

Lightning in a Flash: A Cloud-Based, Open-Source Capability to Support Data Access and Analysis of Space-Based Lightning Observations

Navaneeth Selvaraj, Alan Subedi, Deepak Acharya, Geoffrey T. Stano, Will Ellett, Aaron Kaulfus², and Leigh Sinclair,

¹University of Alabama in Huntsville (UAH) Information Technology and Systems Center (ITSC)

²DAAC Manager, NASA Marshall Space Flight Center, Huntsville, Alabama

NASA's Earth Science DAACs and GHRC

- **Distributed Active Archive Centers (DAAC)**

- NASA's Earth Observing System Data and Information System (EOSDIS)

- **Role**

- Process, archive, document, and freely distribute Earth Science data
- Enable the use of these data by users in their research

- **GHRC**

- Global Hydrometeorology Resource Center
- 1 of 12 NASA DAACs
- Collaboration between NASA Marshall Space Flight Center and the University of Alabama in Huntsville

Value of Lightning Observations

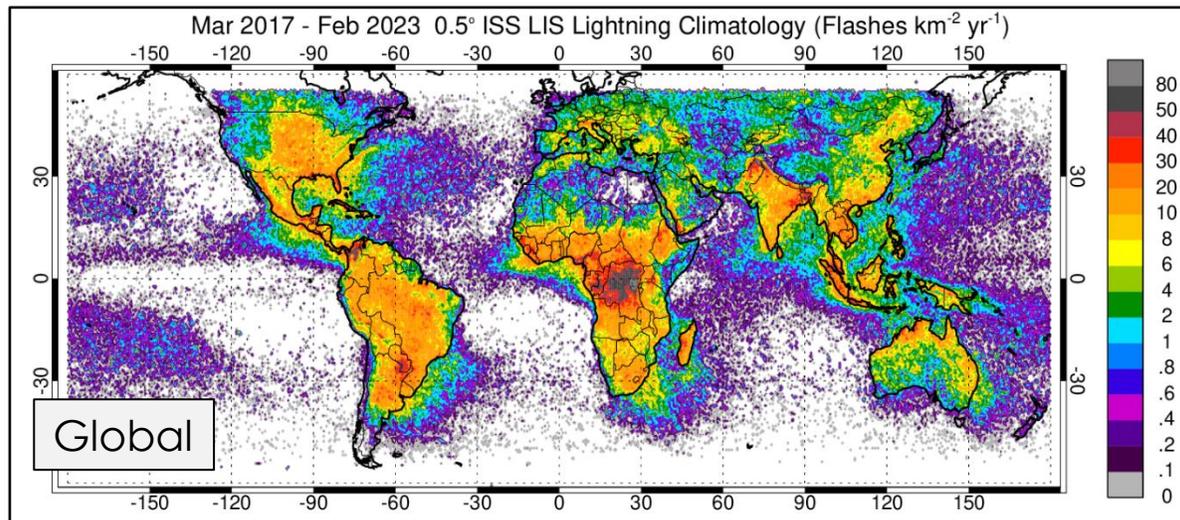

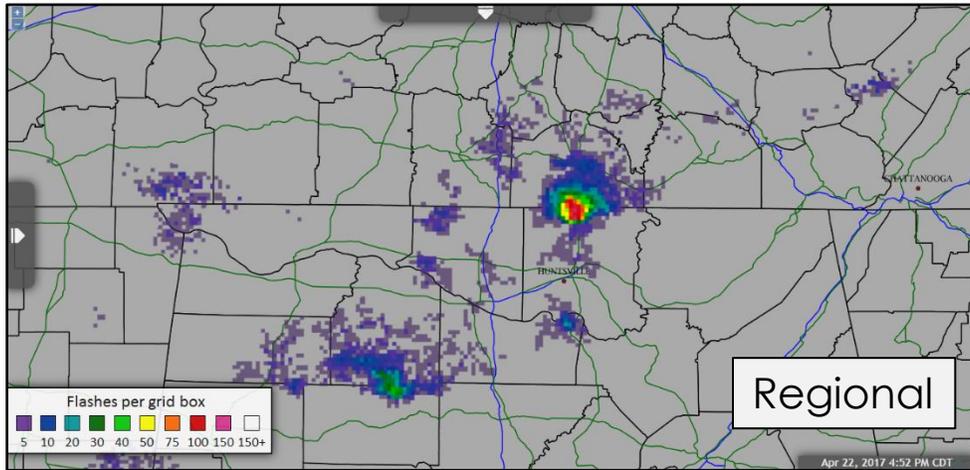

Lightning Fast Facts

- ~45 flashes, globally, every second
- ~25 million strikes in the U.S. per year
- **Safety**
 - Significant progress in the U.S.
 - < 30 deaths per year
 - Major issue globally
 - ~24 thousand killed per year
 - Upwards of a quarter million injured
- **Damages – Difficult to quantify**
 - \$451 million per year in U.S.
 - 9,000 wildland fires from 2008-2012

Uses of Lightning Data

- **Improving observing abilities**
 - Ground (high resolution, but smaller area or privately owned for global data)
 - Satellite (wider coverage, lower resolution)
 - Can see intra-cloud flashes that can make up to 90% of all flashes in some storms
- **Safety and Decision Support**
 - Identify flash extent and megaflashes (>100 km in length)
 - Lightning jumps for severe weather
- **Proxy for Microphysics**
 - Can infer convection (i.e., vertical motion) with lightning observations
 - Highlights regions of greater precipitation where radars are unavailable

Lightning Data at GHRC

• Wide Variety of Lightning Data

- 6-8 of GHRC's top 10 datasets per year
- Lightning Imaging Sensors most popular

• Continuing to Grow

- Anticipate a new global dataset from the World Meteorological Organization
- <https://search.earthdata.nasa.gov/portal/ghrc/>
 - Use 'lightning'

Using GHRC Lightning Data

Cloud Transition

- **Rapid Growth of Earth Science Data**
 - 600 PB by the end of the decade
 - GHRC increasing by 240 TB this year
 - NASA embracing open science
- **Shifting to Cloud Services**
 - NASA Earthdata - Amazon Web Services
 - Reducing local computer storage
 - Opportunity for cross-DAAC and cross-agency data sharing
- **GHRC – Cloud Pathfinder**
 - Pathfinder for DAAC Cloud Ops in 2019
 - First DAAC with all data in cloud in 2020
 - All operations in cloud by 2024

Specific Needs for Lightning

- **Complex data files**

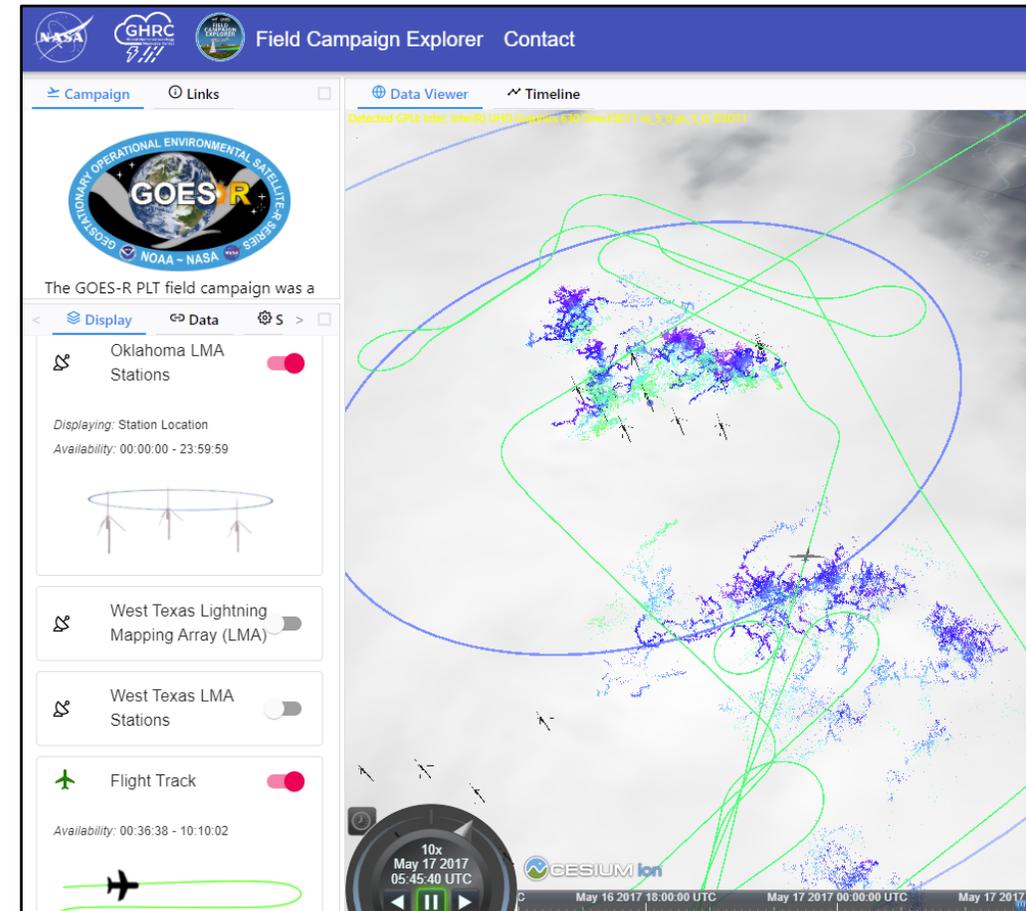

- Large volume of individual observations
- Multiple platforms with different abilities
- Derived products can take time to process

- **GHRC aims to support users**

- Data recipes – Code to do basic manipulation and processing
- Field Campaign Explorer (FCX) – Coincident with other data
- Want to create basic analysis abilities

- **Lightning Dashboard**

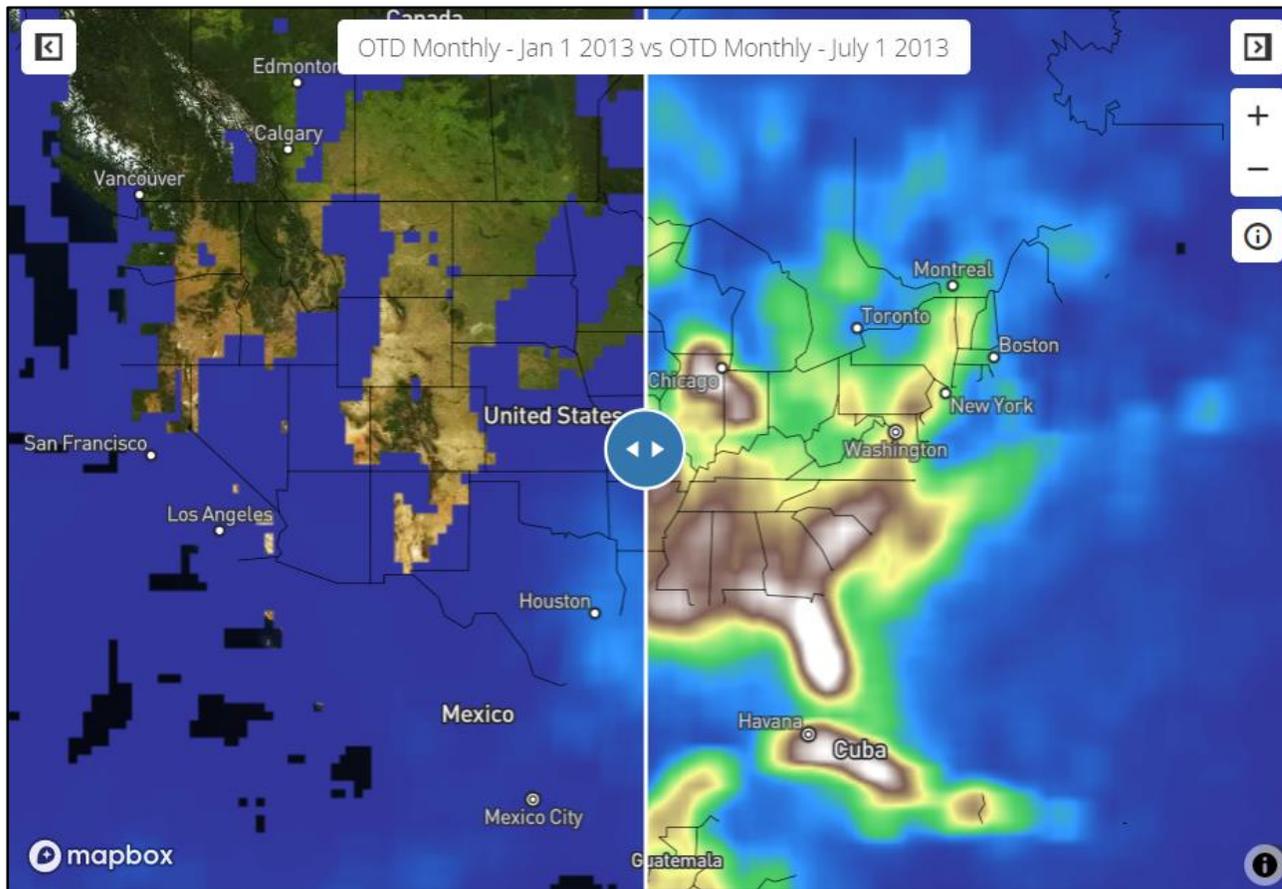

- Quickly visualize multiple lightning datasets
- Offer basic analyses

<https://ghrc.earthdata.nasa.gov/fcx/index.html>

FCX in GHRC's 2022 webinar: <https://youtu.be/tajklJm3rbl>

Development of the Lightning Dashboard

Sample Dashboard: OTD January (left) and July (right)

- **Use cloud expertise / open science**

- Use FCX experience for a cloud-based tool
- Use NASA's Covid-19 dashboard as foundation
 - Highlights open science advantages

- **Development approach**

- Provided funding for one year
- Goal: Functional minimum viable product (MVP)
- Expanded MVP this year

- **Goals**

- Cloud-based (no downloads)
- Use most popular GHRC lightning data
- Basic visualization
- Several, simple analyses

Technical Details

- **Imagery**

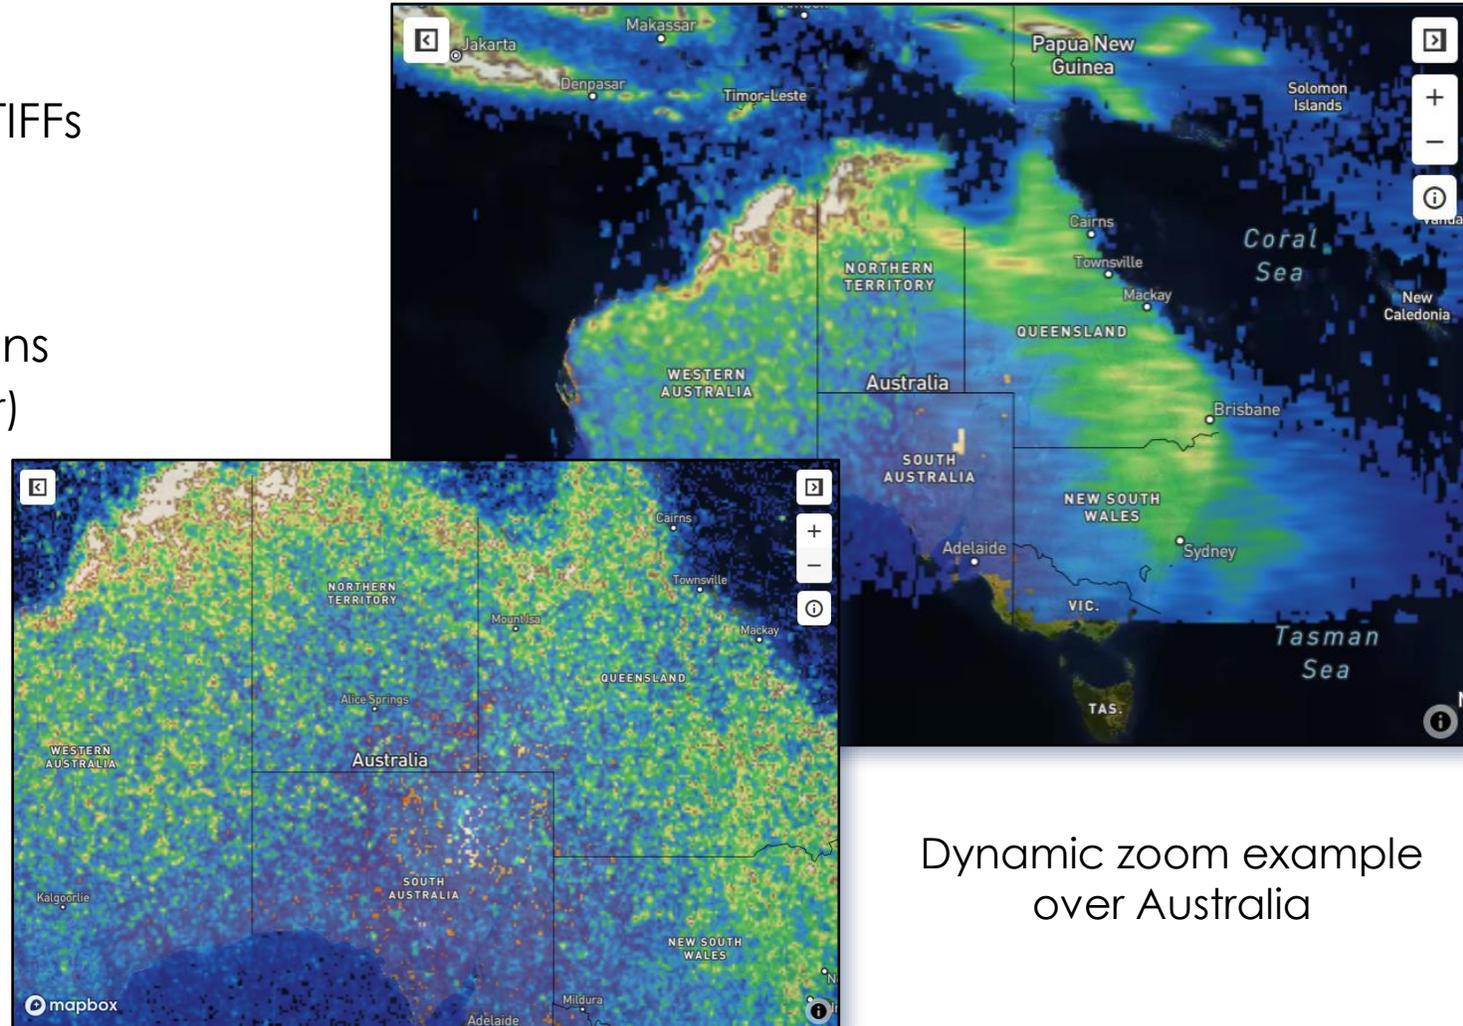

- Convert data to cloud optimized geoTIFFs

- **Software**

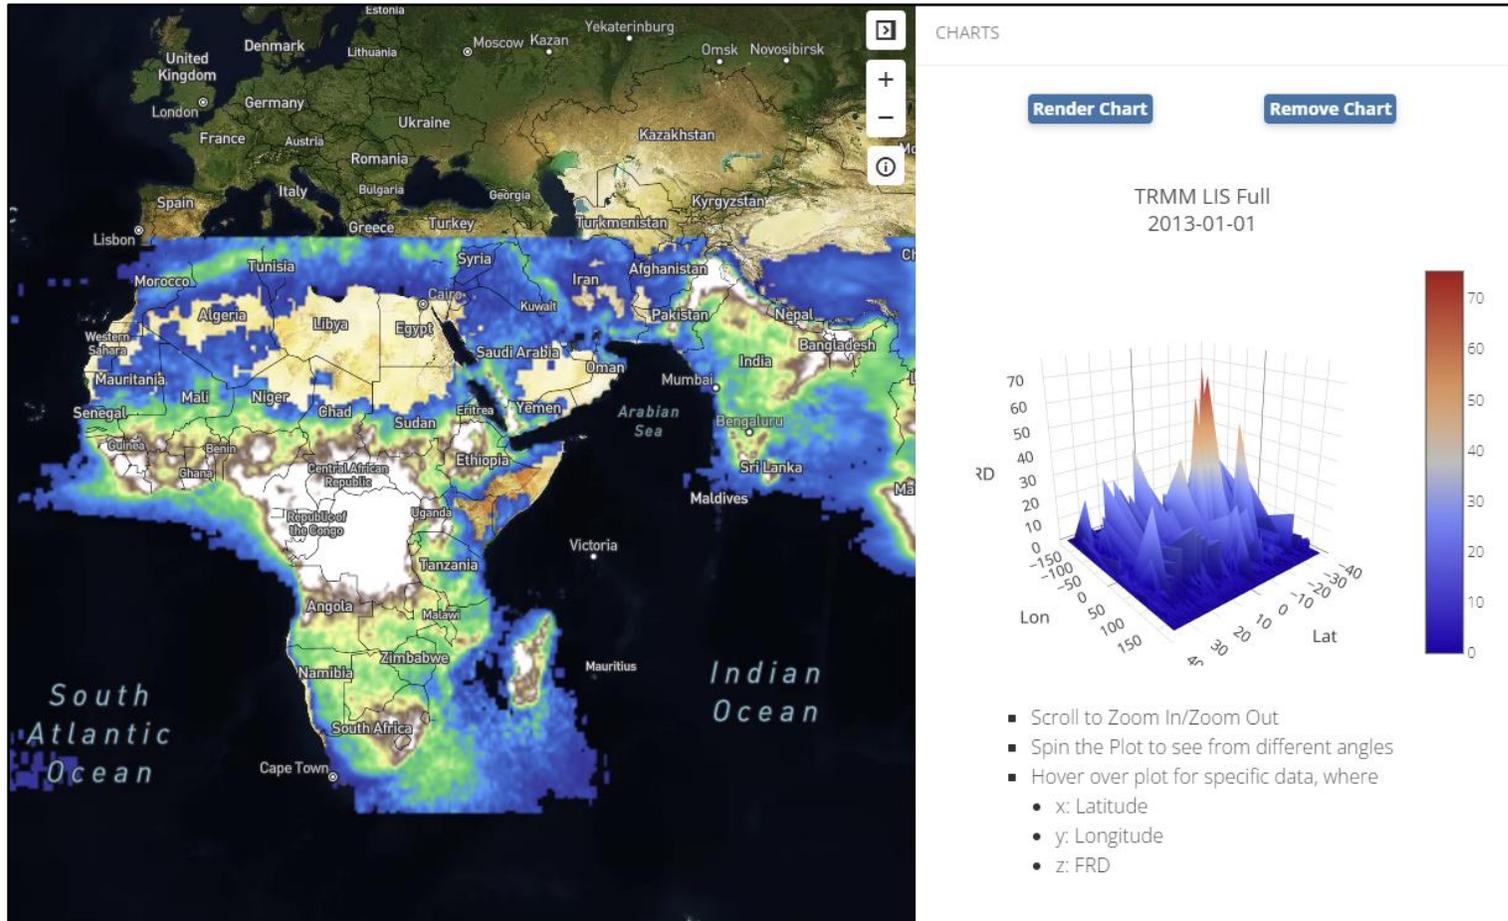

- React for frontend interface
- Amazon Web Services lambda functions
 - Example is metadata filter (shown later)
- Terracotta python as tiling server
 - "Heavy lifting" done here
- Map server is map box
 - Similar to Cesium JS – used for FCX 3D work
 - Map box best known for 2D displays

- **Capabilities**

- Basic flash rate densities
- Slider comparison feature
- Histograms
- Data analysis

Dynamic zoom example over Australia

• Expand Capabilities

- Incorporate additional visualizations
 - Density products
 - Update color curves
- More analysis options
 - Intercompare datasets
- Incorporate additional lightning datasets
 - More ISS LIS data
 - Ground-based lightning mapping arrays

• Open Source

- Deployed in local cloud instance
- Aim to prepare open source release
