work with KSC to de-energize electrical equipment prior to soil IM. MW0001 may have to be

abandoned in advance of soil IM activities. If that is the case, a replacement well will be installed.

NASA inquired if the well is located in the 6 ft excavation? It is not, it is in a 3' excavation. Since the well has been sampled already under worst case conditions, FDEP doesn't believe you need to sample again. NASA stated the previous sample was not tested for chlorinated benzenes so that needs to be done.

FDEP stated, assuming the IM is successful, the case might be made that there is nothing underneath the Communications Building. NASA observed that there are samples as close as possible to the building with results above the residential SCTL. Given the communications lines coming into the building, coring through the floor wasn't feasible. NASA has discussed the circumstances internally and is okay with placing a LUC Implementation Plan.

FDEP commented that digging around the building slab and then collecting sidewall samples may be adequate to avoid LUCs, assuming they are clean. NASA inquired if shoring would be utilized for the 6' excavation? Or will you excavate incrementally? The response was incremental excavation with flowable fill so as not to undermine the roadway. The driveway is only utilized by the communications folks and us. HGL stated it was not in good condition.

NASA stated they will be removing everything 0.5 mg/kg to the building, and inquired with FDEP how the PCB coordinated removal would work. FDEP has not participated in one of those yet, so this will be a mutual learning experience. NASA will forward the Notification Letter sent previously to Bruce (**2206-A07**).

The Team reached consensus that PCB-contaminated soil has been delineated. The Confirmation Sampling Report Addendum and Interim Measure Work Plan will be submitted to FDEP for PCB Coordinated Cleanup approval **(2206-D14).**

The Team reached consensus that side walls samples will be collected to determine if land use controls (LUCs) will be required for soils beneath the Communications Terminal #11 building **(2206-D15).**

Action Item 2206-A07

2206-M10 Robert Lynch/ HGL

Child Development Center Confirmation Sampling Update, June 2022

Goal: The goal is to present the results of the 2022 Confirmatory Sampling event at the KSC Child Development Center (KCDC).

Discussion:
In 2022, a project by NASA to replace certain playground equipment and the rubberized play surface is planned. A Land Use Control Implementation Plan (LUCIP) is in effect at KCDC due to arsenic above the residential soil cleanup target level (rSCTL) beneath the playground's artificial surface. Soil sampling was initiated to investigate whether other metals associated with treated wood (copper and chromium) were present at levels of potential concern; and investigate the remaining arsenic levels.

On March 19th, 2022, soil sampling was conducted at Location of Concern (LOC) 4 (Sealed Playground Area) and LOC 2 (Wooden Fence Area). At LOC 4, a core drill was utilized to drill through the impervious playground surface and underlying concrete pad at five locations. Soil samples were collected from directly beneath the concrete pad to 1 ft below ground surface (bgs) (0.5-1.0 ft. bgs), and every 1-ft. interval until the water table was encountered (approx. 3-4 ft bgs across the site). At LOC 2, two soil boring locations were advanced from ground surface using a hand auger. Soil samples were collected from ground surface to 0.5 ft. bgs, 0.5-1.0 ft. bgs, and every 1-ft. interval until the water table was encountered. All soil samples were analyzed for arsenic, total chromium, hexavalent chromium, and copper. Soil sample results for total chromium, hexavalent chromium, and copper were less than the residential and/or leachability SCTLs.

Detections of arsenic exceeding the rSCTL) of 2.1 mg/kg were observed at SB0045 (LOC 4) and SB0048 (LOC 2). Results are as follows: SB0045: 2.3 mg/kg at 1.0-2.0 ft bgs; SB0048: 10.2 mg/kg at 0-0.5 ft bgs. Both sample locations were delineated vertically to concentrations less than the rSCTL. All arsenic results from the other 5 boring locations were less than the rSCTL.

The two locations with results above the rSCTL are not accessible to playground users because of the play surface and concrete (SB0045) or because of location between two fences (SB0048). Thus, the LUCIP remains valid as a means of protection for human health. Therefore, Land Use Controls and quarterly inspections will continue and the Remediation Program will continue to have repairs made to the play surface as needed.

Further soil sampling and a possible removal action will be planned for the time when the KSC Child Development Center moves to a new location, which is anticipated to be within the next 10 years.

The NASA RPM told the Team that the Remediation Program hoped they could take advantage of the project replacement of the poured-in-place surface. However, the concrete that underlies the rubberized surface will remain in place and is not being removed to expose the contaminated soils. NASA will look at this again when the CDC moves and there is an opportunity to fully excavate.

At sample SB0048, FDEP noted that this is bare ground between two fences with arsenic almost at the industrial level and asked about a delineation. NASA does not believe this is fully delineated to the north. The KSC range of background was used at the time this was initially investigated. NASA has had further discussion with FDEP about regional levels not always being acceptable.

FDEP responded that site-specific values are encouraged as we moved forward here. A little more delineation is warranted in the northern area. What is the facility to the north? NASA replied it was a warehouse.

NASA showed the existing LUCIP boundary. NASA is on board with further delineation and extending the LUC boundary to match the new delineated area if necessary.

2201-M11 KSCRT

Miscellaneous Discussion

NASA provided an update with regards to the PFAS investigations. The Phase II and III Center-wide Report will be submitted to FDEP shortly. The report was substantially complete when the EPA issued new regional screening levels (RSLs) in May 2022. The

recommendations the report developed based on Florida's provisional cleanup target levels will not be changed, but the transmittal letter will include a summary of sites that may require additional evaluation based on the RSLs. Initial Site Assessment work at the selected individual sites has generated a lot of data. ,

There are groundwater samples near the KSC property line that may indicate potential off-site migration.

FDEP responded that it may serve you better to do something sooner than later when it comes to the location near the property boundary. NASA replied that further investigation is underway. FDEP plans on inviting the Program Administrator to at least phone in for the next PFAS presentation and see the PFAs sites. NASA is ahead of the Department of Defense and other government agencies in your investigation efforts.

NASA noted that the PFAS ADPs are being presented in the near future. To get away from very large reports they will try to present findings as they are developed.

FDEP responded that this sounds good for information purposes for them. They cannot make regulatory demands upon anyone at this time. NASA stated they want FDEP's input and would like to give FDEP the opportunity for this round of sites under investigation. We are pulling forward three new sites into the SWMU Assessment stage to include the South Repeater Building, the Sharkey Road area, and Contractor Support Building #7. NASA picked sites that would provide better understanding of groundwater and surface water regional impacts.

FDEP observed that originally NASA contracted to investigate sites that had results above the Florida provisional CTLs. What is the status now? NASA responded that the Site Assessments are being funded incrementally. Comparing to the provisional groundwater cleanup target levels, they had 40 sites with groundwater concerns and now the RSLs suggest 47 sites with potential groundwater concerns. There was one site with soil above the provisional soil cleanup target level, but there are 8 sites with potential soil concerns with the new RSLs.

For the contractors' information, NASA noted that NASA's internal review of documents for public release (STRIVES) is finding very small things. For example, in a legend, they found a copyright symbol, which requires a release for use. Some contractors have a standard email caveat about being read by someone who is not being the intended recipient. NASA asks that contractors please be aware of these export review issues.

2022 Meeting Dates
September 13 – virtual meeting for shortened agenda – pushing most to October 4th date.
October 5th & 6th (hybrid meeting)
November 30th-December 1st, 2022

Agenda Topics for September and October 2022 Meetings

AECOM

1. ORSY site wide PCB results and IMWP (45 min)
2. Updates on PFAS to include (Former Fire Station 2, SLF, South Repeater Building, VAB North) (90 minutes)
3. VAB LTM (LC39OGA DPT groundwater sampling and proposed groundwater monitoring well locations)

Tetra Tech

1. Fire Station 1, Fire Station 3, STP #1 (90 min)
2. CCB RAE (60 min)
3. LC 34 AS Pilot Study (90 min) Jonnet
4. POL Annual OM&M (60 min)
5. AOSB Year 1 OM&M (60 min)
6. CHP Year 1 PMR (60 min)

HGL

1. C5 Substation PARM (30 min)
2. PFAS Sharkey Rd

FDEP
15-20-minute FDEP update by Program Manager

Anne Chrest is the team leader next meeting so email topics to this individual after the meeting is over.

June 2022 Decision Items Rev 1		Decision
Decision No.	Minutes Reference	
2206-D01	2206-M01	**Meeting Minutes and Miscellaneous Items:** Team consensus was reached that Revision 1 of the meeting minutes and action/decision items for the May 2022 Team meeting will become final. Team members acknowledged and did not object to the fact that these meeting minutes may become public as part of a final report at a later date.
2206-D02	2206-M04	**Annual Update on Launch Complex 34 :** The Team reached consensus to continue IM OM&M of the HCS for Year 13, the operational period of April 1, 2022, to March 31, 2023, consistent with the current approach that includes: monthly sampling of the air stripper's effluent (aqueous), quarterly sampling of the combined influent and individual RW influent (aqueous), and annual sampling of the influent and effluent of the CatOx (vapor), DPT (aqueous), and Layer 7/8 monitoring wells (aqueous).
2206-D03	2206-M04	**Annual Update on Launch Complex 34 :** The Team reached consensus on the installation of a new recovery well screened 90 to 100 ft bls adjacent to recovery well RW20C.
2206-D04	2206-M04	**Annual Update on Launch Complex 34 :** The Team reached consensus to continue operation of the HS6 air sparging system of the active 199 air sparge wells for the operational period of April 1, 2022, to March 31, 2023.
2206-D05	2206-M04	**Annual Update on Launch Complex 34 :** The Team reached consensus that HS6 performance monitoring semi-annual sampling will continue to be completed at the same 28 monitoring wells and 3 surface water locations for VOC analysis and field parameters. Tetra Tech stated the upcoming expansion will be sampled quarterly in accordance with its Work Plan once installed.
2206-D06	2206-M05	**Fluid Servicing Road Area Interim Groundwater Monitoring Summary, June 2022:** The Team reached consensus on the 2022-2023 Sampling Plan: 1) Annual sampling event (8 annual wells in December 2022 for TCE, cDCE, tDCE and VC); collect depth to water measurements from 37 site-wide monitoring wells.
2206-D07	2206-M05	**Fluid Servicing Road Area Interim Groundwater Monitoring Summary, June 2022:** The Team reached consensus on the Exit Strategy, which includes continuation of monitoring to evaluate natural attenuation and concentration trends, and evaluation of optimization of monitoring program on an annual basis.
2206-D08	2206-M05	**Fluid Servicing Road Area Interim Groundwater Monitoring Summary, June 2022:** The Team reached consensus to continue annual/biennial IGWM activities at FDSA with the following modifications: 1) Recommend optimization of monitoring schedule of 1 well (MW0061) from quarterly to semi-annual; 2) Semi-annual sampling of 1 well (MW0061) for TCE, cDCE, tDCE, and VC – July and December 2022; 3) Annual Event sampling of 27 wells for TCE, cDCE, tDCE, and VC in December 2022 (fiscal year 2023); 4) Annual water level data from 72 wells.
2206-D09	2206-M05	**Fluid Servicing Road Area Interim Groundwater Monitoring Summary, June 2022:** The Team reached consensus on Exit Strategy, which includes continuation of monitoring to evaluate natural attenuation and concentration trends, and evaluation and optimization of the monitoring program on annual basis.
2206-D10	2206-M06	**KSC HQ Area Soil Interim Measure, June 2022:** The Team reached consensus that remediation is complete for 9 excavation areas at LOC 2D and LOC 2E, delineated to residential SCTL (0.5 mg/kg).
2206-D11	2206-M06	**KSC HQ Area Soil Interim Measure, June 2022:** The Team reached consensus for No further action for soil and concrete at the KHQA (SWMU 104).
2206-D12	2206-M06	**KSC HQ Area Soil Interim Measure, June 2022:** The Team reached consensus for No further action for PCBs and VOCs in groundwater at the KHQA (SWMU 104).
2206-D13	2206-M06	**KSC HQ Area Soil Interim Measure, June 2022:** The Team reached consensus to continue investigation of PFAS in groundwater either through expansion of an existing site with ongoing PFAS investigation or by adding a new site for PFAS investigation in this area. Additional SWMU Assessment activities will be performed to investigate for a PFAS source in this area.
2206-D14	2206-M09	**StandAlone Electrical Equipment Confirmation Sampling Report Addendum and Interim Measure Work Plan, June 2022:** The Team reached consensus that PCB-contaminated soil has been delineated. The Confirmation Sampling Report Addendum and Interim Measure Work Plan will be submitted to FDEP for PCB Coordinated Cleanup approval.

June 2022 Decision Items Rev 1		Decision
Decision No.	Minutes Reference	
2206-D15	2206-M09	**StandAlone Electrical Equipment Confirmation Sampling Report Addendum and Interim Measure Work Plan, June 2022:** The Team reached consensus that side walls samples will be collected to determine if land use controls (LUCs) will be required for soils beneath the Communications Terminal #11 building.

Action Item No.	Minutes Reference	Responsible Team Member	Action item	Status	Comments
1712-A01	1712-M07	Team	If a document contains materials controlled under EAR99 (as determined by Export Control), the following clause shall be included on the first page (Action item): "EAR99 – NO LICENSE REQUIRED This information or item is controlled under the Export Administration Regulations (EAR) as EAR99. It may be exported without a license, expect to embargoed/designated countries (General Provision Six) or entities of concern. The designation of EAR99 does not constitute public release. Per Lori Ray, Reference STI TN#### NASA KSC Export Control Office, 321-867-9209."	Open	Standing Open Item
1810-A01	1810-M01	Team	NASA legal is concerned about copyright infringement regarding the inclusion of lab reports in documents. Reach out to labs to get release statements from them for the lab reports.	Open	Standing Open Item
2002-A03	2002-M10	A&Es	NASA requests that all A&E firms please large file transfer the .pdf and PowerPoint versions of the ADPs being presented so they can be uploaded to the folder and utilized for the team meeting. Cover letters should summarize the goal of the ADPs and the consensus statements should be provided for the minutes.	Open	Standing Open Item
2102-A09	2102-M13	Team	General Comment: FDEP observed that, based on the current monitoring network and plume depiction, one could think the plume is not delineated. Trepidations exist about making decisions without understanding how MNA has progressed. For clarity moving forward, the NASA lead requested that future documents include the end point assessment map that shows that we have plume delineation at a site, as well as a cross-section reference (e.g., what was the last map that brought us to the point of LTM, and where are we now [all the circa data circa]).	Open	Standing Open Item
1810-A02	1810-M04	NASA (RPO)	Launch Complex 39B (LC39B) (SWMU 009) - revisit team consensus 1810-D13 on weir installation based on permits date expiration and Year 2 PM results. (Team consensus reached to suspend the weir installation since CVOC concentrations adjacent to the pond are below their respective GCTLs and to re-evaluate the need for the weir prior to the SJRWMD and USACE permit expiration (11 July 2023).	Open	The Team reached consensus to evaluate Action Item 1810-M04, 1810-A02 in 2022 to re-evaluate the need for a weir near OFW. This item will remain open pending that evaluation. Tetra Tech resampled for line of evidence - upon receiving results, will revisit this action item.
2102-A07	2102-M13	NASA (RPO)	Industrial Area LTM, February 2021 (ORSY Site): FDEP inquired about past results for monitoring well ORSY-DRM-MW0001I. NASA stated they will look into the historical sampling results and get back with the Team.	Open	Findings and recommendations were submitted to FDEP. NASA is implementing the recommendations and will be revisited at a later date.
2102-A08	2102-M13	NASA (RPO)	Industrial Area LTM, February 2021 (EHF Site): FDEP and NASA discussed the site. NASA stated that the MNA program is routinely optimized, but this site was never included in an engineering evaluation process. Mounding takes place at this location, and a building was removed in the past few years. NASA took an action item to review the sampling data in the RFI for this location.	Open	Findings and recommendations were submitted to FDEP. NASA is implementing the recommendations and will be revisited at a later date.
2102-A10	2102-M13	NASA (RPO)	Industrial Area LTM, February 2021 (M7-505 Site): NASA took an action item to investigate if there are deeper data points around the location of MW0033.	Open	Findings and recommendations were submitted to FDEP. NASA is implementing the recommendations and will be revisited at a later date.
2102-A11	2102-M13	NASA (RPO)	Industrial Area LTM, February 2021 (GSSP Site): FDEP inquired if this site was delineated to the northwest of the lake, and if we have vertical delineation at this location. NASA stated a site characterization was performed in 2012. In 2009, DPT55 was placed on the west side of the pond (west of MW0035) and DPT56 was located on the east side of the pond (20ft NW of the location of monitoring wells MW0033, MW0034, and MW0035). On the west side there were no detections, and on the east side there were low detections. Surface water was also sampled here. NASA took an action item to provide this data to FDEP for reference following the meeting.	Open	Findings and recommendations were submitted to FDEP. NASA is implementing the recommendations and will be revisited at a later date.
2102-A12	2102-M13	NASA (RPO)	Industrial Area LTM, February 2021 (KARS Park 1 Site): FDEP inquired if this was a skeet range previously? NASA stated there was a rifle/pistol range with a skeet range to the west (reference slide 154). FDEP inquired on the groundwater in the rifle/pistol range area? NASA stated that the groundwater was not monitored in that area. Tetra Tech pulled up the old wells in a previous presentation figure during the meeting. The only well shown in the area of discussion was in the lead shot area (KP1-MW0007). FDEP stated they would like to know what happened west of LOC 9 if NASA can provide that data. NASA took an action item to look into this.	Open	Findings and recommendations were submitted to FDEP. NASA is implementing the recommendations and will be revisited at a later date.
2106-A01	2106-M03	NASA/FDEP	NASA Remediation Program Updates, June 2021: FDEP stated that, regarding the existing Statement of Basis template being acceptable, it would be best for FDEP and NASA to have a follow up meeting to review the current template. FDEP and NASA can decide from there.	Open	

KSCRT Status of Open Action Items

Action Item No.	Minutes Reference	Responsible Team Member	Action item	Status	Comments
2106-A02	2106-M03	NASA/FDEP	NASA Remediation Program Updates, June 2021: Regarding updating the Statement of Basis (SB) for a site after an IM has taken place (post initial SB publication), FDEP agrees that this is an administrative item and it does have significance. For the Federal Facilities Branch, it may not be critical to see the change in SB post IM, but the RCRA Program may have a different perspective. We need an understanding of what are considered significant changes on the permit, what triggers public notification, etc. That is a conversation NASA and FDEP should have to provide firmer ground on what is required going forward.	Open	Most of this has been addressed in the current permit modification, but still need a follow up meeting with FDEP to close out.
2201-A01	2201-M04	NASA	Center-Wide Per- and Polyfluoroalkyl Substances (PRL #237) Phase III Solid Waste Management Unit Site Assessment and Confirmatory Sampling Report Summary, January 2022: NASA stated that the red boundary (PFAS LOC) in the figure on slide 90 is for the fire station, and not for Central Supply. NASA will gather together the figures they are investigating, and provide to FDEP.	Open	NASA met with Michelle to create figures. Revision to the maps are needed and once completed, NASA will provide the maps to FDEP.

Action Item No.	Minutes Reference	Responsible Team Member	Action item	Status	Date Closed	Closure Comments
1906-A01	1906-M01	NASA (Ryan O'Meara)	Per FDEP correspondence letter dated (March 22, 2019) RPM Ryan O'Meara will provide a site history of the Visitor Center Maintenance Area (SWMU 099) at a future team meeting.	Closed	10/2/2019	Discussion earlier this month with FDEP
1906-A02	1906-M11	FDEP	Discuss with FDEP Management to ensure Alternative Soil Cleanup Target Levels approved for use by Cape Canaveral Air Force Station for barium and copper may be applies to Kennedy Space Center sites.	Closed	8/8/2019	FDEP indicated that the ASCTLs that have been approved for use at CCAFS by the University of Florida can be referenced and applied to KSC sites. FDEP sent the Team an email on this subject on 6/27/19.
1908-A01	1908-M03	NASA Remediation Program wide	An action item was added for the NASA Remediation Program to begin adding a references section in all new and revised LUCIP documents moving forward.	Closed	2/6/2020	FDEP approved the use of a site-specific document reference within the NASA LUCIPs that states, "Site-specific documentation is available for review by contacting the Environmental Assurance Branch at telephone number (321)867-6971", moving forward.
1908-A02	1908-M04	FDEP	FDEP will check with their records department to add language that requires the preferred submission method of a report cover page with the CD only for report submittals moving forward.	Closed	10/23/2019	No FDEP mentioned record - this submittal method is acceptable.
1910-A01	1910-M02	NASA & TetraTech	Launch Complex (LC) 34 (SWMU CC054): DNAPL Source Zone Site Characterization Engineering Evaluation and Remedial Alternatives Evaluation (RAE) for the DSZ discussed the MWs in Layer 8 vertically delineating the TCE (four existing and four newly installed wells were sampled). The Team discussed the Layer 8 wells and recommended they be sampled as part of the next annual plume-wide sampling event scheduled in Dec 2020. An action item for NASA was added to work with Tetra Tech to make sure the deep wells get incorporated into the sampling program accordingly.	Closed	4/16/2020	These wells have been incorporated
2002-A01	2002-M07	A&Es	NASA requests that any updates to the PFAS six questionnaires be provided to Mark Speranza with Tetra Tech so he can utilize those same questions at other sites where Tetra Tech is investigating PFAS.	Closed	4/16/2020	No updates to questionnaires
2002-A02	2002-M07	FDEP	FDEP to look into the review and responses of the following document "White Paper: Development of Surface Water Criteria for PFOA and PFOS based on the protection of aquatic receptors" published by the Center for Environmental & Human Toxicology at the University of Florida , and provide input back to the Team.	Closed	6/18/2020	John Winters looked into and provided response on 05/22/2020 to the Team.
2008-A01	2008-M02	AECOM	Mobile Launch Platform Rehabilitation Sites/Vehicle Assembly Building Area (MLP/VAB), Solid Waste Management Unit (SWMU #056) Corrective Measures Implementation (CMI) and Interim Measures (IM) Update, August 2020: There seems to be a gap of treatment with regards to wells IS1, 1D and 6IR and if the HS2 area is turned off, is there a concern of contaminants slipping through? AECOM clarified that these sparge wells are spaced closely but not operating at the same time. The ROI distance and spacing in the expansion was based on what was learned from the original system design. Looking at DO and ORP, and performance monitoring, AECOM is not seeing data that this area is not being treated. NASA inquired if the wells 1S, 1D, and 6IR are being sampled? AECOM stated these are not being sampled, but they will take an action to research why and come back with an explanation to FDEP.	Closed	10/8/2020	Teams meeting with AECOM on 8/27/20 - The recently observed ROI of the BS system overlaps at the space between treatment barrier walls, therefore there is not gap in treatment. IW0006IR was not sampled because collective data from previous DPT investigations indicated VOCs > 100 ug/L was not present at the 6IR location and that the ROI of treatment wells was treating the targeted >100 VC plume as designed. IW0001S was not sampled because it is not within the treatment interval. Conclusion: IW0001D and IW0006IR will be included in the upcomming September 2020 sampling event. IW0006IR will continue to be monitored for VOC and dissolved oxygen (DO) during OM&M events.
2008-A03	2008-M02	AE Firms	Mobile Launch Platform Rehabilitation Sites/Vehicle Assembly Building Area (MLP/VAB), Solid Waste Management Unit (SWMU #056) Corrective Measures Implementation (CMI) and Interim Measures (IM) Update, August 2020: NASA asked the AE firms to query their teams to find out what sites are sampling using PDBs.	Closed	10/8/2020	HGL and Tetra Tech are not using PDBs at any of their sites. AECOM to look into the sites where this may be used and will report back to NASA. AECOM followed up with NASA that two sites were planned for use of PDBs to include Wilson Corners and the VAB LTM. Per NASA's request, PDBs will no longer be used in sampling moving forward, but the preferred "low-flow" sampling will be used from this point on.

Action Item No.	Minutes Reference	Responsible Team Member	Action item	Status	Date Closed	Closure Comments
2008-A04	2008-M03	AECOM	GSRY Reclamation Yard (SWMU #0010) - An April 2020 approval letter from FDEP regarding UIC at the site statied that since Provect-OX was applied to the saturated subsurface in multiple LDA/caisson excavation cells, monitoring for appropriate Underground Injection Control (UIC) parameters was recommended for a subset of wells, and should be analyzed for the iron, manganese, and sodium. After one year, sampling frequency and locations should be assessed. This means that the Team would need one additional sampling round to meet that year timeframe. AECOM will take an action to update the presentation prior to uploading to RIS for the records	Closed	10/8/2020	AECOM's Jennifer Joyal confirmed this presentation was updated prior to uploading to RIS.
2008-A05	2008-M07	FDEP	FDEP stated that the department has been doing a pilot project beginning with listing out dry cleaner and other cleanup sites. This PFAS tracking spreadsheet has minimal data and link to the reports associated with them, and the state is really trying to identify the max concentrations by media type. It is interesting to see what is coming up. AECOM inquired if the state has a list issued for the hazardous waste sites? AECOM did locate the dry-cleaning list. FDEP stated there are links in the spreadsheet to all different facilities to include landfills and electroplaters. There is an updated version of the tracking sheet, and FDEP will send out a copy to the Team.	Closed	10/8/2020	Laura Barrett (FDEP) provided the latest version of the tracking sheet to the Team.
1906-A03	1906-M09	NASA (Deda Johansen)	Component Refurbishment and Chemical Analysis (CRCA) facility (SWMU 041) Follow-up with NASA Compliance to determine if piping/sumps within the main CRCA building (K6-1696) and adjacent hazardous storage building are double-lined and compliant with Spill Prevention, Control, and Countermeasure (SPCC) requirements.	Closed	12/10/2020	NASA reached out to Jeff Bobersky (NASA Compliance SPCC) on this topic, and was referred to Albert Gibson (NASA Compliance Haz Materials/ Haz Waste) for answers. This piping is not subjec to SPCC double-lined requirements, and should be discussed from a hazardous materials/haz waste compliance standpoint. Project has been reassigned from Ryan O'Meara to Deda Johansen
2010-A01	2010-M02	NASA	Components Refurbishment and Chemical Analysis (CRCA) Solid Waste Management Unit (SWMU) #041, Year 1 Operations Maintenance and Monitoring: NASA took an action item to transition MW0032 to quarterly monitoring.	Closed	12/10/2020	MW0032 has been transitioned to quarterly monitoring
2010-A02	2010-M02	NASA (Deda Johansen)	Components Refurbishment and Chemical Analysis (CRCA) Solid Waste Management Unit (SWMU) #041, Year 1 Operations Maintenance and Monitoring: NASA took the action to present a basket item after the next two rounds of quarterly groundwater data, which will take place in October 2020 and January 2021	Closed	12/10/2020	Tetra Tech presented groundwater data in a basket item at the 12/10/2020 KSCRT meeting to update FDEP on the October sample results for monitoring well CRCA-MW0032, and propose installation of MW0033 to monitor the downgradient plume edge west of MW0032
2010-A03	2010-M3	NASA (Anne Chrest)	KSC Headquarters Building Area (KHQA) (SWMU #104) Perimeter Soil IM Completion: NASA will provide a copy of the Interim Measure Work Plan for LOC 2D and 2E to FDEP	Closed	12/10/2020	Anne provided after meeting - FYI only and previously submitted and approved by FDEP earlier regime.
2010-A04	2010-M04	Tetra Tech	LC34 DNAPL Source Zone Remediation Alternative Evaluation (RAE) Discussion and Proposed Pilot Study, October 2020: Aquifer testing was conducted in 2019 for Layer 7. During the test, an upward gradient was observed in well pairs screened in Layers 6 and 8, suggesting an upward gradient. FDEP inquired if the Team recalls how much of a gradient was observe? TetraTech will take an action to provide that information following the meeting to FDEP.	Closed	12/10/2020	Mark Jonnet (Tetra Tech) provided the requested information to Kirk Johnson (FDEP) by email on 10/9/2020. Water level elevations at the paired wells differed by 0.7 to 0.8 ft and the average vertical gradient was 0.02 ft/ft.
2008-A02	2008-M02	AECOM & NASA	Mobile Launch Platform Rehabilitation Sites/Vehicle Assembly Building Area (MLP/VAB), Solid Waste Management Unit (SWMU #056) Corrective Measures Implementation (CMI) and Interim Measures (IM) Update, August 2020: An action item was assigned to NASA and AECOM to convene and review past data and devise a plan to present to the state regarding the data gap in the northwest portion of the site, and the downgradient wells that serve as the points of compliance, where the vinyl chloride results have recently exceeded its groundwater cleanup target level (1 µg/L) and show signs of increasing.	Closed	2/17/2021	AECOM is under contract to conduct additional groundwater assessment and installation of wells to the east of the biosparge barrier and railroad tracks. Up to 10 monitoring wells will be installed based on the results of the groundwater assessment.

Action Item No.	Minutes Reference	Responsible Team Member	Action item	Status	Date Closed	Closure Comments
2012-A01	2012-M02	NASA (Deda Johansen)	Maintenance and Operations (M&O) Building (SWMU #014) Confirmation Sampling Work Plan for Soil Land Use Control Implementation Plan (LUCIP) Removal, December 2020: NASA (Deda Johansen) took an action item to look more into the site history for data from the prior investigation	Closed	2/17/2021	A bibliography with brief descriptions of document content was prepared. It will be included in HGL's upcoming Confirmatory Sampling Work Plan for Soil LUCIP Close-out
2012-A02	2012-M03	NASA (Mike Deliz)	Review of Site Status and Deliverables, December 2020: FDEP inquired if NASA will be going over the outstanding CAMP documents later on, or if a list could be provided. NASA (Mike Deliz) took an action item to consolidate and send the outstanding document summary to FDEP	Closed	2/17/2021	A consolidation of the outstanding CAMP documents was provided to FDEP following the meeting
2102-A01	2102-M05	NASA (DJ)	Contractors Road Heavy Equipment Area (SWMU #055) 2020 Annual Groundwater Monitoring, February 2021: FDEP asked about the TDS and sodium results in the bioremediation area that are above Class GII groundwater standards. NASA responded that the sodium and TDS are compared to the KSC background levels, and took an action to provide the approved plan and data to FDEP for future reference.	Closed	4/28/2021	Completed - NASA sent both the background study and the approval letter to FDEP on 2/19/2021. A follow-up meeting was held between NASA, FDEP and HGL on 3/1/2021. FDEP requested a copy of the Decision Process Document, and as a follow-on later requested a copy of the actual background study. On 4/18/2021, FDEP recommended that NASA identify a suite of wells at the site that can be used to generate site-specific background information. NASA will follow that recommendation.
2102-A02	2102-M05	NASA (DJ)	Contractors Road Heavy Equipment Area (SWMU #055) 2020 Annual Groundwater Monitoring, February 2021: FDEP inquired if NASA has an UIC approval order to identify what NASA is using? NASA stated UIC monitoring was approved as part of the IM work plans that will be provided to FDEP .	Closed	4/28/2021	NASA provided FDEP with the 2016 and 2018 Bioremediation Work Plans that included the UIC Notifications as an appendix in each.
2102-A03	2102-M05	NASA (DJ)	Contractors Road Heavy Equipment Area (SWMU #055) 2020 Annual Groundwater Monitoring, February 2021: FDEP inquired if the Team resampled for benzene and chloroform at the site, and found these not to be a risk? NASA performed a real-time investigation during the KSCRT meeting of past data and did not find resampling of benzene. Since no soil benzene source was identified in soil or groundwater, and the detections did not exceed the commercial level, NASA submitted these sampling results to the NASA Industrial Hygiene Office for review. FDEP would like to see the email to help understand the resampling and rationale of the dropping of these chemicals off the sampling list. NASA will provide this benzene data to FDEP and have a discussion to review the data and also the UIC information from May/June 2014.	Closed	4/28/2021	NASA sent the Vapor Intrusion Memorandum to FDEP on 2/19/2021. A follow-up meeting was held between NASA, FDEP and HGL on 3/1/2021. FDEP's primary concern was that the sub-slab vapor results would be acted on if needed. NASA explained that KSC's Industrial Hygienist was consulted about the findings which FDEP had concerns about and found no need for action, and that vapor sampling results will continue to be provided to KSC's Environmental and Occupational Health organization.
2102-A04	2102-M10	NASA (DJ)	GSA Reclamation Yard (SWMU#010), DPT Results, February 2021: FDEP pointed out that the iron in monitoring well MW0071 exceeded the secondary standard. What is the basis for not including monitoring well MW0071? NASA responded that the results for iron were within the range of background values for KSC, and will provide documentation. FDEP stated that site-specific background data may be needed at some point. NASA took an action item to look at the RFI for that data, and provide to FDEP.	Closed	4/28/2021	The RFI and CMS groundwater metals data for GSRY were reviewed. The majority of the data are from the upper horizon of the aquifer (30 ft. or shallower), while the zone treated with Provect-OX™ was 40-50 ft below ground surface. In the 2021 wet season groundwater sampling event, samples for iron will be collected from a site well outside the treated area.
2102-A05	2102-M13	NASA (RO)	needs to be a downgradient well establishing the extent of the plume at FSA1 (PRL #157). Do we have one? AECOM took an action item to look into that request	Closed	4/28/2021	NASA will be installing a downgradient well.
2102-A06	2102-M13	NASA (RO)	Industrial Area LTM, February 2021 (FSA1 Site): NASA stated they will take a look into the prior DPT data to see if we need to install that well and provide the Team with an update and make a recommendation	Closed	4/28/2021	NASA will be installing a downgradient well.
2104-A01	2104-M04	NASA (AMC)	Area South of K7-0516 and Eastern Component Cleaning Facility (SWMU #030) Interim Measure, Operation, Maintenance, & Monitoring, and Performance Monitoring and Interim Groundwater Monitoring, April 2021: An action item to incorporate surface water sampling into the CCF monitoring program was assigned to NASA and Tetra Tech	Closed	6/22/2021	This surface water sampling was incorporated in the barge canal sampling program moving forward.

Action Item No.	Minutes Reference	Responsible Team Member	Action item	Status	Date Closed	Closure Comments
2012-A03	2012-M03	NASA (MD)	Review of Site Status and Deliverables, December 2020: Mike will summarize the look ahead and send a detailed version to FDEP that will provide site histories, what NASA has completed, and where they are going (plume maps, the works). FDEP inquired if they could also obtain a copy of the slides being presented today. NASA confirmed they would provide the slides via large file transfer	Closed	9/15/2021	Look ahead and maps have been provided to FDEP by NASA
2104-A02	2104-M04	NASA (AMC)	Area South of K7-0516 and Eastern Component Cleaning Facility (SWMU #030) Interim Measure, Operation, Maintenance, & Monitoring, and Performance Monitoring and Interim Groundwater Monitoring, April 2021: FDEP requested that the sampling plans for 2021 be documented in a letter since there will not be a report submitted this year for this site. NASA stated they would put a memo together and provide the work plan for the next year of monitoring	Closed	9/15/2021	FDEP referenced the April 2021 advance data package (ADP) in their review letters dated May 11, 2021 (for CCF, SWMU #030) and May 12, 2021 (for 516S, SWMU #100). Both letters state additional groundwater assessment activities will be conducted in 2021. This work has been delayed and will now occur in early 2022. The proposed sampling plans were presented in the April 2021 ADP. Revisions to the CCF East sampling plan will be presented at the September Team meeting. This meets the intent of this action item.
2106-A03	2106-M03	NASA	NASA Remediation Program Updates, June 2021: FDEP received a request from Florida Today requesting documents associated with PFAS on KSC. NASA stated they will provide the Oculus document/report names to FDEP to assist with the inquiry.	Closed	9/15/2021	NASA assisted FDEP with this inquiry
2012-A04	2012-M04	NASA (MD)	Firex Water Tank (SWMU #069) Confirmation Sampling Work Plan for Soil LUCIP Removal, December 2020: NASA (Mike Deliz) took an action item to see what NASA can find out on these discharge reports	Closed	11/9/2021	Internal discharge records were located and saved to the NASA shared drive. No additional spill records have been located for the release(s). The site entered the RCRA process through a SWMU Assessment and was added to KSC's RCRA Permit Appendix A. A Discharge Report Form does not appear to have been filed.
2109-A02	2109-M09	NASA (MJD)	KSC Center-Wide Per- and Polyfluoroalkyl Substances (PRL 237) Locations of Concern, September 2021: NASA has conducted sampling in the Indian River for PFAS. NASA to provide FDEP with the surface water sample results from the Indian River	Closed	11/9/2021	Sample results provided to FDEP
2109-A01	2109-M09	NASA (AC)	Wilson Corners (SWMU 001) High Concentration Plume Site Characterization and Revised AS System Layout, September 2021: NASA will send historic groundwater sampling data to FDEP.	Closed	1/11/2022	This data was provided to FDEP on November 9, 2021, during the KSCRT meeting.
2109-A03	2109-M14	NASA (DJ)	General Services Administration Reclamation Yard (GSRY) SWMU 010, May/June Groundwater Monitoring Results September 2021: NASA asked that the pre-Interim Measure UIC sample results be added to the applicable figure and requested that AECOM update the table with pre-treatment results in the ADP and get that back to the Team for the records.	Closed	1/11/2022	The pre-Interim Measure UIC results were included in the UIC discussion in the annual groundwater monitoring report that was submitted in November 2021.
2201-A02	2201-M04	NASA	Center-Wide Per- and Polyfluoroalkyl Substances (PRL #237) Phase III Solid Waste Management Unit Site Assessment and Confirmatory Sampling Report Summary, January 2022: NASA will update the summary table for KARS Park I and email back out to the Team.	Closed	5/3/2022	addressed in the meeting minutes
2203-A01	2203-M03	NASA	Contractors Rd Heavy Equipment Area (SWMU 055) 2021 Annual Groundwater Monitoring Report Advanced Data Package, March 2022: FDEP requested that HGL provide information regarding the number of sample points necessary for Mann-Kendall statistical analysis	Closed	5/3/2022	HGL provided the requested information to FDEP in a follow up email on March 8, 2022 to FDEP.
2203-A04	2203-M06	NASA	GSA Reclamation Yard (SWMU 010) Groundwater Monitoring Update, March 2022: FDEP requested a synoptic figure of the last two clean sampling events of the two wells.	Closed	5/3/2022	AECOM provided figure to FDEP on March 9, 2022
2203-A06	2203-M09	NASA	CAMP Deliverables Look-Ahead and Document Requirements, March 2022: FDEP inquired if the CAMP document being presented is the document sent around March 1? NASA confirmed that it was, but that it was revised since then. For PRL 237, there were two errors on dates (inadvertently switched), but will send this after the meeting.	Closed	5/3/2022	NASA provided the updated CAMP to team members

Action Item No.	Minutes Reference	Responsible Team Member	Action item	Status	Date Closed	Closure Comments
2201-A03	2201-M04	NASA	Center-Wide Per- and Polyfluoroalkyl Substances (PRL #237) Phase III Solid Waste Management Unit Site Assessment and Confirmatory Sampling Report Summary, January 2022: NASA owes FDEP an update on Q6 Radar Station (SWMU #112), so they will put together an ADP to review the RFI they completed.	Closed	6/28/2022	contract was modified and NASA will present results for this in a future presentation
2205-A02	2205-M08	NASA	**Wilson Corners (SWMU #001) 2021 Annual Long-Term Monitoring Update, May 2022:** FDEP stated that VOC concentrations are increasing to the west but the natural attenuation default concentrations (NADC) footprint hasn't changed much. AECOM confirmed that was correct. Based predominantly on DPT data, the existing wells are appropriate for the extent of the low-concentration plume (LCP). The performance monitoring wells are more on the interior of the plume and will give us a better idea of what is going on with the high concentration plume (HCP). FDEP inquired what the vertical head difference of the zones are that are being referred to. AECOM will look into this question and provide the information.	Closed	6/28/2022	AECOM provided vertical head data for 2019, 2020 and 2021 to FDEP on May 5, 2022.
