

PLATTE RIVER BASIN WATER RESOURCES

Assessing Urban Flood Vulnerability to
Select Restoration Sites for Urban Woods
and Prairies in the Great Plains

Jennifer Mathis

Emma Vail

Jackie Encinas

Olivia Kirkland

Georgia – Athens | Spring 2024

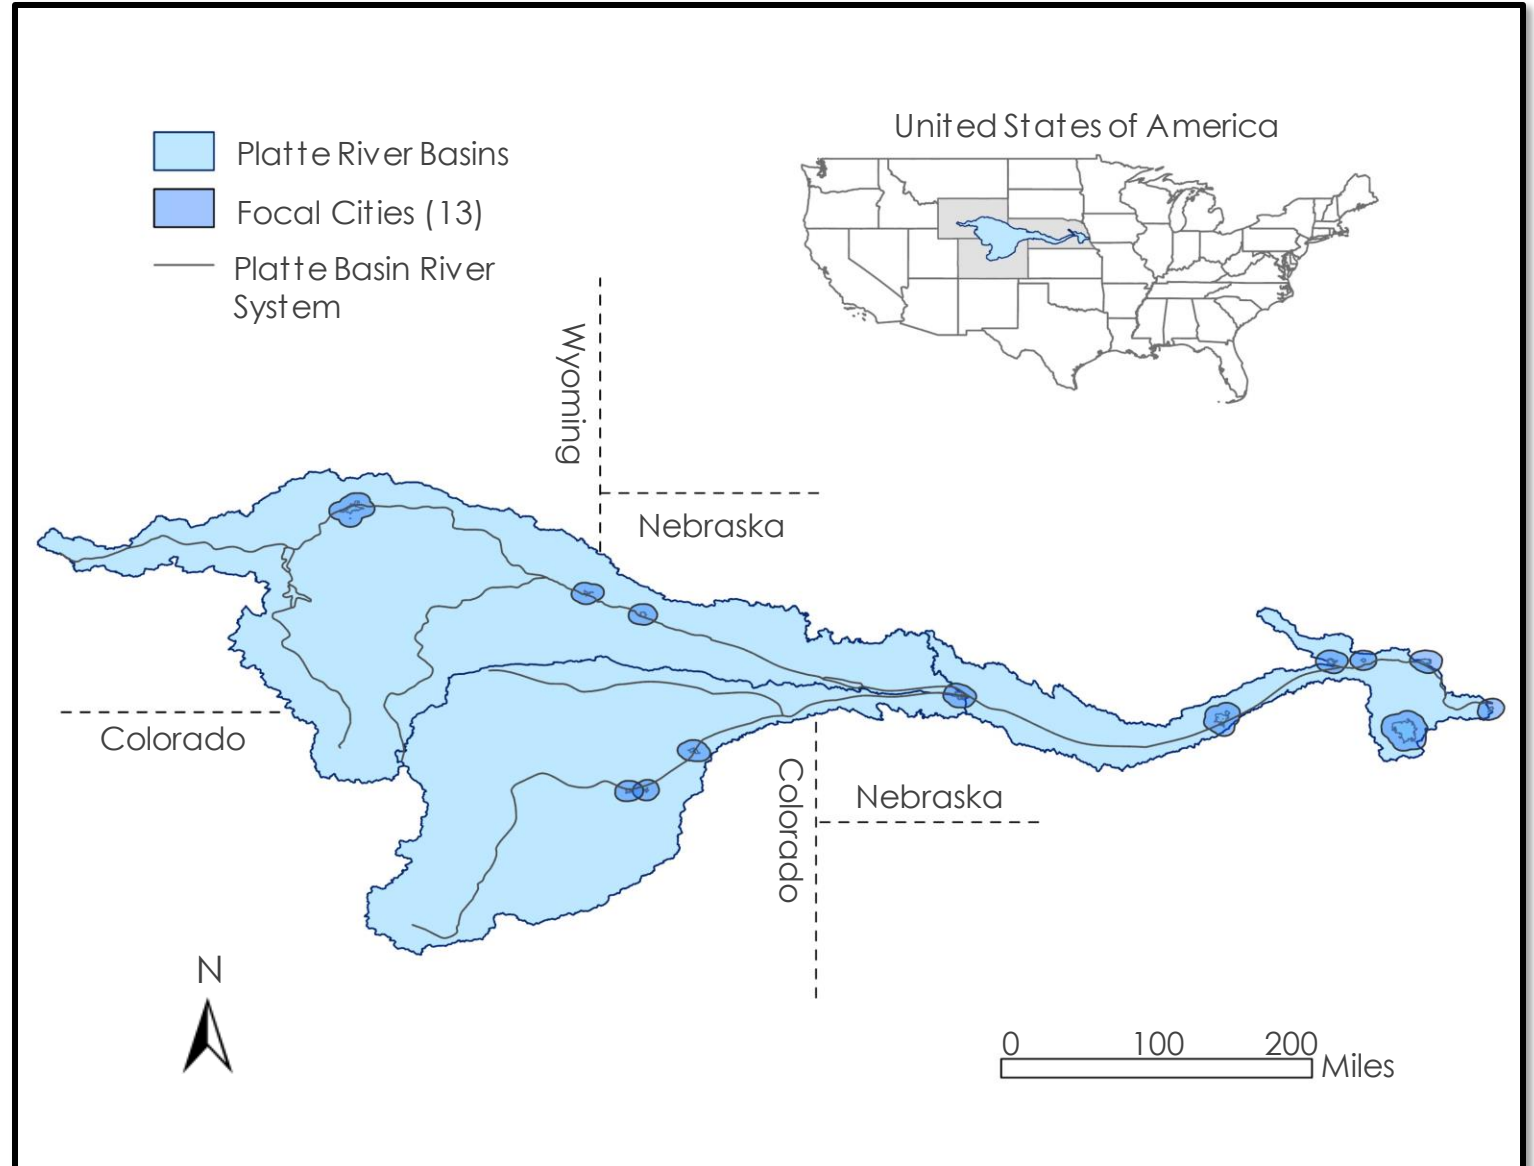

Study Area

Platte River Basin (Wyoming, Colorado, and Nebraska, USA)

Focal cities

Community Concerns

- Community Vulnerability
- Urban Flooding

- Green Infrastructure
- Habitat Fragmentation

Partner

Audubon Great Plains

"To **protect birds** and the **places** they need, today and tomorrow. Audubon works throughout the Americas using **science, advocacy, education**, and on-the-ground **conservation**."

Land use change
Floodplain mapping

Focused **restoration** work through
the **Urban Woods and Prairies (UWP)**
Initiative

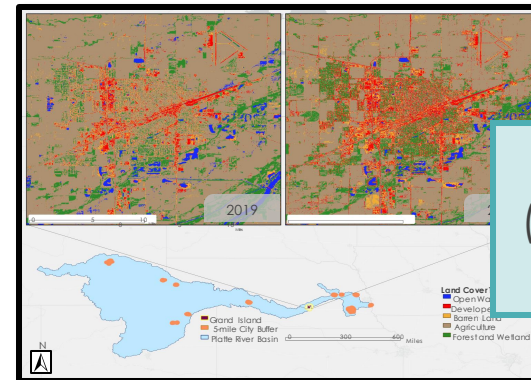

Objectives

Objective

Provide scientific guidance for restoration work our partner will conduct.

End products

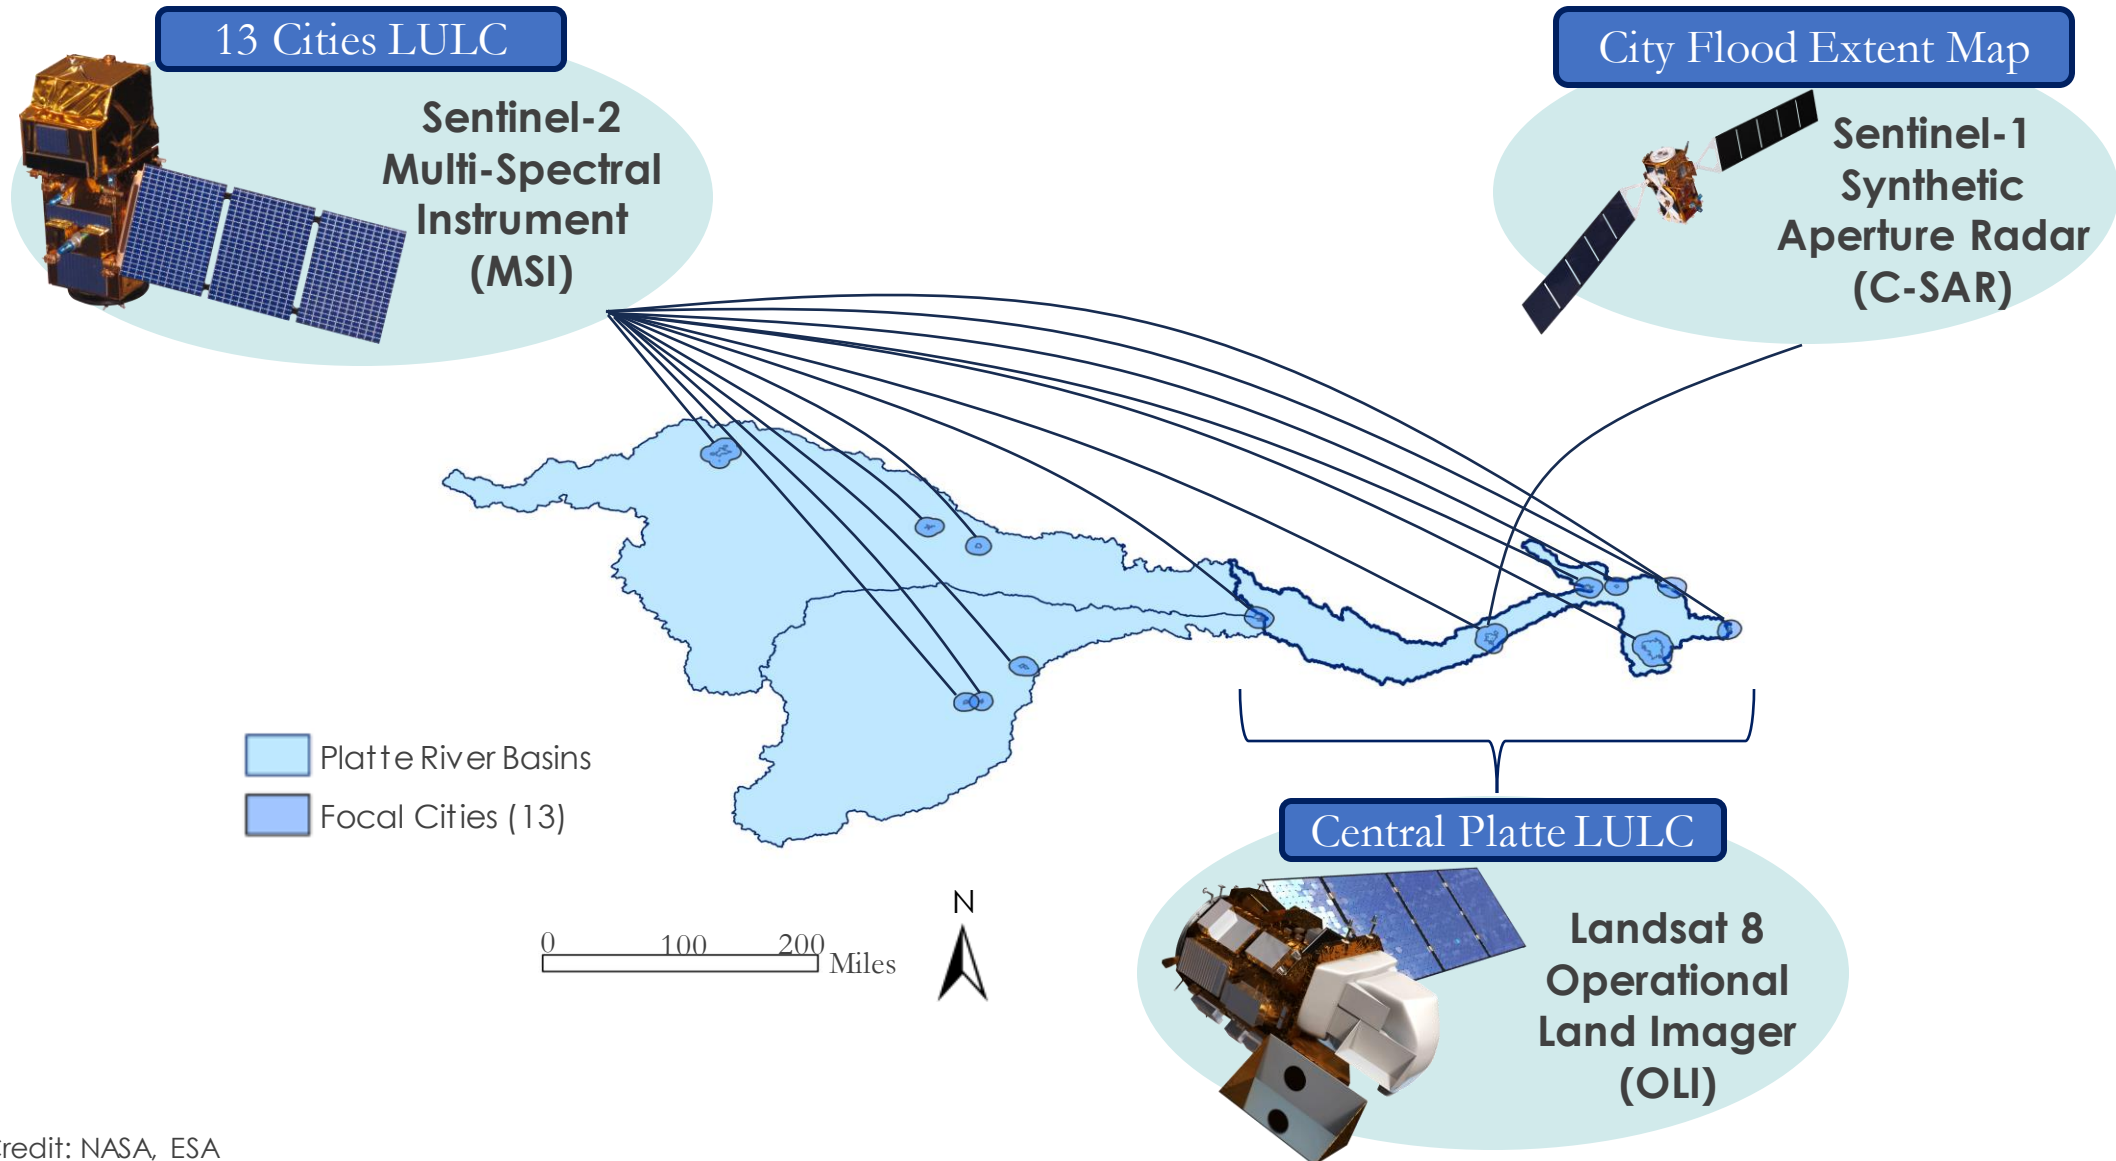

Land Use Land Cover
(LULC) 10-year time series
(2013 – 2023)

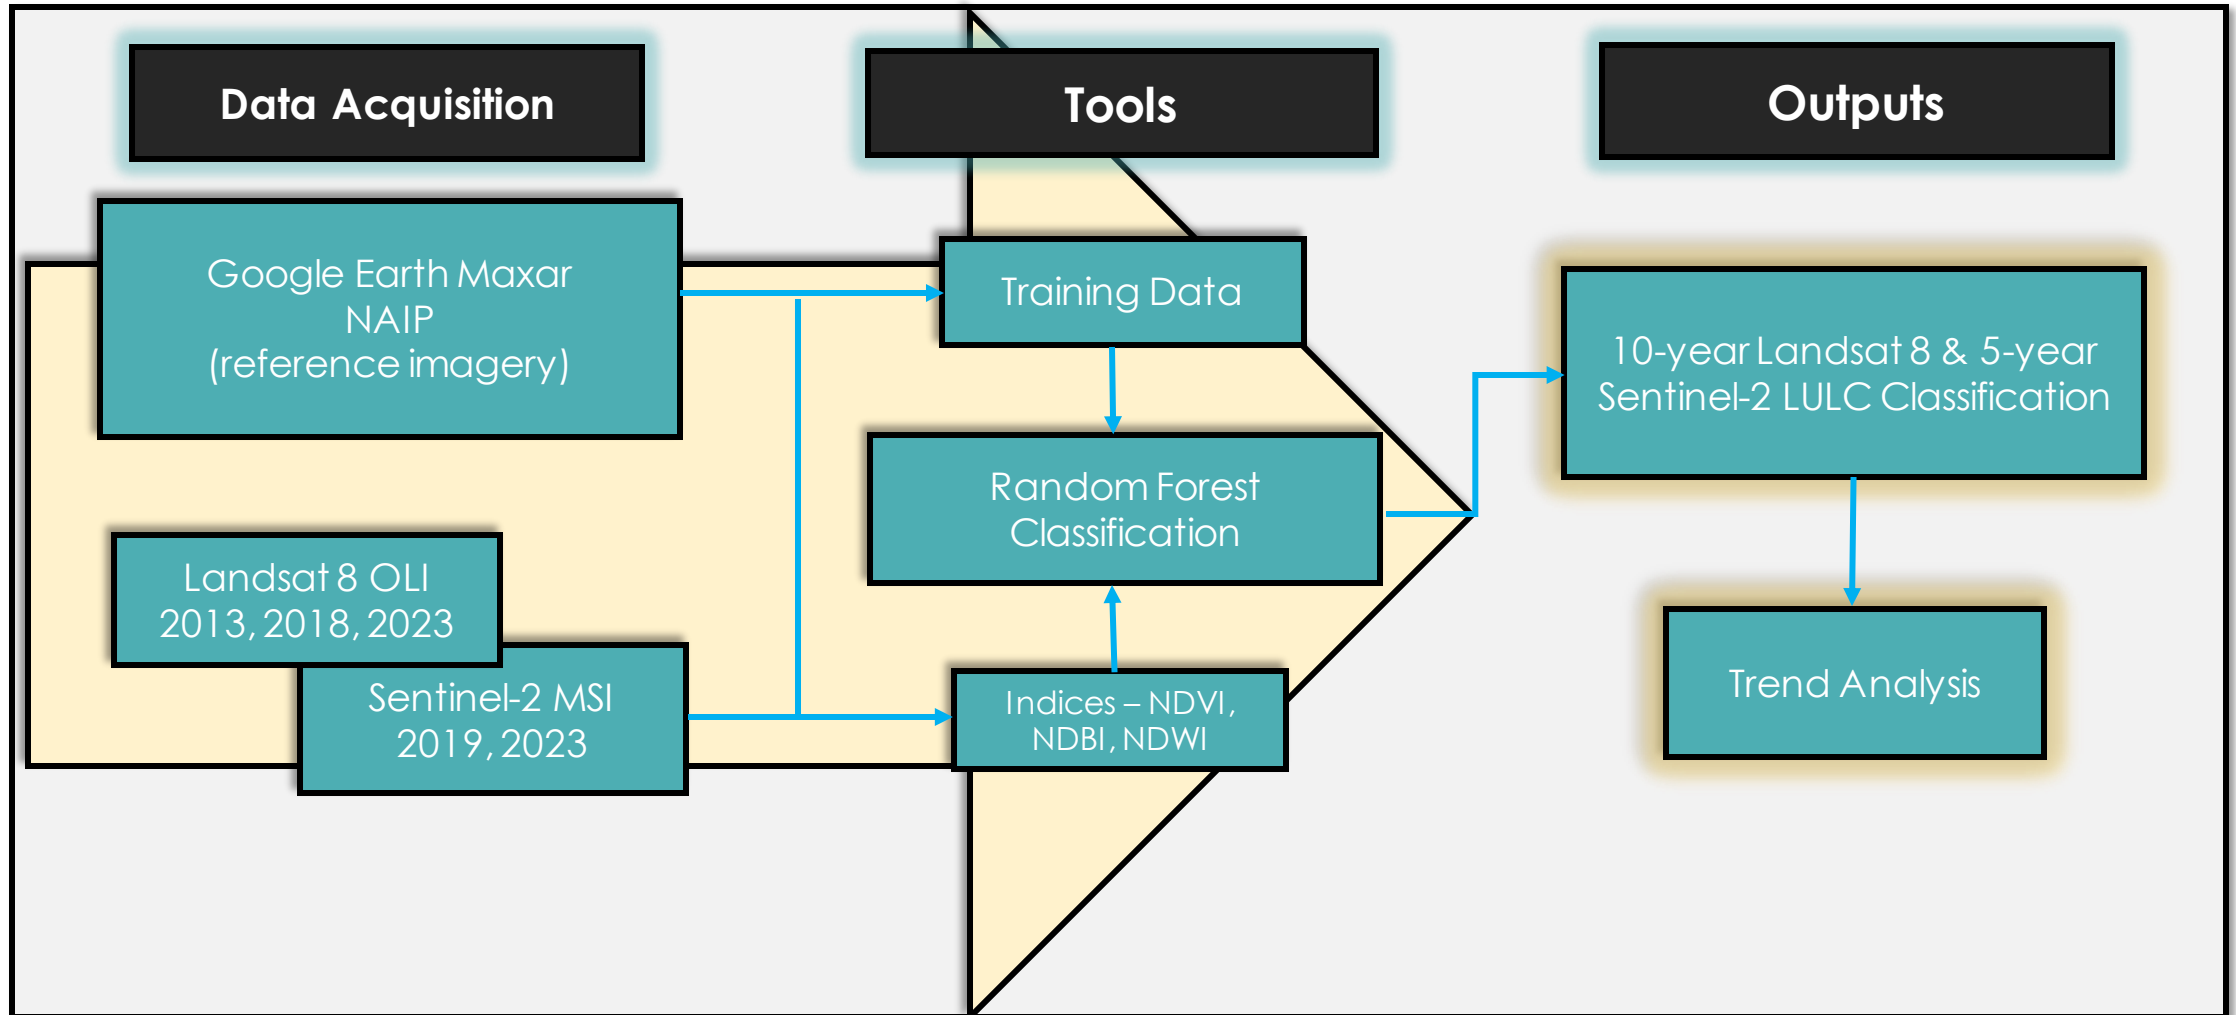

30m Flood Risk Map

Earth Observations

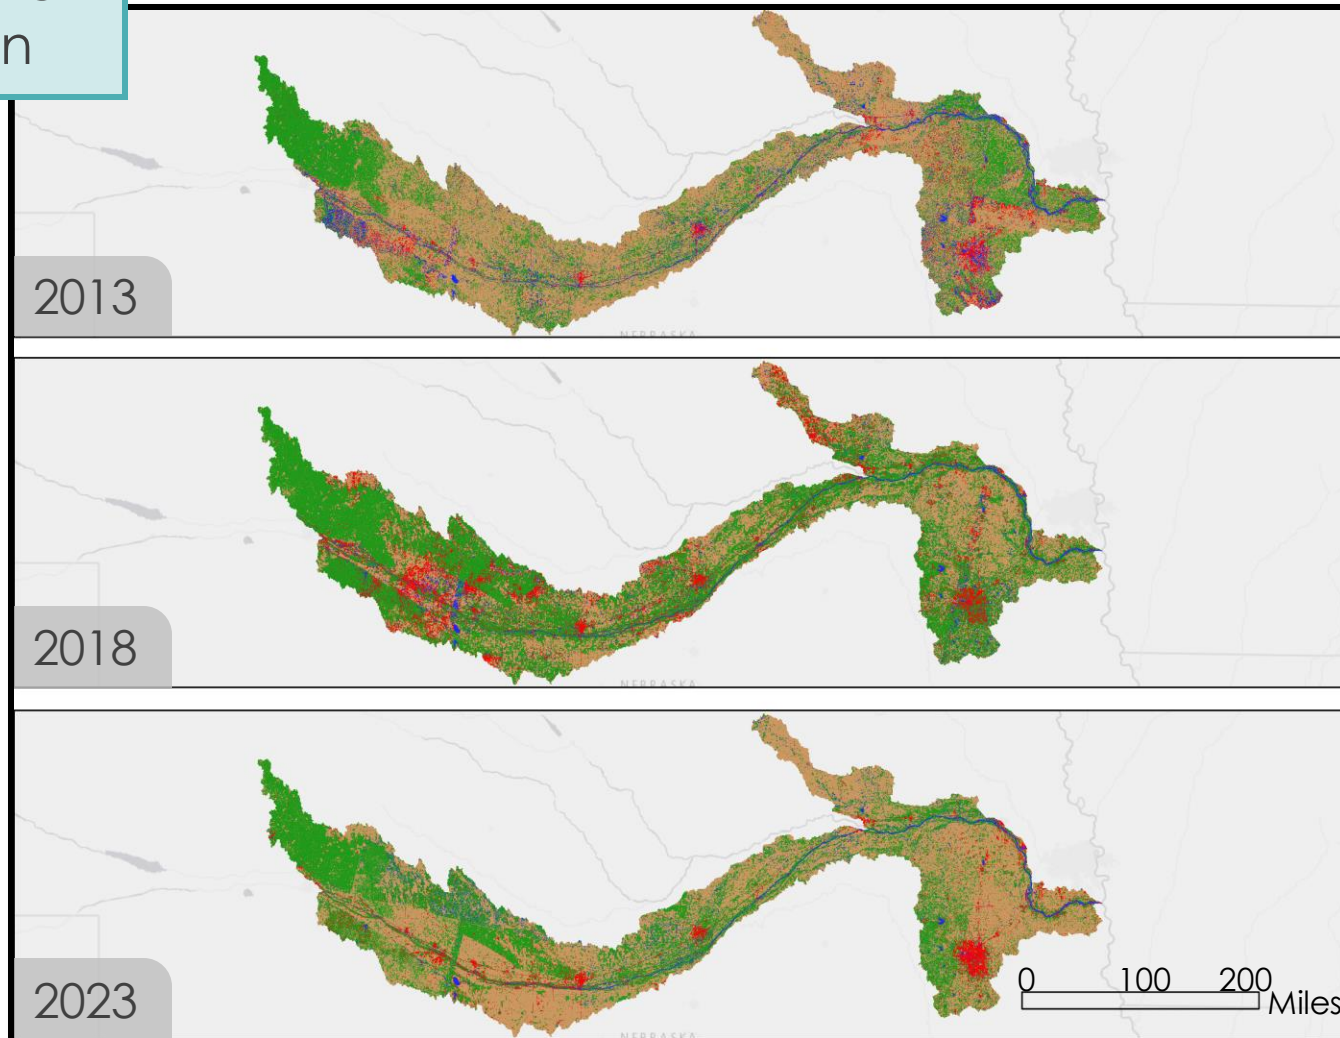

Methods – LULC

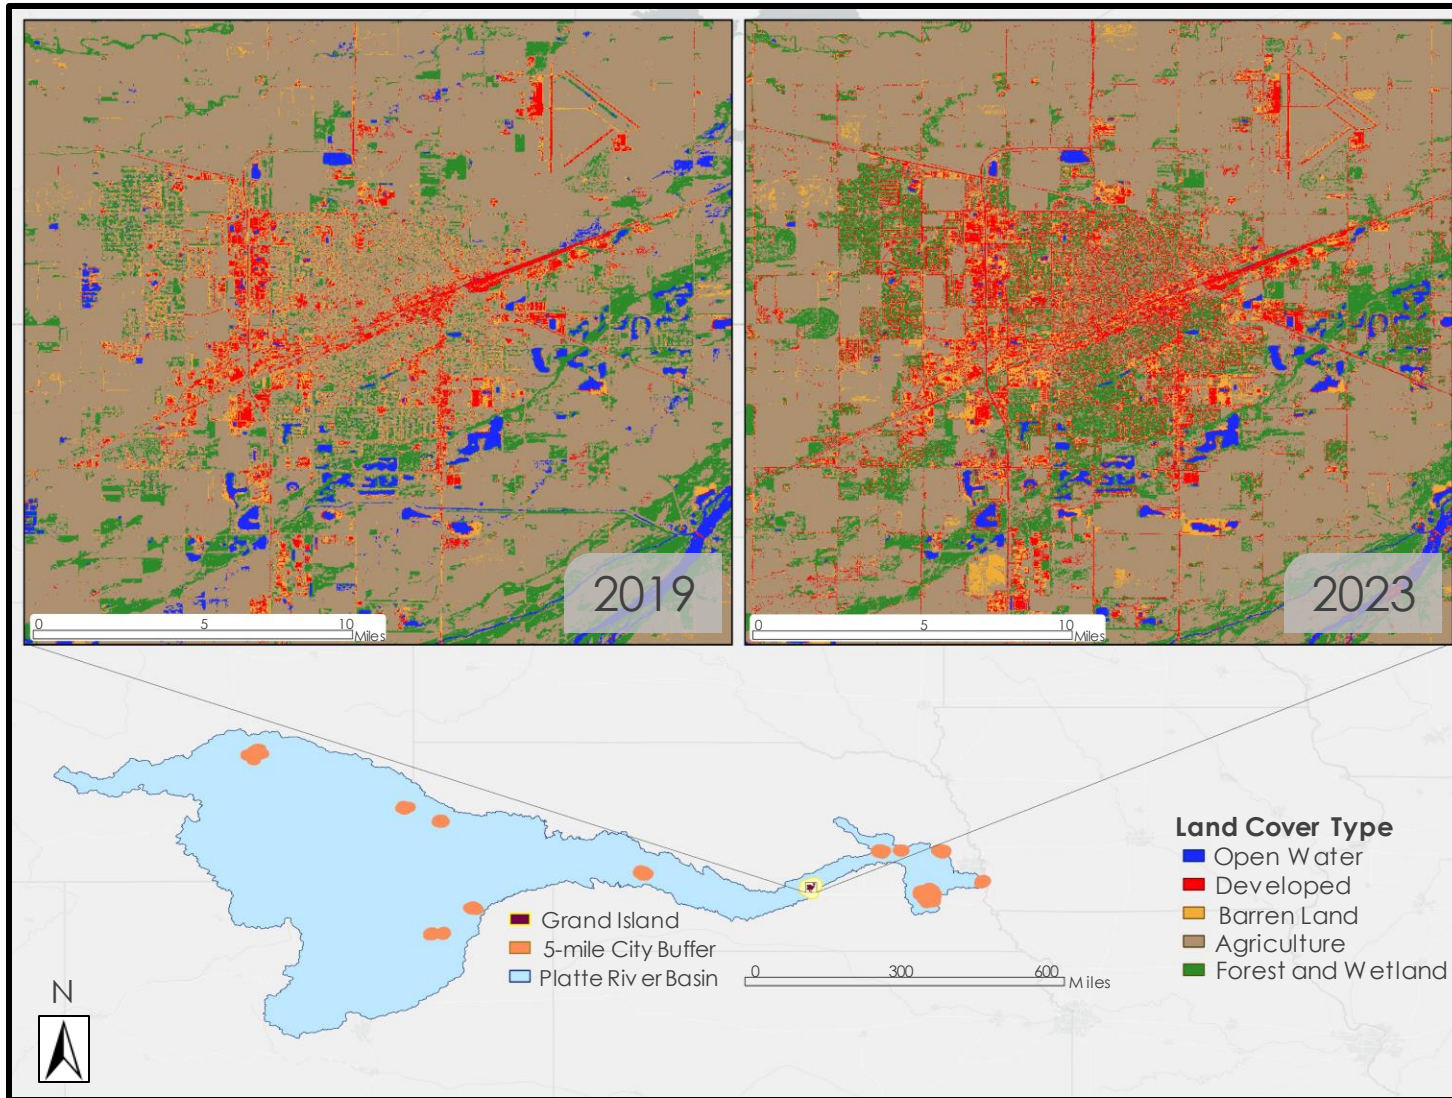

Results – LULC Time Series (Landsat 8)

Land Use Land Cover Central Platte Basin

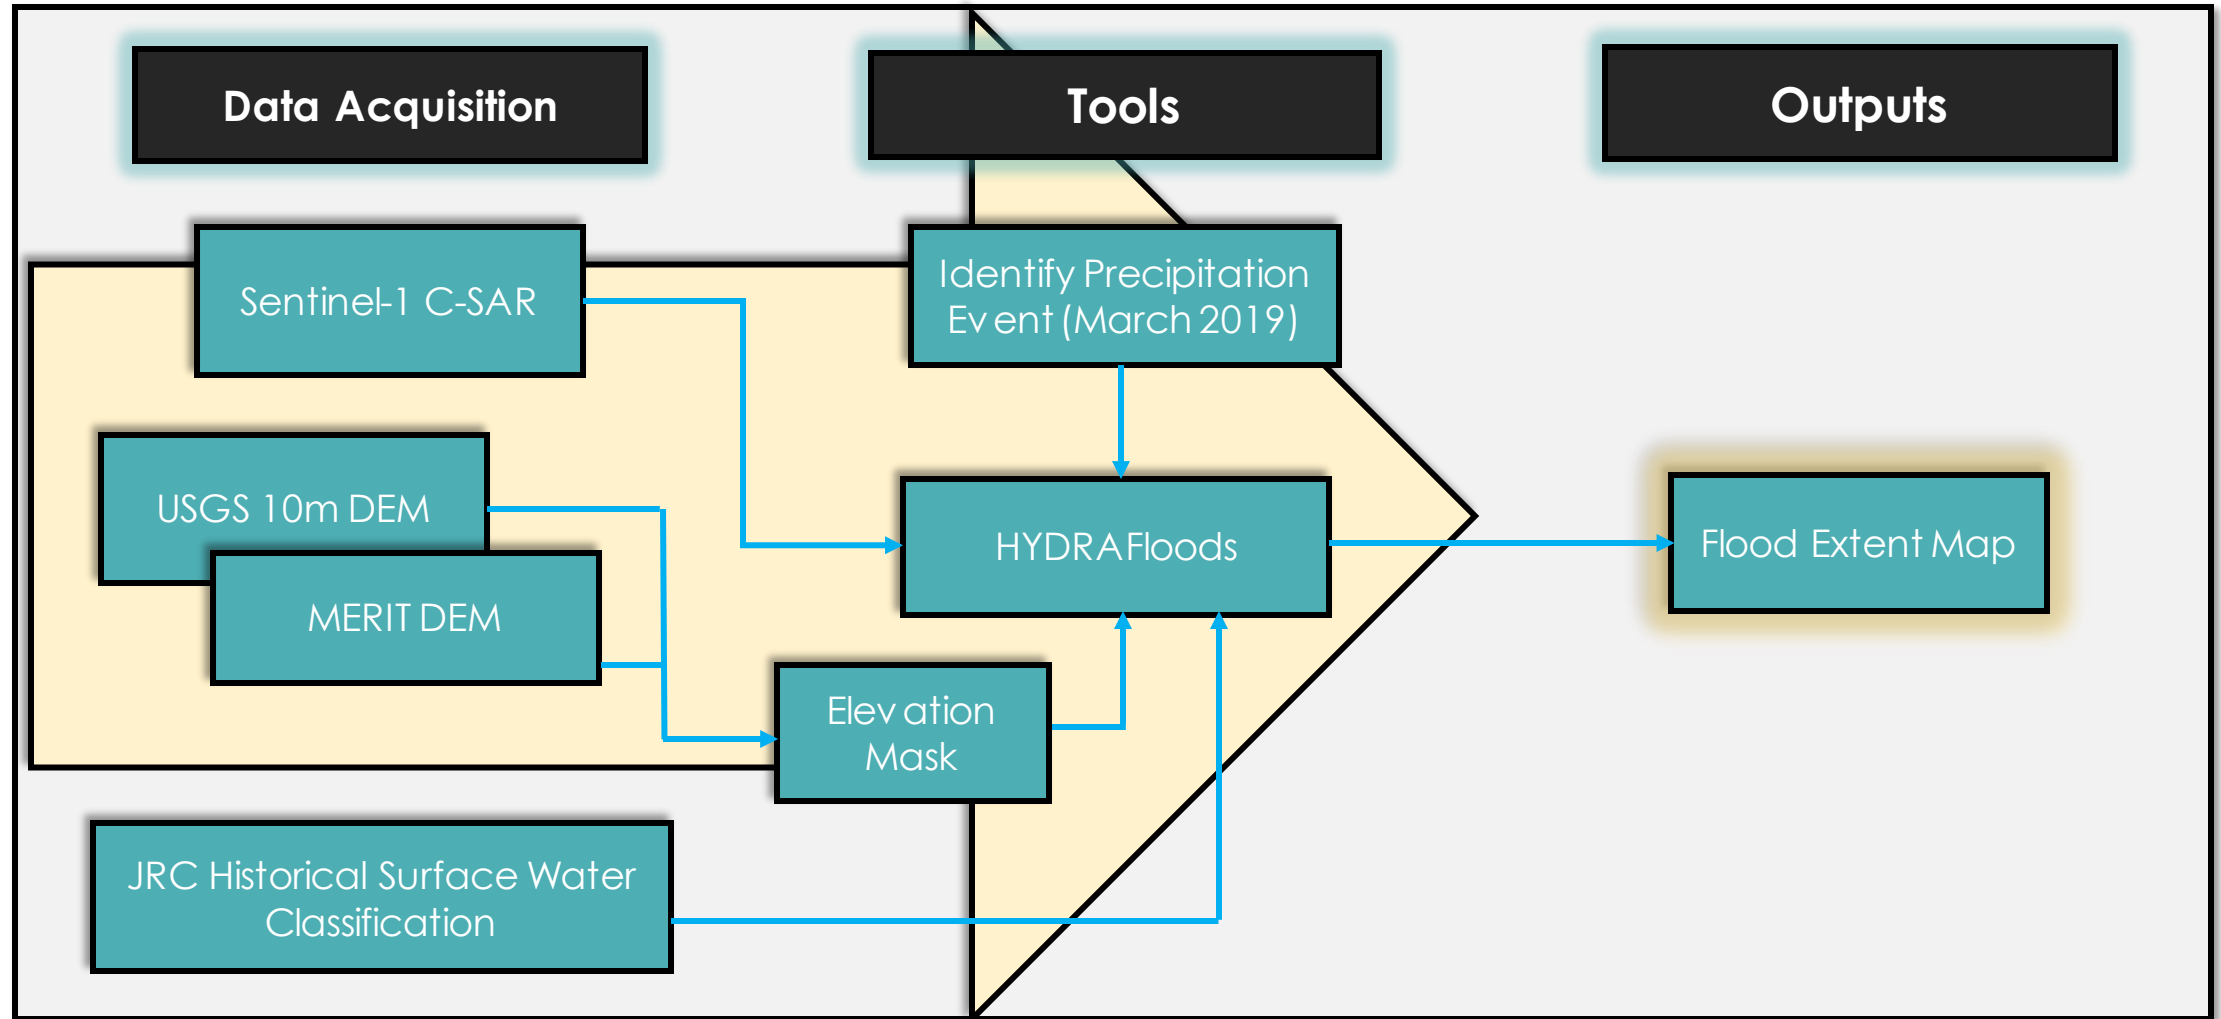

- Open Water
- Developed
- Agriculture
- Vegetation & Grassland

Results – LULC Change Detection (Sentinel-2)

Methods – Flood Extent

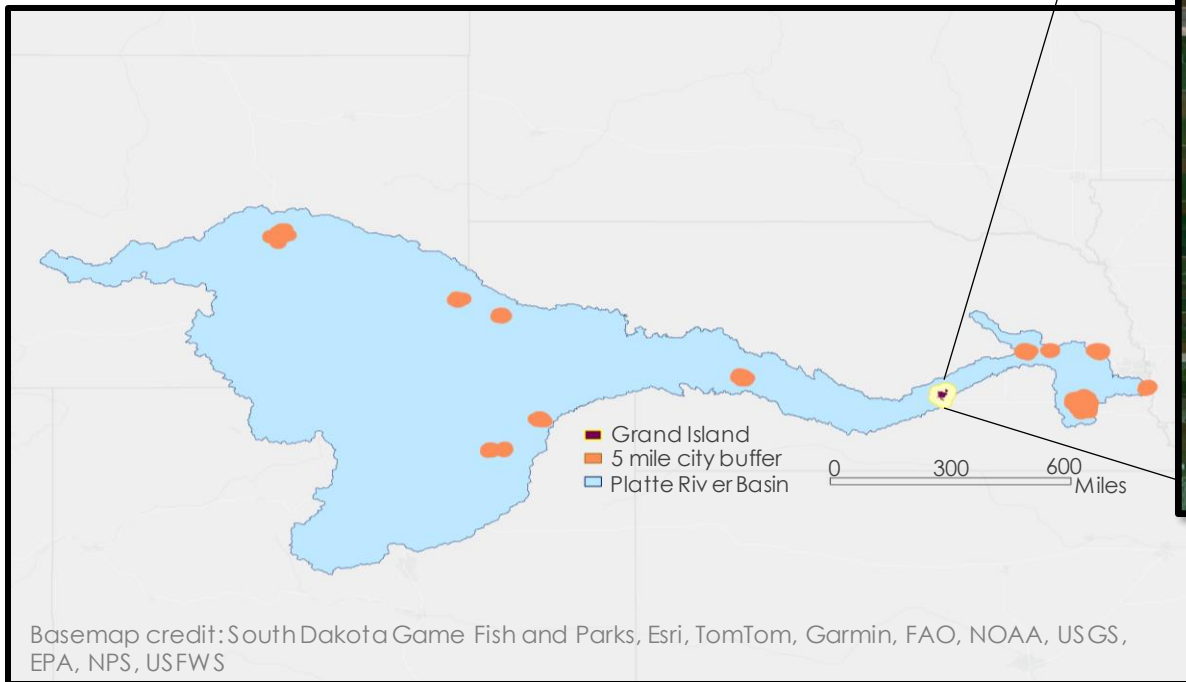

Results – Flood Extent

Flood Extent, 30 m

Grand Island, NE

March 1 – 21, 2019

Capturing March 14th, 2019 flood event

Limitations

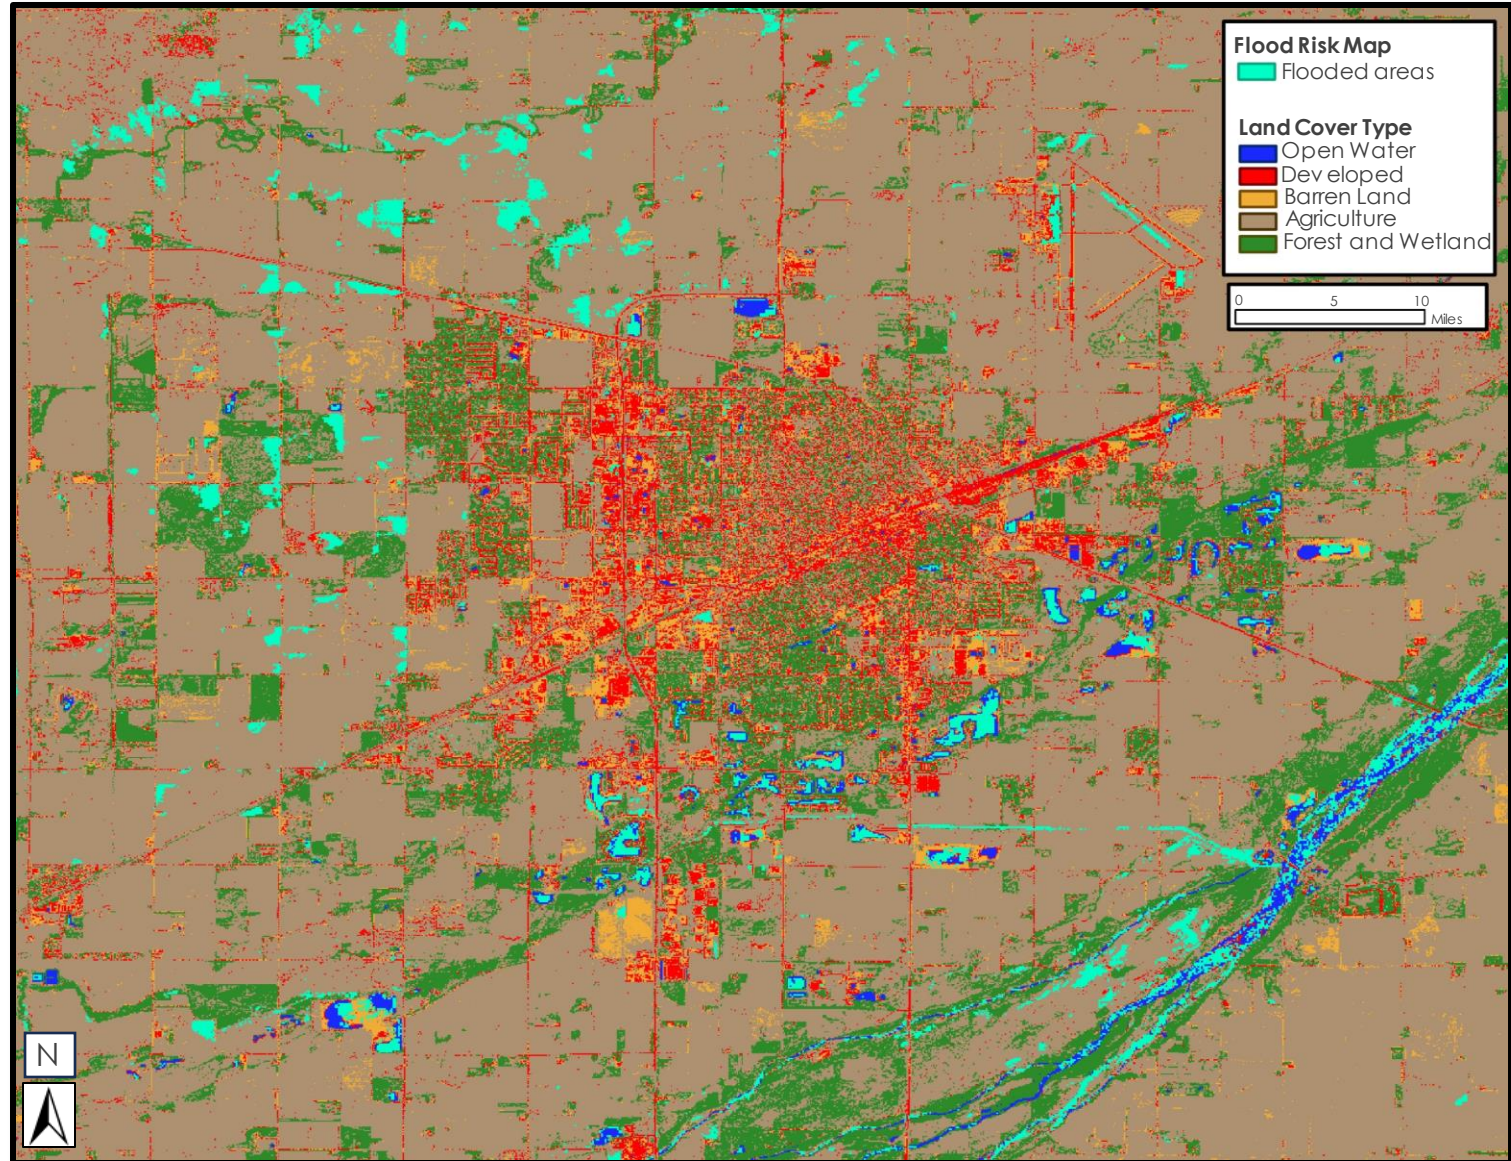

Image Credit: Lindsay Vivian, USFWS

- **Size** of the basin introduced difficulties
- Our reduced area of interest highlights **priority cities**
- Limited **field verification** for flood events
- **Limited availability** of Sentinel-1 images for HYDRAFloods
- **Satellite imagery resolution** made wetland classification difficult

Conclusions

- Combination of classifications and flood risk map identifies possible restoration sites (depicted in Grand Island)
- High-resolution ML classifications in targeted cities aid in understanding the relationship between urban growth, wetland delineation, and other LULC variables

Future Work

Image Credit: Tom Koerner, USFWS

- Fine-tuning classification
- Complete HYDRAFloods for other cities
- Mask wetlands in land classification using SAR, LiDAR, or National Wetland Inventory datasets
- Urban Growth Model
