In accordance with the provisions of Florida Statutes, Chapter 492, this Groundwater Monitoring Report for the Kennedy Space Center General Services Administration Reclamation Yard site located in Merritt Island, Florida, has been prepared under the direct supervision of a Professional Geologist registered in the State of Florida. This work was performed in accordance with generally accepted professional geology practices pursuant to Chapter 492 of the Florida Statutes. The data, findings, recommendations, specifications, or professional opinions were prepared solely for the use of the National Aeronautics and Space Administration and the Florida Department of Environmental Protection. AECOM makes no other warranty, either expressed or implied, and is not responsible for the interpretation by others of these data.

EXECUTIVE SUMMARY

This report presents a summary of the groundwater monitoring activities that occurred in September and October 2022 at General Services Administration Reclamation Yard, Solid Waste Management Unit 010, located at the John F. Kennedy Space Center (KSC), Florida. The site is monitored under KSC's Resource Conservation and Recovery Act Corrective Action Program. This approach also meets the requirements of Chapter 62-780, Florida Administrative Code. For the purposes of this report, two separate plumes, known as the Polychlorinated Biphenyl (PCB)/Volatile Organic Aromatic (VOA) Plume and the Chlorinated Volatile Organic Compound (VOC) Plume, were identified for this site. The contaminants of concern (COCs) for the PCB/VOA Plume consist of PCBs, 1,2,4-trichlorobenzene, and breakdown products of 1,2,4-trichlorobenzene. The COCs for the Chlorinated VOC Plume were tetrachloroethene, trichloroethene, cis-1,2-dichloroethene, and vinyl chloride. Groundwater monitoring for VOCs in the Chlorinated VOC Plume area was discontinued following the December 2021 annual monitoring event. Annual groundwater monitoring for underground injection control (UIC) parameters continues for both the PCB/VOA Plume and the Chlorinated VOC Plume areas.

The activities presented in this report include one field event: September and October 2022, which includes sitewide semi-annual water level measurements of 55 monitoring wells, redevelopment of all monitoring wells listed in the sampling plan, and groundwater sampling of 28 monitoring wells.

Groundwater Flow

Based on water level measurement activities performed during this reporting period, the following conclusions are provided:

- In September 2022, groundwater flow for the site was generally to the north in the 2 to 18 feet below land surface (bls) and 10 to 30 feet bls zones, with flow direction varying by occasional east and west components, and to the southeast in the 30 to 40 feet bls zone. This is generally consistent with historical observations at the site; however, flow direction at the site has varied during past monitoring events.

Based on water level measurement activities performed during this reporting period, the following recommendations are provided:

- Conduct annual water level measurements at 55 monitoring wells.

PCB/VOA Plume

Based on groundwater and surface water sampling activities performed during this reporting period, the following conclusions are provided:

- Groundwater and surface water results demonstrate a reduction in plume size and COC concentrations compared to baseline sampling for the 2018 Interim Measure (IM), which

included excavation using both conventional methods and large diameter auger caisson technology. Additionally, a persulfate and ferric iron mixture was added to the bottom of the excavation in some areas; therefore, three monitoring wells in the PCB/VOA Plume area were sampled for UIC parameters. The results indicate that concentrations were above the site-approved target levels in GSRV-MW0049 for sulfate, iron, manganese, and sodium; in GSRV-MW0066 for sulfate, iron, sodium, and total dissolved solids (TDS); and in GSRV-MW0050 for sodium and TDS.

- Chlorinated benzene compound COCs were detected above State of Florida Groundwater Cleanup Target Levels (GCTLs) in the 10 to 30 feet bls zone only.
- There were no detections of PCBs.
- The VOA plumes are delineated, both horizontally and vertically.

Based on groundwater sampling activities performed during this reporting period, the following recommendations are provided:

- Discontinue monitoring for VOCs at 16 monitoring wells and one surface water location due to at least two consecutive events in which VOC concentrations were below GCTLs.
- Discontinue monitoring for PCBs at 20 monitoring wells and 1 surface water location due to at least two consecutive events in which PCB concentrations were below GCTLs.
- Perform annual monitoring at 12 monitoring wells for VOCs or PCBs.
- Discontinue UIC monitoring of TDS at GSRV-MW0049 and manganese at GSRV-MW0050 and GSRV-MW0066.
- Perform annual UIC monitoring at GSRV-MW0049 for sulfate, iron, manganese, and sodium, and at GSRV-MW0050 and GSRV-MW0066 for sulfate, iron, sodium, and TDS.

Chlorinated VOC Plume

Based on groundwater sampling activities performed during this reporting period, the following conclusions are provided:

- Annual UIC monitoring was conducted in the Chlorinated VOC Plume area at three monitoring wells, GSRV-MW0067, GSRV-MW0071, and GSRV-MW0073. UIC monitoring is being conducted to monitor for groundwater conditions that may have changed due to the enhanced reductive dechlorination treatment IMs conducted in 2013 and 2017.
- Concentrations of iron or TDS remain above the site-approved target levels in the three monitoring wells sampled.

Based on groundwater sampling activities performed during this reporting period, the following recommendations are provided:

- Perform annual UIC groundwater monitoring at GSRV-MW0067 for iron and at GSRV-MW0071 and GSRV-MW0073 for iron and TDS.

1. INTRODUCTION

1.1 OVERVIEW

The National Aeronautics and Space Administration (NASA), through its Environmental Assurance Branch, is managing cleanup of two areas at the General Services Administration Reclamation Yard (GSRY) at John F. Kennedy Space Center (KSC), Florida. The area located in the northeast portion of the GSRY has historically been referred to as the Northeast Area and is now known as the Polychlorinated Biphenyl (PCB)/Volatile Organic Aromatic (VOA) Plume. The area located in the western portion of the GSRY has been historically referred to as the Southwest Area and Southwest Hot Spot and is now referred to as the Chlorinated Volatile Organic Compound (VOC) Plume. The GSRY has been designated Solid Waste Management Unit 010 under KSC's Resource Conservation and Recovery Act (RCRA) Corrective Action Program.

AECOM Technical Services, Inc. (AECOM) has prepared this report and completed groundwater monitoring of the PCB/VOA and Chlorinated VOC Plumes at the GSRY site for NASA under contract 80KSC019D0010, Task Order 80KSC019F0078. An Advance Data Package (ADP) was presented to the KSC Remediation Team (KSCRT) in preparation for this report. The KSCRT approved the recommendations in those presentations during a meeting on April 5, 2023. The ADP and meeting minutes are provided as **Appendix A**. This report presents the activities and findings for the September and October 2022 groundwater monitoring event. The evaluation of these data provides conclusions and recommendations for continued groundwater monitoring.

1.2 FACILITY LOCATION AND SITE USE

KSC is located on the east-central Atlantic Coast of Florida in the northern portion of Merritt Island, between the Indian River and Banana River Lagoons in Brevard County. The GSRY is located within KSC on Ransom Road between State Road 3 and Space Commerce Way, as shown on **Figure 1-1**, and in Section 7 of Township 23, Range 37 East, as shown on the United States Geological Survey 7.5-minute Orsino Quadrangle Map (United States Geological Survey 1976), which is included as **Figure 1-2**. The current site layout is presented on **Figure 1-3**.

The GSRY was constructed in the 1960s on 7 acres. It was historically used to stage transformers, air conditioners, batteries, paints, solvents, oils, pesticides, and adhesives. It is currently operated as the Reutilization, Recycling, and Marketing Facility (RRMF) by KSC's Institutional Support Contractor. The RRMF is used for the sale, recycling, and temporary storage of equipment and surplus materials. The facility operates within a security fence, which is locked during after-duty hours. The facility holds public auctions and is visited by buyers and vendors.

The main area of the yard north of the main building and the entrance to the yard are paved with asphalt and concrete. The western portion of the yard and the areas south and east of the main building are covered by sand and gravel. Ransom Road and two small retention ponds border the site to the north. Drainage ditches border the yard to the west, south, and east. The Corrosion Control

Facility, also known as the Ransom Road Sandblast Yard, is located to the east, a scrap storage yard is located to the west, and undeveloped land is located to the south.

1.3 PCB/VOA PLUME BACKGROUND

In 1990, the Base Operations contractor completed a site-wide RCRA Facility Investigation Work Plan (NASA 1998), and additional site-wide RCRA Facility Investigation activities took place from 1998 to 2001 (NASA 2001). During the investigations, chlorobenzenes, pesticides, and PCBs were identified as contaminants of concern (COCs) in groundwater, and pesticides and PCBs were identified as COCs in soil.

An Interim Measure (IM) was completed in 2002 (NASA 2003) to remove exposed shallow soils containing PCB concentrations above the State of Florida Direct Exposure Industrial Soil Cleanup Target Level (SCTL), which was then 2.1 milligrams per kilogram (mg/kg), as provided in Table 2 of Chapter 62-777, Florida Administrative Code (F.A.C.). Approximately 400 tons of exposed soils were removed from the eastern ditch and around the southeast edge of pavement that contained PCB concentrations greater than the Industrial SCTL and were disposed of off-site at permitted facilities.

A Corrective Measures Study (CMS) to identify and evaluate potential remedial alternatives was completed between 2002 and 2004 (NASA 2004). Groundwater analytical results from CMS sampling indicated that pesticides were no longer a COC at the site. The CMS recommended additional soil excavation, which included short-term groundwater recovery via dewatering, as the remedial strategy for the site. Additional soil sampling to further delineate PCBs was completed as part of the remedial design process. The Corrective Measures Implementation (CMI) Design was completed in 2005 and included an excavation plan with dewatering for the PCB/VOA Plume (NASA 2006b).

In 2006, CMI was conducted, and consisted of excavation and short-term groundwater recovery (NASA 2006a). Dewatering wells, screened from 15 to 20 feet below land surface (bls), were installed around the north, east, and a portion of the south side of the PCB/VOA Plume. During dewatering activities, approximately 265,000 gallons of impacted water were removed and treated on-site by an air stripper and PCB filter cartridges to reduce VOAs and PCBs to levels suitable for discharge. The treated water was discharged into ditches along the perimeter of the GSRY property. Approximately 1,742 tons of soil with PCB concentrations greater than or equal to the leachability SCTL of 17 mg/kg were removed at depths up to 15 feet bls for disposal at permitted facilities. The excavation was filled with verified clean fill dirt, and the area was repaved.

After completion of excavation activities, two monitoring wells (GSRY-MW0010S and GSRY-MW0010IS) were installed to replace wells that were abandoned prior to excavation activities. Groundwater sampling in 2006 and 2007, which was included in the performance monitoring for the CMI, indicated that GSRY-MW0010S and GSRY-MW0010IS contained concentrations of PCBs that were below the State of Florida Groundwater Cleanup Target Levels (GCTLs) as provided in

Chapter 62-777, F.A.C.; however, chlorobenzene, trichlorobenzene, and dichlorobenzene concentrations remained above GCTLs (NASA 2008). Due to the presence of PCBs detected in the drill cuttings during well installation activities, three direct push technology (DPT) locations were sampled for saturated soil analysis. Two locations had PCBs above residential SCTLs at 14 to 15 feet bls and 24 to 25 feet bls. The site transitioned to long-term monitoring (LTM), and in 2008, analytical results indicated that concentrations of PCBs in GSRY-MW0010S and GSRY-MW0010IS were below GCTLs for the fourth consecutive event, and LTM for PCBs was discontinued. The LTM program was suspended, and additional site assessment for chlorinated benzenes was recommended.

In 2008, NASA initiated supplemental groundwater assessment due to increasing concentrations of 1,2,4-trichlorobenzene (124TCB) in GSRY-MW0010S (NASA 2019b). From August 2008 to February 2009, groundwater samples were collected from existing monitoring wells and temporary sampling points using DPT. Concentrations of chlorinated benzenes were detected above GCTLs and above the State of Florida Natural Attenuation Default Concentrations (NADCs) provided in Table 5 of Chapter 62-777, F.A.C.

Confirmation groundwater samples were collected using DPT in August 2009 from three intervals in two of the previously sampled locations (NASA 2019b). Filtered and unfiltered samples were analyzed for VOCs and PCBs. Concentrations in the filtered samples were lower than the unfiltered samples. Four unfiltered samples and one filtered sample contained PCBs: the unfiltered samples contained a maximum PCB concentration of 14 micrograms per liter ($\mu\text{g/L}$), and the filtered sample contained a maximum PCB concentration of 1.7 $\mu\text{g/L}$, which was qualified as an estimated value. The maximum PCB concentrations were above the GCTL of 0.5 $\mu\text{g/L}$.

In 2009, additional monitoring wells were installed to further delineate the chlorinated benzene compounds (NASA 2012b). Monitoring well GSRY-MW0010S contained VOC concentrations that were an order of magnitude higher than what was detected in other nearby shallow wells. Because of the correlation between turbidity and groundwater contaminant concentrations, there was an indication that GSRY-MW0010S may have been damaged. In June 2010, monitoring well GSRY-MW0035 was installed approximately 4 feet south of GSRY-MW0010S. Free product containing 75 percent PCBs (Aroclor 1260) and a concentration of 124TCB at 62,000,000 $\mu\text{g/L}$ was extracted from GSRY-MW0035 during development.

In 2010 and 2011, surface water samples were collected semi-annually from the retention pond on the northeast side of the GSRY (NASA 2012b). Samples were analyzed for VOCs, and analytical results indicated on one occasion the concentration of 1,4-dichlorobenzene (14DCB) was above the State of Florida Surface Water Cleanup Target Level for Freshwater Surface Water Criteria provided in Table 1 of Chapter 62-777, F.A.C. In May 2011, free product was again observed in GSRY-MW0035.

2022 Groundwater Monitoring Report

GSRY SWMU 010

Revision: 0

October 2023

Soil and groundwater assessments were conducted in 2012 and continued until 2017, when the IM Work Plan for the Northeast PCB and Chlorobenzene Source Area (NASA 2017a) was completed. A total of 564 soil samples were collected to investigate PCB soil contamination. A total of 369 soil samples were analyzed at a fixed-based laboratory by United States Environmental Protection Agency (USEPA) Methods 3550C/8082A. A total of 196 soil samples were analyzed by a field test kit, some of which were also analyzed by fixed-based laboratory analysis. Two lithological soil borings were completed to a depth of 34 feet bls. Unsaturated soil results were compared to the Direct Residential Exposure SCTL for PCBs (0.5 mg/kg) (NASA 2019b). Soil samples were collected in the vadose zone (0 to 3 feet bls) to characterize PCB concentrations of the backfilled soils within the 2006 excavation. The highest PCB concentration in the vadose zone was 29.8 mg/kg.

Saturated soil samples were collected by DPT, and based on a comparison of groundwater PCB results to saturated soil concentrations, the extent of PCBs in the saturated soils was delineated to 1 mg/kg (NASA 2017a). It was found that 1 mg/kg in saturated soils corresponded with dissolved PCB concentrations equal to or below the GCTL of 0.5 µg/L. The soil assessment indicated that 15 locations in the saturated zone contained PCB concentrations exceeding the leachability SCTL of 17 mg/kg. Soil sampling in the saturated zone revealed PCB contamination extended to a depth of 22 feet bls in an area of approximately 4,285 square feet.

In 2015, groundwater samples were collected and analyzed for PCBs from existing monitoring wells GSRY-MW0010S, GSRY-MW0035, and GSRY-MW0032 (NASA 2019b). Laboratory analytical results indicated that GSRY-MW0010S and GSRY-MW0035 contained concentrations of PCBs at 20 µg/L and 667 µg/L, respectively. Based on soil analytical results, four shallow monitoring wells were installed around the perimeter of the area in which concentrations of PCBs in saturated soils exceeded 25 mg/kg. Additionally, one deep monitoring well (GSRY-MW0048) was installed to vertically delineate PCBs and sampled in November 2016. Three of the shallow wells yielded results above the PCB GCTL of 0.5 µg/L with a maximum of 20 µg/L. In December 2016, eight shallow monitoring wells were installed around the perimeter of the area in which concentrations of PCBs in saturated soils exceeded 1 mg/kg. The newly installed wells, select existing wells (GSRY-MW0004S and GSRY-MW0011S), and a surface water location (GSRY-SW0001) from the north pond were sampled for PCB analysis. Analytical results ranged from non-detect to 1.7 µg/L in the new perimeter wells. Two perimeter wells (GSRY-MW0043 and GSRY-MW0047), which both had a PCB concentration of 1.7 µg/L, were re-developed and re-sampled in January 2017. The analytical results indicated PCB concentrations were less than 0.5 µg/L in both wells. Groundwater sampling using DPT was also conducted to evaluate chlorinated benzene compounds. Analytical results indicated chlorinated benzene compounds were present with concentrations greater than GCTLs in the PCB/VOA Plume area. Concentrations of chlorinated benzene compounds also exceeded NADCs in the area near and around GSRY-MW0035, which historically contained free product. Concentrations of chlorinated benzene compounds exceeding GCTLs were not found below 24 feet bls.

In 2018, NASA implemented an IM using conventional excavation and large diameter auger (LDA) caisson technology to excavate PCB-contaminated soils (NASA 2019b). The IM objectives were to reduce PCBs in unsaturated soil to below the Direct Exposure Residential SCTLs of 0.5 mg/kg, and to remove contaminant mass in the saturated soils to accelerate groundwater cleanup. Excavation of 267 cells was completed using LDA caisson technology. Excavation of 85 proposed cells was completed using conventional methods. As part of the IM, a persulfate and ferric iron mixture, Provect-OX[®], was added to the bottom of excavation cells where the concentration of PCB was greater than 1 mg/kg. The LDA caisson excavation was completed in April 2018. The conventional excavation was completed in October 2018. Approximately 7,080 tons of PCB-impacted soils were removed during excavation activities and properly disposed of off site.

Following the IM, 21 monitoring wells were installed from September 2018 through February 2019 (NASA 2019b). Groundwater monitoring was completed in September and October 2018 and February and March 2019. A surface water sample (GSRY-SW0001) was collected from the north pond. Analytical results indicated chlorobenzene was detected above the GCTL in GSRY-MW0049 and GSRY-MW0050, and benzene was detected above the GCTL in GSRY-MW0036R. In monitoring well GSRY-MW0062, PCBs were detected above the GCTL. However, GSRY-MW0062 was redeveloped and resampled, and analytical results indicated PCBs were below detection limits. The surface water sample GSRY-SW0001 had no COC concentrations above detection limits in March 2019.

Underground injection control (UIC) sampling was conducted at a subset of monitoring wells in September 2018 to monitor the residual effects of the Provect-OX[®] treatment. UIC parameter concentrations were compared to GCTLs or KSC-wide background target levels. Analytical results indicated sulfate, iron, manganese, or sodium were detected above the site-approved target levels in either GSRY-MW0049 or GSRY-MW0050.

In February 2020 and October 2020, two monitoring wells were installed, GSRY-MW0066 and GSRY-MW0075, respectively (NASA 2021c). Both were screened within the 10 to 30 feet bls zone and were installed to assist with horizontal delineation of the PCB/VOA Plume to the west and east, respectively. Groundwater monitoring was completed in December 2019 and May/June 2020. Groundwater results for monitoring wells GSRY-MW0049 and GSRY-MW0050 indicated a decreasing trend for 124TCB, and an increasing trend for 14DCB. Groundwater results for monitoring well GSRY-MW0049 indicated an increasing trend for 1,3-dichlorobenzene (13DCB). Additionally, PCB concentrations in several monitoring wells were above the GCTL in the December 2019 sampling event; however, PCB concentrations were below the GCTL in the sampled wells for the May/June 2020 sampling event. Concentrations of UIC parameters iron, sulfate, and total dissolved solids (TDS) remained above GCTLs or KSC-wide background target level criteria in monitoring wells GSRY-MW0049 and GSRY-MW0050, located within the former Provect-OX[®] treatment area. Concentrations of UIC parameters during December 2019 and May 2020 were below the applicable site-approved target level criteria in perimeter wells GSRY-MW0057, GSRY-

MW0061, and GSRY-MW0064, indicating these analytes are not migrating outside of the treatment area.

Semi-annual groundwater monitoring was conducted in December 2020 and May/June 2021 (NASA 2021a). In May/June 2021, chlorinated benzene compound COCs were detected above the target levels in the 10 to 30 feet bls zone only. Groundwater analytical results continued to demonstrate a reduction in plume size and COC concentrations compared to baseline sampling for the 2018 LDA excavation IM. Concentrations of UIC parameters iron, sulfate, and TDS remained above applicable target level criteria in monitoring wells GSRY-MW0049, GSRY-MW0050, and GSRY-MW0066. The sampling frequency was changed from semi-annual to annual, alternating between wet and dry seasons.

In November and December 2021, DPT groundwater sampling and annual groundwater monitoring was conducted (NASA 2022). Analytical results demonstrated a reduction in plume size and COC concentrations, compared to baseline sampling for the 2018 IM. Chlorinated benzene compound COCs were detected above GCTLs in the 10 to 30 feet bls zone only. Chlorinated benzene compound COCs were below the GCTLs in monitoring wells that bound the current PCB/VOA plume horizontally and vertically. During the 2018 IM, the localized shallow aquifer was affected by the addition of flowable fill, and pore volume exchange is likely slower than pre-IM; therefore, no locations or COC analytes were recommended for elimination, although there had been two or more consecutive sampling events below GCTLs at some locations. In December 2021, UIC sampling included sampling a site-specific background monitoring well, GSRY-MW0002IS. UIC parameters iron, manganese, sodium, sulfate, or TDS were detected above baseline concentrations at GSRY-MW0049, GSRY-MW0050, and GSRY-MW0066. UIC monitoring was discontinued at GSRY-MW0057, GSRY-MW0061, and GSRY-MW0064.

1.4 CHLORINATED VOC PLUME BACKGROUND

In 1990, the Base Operations contractor completed a site-wide RCRA Facility Investigation Report (NASA 1998). Additional site-wide RCRA Facility Investigation activities took place from 1998 to 2001 (NASA 2001). Past handling practices resulted in releases of solvents to the environment in the Chlorinated VOC Plume area. During the investigation, tetrachloroethene (PCE), trichloroethene (TCE), and other VOCs created by their degradation were identified in groundwater and soils in the Chlorinated VOC Plume.

A CMS for removal of solvent-impacted soils to a depth of 16 feet bls was completed in 2004 (NASA 2004), and the CMI by excavation was completed in 2006 (NASA 2006b). During the backfill process, sodium permanganate was added to chemically oxidize additional solvents. In 2007, sodium permanganate was injected in the western portion of the site to address rebounding concentrations in groundwater. LTM was initiated after the 2006 and 2007 CMI activities were completed.

Results from LTM activities indicated increasing trends in VOC concentrations that exceeded GCTLs and NADCs. Therefore, LTM was suspended, and supplemental site assessment activities were conducted from 2008 to 2010.

In 2011, following further assessment and remedial alternatives evaluation, enhanced reductive dechlorination (ERD), through injection, using emulsified zero valent iron (EZVI) and vegetable oil/lactate (VO/L) or emulsified vegetable oil (EVO), was selected as an additional treatment method for the Chlorinated VOC Plume source area (NASA 2012a). The IM Work Plan was approved in May 2012 and included baseline sampling, two in situ treatment events, and six performance monitoring events using DPT.

In 2012 and 2013, baseline groundwater sampling was conducted using DPT. Concentrations of PCE were detected up to 170,000 µg/L within the Chlorinated VOC Plume source zone at the former GSRY-DPT3005 location (NASA 2019c). During the 2013 DPT sampling event, dense non-aqueous phase liquid was encountered at 21 to 22 feet bls in the south-center of the Chlorinated VOC Plume treatment area. The Chlorinated VOC Plume COCs are PCE, TCE, trans-1,2-dichloroethene, cis-1,2-dichloroethene, 1,1-dichloroethene, and vinyl chloride (VC).

Prior to injections in 2013, monitoring wells within a 50-foot radius of influence were abandoned (NASA 2019c). The first ERD injection event was conducted in November 2013. Approximately 9,060 gallons of EZVI were injected at 28 locations, and approximately 26,000 gallons of VO/L were injected at 13 locations. Analytical data from the first through fourth DPT performance monitoring events (July 2014 to September 2016) indicated 97 percent reduction of PCE and 71 percent reduction for other COCs.

The second ERD injection event for the Chlorinated VOC Plume was conducted in March 2017 (NASA 2019c). Approximately 3,894 gallons of EZVI were injected at 6 locations, and approximately 12,077 gallons of EVO were injected at 18 locations. Approximately 441 pounds of an anti-methanogenic agent, Provect-CH₄TM, were added to the EZVI and EVO solutions to limit methane production and increase dechlorination efficiency. The fifth and sixth DPT performance monitoring events were conducted in October 2017 and August 2018, respectively. Analytical data from these events indicated detections of PCE and VC were above GCTLs, and VC was above NADC in a significantly reduced footprint within the Chlorinated VOC Plume treatment area. The COC concentrations in groundwater were below GCTLs to the north of the Chlorinated VOC Plume treatment area.

In November 2019, eight monitoring wells (GSRY-MW0067 through GSRY-MW0074) were installed within the Chlorinated VOC Plume area (NASA 2021b). Groundwater monitoring was completed in December 2019 and May 2020, and laboratory analytical results indicated that concentrations of COCs were at or below GCTLs. During both events, UIC monitoring, associated with the ERD process, was conducted in three monitoring wells (GSRY-MW0067, GSRY-MW0071, and GSRY-MW0073) for analysis of total recoverable petroleum hydrocarbons (TRPH),

2022 Groundwater Monitoring Report

GSRY SWMU 010

Revision: 0

October 2023

iron, and TDS. Analytical results indicated TRPH was below the GCTL in the three wells, iron was above the GCTL in one well (GSRY-MW0073), and TDS was above the GCTL in two wells (GSRY-MW0071 and GSRY-MW0073). Prior to installation of these monitoring wells, UIC monitoring had been conducted via DPT since the baseline sampling.

In October 2020, temporary sampling points were installed using DPT to sample groundwater and assess the degradation of chlorinated VOCs in areas where there are no monitoring wells and to assess the Chlorinated VOC Plume delineation (NASA 2021a). Laboratory analytical results for this event indicated that VOC concentrations were either not detected or below the GCTL in every sample, except for GSRY-DPT3076. One sample collected from GSRY-DPT3076 in the 15 to 19 feet bls depth interval indicated that PCE, TCE, and VC concentrations were above their respective GCTLs.

In December 2020 and May-June 2021, semi-annual groundwater monitoring was conducted (NASA 2021a). In May 2021, two new monitoring wells, GSRY-MW0076 and GSRY-MW0077, were installed to investigate the GSRY-DPT3076 results. In May 2021, no concentrations of site COCs were detected above GCTLs. The May 2021 results continued to demonstrate chlorinated VOCs have been reduced below GCTLs in the ERD treatment area, including down-gradient and cross-gradient. Concentrations of iron and TDS were detected above the site-approved target level or maximum baseline criteria in monitoring wells GSRY-MW0071 and GSRY-MW0073. The sampling frequency was changed from semi-annual to annual, alternating between wet and dry seasons.

In December 2021, annual groundwater monitoring was conducted (NASA 2022). No site COCs were detected above GCTLs. Concentrations of iron or TDS remained above the site-approved target levels in three monitoring wells at GSRY-MW0067, GSRY-MW0071, and GSRY-MW0073. Due to two or more consecutive events in which target VOC concentrations were below GCTLs, annual groundwater monitoring for VOCs was discontinued. Annual UIC groundwater monitoring at GSRY-MW0067 for iron and at GSRY-MW0071 and GSRY-MW0073 for iron and TDS was continued.

1.5 PURPOSE

The purpose of this report is to present the field activities and results of the September and October 2022 annual groundwater monitoring event. Additionally, this report provides recommendations for future assessment and monitoring activities.

1.6 REPORT ORGANIZATION

The remainder of this report is organized as follows:

Section 2: Field Activities and Groundwater Flow. This section describes the methodology used for the groundwater monitoring activities.

Section 3: PCB/VOA Plume Analytical Results. This section summarizes the results of the 2022 groundwater monitoring activities in the PCB/VOA Plume area.

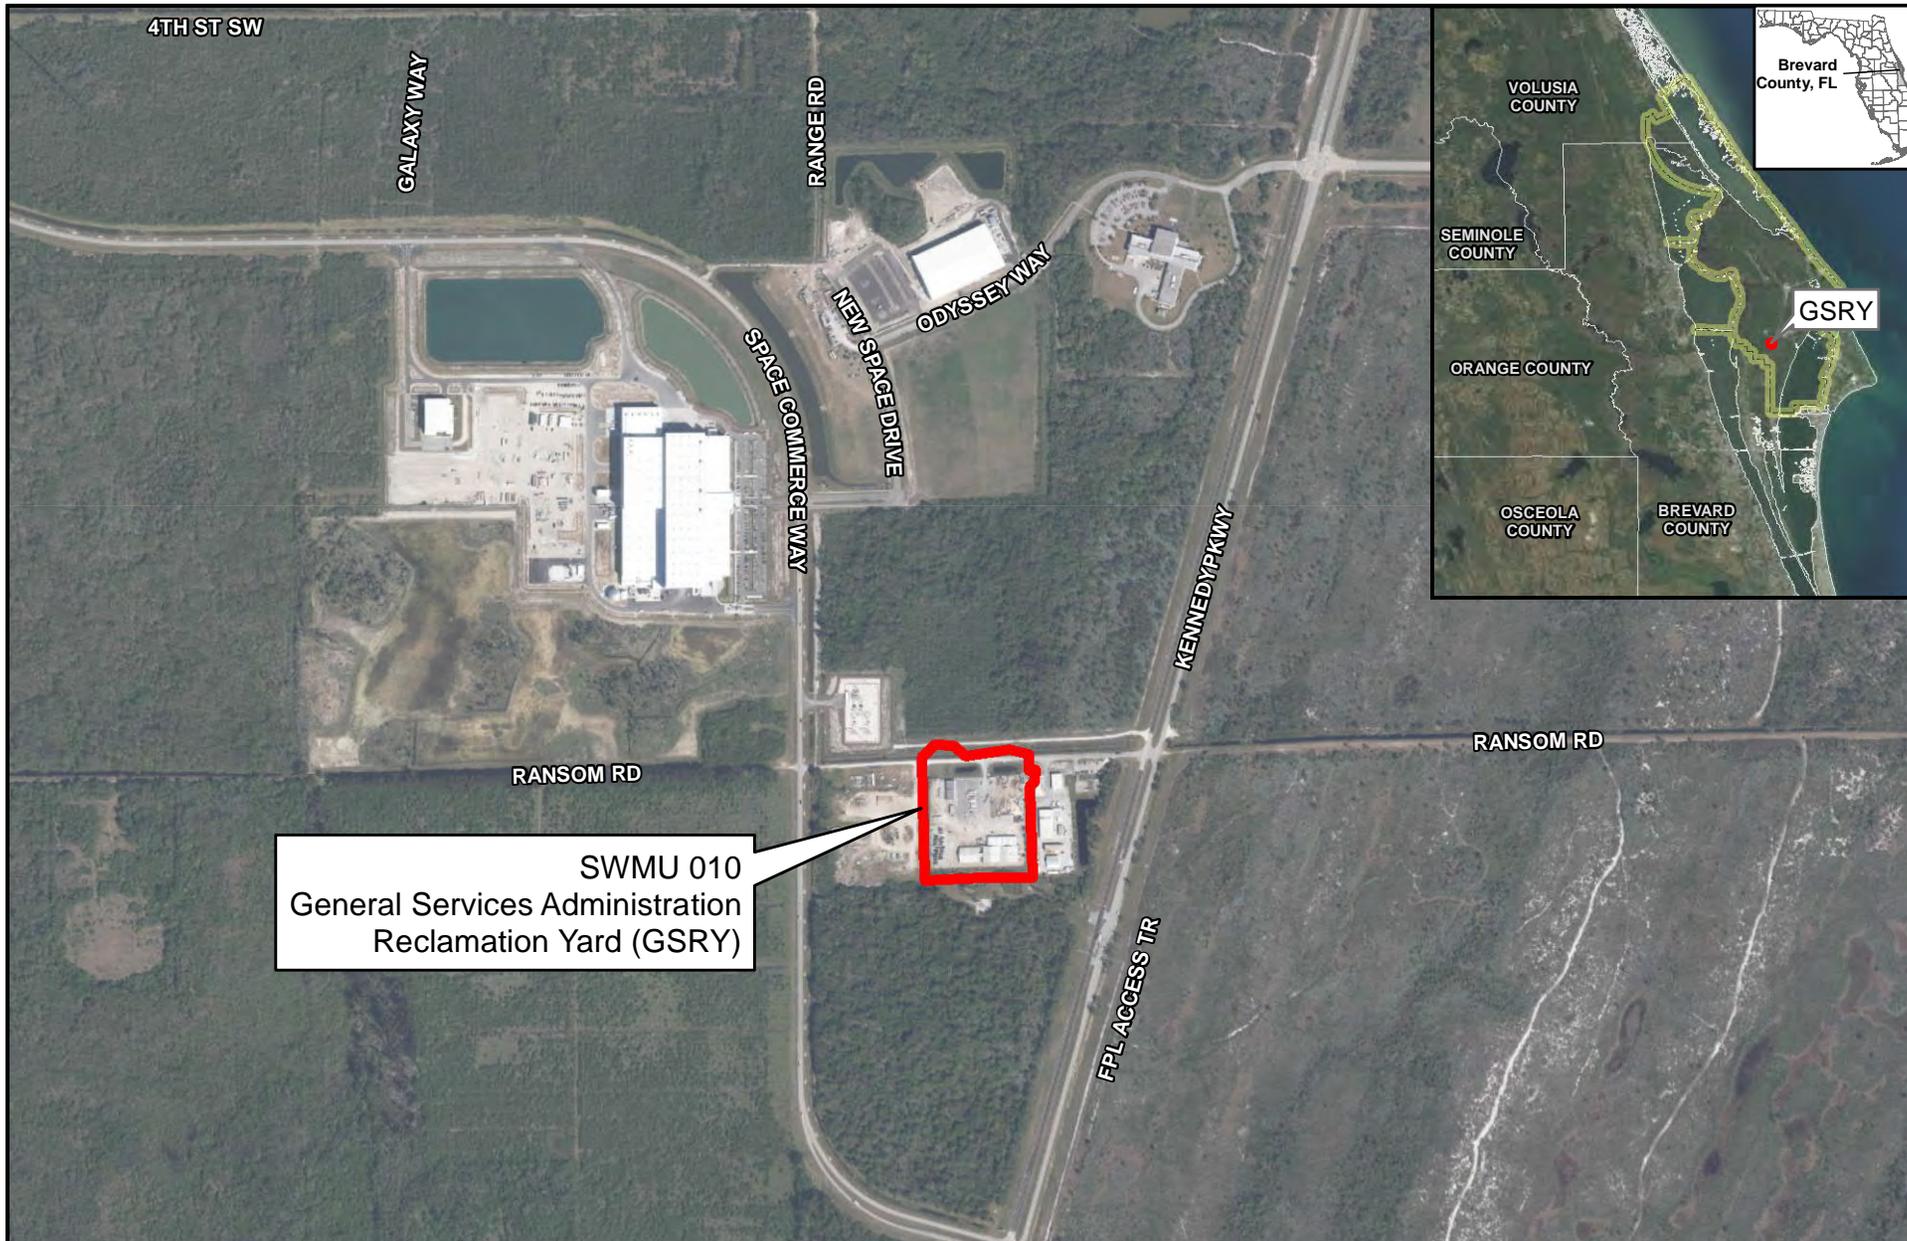

Section 4: Chlorinated VOC Plume Analytical Results. This section summarizes the results of the 2022 groundwater monitoring activities in the Chlorinated VOC Plume area.

Section 5: Conclusions and Recommendations. This section discusses conclusions based on recent and historical data and presents recommendations for future activities at the site.

Section 6: References. This section lists the documents used in developing this report.

2. FIELD ACTIVITIES AND GROUNDWATER FLOW

2.1 OVERVIEW

In September and October 2022, AECOM field personnel conducted the annual groundwater monitoring event. Field activities were conducted in accordance with Florida Department of Environmental Protection (FDEP) Standard Operating Procedures (FDEP 2018), the KSC Sampling and Analysis Plan (NASA 2017b), and the KSC Decision Process Document for the RCRA Corrective Action Program (NASA 2019a). Analytical results for the PCB/VOA Plume and the Chlorinated VOC Plume are discussed in Sections 3 and 4, respectively. The 2022 Groundwater Monitoring Plan is presented in **Table 2-1**, and the monitoring well locations are presented on **Figure 1-3**. Field notes and field logs are provided in **Appendix B**.

Investigation-derived waste from field activities was contained in properly labeled 55-gallon drums, which were stored on NASA-provided spill pallets, and secured with cargo straps to be properly disposed of by NASA.

2.2 DEPTH TO GROUNDWATER MEASUREMENTS

On September 27, 2022, prior to sampling, water levels were measured in 55 monitoring wells: 18 are included in the Chlorinated VOC Plume, and 37 are included in the PCB/VOA Plume area. Wells from both areas were used when evaluating groundwater flow direction to enable contouring across the entire site. Groundwater level measurements were compared to top-of-casing survey data to determine a relative groundwater elevation for each well. These elevations were then used to construct groundwater contour figures.

2.3 GROUNDWATER ELEVATIONS, FLOW DIRECTION, AND GRADIENT

In September 2022, groundwater flow for the site was generally to the north in the 2 to 18 feet bls and 10 to 30 feet bls zones, with flow direction varying by occasional east and west components, and to the southeast in the 30 to 40 feet bls zone. This is generally consistent with historical observations at the site; however, flow direction at the site has varied during past monitoring events. Groundwater level measurements were recorded from site wells prior to sampling and are summarized in **Table 2-2**. Groundwater contour maps, representing the different zones for each event, are provided on **Figure 2-1** through **Figure 2-3**.

Groundwater flow direction for each zone is discussed below.

- 2 to 18 feet bls (**Figure 2-1**): Depth to water ranged from 0.22 to 2.85 feet bls, with an average depth to water of 2.10 feet bls. Groundwater elevations indicated a north flow direction and a horizontal gradient of 0.0007 feet elevation per foot distance (ft/ft) from monitoring well GSRY-MW0008S to GSRY-MW0004S.
- 10 to 30 feet bls (**Figure 2-2**): Depth to water ranged from 0.62 to 4.24 feet bls, with an average depth to water of 1.95 feet bls. Groundwater elevations indicated a north flow direction and a

horizontal gradient of 0.0001 ft/ft from monitoring well GSRY-MW0075 to GSRY-MW0066 in the PCB VOA Plume area, and a horizontal gradient of 0.0002 ft/ft from monitoring well GSRY-MW0072 to GSRY-MW0013M in the Chlorinated VOC Plume area.

- 30 to 40 feet bls (**Figure 2-3**): Depth to water ranged from 0.00 to 0.95 feet bls, with an average depth to water of 0.57 feet bls. Groundwater elevations indicated a southeast flow direction and a horizontal gradient of 0.0098 ft/ft from monitoring well GSRY-MW0058 to GSRY-MW0062.

Vertical gradients were calculated at several well pairs across the site using the September 2022 groundwater elevation data. In the PCB/VOA Plume area, the vertical gradient was 0.0072 ft/ft downward between monitoring wells GSRY-MW0036R and GSRY-MW0066 and was 0.1387 ft/ft downward between monitoring wells GSRY-MW0050 and GSRY-MW0059. In the Chlorinated VOC Plume area, the vertical gradient was 0.0040 ft/ft downward between monitoring wells GSRY-MW0074 and GSRY-MW0073.

2.4 GROUNDWATER MONITORING

In September and October 2022, AECOM personnel collected groundwater samples from 31 monitoring wells and 1 surface water sample from the northeast retention pond. Prior to sampling, the 31 monitoring wells on the sampling plan were redeveloped to remove sediments and stagnant water. The redeveloped wells were then given at least 24 hours of rest before purging and sampling. During the 2022 event, groundwater sampling for per- and polyfluoroalkyl substances (PFAS) was also conducted at seven monitoring wells across the site. The PFAS results will be presented and discussed under a separate cover.

During monitoring well purging, the following geochemical parameters were recorded at regular intervals: pH, temperature, dissolved oxygen, conductivity, oxidation reduction potential, salinity, and turbidity. Groundwater samples were submitted to a fixed-based laboratory, Eurofins Environment Testing - Orlando, for analysis by USEPA Method 8260B for VOCs and USEPA Method 8082A for total PCBs. Three monitoring wells were also analyzed for UIC parameters, including sulfate, iron, manganese, sodium, and TDS. The laboratory analytical data was reviewed for completeness, and the data is acceptable for its intended use as it pertains to this report.

3. PCB/VOA PLUME ANALYTICAL RESULTS

3.1 OVERVIEW

This section presents the results of the September and October 2022 groundwater monitoring activities for the PCB/VOA Plume. The goals were to determine groundwater flow characteristics, monitor the downgradient concentration trends, and monitor select locations internal to the groundwater plume. Groundwater analytical results from each zone, including DPT results from November 2021, are summarized in **Table 3-1**, and are depicted on **Figure 3-1** through **Figure 3-3**. The November 2021 DPT groundwater sampling was conducted to confirm degradation of chlorinated benzenes in areas where there are no monitoring wells and to update the delineation of the chlorinated benzene plume. Laboratory analytical reports are provided in **Appendix C**. Data were uploaded to the Remediation Information System (RIS) upon receipt. The RIS completion tickets are provided in **Appendix D**.

3.2 MONITORING WELL GROUNDWATER AND SURFACE WATER ANALYTICAL RESULTS

Groundwater samples were submitted to a fixed-based laboratory, Eurofins Environment Testing - Orlando, for one or more of the following analyses: USEPA Method 8260B for VOCs (benzene, chlorobenzene, 1,2-dichlorobenzene, 13DCB, 14DCB, 1,2,3-trichlorobenzene, and 124TCB), USEPA Method 8082A for total PCBs, or UIC parameters (sulfate, iron, manganese, sodium, or TDS).

3.2.1 2 to 18 Feet Bls

Samples were collected from 14 monitoring wells. A summary of site COC concentrations in groundwater for the 2 to 18 feet bls interval is presented on **Figure 3-1**. There were no detections of site COCs above GCTLs in the 2 to 18 feet bls interval.

3.2.2 10 to 30 Feet Bls

Samples were collected from 11 monitoring wells. A summary of site COC concentrations in groundwater for the 10 to 30 feet bls interval is presented on **Figure 3-2**. The GCTL contours for 13DCB, 14DCB, 124TCB, and chlorobenzene are also presented on **Figure 3-2**.

Groundwater sampling results indicated that VOC concentrations were greater than GCTLs in two monitoring wells, GSRY-MW0049 and GSRY-MW0050. Concentrations of 13DCB and 14DCB have fluctuated in GSRY-MW0049 since December 2019. Concentrations of 14DCB and 124TCB have decreased in GSRY-MW0050 since December 2019. Chlorobenzene has shown an increasing trend in GSRY-MW0049 since December 2019. 124TCB was detected above the GCTL in GSRY-MW0049 for the first time since December 2019, and has shown an increasing trend since December 2021. There were no detections of PCBs above GCTLs in the 10 to 30 feet bls interval.

3.2.3 30 to 40 Feet Bls

Samples were collected from three monitoring wells. A summary of site COC concentrations in groundwater for the 30 to 40 feet bls interval is presented on **Figure 3-3**. There were no detections of site COCs above GCTLs in the 30 to 40 feet bls interval.

3.2.4 Underground Injection Control Monitoring

Groundwater sampling conducted in September and October 2022 included UIC monitoring. UIC monitoring is conducted to monitor the groundwater for residual effects from the Provect-OX® treatment at the bottom of select LDA caisson excavation cells during the 2018 IM. Three monitoring wells (GSRV-MW0049, GSRV-MW0050, and GSRV-MW0066), located in the zone where Provect-OX® was applied, were sampled for sulfate, iron, manganese, sodium, and TDS. The UIC analytical results are presented in **Table 3-2**.

Laboratory analytical results indicate that concentrations were above the site-approved target levels in GSRV-MW0049 for sulfate, iron, manganese, and sodium; in GSRV-MW0066 for sulfate, iron, sodium, and TDS; and in GSRV-MW0050 for sodium and TDS. The remaining analytes were below target levels.

3.2.5 Surface Water Analytical Results

In October 2022, one surface water sample GSRV-SW0001 was collected from the retention pond in the northeast area of the site. The surface water sample collected was analyzed for benzene, chlorinated benzene compounds, and PCBs. The surface water sample had no detections of VOCs or PCBs. The surface water analytical results are summarized in **Table 3-1** and are depicted on **Figure 3-1**.

Notes:

Bolded results indicate the presence of an analyte at the specified concentration

Red font indicates an exceedance of FDEP GCTLs

Highlighted cell indicates an exceedance of FDEP NADCs

Blank cells indicate the analyte was not analyzed for that specific well and date

bls = below land surface

GCTL = Groundwater Cleanup Target Level, Chapter 62-777 Florida Administrative Code, Table 1 (2005)

I = The analytical result was greater than or equal to the method detection limit, but less than the practical quantitation limit

J = Estimated value

L = Value exceeds calibration range

NADC = Natural Attenuation Default Concentration, Chapter 62-777 Florida Administrative Code, Table V (2005)

PCB/VOA Plume = Polychlorinated Biphenyl/Volatile Organic Aromatic Plume (formerly known as the Northeast Area)

PCBs = polychlorinated biphenyls

Q = The sample was analyzed beyond hold time

SWMU = Solid Waste Management Unit

U = The analyte was not detected

µg/L = micrograms per liter

Notes:

Bolded results indicate the presence of an analyte at the specified concentration

Red font indicates an exceedance of target levels for UIC Sampling

Blank cells indicate the analyte was not analyzed for that specific well and date

*Target levels for UIC sampling are GCTL for sulfate and manganese, and site-specific background** for iron, sodium, and TDS

**Site-specific background concentrations are derived from the GSRY-MW0002IS, 12/10/21 analytical results

bls = below land surface

GCTL = Groundwater Cleanup Target Level, Chapter 62-777 Florida Administrative Code, Table 1 (2005)

I = The analytical result was greater than or equal to the method detection limit, but less than the practical quantitation limit

PCB/VOA Plume = Polychlorinated Biphenyl/Volatile Organic Aromatic Plume (formerly known as the Northeast Area)

Q = The sample was analyzed beyond hold time

SWMU = Solid Waste Management Unit

TDS = Total Dissolved Solids

U = The analyte was not detected

µg/L = micrograms per liter

UIC = Underground Injection Control

V = The analyte was detected in both the sample and the associated method blank

4. CHLORINATED VOC PLUME ANALYTICAL RESULTS

4.1 OVERVIEW

This section presents the results of the October 2022 groundwater monitoring activities for the Chlorinated VOC Plume. The goal was to monitor locations internal to and adjacent to the historical groundwater plume for UIC parameters. Analytical results are provided in **Table 4-1**. The laboratory analytical report is provided in **Appendix C**. Data were uploaded to RIS upon receipt, and the RIS completion tickets are provided in **Appendix D**.

4.2 MONITORING WELL GROUNDWATER ANALYTICAL RESULTS

Groundwater samples were submitted to a fixed-based laboratory, Eurofins Environment Testing - Orlando, for UIC parameters: iron or TDS.

Groundwater sampling conducted in October 2022 included UIC monitoring by sampling three monitoring wells GSRY-MW0067, GSRY-MW0071, and GSRY-MW0073 for iron or TDS. The UIC monitoring is being conducted in the Chlorinated VOC Plume area to monitor for groundwater conditions that may have changed due to the ERD treatment process.

Analytical results indicate the TDS concentration was above the site-approved target level in GSRY-MW0071 and GSRY-MW0073, and iron concentrations were above the site-approved target level in GSRY-MW0067, GSRY-MW0071, and GSRY-MW0073.

Notes:

Bolded results indicate the presence of an analyte at the specified concentration**Red** font indicates an exceedance of Site Approved* Target Levels for UIC Sampling

Blank cells indicate the analyte was not analyzed for that specific well

*Target levels for UIC sampling are GCTL for TRPH, and maximum baseline**** concentration for iron and TDS

**Monitoring wells were abandoned prior to the 2014 sampling, and the 2014 and 2015 sampling events listed were collected via DPT

***MW0067, MW0071, and MW0073 were installed in November 2019 and replaced the previously abandoned wells in the UIC Program

****Maximum baseline concentrations are derived from the 11/15/2012 sampling results

bls = below land surface

GCTL = Groundwater Cleanup Target Level, Chapter 62-777 Florida Administrative Code, Table 1 (2005)

I = The analytical result was greater than or equal to the method detection limit, but less than the practical quantitation limit

J = Estimated value

SWMU = Solid Waste Management Unit

TDS = Total Dissolved Solids

TRPH = Total Recoverable Petroleum Hydrocarbons

U = The analyte was not detected

µg/L = micrograms per liter

UIC = Underground Injection Control

5. CONCLUSIONS AND RECOMMENDATIONS

The GSRV groundwater monitoring activities and results were presented to the KSCRT in April 2023, and the KSCRT agreed with the following conclusions and recommendations, with the understanding that FDEP will review this report and provide comments. The ADP and KSCRT meeting minutes are provided in **Appendix A**. The Proposed Groundwater Monitoring Plan, with a list of the wells and locations to be sampled and measured for water levels, is presented in **Table 5-1** and on **Figure 5-1**. The next annual groundwater monitoring event is currently planned for December 2023.

5.1 GROUNDWATER FLOW

Based on water level measurement activities performed during this reporting period, the following conclusions are provided:

- In September 2022, groundwater flow for the site was generally to the north in the 2 to 18 feet bls and 10 to 30 feet bls zones, with flow direction varying by occasional east and west components, and to the southeast in the 30 to 40 feet bls zone. This is generally consistent with historical observations at the site; however, flow direction at the site has varied during past monitoring events.

Based on water level measurement activities performed during this reporting period, the following recommendations are provided:

- Conduct annual water level measurements at 55 monitoring wells.

5.2 PCB/VOA PLUME

Based on groundwater and surface water sampling activities performed during this reporting period, the following conclusions are provided:

- Groundwater and surface water results demonstrate a reduction in plume size and COC concentrations compared to baseline sampling for the 2018 IM.
- Chlorinated benzene compound COCs were detected above GCTLs in the 10 to 30 feet bls zone only.
- There were no detections of PCBs.
- The VOA plumes are delineated, both horizontally and vertically.

Based on groundwater sampling activities performed during this reporting period, the following recommendations are provided:

- Discontinue monitoring for VOCs at 16 monitoring wells and 1 surface water location due to at least two consecutive events in which VOC concentrations were below GCTLs.
- Discontinue monitoring for PCBs at 20 monitoring wells and one surface water location due to at least two consecutive events in which PCBs concentrations were below GCTLs.
- Perform annual monitoring at 12 monitoring wells for VOCs or PCBs.
- Discontinue UIC monitoring of TDS at GSRV-MW0049, and manganese at GSRV-MW0050 and GSRV-MW0066.
- Perform annual UIC monitoring at GSRV-MW0049 for sulfate, iron, manganese, and sodium, and at GSRV-MW0050 and GSRV-MW0066 for sulfate, iron, sodium, and TDS.

5.3 CHLORINATED VOC PLUME

Based on groundwater sampling activities performed during this reporting period, the following conclusions are provided:

- In October 2022, concentrations of iron or TDS remained above the site-approved target levels in three monitoring wells.

Based on groundwater sampling activities performed during this reporting period, the following recommendation is provided:

- Perform annual UIC groundwater monitoring at GSRV-MW0067 for iron and GSRV-MW0071 and GSRV-MW0073 for iron and TDS.

General Services Administration Reclamation Yard (GSRY) Solid Waste Management Unit (SWMU) 010

September/October 2022 Groundwater Monitoring Results

April 2023

Outline

- Site Overview
- Polychlorinated Biphenyl (PCB)/Volatile Organic Aromatic (VOA) Plume Area
- Chlorinated Volatile Organic Compound (CVOC) Plume Area

PCB/VOA Plume Area

CVOC Plume Area

Site Overview – Site Location and General Site Background

- General Services Administration Reclamation Yard (GSR Y), Solid Waste Management Unit (SWMU) #010, is located on Ransom Road between State Road 3 and Space Commerce Way, and currently operates as the Reutilization, Recycling, and Marketing Facility (RRMF).
- Constructed in the 1960s on 7 acres
- Historically staged transformers, air conditioners, batteries, paints, solvents, pesticides, and adhesives
- Current facility conducts reuse, resale, and recycling of materials and equipment

Site Overview – General Site Background

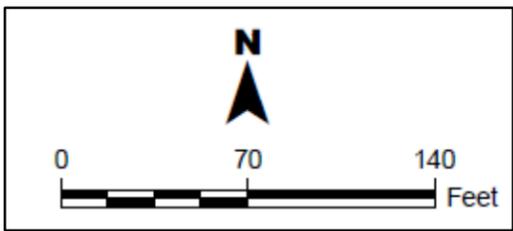

- Site areas of groundwater impacts
 - PCB/VOA Plume Area (formerly known as the Northeast Area)
 - CVOC Plume Area (formerly known as the Southwest Area) –
 - Groundwater sampling for CVOCs was discontinued during the March 2022 Kennedy Space Center Remediation Team (KSCRT) meeting
 - Underground injection control (UIC) monitoring remains
- Site-Wide Per- and Polyfluoroalkyl Substances (PFAS) Investigation
 - PFAS sampling events are ongoing to delineate the groundwater and surface water at the site
 - Results will be covered under a separate presentation and report
- Site-Wide PCB Soil Investigation
 - Soil sampling events are ongoing to delineate the shallow soil impacted areas
 - Results will be covered under a separate presentation and reports

Site Overview – Site Layout Map

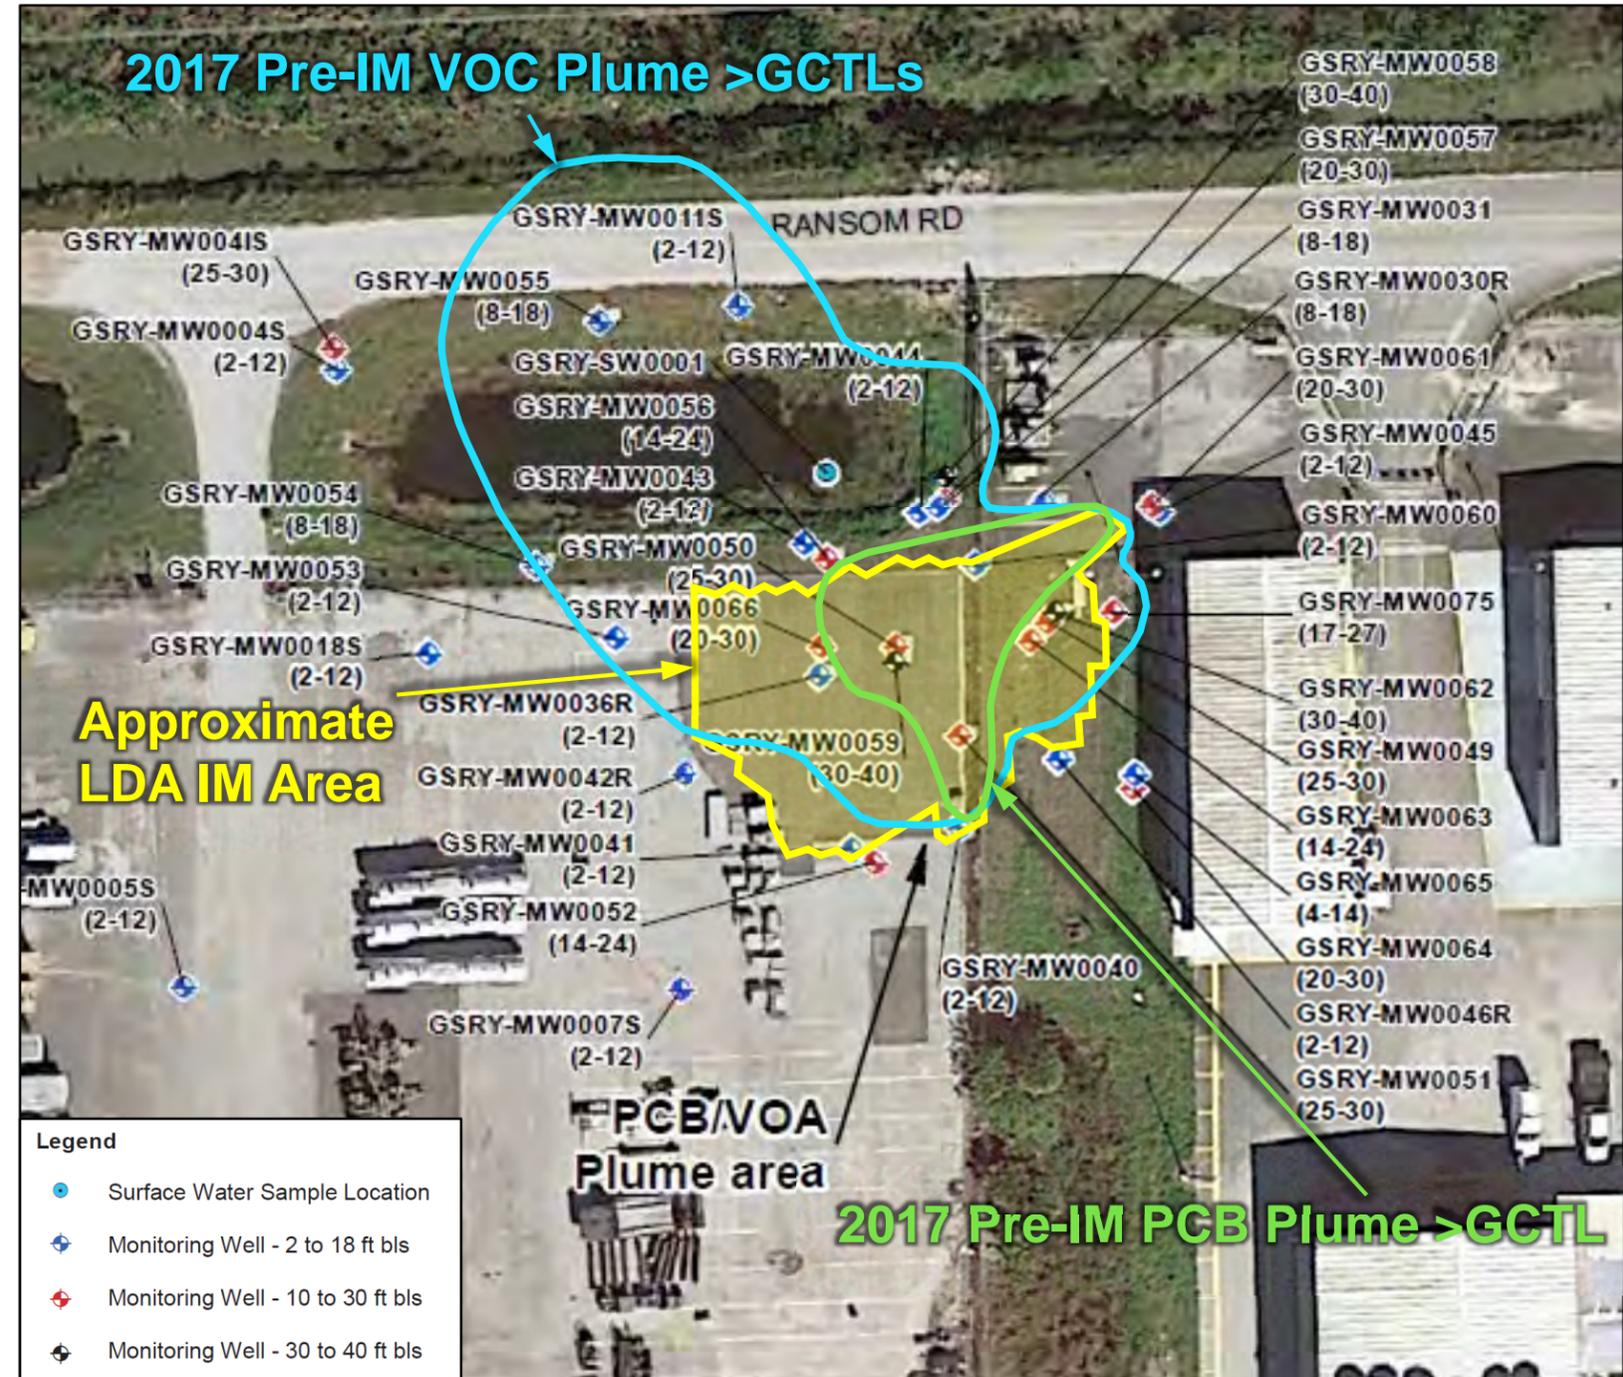

Legend

- Surface Water Sample Location
- ⊕ Monitoring Well - 2 to 18 ft bls
- ⊕ Monitoring Well - 10 to 30 ft bls
- ⊕ Monitoring Well - 30 to 40 ft bls

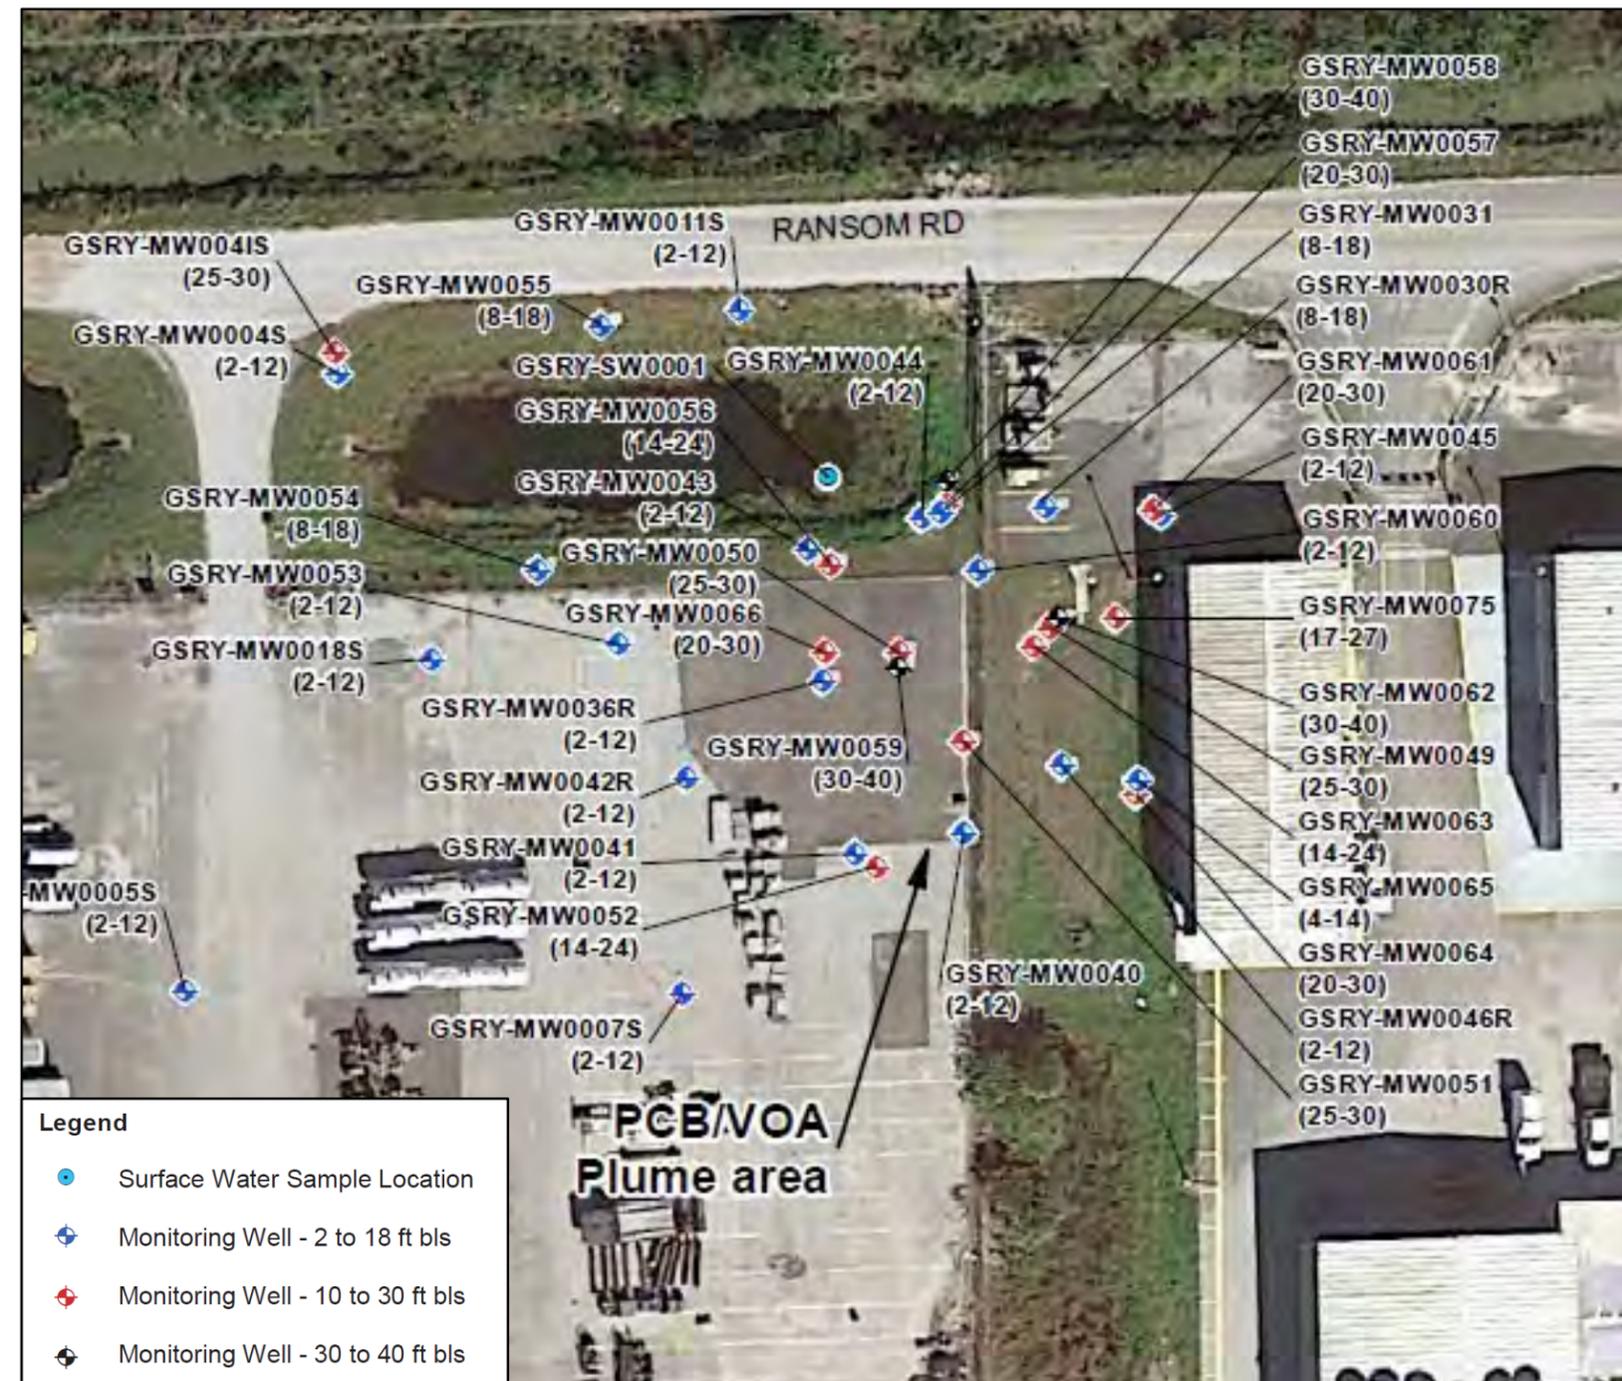

PCB/VOA Plume Area – General Background

- Dielectric fluid releases occurred from stored equipment
- PCBs and chlorobenzene compounds were present in the northeast area of the site
- Impacted soils resulted in dissolved PCB and chlorobenzene groundwater contamination
- 1999 through 2015
 - Resource Conservation and Recovery Act Facility Investigation (RFI)
 - Several Interim Measures (IMs) conducted using excavation for PCB-impacted soils
 - Corrective Measures Study for soils and groundwater conducted
 - Several events in which additional sampling for groundwater and soils were conducted
- 2018 – Large Diameter Auger (LDA) IM
 - LDA to depths of up to 25 feet bls in conjunction with conventional excavation for shallower soils up to 7 feet bls
 - Persulfate and ferric iron mixture was added to the bottom of select LDA borings where PCBs were greater than 1 part per million, which warranted UIC monitoring

PCB/VOA Plume Area – General Background

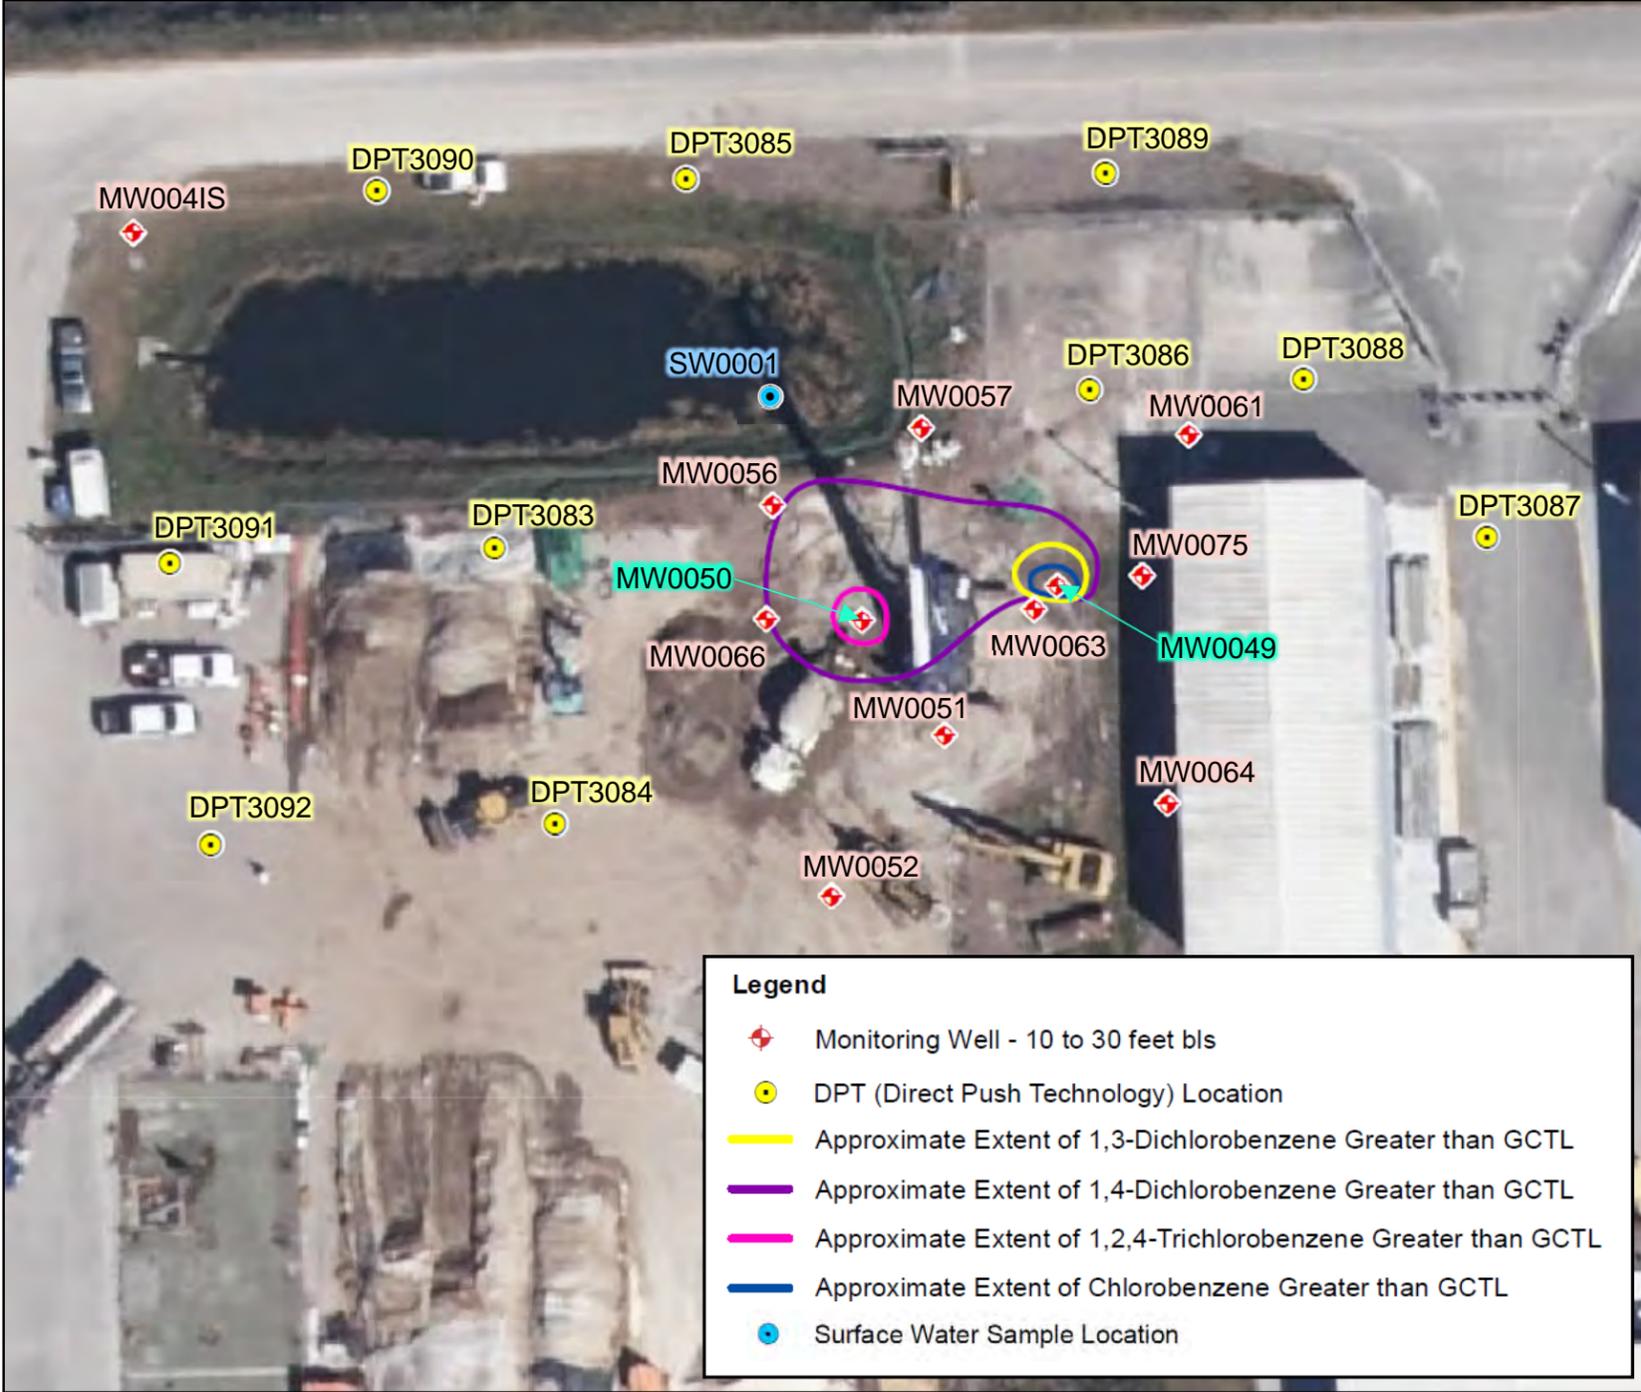

- Site volatile organic compounds (VOCs):
 - benzene
 - chlorobenzene
 - 1,2 – dichlorobenzene (12DCB)
 - 1,3 – dichlorobenzene (13DCB)
 - 1,4 – dichlorobenzene (14DCB)
 - 1,2,3 – trichlorobenzene (123TCB)
 - 1,2,4 – trichlorobenzene (124TCB)
- Sept 2018 through Feb 2019 – Installed 21 monitoring wells in the IM area
- Sept 2018 through May 2021 – Conducted four semi-annual sampling events
 - 27 to 29 monitoring wells sampled per event
 - One surface water sample was collected from the northeast pond during some of the events
 - Installed MW0066 in Feb 2020 for delineation to the west
 - Installed MW0075 in Oct 2020 for delineation to the east
 - Following the May 2021 sampling event, the sampling frequency was changed from semi-annual to annual with the first annual event in Dec 2021

PCB/VOA Plume Area – General Background

- Nov 2021 – Collected 70 groundwater samples from 10 Direct Push Technology (DPT) locations
 - Samples analyzed using an on-site mobile lab for Site VOCs
 - Site VOCs were detected at several locations, but concentrations were below the State of Florida Groundwater Cleanup Target Levels (GCTLs)
 - DPT sampling assisted with confirming delineation of the VOA plume
- Dec 2021 – Collected samples from 29 monitoring wells and one surface water sample
 - Site VOCs were detected above GCTLs in MW0049 and MW0050, both screened 25 to 30 feet bls
 - Chlorinated benzene compounds were detected above GCTLs in the 10 to 30 feet bls zone only
 - No detections of PCBs
 - The surface water sample at SW0001 had no detections of Site VOCs or PCBs

Dec 2021 Groundwater Analytical Plumes – 10 to 30 feet bls

PCB/VOA Plume Area – Scope of Work

September/October 2022 – Annual Groundwater Monitoring:

- Groundwater elevation measurements collected from 55 monitoring wells
- Redeveloped 28 monitoring wells prior to sampling
 - Wells were redeveloped to remove sediment and solids from the wells
- Groundwater samples collected from 28 monitoring wells and analyzed for one or more of the following:
 - Site VOCs
 - Total PCBs
 - UIC Parameters: sulfate, iron, manganese, sodium, or total dissolved solids (TDS)
- One surface water sample was collected from the northeast retention pond and analyzed for Site VOCs and total PCBs

Northeast Retention Pond

VOC – Volatile Organic Compound; Fe – Iron; Mn – Manganese; Na – Sodium; TDS – Total Dissolved Solids; PCBs – Polychlorinated Biphenyls; PFAS – Per- and Polyfluoroalkyl Substances

PCB/VOA Plume Area – Groundwater Flow Results for September 27, 2022

2 to 18 feet bls

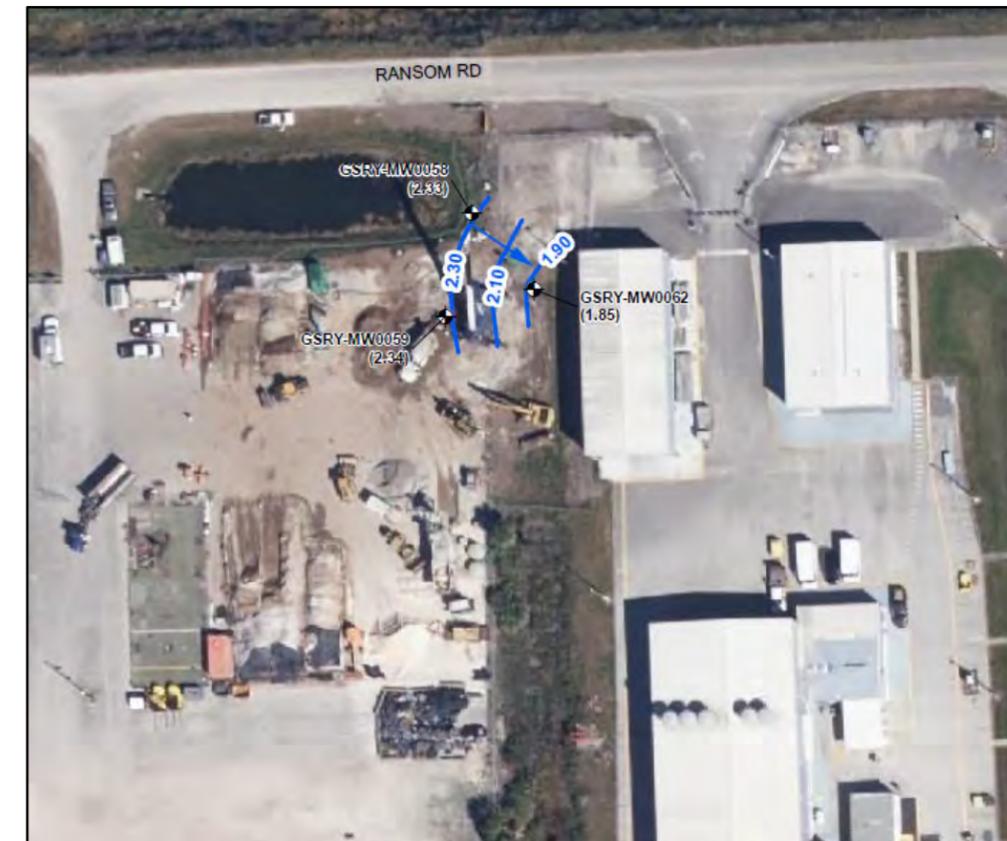

- Sept 2022 flow direction: **north**
- Previous groundwater flow:
 - Dec 2021: north
 - May 2021: northwest
 - Dec 2020: north-northwest

10 to 30 feet bls

- Sept 2022 flow direction: **north**
- Previous groundwater flow:
 - Dec 2021: north
 - May 2021: north
 - Dec 2020: north

30 to 40 feet bls

- Sept 2022 flow direction: **southeast**
- Previous groundwater flow:
 - Dec 2021: northwest
 - May 2021: west-northwest
 - Dec 2020: west

Note: bls – below land surface

PCB/VOA Plume Area – Groundwater and Surface Water Analytical Results

- VOCs - Site VOCs were above GCTLs in 2 wells, MW0049 and MW0050
 - MW0049:
 - Chlorobenzene was above the GCTL and has shown an increasing trend since Dec 2019
 - 13DCB and 14DCB have fluctuated since Dec 2019
 - 124TCB was above the GCTL for the first time since Dec 2019
 - MW0050:
 - 14DCB and 124TCB have decreased in MW0050 since Dec 2019
 - No wells screened in the 2 to 18 feet bls or 30 to 40 feet bls zones, had detections of Site VOCs above GCTLs
- PCBs - No detections of PCBs
- No wells had concentrations above State of Florida Natural Attenuation Default Concentrations (NADCs)
- The surface water sample SW0001 had no detections of Site VOCs or PCBs

Notes: Detections are **bolded**; GCTL exceedances are **red bolded**; NADC exceedances are **highlighted yellow**; DCB = dichlorobenzene; TCB = trichlorobenzene; I = The analyte was detected, but below quantitation limits; U = The analyte was not detected; L = Value Exceeds Calibration Range; Blank Cell = Not Sampled; bls – below land surface; µg/L = micrograms per liter

PCB/VOA Plume Area – GW and SW Analytical Results – 2 to 18 feet bls

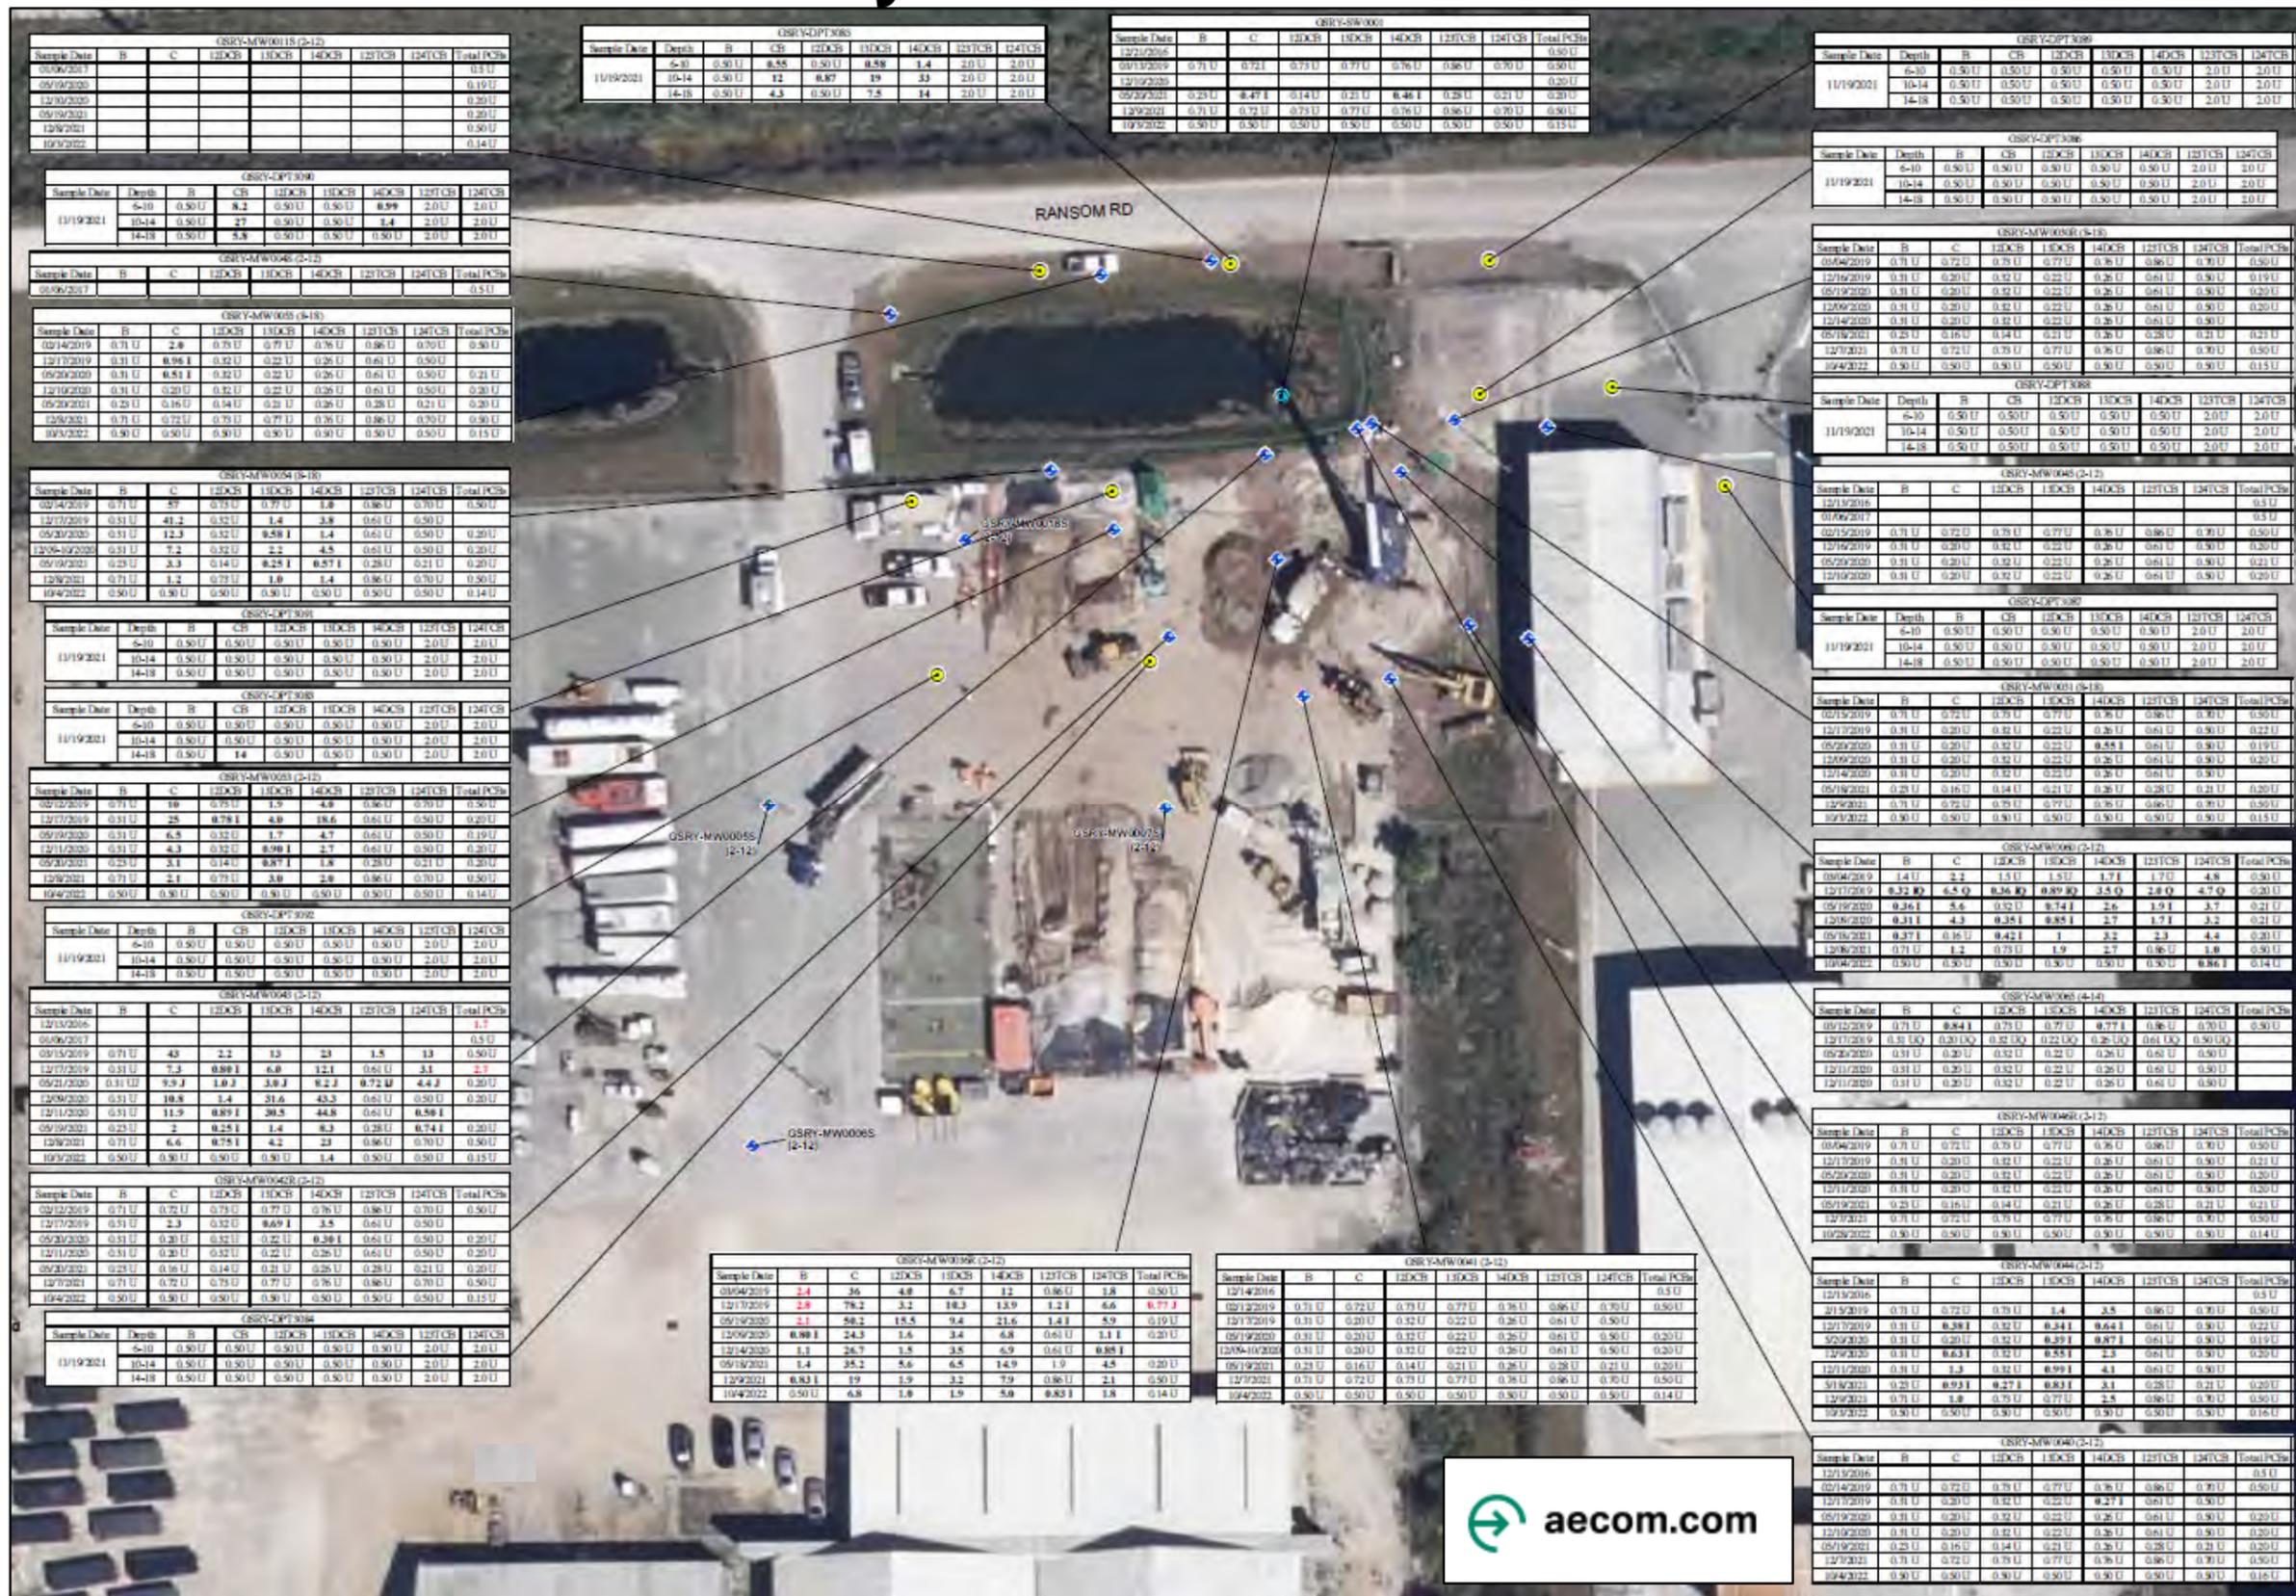

- Site VOCs were detected below GCTLs at various locations
- No Site Contaminants of Concern (COCs) have been above GCTLs for at least four consecutive events

Legend

- Surface Water Sample Location
- ◆ Monitoring Well - 2 to 18 feet bls
- DPT (Direct Push Technology) Location

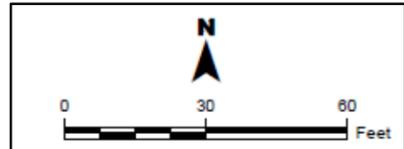

Abbreviation	Analyte	GCTL	NADC
B	Benzene	1	100
C	Chlorobenzene	100	1000
12DCB	1,2-Dichlorobenzene	600	6000
13DCB	1,3-Dichlorobenzene	210	2100
14DCB	1,4-Dichlorobenzene	75	7500
123TCB	1,2,3-Trichlorobenzene	70	700
124TCB	1,2,4-Trichlorobenzene	70	700
Total PCBs	Total PCBs	0.5	50

PCB/VOA Plume Area – GW Analytical Results – 10 to 30 feet bls

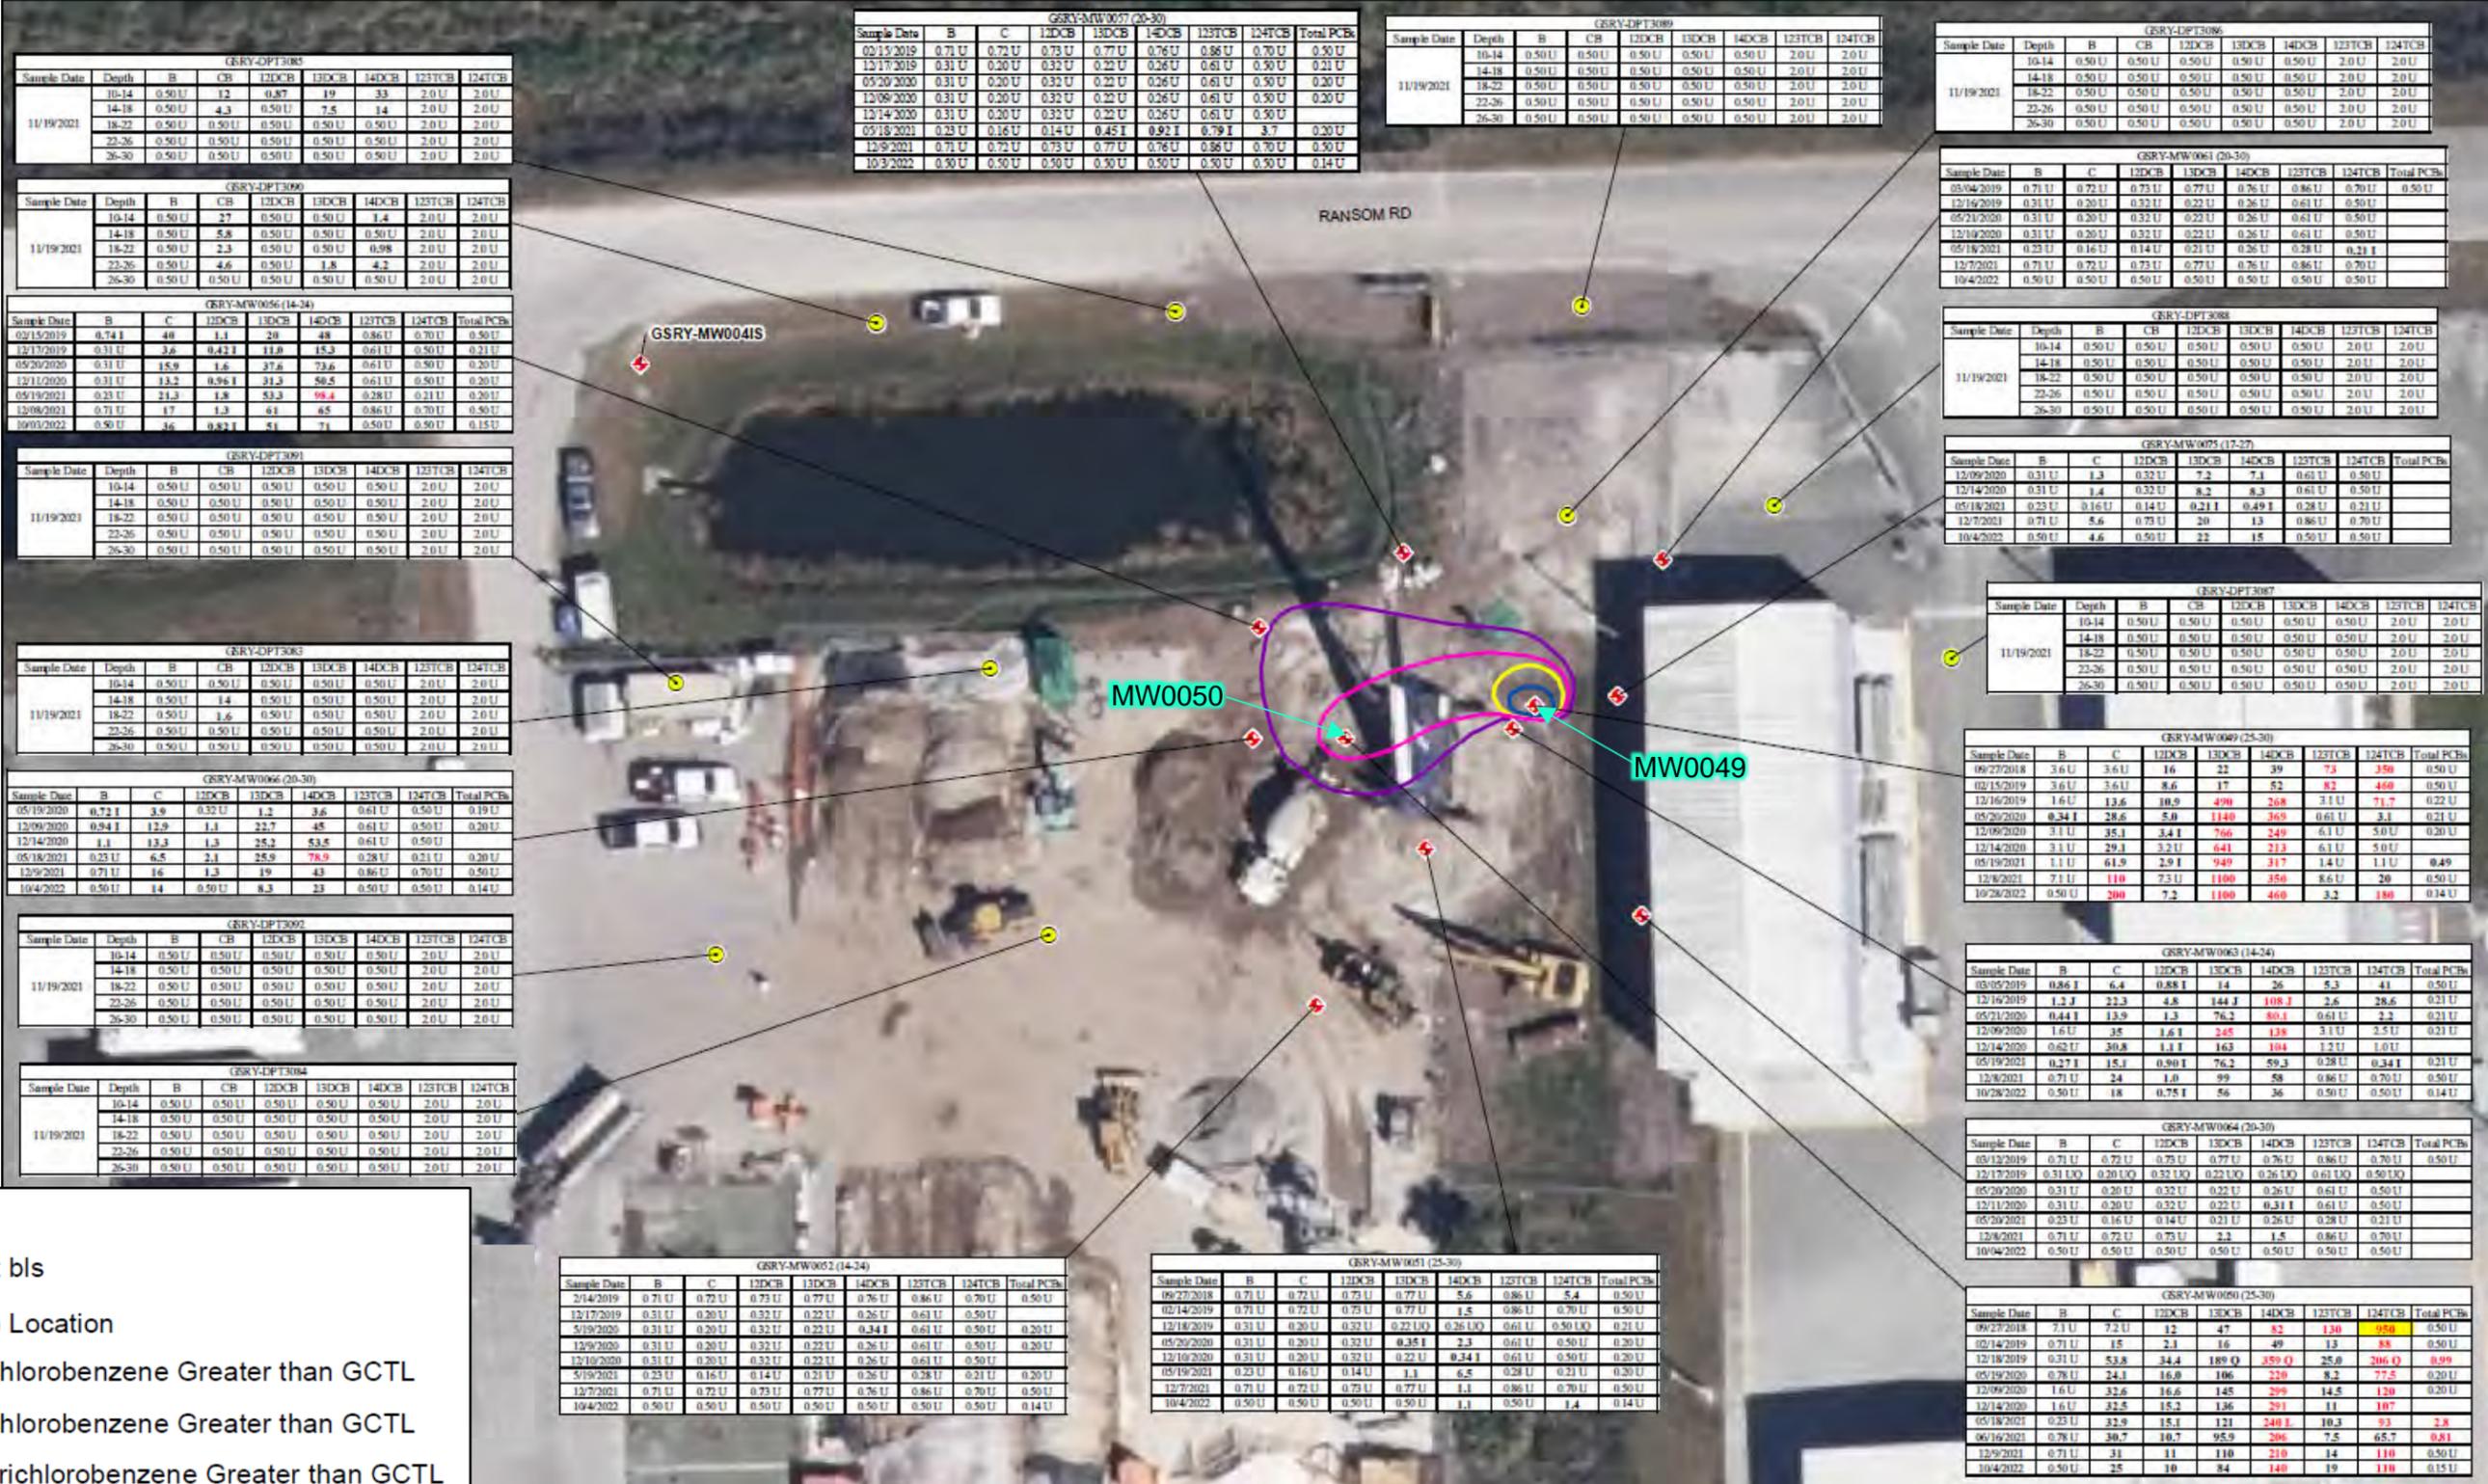

- MW0049 and MW0050 were above GCTLs for several of the Site VOCs
- Remaining wells were below GCTLs
- No wells were above NADCs

Abbreviation	Analyte	GCTL	NADC
B	Benzene	1	100
C	Chlorobenzene	100	1000
12DCB	1,2-Dichlorobenzene	600	6000
13DCB	1,3-Dichlorobenzene	210	2100
14DCB	1,4-Dichlorobenzene	75	7500
123TCB	1,2,3-Trichlorobenzene	70	700
124TCB	1,2,4-Trichlorobenzene	70	700
Total PCBs	Total PCBs	0.5	50

Legend

- Monitoring Well - 10 to 30 feet bls
- DPT (Direct Push Technology) Location
- Approximate Extent of 1,3-Dichlorobenzene Greater than GCTL
- Approximate Extent of 1,4-Dichlorobenzene Greater than GCTL
- Approximate Extent of 1,2,4-Trichlorobenzene Greater than GCTL
- Approximate Extent of Chlorobenzene Greater than GCTL

PCB/VOA Plume Area – GW Analytical Results – 30 to 40 feet bls

- No Site COCs have been above GCTLs for at least five consecutive events

PCB/VOA Plume Area – UIC Monitoring

- UIC monitoring is being conducted due to a persulfate and ferric iron mixture that was added to the bottom of select LDA borings during the 2018 IM
- UIC parameters will be monitored until results from two consecutive sampling events meet target levels.
- No baseline samples were collected prior to the addition of the persulfate and iron mixture; therefore, monitoring well MW0002IS, which was the farthest well from the IM area with a corresponding interval, was selected and sampled in December 2021 to represent the site-specific background concentrations. Based on those results, the following table presents the target level criteria for the PCB/VOA Plume Area UIC sampling program:

UIC Parameter	Target Level	Applicable Screening Standard
Sulfate	250,000 µg/L	State of Florida GCTL
Iron	1,300 µg/L	Site-Specific Background Concentration
Manganese	50 µg/L	State of Florida GCTL
Sodium	204,000 µg/L	Site-Specific Background Concentration
TDS	1,100,000 µg/L	Site-Specific Background Concentration

PCB/VOA Plume Area – UIC Monitoring

- Three monitoring wells sampled
- UIC parameters: sulfate, iron, manganese, sodium, and TDS
- MW0049 and MW0066 were above the GCTL for sulfate and above the site-specific background concentration for iron
- MW0049, MW0050 and MW0066 were above the site-specific background concentration for sodium
- MW0050 and MW0066 were above the site-specific background concentration for TDS
- MW0049 was above the GCTL for manganese

MW ID	Screened Interval	Sample Date	Sulfate	Iron	Manganese	Sodium	TDS
Target Level			250,000	1,300	50	204,000	1,100,000
Units	feet bls		µg/L	µg/L	µg/L	µg/L	µg/L
MW0049	25 to 30	5/20/2020	3,580,000	57,800	260	1,720,000	7,610,000
		12/9/2020	2,370,000	37,300	191	1,150,000	5,750,000
		5/16/2021	2,770,000	47,900	259	1,230,000	5,590,000
		12/8/2021	3,200,000	48,000	246	3,650,000 V	480,000
		10/28/2022	3,100,000	19,000	84	1,100,000	210,000
MW0050	25 to 30	5/19/2020	279,000	1,450	28.2	295,000	1,430,000
		12/9/2020	116,000	1,660	27.1	214,000	1,112,000
		5/18/2021	259,000	1,600	31.5	234,000	1,310,000
		12/9/2021	270,000	2,360	40.8	239,000	1,200,000
		10/4/2022	110,000	1,220	46	210,000	1,200,000
MW0066	20 to 30	12/9/2020	609,000	2,980	41.3	417,000	2,010,000
		5/18/2021	245,000	1,790	27.3	186,000	1,170,000
		12/9/2021	620,000	2,580	32.6	349,000 V	1,700,000
		10/28/2022	280,000	1,700	27	260,000	1,300,000

Notes:

Detections are **bolded**

Target Level exceedances are **red bolded**

*Target levels for UIC sampling are GCTL for sulfate and manganese, and site-specific background** for iron, sodium, and TDS

**site-specific background concentrations are derived from the GSRV-MW0002IS, 12/10/21 analytical results

bls – below land surface

I – the analytical result was greater than or equal to the method detection limit, but less than the practical quantitation limit

U – the analyte was not detected

µg/L – micrograms per liter

V – the analyte was detected in both the sample and the associated method blank

PCB/VOA Plume Area – Conclusions

- Groundwater results demonstrate a reduction in plume size and COC concentrations compared to baseline sampling for the 2018 IM
- In September/October 2022:
 - Chlorinated benzene compound COCs were detected above GCTLs in the 10 to 30 feet bls zone only
 - There were no detections of PCBs
 - The VOA plumes are delineated, both horizontally and vertically

PCB/VOA Plume Area – Test Consensus

- Conduct annual water level measurements at 55 monitoring wells
- Discontinue monitoring for Site VOCs at 16 monitoring wells and one surface water location due to at least two consecutive events in which Site VOC concentrations were below GCTLs
- Discontinue monitoring for PCBs at 20 monitoring wells and one surface water location due to at least two consecutive events in which PCBs concentrations were below GCTLs
- Perform annual monitoring at 12 monitoring wells for Site VOCs and/or PCBs
- Discontinue UIC monitoring for TDS at GSRV-MW0049, and discontinue UIC monitoring for manganese at GSRV-MW0050 and GSRV-MW0066
- Continue annual UIC monitoring at GSRV-MW0049 for sulfate, Fe, Mn, and NA, and at GSRV-MW0050, and GSRV-MW0066 for sulfate, Fe, Na, and TDS

PCB/VOA Plume Area – Proposed Monitoring Well Location Figure

Legend

- Monitoring Well (Sample and Water Level Measurement)
- Monitoring Well (Water Level Measurement Only)

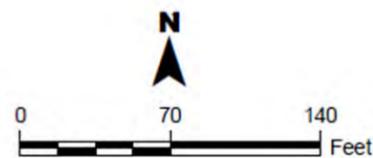

CVOC Plume Area – General Background

- Past handling practices resulted in releases of solvents
- Tetrachloroethene and possibly trichloroethene were discharged
- RFI completed from 1998 through 2005
- Several corrective measures (CMs) followed
- Site CVOCs:
 - 1,1-dichloroethene
 - cis-1,2-dichloroethene
 - trans-1,2-dichloroethene
 - tetrachloroethene
 - trichloroethene
 - vinyl chloride

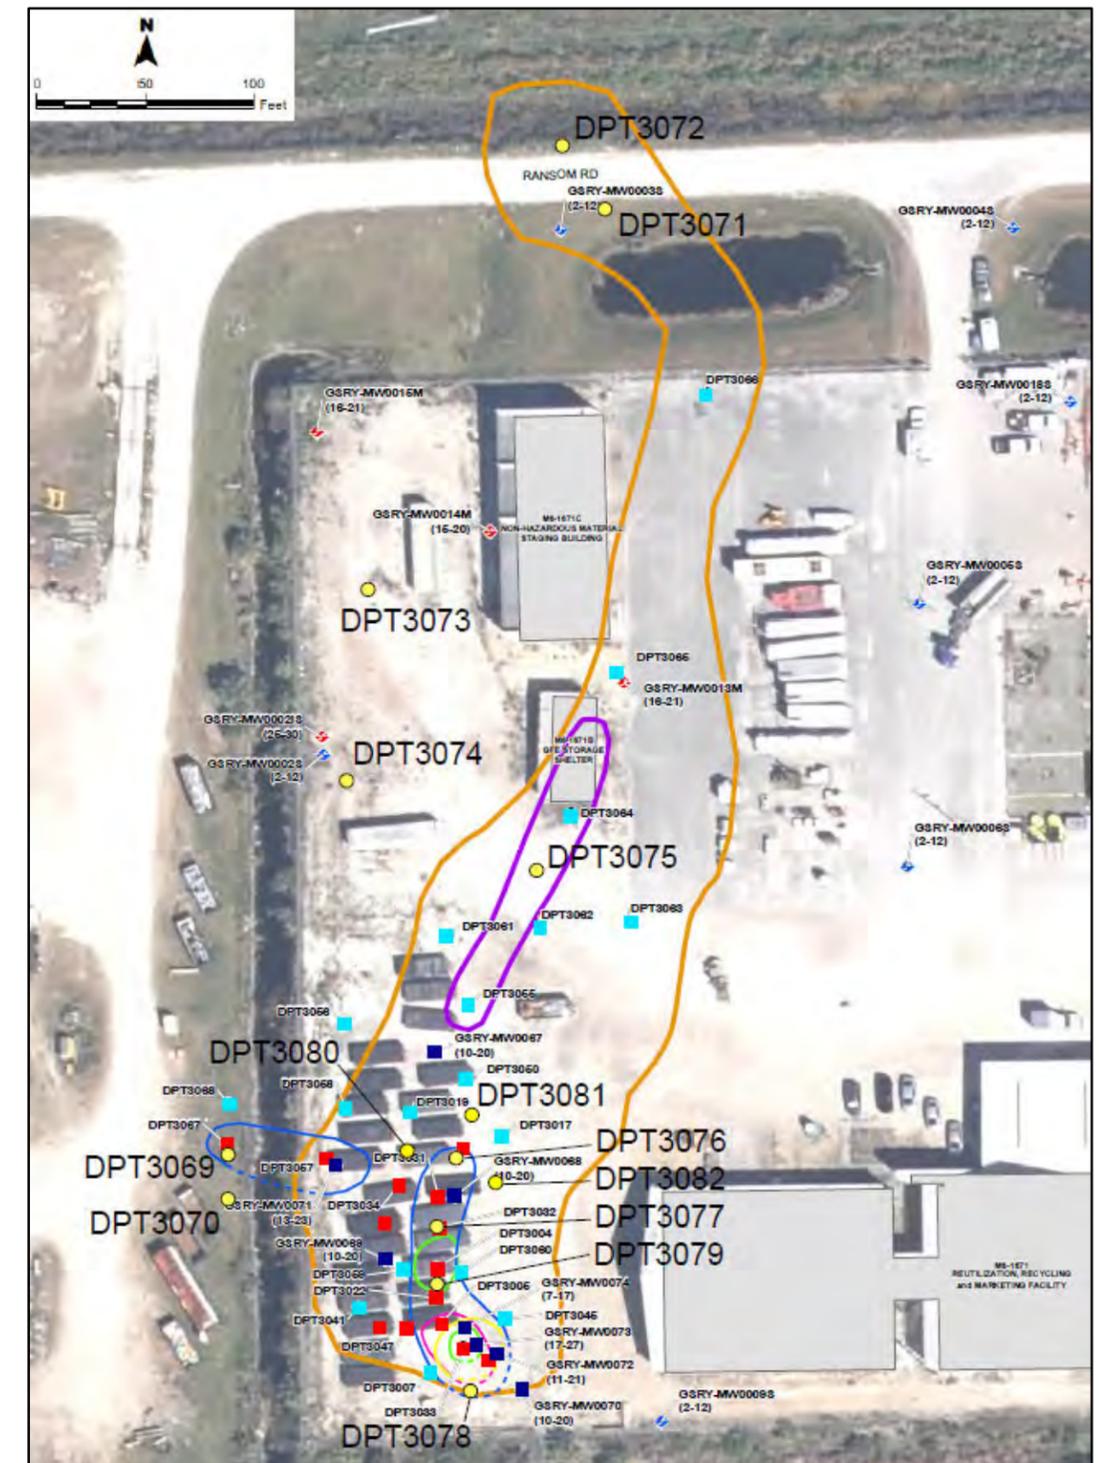

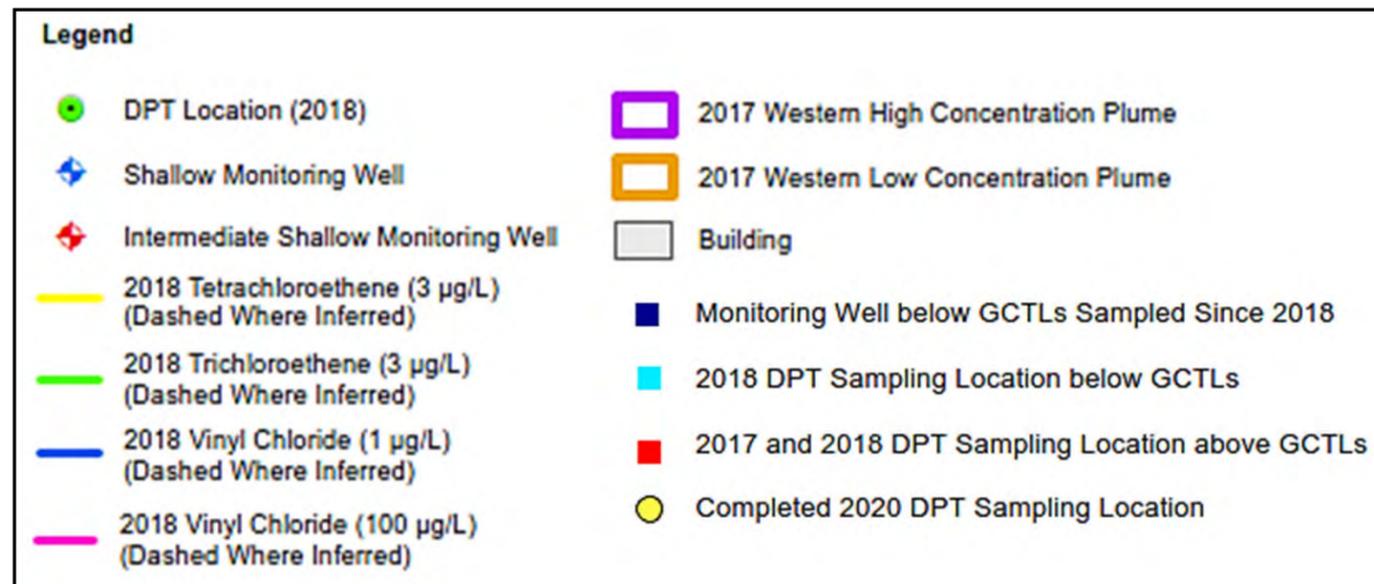

Legend

-  Southwest Hot Spot
-  Building

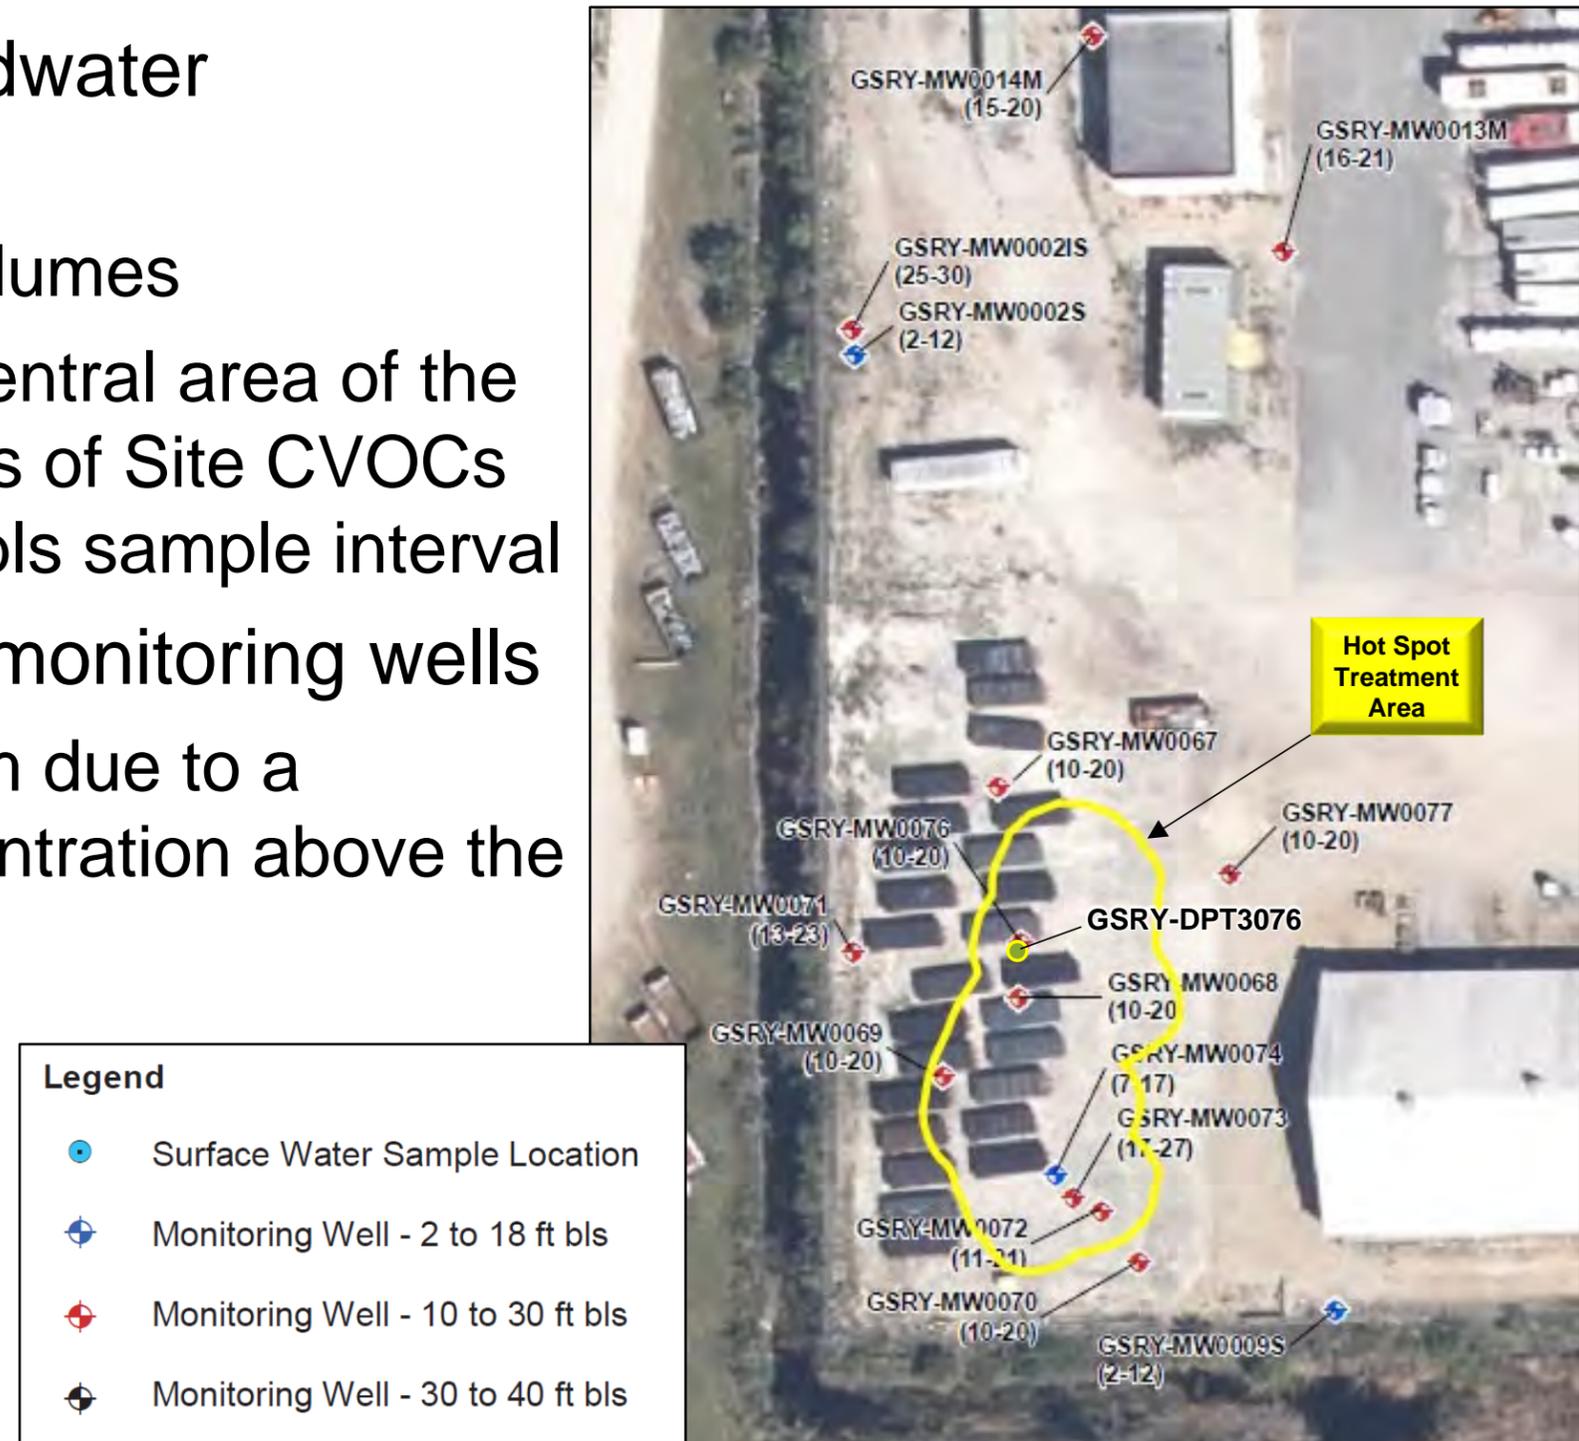

CVOC Plume Area – Post IM Groundwater Monitoring Review

- 2006 through 2017 – CMs and IMs conducted
 - Excavation of solvent-impacted soils
 - Injections of sodium permanganate
 - Enhanced reductive dechlorination (ERD) by injections of emulsified zero valent iron along with vegetable oil/lactate or emulsified vegetable oil which warranted UIC monitoring in the groundwater
- 2017 through May 2020 – Semi-annual post-IM performance monitoring
 - 2017 and 2018 – Several DPT groundwater sampling events conducted to assess IM performance and overall plume extent
 - Nov 2019 – Installed 8 monitoring wells; MW0067 through MW0074
 - Dec 2019 and May 2020 Groundwater Monitoring Events – Collected samples from 8 monitoring wells and Site CVOC concentrations were at or below GCTLs for both events

CVOC Plume Area – Post IM Groundwater Monitoring Review

- Oct 2020 – Conducted a limited groundwater assessment via DPT and mobile lab
 - Confirmed degradation of the CVOC plumes
 - One location, DPT3076, in the north-central area of the hot spot treatment area, had detections of Site CVOCs above the GCTLs in the 15 to 19 feet bls sample interval
- Dec 2020 – Collected samples from 9 monitoring wells
 - Added MW0013M to sampling program due to a historical elevated vinyl chloride concentration above the GCTL
 - Vinyl chloride was above the GCTL in MW0074 at 4.7 µg/L
 - The remaining wells had Site CVOC concentrations below GCTLs

CVOC Plume Area – Post IM Groundwater Monitoring Review

- May 2021 – Installed 2 new monitoring wells and collected samples from 11 monitoring wells
 - Installed MW0076 and MW0077; screened 10 to 20 feet bls
 - MW0076 is located adjacent to DPT3076 and MW0077 is located northeast of DPT3076
 - No wells had concentrations of Site CVOCs above GCTLs
 - Discontinued groundwater monitoring of MW0013M, MW0067, MW0068, MW0069, MW0070, MW0071, and MW0072
 - Discontinued UIC monitoring at MW0067 for TDS
 - Changed the sampling frequency to annual
- Dec 2021 – Collected samples from 6 monitoring wells
 - No wells had concentrations of Site CVOCs above GCTLs
 - Discontinued annual groundwater monitoring for site CVOCs due to at least two consecutive events in which concentrations were below GCTLs; this included discontinuing sampling of GSRY-MW0073, GSRY-MW0074, GSRY-MW0076, and GSRY-MW0077 for Site CVOCs

CVOC Plume Area – UIC Monitoring

- UIC monitoring is being conducted due to chemicals that were added during ERD implementation
- UIC parameters will be monitored until results from two consecutive sampling events meet the following target levels:

UIC Parameter	Target Level	Applicable Screening Standard
Iron	1,200 µg/L	Maximum Baseline Concentration
TDS	980,000 µg/L	Maximum Baseline Concentration

TDS - Total Dissolved Solids

CVOC Plume Area – Scope of Work and Groundwater Sampling Plan

- Three monitoring wells, MW0067, MW0071, and MW0073, were redeveloped prior to sampling to remove sediments and solids from the wells
- Groundwater samples were collected from 3 monitoring wells in October 2022 and analyzed for UIC parameters: iron or TDS

Well ID	Screen Interval (feet bls)	Sampled	
		Iron	TDS
MW0067	10 to 20	X	
MW0071	13 to 23	X	X
MW0073	17 to 27	X	X

TDS – total dissolved solids
bls – below land surface

Legend

- Surface Water Sample Location
- ⊕ Monitoring Well - 2 to 18 ft bls
- ⊕ Monitoring Well - 10 to 30 ft bls

CVOC Plume Area – UIC Monitoring Results

- 3 monitoring wells sampled
- Samples analyzed for Iron and TDS
- MW0067, MW0071, and MW0073 were above the maximum baseline concentration for Iron
- MW0071 and MW0073 were above the maximum baseline concentration for TDS

MW ID	Screened Interval	Sample Date	Iron	TDS
Maximum Baseline Concentration (Target Level)		11/15/2012	1,220	980,000
Units	feet bls		µg/L	µg/L
MW0067	10 to 20	5/21/2020	1,940	862,000
		12/11/2020	960	952,000
		5/20/2021		934,000
		12/10/2021	1,420	
		10/4/2022	1,400

2304-M01 Michelle Moore/NEMCON

Meeting Minutes and Miscellaneous Items

Objective:

Test team consensus on February 2023 KSCRT meeting minutes and review open action items.

Discussion:

Team consensus was reached that Revision 1 of the February 2023 KSCRT meeting minutes and action items are final. Team members are aware that meeting minutes and decision/action items may become public as part of a report at a later date **(2304-D01)**.

Open action items were reviewed and the following were closed out:

C-5 Electrical Substation (SWMU #066) Groundwater Monitoring Report and Long-Term Monitoring Work Plan:

The Florida Department of Environmental Protection (FDEP) requested the team construct an east/west cross-section of the plume to show vertical delineation of the site and put data points on the figure. A figure like this already exists and was developed during the site characterization. NASA will send this figure to FDEP.

The figure was included in the C-5 Electrical Substation Groundwater Monitoring Report that was sent to FDEP on January 23, 2023 **(2210-A02)**.

A subset of DPT samples were submitted to a fixed-base laboratory for 1,4-dioxane analysis to assess if 1,4-dioxane concentrations above the GCTL were widely present across the site. The results indicate that 1,4-dioxane exceedances of the GCTL are not widespread at the site. The potential next steps include conducting additional DPT groundwater sampling for CVOCs, with a subset of samples analyzed for 1,4-dioxane. The objective of the additional DPT groundwater sampling is to refine the low concentration plume, high concentration plume (HCP), and 10 times NADCs (10xNADC) data gaps (in the vegetated area and west of the railroad tracks). The updated CSM may be used in the development of potential approaches to address the remaining dissolved phase CVOC HCP and/or 10xNADC plume.

FDEP inquired if we have vertical delineation at this site? HGL Team member confirmed we do have some vertical delineation at this location, which is part of the 2022 effort that was made. NASA offered to provide more information to FDEP on this, if needed.

Results: Decision Items 2304-D02 through D04

2304-M03 Chad Lee/AECOM

GSA Reclamation Yard (GSRY) 2022 Groundwater Monitoring Results, April 2023

Objective: This briefing provides results for 2022 groundwater monitoring activities for GSA Reclamation Yard and evaluates the data. Proposed 2023 groundwater monitoring activities are presented for Team consensus.

Discussion:

In September 2022, groundwater elevation was measured in 55 monitoring wells. Groundwater flow was to the north for the 2-18 feet below land surface (ft. bls) interval, to the north for the 10-30 ft. bls interval and to the southeast for the 30-40 ft. zone. Team consensus was reached to conduct annual water level measurements at 55 monitoring wells in 2023 (Slide 22) (**2304-D05**).

Groundwater in the northeast area of the site is contaminated by volatile organic compounds (VOCs), specifically volatile organic aromatics, polychlorinated biphenyls (PCBs) from past storage of

electrical equipment. There were 28 groundwater samples analyzed for VOCs, and 26 groundwater samples analyzed for PCBs, and one surface water sample analyzed for VOCs and PCBs. There were two monitoring wells with detections of VOCs above the associated groundwater cleanup target level (GCTL), MW0049 and MW0050. Test consensus to discontinue monitoring for VOCs at 18 monitoring wells and one surface water location due to at least two consecutive events in which site VOC concentrations were below GCTLs (**2304-D06**).

FDEP stated they normally like to see performance monitoring quarterly but since there are two years of data, they would accept that.

PCBs were not detected in any groundwater or surface water sample. Test consensus to discontinue monitoring for polychlorinated biphenyls (PCBs) at 20 monitoring wells and one surface water location due to at least two consecutive events in which PCB concentrations were below GCTLs (**2304-D07**).

FDEP inquired if we are removing any wells that would serve as cross gradient or down gradient that we may want to keep an eye on? FDEP advised to keep one or two wells downgradient to keep an eye on this VOC area.

AECOM noted that we have not had an exceedance in the shallow zone (2-18 ft. bls) in some time. In 2022, there were three wells with VOC detections, all below GCTLs: MW0036R, MW0043 and MW0060. We are proposing to keep MW0036R and MW0043 since they had the higher detections. MW0043 is downgradient of MW0036R, and VOCs results are lower in MW0043 than in MW0036R. The retention pond is downgradient of MW0043. For PCBs, proposing to keep MW0036R, MW0043, MW0049, MW0050, and MW0062, due to detections and GCTL exceedances for PCBs since the Large Diameter Auger Interim Measures event was completed in 2018.

FDEP and AECOM discussed groundwater flow direction, which was north to northwest in the 2-30 ft. interval. Flow direction was southeast in the 30-40 ft. interval in 2022, but a northwest pattern has been observed in some years. Need to retain monitoring wells

between the pond and well with current exceedances so we don't come back to ask later.

Test consensus to perform annual monitoring at 12 monitoring wells; samples from four to be analyzed for VOCs and PCBs, one for PCBs, and seven for VOCs **(2304-D08)**.

Underground injection control (UIC) monitoring is conducted in the PCB/VOA plume parameters associated with the iron persulfate that was used at some locations during source material excavation. It was proposed to discontinue monitoring for total dissolved solids (TDS) at GSRY-MW0049 and discontinue UIC monitoring for manganese at GSRY-MW0050 and GSRY-MW0066. FDEP noted that there is no pre-application data for the UIC parameters and requested previous FDEP approval. NASA to provide FDEP approval emails or correspondence regarding lack of pre-injection data at the site and the selection of MW0002IS as a site-specific background well **(2304-A01)**. Test consensus to continue annual UIC monitoring at GSRY-MW0049 for sulfate, iron, manganese, and sodium, and at GSRY-MW0050, and GSRY-MW0066 for sulfate, iron, sodium, and TDS **(2304-D09)**.

Iron and TDS, UIC parameters from the enhanced reductive dechlorination injections, are the remaining analytes in the former chlorinated VOC plume area. Iron and TDS remain above background concentrations. Team consensus was reached to perform annual UIC groundwater monitoring at GSRY-MW0067 for iron, and at GSRY-MW0071 and GSRY-MW0073 for iron and TDS **(2304-D10)**.

Results: Decision Items 2304-D05 through D10

2304-M04 Andrew Walters/Tetra Tech

CCB SWMU #089 - MW21 Area Groundwater IMWP, April 2023

Objective: The goal of this Interim Measures Work Plan (IMWP) Advance Data Package (ADP) is to present a design for an injection IM to remediate groundwater within the Converter Compressor Building (CCB) Monitoring Well 21 (MW21) Area where volatile organic compounds (VOCs) concentrations exceed Natural Attenuation Default Concentrations (NADC).

April 2023 Decision Items Rev 1		Decision
Decision No.	Minutes Reference	
2304-D01	2304-M01	Meeting Minutes and Miscellaneous Items: Test team consensus was reached that Revision 1 of the February 2023 KSCRT meeting minutes and action items are final. Team members are aware that meeting minutes and decision/action items may become public as part of a report at a later date.
2304-D02	2304-M02	CRHEA Groundwater Monitoring Update: Team consensus was reached continue annual sampling as follows: <ul style="list-style-type: none"> •Sample 15 wells for VOCs. That includes Hot Spot 1: MW0025, MW0027, MW0029, MW0047, MW0048, and MW0058; Hot Spot 2: MW0031, MW0032, and MW0042; Northern Area: MW0017I, MW0019I, and MW0034; and down gradient: MW0035, MW0039, and MW0041. •Sample 4 wells for 1,4-dioxane within HS1: MW0025 and downgradient: MW0035, MW0039, and MW0041. •Sample 3 wells for TRPH within HS1 at MW0044, MW0047, and MW0056. •Sample 1 well for sodium within HS1 at MW0047 and eliminate MW0044 since last 2 consecutive events were less than GCTL. •Sample 6 wells for TDS (biennial) within HS1 at MW0025, MW0043, MW0044, MW0056, MW0057, and MW0058. •Collect depth to water measurements from 48 site-wide monitoring wells. Abandon monitoring well IW0004S if obstruction at 2 to 3 ft. btoc cannot be repaired, and abandon IW0014I and IW0015I due to obstructions at 17.2 and 5 ft. btoc, respectively. •Make one final attempt to locate IW0016I, IW0018I, and IW0020I. Determine viability and properly abandon any wells that are located but cannot be repaired. •Generate Mann-Kendall statistics for all applicable wells (that meet the criteria for using Mann-Kendall)
2304-D03	2304-M02	CRHEA Groundwater Monitoring Update: Team consensus was reached to sample 10 monitoring wells for PFAS: IW0001S, IW0002S, IW0004I, IW0009S, IW0013S, IW0017I, IW0019I, MW0024, MW0025, and MW0030
2304-D04	2304-M02	CRHEA Groundwater Monitoring Update: Team consensus was reached to conduct sub slab soil gas sampling event for CVOCs in June and December 2023, to evaluate if there are changes in sub slab soil gas in the four vapor probes due to previous interim measure activities or plume movement.
2304-D05	2304-M03	GSA Reclamation Yard (GSRY) 2022 Groundwater Monitoring Results: Team consensus was reached to conduct annual water level measurements at 55 monitoring wells in 2023 (Slide 22).
2304-D06	2304-M03	GSA Reclamation Yard (GSRY) 2022 Groundwater Monitoring Results: Test consensus to discontinue monitoring for VOCs at 18 monitoring wells and one surface water location due to at least two consecutive events in which site VOC concentrations were below GCTLs.
2304-D07	2304-M03	GSA Reclamation Yard (GSRY) 2022 Groundwater Monitoring Results: Test consensus to discontinue monitoring for polychlorinated biphenyls (PCBs) at 20 monitoring wells and one surface water location due to at least two consecutive events in which PCB concentrations were below GCTLs.
2304-D08	2304-M03	GSA Reclamation Yard (GSRY) 2022 Groundwater Monitoring Results: Test consensus to perform annual monitoring at 12 monitoring wells; samples from four to be analyzed for VOCs and PCBs, one for PCBs, and seven for VOCs.
2304-D09	2304-M03	GSA Reclamation Yard (GSRY) 2022 Groundwater Monitoring Results: Test consensus to continue annual UIC monitoring at GSRY-MW0049 for sulfate, iron, manganese, and sodium, and at GSRY-MW0050, and GSRY-MW0066 for sulfate, iron, sodium, and TDS.
2304-D10	2304-M03	GSA Reclamation Yard (GSRY) 2022 Groundwater Monitoring Results: Team consensus was reached to perform annual UIC groundwater monitoring at GSRY-MW0067 for iron, and at GSRY-MW0071 and GSRY-MW0073 for iron and TDS.
2304-D11	2304-M04	CCB SWMU #089 - MW21 Area Groundwater IMWP: Team consensus was reached on the Interim Measure Work Plan (IMWP) design for in situ reductive dechlorination injection treatment of the high concentration plume (HCP)/ Hot Spot (HS) / Source Zone (SZ) at the MW21 Area and to proceed with the develop of an Implementation Work Plan to plan and facilitate the Interim Measure.
2304-D12	2304-M05	Corrosion Atmospheric Exposure Facility (PRL 239) Interim Measure (IM) Work Plan: Team consensus was reached on the Interim Measure excavation boundary (bounded by sample locations below iSCTL: SB0026, SB0029, SB0018, SB0020, SB0031, SB0030, SB0048, SB0047, SB0046, SB0045, SB0043, SB0003, SB0042).
2304-D13	2304-M06	Hypergol Maintenance Facility (HMF) South (SWMU #070) Groundwater No Further Action (NFA) Request: Team consensus was reached for No Further Action for groundwater at HMF South and to abandon all site monitoring wells.

GK CB

- 0730 GK + CB onsite at the Corrosion Control Facility.
- Sign in at the office
 - H+S meeting
 - organize equipment
- 0745 Calibrate equipment.
- 0830 Begin ~~GK Sampling~~ ^{Purging} GSRy-MW0062-035.0-20221028.
- 0900 Begin ~~GK Sampling~~ ^{Purging} GSRy-MW0049-027.5-20221028.
- 0930 Begin purging GSRy-MW0063-019.0-20221028.
- 1045 Begin purging GSRy-MW0046R-003.0-20221028.
- 1130 Drive to the logistics building for ice.
- 1200 Arrive at the CCF to unload and sample IDW.
- 1215 Sample IDW11.
- 1245 GK + CB offsite. GK to drop off samples at the Lab.

GROUNDWATER SAMPLE LOG SHEET

Event: Kennedy Space Center GSRV
 Site Name: GSA Reclamation Yard
 Project No: 60614327

Sample ID: GSRV-MW0073-022.0-20221005 Sampler: Dustin Slater
 Well ID: GSRV-MW0073 Well Type: Monitoring Well
 Remark:

Well Information			
Well Diameter (in.):	1	Static Water Level (ft-BTOR):	0.27
Top of Screen (ft-BTOR):	17	Purge/Sample Method:	Low flow - peristaltic
Bottom of Screen (ft-BTOR):	27	Sample Analysis:	Fe, TDS
Total Depth of Well (ft-BTOR):	NM

Calibration Report

Instrument Aqua TROLL 600
Serial Number 606696
Created 10/3/2022

Sensor	RDO
Serial Number	911003
Last Calibrated	10/3/2022

Calibration Details

Slope 1.010808
Offset 0.00 mg/L

Calibration point 100%

Concentration 8.11 mg/L
Pre Measurement 104.77 %Sat
Post Measurement 100.00 %Sat
Temperature 25.60 °C
Barometric Pressure 1,015.8 mbar

Sensor	Conductivity
Serial Number	673517
Last Calibrated	10/3/2022

Calibration Details

TDS Conversion Factor (ppm) 0.65
Cell Constant 1.012
Reference Temperature 25.00 °C

Pre Measurement

Actual Conductivity 7,912.0 µS/cm
Specific Conductivity 7,992.2 µS/cm

Post Measurement

Actual Conductivity 7,919.7 µS/cm
Specific Conductivity 8,000.0 µS/cm

Sensor	pH/ORP
Serial Number	723210
Last Calibrated	10/3/2022

Calibration Details

Calibration Point 1

pH of Buffer 7.00 pH
pH mV -14.9 mV
Temperature 24.47 °C

Pre Measurement

pH 7.22 pH
pH mV -14.8 mV

Post Measurement

pH 7.00 pH
pH mV -14.8 mV

Slope and Offset 1

Slope -59.06 mV/pH
Offset -14.9 mV

ORP

ORP Solution Quick-Cal
Offset -95.6 mV
Temperature 24.47 °C
Pre Measurement 329.9 mV
Post Measurement 224.3 mV

Environment Testing

PERMISSION TO PUBLISH

Eurofins Environment Testing Southeast, LLC (EETSE) grants NASA and the U.S. Government permission to reproduce, publish, and distribute Resource Conservation and Recovery Act (RCRA) Program Documents, submitted in 2019 or beyond, hereinafter referred to as “the Work” in any form, language, or manner, now or hereafter known or developed, throughout the world, and to authorize others to do so on its behalf.

EETSE certifies that the Work does not infringe any existing copyright, proprietary right, or other right of a third party; and all clearance permissions, if necessary, to use materials of third parties have been obtained.

A handwritten signature in blue ink, appearing to read "Alex M.", is positioned above a horizontal line.

Definitions/Glossary

Client: AECOM Technical Services Inc.
Project/Site: NASA KSC GSRV PCB VOC Area

Job ID: 670-6709-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J1	Estimated value; value may not be accurate. Surrogate recovery outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: AECOM Technical Services Inc.
Project/Site: NASA KSC GSRV PCB VOC Area

Job ID: 670-6709-1

Job ID: 670-6709-1

Laboratory: Eurofins Orlando

Narrative

**Job Narrative
670-6709-1**

Receipt

The samples were received on 10/4/2022 12:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.2°C

GC/MS VOA

Method 8260B: The continuing calibration verification (CCV) associated with batch 670-7445 recovered above the upper control limit for 1,2-Dichlorobenzene and 1,3-Dichlorobenzene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PCBs

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Client: AECOM Technical Services Inc.
Project/Site: NASA KSC GSRV PCB VOC Area

Job ID: 670-6709-1

Client Sample ID: GSRV-MW0011S-007.0-20221003

Lab Sample ID: 670-6709-1

No Detections.

Client Sample ID: GSRV-MW0031-013.0-20221003

Lab Sample ID: 670-6709-2

No Detections.

Client Sample ID: GSRV-MW0043-007.0-20221003

Lab Sample ID: 670-6709-3

Analyte	Result	Qualifier	PQL	MDL	Unit	Dil Fac	D	Method	Prep Type
para-Dichlorobenzene	1.4		1.0	0.50	ug/L	1		8260B	Total/NA

Client Sample ID: GSRV-MW0044-007.0-20221003

Lab Sample ID: 670-6709-4

No Detections.

Client Sample ID: GSRV-MW0055-013.0-20221003

Lab Sample ID: 670-6709-5

No Detections.

Client Sample ID: GSRV-MW0056-019.0-20221003

Lab Sample ID: 670-6709-6

Analyte	Result	Qualifier	PQL	MDL	Unit	Dil Fac	D	Method	Prep Type
Chlorobenzene	36		1.0	0.50	ug/L	1		8260B	Total/NA

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southeast, LLC.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.3°C IR8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

ANALYTICAL REPORT

PREPARED FOR

Attn: Teresa Amentt Jennings
AECOM Technical Services Inc.
150 North Orange Avenue
Suite 200
Orlando, Florida 32801

Generated 12/27/2022 4:47:18 PM Revision 2

JOB DESCRIPTION

NASA KSC GSRV PCB VOC Area

JOB NUMBER

670-6769-1

Eurofins Orlando

Job Notes

The test results in this report meet NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted. Results pertain only to samples listed in this report. This report may not be reproduced, except in full, without the written approval of the laboratory. Questions should be directed to the person who signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Authorization

Authorized for release by
Kaitlin Dylnicki, Project Manager

Job ID: 670-6769-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J1	Estimated value; value may not be accurate. Surrogate recovery outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
J1	Estimated value; value may not be accurate. Surrogate recovery outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

REVISION

The report being provided is a revision of the original report sent on 10/18/2022. The report (revision 1) is being revised to update the reported units for Sulfate, Metals, and TDS.

Report revision history

Receipt

The samples were received on 10/4/2022 4:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.0°C

GC/MS VOA

Method 8260B: Surrogate recovery for the following samples were outside the upper control limit: GSRV-MW0053-007.0-20221004 (670-6769-9), GSRV-MW0054-013.0-20221004 (670-6769-10), GSRV-MW0061-025.0-20221004 (670-6769-13) and GSRV-MW0064-005.0-20221004 (670-6769-14). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Method 8260B: Surrogate recovery for the following samples were outside control limits: GSRV-MW0051-027.5-20221004 (670-6769-7), GSRV-MW0059-035.0-20221004 (670-6769-11), GSRV-MW0066-025.0-20221004 (670-6769-15) and GSRV-MW0075-022.0-20221004 (670-6769-16). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8260B: Surrogate recovery for the following sample was outside control limits: GSRV-MW0066-025.0-20221004 (670-6769-15). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PCBs

Method 8082A: Two surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: GSRV-MW0036R-007.0-20221004 (670-6769-2). These results have been reported and qualified.

Method 8082A: The surrogate recovery for the blank associated with preparation batch 400-595883 and analytical batch 400-595986 was outside the upper control limits.

Method 8082A: Two surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: GSRV-MW0052-019.0-20221004 (670-6769-8) and GSRV-MW0059-035.0-20221004 (670-6769-11). These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southeast, LLC.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

Metals

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: AECOM Technical Services Inc.

Job ID: 670-6897-1

Job ID: 670-6897-1

Laboratory: Eurofins Orlando

Narrative

**Job Narrative
670-6897-1**

Receipt

The samples were received on 10/5/2022 4:45 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.0°C

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

ANALYTICAL REPORT

PREPARED FOR

Attn: Teresa Amentt Jennings
AECOM Technical Services Inc.
150 North Orange Avenue
Suite 200
Orlando, Florida 32801

Generated 12/16/2022 12:57:34 PM Revision 1

JOB DESCRIPTION

NASA KSC GSRV IDW
October Sampling

JOB NUMBER

670-8406-1

Eurofins Orlando

Job Notes

The test results in this report meet NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted. Results pertain only to samples listed in this report. This report may not be reproduced, except in full, without the written approval of the laboratory. Questions should be directed to the person who signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Authorization

Authorized for release by
Kaitlin Dylnicki, Project Manager

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
U	Indicates that the compound was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
J1	Estimated value; value may not be accurate. Surrogate recovery outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
Q	Sample held beyond the accepted holding time.
U	Indicates that the compound was analyzed for but not detected.

LCMS

Qualifier	Qualifier Description
*	Isotope Dilution analyte is outside acceptance limits.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
U	Indicates that the compound was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 670-8406-1

Laboratory: Eurofins Orlando

Narrative

Job Narrative 670-8406-1

Receipt

The samples were received on 10/28/2022 2:15 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.9°C and 3.8°C

Revision

The report being provided is a revision of the original report sent on 11/29/2022. The report (revision 1) is being revised due to: update of units for total phosphorus and nitrate.

GC/MS VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PCBs

Method 8082A: Two surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: GSR Y-IDW01-20221027 (670-8406-1), GSR Y-IDW03-20221027 (670-8406-3), GSR Y-IDW04-20221027 (670-8406-4), GSR Y-IDW06-20221027 (670-8406-6), GSR Y-IDW08-20221027 (670-8406-8), GSR Y-IDW10-20221027 (670-8406-10) and GSR Y-IDW11-20221028 (670-8406-11). These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFMS: The following samples were performed outside of the analytical holding time due to failing instrument QC: GSR Y-IDW01-20221027 (670-8406-1), GSR Y-IDW02-20221027 (670-8406-2), GSR Y-IDW03-20221027 (670-8406-3), GSR Y-IDW04-20221027 (670-8406-4), GSR Y-IDW05-20221027 (670-8406-5), GSR Y-IDW06-20221027 (670-8406-6) and GSR Y-IDW07-20221027 (670-8406-7), GSR Y-IDW08-20221027 (670-8406-8), GSR Y-IDW09-20221027 (670-8406-9) and GSR Y-IDW10-20221027 (670-8406-10).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PFAS

Method PFC_IDA_D5.3: The recovery for the labeled isotope(s) 13C2-PFDoDA, d5-NEtFOSAA, 13C5 PFPeA, 13C2 PFTeDA, 13C7 PFUnA, d3-NMeFOSAA, d3-NMePFOSA and 13C4 PFBA in the following sample: GSR Y-IDW01-20221027 (670-8406-1) is outside the QC acceptance limits. The following action was taken: This sample was re-extracted outside of the required holding time and the recovery for labeled isotope(s) 13C2 PFTeDA d3-NMePFOSA 13C4 PFBA was again outside of the QC acceptance limits. The recovery for labeled isotope d5-NEtFOSAA d3-NMeFOSAA 13C5 PFPeA 13C2-PFDoDA 13C7 PFUnA was within the QC acceptance limits.

Method PFC_IDA_D5.3: The recovery for the labeled isotope(s) 13C6 PFDA, 13C2-PFDoDA, 13C5 PFHxA, 13C3 PFBS, 13C8 FOSA, d5-NEtFOSAA, 13C5 PFPeA, 13C2 PFTeDA, 13C7 PFUnA, d3-NMeFOSAA, 13C8 PFOA, 13C9 PFNA, d3-NMePFOSA, 13C4 PFHpA, M2-8: FTS, 13C8 PFOS and 13C4 PFBA in the following sample: GSR Y-IDW02-20221027 (670-8406-2) is outside the QC acceptance limits. The following action was taken: This sample was re-extracted outside of the required holding time and the recovery for labeled isotope(s) 13C2 PFTeDA 13C4 PFBA d3-NMePFOSA was again outside of the QC acceptance limits. The recovery for labeled isotope(s) M2-8:2 FTS 13C3 PFBS 13C8 PFOS 13C5 PFHxA d3-NMeFOSAA 13C4 PFHpA 13C8 PFOA 13C9 PFNA d5-NEtFOSAA 13C6 PFDA 13C5 PFPeA 13C2-PFDoDA 13C7 PFUnA 13C8 FOSA was within the QC acceptance limits.

Method PFC_IDA_D5.3: The recovery for the labeled isotope(s) 13C6 PFDA, 13C2-PFDoDA, 13C8 FOSA, d5-NEtFOSAA, 13C5 PFPeA, 13C2 PFTeDA, 13C7 PFUnA, d3-NMeFOSAA, d3-NMePFOSA and 13C4 PFBA in the following sample: GSR Y-IDW03-20221027 (670-8406-3) is outside the QC acceptance limits. The following action was taken: This sample was re-extracted outside of the required holding time and the recovery for labeled isotope(s) d3-NMePFOSA was again outside of the QC acceptance limits. The recovery for labeled isotope(s) 13C2 PFTeDA 13C4 PFBA d3-NMeFOSAA d5-NEtFOSAA 13C6 PFDA 13C5 PFPeA 13C2-PFDoDA 13C7 PFUnA 13C8 FOSA was within the QC acceptance limits.

Laboratory: Eurofins Orlando (Continued)

Method PFC_IDA_D5.3: The recovery for the labeled isotope(s) 13C6 PFDA, 13C2-PFDoDA, 13C5 PFHxA, 13C3 PFBS, 13C8 FOSA, d5-NEtFOSAA, 13C5 PFPeA, 13C2 PFTeDA, 13C7 PFUnA, d3-NMeFOSAA, 13C8 PFOA, 13C9 PFNA, d3-NMePFOSA, 13C4 PFHpA, M2-8: FTS, 13C8 PFOS and 13C4 PFBA in the following sample: GSRV-IDW04-20221027 (670-8406-4) is outside the QC acceptance limits. The following action was taken: This sample was re-extracted outside of the required holding time and the recovery for labeled isotope(s) 13C4 PFBA d3-NMePFOSA was again outside of the QC acceptance limits. The recovery for labeled isotope(s) 13C2 PFTeDA M2-8:2 FTS 13C3 PFBS 13C8 PFOS 13C5 PFHxA d3-NMeFOSAA 13C4 PFHpA 13C8 PFOA 13C9 PFNA d5-NEtFOSAA 13C6 PFDA 13C5 PFPeA 13C2-PFDoDA 13C7 PFUnA 13C8 FOSA was within the QC acceptance limits.

Method PFC_IDA_D5.3: The recovery for the labeled isotope(s) 13C2-PFDoDA, 13C8 FOSA, M2-4:2 FTS, d5-NEtFOSAA, 13C2 PFTeDA, 13C7 PFUnA, d3-NMePFOSA and 13C4 PFBA in the following sample: GSRV-IDW05-20221027 (670-8406-5) is outside the QC acceptance limits. The following action was taken: This sample was re-extracted outside of the required holding time and the recovery for labeled isotope(s) 13C4 PFBA M2-4:2 FTS was again outside of the QC acceptance limits. The recovery for labeled isotope(s) 13C2 PFTeDA d3-NMePFOSA d5-NEtFOSAA 13C2-PFDoDA 13C7 PFUnA 13C8 FOSA was within the QC acceptance limits.

Method PFC_IDA_D5.3: The recovery for the labeled isotope(s) 13C6 PFDA, 13C2-PFDoDA, 13C8 FOSA, d5-NEtFOSAA, 13C5 PFPeA, 13C2 PFTeDA, 13C7 PFUnA, d3-NMeFOSAA, d3-NMePFOSA and 13C4 PFBA in the following sample: GSRV-IDW06-20221027 (670-8406-6) is outside the QC acceptance limits. The following action was taken: This sample was re-extracted outside of the required holding time and the recovery for labeled isotope(s) 13C2 PFTeDA d3-NMePFOSA 13C2-PFDoDA was again outside of the QC acceptance limits. The recovery for labeled isotope(s) 13C4 PFBA d3-NMeFOSAA d5-NEtFOSAA 13C6 PFDA 13C5 PFPeA 13C7 PFUnA 13C8 FOSA was within the QC acceptance limits.

Method PFC_IDA_D5.3: The recovery for the labeled isotope(s) 13C6 PFDA, 13C2-PFDoDA, 13C5 PFHxA, 13C3 PFBS, 13C8 FOSA, d5-NEtFOSAA, 13C5 PFPeA, 13C7 PFUnA, d3-NMeFOSAA, 13C9 PFNA, d3-NMePFOSA, 13C4 PFHpA, M2-8:2 FTS, 13C8 PFOS and 13C4 PFBA in the following sample: GSRV-IDW07-20221027 (670-8406-7) is outside the QC acceptance limits. The following action was taken: This sample was re-extracted outside of the required holding time and the recovery for labeled isotope(s) M2-8:2 FTS d3-NMePFOSA 13C4 PFBA d3-NMeFOSAA d5-NEtFOSAA was again outside of the QC acceptance limits. The recovery for labeled isotope(s) 13C3 PFBS 13C8 PFOS 13C5 PFHxA 13C4 PFHpA 13C9 PFNA 13C6 PFDA 13C5 PFPeA 13C2-PFDoDA 13C7 PFUnA 13C8 FOSA was within the QC acceptance limits.

Method PFC_IDA_D5.3: The recovery for the labeled isotope(s) 13C6 PFDA, 13C2-PFDoDA, 13C5 PFHxA, 13C3 PFBS, 13C8 FOSA, M2-6:2 FTS, d5-NEtFOSAA, 13C5 PFPeA, 13C2 PFTeDA, 13C7 PFUnA, d3-NMeFOSAA, 13C8 PFOA, 13C9 PFNA, d3-NMePFOSA, 13C4 PFHpA, M2-8:2 FTS, 13C3 PFHxS, 13C8 PFOS and 13C4 PFBA in the following sample: GSRV-IDW08-20221027 (670-8406-8) is outside the QC acceptance limits. The following action was taken: This sample was re-extracted outside of the required holding time and the recovery for labeled isotope(s) 13C2 PFTeDA d3-NMePFOSA M2-6:2 FTS was again outside of the QC acceptance limits. The recovery for labeled isotope(s) 13C3 PFHxS M2-8:2 FTS 13C3 PFBS 13C8 PFOS 13C5 PFHxA 13C4 PFBA d3-NMeFOSAA 13C4 PFHpA 13C8 PFOA 13C9 PFNA d5-NEtFOSAA 13C6 PFDA 13C5 PFPeA 13C2-PFDoDA 13C7 PFUnA 13C8 FOSA was within the QC acceptance limits.

Method PFC_IDA_D5.3: The recovery for the labeled isotope(s) 13C6 PFDA, 13C2-PFDoDA, 13C5 PFHxA, 13C8 FOSA, d5-NEtFOSAA, 13C5 PFPeA, 13C2 PFTeDA, 13C7 PFUnA, d3-NMeFOSAA, d3-NMePFOSA and 13C4 PFBA in the following sample: GSRV-IDW09-20221027 (670-8406-9) is outside the QC acceptance limits. The following action was taken: This sample was re-extracted outside of the required holding time and the recovery for labeled isotope(s) 13C4 PFBA d3-NMePFOSA was again outside of the QC acceptance limits. The recovery for labeled isotope(s) 13C2 PFTeDA 13C5 PFHxA d3-NMeFOSAA d5-NEtFOSAA 13C6 PFDA 13C5 PFPeA 13C2-PFDoDA 13C7 PFUnA 13C8 FOSA was within the QC acceptance limits.

Method PFC_IDA_D5.3: The recovery for the labeled isotope(s) 13C6 PFDA, 13C2-PFDoDA, 13C5 PFHxA, 13C3 PFBS, 13C8 FOSA, d5-NEtFOSAA, 13C5 PFPeA, 13C2 PFTeDA, 13C7 PFUnA, d3-NMeFOSAA, 13C8 PFOA, 13C9 PFNA, d3-NMePFOSA, 13C4 PFHpA, M2-8: FTS, 13C3 PFHxS, 13C8 PFOS and 13C4 PFBA in the following sample: GSRV-IDW10-20221027 (670-8406-10) is outside the QC acceptance limits. The following action was taken: This sample was re-extracted outside of the required holding time and the recovery for labeled isotope(s) 13C2 PFTeDA 13C4 PFBA d3-NMePFOSA was again outside of the QC acceptance limits. The recovery for labeled isotope(s) 13C3 PFHxS M2-8:2 FTS 13C3 PFBS 13C8 PFOS 13C5 PFHxA d3-NMeFOSAA 13C4 PFHpA 13C8 PFOA 13C9 PFNA d5-NEtFOSAA 13C6 PFDA 13C5 PFPeA 13C2-PFDoDA 13C7 PFUnA 13C8 FOSA was within the QC acceptance limits.

CHAIN OF CUSTODY AND ANALYTICAL REQUEST RECORD

Project Name: NASA KSC - GSA Reclamation Yard
Site Location: GSRY - IDW
TO No.: 80KSC019F0078
Sampler/Phone # Greg Kusel / (772) 631-7426
EUROFINS Project Manager: Chad Lee cc: Jennifer Gootee
Instructions in MSA# 215-27172-GV03
Deliver Sample Kits To: AECOM Depot, 523 18th Street, Orlando
Deliver Samples To: Eurofins Orlando
Phase: 60614327.4
EDD to: Jennifer Chastain
Report to: Jennifer Chastain
Site-Specific WS#15 from QAPP: 15-17A

Client: AECOM Technical Services Inc.

Job Number: 670-8406-1

Login Number: 8406

List Number: 1

Creator: Betancourt, Luis I

List Source: Eurofins Orlando

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

ANALYTICAL REPORT

PREPARED FOR

Attn: Teresa Amentt Jennings
AECOM Technical Services Inc.
150 North Orange Avenue
Suite 200
Orlando, Florida 32801

Generated 12/6/2022 4:40:15 PM Revision 2

JOB DESCRIPTION

NASA KSC GSRV PCB VOC Area

JOB NUMBER

670-8411-1

Eurofins Orlando

Job Notes

The test results in this report meet NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted. Results pertain only to samples listed in this report. This report may not be reproduced, except in full, without the written approval of the laboratory. Questions should be directed to the person who signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Authorization

Authorized for release by
Kaitlin Dylnicki, Project Manager

Job ID: 670-8411-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
J1	Estimated value; value may not be accurate. Surrogate recovery outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

HPLC/IC

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
U	Indicates that the compound was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)

Narrative

Job Narrative 670-8411-1

Comments

No additional comments.

Revision

The report being provided is a revision of the original report sent on 11/28/2022. The report (revision 2) is being revised to update units reported for multiple analytes.

Report revision history

Revision 1 - 11/29/2022 - Reason - update the report to include quality control data that was not initially included..

Receipt

The samples were received on 10/29/2022 2:15 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 5.8° C.

GC/MS VOA

Method 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 670-9926 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HPLC/IC

Method 300.0: The matrix spike duplicate (MSD) recovery for analytical batch 670-11876 was outside control limit; however, the matrix spike, %RPD, and the associated laboratory control sample (LCS) recovery were within acceptance limits. Data has been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method 8082A: Two surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: GSRV-MW0049-027.5-20221028 (670-8411-2), GSRV-MW0062-035.0-20221028 (670-8411-3) and GSRV-MW0063-019.0--20221028 (670-8411-4). These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 6010D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 670-10364 and analytical batch 670-10488 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

List Source: Eurofins Orlando

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
