EXECUTIVE SUMMARY

This Implementation Work Plan (IWP) for Hot Spot (HS) Area 6 Expansion – Phase Three, presents the design and coordination specifics to expand the existing HS 6 Air Sparging (AS) Interim Measure (IM) at Launch Complex 34 (LC34) located at Cape Canaveral Space Force Station (CCSFS), Florida. LC34 has been designated as Solid Waste Management Unit CC054 under the Kennedy Space Center (KSC) Resource Conservation and Recovery Act Corrective Action Program.

Expansion of the HS 6 IM will include installation of an additional 192 AS wells to depths of approximately 40 feet below land surface (bls) to remediate contaminated groundwater within two areas located west and northeast of the existing HS 6 AS treatment area. These areas were delineated via direct push technology investigations in September and October 2023. The expansion will target "hot spot" concentrations of cis-1,2-dichloroethene (cDCE) and vinyl chloride (VC), which are the contaminants of concern in these areas with concentrations greater than 10-times Florida Department of Environmental Protection Natural Attenuation Default Concentrations. The highest cDCE and VC concentrations detected in the proposed phase three expansion area were 58,000 micrograms per liter (µg/L) (32 to 36 feet bls) and 12,000 µg/L (23 to 27 feet bls), respectively. The objective for this expansion is to remediate contaminated groundwater within the treatment zone to support transition to long-term monitoring. This phase three expansion will add an additional 9.4 acres of treatment area to the HS 6 IM, which currently covers approximately 26.9 acres.

The IM design for this phase three expansion will utilize the existing AS system trailer that was installed for the original HS 6 IM in 2018 (160 AS wells) and used for the first and second phases of the HS 6 IM expansions completed in 2019 and 2023, respectively (additional 330 AS wells). For this third phase of expansion, two new distribution trailers and subsurface piping will be installed to distribute compressed air from the existing AS trailer to the 192 new AS wells. A network of 30 monitoring wells (18 existing and 12 new) will be sampled on a quarterly basis following a baseline sampling event, and results will be used to evaluate performance of the IM expansion.

The contents of this document were presented during the February 2024 KSC Remediation Team meeting, and consensus was reached to proceed with development of this IWP based on the presentation. Construction completion and performance monitoring will be incorporated into LC34's Annual Performance Monitoring Reports, which are currently submitted on an annual schedule to document operation and maintenance activities, performance monitoring, and results from the two remediation systems currently operating at LC34: the dense non-aqueous phase liquid source zone hydraulic containment system and the HS 6 AS system.

SECTION I
INTRODUCTION

This Hot Spot (HS) Area 6 Expansion – Phase Three Implementation Work Plan (IWP) was prepared by Tetra Tech, Inc., for the National Aeronautics and Space Administration (NASA) under the Indefinite Delivery Indefinite Quantity Contract 80KSC019D0011-80KSC019F0067, for the implementation of an Air Sparging (AS) Interim Measure (IM) at Launch Complex 34 (LC34), located at Cape Canaveral Space Force Station (CCSFS), Florida. LC34 has been designated as Solid Waste Management Unit (SWMU) CC054 under the Kennedy Space Center (KSC) Resource Conservation and Recovery Act (RCRA) operating permit.

This IWP presents the design and coordination specifics to expand the existing HS 6 AS IM with an additional 192 AS wells to the west and northeast of the current HS 6 AS treatment area. These AS wells are designed to remediate contaminated groundwater located outside of the hydraulic containment system (HCS) IM treatment area for the dense non-aqueous phase liquid (DNAPL) source zone (DSZ). The design presented in this IWP will consist of a description of the installation of infrastructure required to accommodate the expanded AS system.

1.1 SITE SETTING AND HISTORY

LC34 is located in Section 6, Township 23 South, and Range 38 East in the False Cape Quadrangle. The facility is located on CCSFS (renamed from Cape Canaveral Air Force Station in December 2020) and is bordered by Launch Complex 37 to the north, by Launch Complex 20 to the south, by ICBM Road (Samuel Phillips Parkway) to the west, and by the Atlantic Ocean to the east. Prior to development, LC34 consisted of relict sand dunes and interdunal swales typical of barrier island depositional environments. A detailed description of site buildings and structures is presented in the RCRA Facility Investigation Report (NASA, 1999). The location of LC34 within CCSFS is presented on Figure A-1 in Appendix A, and an LC34 site map is presented as Figure A-2.

1.2 BACKGROUND

The launch pad and associated facilities at LC34 were built in the late 1950s and used by the NASA Apollo Space Program for the launching of Saturn rockets from 1960 to 1968. Historical information suggests that rocket engines and other parts were cleaned at the site using solvent degreasers, most notably trichloroethene (TCE). It is speculated that releases of solvents occurred during cleaning operations through both intentional and unintentional discharges to nearby areas. Based on groundwater sampling data, these releases occurred primarily in the immediate vicinity of the former Engineering Support Building (ESB) located southwest of the Blockhouse and identified on Figure A-2. Following shutdown of the launch pad in 1968, LC34 has remained largely inactive, although several site features (e.g., Blockhouse, camera pad, etc.) are still present. Most operational equipment (service towers, fuel storage tanks, piping, etc.) has been dismantled, and the majority of the on-site buildings and structures were abandoned-in-place. Native and invasive vegetation has overgrown much of the site, and dense wooded areas currently surround the site. Figure A-2 shows LC34's location and major site features.

1.3 SITE CHARACTERIZATION

Beginning in 1993, a number of site investigations, engineering studies, and pilot-scale in-situ remedial technology demonstrations have been performed at LC34. Extensive soil and groundwater contamination was identified and characterized during the investigations. Chlorinated solvents are the primary contaminants of concern (COCs) and have been detected at trace to high concentrations in groundwater and soil above Florida Department of Environmental Protection (DEP) cleanup criteria. The overall mass of TCE released at the site is unknown; however, the majority of TCE mass is present within the DSZ, which is approximately two acres in size and currently being contained by the HCS. The overall extent of the LC34 groundwater plume encompasses over 300 acres, which is identified as the Low Concentration Plume (LCP) where COC concentrations exceed State of Florida Groundwater Cleanup Target Levels (GCTLs). Within the LCP includes 162 acres of High Concentration Plume (HCP), where COC concentrations exceed Florida DEP Natural Attenuation Default

Concentrations (NADCs). Several HSs have also been identified within the HCP, where COC concentrations exceed 10-times NADCs.

Site characterization efforts for HS 6 began in 2014, and cis-1,2-dichloroethene (cDCE) and vinyl chloride (VC) were identified as the COCs with concentrations greater than 10-times NADCs. The initial HS 6 AS IM was implemented in 2018 with 160 AS wells, and subsequently expanded in 2019 with an additional 140 AS wells. Further sampling in 2019-2020 and 2022 delineated additional areas of cDCE and VC exceeding the Hot Spot criterion (10-times NADCs) on the north side of the existing HS 6 IM treatment area and the one-year HCS capture zone (the region where groundwater will reach a HCS recovery well within a one-year timeframe). The AS network was expanded again in 2023 (Phase Two expansion) with an additional 190 AS wells. The combined 490 AS well network covers approximately 26.9 acres of treatment area (8.4 acres from original installation, 7.3 acres from first expansion, and 11.2 acres from the second expansion). HS locations and the existing HS 6 IM treatment area are shown on Figure A-3.

In September and October 2023, further investigations were conducted to refine and delineate areas to the west and northeast of the existing HS 6 IM treatment area that previously exceeded 10-times NADCs. Area #1 is a HS located to the west of the existing HS 6 treatment area and HCS one-year capture zone. Area #2 is a HS located northeast of the HS 6 IM treatment area and situated on the southeast-side of the launch pad. Expanding the HS 6 AS network to treat Areas #1 and #2 is the focus of this IWP. The locations of the Phase Three expansion HS areas are shown on Figure A-3, and direct push technology (DPT) sampling analytical results for the investigation are shown on Figure A-4. Detailed discussion of the Areas #1 and #2 DPT groundwater investigations are included in Section II of this IWP.

1.4 LITHOLOGY

Subsurface materials have been subdivided into nine facies (layers) in the LC34 area. Layers 1, 2, 3, 6, and 8 are considered the primary water-transmitting units in the site area. All nine layers are described below and shown on Figure A-5. The descriptions provided are based on

average lithology depths, as land surface is not uniform across the site due to past development and grading (i.e., stormwater ditches, elevated launch pad):

- Layer 1 – tan/gray fine sand with shell fragments (approximately 25 feet thick from 0 to 25 feet below land surface [bls]);
- Layer 2 – gray silty clayey fine sand with shell fragments (approximately 5 feet thick from 25 to 30 feet bls);
- Layer 3 – gray silty fine sand with shell fragments (approximately 12 to 15 feet thick from 30 to 45 feet bls);
- Layer 4 (shallow confining unit) – greenish gray sandy clay unit (less than 1 to 5 feet thick from 45 to 50 feet bls);
- Layer 5 – medium to coarse sand with shell fragments (approximately 12 to 15 feet thick from 50 to 65 feet bls);
- Layer 6 – gray fine to medium “salt and pepper” sand (approximately 20 feet thick from 65 to 85 feet bls);
- Layer 7 – fine silty gray sand with abundant shell fragments (approximately 15 feet thick from 85 to 100 feet bls); and,
- Layer 8 – fine to coarse sand with shell fragments (approximately 20 feet thick from 100 to 120 feet bls).

The Hawthorn Formation (Layer 9), which directly underlies the lower sand unit (Layer 8) and ranges from 120 to 140 feet bls, is a thick green sandy clay and is considered a regional confining unit.

1.5 DOCUMENT ORGANIZATION

The remainder of this document is organized as follows:

Section II: DPT Groundwater Investigation for Hot Spot 6 - Phase Three Expansion – presents a summary of the DPT groundwater investigation conducted to delineate two HS areas in September and October 2023.

Section III: Interim Measure Summary – presents a summary of the IM objectives and technical approach for implementation of the HS 6 AS system expansion (phase three).

Section IV: Permitting Requirements and Site Preparation – details the permitting and site preparation requirements.

Section V: Interim Measure Implementation – discusses the technology to be implemented, details of the monitoring well and AS system, and installation processes.

Section VI: System Commissioning, Verification, and Operation and Maintenance – describes the steps taken to commission the expanded AS system and transition to full-scale operation.

Section VII: Performance Monitoring Program – describes how process and performance monitoring will be implemented, including baseline and post-startup sampling.

Section VIII: Site Controls – discusses the measures that will be taken to prevent or mitigate unintended exposure to human health and the environment.

Section IX: Waste Management Procedures – describes the processes by which contaminated groundwater, decontamination liquids, and other items will be disposed of.

Section X: Remediation Management – covers various administrative aspects of the project, including scheduling, reporting, and data quality management.

Section XI: References – lists the documents referenced in this IWP.

SECTION II
DPT GROUNDWATER INVESTIGATION
FOR HOT SPOT 6 - PHASE THREE EXPANSION

DPT groundwater sampling activities were conducted in September and October 2023 to delineate two HS areas (referred to as Area #1 and Area #2) outside of the existing HS 6 IM treatment area and HCS capture zone. Area #1 is a HS located to the west of the existing HS 6 treatment area and HCS one year capture zone. Area #2 is a HS located northeast of the HS 6 IM treatment area and situated on the southeast side of the launch pad. The locations of Area #1 and Area #2 are shown on Figure A-3.

In total, 594 groundwater samples were collected from 93 DPT locations in these two areas of LC34, focusing on vertical intervals between 6 to 45 feet bls (DPT0914 to DPT0996 and DPT1009 to DPT1018). Note, DPT0997 to DPT1008 were collected in a separate area of the site, unrelated to this HS investigation, and are therefore not discussed in this document. Each DPT groundwater sample was collected using a 4-foot long screen point sampler. DPT groundwater sample intervals across LC34 were collected from 6 to 10, 11 to 15, 16 to 20, 23 to 27, 32 to 36, 36 to 40, and 41 to 45 feet bls. Note, not all DPT locations were sampled across all or the same sample intervals. DPT groundwater sampling depths were based upon historical volatile organic compound (VOC) analytical results and laboratory analytical results obtained during the investigation. The DPT drilling company was DrillPro, LLC of Orlando, Florida. Samples were analyzed by Eurofins Orlando of Altamonte Springs, Florida, for VOCs, via United States Environmental Protection Agency (USEPA) Method SW-846 8260D.

The Phase Three Expansion Site Characterization Advance Data Package (ADP) (NASA, 2024), which summarized this DPT investigation and the HS delineations for Area #1 and Area #2, was presented to the KSC Remediation Team (KSCRT) in February 2024. Team consensus was reached for the horizontal and vertical delineation of both areas to support the expansion of the HS 6 AS IM (Meeting Minute 2402-M03, Decisions 2402-D02 and 2402-D03). A copy of the ADP and relevant meeting minutes are provided in Appendix B.

2.1 DPT INVESTIGATION RESULTS

The following sections discuss the DPT groundwater investigations results. This groundwater analytical data was used to determine final placement of proposed AS wells across the treatment areas and to document pre-IM VOC groundwater concentrations. The target VOC analytical list evaluated for HS delineation included TCE, cDCE, trans-1,2-dichloroethene (tDCE), and VC. Note, Freon was not detected in any of the DPT samples collected. VOC analytical results are presented in Table 2-1 and on Figure A-4. Laboratory analytical packages are provided in Appendix C, and sampling field forms and notes are provided in Appendix D.

2.1.1 Area #1 Results. 318 samples collected from 49 DPT locations were used to delineate the HS in Area #1. TCE was detected in 28 of the 318 samples with a maximum concentration of 470 micrograms per liter (µg/L) at DPT0969 (32 to 36 feet bls). Of the 28 TCE detections, 16 samples exceeded its GCTL, one exceeded its NADC, and no samples exceeded 10-times its NADC. cDCE was detected in 299 of the 318 samples with a maximum concentration of 58,000 µg/L at the same location of maximum TCE exceedance (DPT0969, 32 to 36 feet bls). Of the 299 cDCE detections, 151 samples exceeded its GCTL, 78 exceeded its NADC, and 15 exceeded 10-times its NADC. tDCE was detected in 115 of the 318 samples with a maximum concentration of 2,100 µg/L at DPT0969 (32 to 36 feet bls). Of the 115 tDCE detections, 17 samples exceeded its GCTL, two exceeded its NADC, and no samples exceeded 10-times its NADC. VC was detected in 268 of the 318 samples with a maximum concentration of 12,000 µg/L at DPT0970 (23 to 27 feet bls). Of the 268 VC detections, 253 samples exceeded its GCTL, 154 exceeded its NADC, and 61 exceeded 10-times its NADC. Since TCE and tDCE concentrations did not exceed the 10-times NADC HS criterion, the Area #1 HS delineation was focused on cDCE and VC.

The following provides a breakdown of the 2023 DPT sampling results in Area #1 with HS exceedances by interval:

- In the 6-10 feet bls interval, no samples exceeded the HS criterion.

- In the 11-15 feet bls interval, DPT0918 exceeded 10-times the VC NADC with a concentration of 1,200 µg/L.

- In the 16-20 feet bls interval, 14 samples exceeded 10-times the VC NADC with a maximum concentration 6,000 µg/L at DPT0954, while three samples exceeded 10-times the cDCE NADC with a maximum concentration of 10,000 µg/L at DPT0932.

- In the 23-27 feet bls interval, 15 samples exceeded 10-times the VC NADC with a maximum concentration 12,000 µg/L at DPT0970, while four samples exceeded 10-times the cDCE NADC with a maximum concentration of 42,000 µg/L at DPT0970.

- In the 32-36 feet bls interval, 12 samples exceeded 10-times the VC NADC with a maximum concentration 9,600 µg/L at DPT0969, while four samples exceeded 10-times the cDCE NADC with a maximum concentration of 58,000 µg/L at DPT0969.

- In the 36-40 feet bls interval, 18 samples exceeded 10-times the VC NADC with a maximum concentration 8,000 µg/L at DPT1009, while four samples exceeded 10-times the cDCE NADC with a maximum concentration of 33,000 µg/L at DPT1009.

- In the 41-45 feet bls interval, only one sample exceeded 10-times the cDCE and VC NADCs with concentrations of 14,000 µg/L and 8,300 µg/L at DPT0996, respectively. DPT0996 is the only DPT location within Area #1 with 10-times NADC concentrations extending into Layer 4.

Additional sampling was not conducted below Layer 4 as the HS 6 AS IM is focused on remediating HS conditions above Layer 4 and outside of the hydraulic containment capture zone. Historical sampling associated with HS 6 has indicated that HS concentrations outside of the DSZ area are above Layer 4, a shallow confining unit. In Area #1, HS exceedances extended into Layer 4 at only one location (DPT0996), which is located adjacent to the shallow and deep HCS capture zones.

In summary, all 10-times cDCE NADC exceedances coincided with 10-times VC NADC exceedances. Therefore, only VC results were used to contour the boundary of the HS within Area #1. The 10-times NADC exceedances ranged between 11 and 45 feet bls.

DPT groundwater sampling results are presented in Table 2-1 and shown on Figure A-4. Vertical profiles for VC contamination within Area #1 are shown on Figures A-6 and A-7.

2.1.2 Area #2 Results. 276 samples collected from 44 DPT locations were used to delineate the HS in Area #2. TCE was detected in 7 of the 276 samples with a maximum concentration of 6.1 µg/L at DPT1011 (16 to 20 feet bls). Of the 7 TCE detections, one sample exceeded its GCTL, and no samples exceeded its NADC. cDCE was detected in 226 of the 276 samples with a maximum concentration of 1,200 µg/L at DPT0939 (16 to 20 feet bls). Of the 226 cDCE detections, 57 samples exceeded its GCTL, five exceeded its NADC, and zero exceeded 10-times its NADC. tDCE was detected in 85 of the 276 samples with a maximum concentration of 440 µg/L at DPT0937 (23 to 27 feet bls). Of the 85 tDCE detections, five samples exceeded its GCTL, and no samples exceeded its NADC. VC was detected in 230 of the 276 samples with a maximum concentration of 9,500 µg/L at DPT0937 (23 to 27 feet bls). Of the 230 VC detections, 223 samples exceeded its GCTL, 76 exceeded its NADC, and 20 exceeded 10-times its NADC. Since TCE, cDCE, and tDCE concentrations did not exceed the 10-times NADC HS criterion, the Area #2 HS delineation was focused on VC.

The following provides a breakdown of the 2023 DPT sampling results in Area #2 with HS exceedances by interval:

- In the 6-10 feet bls interval, DPT0939 exceeded 10-times the VC NADC with a concentration of 1,200 µg/L.

- In the 11-15 feet bls interval, no samples exceeded the HS criterion.

- In the 16-20 feet bls interval, five samples exceeded 10-times the VC NADC with a maximum concentration 3,800 µg/L at DPT0984.

- In the 23-27 feet bls interval, 11 samples exceeded 10-times the VC NADC with a maximum concentration 9,500 µg/L at DPT0937.

- In the 32-36 feet bls interval, three samples exceeded 10-times the VC NADC with a maximum concentration 3,500 µg/L at DPT0952.

- In the 36-40 feet bls interval, no samples exceeded the HS criterion.

- In the 41-45 feet bls interval, no samples exceeded the HS criterion.

In summary, 10-times NADC VC exceedances ranged between 6 and 36 feet bls. DPT groundwater sampling results are presented in Table 2-1 and shown on Figure A-4. Vertical profiles for VC contamination within Area #2 are shown on Figures A-8 and A-9.

2.1.3 Other VOC Exceedances. In addition to the target VOCs discussed in the previous sections, the following VOCs were detected in DPT groundwater samples at concentrations greater than their GCTLs:

- 1,1-Dichloroethane exceeded its GCTL (70 µg/L) at DPT1015 in the 16-20 feet bls interval with a concentration of 170 µg/L,

- 1,1-Dichloroethene exceeded its GCTL (7 µg/L) at six locations with a maximum of 25 µg/L at DPT0932 in the 16-20 feet bls interval,

- Benzene exceeded its GCTL (1 µg/L) at five locations with a maximum of 370 µg/L at DPT0971 in the 32-36 feet bls interval,

- Bromodichloromethane exceeded its GCTL (0.6 µg/L) at DPT1011 in the 23-27 feet bls interval with a concentration of 2.5 µg/L,

- Bromoform exceeded its GCTL (4.4 µg/L) at DPT0921 in the 16-20 feet bls interval with a concentration of 2.5 µg/L,

- Carbon Tetrachloride exceeded its GCTL (3 µg/L) at two locations with a maximum of 17 µg/L at DPT0970 in the 36-40 feet bls interval,

- Dibromochloromethane exceeded its GCTL (0.4 µg/L) at three locations with a maximum of 3.5 µg/L at DPT1011 in the 23-27 feet bls interval,

- Chloroethane exceeded its GCTL (12 µg/L) at 2 locations with a maximum of 54 µg/L at DPT1015 in the 16-20 feet bls interval,

- Chloromethane exceeded its GCTL (2.7 µg/L) at DPT1011 in the 23-27 feet bls interval with a concentration of 3.4 µg/L,

- 1,3-Dichloropropene exceeded its GCTL (0.4 µg/L) at two locations with a maximum of 3.1 µg/L at DPT1011 in the 23-27 feet bls interval, and

- Ethylbenzene exceeded its GCTL (30 µg/L) at DPT0971 in the 32-36 feet bls interval with a concentration of 83 µg/L,

- Isopropyl benzene exceeded its GCTL (0.8 µg/L) at two locations with a maximum of 230 µg/L at DPT0971 in the 32-36 feet bls interval, and

- Total Xylenes exceeded its GCTL (20 µg/L) at three locations with a maximum of 920 µg/L at DPT1015 in the 32-36 feet bls interval.

It appears that a number of these results may be the result of ambient cross-contamination, particularly the volatile organic aromatics and disinfection byproducts. Since DPT groundwater samples are screening level data, quality control samples were not submitted to the laboratory during the sampling event. The performance monitoring samples that will be collected will be analyzed for the same suite of compounds, and the presence and concentration of these other analytes will be evaluated.

Notes:

DPT results are considered screening-level only and were reviewed in accordance with internal data review protocols; appropriate qualifiers were applied to the data as deemed necessary by the quality reviewer.

DPT locations, DPT0997 to DPT1008, were collected during the September-October 2023 DPT sampling event, but in a separate area of the site and unrelated to this HS investigation, and is therefore not included in this table.

Concentrations reported in micrograms per liter (µg/L)

Shading indicates > Groundwater Cleanup Target Level: TCE = 3 µg/L, cDCE = 70 µg/L, tDCE = 100 µg/L, and VC = 1 µg/L

TCE = Trichloroethene
cDCE = cis-1,2-Dichloroethene
tDCE = trans-1,2-Dichloroethene
VC = Vinyl chloride
I = Reported value is between method detection limit (MDL) and practical quantitation limit
L = Actual value is known to be greater than value given
Q = Sample held beyond the accepted holding time
U = Not detected at or above MDL (associated value)

SECTION III
INTERIM MEASURE SUMMARY

3.1 CONTAMINANTS OF CONCERN

A significant release and/or releases of TCE occurred at LC34 between the late 1950s to 1968. In the immediate vicinity of the ESB, the mass remaining nearly 40 years following the termination of launch activities was estimated to be approximately 90,000 pounds (NASA, 2009), resulting in a dissolved groundwater plume of TCE and daughter products (cDCE, tDCE, and VC) at concentrations exceeding GCTLs as specified in Chapter 62-777, Florida Administrative Code (F.A.C.). The dissolved-phase chlorinated volatile organic compound (CVOC) plume at LC34 encompasses approximately 327 acres and extends to a depth of approximately 98 feet bls in the DSZ but to shallower depths away from the DSZ.

HS 6 is located east of the DSZ, but on-going investigations have extended the footprint to the north and west of the DSZ. The current HS 6 AS treatment area covers approximately 26.9 acres and includes the initial IM (160 AS wells covering 8.2 acres, completed in 2018), first phase of expansion (140 AS wells covering 7.5 acres, completed in 2019), and second phase of expansion (190 AS wells covering 11.2 acres, completed in 2023). The primary COCs (those exceeding 10-times NADCs) for HS 6 are cDCE and VC. Based on the 2023 DPT investigations at Areas #1 and #2, cDCE and VC are the COCs present at 10-times NADCs in the proposed third phase of expansion. Groundwater results for the proposed expansion areas are illustrated on Figure A-4.

3.2 INTERIM MEASURE OBJECTIVE

The IM objective for the HS 6 expansion (phase three) is to remediate contaminated groundwater within the treatment zone to support transition to long-term monitoring. The objective was developed to provide an approach where certain metrics such as remedial performance, plume dynamics, and natural attenuation characteristics can be evaluated to determine an endpoint to the IM. The overall Corrective Action Objective for HS 6 is to reduce concentrations of COCs (cDCE and VC) from greater than 10-times Florida DEP NADCs to less than NADCs via AS. The overall Corrective Action Objective for the LC34

groundwater plume, as a whole, is to reduce concentrations of all groundwater contaminants to below GCTLs.

3.3 TECHNICAL APPROACH SUMMARY

Compressed air will be injected into the subsurface via one mechanical process system, a conveyance network, and an AS well network. The compressed air will be injected using diffusers to provide a fine bubble matrix to volatilize COCs into a gaseous form. As a secondary treatment mechanism, the AS application will increase the dissolved oxygen content of groundwater, promoting aerobic COC biodegradation.

For the third phase of expansion, a network of 192 AS wells will be installed and split into six treatment zones based on geographical proximity for pulse-treatment application. The zones will be supplied with compressed air from the AS system trailer that was installed in 2018 for the original HS 6 AS system. Details of the original investigation and conceptual design for the HS 6 AS IM are provided in the LC34 HS 6 Area of Investigation Site Characterization ADP (NASA, 2016). Of the 490 AS wells installed during the original implementation and subsequent expansions, 252 have been shut off as COC concentrations have been reduced to less than GCTLs. Therefore, the existing HS 6 AS trailer has the capacity to incorporate the additional 192 AS wells into existing operations.

For the phase three expansion, a distribution manifold trailer will be located within each expansion area to receive compressed air from the AS system via header piping. Distribution manifolds dedicated to each zone will be used for flow and pressure balancing and to distribute compressed air to the individual AS wells via dedicated lateral piping. Based on performance data from the existing HS 6 AS IM, a design radius of influence (ROI) of 25 feet on approximately 50-foot center-to-center spacing was assumed for placement of each well. All AS wells will be installed immediately above the shallow confining unit (Layer 4), at a depth of approximately 40 feet bls, identified during previous investigations. The location of the confining unit will be confirmed via soil cores. AS wells will be constructed with diffusers to distribute fine air bubbles within the treatment zone. The zones, dispersed from the distribution trailer, will be pulsed to minimize development of channels that could result in

preferential pathways and diminished AS removal efficiency. New monitoring wells will be installed in both Area #1 and Area #2 for performance monitoring.

Like the original HS 6 AS IM and expansions, soil vapor extraction is not proposed for the phase three expansion treatment area for two reasons: (1) The location of the treatment area is not near occupied surface structures or site personnel; and (2) The total estimated mass of 470 pounds (Areas #1 and #2 combined) is less than the Hazardous Air Pollutants (HAPs) annual emissions limit of 1,000 pounds for a single contaminant and 2,500 pounds for total contaminants. To confirm that the total air emissions do not exceed 5.5 pounds per day for any single HAP or 13.7 pounds per day for total HAPs (62-780[3][f], F.A.C), air monitoring will be conducted as discussed in Section 8.3. The estimated remediation timeframe for the phase three expansion area is more than one year. Potential emissions from all operating remediation systems at LC34 are not expected to exceed HAP emission limits either. Emissions from the HCS are treated by a catalytic oxidizer, which has shown high destruction efficiencies with the most recent CVOC emission rate (post-treatment) calculated to be 0.002 pounds per day (NASA, 2023). Within the original and first expansion HS 6 AS area, cDCE and VC concentrations have been reduced by 94% (NASA, 2023), with initial cDCE and VC mass estimates in this area (prior to system startup) of 1,500 pounds and 430 pounds, respectively (NASA, 2017b).

The following subsections describe the main components of the IM. Construction and installation details are further discussed under Section V of this IWP. This information was presented during the February 2024 KSCRT meeting as part of the Hot Spot 6 Area Expansion Phase Three Site Characterization and Implementation Work Plan ADP (NASA, 2024), which is attached as Appendix B. The Team reached consensus on the implementation of the phase 3 expansion of the Hot Spot 6 Air Sparging IM based on the ADP and submission of this Implementation Work Plan to Florida DEP (Meeting Minute 2402-M03, Decisions 2402-D04)

3.3.1 Air Sparging Wells. The 192 new AS wells will target 9.4 acres of HS concentrations (8.3 acres in Area #1 and 1.1 acres in Area #2). Well quantities per zone and design manifold pressures are presented in the following table.

	Zone	Number of AS Wells	Manifold Design Pressure (psig)
Area #1	15	34	36.4
	16	34	36.4
	17	34	36.4
	18	34	36.4
	19	34	36.4
Area #2	20	22	33.6

(psig = pounds per square inch gauge)

Because this phase three expansion will utilize the same AS system installed for the initial and subsequent phases of the HS 6 IM, the zone numbering begins at "15" since Zones 1 through 14 are already established. Design calculations for the manifold pressures are included in Appendix E.

Each AS well will be operated at a design air flowrate of 5 standard cubic feet per minute (scfm) and at a sufficient pressure to displace the water column within the AS well and provide air distribution. Wellhead design pressure for both areas is 21.4 psig. Final operational pressures will be established based on startup testing and performance monitoring.

AS well depth profiles across Areas #1 and #2 are presented on Figures A-6 through A-9. The existing compressor trailer, and proposed locations for distribution trailers and AS well locations for Areas #1 and #2, are presented on Figure A-10. The overall AS well layout (existing and proposed) over the HS 6 area is shown on Figure A-3. Installation details for AS wells are provided in Section 5.3.1. Table 3-1 provides a summary of the AS well construction information including depths, screened intervals, well materials, and manifold zones. Note, AS well numbers begin at "491" for this third phase of expansion, as AS wells 1 through 490 are already associated with the existing HS 6 treatment system.

3.3.2 Monitoring Wells. Twelve (12) new monitoring wells, with screened intervals ranging between 16 to 40 feet bls, will be installed and added to the existing HS 6 monitoring well network. Six of the wells will be installed within and just outside of Area #1 and the other six within and around Area #2 to monitor performance of the AS IM. Figure A-11 shows the proposed monitoring well locations and the locations of the existing wells that will

be used for performance monitoring. Table 3-2 provides a summary of monitoring well construction information including screened intervals and well materials. The monitoring wells will be appropriately named and numbered during field installation. Section 5.2 provides additional monitoring well installation details.

SECTION IV
PERMITTING REQUIREMENTS AND SITE PREPARATION

This section identifies the permitting requirements and necessary site preparations for implementation of this IWP.

The following will be completed prior to mobilization:

- Submittal of applications for access and identification badges;
- Submittal of required permits;
- Coordination of site reconnaissance activities through the NASA Remediation Project Manager (RPM); and
- Scheduling of utility location and clearances.

4.1 PERMIT REQUIREMENTS

IM activities at LC34 are being conducted under NASA's RCRA permit for KSC. All relevant requirements will be observed. Permits and associated requirements consist of the KSC Environmental Checklist, utility locate/excavation permit, monitoring well permits, and National Pollution Discharge Elimination System (NPDES) permit.

Copies of all permits relative to IM work will be retained on site and added to the field copy of this IWP in Appendix F as they are received. The Tetra Tech Construction Supervisor will be responsible for maintaining all required records for the duration of the project. After demobilization, permitting records will be maintained in Tetra Tech's Pittsburgh, Pennsylvania office. Copies of all permits received will also be included with construction completion documentation once phase three expansion is complete.

4.1.1 KSC Environmental Checklist. The NASA RPM submitted a KSC Environmental Checklist for this project in order to receive a KSC Record of Environmental Consideration (REC). The KSC REC lists environmental requirements associated with the project that must

be completed to assure compliance with all applicable environmental regulations. The REC for phase three expansion was received on March 21, 2024.

4.1.2 Site Planning Authorization. A Site Plan has not been requested by CCSFS personnel. If a Site Plan is required, a Site Plan request will be submitted before field activities begin. A copy of the Site Plan will be included in the construction completion documentation, if required.

4.1.3 AF Base Civil Engineer Work Request. Because LC34 is located at CCSFS, the NASA RPM submitted a Base Civil Engineer Work Request (AF Form 332) to the Air Force for this project. The AF Form 332 identifies any project requirements (i.e., dig permit, environmental impact analysis, etc.) necessary to complete the project. The approved AF Form 332 was received on March 12, 2024.

4.1.4 Utility Locate/Dig Permit. A Utility Locate/Dig Permit (Base Civil Engineering Work Clearance Request, AF Form 103) was submitted to CCSFS personnel prior to any excavation activity (e.g., intrusive surveying, drilling, or trenching). The excavation inspectors will be contacted in advance of anticipated drilling or trenching activities to schedule utility clearance for the specific activity. Excavation will not occur on “no dig days” unless a “dig waiver” is granted. Tetra Tech will apply for a “dig waiver” following utility clearance, as necessary. The Tetra Tech Site Manager will contact the duty office for “no dig day” forecasts. The approved AF Form 103 was received on March 22, 2024.

4.1.5 Threatened and Endangered Species Survey. The project has the potential to impact protected and/or threatened and endangered species, specifically the gopher tortoise and Florida beach mouse. A biological survey will be performed by KSC personnel prior to commencement of field activities. Measures required to protect endangered or threatened species or species of special concern will be implemented as appropriate. If any protected wildlife is spotted within the construction area once field activities commence, or if a burrow is observed within 25 feet of an excavation area, Tetra Tech will immediately contact the KSC wildlife ecologist for support to safely remove the animal(s) from the site. Tetra Tech will abide by the Reasonable and Prudent Measures necessary to minimize incidental take as

required by the Biological Opinion for the NASA AS System at CCSFS dated June 22, 2022, as stated in the REC.

4.1.6 Well Permits. Permit applications will be submitted by the drilling subcontractor to St. Johns River Water Management District and Brevard County for each well installed.

4.1.7 NPDES Permit. A NPDES permit, specifically a NPDES Construction Activity Permit/Notice of Intent (NOI) to Use Generic Permit for Stormwater Discharge, is required for proposed site construction activities based on the areas that will be disturbed by construction. Although 9.4 acres of groundwater will be treated by the third phase of AS expansion, the estimated area of land disturbance is only 1.3 acres to complete construction activities, such as trenching. A Storm Water Pollution Prevention Plan (SWPPP) is also required and is included as Appendix G. The NOI will be submitted to the State of Florida NPDES Stormwater Program. Implementation of appropriate pollution prevention techniques to minimize erosion and sedimentation and properly manage stormwater will be conducted in accordance with the SWPPP and best management practices (BMPs). Following demobilization and stabilization of the soil, a Notice of Termination (NOT) will be submitted to Florida DEP.

4.1.8 Air Permit. HAPs emitted during treatment operations are covered under the current KSC Title V Air Operation Permit. Based on mass estimates for cDCE and VC in the phase three expansion area (total mass of 470 pounds) and estimated remedial timeframe of more than one year, emissions are estimated to be less than the allowable annual emissions from remediation activities, which are 1,000 pounds per year for individual HAPs and 2,500 pounds per year for total HAPs. Freon was not detected in either of the expansion areas (Area #1 or Area #2). Additionally, as discussed in Section 3.3, potential emissions from all operating remediation systems at LC34 are not expected to exceed annual HAP emission limits. To confirm that the total air emissions do not exceed 5.5 pounds per day for any single HAP or 13.7 pounds per day for total HAPs (62-780[3][f], F.A.C), vertical vapor monitoring points will be installed as described in Section 5.3.4, and air monitoring will be conducted as discussed in Section 8.3.

4.1.9 Hot Work. Hot Work permits may be required if open flame and heat-producing devices are used, if welding or cutting operations are necessary, if flammable materials are stored on site, or if any spark-producing activity occurs. Permitting requirements will be coordinated through NASA, if necessary, via submission of a Hot Work permit request. Previous HDPE socket fusion welding conducted at CCSFS and KSC has not required a Hot Work Permit.

4.1.10 Wetlands Survey. A wetlands survey may be required to ensure no wetlands are present within the proposed phase three expansion area. Wetlands surveys were conducted by a KSC biologist for the original HS 6 AS installation completed in 2018, first phase of expansion completed in 2019, and second phase of expansion completed in 2023. No wetlands permits have been needed for the AS IM to date. The 2022 Biological Opinion did not identify wetlands within the phase 3 expansion area. The absence of wetlands will be confirmed during the Threatened and Endangered Species survey.

4.2 PROJECT SUPPORT AREA

Based on the extent of field activities associated with this project, only a limited project support area will be required as part of mobilization activities. The project support area will consist of a decontamination pad, chemical toilet, and temporary office/storage trailer. Water used for decontamination of drilling equipment will be supplied by an on-site water source (hydrant) and transported by the drilling subcontractor**.**

The Tetra Tech Merritt Island, Florida office will be used as an alternative support area. On-site communications will be provided by cellular telephones and radios.

4.3 STAKEOUT SURVEY

Prior to utility clearance by the excavation inspectors, a stake-out survey will be conducted to demarcate areas of proposed penetration and intrusive work. The survey will mark new monitoring well and AS well locations with flush-mounted wooden hubs.

SECTION V
INTERIM MEASURE IMPLEMENTATION

5.1 TECHNOLOGY DESCRIPTION

The IM will generally consist of diffused air injection within an array of AS wells installed at appropriate locations and depths within the plume containing concentrations of TCE daughter products greater than 10-times Florida DEP NADCs. AS involves injection of air into an aquifer to promote the short-term volatilization of CVOCs and long-term aerobic biodegradation of residual CVOCs.

5.2 MONITORING WELL INSTALLATION

This section discusses the activities to be conducted for installation of the 12 new monitoring wells that will be part of the AS performance monitoring network for the phase three expansion. The monitoring wells will be installed with screened intervals ranging from 16 to 40 feet bls depending on their location. Monitoring well locations are shown on Figure A-11, and typical construction details are presented on Figure A-12. The wells will be installed in accordance with Section 4.5 of the KSC Sampling and Analysis Plan (SAP) for the RCRA Corrective Action Program (NASA, 2017a). The Tetra Tech geologist/field engineer will be responsible for direction of the Florida-licensed drilling subcontractor, monitoring of drilling operations, logging, and recording well installation and decontamination procedures. A well completion log, included in Appendix H, will be completed during installation of each monitoring well.

The monitoring wells will be installed with 1-inch inside diameter (I.D.) Schedule 40 polyvinyl chloride (PVC) casings using sonic drilling technology. Casing sections will be flush-joint threaded with neoprene O-rings on the male threaded ends to render the joints watertight. Each well screen will be either 5 or 10 feet in length (see Table 3-2) and consist of 1-inch I.D. Schedule 40 PVC with a screen slot size of 0.010 inch. Wastes generated by monitoring well installation will be handled in accordance with Section 9.1 of this IWP.

Monitoring Well Annular Space Construction: The filter pack will be pre-packed silica sand of American Society of Testing and Materials (ASTM) gradation 20/30. Initially, the well casing and screen will be suspended using a winch line on the drilling rig and then the sand will be poured into the annulus at a rate to avoid sand bridging. The filter pack will be placed within each annulus in a way to ensure that the sand is evenly distributed throughout the screened interval. From the top of each screen to 2 feet above the screen, a fine sand seal will be installed with sand of ASTM gradation 30/65. The geologist/field engineer will consult with the driller to confirm the appropriate volume of sand required to fill the borehole annulus at each location. As sand is being placed, the driller will confirm the depth to sand as well as the overall sand volume required to construct the filter pack. A bentonite seal will be installed from the top of the fine sand seal to 2 feet bls and will be composed of a cement slurry grout mixed in the following proportions by volume:

- Portland Cement – 6.5 to 7 gallons of water per 94-pound bag; and
- Bentonite Powder – Not more than 4 pounds per 94-pound bag of Portland cement.

The grout will be mixed to a uniform consistency, and the slurry mix will be confirmed using an appropriate mud scale. The grout will be allowed to set for a minimum of 24 hours before surface completion. All monitoring well installations will be completed by a Florida-licensed driller. Following installation of the monitoring wells, each well will be developed via surging and evacuation until clear to remove drilling fluids and suspended solids.

Monitoring Well Surface Completion: Surface completions will include a flush-mounted well cover, metal locking riser cap, and 2-foot by 2-foot concrete pad. Surface completions will all be flush-mounted in order to prevent any constraints to CCSFS prescribed burning activities within the LC34 land management unit. As necessary, bollards may be installed to protect and more easily locate flush-mounted wells. The bollards will be at least 3 inches in diameter, 6 feet in total length, recessed 3 feet below ground level, set in concrete, and filled with concrete. Bollards will be placed around the pads with spacing that prevents vehicles from driving on the pads, and will also be corrosion-resistant and fireproof for protection during prescribed burning. Locations of new wells will be made available to Space Launch

Delta 45, Civil Engineering, Natural Assets Group (45 CES/CEIE). Well identification tags will be provided in accordance with Florida DEP Standard Operating Procedures (SOPs).

5.3 AIR SPARGING SYSTEM INSTALLATION

This section discusses the installation of the AS network expansion activities to be performed, including installation of AS wells, piping, and new distribution trailers for the HS 6 phase three AS network. Headers for the new AS wells will be connected to the existing HS 6 AS system compressor trailer that is currently operating. The existing AS system trailer, equipment, and utilities were installed during original HS 6 system construction in June 2018.

5.3.1 Air Sparging Well Installation. A total of 192, 1-inch diameter AS wells will be installed using sonic methods to depths identified in Table 3-1 and at the locations shown on Figure A-10. The termination depth for each AS well will be determined via soil coring, in which a soil core will be collected from the bottom 5-10 feet of the screened interval to confirm lithologic conditions are adequate for AS well screen placement. The cores will identify the depth of the confining layer above which the AS wells will be installed. If the confining layer is penetrated, the boring will be backfilled with grout to the top of this layer. Typical construction details for AS wells are presented on Figure A-13.

The Tetra Tech geologist/field engineer will be responsible for direction of the drilling subcontractor, monitoring of drilling operations, logging, and recording the installation and decontamination procedures. A boring log template, provided in Appendix H, will be used to log the soil cores from well drilling activities. The cores will be photographed and managed as investigation-derived waste (IDW).

AS Well Construction: A 4-inch diameter borehole will be drilled to complete each AS well location. Each AS well will be constructed with a 1-inch I.D., 40-micron Schumasoil® diffuser well screen (20-inches in length), and each well casing will be constructed of 1-inch I.D. Schedule 40 PVC. Casing sections will be flush-joint threaded with neoprene O-rings on the male threaded ends to render the joints airtight.

AS Well Annular Space Construction: The filter pack will be silica sand of ASTM gradation 20/30 and will be placed within the annulus in a way to ensure that it will be evenly distributed. Initially, each joined casing and screen will be suspended using a winch line on the drilling rig and then the sand will be poured into the annulus at a rate to avoid sand bridging. The geologist/field engineer will consult with the driller to confirm the appropriate volume of sand required to fill the borehole annulus around each well screen. As sand is being placed, the driller will confirm the depth to sand as well as the overall sand volume required to construct the filter pack. The filter pack will be placed approximately 6 inches above the screened interval and sealed using a bentonite plug. The seal will be composed of pelletized bentonite with sufficient pellet volume to form a seal of approximately 2 feet. The pelletized bentonite will be hydrated to eliminate grout migration during the annular space grouting process. The annular space around the well casing will then be filled with a cement slurry grout mixed in the following proportions by volume:

- Portland cement – 6.5 to 7 gallons of water per 94-pound bag; and
- Bentonite powder – No more than 4 pounds per 94-pound bag of Portland cement.

The grout will be mixed to a uniform consistency and the slurry mix confirmed using an appropriate mud scale. Following placement of the grout, the well annulus will be pressurized to ensure an adequate seal between the grout and native material.

AS Well Surface Completion: Surface completion at each AS well will be conducted following trenching and piping installation activities. All AS wells will be direct-buried and a surveyor-style location hub will be installed above each well. AS well completion details are included on Figure A-13.

IDW generated during the installation of AS wells will be managed in accordance with the KSC IDW management protocols and as detailed in Section 9.1 of this IWP.

5.3.2 Piping and Distribution Trailer Installation. A 24-inch-deep trenching network of sufficient width will be excavated for installation of compressed air conveyance piping. Six new zones (Zones 15 through 20) will be established to supply air to the phase three

expansion treatment areas. Zones 15 to 19 will operate in Area #1 and Zone 20 will operate in Area #2. The trenching layout, proposed location of new distribution trailers, and new AS zones are presented on Figure A-14. The cross-sectional details of the trenches are shown on Figure A-15.

AS wells installed in each zone will be supplied with compressed air from the existing AS system. Compressed air will be conveyed via two 2-inch I.D. standard diameter (SDR) 11 high density polyethylene (HDPE) headers from the AS system to new distribution manifold trailers located in the HS 6 phase three expansion areas (one in Area #1 and one in Area #2).

The new distribution trailers will be pre-fabricated for this phase three expansion. Details of the distribution manifolds within the trailer are shown on Figure A-16, and the piping and instrumentation diagram for the AS system is presented as Figure A-17. The air flow at each new AS well will be able to be independently adjusted, and each well will have a dedicated manual flow control valve, flow meter, check valve, and pressure gauge at the distribution manifold. Air will be distributed to each well from the distribution manifolds via lateral lines constructed of 1-inch I.D. HDPE. Connections of HDPE piping sections and fittings will be fused via a heat plate. No barbed or compression fittings will be used for HDPE connections. Wellheads will be modified to accept the AS conveyance piping.

Single-conductor #10 insulated wire and magnetic utility marking tape will be installed within all trenches at a depth of 4 to 8 inches bls for future utility detection. Trenches will be backfilled with native soil, compacted, and resurfaced to match existing conditions.

5.3.3 Air Sparge Trailer and Equipment Information. The AS compressor trailer currently in use for HS 6 will also be used for this phase three expansion. This system was previously used at another remediation site at KSC before it was moved to LC34 for the HS 6 IM in 2018. The location of the AS compressor trailer is shown on Figure A-10. The trailer housing the AS equipment has approximate dimensions of 8 feet by 24 feet and has already been blocked, leveled, and anchored to the subsurface in accordance with the Trailer/Equipment Tiedown Plan (NASA, 2001). Additional information on the AS trailer and

equipment can be found in the LC34 IWP developed for the original HS 6 AS installation (NASA, 2017b).

5.3.4 Vapor Monitoring Points. In order to calculate potential VOC emissions, vertical vapor monitoring points will be installed in the vadose zone. Six vertical vapor monitoring points (five in Area #1 and one in Area #2) will be installed at the locations shown on Figure A-11. Each vapor monitoring point will be constructed with a five-foot long, 1-inch I.D. Schedule 40 PVC riser pipe and 2.5-foot-long screen. From 1.5 to four feet bls, each vapor monitoring point will be constructed of a 0.010-inch, Schedule 40 PVC slotted screen. The PVC riser pipe will extend 1.5 feet bls with a 3.5-foot stickup. The riser pipe to screen connection will be a flush- joint threaded with a neoprene "O" ring on the male threaded end to render the joint air-tight. Silica sand with ASTM gradation 20/30 will be placed within the annulus around screen and riser pipe. A PVC ball valve will be installed at the top of the stickup. Construction details for the vertical vapor monitoring points are shown on Figure A-18. During each measurement event, the valve will be opened, and vapor readings will be measured directly from the valve with a photoionization detector (PID) or tubing will be attached to allow collection via Summa cannister.

5.3.5 As-Built Survey. Surveying will be conducted to provide as-built details for this project. The survey will include new monitoring (before and after installation) and AS wells (before installation). Surveying will be performed in accordance with the following requirements:

- Surveys will be conducted by a Florida-licensed land surveyor;
- Each monitoring well will be marked with a notch on the riser pipe to indicate the proper survey (and water level measurement) location;
- Horizontal locations will be third order, in meters, and relative to the Florida State Plane Coordinate System, East Zone (North American Datum [NAD] of 1983);

- Vertical locations will be referenced to the North American Vertical Datum (NAVD) of 1988 with the following accuracy:
    - Ground elevations: 0.1 foot; and
    - Top of casing (TOC) elevations: 0.01 foot.

SECTION VI
SYSTEM COMMISSIONING, VERIFICATION, AND OPERATION AND MAINTENANCE

This section discusses the activities to be conducted to commission, operate, and maintain the expanded AS system for HS 6 at LC34. As previously stated in this IWP, the original AS system was installed for HS 6 in 2018. The AS system is still operating portions of the original and first and second phase expansions; although, some zones have been turned off based on performance monitoring results below NADCs, and in some locations, below GCTLs. All startup and prove-out procedures were completed as part of the original HS 6 IM (NASA, 2017b). Details specific to each step of system operation are included under Section 6.1 and general operation and maintenance (O&M) procedures are discussed under Section 6.2. Vadose zone VOCs will be monitored in-situ during start-up so that potential emissions can be calculated. The procedure and calculations are described in Section 8.3. O&M checklists and forms to be used during the tasks described in this section are provided in Appendix H.

6.1 AIR SPARGING SYSTEM COMMISSIONING AND OPERATION

6.1.1 Air Sparging System Commissioning. The objectives for commissioning the phase three expanded LC34 HS 6 AS system are to confirm that the newly installed AS wells with new distribution trailers and the existing AS compressor system operate as specified, to facilitate any necessary modifications in the AS system trailer, and to gather and evaluate initial operational data. Modification of the programmable logic controller (PLC) and system manifold pressure regulator set points will be conducted.

The commissioning process is composed of three primary activities:

- Pre-commissioning check;
- Functional performance tests of individual components; and
- Pre-startup functional performance system testing of the combined components.

The commissioning process will verify that all of the components of the expanded system, below and above ground, have been properly installed and mechanically operate as designed and intended for the IM.

A site-specific commissioning checklist (Appendix H) will be completed to ensure that all equipment and instrumentation have been properly prepared and lubricated and that protective covers on rotating equipment are in place. Inspections of equipment lockouts, safety valves and/or other pressure relief devices, and site security devices will also be completed. Any deficiencies will be corrected to meet operational requirements. The checklist will be initialed by the appropriate team member at the completion and acceptance of each particular item.

Checks and individual component testing will be performed to verify that the manifold legs cycle appropriately. Any deficiencies in the system must be corrected and performance checks successfully completed before the expanded system can be accepted.

6.1.2 System Verification. Upon completion of the commissioning process and baseline performance monitoring (see Section 7.1), the phase three expanded AS system will be operated at the LC34 site until the network reaches the desired pressures and flowrates at a steady state. The strategy for verification is to start up the system, comparing observations and test data to design and performance criteria. The check-out will demonstrate proper functionality of the following:

- Fail-safe instrumentation and logic; and
- All valves, fittings, and gauges.

All related health, safety, and emergency response procedures will be in place and reviewed before this phase of operation. Before process systems are started, a final check on the alignments and positioning of all valves, safety devices, and control set points will be conducted.

The general startup sequence for normal operation of the AS system is as follows:

- Ensure that all valves are in proper position (including valves at the distribution trailers and manifolds);
- Ensure that the electrical disconnects are in the energized position;
- Ensure that all alarm conditions on the control panel are cleared;
- Verify that the solenoid valve programming is set for pre-set pulse intervals and set in AUTO position (entries for spare manifold legs should be set as "OFF", if applicable);
- Turn the selector switch for the refrigerated air dryer to the AUTO position;
- Turn the selector switch for the rotary screw compressor to the AUTO position; and
- Verify operating pressures, flows, and temperatures throughout the system and at the system discharge manifolds.

The system is now in automatic operation, and ON/OFF and START/STOP functions of the system are controlled by the PLC.

After operation has been verified and acceptable at the air sparge system location, conditions will be inspected at the distribution trailers. Flow pressure and flow rate will be verified and balanced at each distribution manifold. The following table shows design wellhead flow and pressure and design manifold pressure for the two new areas associated with the phase three expanded system.

	Area #1					**Area #2**
Zone	**15**	**16**	**17**	**18**	**19**	**20**
Wellhead Flow (scfm)	5	5	5	5	5	5
Wellhead Pressure (psig)	21.4	21.4	21.4	21.4	21.4	21.4
Manifold Pressure (psig)	36.4	36.4	36.4	36.4	36.4	33.6

At the distribution manifolds, all AS wells will be set at a flow of 5 scfm for the six new zones. Based on friction loss estimates, the initial pressure regulator settings at the system

legs for the LC34 HS 6 phase three expansion header lines are designed to operate at 36.4 psig for Zones 15 through 19 and 33.6 psig for Zone 20. The distribution manifolds will be checked to ensure that the wellhead pressure applied to each well is within the design wellhead pressure. The pressure regulator at the manifolds will be adjusted to reach a pressure of 21.4 psig at the lateral pressure gauges. Design calculations for the pressure requirements are provided in Appendix E.

The sequence terminates when the design and equipment performance is documented to comply with specifications, and the system is ready for transition into the O&M phase. Data will be collected on the startup and O&M checklists (Appendix H) as well as in a field logbook.

Temperature and pressure readings at the air dryer discharge and AS system manifold legs will be documented. Total flow from the discharge of the air compressor and manifold legs will be verified and documented. Observations, sampling, and other performance testing will be performed during startup to ensure that the expanded system is operating as expected. After startup criteria have been satisfied, the same startup procedure will be conducted remotely to ensure that the system can be fully operated remotely should there be a need for remote shutdown in the future.

Soil heterogeneities across the AS areas may present conditions under which specific design points cannot be reached. In these cases, the operational curves for the specified equipment will be consulted to verify that the equipment is operating as designed. Adjustments may be required to ensure proper AS application and/or equipment operation.

6.1.3 System Operation. After the system has been commissioned and verified operational, the system is considered to be ready to be put online in conjunction with the existing HS 6 AS well network. Each of the legs of the phase three expanded well network will be put into service as existing legs from the HS 6 IM well network are taken offline as part of pulse sequencing. At this point, remote monitoring of the system will be relied on, and O&M will be performed as needed for performance monitoring requirements and equipment maintenance schedules.

6.2 GENERAL O&M PROCEDURES

6.2.1 Routine Operation/Process Monitoring. In general, routine O&M consists of observing and adjusting process conditions and checking the system for abnormal conditions (e.g., noise, leaks, temperature, and vibration). Routine system observations will be recorded on the data sheets and forms included in Appendix H. All site activities will be recorded. During each site visit, the following activities will be performed:

- Inspection of the AS system for leakage and excessive vibration, noise, or temperature;
- Inspection of oil levels and lubrication;
- Inspection of the refrigerated air dryer;
- Assessment of differential pressures across filtration units and process equipment;
- Recording of system operational data and comparing data to design conditions and previous operating data; and
- Performing housekeeping.

6.2.2 Routine Maintenance. This section describes the routine maintenance and replacement of expendable materials associated with the phase three expanded AS system. Maintenance will be executed in a manner that prevents emergencies or unscheduled shutdowns. Drawings showing each unit, piping, valves, and electrical schematics are available on site for reference.

If electrical power maintenance is performed on any energized unit, the electrical disconnect located at the service connection will be de-energized, tagged, and locked out. Without prior coordination with NASA and Tetra Tech Health and Safety personnel (for contact information, see the 2021 LC34 Site-Specific Health and Safety Plan [SSHASP] for Air Sparge Pilot Study and Hot Spot 6 Air Sparge System Expansion and System Operations, Maintenance, and Monitoring), no maintenance or work will be conducted on the primary

voltage lines located upstream of the transformer associated with all LC34 systems. The AS system (including receiver tank, manifolds, etc.) and associated process lines will be fully depressurized prior to conducting maintenance activities.

AS Well Maintenance: The new AS wells may require maintenance when excessive solids accumulate in the wells or when pressure and/or flow rates indicate potential well fouling. If either of these situations occur, well rehabilitation may be necessary. Typical issues may be caused by sediment infiltration, chemical scaling, biomass growth, or physical damage. Well maintenance activities will be dictated by flow and pressure performance monitoring at each AS well. The diagnosis of maintenance required will be on a case-by-case basis, and appropriate actions may include repair, chemical treatment, and/or physical surging.

Air Compressor, Refrigerated Air Dryer, and Air Filters: Routine maintenance of the air compressor and refrigerated air dryer will be conducted in accordance with manufacturer recommendations. An inspection of the compressor and refrigerated air dryer will be conducted and recorded at least monthly. At a minimum, the following activities will be performed for the air compressor and refrigerated air dryer during monthly O&M visits:

- Inspection of all safety guards on blowers;
- Inspection of all mechanical components and foundation hardware and fittings for tightness;
- Inspection for excessive vibration;
- Inspection of the inlet for particulate fouling;
- Inspection of belts/drive alignment;
- Inspection of oil level and lubrication; and
- Draining of any accumulated condensate within the refrigerated air dryer and receiver tank.

Inlet filters will be replaced on an as-needed basis. Routine lubrication will be performed per manufacturer recommendations. If excessive vibration or heat is encountered, troubleshooting per manufacturer recommendations will be performed.

All O&M activities, including prove-out, will be documented on the site-specific O&M sheets (Appendix H).

SECTION VII
PERFORMANCE MONITORING PROGRAM

Performance monitoring will be conducted to evaluate the effectiveness of the LC34 HS 6 AS IM. Performance monitoring will help determine if the entire system is operating properly and if additional actions or adjustments are needed. This section discusses the performance monitoring program to evaluate the progress of the phase three expansion for the HS 6 IM. Performance monitoring for the original HS 6 IM and expansions is on-going and being documented in routine Annual Performance Monitoring Reports. Performance monitoring for this phase three expansion will also be incorporated into routine reports. Additionally, process monitoring, as discussed in Section 7.3, will be performed to evaluate IM operations and aid in maintenance and optimization reviews.

In the HS 6 phase three expansion areas, performance monitoring will be conducted during baseline and quarterly events. Baseline and quarterly samples will be collected at 18 existing and six new monitoring wells in Area #1 and six new monitoring wells in Area #2, as shown on Figure A-11. Sampling procedures will be in accordance with Section 5.2.1.2 of the KSC SAP for the RCRA Corrective Action Program (NASA, 2017a), and Florida DEP field and laboratory SOPs which are incorporated into the KSC SAP. Table 7-1 summarizes performance monitoring program locations, monitoring functions, frequencies, and analytes.

Low flow sampling techniques will be employed during groundwater sampling activities. Prior to sampling events, the AS system will be turned off at least 48-hours in advance of the sampling event. Each monitoring well will be purged and sampled using a peristaltic pump and dedicated Teflon™ or HDPE tubing. Sample tubing will be placed at the mid-point of the well screen. All purge water generated through sampling will be containerized on-site in new 55-gallon drums. The drums will be placed on a NASA-provided spill pallet and the bell cover will be secured with a strap. The bell cover and drums will be labeled. Each drum of purge water will be sampled and characterized for disposal (further discussed in Section IX).

7.1 BASELINE MONITORING

Baseline monitoring for the HS 6 phase three expanded system will be conducted at 30 performance monitoring wells to develop a baseline of groundwater concentrations immediately prior to initiating AS in Area #1 (24 monitoring wells) and Area #2 (six monitoring wells). The monitoring well locations were selected based on the HS footprint, depth, and monitoring functions. Groundwater level measurements will be collected from the monitoring wells to provide an overall summary of groundwater elevations but will not be used for groundwater contouring purposes for this specific area. Groundwater contours are periodically developed for LC34 as a whole, and water level measurements from wells within the HS 6 area will be factored into site-wide groundwater contours when prepared for the site.

All samples collected will be analyzed for the standard list of VOCs via USEPA Method 8260D. Field parameter data will also be collected, to include dissolved oxygen, pH, oxidation/reduction potential, water level, temperature, and conductivity. Following interpretation of the baseline data set, the cycling times for the total system will be determined.

7.2 QUARTERLY PERFORMANCE MONITORING

Performance monitoring for the phase three expansion areas will include groundwater sampling and collection of field parameter data at 30 monitoring well locations during quarterly sampling events. Field parameter data will include dissolved oxygen, pH, oxidation/reduction potential, water level, temperature, and conductivity. All samples collected will be analyzed for the standard list of VOCs by a fixed-based laboratory via USEPA Method 8260D. Quarterly performance monitoring events will be used to evaluate the performance of the system and to determine whether operational adjustments are needed (e.g., cycling modification, flow/pressure adjustment, etc.).

7.3 PROCESS MONITORING

Startup and routine monthly monitoring of the phase three expanded AS system will be conducted as part of O&M activities at LC34. Process monitoring of the expanded system will

be performed at the AS compressor and distribution trailers. The readings at the distribution trailers will be collected while the respective AS manifolds are active. Forms for AS data acquisition are provided in Appendix H. The following text summarizes the minimum process monitoring required for the phase three expanded AS system and distribution trailers/manifolds.

The following will be monitored for the AS system:

- Voltage and load of each service feeder (to verify adequate electrical supply);
- Voltage and load at the compressor and refrigerated air dryer;
- Compressor discharge flow, temperature, and pressure;
- Receiver tank flow and pressure;
- Refrigerated air dryer flow, temperature, pressure, and dewpoint; and
- System manifold flow and pressure (collected while the manifold is active).

The following will be monitored at the distribution manifolds:

- Distribution manifold pressures;
- Manifold leg pressures and flows; and
- Manifold conditions and whether condensate is evident at the manifolds.

Table 7-1. Groundwater Performance Monitoring Plan - Phase Three Expansion (Year 1)

Well Location*	Screened Interval (ft bls)	Monitoring Function	Baseline Sampling	Sampling Frequency - Year 1	Analytes

K*	30-40	Monitor treatment area	✓	Quarterly	✓	✓

*Monitoring wells will be re-named and numbered, as appropriate, during field installation.
Field parameters - dissolved oxygen, pH, oxidation/reduction potential, water level, temperature, and conductivity.
ft bls - Feet below land surface.
VOC - Volatile organic compound.

SECTION VIII
SITE CONTROLS

Tetra Tech will maintain controls over the work areas at the site during IM implementation to manage potential impacts from site activities on the environment, NASA and U.S. Space Force operations, and personnel both on and near the site. Because CCSFS has an agreement with NASA which allows NASA to conduct environmental remediation at LC34, personnel will follow KSC guidelines for site controls. Note, CCSFS approval is required to take any photographs at LC34 to document remediation work activities; authorization will need to be coordinated through the NASA RPM.

8.1 SITE SECURITY

Site security will be maintained to protect the health and safety of personnel and to preserve the integrity of NASA operations. General security requirements, project-specific security requirements, site security measures, and standard security measures are described in the following subsections.

8.1.1 General Security Requirements. Personnel with long-term KSC badges may enter CCSFS to access LC34. Short-term KSC visitor badges are not accepted at CCSFS; therefore, personnel requiring short-term access to LC34 (i.e., to deliver equipment) will require a Defense Biometric Identification System (DBIDS) badge from CCSFS.

Long-term KSC badges are only for those who work routinely at KSC or LC34 and require access for more than 30 days in a calendar year. Long-term KSC badges will be obtained in coordination with the NASA RPM through formal application to KSC Security. All personnel must be naturalized United States citizens. Badges assigned by KSC Security must be clearly displayed on the person above the waist, on the outermost garment, and with the picture and expiration date facing outward at all times while on site. Identification badges are not to be worn off site.

When applying for a long-term KSC visitor badge, the following information must be provided to the NASA RPM:

- Name (exactly as it appears on the individual's driver's license or other identification);
- Date of birth;
- Place of birth (city, state);
- Dates of visit;
- Social Security number;
- Citizenship (if not a United States citizen by birth, provide naturalization or alien registration number);
- Employer's company name and address;
- Email address for the applicant;
- Areas to be visited (e.g., LC34); and
- Purpose of visit.

Long-term badge request applicants will be instructed to complete a National Crime Information Center check, fingerprinting, enrollment in NASA's Identification Management System, and enrollment at the KSC Badging Office. Personnel reporting to the KSC Badging Office to enroll or pick up a badge should be prepared with two forms of identification, one of which must be a government-issued photo identification. The two forms of identification must display identical names (e.g., middle name either included or excluded in the same manner).

Personnel requiring short-term access to LC34 will be required to obtain a DBIDS badge through CCSFS Security. Information for a DBIDS badge will be provided by Tetra Tech to one of KSC's personnel designated for CCSFS badging. Information to be provided includes:

- Name (exactly as it appears on the individual's driver's license or other identification);

- Date of birth;
- Driver's license number and state;
- Dates of visit;
- Social Security number;
- Citizenship (if not a United States citizen by birth, provide naturalization or alien registration number);
- Employer's company name; and
- Gender, height, weight, and eye and hair color.

A 72-hour lead time is required for DBIDS badge requests to be processed by CCSFS Security. Personnel reporting to the CCSFS Badging Center to pick up a DBIDS badge should be prepared with the required documentation, as requested by the badging authorities. Display requirements for DBIDS badges must follow CCSFS Security guidance.

Prior to arriving at LC34, all personnel will be required to notify the Tetra Tech Construction Supervisor. A list of all personnel arriving and/or working at the site will be maintained and provided to the NASA RPM. Entry to CCSFS and KSC property or into controlled areas is a privilege that can be denied, suspended, or revoked.

8.1.2 Project-Specific Security Requirements. Tetra Tech will seek the NASA RPM's assistance in obtaining identification badges assigned to Tetra Tech personnel and vendors for the duration of IM activities. Personnel will present the KSC-issued or CCSFS-issued identification badges to the security guard at the KSC or CCSFS entrance gate (see Section 8.1.1 for requirements on KSC or CCSFS badging). All identification badges will be returned to KSC or CCSFS Security upon expiration of the badge, upon completion of the IM, or when possession of the badge is no longer necessary (i.e., upon removal of temporary personnel

from the IM). Personnel transporting heavy equipment which needs inspection will follow CCSFS badging guidelines and enter through the CCSFS South Gate.

8.1.3 Site Security Measures. Security equipment including traffic cones, signs, and hazard tape will be used to deter entry of unauthorized personnel to the exclusion areas. All vehicles, trailers, and equipment will be secured when not in use. Keys will be removed from construction equipment and placed in a secure location when not in use.

8.1.4 Standard Security Measures. The site is not subject to restrictions during normal security conditions and routine work hours. All employees and subcontractors will receive training on site security before they begin working on the site. Training records will be maintained. There is no need for project personnel to enter any Temporary Area Access restricted areas.

Standard security measures will include the following practices:

- The Visitor Logbook will be completely filled out by any visitors to the site and will be kept on site.
- If a visitor refuses to properly register, acts suspiciously, or has no reason to visit the work areas, the Tetra Tech Construction Supervisor will contact the NASA RPM and CCSFS/KSC Security. If the visitor continues to be uncooperative or acts suspiciously, work will stop until the matter has been resolved.
- When entering and departing the work area, all access controls will be followed.
- No alcohol, illegal drugs, or weapons will be permitted on site. Vehicles may periodically be searched for these items.
- Personnel at the site are allowed to conduct only site-related business.

Details of security incidents will be documented and reported to the NASA RPM. These incidents include trespassers on site, vandalism to property or equipment, and accidents or damage to any on-site vehicles. All site workers will comply with CCSFS/KSC traffic

enforcement requirements, as stated in KSC Security Procedural Requirements 1600.1, Chapter 16. Specifically, speed limits must be maintained, and use of cell phones while driving is prohibited (hands-free only).

8.1.5 Use and Maintenance of Site Control Measures. The Tetra Tech Construction Supervisor is responsible for ensuring that site work zones and support areas are properly delineated. Signs posted as part of site control must be legible and unobstructed. The Tetra Tech Construction Supervisor will direct the replacement of damaged or expended control equipment and materials.

8.1.6 Procedures to Detect Violations of Security Measures. During work hours, all site employees will be responsible for detecting violations of security measures. If a violation is detected, the Tetra Tech Construction Supervisor will be notified immediately.

If employees, subcontractor personnel, or visitors are found to be violating any security or site rules during work hours, the Tetra Tech Construction Supervisor will be contacted. The Tetra Tech Construction Supervisor will then discuss the violation with the appropriate personnel. After-hour security violations, as detected by signs such as tampering with gates or site facilities, will be duly recorded. Such indications will be reported by the Tetra Tech Construction Supervisor to the NASA RPM and KSC/CCSFS Security.

8.2 EROSION AND SEDIMENTATION CONTROL

This section presents the erosion and sediment control devices proposed for the IM. A limited amount of ground disturbance will occur during drilling and trenching operations; however, based on the estimated disturbance area (greater than one acre), a NPDES permit will be required (see Section 4.1.7). A SWPPP is also required and is included as Appendix G. If the controls are identified to be ineffective (e.g., if the controls are not collecting debris) or if there is a change in design, construction processes, or maintenance activities that will significantly affect the potential for discharge of pollutants to surface water, the controls will be modified accordingly and recorded in construction completion documentation.

Erosion and Sediment Control Best Management Practices: The following describes the types of erosion and sediment control BMPs to be implemented on an as-needed basis by the Construction Supervisor to prevent sediments (contaminated or uncontaminated) from being transported beyond the limits of disturbance. The references presented along with the erosion and sediment control BMPs refer to the Florida Storm Water and Erosion and Sedimentation Control Inspector's Manual (Florida DEP, 2018).

Filter Sock (Inspector's Manual BMP 3.4.3): A filter sock is a temporary sediment barrier and storm water runoff filtration device consisting of a three-dimensional, tubular, sediment control filled with biodegradable material placed on the ground and attached to supporting posts. The purpose of a filter sock is to intercept and detain small amounts of sediment from disturbed areas during construction operations and to decrease the velocity of sheet flows and low- to moderate-level channel flows.

Permanent Seeding (Inspector's Manual BMP 4.5): Permanent seeding is the establishment of perennial vegetative cover on disturbed areas by planting seed. The purpose of permanent seeding is to reduce erosion and decrease sediment yield from disturbed areas. Additionally, permanent seeding permanently stabilizes disturbed areas in a manner that is economical, adaptable to site conditions, and allows selection of the most appropriate plant material. Permanent seeding will be used within the limits of disturbance in all areas that will not be restored with access roads.

Other prevention and response measures will be used to prevent surface water contamination and transportation of contamination. These controls are not identified in the Florida Storm Water and Erosion and Sedimentation Control Inspectors Manual and are as follows:

- Contaminated equipment will be decontaminated before exiting the exclusion zone.
- Any release of hazardous waste or hazardous material will be contained and cleaned up immediately. A spill kit will be maintained on site.
- In the unlikely event of a release of contaminated groundwater to land surface, the NASA RPM will be notified.

- Soil cuttings generated from drilling activities will be collected in 55-gallon drums or a roll-off container, sampled, and disposed of appropriately.

8.3 FUGITIVE EMISSIONS AND AIR QUALITY MONITORING

As discussed in Section 4.1.8, the expanded AS system and the LC34 site as a whole, are not expected to exceed annual HAP emission limits. As a screening step to ensure that KSC's Air Operation Permit's HAP requirements are met at HS 6, fugitive gas emissions will be estimated from groundwater contaminant results at the monitoring wells during baseline sampling. If concentrations are estimated at levels that could indicate individual HAP emissions greater than 1,000 pounds per year or total HAP emissions greater than 2,500 pounds per year, an evaluation of system operations and permit requirements will be performed to determine appropriate AS system construction or operation modifications.

To confirm that the total air emissions do not exceed 5.5 pounds per day for any single HAP or 13.7 pounds per day for total HAPs (62-780[3][f], F.A.C), air monitoring and sampling will be conducted prior to and during startup and verification of the expanded AS system using the six vadose zone vapor monitoring points shown on Figure A-11. The proposed locations were selected based on the areas of highest groundwater VOC concentrations. Prior to start-up, direct total VOC measurements will be made with a PID at each vapor monitoring point to establish a baseline dataset. In addition, soil vapor samples will be collected from each point using Summa canisters. During startup and operation, total VOCs will be measured by PID at a frequency of approximately once per hour. If PID detections above background are encountered at the vapor monitoring points, a 6-liter Summa canister with an 8-hour composite pressure regulator will be deployed at the location with the highest PID reading to collect an air sample. If no PID readings are above background, a Summa cannister air sample will be collected from the location with the highest groundwater concentrations. Soil vapor samples will be collected at a frequency of one sample per day for the first five workdays followed by a weekly sample for the next three weeks to provide data for air emissions calculations. The vapor samples will be analyzed for of VOCs via USEPA Method TO-15 to determine individual and total HAP concentrations. The potential emissions will be calculated in pounds per day for tetrachloroethene, TCE and VC. Based on a 5 scfm air flow

rate per AS well and 192 AS wells, the total air flow rate injected into the subsurface is 960 scfm (850 scfm in Area #1 and 110 scfm in Area #2). Based on standard conditions of 14.7 psi and 77 degrees Fahrenheit (conditions used for determining flow rate of the Summa cannister), atmospheric conditions at LC34 are closely representative of the standard conditions. Therefore, the flow rate of air emissions for Area #1 and Area #2 are assumed to be 850 and 110 cubic feet per minute (24.1 and 3.1 cubic meters per minute), respectively. Zones 15 through 20 are anticipated to operating for six hours per day (360 minutes per day) each based on the capacity and current availability of the AS system. Using these parameters, daily emissions in pounds per day will be determined for each expansion area using the following calculations.

Area #1 Daily Air Emissions (in pounds per day):

$$Air\ Sample\ Concentration\ in\ \frac{\mu g}{m^3} \times \frac{1\ pound}{453{,}600{,}000\ \mu g} \times \frac{24.1\ m^3}{1\ minute} \times \frac{360\ minutes}{1\ day}$$

Area #2 Daily Air Emissions (in pounds per day):

$$Air\ Sample\ Concentration\ in\ \frac{\mu g}{m^3} \times \frac{1\ pound}{453{,}600{,}000\ \mu g} \times \frac{3.1\ m^3}{1\ minute} \times \frac{360\ minutes}{1\ day}$$

For Area #1, the daily air emissions will be calculated using both the maximum and average sampling results from the five vapor monitoring points. Area #2 daily air emissions will be calculated using the sole vapor monitoring point sampling results. The results will be summed for Area #1 and #2 to calculate the total daily air emissions mass rate for the phase 3 expansion.

Data from soil vapor monitoring will be provided to the Florida DEP by the NASA RPM weekly. If air sample concentrations indicate potential emissions greater than either daily or yearly criteria, operation of the AS system will be modified such that emissions remain less than permitted HAP limitations. These modifications may include, but are not limited to, reductions in the number of AS wells being operated or adjustments to duration of operation.

For protection of worker and visitor health, real-time field monitoring of ambient air will be conducted within the AS field with a PID to establish a baseline dataset, and then during startup and operation of each zone at a frequency of approximately once per hour to determine if background conditions in breathing zones are affected by AS activities.

8.4 DECONTAMINATION

A temporary decontamination pad (most likely consisting of a plastic tarp and PVC piping to create a collection basin) will be constructed on site and will be used by the drilling subcontractor during installation of monitoring and AS wells. Decontamination fluids will be collected, sediments removed, and water characterized to determine proper disposal. IDW will be properly handled in accordance with the KSC IDW Management protocols.

Decontamination fluids will be placed into 55-gallon drums or staged in double-walled bulk containers for on-site treatment and appropriately labeled. The drums will be transported to a designated IDW staging area and secured on spill pallets with secondary containment. Waste management is further discussed in Section 9.1.

8.5 SPILL PREVENTION AND CONTROL

The impact to health and the environment due to any spill will depend on the quantity of material spilled and the physical, chemical, and toxic effects of the material. The following items are considered for spill and discharge control:

- Equipment used for installation and operation of the system that may include petroleum, oil, and lubricant products;
- Contaminated groundwater extracted during site sampling activities; and
- Untreated air compressor condensate.

8.5.1 Control Procedures and Protective Measures. The potential for release of contaminants to the ground will be controlled by containment, proper equipment service, and maintenance practices. Equipment operators will be required to inspect equipment for leaking

seals, fittings, and lines during every site visit and will not use the equipment until any deficiencies are corrected. If a release of contamination to soil occurs, the soil will be excavated and properly treated or disposed of off-site.

8.5.2 Spill Response. Tetra Tech will maintain readily accessible spill control/response equipment. Spill supplies including, but not limited to, organic sorbent material, personal protective equipment (PPE), a portable eye wash, and overpacks will be maintained. An inventory of spill control supplies will be maintained and inspected by the Tetra Tech Construction Supervisor throughout installation of the expanded AS IM.

The Tetra Tech Construction Supervisor will be notified if a spill occurs, and the NASA RPM will be notified verbally within 8 hours of the incident. If the spill leads to personnel injury or fire, the initial notification will be made to the emergency telephone number found in the 2021 LC34 SSHASP for Groundwater Interim Measures and System Operations, Maintenance, and Monitoring (NASA, 2021), and a subsequent notification will be made to the NASA RPM. The Tetra Tech Construction Supervisor will direct emergency activities at the spill and will ensure that all health and safety equipment and supplies needed for a spill are readily available and properly used. The personnel responding to the emergency will be instructed on the characteristics of the spilled material(s) and special cleanup procedures. During a hazardous materials spill cleanup, the Tetra Tech Construction Supervisor will designate a Hazardous Waste Operations and Emergency Response trained person to monitor for exposures to chemical contamination to determine the need for protective equipment and apparel, to identify any restricted work areas and controlled access areas, and to provide cleanup guidance.

SECTION IX
WASTE MANAGEMENT PROCEDURES

Types of waste generated during the performance of IM operations may include soil cuttings, well development and purge water, decontamination fluids, and PPE. Based on historical site activities and types of contaminants present, none of these IDW materials is expected to present a significant risk to human health or the environment if properly managed. The following describes the waste management procedures to be conducted during IM implementation, which will follow the general guidelines as outlined in the KSC IDW management protocols.

9.1 IDW MANAGEMENT

Grab samples (one from each drum or roll-off container generated, with separate containers for soil and water) will be collected from the IDW generated during well installation and groundwater sampling activities to classify the material for disposal. The samples will be submitted to the laboratory for VOC, Toxicity Characteristic Leaching Procedure, reactivity, corrosivity, and ignitability analyses.

Soil cuttings and excess soil core material resulting from well installation activities will be placed directly into Department of Transportation (DOT)-approved 55-gallon drums or roll-off container. Proper management and staging of these wastes will be performed by Tetra Tech after waste sample analytical results are received from the laboratory and reviewed. Appropriate waste profiles and/or manifests provided by the company providing waste transportation and disposal will be completed prior to off-site removal of wastes.

Well development, purge, and decontamination waters will be pumped into DOT-approved 55-gallon drums. The drums will be labeled and logged, and the pH of the contents will be measured. If the pH of the contents of any drum is less than 6 or greater than 8.5, the pH of the IDW contents will be adjusted using either base (to increase pH) or acid (to decrease pH). Logs containing pH levels, pH adjustment summary information, waste quantities, and drum identification information will be documented on the IDW log provided in Appendix H. IDW analytical results will be forwarded to the NASA RPM for proper characterization and

disposal. Note, purge and decontamination water generated through baseline and performance sampling may be transferred to the HCS treatment system for processing as done for routine site sampling events.

9.2 DECONTAMINATION FLUIDS

Fluids generated during the decontamination of equipment will be disposed of in the same manner as described for IDW.

9.3 PPE AND MISCELLANEOUS TRASH

PPE and clothing will be wiped clean and disposed of in trash containers. All empty, spent, broken, unusable, or unwanted aerosol cans are considered “waste aerosol cans” and must be properly collected, stored, labeled, and disposed of through the KSC Waste Management Office. Waste aerosol cans cannot be discarded in regular trash or in solid waste dumpsters.

SECTION X
REMEDIATION MANAGEMENT

10.1 RESOURCES MANAGEMENT

The activities described in the IWP will be implemented by NASA through Tetra Tech. Tetra Tech is responsible for performance of these activities.

10.2 SCHEDULE AND TIME MANAGEMENT

The schedule for implementation of the IM at the site is dependent on the critical path, which consists of obtaining necessary authorizations and permit approvals, performing mobilization activities, installing AS and monitoring wells, trenching and installation activities, baseline sampling, system verification, system O&M, and performance monitoring. Field activities may also be affected by launch delays and weather conditions including wind and lightning, which are addressed in the 2019 and 2021 LC34 SSHASPs (NASA, 2019b and 2021).

10.3 COMMUNICATIONS

An initial project kick-off meeting will be held with Tetra Tech, KSC Safety and Health personnel, and the NASA RPM to review project information. Prior to the start of field activities, a health and safety meeting will be held with the field crew to discuss the project. In addition, a health and safety meeting will be conducted whenever a new subcontractor is scheduled to be on site. Site personnel will meet daily for morning tailgate meetings during IM installation to discuss operations and safety issues and to coordinate activities such as personnel assignments and action items for that day.

Once a week, a project meeting will be held with the Tetra Tech Construction Supervisor, Tetra Tech Site Safety Supervisor, and Tetra Tech Project Manager. The NASA RPM is invited to all meetings and for general site visits. The topics will be safety, progress since the last meeting, potential concerns or conflicts, ideas and suggestions, and quality. Comments from NASA will be discussed, and a response given or action taken, as appropriate.

The following is a list of the project meetings that will be held to enhance communication among other members of the project team:

- Post-Award Kick-Off Meeting – A contract pre-performance meeting will be held following the notice to proceed. The meeting will address planned site activities and project tasks, schedule, deliverables, technical matters, and coordination with KSC and pertinent CCSFS entities.

- Daily Tailgate Meetings – Daily tailgate meetings will be led by the Construction Supervisor or field geologist/engineer and will detail operations for the day and discuss safety components associated with work activities. All site personnel and subcontractors will participate in the daily meetings and sign the meeting attendance form.

- Site Kick-Off Meeting – A site kick-off meeting and "Nuts and Bolts Meeting" will be held as part of mobilization. The Tetra Tech Project Manager, Tetra Tech Construction Supervisor, and key personnel will attend. The NASA RPM, KSC Safety and Health personnel, and key KSC personnel identified by the NASA RPM (e.g., security, facility manager, locate/excavate personnel, etc.) will be invited to attend.

- Weekly Progress Briefings – Throughout field work, the Tetra Tech Project Manager or Construction Supervisor will brief the NASA RPM weekly on scheduled work, progress, and upcoming activities. Notification will be provided of changes in personnel or equipment. Issues arising from the daily site meetings will be brought to the Tetra Tech Project Manager's attention, and potential problems will be noted.

- Subcontractor Health and Safety Meeting – Along with attendance at daily tailgate meetings, subcontractors will meet with the Construction Supervisor prior to initiating site work and discuss the work activities, the SSHASP, and hazard analyses for the tasks being completed. Attendance of the meeting will be documented in the SSHASP.

- Final Inspection Conference – A post-construction final inspection conference will be held to discuss and resolve any outstanding issues prior to final inspection of the work. The schedule and procedures for the final inspection will be finalized during this conference.

10.4 DOCUMENTATION, RECORDKEEPING, AND REPORTING

Information to be documented and maintained during IM implementation as required by the KSC SAP (NASA, 2017a), 2019 LC34 SSHASP for Groundwater Interim Measures and System Operations, Maintenance, and Monitoring (NASA, 2019b), and Air Sparge System Expansion SSHASP (NASA, 2021) consists of the following:

- CCSFS Utility Locate/Excavation Permit;
- Site Planning Request and Authorization;
- Hot Work Permit (if required);
- Digital imaging documentation of site and field activities obtained as part of mobilization activities, during each major phase of the IM, for each area of the IM, whenever unforeseen site conditions are encountered, after restoration activities are complete, and as directed by the NASA RPM. Digital images will be provided in Joint Photographic Experts Group (JPEG) format.
- Waste profile sheets, waste characterization results, waste shipment records, waste manifest documentation, and certificates of disposal;
- Analytical results from performance monitoring;
- Data collected during system operation; and
- Documentation required per the SSHASP.

The following text summarizes the reporting requirements and documents to be submitted to NASA as part of IM implementation.

Remediation Information System: All analytical data and supporting information will be compiled and input into the Tetra Tech database management system to update the KSC Remediation Information System (RIS). The Tetra Tech database will be used to prepare tag maps, compare site data to KSC RCRA screening criteria, determine frequencies of detection, generate summary tables, and generate figures.

Construction Completion Reporting: Following startup of the phase three expanded system for HS 6, Construction Completion will be reported and will include a summary of installation activities conducted as part of IM implementation. Drawings and survey information for the trenching and well locations will be provided as part of Construction Completion reporting. Project-related documents such as waste manifests, permits, inspections, well construction logs, daily field logs, and photo logs will be provided. Construction Completion, including initial AS system start-up activities, has already been reported for the initial HS 6 AS IM and first phase of expansion in the 2018 Operation, Maintenance, and Monitoring (OM&M) Report and Hot Spot 6 Construction Completion Report (NASA, 2019a). Construction Completion reporting for the second phase of expansion is currently in preparation, and the third phase of expansion will be incorporated into a future annual monitoring report.

O&M Manual: The AS system O&M Manual is maintained on-site in the AS compressor trailer to provide details about equipment upkeep and operation. The manual includes a complete list of system components, spare parts list, and cut sheets for each individual component. A routine maintenance schedule for mechanical equipment is also included in the manual. Instructions for equipment maintenance are provided according to manufacturer recommendations.

Advance Data Packages: A combined Construction Completion and Performance Monitoring ADP will be developed and presented to the KSCRT for the HS 6 phase three expansion. The ADP will include a summary of installation activities, permitting, deviations from the work plan, safety procedures, construction photographs, schedule, baseline

monitoring, and lessons learned from the implementation. The ADP will also present performance monitoring data from baseline, startup, and the first quarter of operation. Year 1 Performance Monitoring data for the phase three expansion will be incorporated into LC34's Annual ADP. The ADPs will include tables, maps, and other photographs/figures necessary to present findings. The data packages will be submitted to KSCRT members three weeks prior to the appropriate team meeting. The ADP will be presented in PowerPoint format during the KSCRT meeting.

Operations, Maintenance, and Monitoring / Performance Monitoring Reports: The existing LC34 HS 6 AS system and HCS are currently combined in one OM&M / Performance Monitoring Report and submitted to NASA and Florida DEP on an annual basis. The phase three HS 6 expansion will be integrated into the Annual Report. Results from performance groundwater monitoring and IM activities conducted during each operating year will be included in the reports. The reports will also include detailed descriptions of IM implementation operations completed during the reporting period and provide site contaminant and system data sets used to evaluate remedial performance. The annual reports will be sealed by a Florida-registered professional engineer, presented to the KSCRT, and submitted to Florida DEP.

10.5 DATA QUALITY AND SUBMITTAL REQUIREMENTS

The LC34 HS 6 phase three expansion IM will be subject to the data quality and submittal requirements established in the KSC SAP (NASA, 2017a).

APPENDIX A

FIGURES

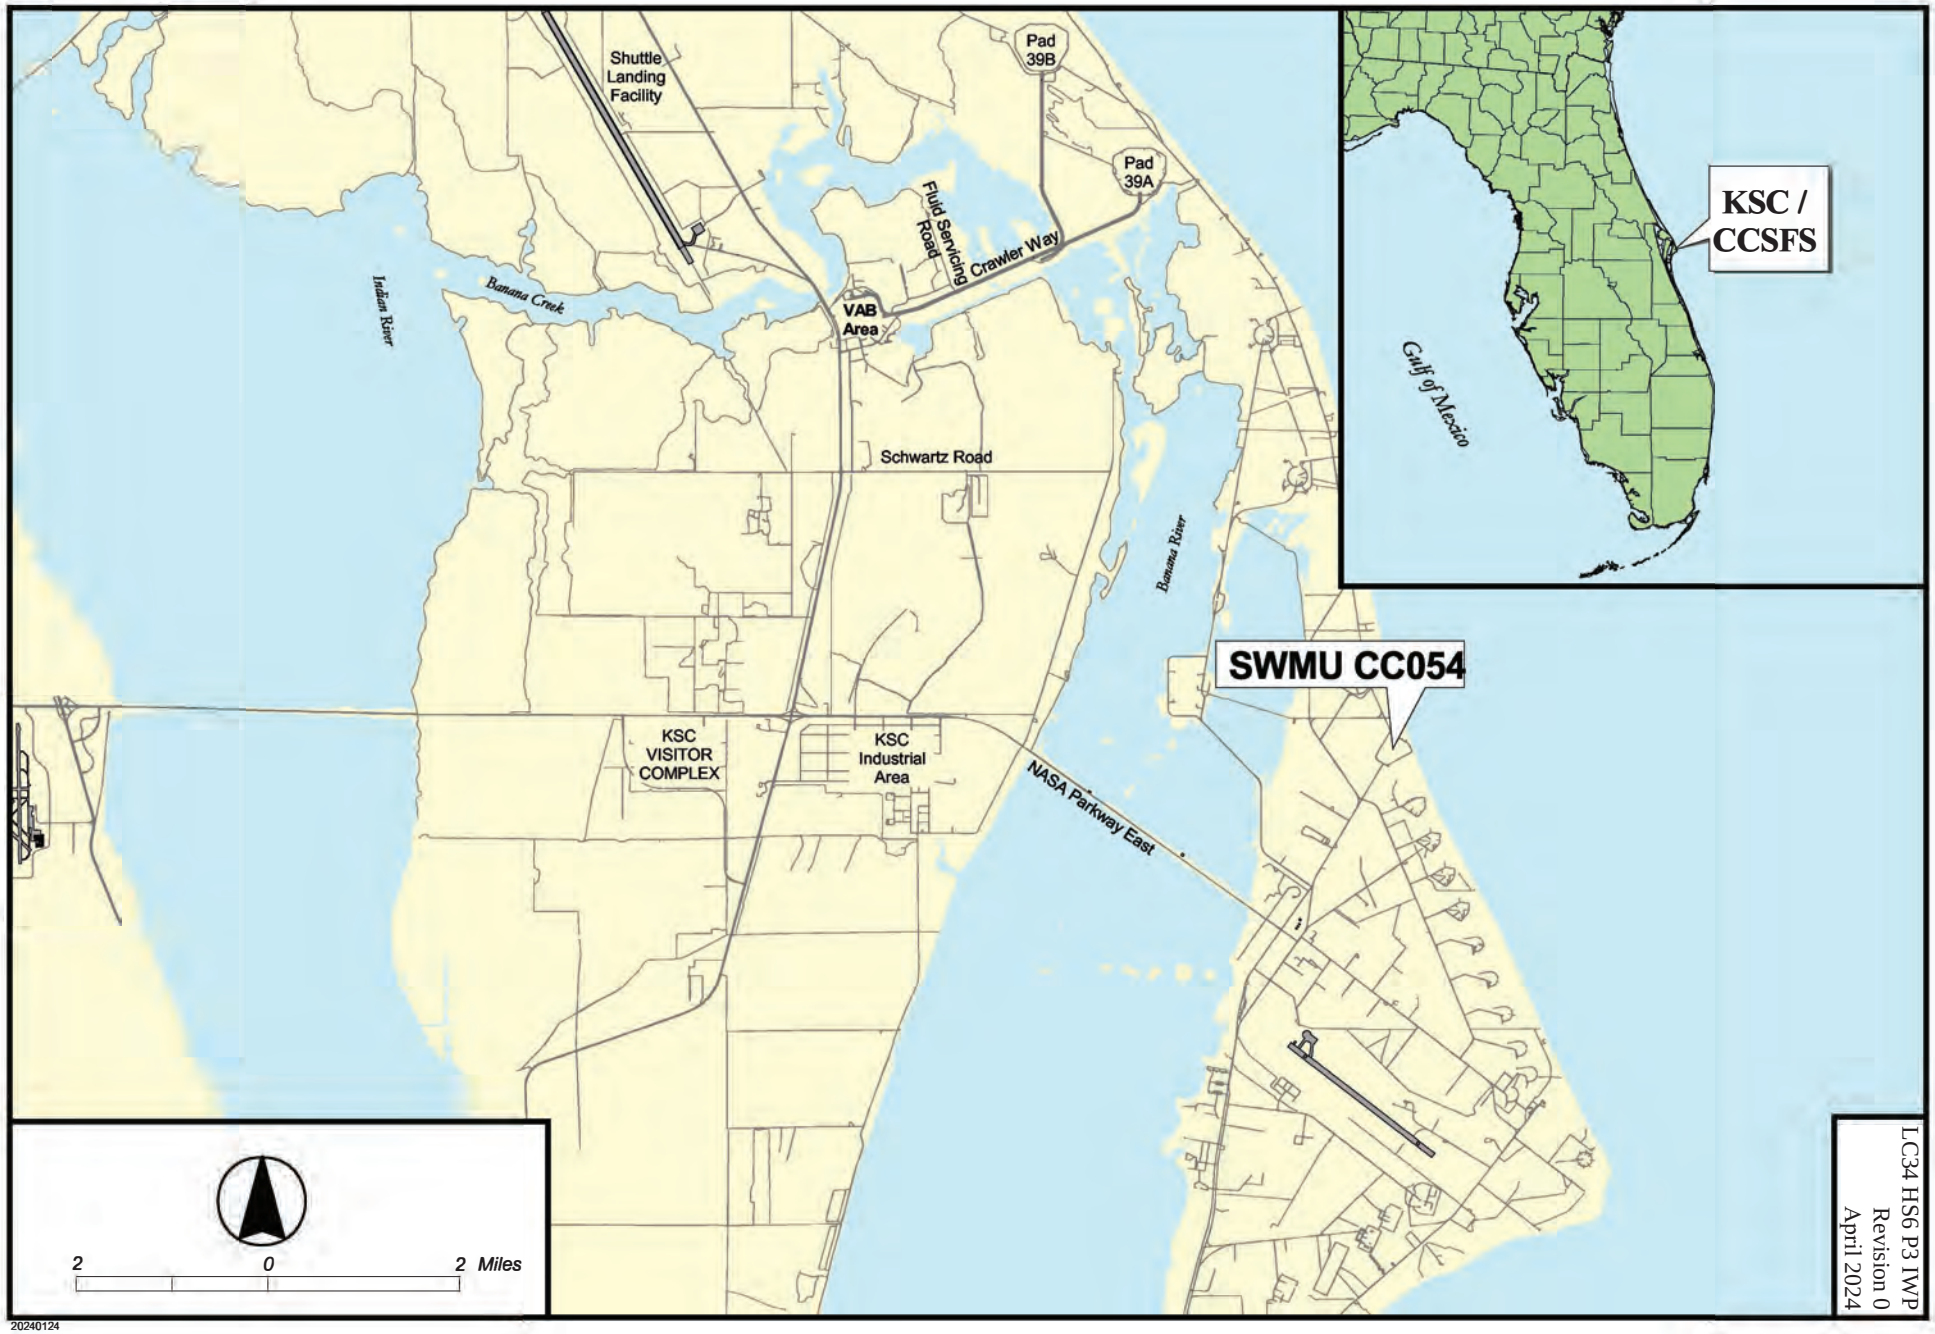
ACRONYMS, ABBREVIATIONS, AND REGULATORY REFERENCE TABLE

The following list of acronyms and abbreviations are for figures included in Appendix A. The regulatory references table is for figures where contaminant contours are presented for cDCE and VC.

AS	air sparge
ASTM	American Society of Testing and Materials
ASW	air sparge well
bls	below land surface
CCSFS	Cape Canaveral Space Force Station
cDCE	cis-1,2-dichloroethene
DIA.	diameter
DNAPL	dense non-aqueous-phase liquid
DPT	direct-push technology
DSZ	DNAPL Source Zone
FNPT	Female National Pipe Thread
ft	feet
GALV.	galvanized
GCTL	Groundwater Cleanup Target Level
HCP	high concentration plume
HCS	hydraulic containment system
HDPE	high-density polyethylene
HS 6	Hot Spot 6
I.D.	inside diameter
IPS	iron pipe size
IWP	Implementation Work Plan
I	laboratory qualifier indicating estimated value
KSC	Kennedy Space Center
L	laboratory qualifier indicating actual results is greater than reported
LC34	Launch Complex 34

ACRONYMS, ABBREVIATIONS, AND REGULATORY REFERENCE TABLE

(CONTINUED)



LCP	low concentration plume
MAX.	maximum
MIN.	minimum
MNPT	Male National Pipe Thread
NADC	Natural Attenuation Default Concentration
NASA	National Aeronautics and Space Administration
NPT	National Pipe Thread
NPTF	National Pipe Thread – Fuel
PVC	polyvinyl chloride
Q	laboratory qualifier indicating sample was held beyond acceptable holding time
SCH.	Schedule
SDR	standard diameter ratio
STL	steel
SWMU	Solid Waste Management Unit
TCE	trichloroethene
tDCE	trans-1,2-dichloroethene
TYP.	typical
U	laboratory qualifier indicating compound was analyzed for but not detected
µg/L	microgram per liter
VAB	Vertical Assembly Building
VC	vinyl chloride

Regulatory Reference Table

	cDCE	VC
GCTL (LCP)	70	1
NADC (HCP)	700	100
10x NADC (Hot Spot)	7,000	1,000
100x NADC (10x Hot Spot)	70,000	10,000

All concentrations in µg/L

APPENDIX B

HOT SPOT AREA 6, PHASE THREE EXPANSION SITE CHARACTERIZATION ADP AND MEEETING MINUTES (FEBRUARY 2024)

Revision 1 Meeting Minutes for February 7, 2024

2402-M03 Mark Jonnet/Tetra Tech

Launch Complex 34 (SWMU CC054) Hot Spot Area 6 Phase Three Expansion Site Characterization

Objective: The goal of the Advanced Data Package (ADP) is to present results of the 2023 direct push technology (DPT) groundwater sampling and the proposed third phase expansion of the Hot Spot 6 air sparging interim measure (IM).

Discussion:

The Hot Spot 6 IM objective is to remediate contaminated groundwater (cis-1,2-dichloroethene [cDCE] and vinyl chloride [VC]) within the treatment zone to prevent impacts to the drainage ditch in the area (applicable to the initial IM phase) and support transition to monitored natural attenuation (MNA). The IM utilizes air sparging to remediate the contaminated groundwater outside the source zone hydraulic containment system. Air sparging is applied in the sandy Layers 1, 2, and 3 to a depth of approximately 40 ft bls, which is the top of Layer 4 that consists of gray silty sand and sandy clay w/shell fragments. The initial Hot Spot 6 IM consisted of implementation of 140 air sparging wells (ASWs) spaced linearly 50 feet, center-to-center, treating 7.5 acres; full-scale operations began in July 2018. The ASWs were constructed with 1-inch PVC with a 24-inch screen and were installed by sonic drilling methods; each ASW had a soil core extracted to determine the top of Layer 4 during installation. The radius of influence was assumed to be 25 feet at a flow rate of 5 cubic feet per minute (CFM) based on the success of similar treatment at CCB Hot Spot 3 at KSC (SWMU 089). Electrical service from the transformer (MOT-1) is 3-phase, 460-volt, 60-hertz, 800-amp service feed. Details for the compressor trailer are listed below. The Hot Spot 6 IM was expanded in early 2019 (Phase One expansion) with an additional 160 ASWs, which began full-scale operations in May 2019.

The compressor trailer components include a 75 horsepower (HP) variable frequency drive (VFD) Rotary Screw Air Compressor with an integrated refrigerated air dryer, coalescing and particulate filters, an oil/water separator, a 400-gallon receiver tank, 10 air distribution

manifolds, and has the capacity to operate 210 ASWs (70 ASWs per 8-hour cycle).

Performance sampling was conducted quarterly for the first three years of operations then semi-annually since October 2021 at 28 monitoring wells and three surface water locations within the drainage ditch. Based on the April 2023 sampling event, the highest cDCE and VC concentrations have decreased from 53,800 µg/L and 13,600 µg/L to 7,300 µg/L and 5,600 µg/L respectively. Based on the April 2023 performance results, 15.1 acres of the treatment area have decreased to less than groundwater cleanup target levels (GCTLs), leaving the upgradient plume edge adjacent to the Hydraulic Containment System (IWs 134 and 135) exceeding GCTLs. The Baseline and April 2023 performance results are summarized on Slide 16 and include: 1) Surface water sample locations were below detection limits, 2) Perimeter wells beyond the treatment area had detections exceeding GCTLs in 3 of the 7 wells, and 3) Monitoring wells within the treatment area had detections exceeding 10 times the natural attenuation default concentration (10xNADC) of cDCE and/or VC in 2 (IWs 134 and 135) of the 21 wells, and the remaining wells were less than GCTLs.

The Hot Spot 6 IM Phase Two was expanded including an additional 190 ASWs treating an additional 11.2 acres. Treatment was discontinued in 252 ASWs where performance results were less than GCTLs when Phase Two began full-scale operations on August 27, 2023. Currently 190 ASWs in the Phase Two area and 48 ASWs on the leading edge of the former treatment area are operating. Performance sampling is conducted quarterly at 21 wells in the Phase Two area and semi-annually in the former treatment area. Based on the November 2023 sampling event, the highest cDCE and VC concentrations have decreased from 6,500 µg/L and 3,800 µg/L to 3,900 µg/L and 3,100 µg/L respectively.

The objective of the 2023 Hot Spot assessment was to delineate areas exceeding 10 times NADC, also referred to as “Hot Spot” criterion in Area #1 and Area #2. The investigation area was beyond the one-year capture zone for the Hydraulic Containment System, as shown on Slide 24. Samples were collected using DPT methods and analyzed by a fixed based laboratory. The Area #1 dataset includes results from 314 samples collected from 49 locations. Freon was not detected in any samples, Trichloroethene (TCE) exceeded GCTL in

16 samples with a sample also exceeding NADC, tDCE exceeded GCTL in 18 samples with two samples also exceeding NADC, and cDCE and VC were detected at concentrations exceeding GCTL and NADCs, and VC exceeded 10 times NADCs. The Area #2 dataset includes results from 275 samples collected from 44 locations. Freon was not detected in any samples, TCE exceeded GCTL in two samples, tDCE exceeded GCTL in five samples, and cDCE and VC were detected at concentrations exceeding GCTL and NADCs, and VC exceeded 10 times NADCs. Results for TCE (within the adjacent source zone), cDCE, and VC are presented on figures for 0 to 10 ft below land surface (bls), 10 to 15 ft bls, 15 to 20 ft bls, 20 to 28 ft bls, 28 to 34 ft bls, 34 to 40 ft bls, and greater than 40 ft bls, as well as vertical profiles. With the exception of southern edge of Area #1 Hot Spot concentrations (10 times NADCs) have been horizontally delineated. Areas #1 and #2 vertical profiles demonstrate Hot Spot vertical delineation for each contaminant.

Based on the success of air sparging in the existing Hot Spot 6 area, which has remediated 15.1 of the 15.7 acres to less than GCTLs, NASA is proposing to expand the existing Hot Spot 6 IM to include the 9.4 acres shown on Slide 61. The Area #1 Hot Spot is adjacent to the existing treatment area and is delineated horizontally and vertically. The proposed treatment area has an estimated mass of 435 pounds, composed of cDCE and VC. The Area #2 Hot Spot is delineated horizontally and vertically. The proposed treatment area has an estimated mass of 34 pounds, composed of cDCE and VC Soil vapor extraction (SVE) is not being proposed for either treatment area based on an estimated remediation timeframe of more than one year, and the total estimated mass of 469 pounds being less than the Hazardous Air Pollutants emission limits of a single and total contaminants of 1,000 and 2,500 pounds annually. The proposed expansion includes an additional 207 ASWs constructed of 1-inch PVC and screened 33 to 35 ft bls, which will be installed by sonic drilling methods and spaced linearly 50 feet, center-to-center. The radius of influence and flows will be 25 feet at a flow rate of 5 CFM. The 185 ASWs in Area #1 will be split into five manifolded zones and the 22 ASWs in Area #2 will be operated as one zone, each being supplied by a two-inch high-density polyethylene (HPDE) supply line from the existing compressor. One-inch HDPE lines will supply each ASW from the manifold distribution trailer. The maximum pressure in Area #1 of 36.8 psi includes 18.5 psi at the well head, 0.4 psi for the longest one-inch HDPE (750 feet)

supply line, 5 psi for ancillary equipment, and 12.9 psi for the two-inch HPDE supply line. The maximum pressure in Area #2 of 30.8 psi includes 18.5 psi at the well head, 0.1 psi for the longest one-inch HDPE (250 feet) supply line, 5 psi for ancillary equipment, and 7.2 psi for the two-inch HPDE supply line. The existing compressor is capable to support the expansion, once GCTLs are attained in the second expansion phase treatment will be discontinued and phase three expansion will come online. The Area #1 proposed expansion includes baseline and performance sampling of 17 existing wells depicted on Slide 65 and installation of 6 wells in Area #2. Performance sampling would continue to be quarterly with the collection of field parameters and samples submitted for VOC analysis via EPA Method 8260B.

The Team reached consensus that Area #1 was adequately delineated horizontally and vertically to support the expansion of the Hot Spot 6 Air Sparging Interim Measure (IM) (**2402-D02**).

The Team reached consensus that Area #2 is adequately delineated horizontally and vertically to support expansion of the HS6 AS IM (**2402-D03**).

The Team reached consensus on the implementation of the Phase 3 expansion of the Hot Spot 6 Air Sparging IM based on this ADP and submission of the Implementation Work Plan to FDEP, which will include what was reviewed today and IW0053D and 6 new monitoring wells (**2402-D04**).

Results: Decision 2402-D02, D03, D04

Hot Spot Area 6, Launch Complex 34 (LC34), SWMU CC054
Phase Three Expansion Site Characterization

TETRA TECH

February 2024

complex world | CLEAR SOLUTIONS™

This Advance Data Package (ADP) was prepared for NASA to aid in evaluation of site conditions and remedial actions. This is not a decision document. New information may come to light that makes this ADP outdated.

Objectives

Overview

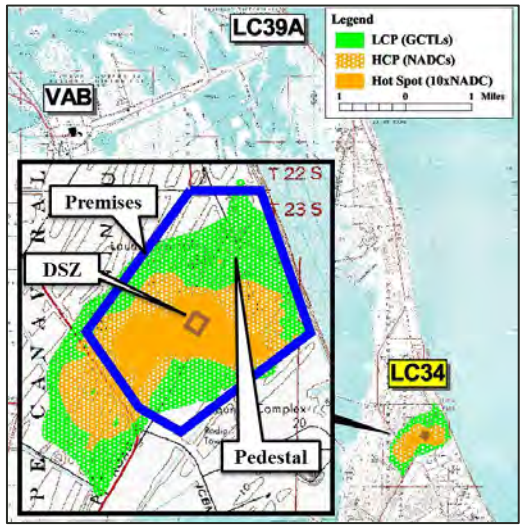
- The presentation will focus on the installation and operation of the Hot Spot 6 (HS6) Air Sparge System Phase Two Expansion as well as the DPT investigation conducted for the Phase Three Expansion

Background

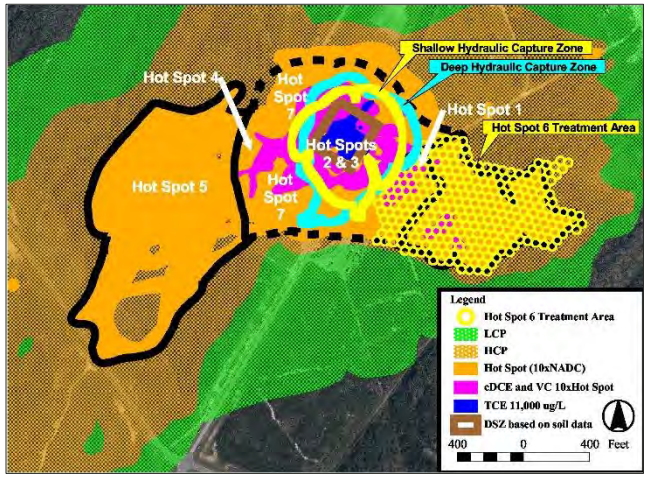
- Site History focused on groundwater investigation and remediation
- Lithology and groundwater flow direction

HS6 Interim Measures

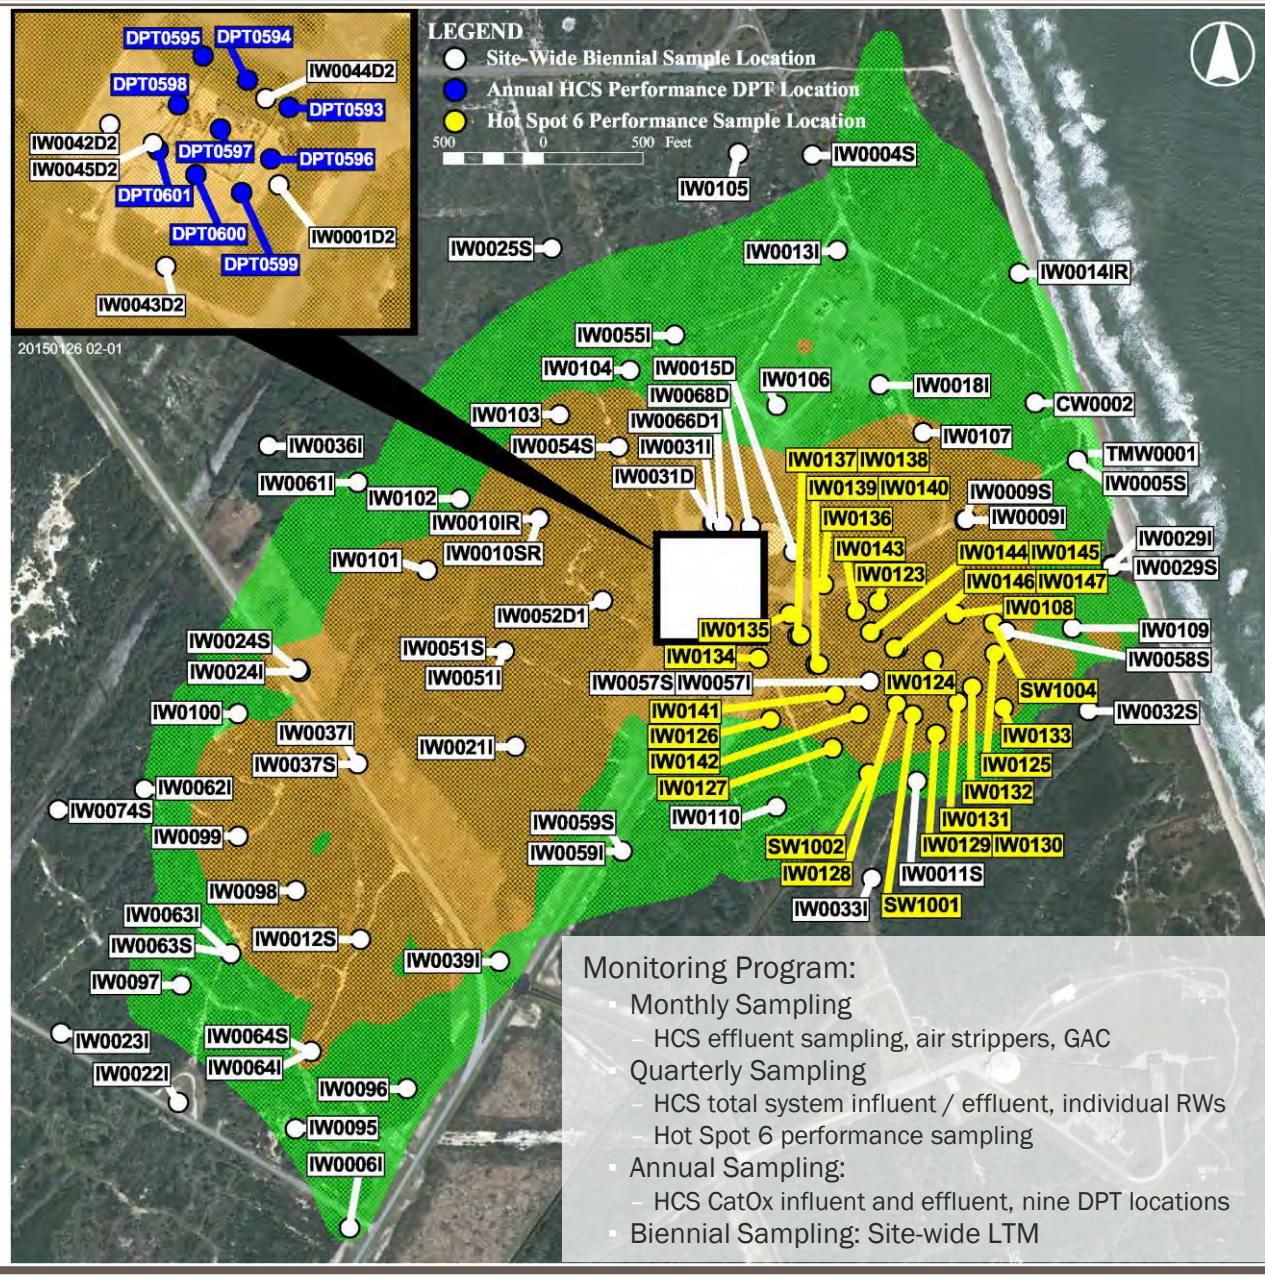
- Prior to Phase Two Expansion
- Phase Two Expansion
- Hot Spot Assessment
- Proposed Phase Three Expansion



Team Consensus:



- Implement the Phase 3 expansion of the Hot Spot 6 Air Sparging IM based on this ADP and submission of the Implementation Work Plan to FDEP



Site History

- Located on a barrier island bounded by the Banana River and Atlantic Ocean
- Pedestal is a regular stop for the KSC Visitor Bus and CCSFS tours
- The Air Force has issued NASA a permit granting the privilege for the use of real property and facilities referred to as the “Premises” for environmental restoration
- Current plume footprint: 315 acres ≥ GCTLs, low concentration plume (LCP); 157 acres ≥ NADCs, high concentration plume (HCP); 53 acres ≥ 10xNADC, Hot Spot; 9 acres ≥ 10x Hot Spot
- The 2.0-acre DNAPL source zone (DSZ) was originally characterized using soil data, included significant dissolved and sorbed mass TCE > 300 mg/kg and transition zone to 100 mg/kg and recharacterized in 2018-2019 with groundwater data where TCE > 11,000 µg/L

Monitoring Program:
- Monthly Sampling
  - HCS effluent sampling, air strippers, GAC
- Quarterly Sampling
  - HCS total system influent / effluent, individual RWs
  - Hot Spot 6 performance sampling
- Annual Sampling:
  - HCS CatOx influent and effluent, nine DPT locations
- Biennial Sampling: Site-wide LTM

Site History

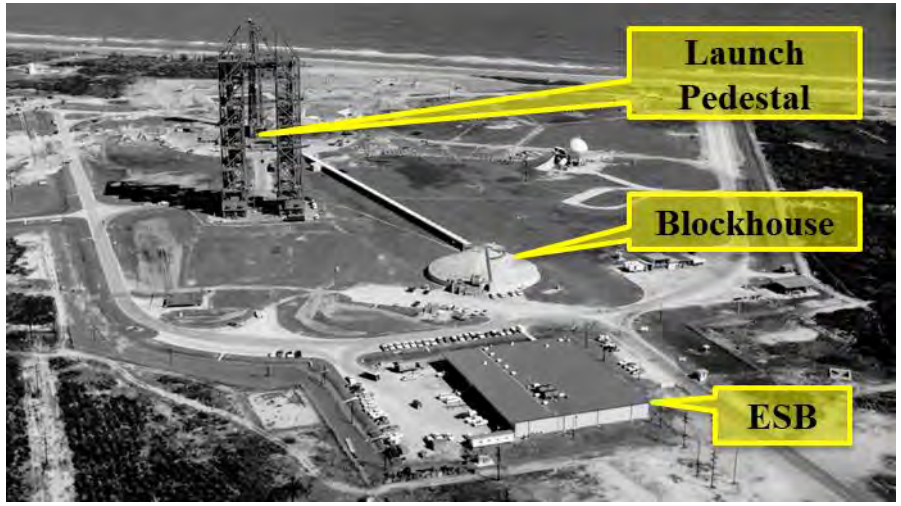
Construction of Complex 34 began in 1959, designed to support NASA's Saturn 1 and 1B programs

Seven launches between 1961 and 1968

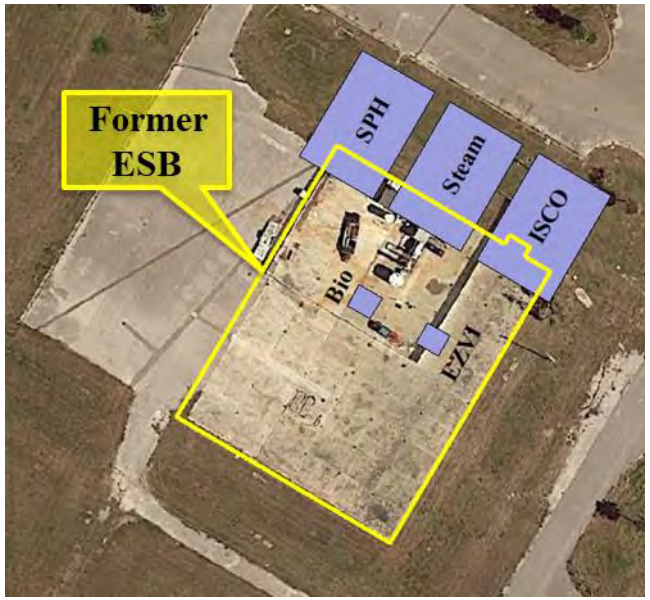
- Historical records suggest TCE used to flush rocket engines and for precision cleaning of spaceflight hardware

1967: Apollo 1 cabin fire during a launch rehearsal test taking the lives of Grissom, White, and Chaffee

1972: Service structures and operational equipment scrapped, leaving majority of on-site buildings and structures abandoned-in-place



1984: Declared part of the Man In Space National Historic Landmark



1990s: Environmental investigations revealed chlorinated solvent contamination including dense non-aqueous phase liquid (DNAPL) in groundwater

1999 to 2003: In situ remediation demonstration projects at the Engineering Support Building (ESB) included test cells for:

- Chemical Oxidation (ISCO), TCE reduction of 12,700 pounds (43' bls)
- Six-Phase Heating (SPH), TCE reduction of 22,719 pounds (43' bls)
- Steam Injection, TCE reduction of 23,629 pounds (43' bls)
- Emulsified zero-valent iron (EZVI), TCE reduction of 40 pounds (16' to 24' bls)
- Bioaugmentation, TCE reduction of 60 pounds (16' to 24' bls)

2004: Groundwater long-term monitoring (LTM) and corrective measures study (CMS) initiated

Site History (Groundwater Contamination)

2007: CMS recommended corrective action alternative

- P&T to provide hydraulic containment of the DSZ,
- MNA with supplemental investigations and follow-up Interim Measures to target CVOC Hot Spots in the HCP,
- MNA in the LCP
- LUCIP to prohibit groundwater use

2008: IM Design for Hydraulic Containment of the DSZ and Deep TCE Groundwater Plume

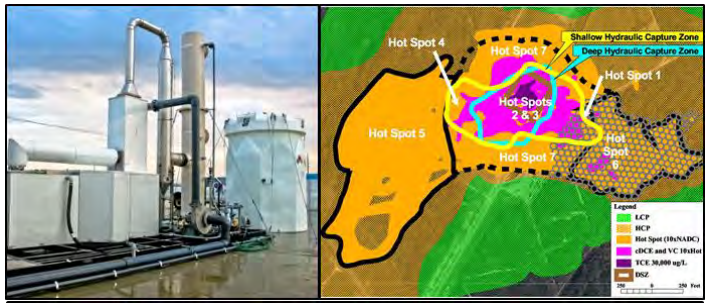
2009:

- Began groundwater investigation(s) to refine Hot Spot delineation, ongoing
- Installation and operation of the DSZ Hydraulic Containment System (HCS)

2015: Cat-Ox Refurbishment and HCS Expansion

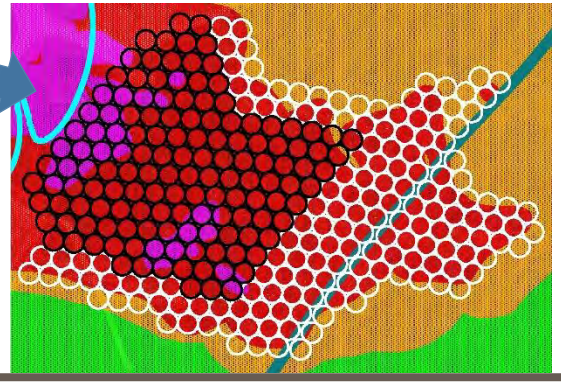
2016: Hot Spot 6 Site Characterization (cDCE and VC exceeded NADCs and 10xNADCs)

2018: Hot Spot 6 Air Sparging IM implemented



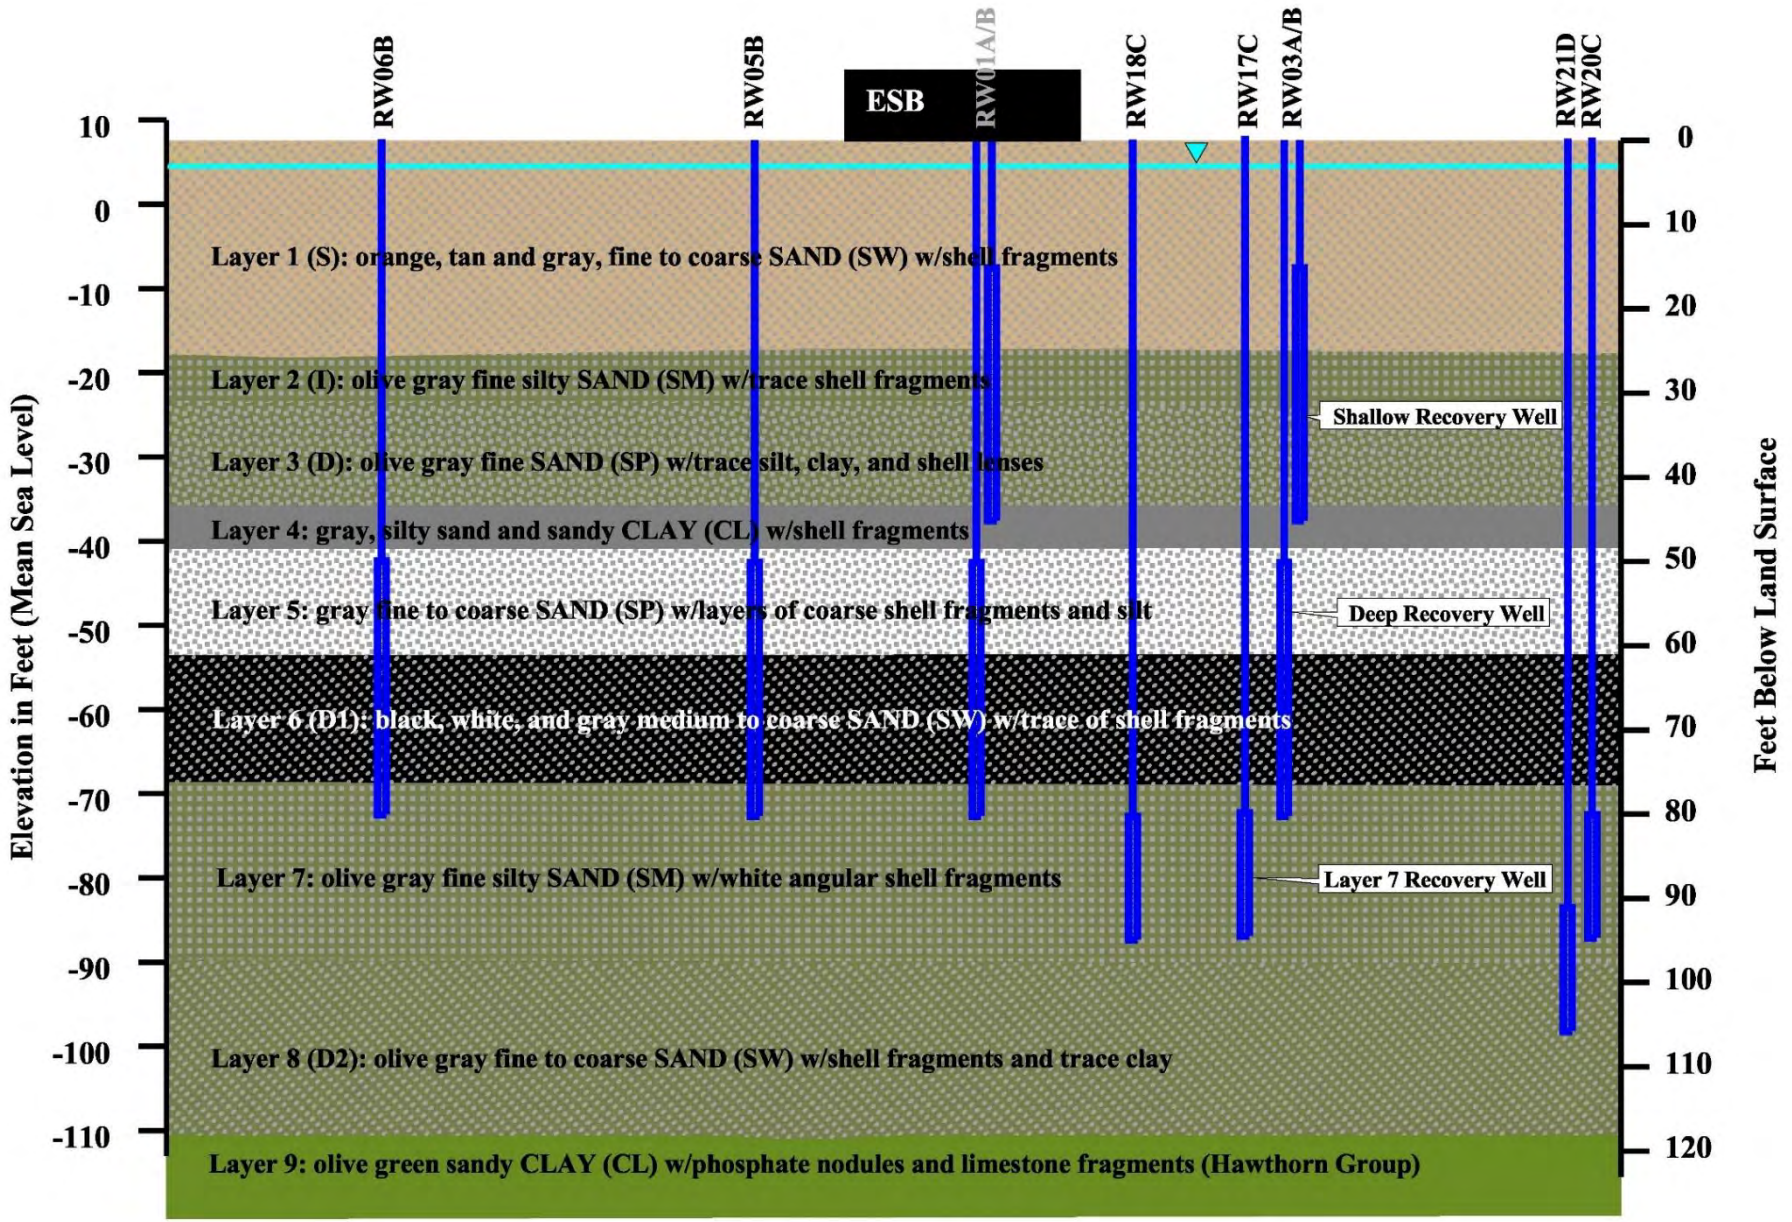
2019: DSZ Supplemental Site Characterization

2020: Hot Spot 6 Expansion Phase Two Work Plan



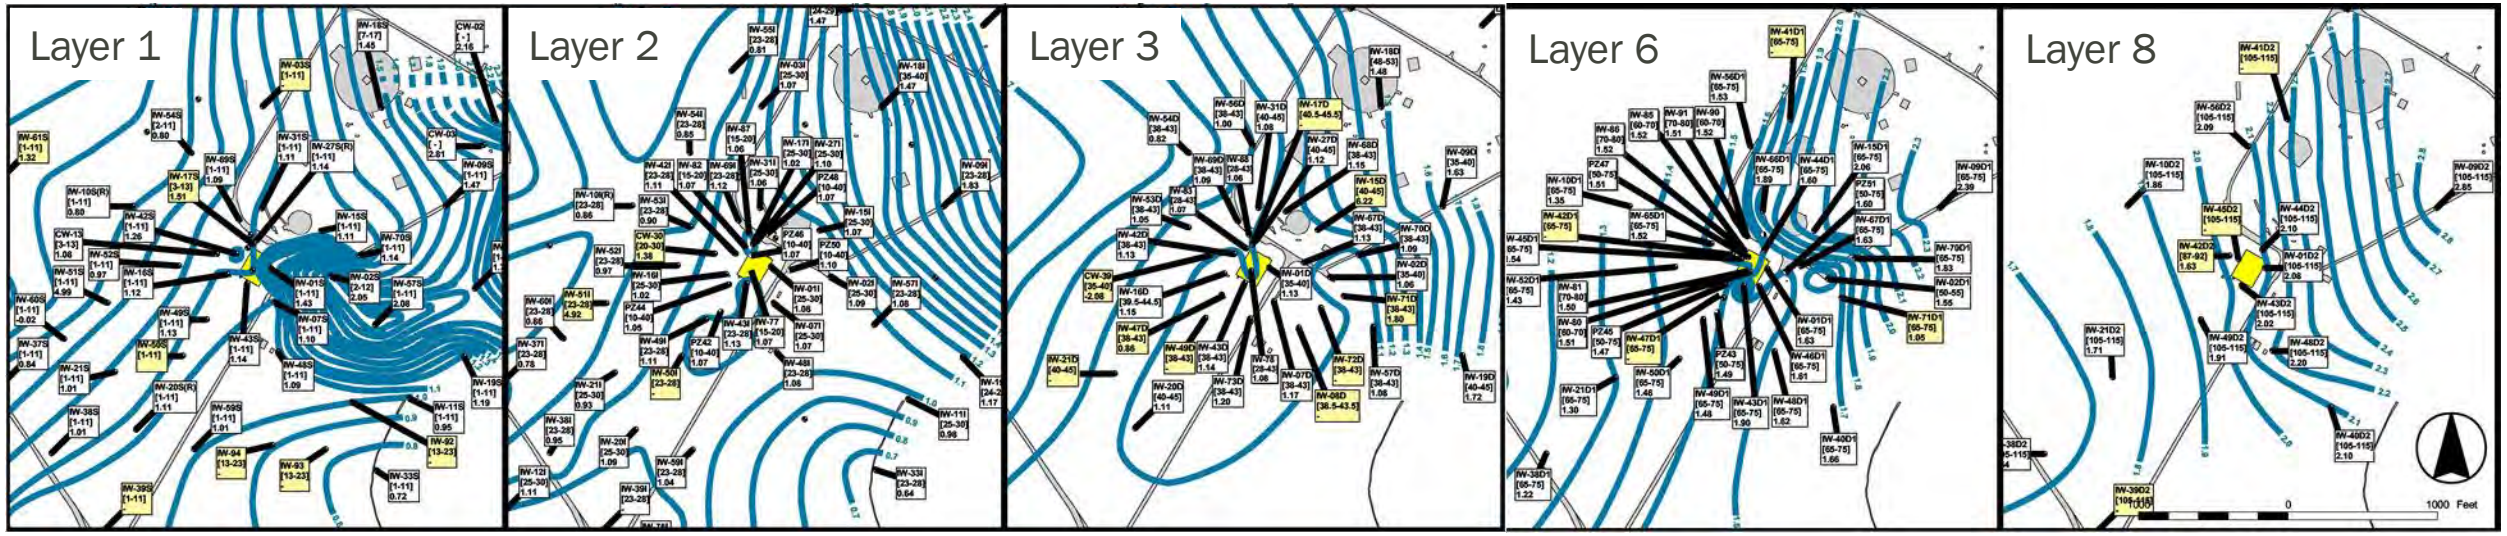
2022: DNAPL Source Zone Remedial Alternate Evaluation (RAE) and Pilot Study

2023:



- Hot Spot 6 Expansion Phase Two Work Plan
- Installed and began operation RW21D to address TCE in IW162

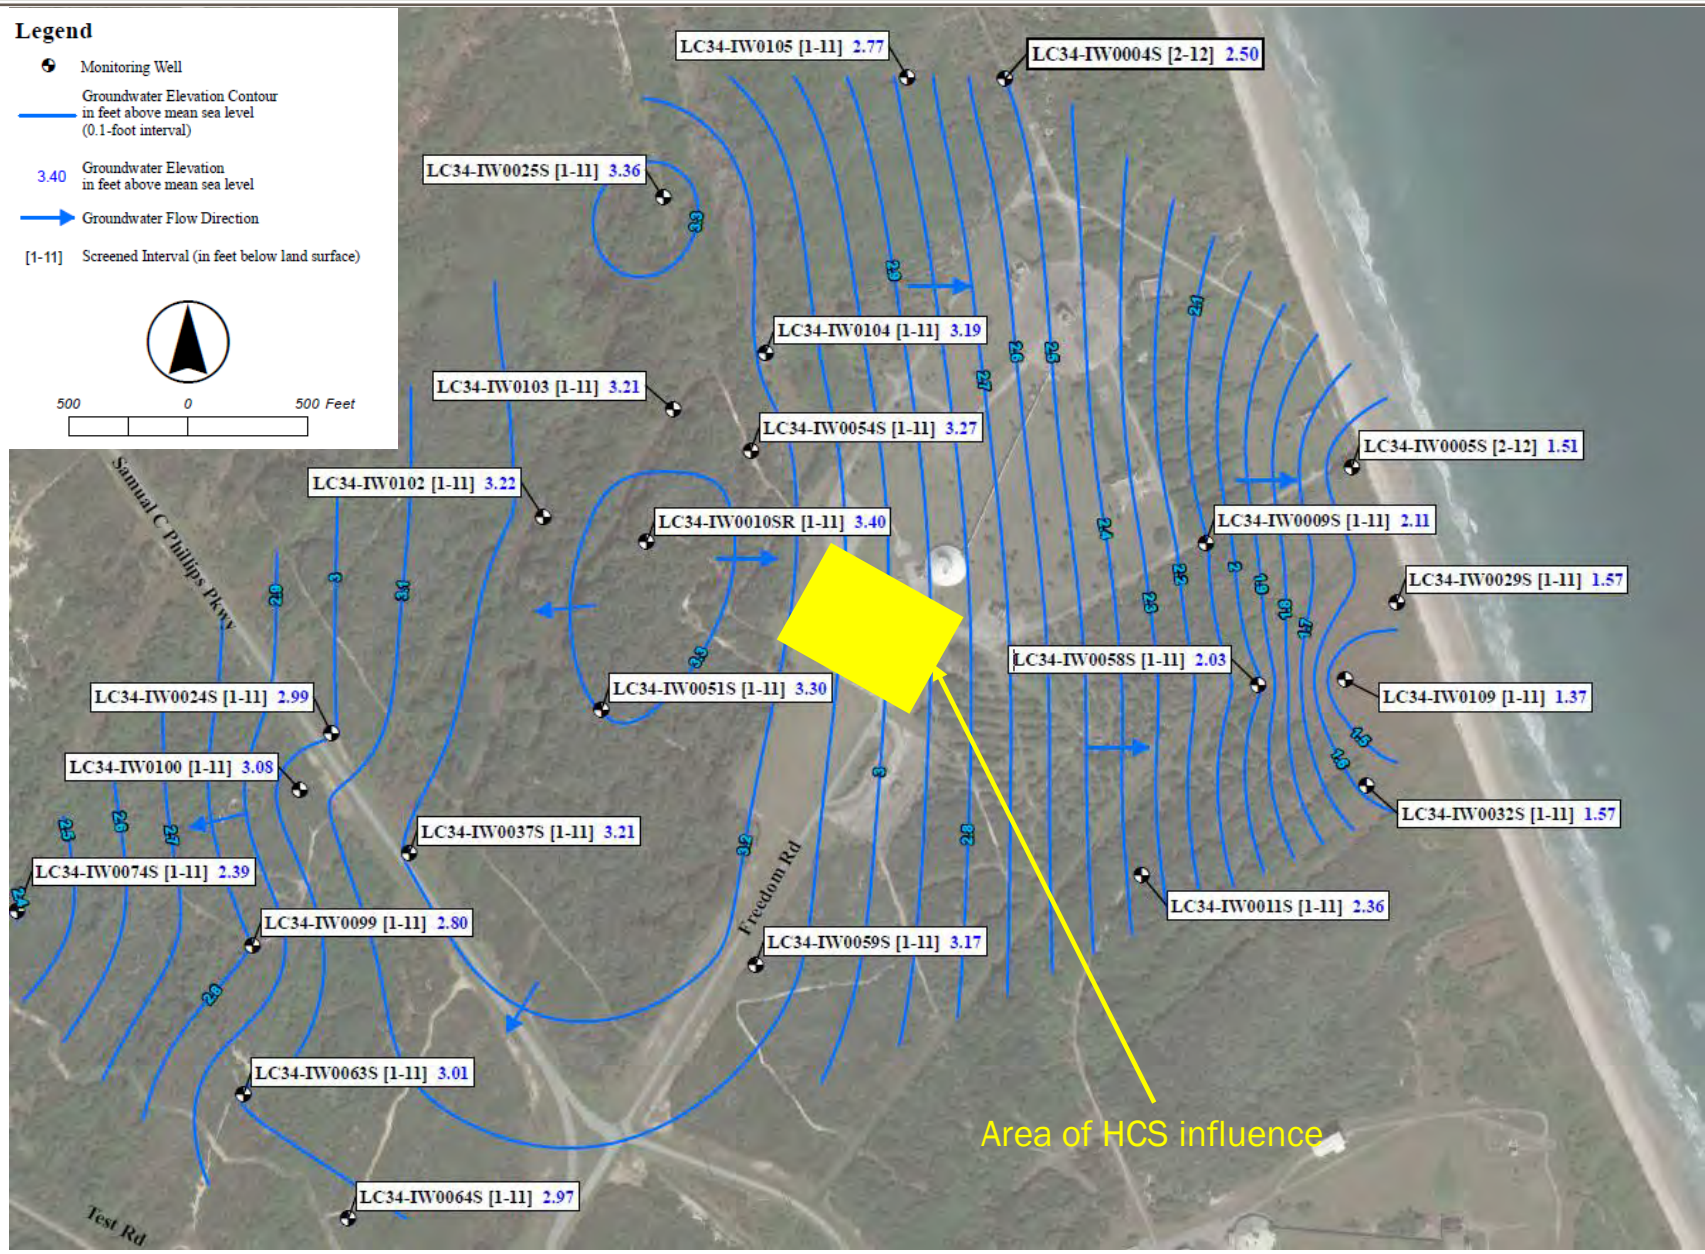
- IM Objective: Hydraulically control the DSZ and TCE HCP within Hot Spots 2, 3, and 4 by hydraulic containment and ex-situ treatment
- Current process system components:
  - 10 shallow recovery wells (~15 to 45 ft bls)
  - 7 deep recovery wells (~50 to 80 ft bls)
  - 5 deeper recovery wells (80 to 95 ft bls)
  - 1 deeper recovery well (86 to 106 ft bls)
  - Equalization tank and discharge pump
  - Air stripping, discharge pump, and carbon treatment
  - Catalytic oxidizer and scrubbing unit
  - Deep well injection and infiltration gallery discharge
- To date 335 million gallons have been processed and 94,300 pounds of VOCs have been destroyed



Lithology with Recovery Wells

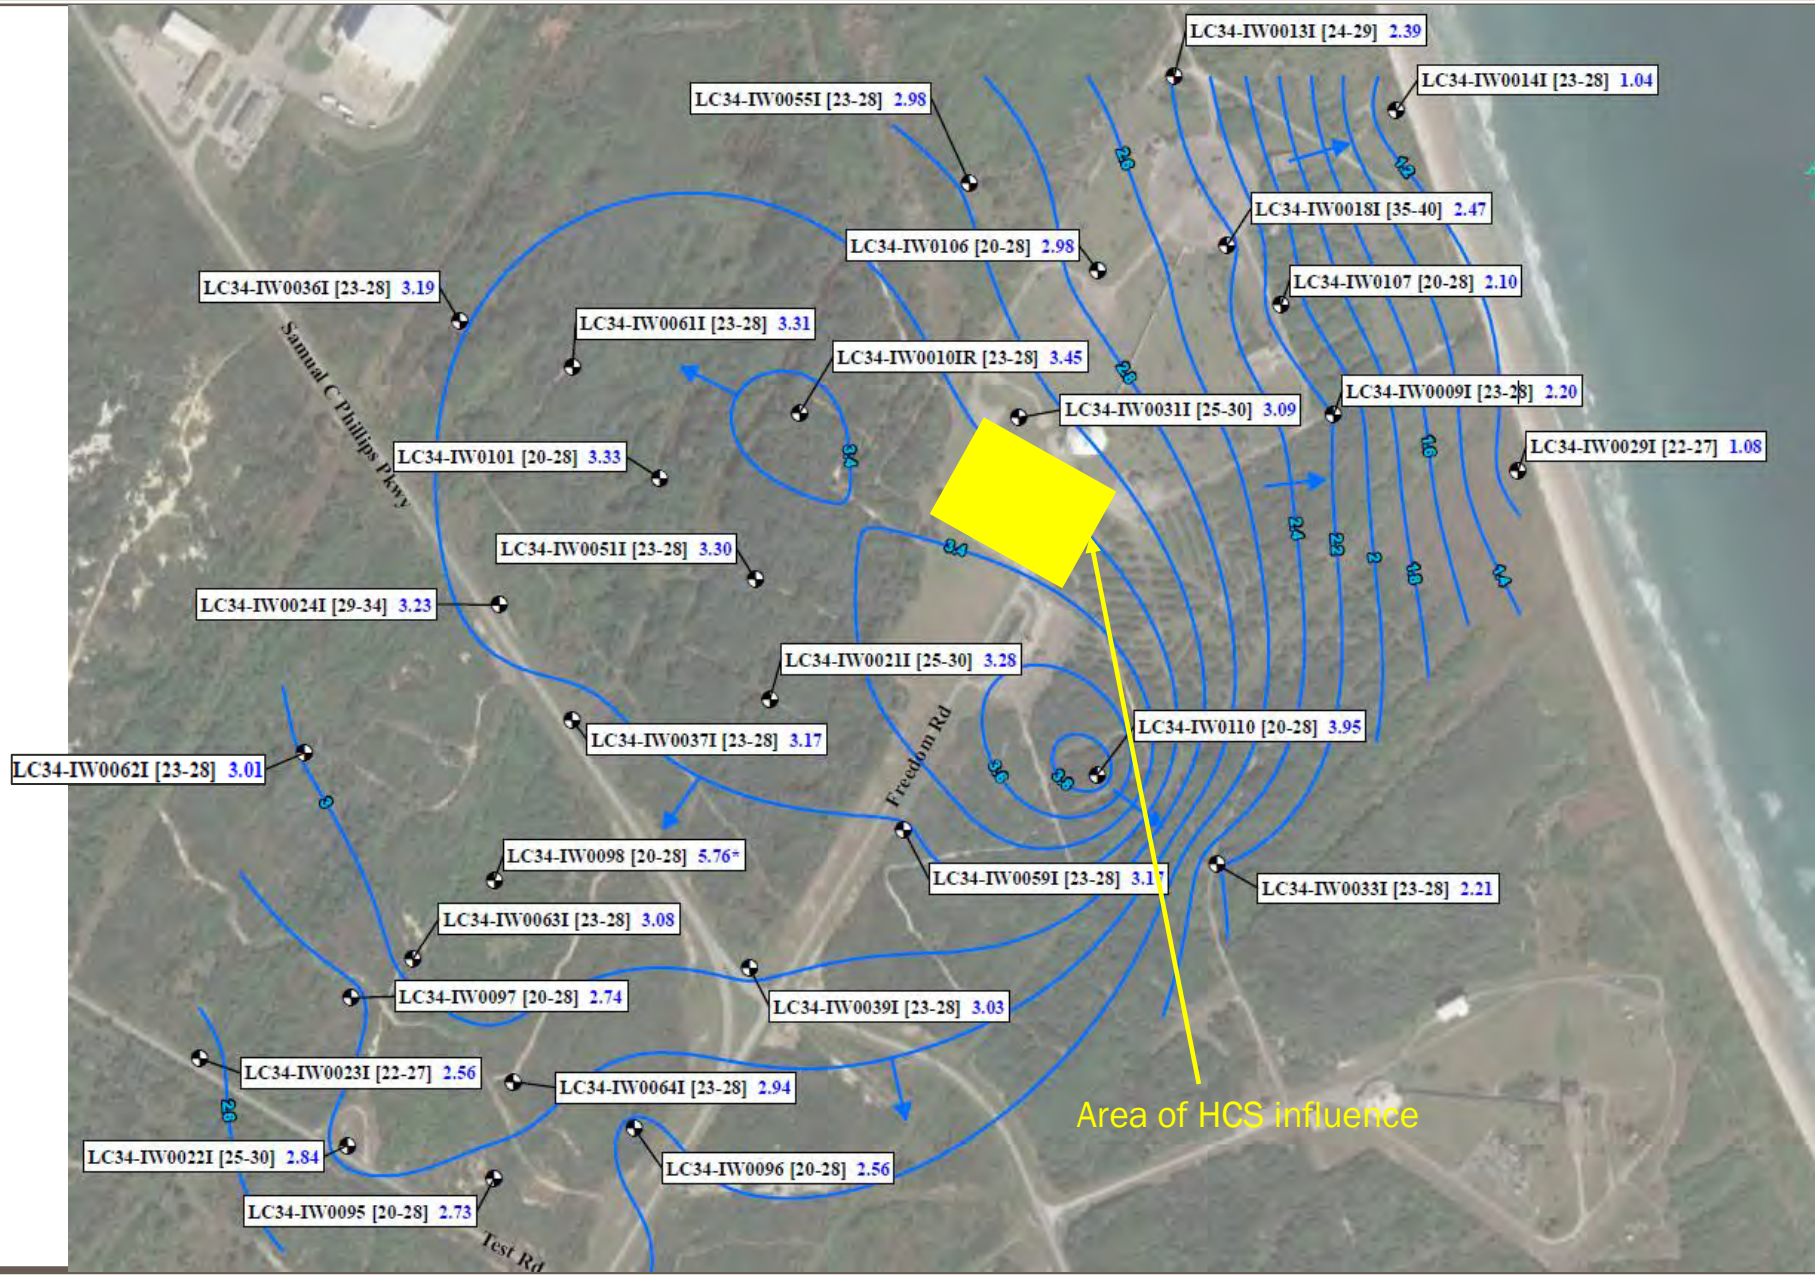
Lithology

Layer	Description	Photo
1 (S)	orange, tan and gray, fine to coarse SAND (SW) w/shell fragments	
2 (I)	olive gray fine silty SAND (SM) w/trace shell fragments	
3 (D)	olive gray fine SAND (SP) w/trace silt, clay, and shell lenses	
4	gray, silty sand and sandy CLAY (CL) w/shell fragments	
5	gray fine to coarse SAND (SP) w/layers of coarse shell fragments and silt	
6 (D1)	black, white, and gray medium to coarse SAND (SW) w/trace shell fragments	
7	olive gray fine silty SAND (SM) w/white angular shell fragments	
8 (D2)	olive gray fine to coarse SAND (SW) w/shell fragments and trace clay	Description from Deep Soil Coring completed in 2002, no photos available
9	olive green sandy CLAY (CL) w/phosphate nodules and limestone fragments (Hawthorn Group)	



Site Overview: Groundwater Contours

- Potentiometric maps show groundwater flow patterns prior to HCS operation in December 2009
- In the shallow intervals (Layers 1, 2, and 3) there is localized groundwater mounding near the HCS Compound
- In the deep intervals (Layers 6 and 8) flow is generally to the southeast, southwest, and west
- Decision to discontinue water levels was made during April 2012 KSCRT Meeting (1204-M13, Decision 1204-D24)
- Water levels were collected February 22, 2023 at sampled wells during biennial LTM event (Layers 1 and 2) contoured to verify consistency with historic readings (shown on next slides)



Site Overview: Groundwater Contours

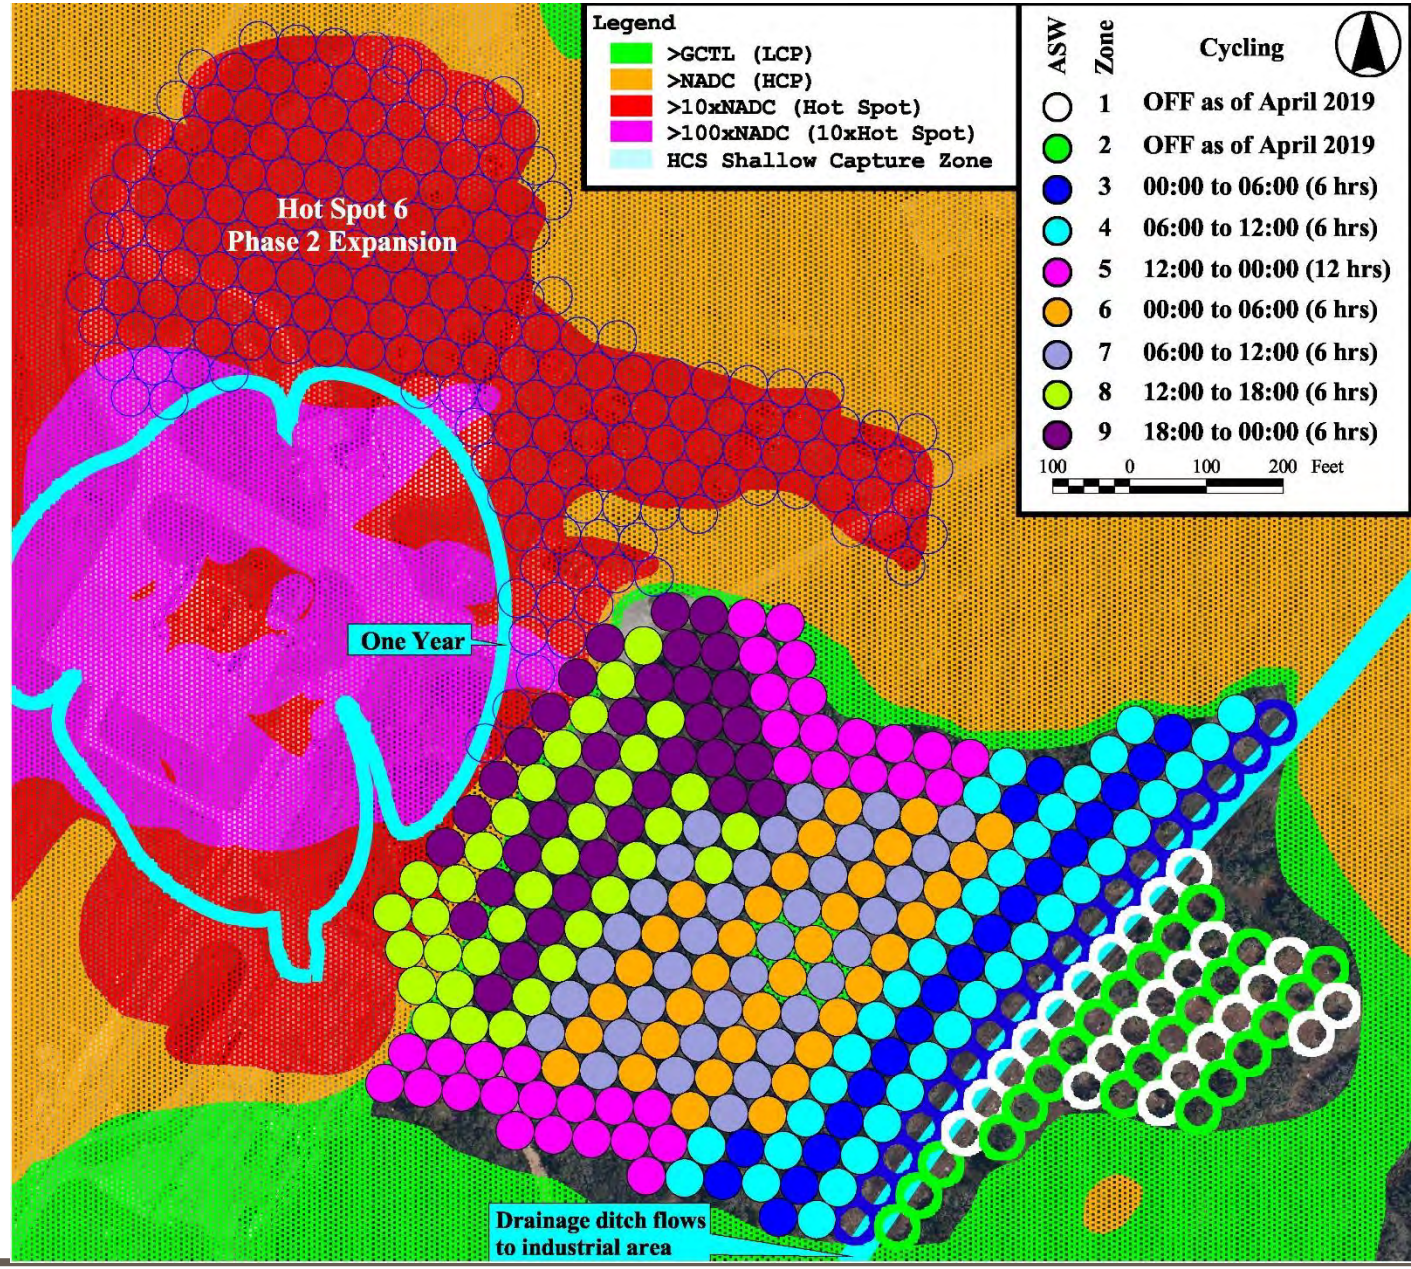
- Layer 1 (screened 0 to 25 ft bls)
- 24 biennial LTM wells used for contouring
- Elevations ranged from 1.37 feet above mean sea level (ft amsl) in well IW0109 to 3.40 ft amsl in well IW0010SR
- Flow is radial at wells IW0025S and IW0010SR. Generally, flow is to the east towards the Atlantic Ocean on eastern half of site and generally flows west on western half of site.
- Wells used for contouring were outside of the HCS influence area

Site Overview: Groundwater Contours

- Layer 2 (screened 25 to 30 ft bls)
- 30 biennial LTM wells used for contouring
- IW0098 damaged, not used for contouring
- Elevations ranged from 1.04 ft amsl in well IW0014I to 3.95 ft amsl in well IW0110
- Groundwater flow appears to be radial from wells IW0010IR and IW0110. Generally, flow is to the east towards the Atlantic Ocean on eastern half of site and generally flows southwest on western half of site
- Wells used for contouring were beyond influence of the HCS

Hot Spot 6 Interim Measure Air Sparge System Overview

COCs: cDCE and VC exceeding 10xNADCs

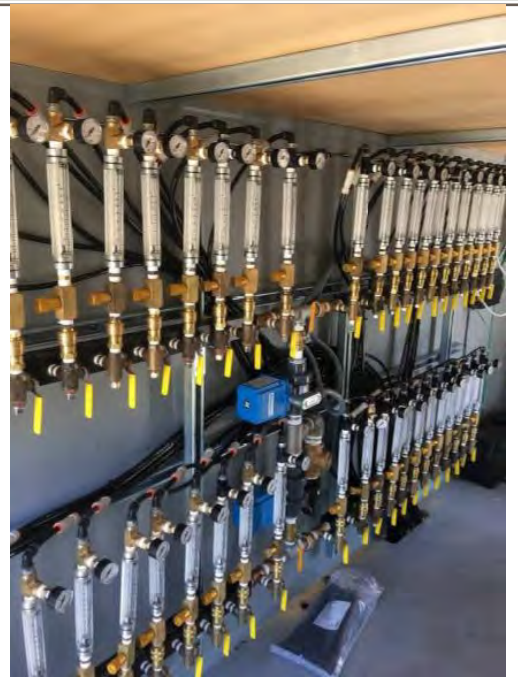


Objective: To remediate contaminated groundwater within treatment zone to prevent impacts to drainage ditch and support transition to MNA

Operations:

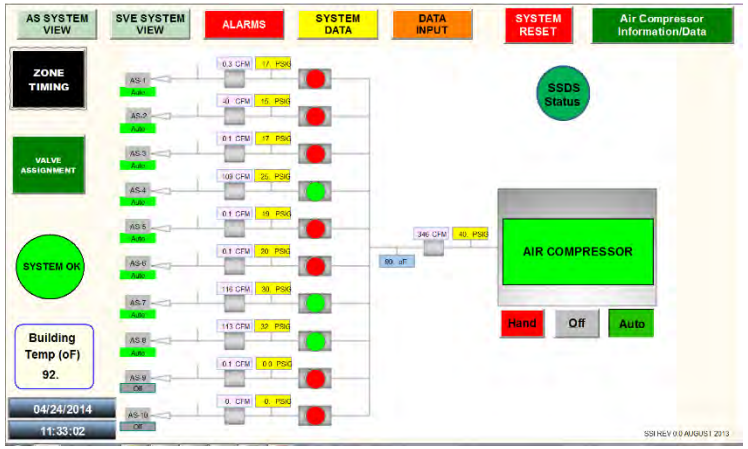
- Full-scale operations of initial 9 zones:
  - Zones 1 to 5 began July 2018
  - Zones 6 to 9 began May 2019
- System Design
  - 300 AS Wells (ASWs) in 9 treatment zones
    - Zones 1 and 2 turned off April 2019
    - Selected wells in Zones 3 and 4 turned off January 2020
    - Operated 199 ASWs from January 2020 through July 2023
  - Installation depth ~40' bls (Top of Layer 4)
  - 25' ROI, spaced 50' on center (c/c)
  - 5 CFM per ASW

Sampling Plan



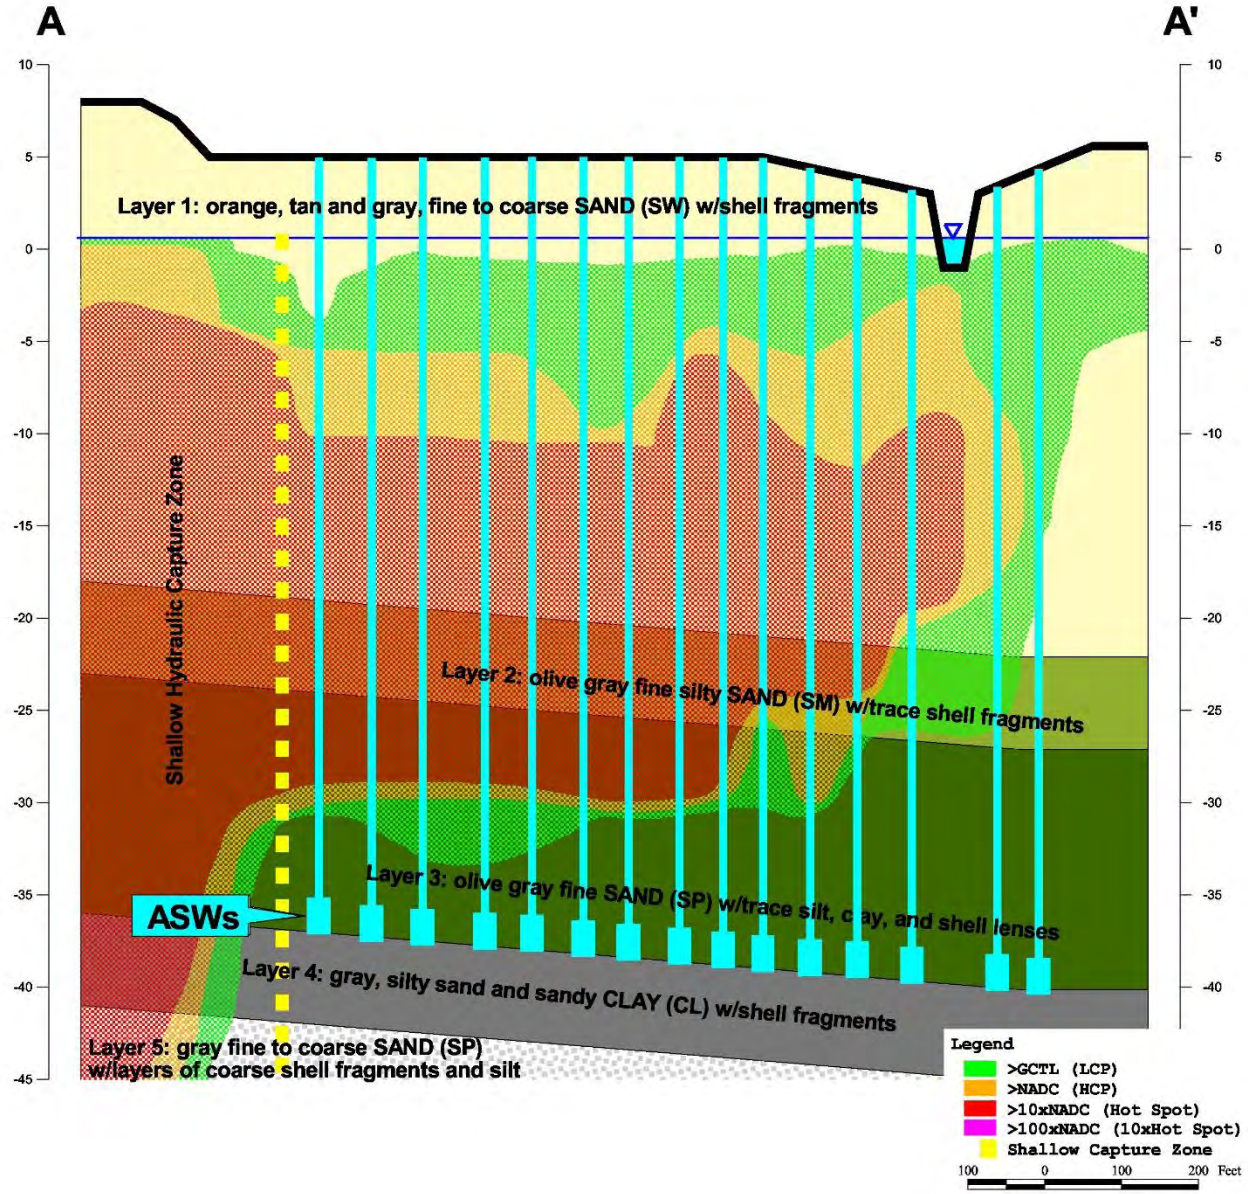
- Baseline sampling events July 2018 and May 2019
- Performance sampling
  - Initially quarterly events to January 2021
  - Frequency reduced to semi-annual events based on results
  - All events included sampling 28 MWs and 3 SWs for VOCs and field parameters

Hot Spot 6 Interim Measure Air Sparge System Overview



Compressor Trailer

Manifold Trailer



Compressed air is distributed from compressor trailer via 2” HDPE lines to three manifold trailers to 1” HDPE lines to individual ASWs

Hot Spot 6 Interim Measure Air Sparge System Overview

Hot Spot 6 Interim Measure Air Sparge System Phase Two Expansion

HS6 IM Phase Two Expansion

- 27Aug2023 began full scale operations
  - System Design
    - Operating 238 AS Wells (ASWs) in 7 treatment zones
      - Zone 8 includes 48 ASWs to prevent upgradient contamination from impacting treated area
      - Zones 9 to 14 includes 190 ASWs treating an additional 11.2 acres
      - 252 existing ASWs have been shut down where GCTLs have been achieved
    - Installation depth ~40' bls (Top of Layer 4), soil cores were collected to guide installation depth for each ASW
    - 25' ROI, spaced 50' on center (c/c)
    - 5 CFM per ASW
- First quarter sampling event conducted week of November 27th
  - Quarterly sampling of 21 monitoring wells

Team Decisions

- 2310-D31, The Team reached consensus to continue operation of the HS6 air sparging system of the active 238 ASWs for the operational period of April 1, 2023 to March 31, 2024
- 2310-D32, The Team reached consensus for quarterly sampling of 21 monitoring wells associated with expansion for VOCs and field parameters
- 2310-D33, The Team reached consensus to continue semi-annual sampling of 28 monitoring wells and 3 surface water locations associated with previous treatment area for VOCs and field parameters

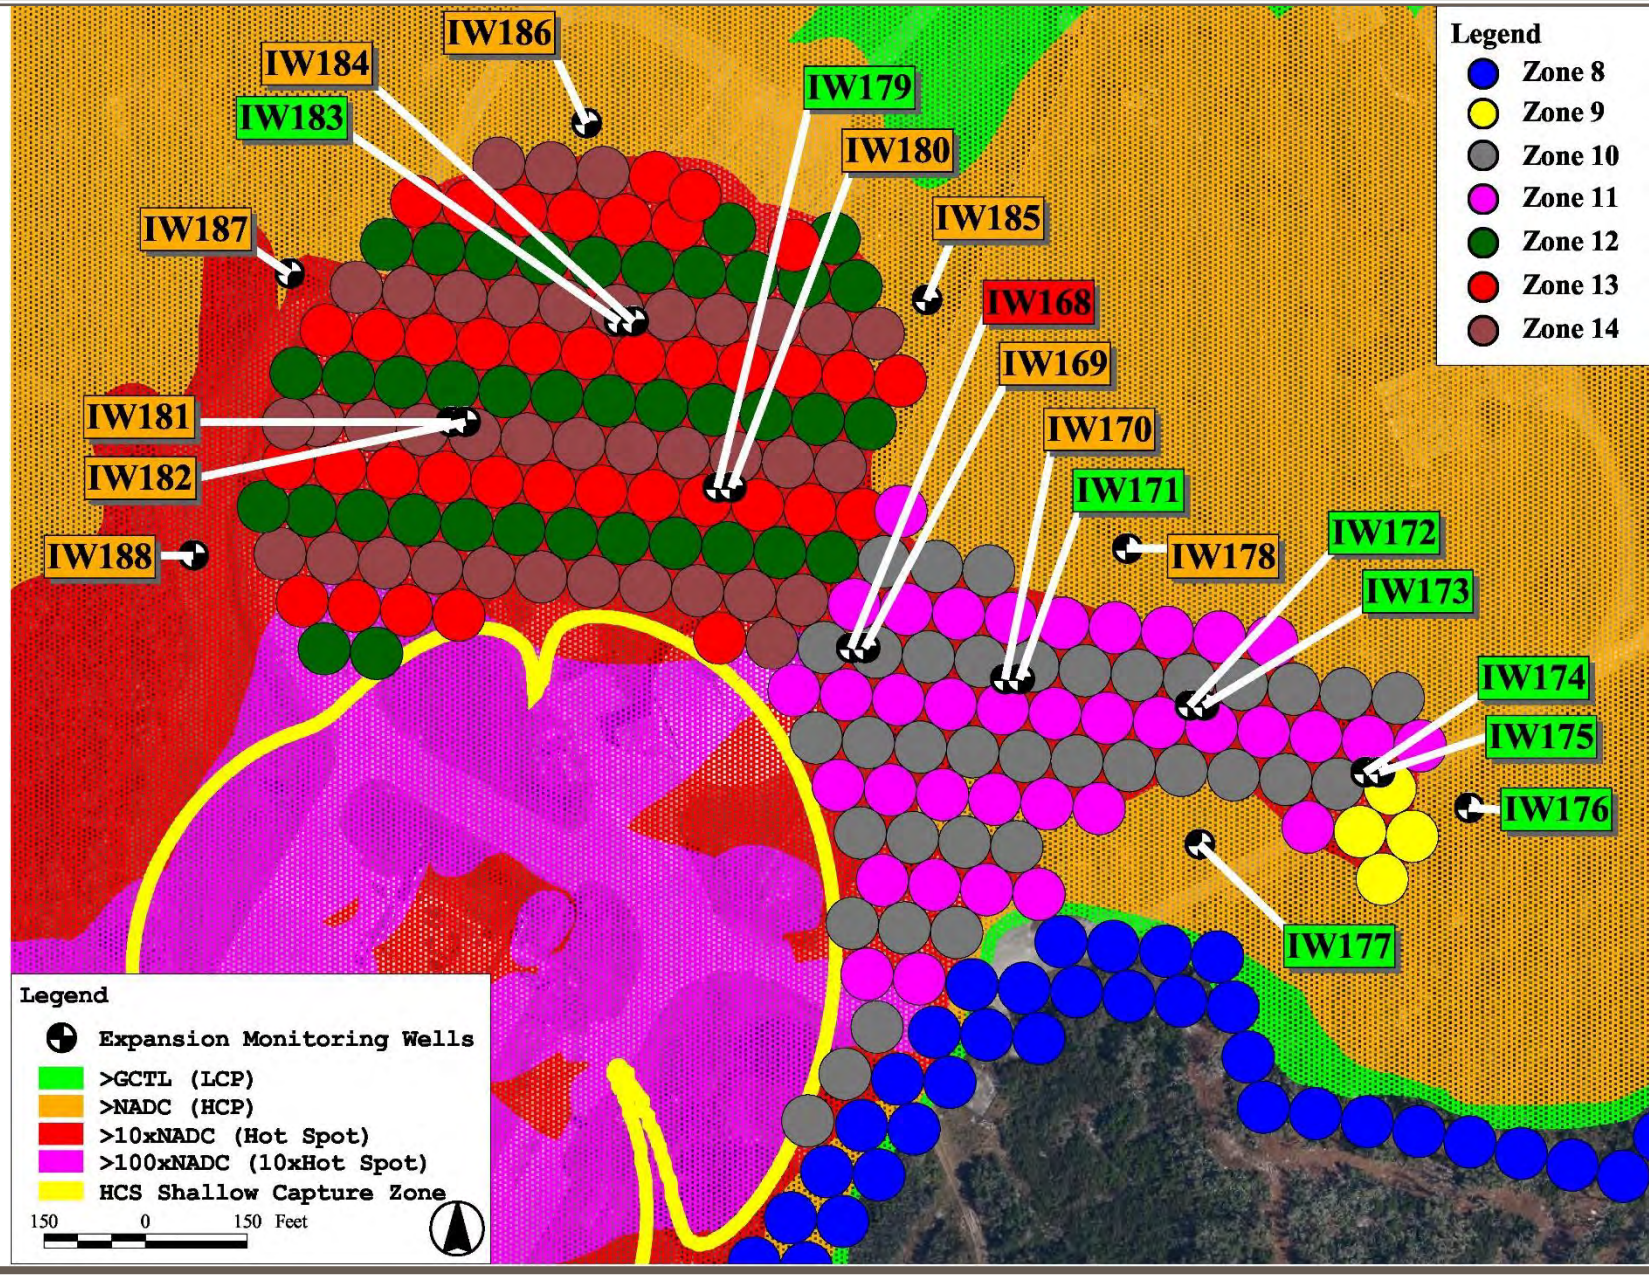
Legend

✓ Less than or equal to GCTLs



✓ Exceeds GCTLs

✓ Exceeds NADCs

✓ Exceeds 10xNADCs

Notes: 1) Baseline event sampled July 2023

2) Maximum detections highlighted in yellow

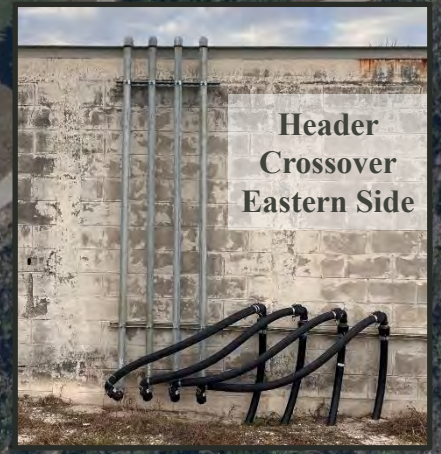
Hot Spot 6 Interim Measure Air Sparge System Phase Two Expansion

TETRA TECH

Phase 2
- 1-inch HDPE Supply Line
- 2-inch HDPE Supply Line
- Air Sparging Well (ASW)
- Directional (26 ASWs)

Phase 1
- 1-inch HDPE Supply Line
- ASW

100 0 100 Feet

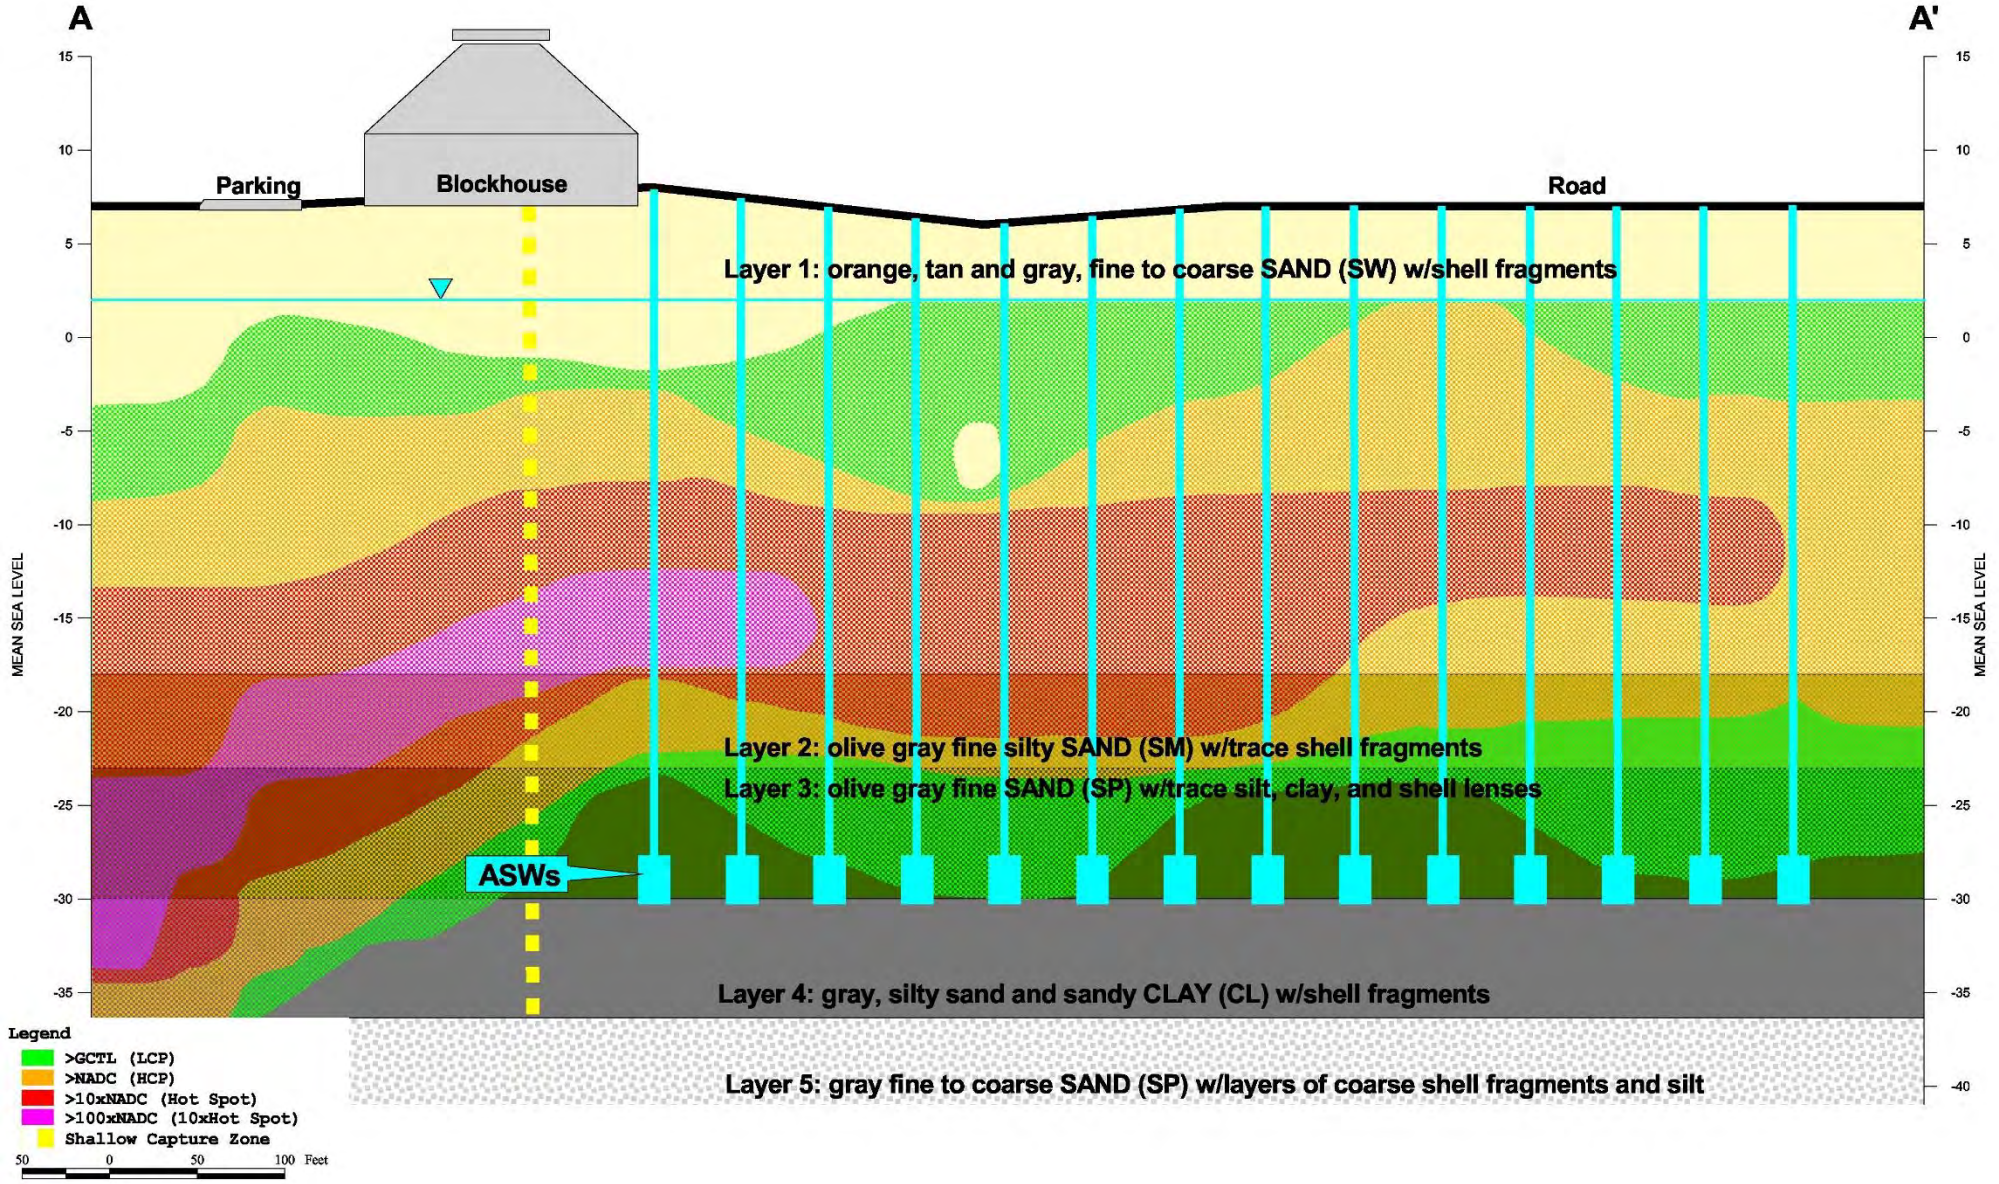


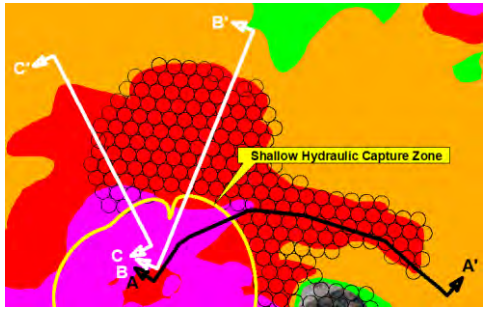
Phase Two Expansion

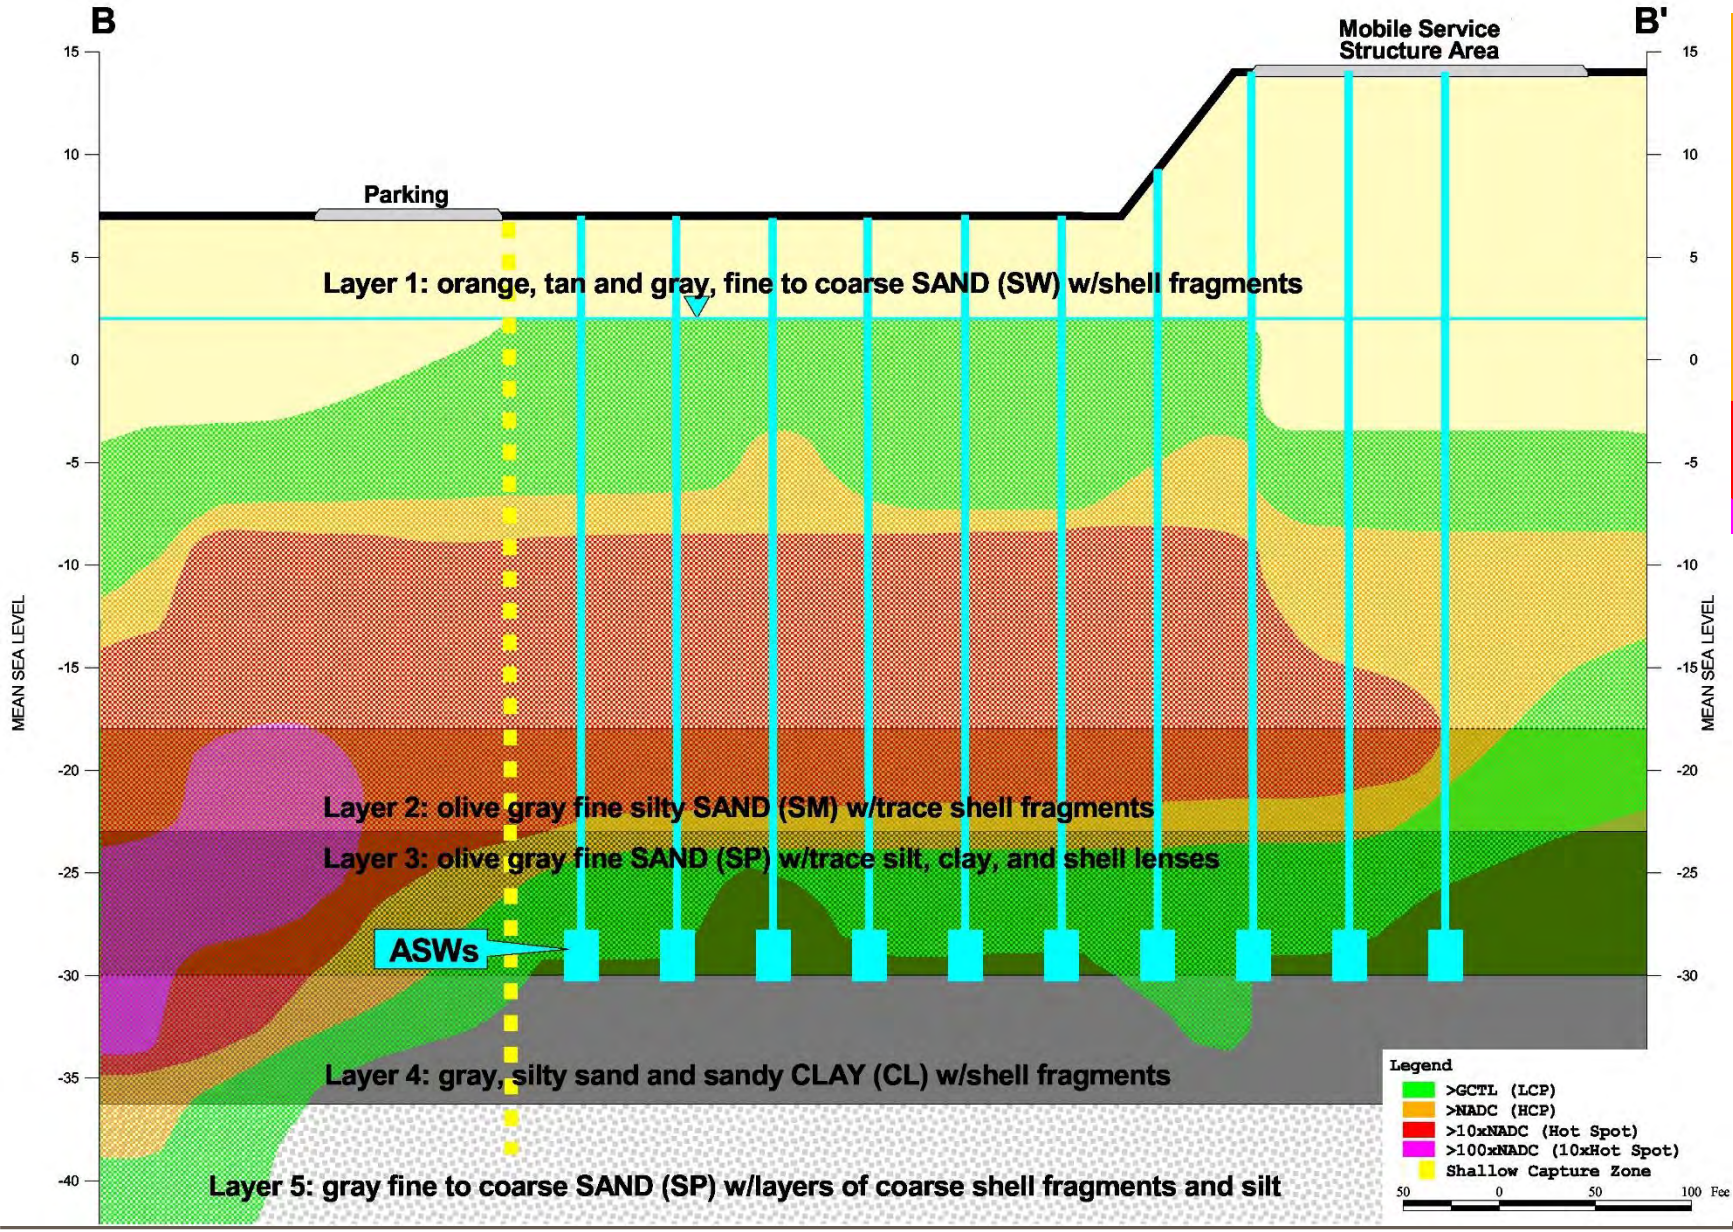
- Compressed air provided from existing compressor
- All distribution lines were HDPE installed underground except the 2-inch steel lines going over the wall near Blockhouse
- Distribution trailers set on existing concrete pads
- Directional drilling to install 26 ASWs to avoid surface obstructions
- ASW total depth ranged from 32 to 50 ft bls
  - Depths variation due to terrain

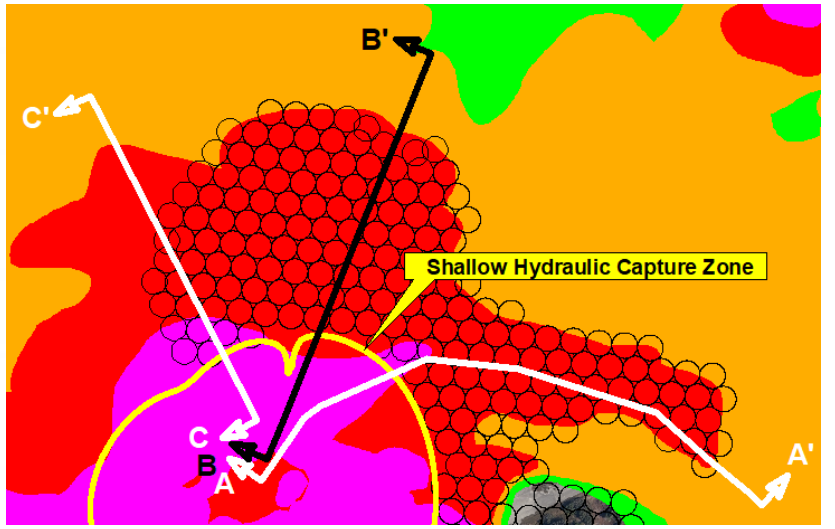
Distribution Trailer

Distribution Trailer

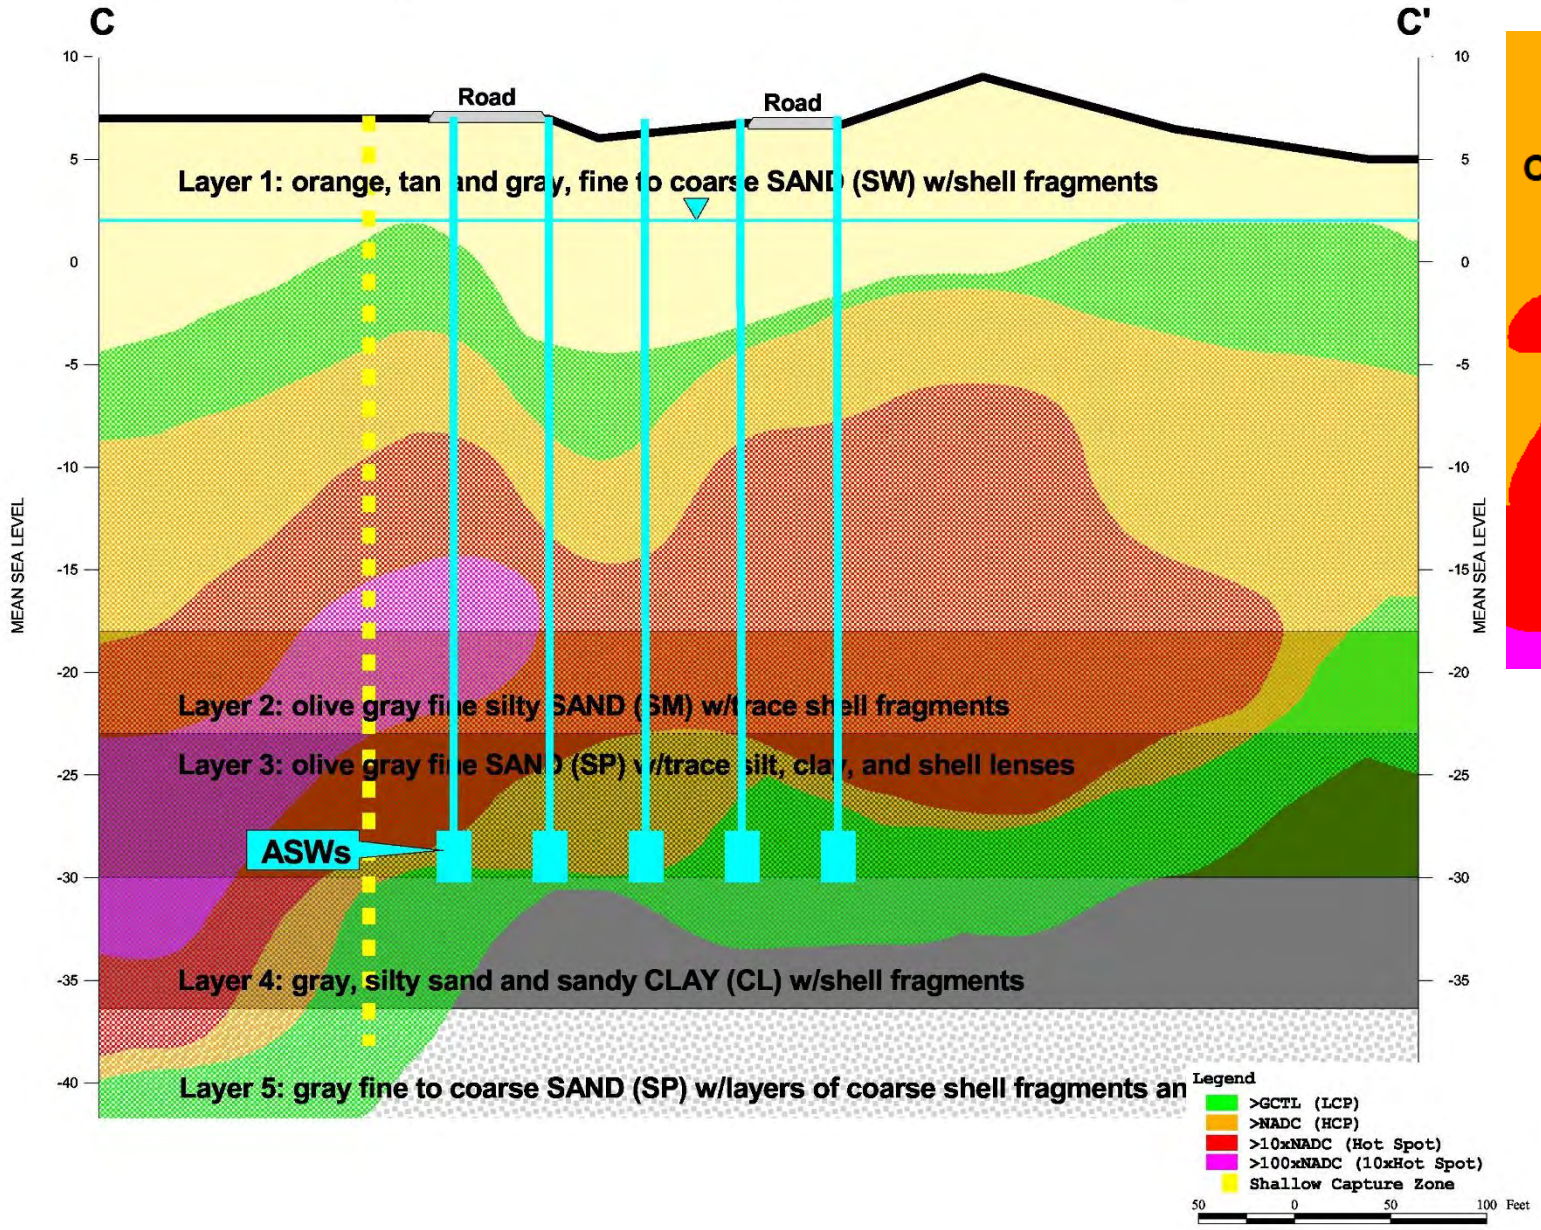


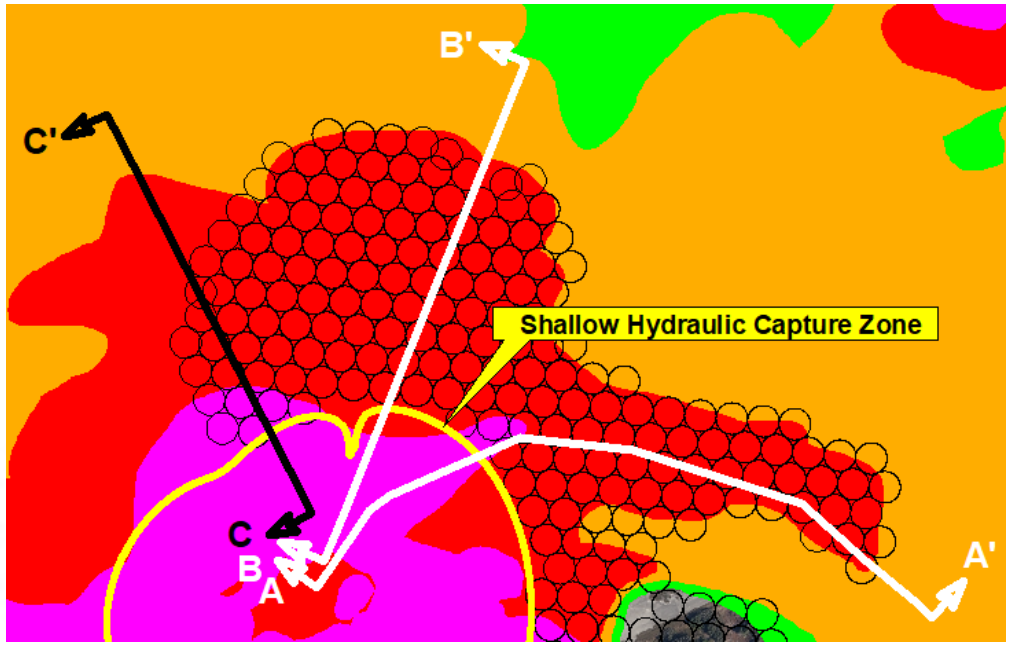






Hot Spot 6 Interim Measure Air Sparge System Overview





Hot Spot 6 Interim Measure Air Sparge System Overview

2023 DPT Investigation Results

- Investigation objective:
  - Refine delineation of areas previously exceeding 10xNADCs (Hot Spot criterion) to support air sparging implementation
- Investigation areas:
  - Area #1 - Hot Spot west and southwest of active treatment beyond the HCS One year capture zone to the "Southern Sampling Line"
  - Area #2 - Hot Spot southeast of launch pad
- Sampling:
  - Area #1 - 314 samples collected from 49 locations, 100-foot c/c
  - Area #2 - 275 samples collected from 44 locations, 50-foot c/c
- Image displays 2023 DPT results with plume(s) based on historic data

Area #1: 2023 DPT Investigation Results

Interval (ft bls):	0-10	10-15	15-20	20-28	28-34	34-40	>40

>10xNADC:	0	1	14	16	12	18	1
Maximum (ppb):	160	1,200	6,000	12,000	9,600	8,000	8,300
Average (ppb):	33	217	816	1,317	1,263	997	725

Dataset includes 314 samples collected from 49 locations:

- Freon was not detected in any of the 314 samples
- TCE was detected in 16 samples and a sample exceeding GCTL and NADC respectively
- tDCE was detected in 18 samples and 2 samples exceeding GCTL and NADC respectively
- cDCE and VC exceeded GCTL, NADC, and 10xNADC

Contouring and data evaluation:

- Results within one-year HCS capture zone and performance results within Hot Spot 6 treatment zone were used to:
  - Generate TCE, cDCE, and tDCE interval slides, results not contoured
    - All cDCE exceeding 10xNADC coincide with VC exceeding 10xNADC
  - Generate interval slides for VC, results were contoured
- Intervals 0-10', 10'-15', 15'-20', 20'-28', 28'-34', 34'-40', and >40' bls
  - 0-10' included all data from ground surface to and including 10' bls
  - 10'-15' included all data greater than 10' bls to and including 15' bls
  - Deeper intervals followed same logic
- If an interval had multiple results, maximum was used for contouring
- Elevated non-detected values for cDCE > 140, and VC > 20 µg/L not used in contouring, non-detected values less than those values were assumed to be zero
- All sample locations have labels; only locations with symbol used in contouring
- Vertical Profiles provided for vertical evaluation

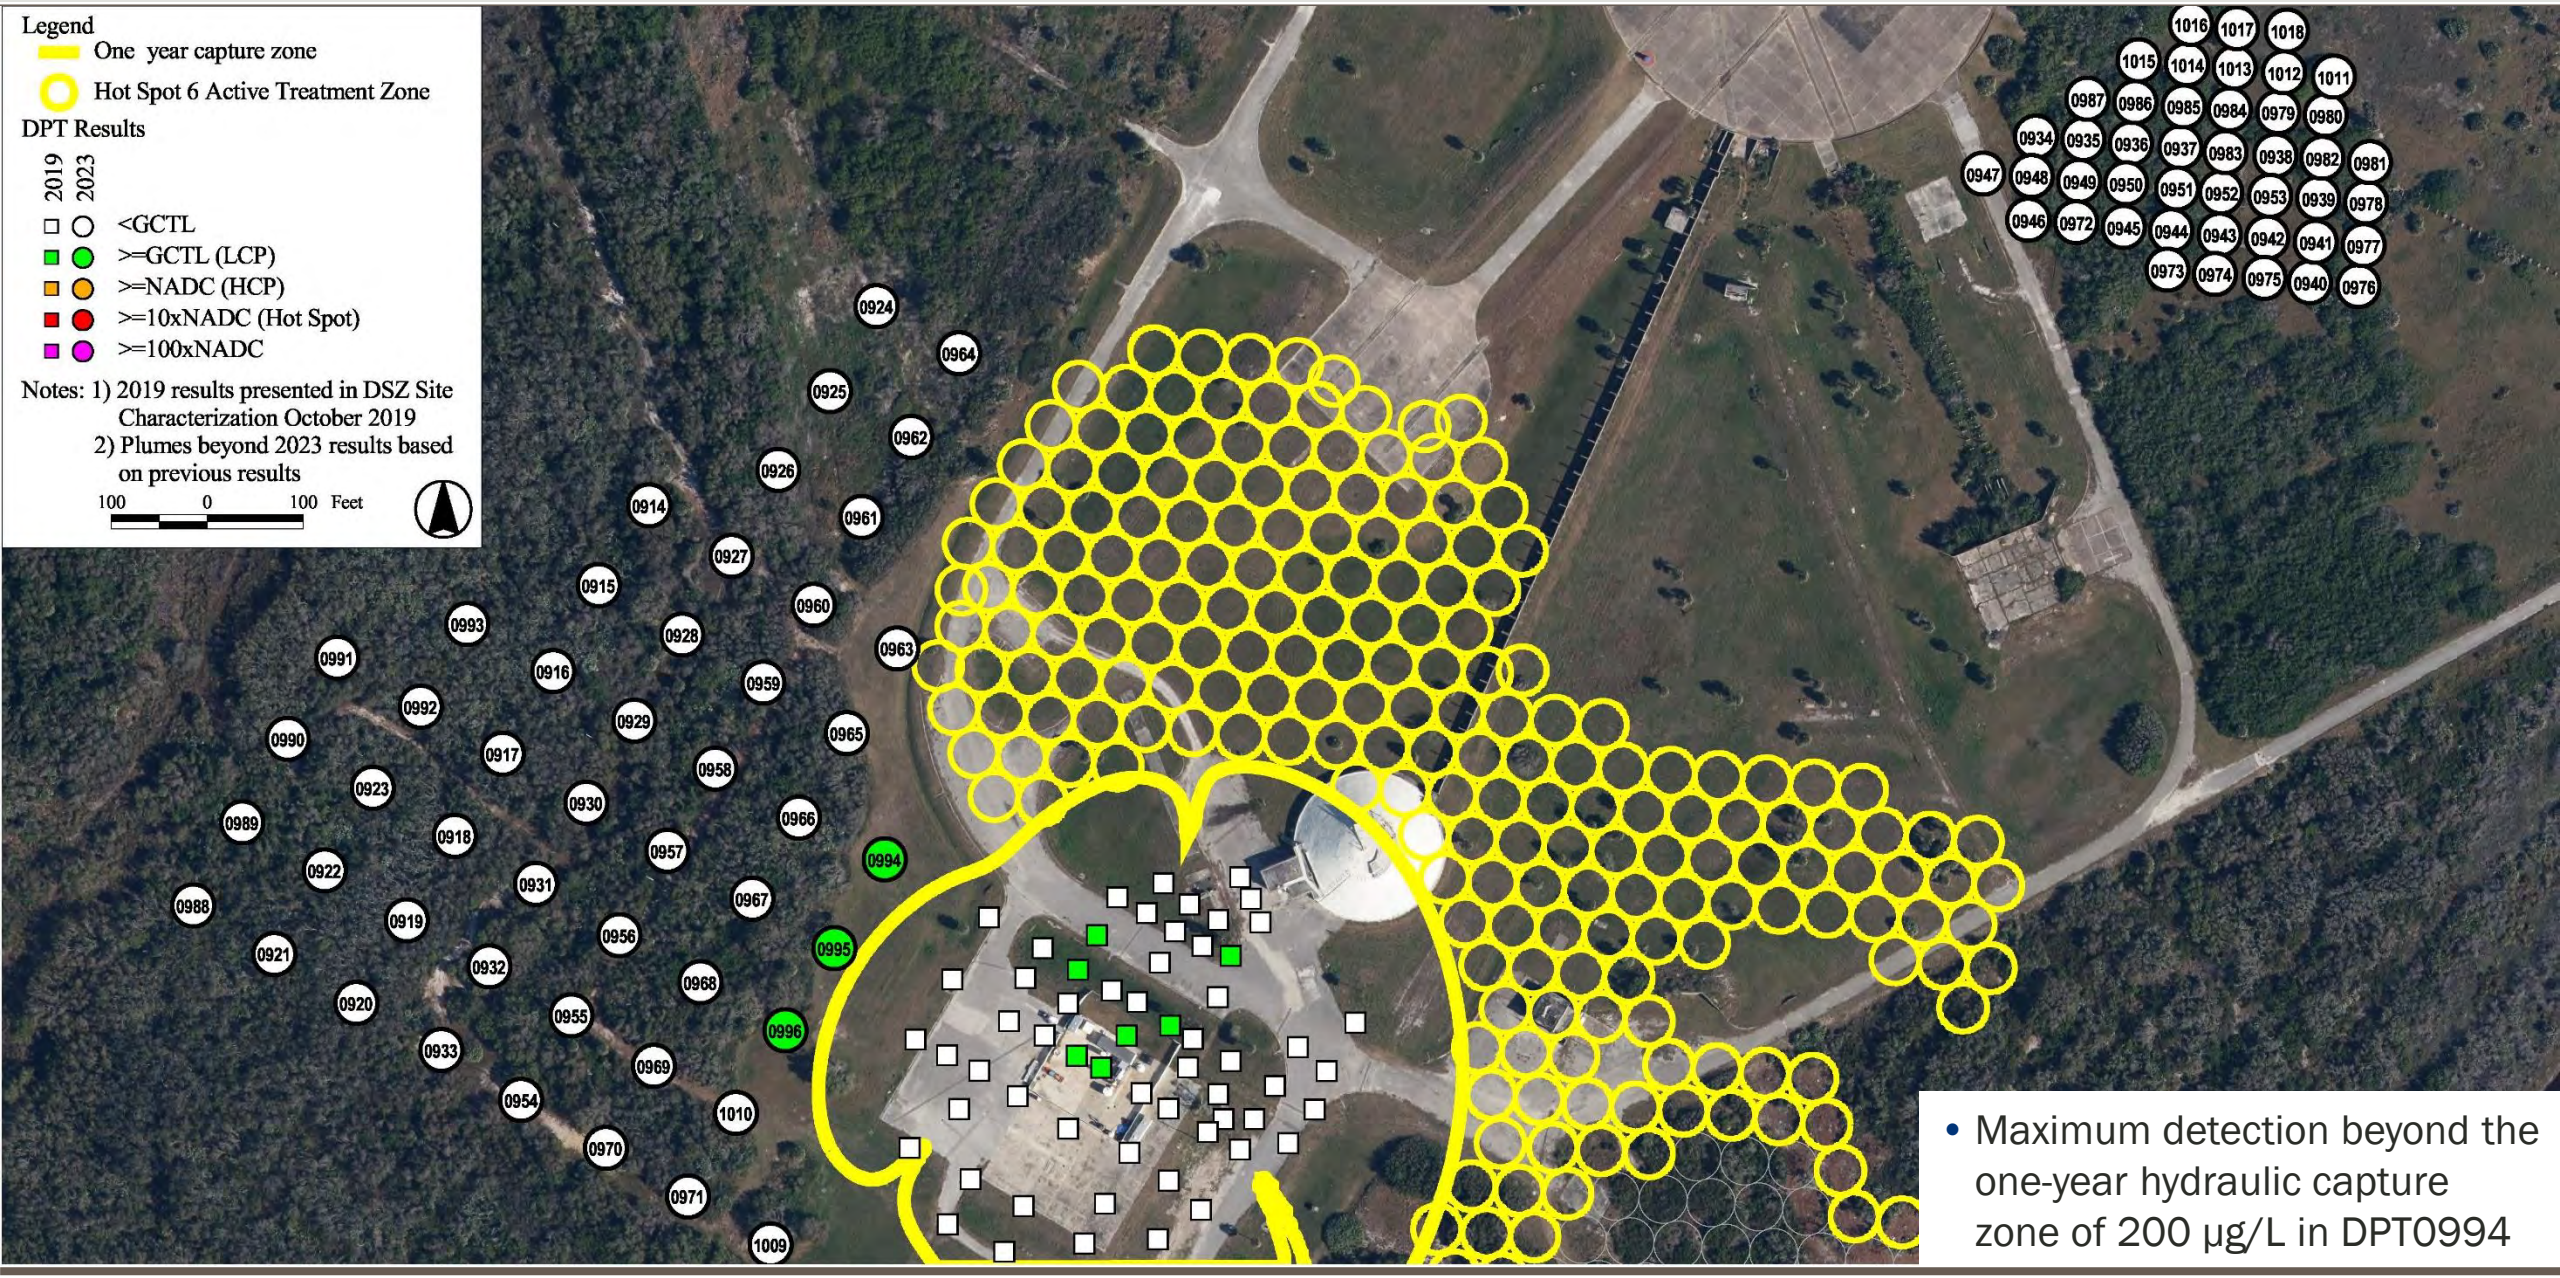
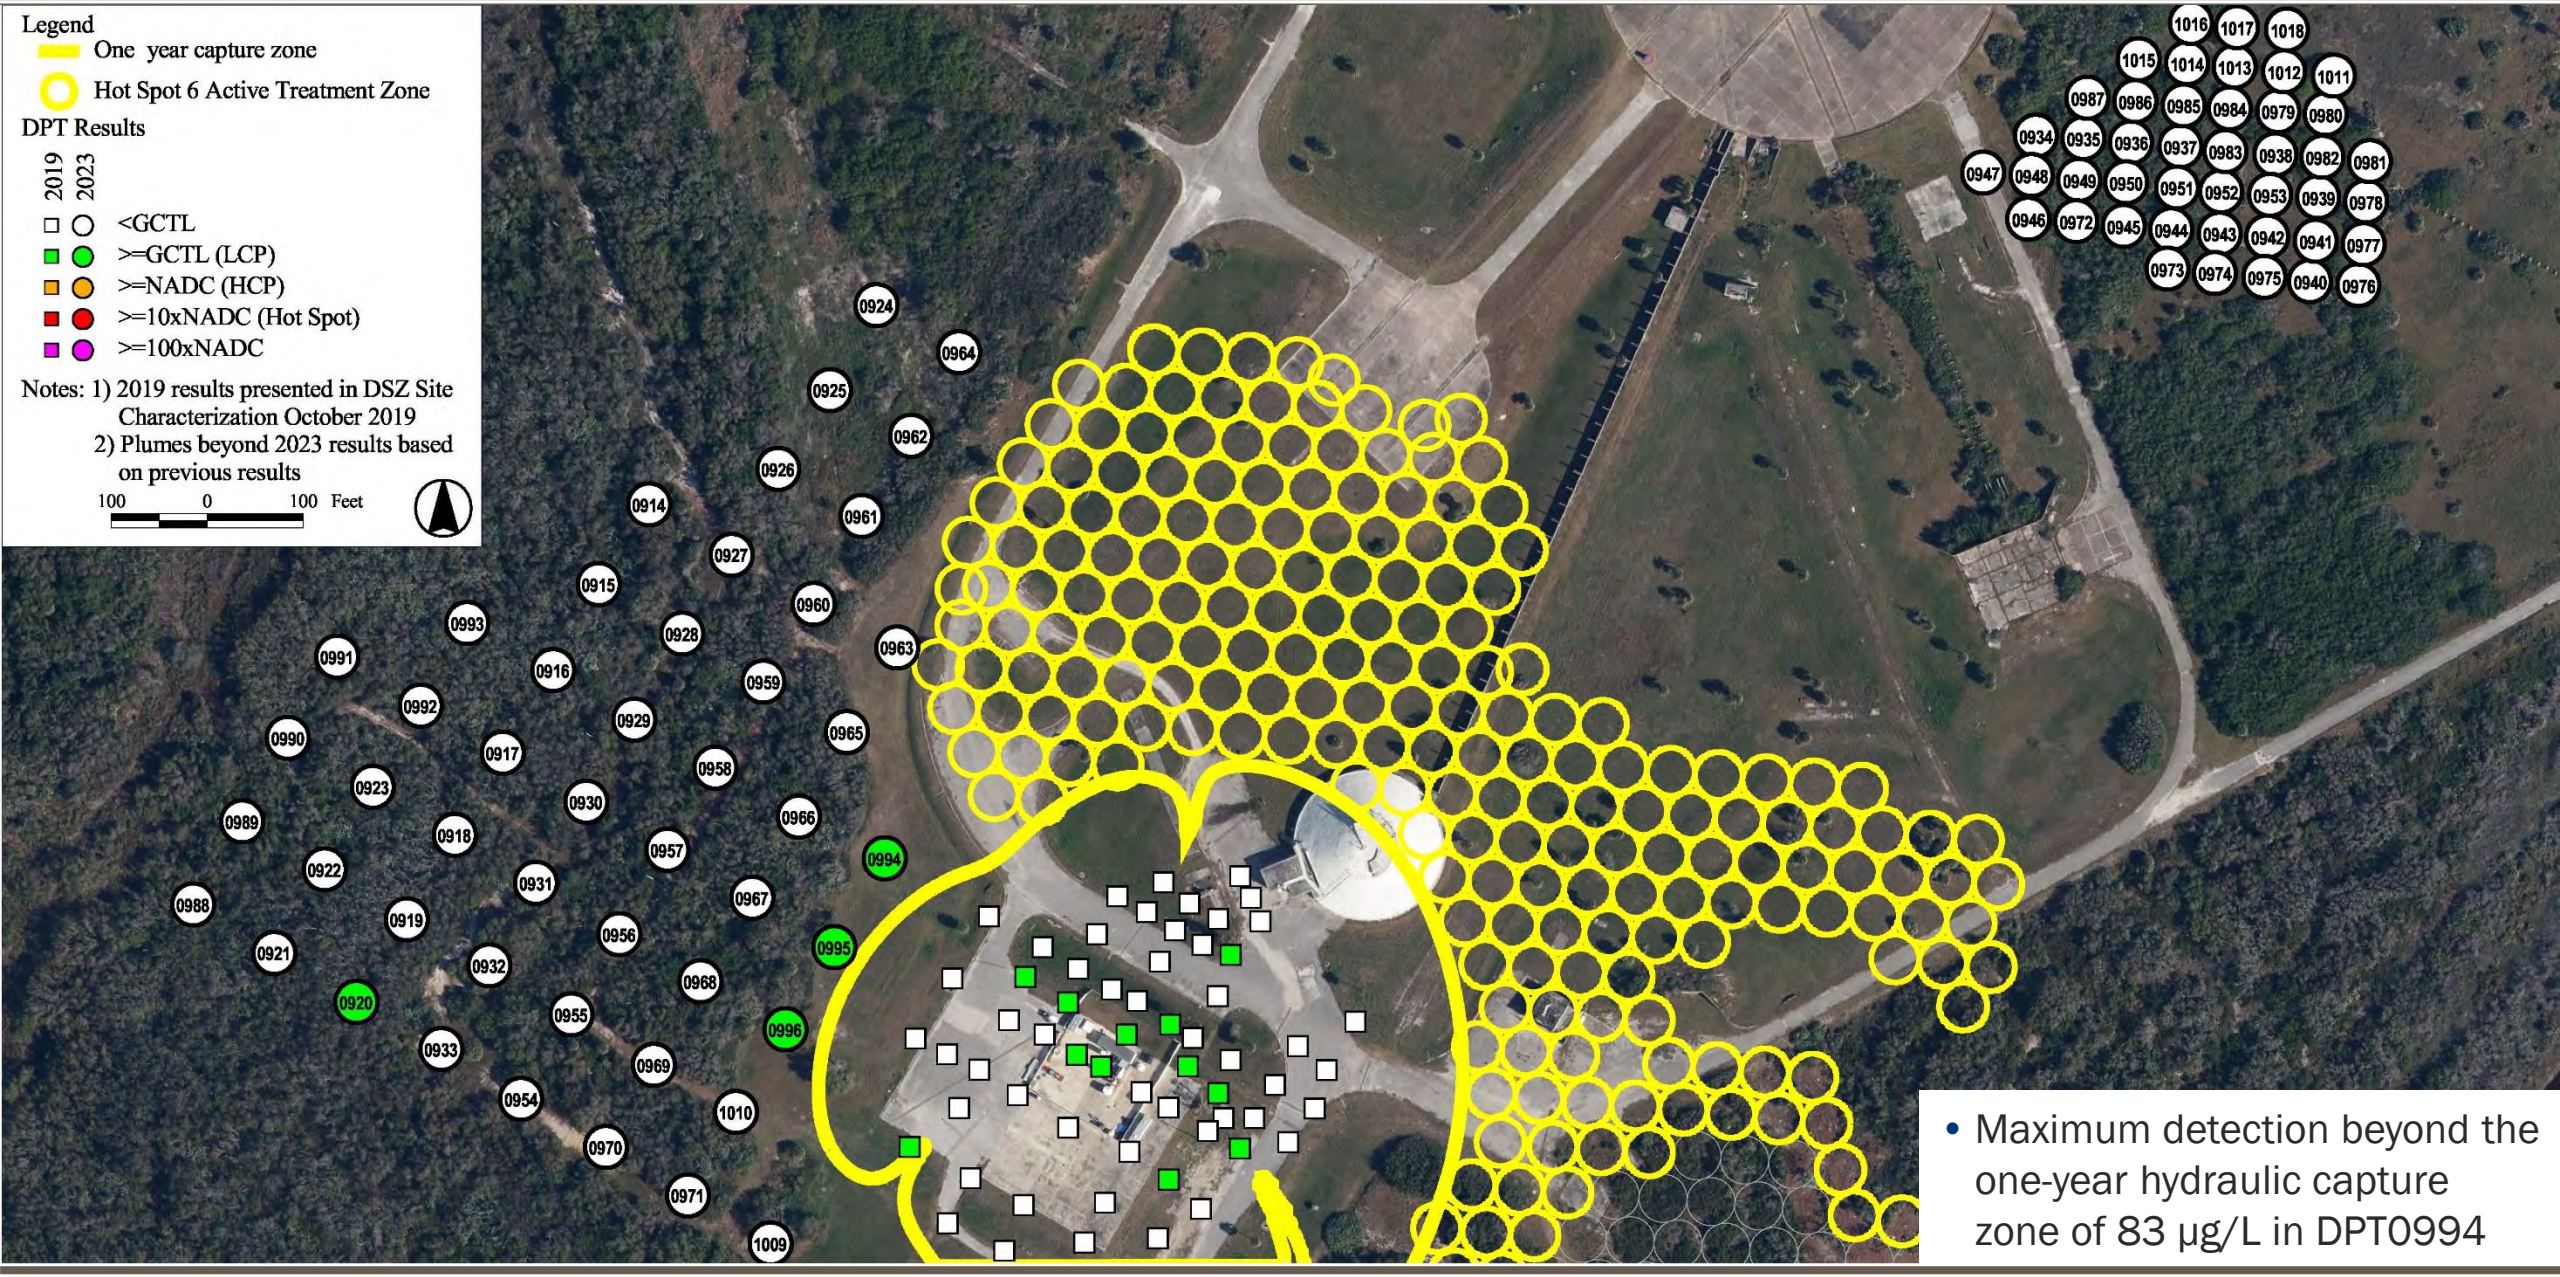
Average (ppb):	63	119	383	1,169	298	5	0



Dataset includes 275 samples collected from 44 locations:

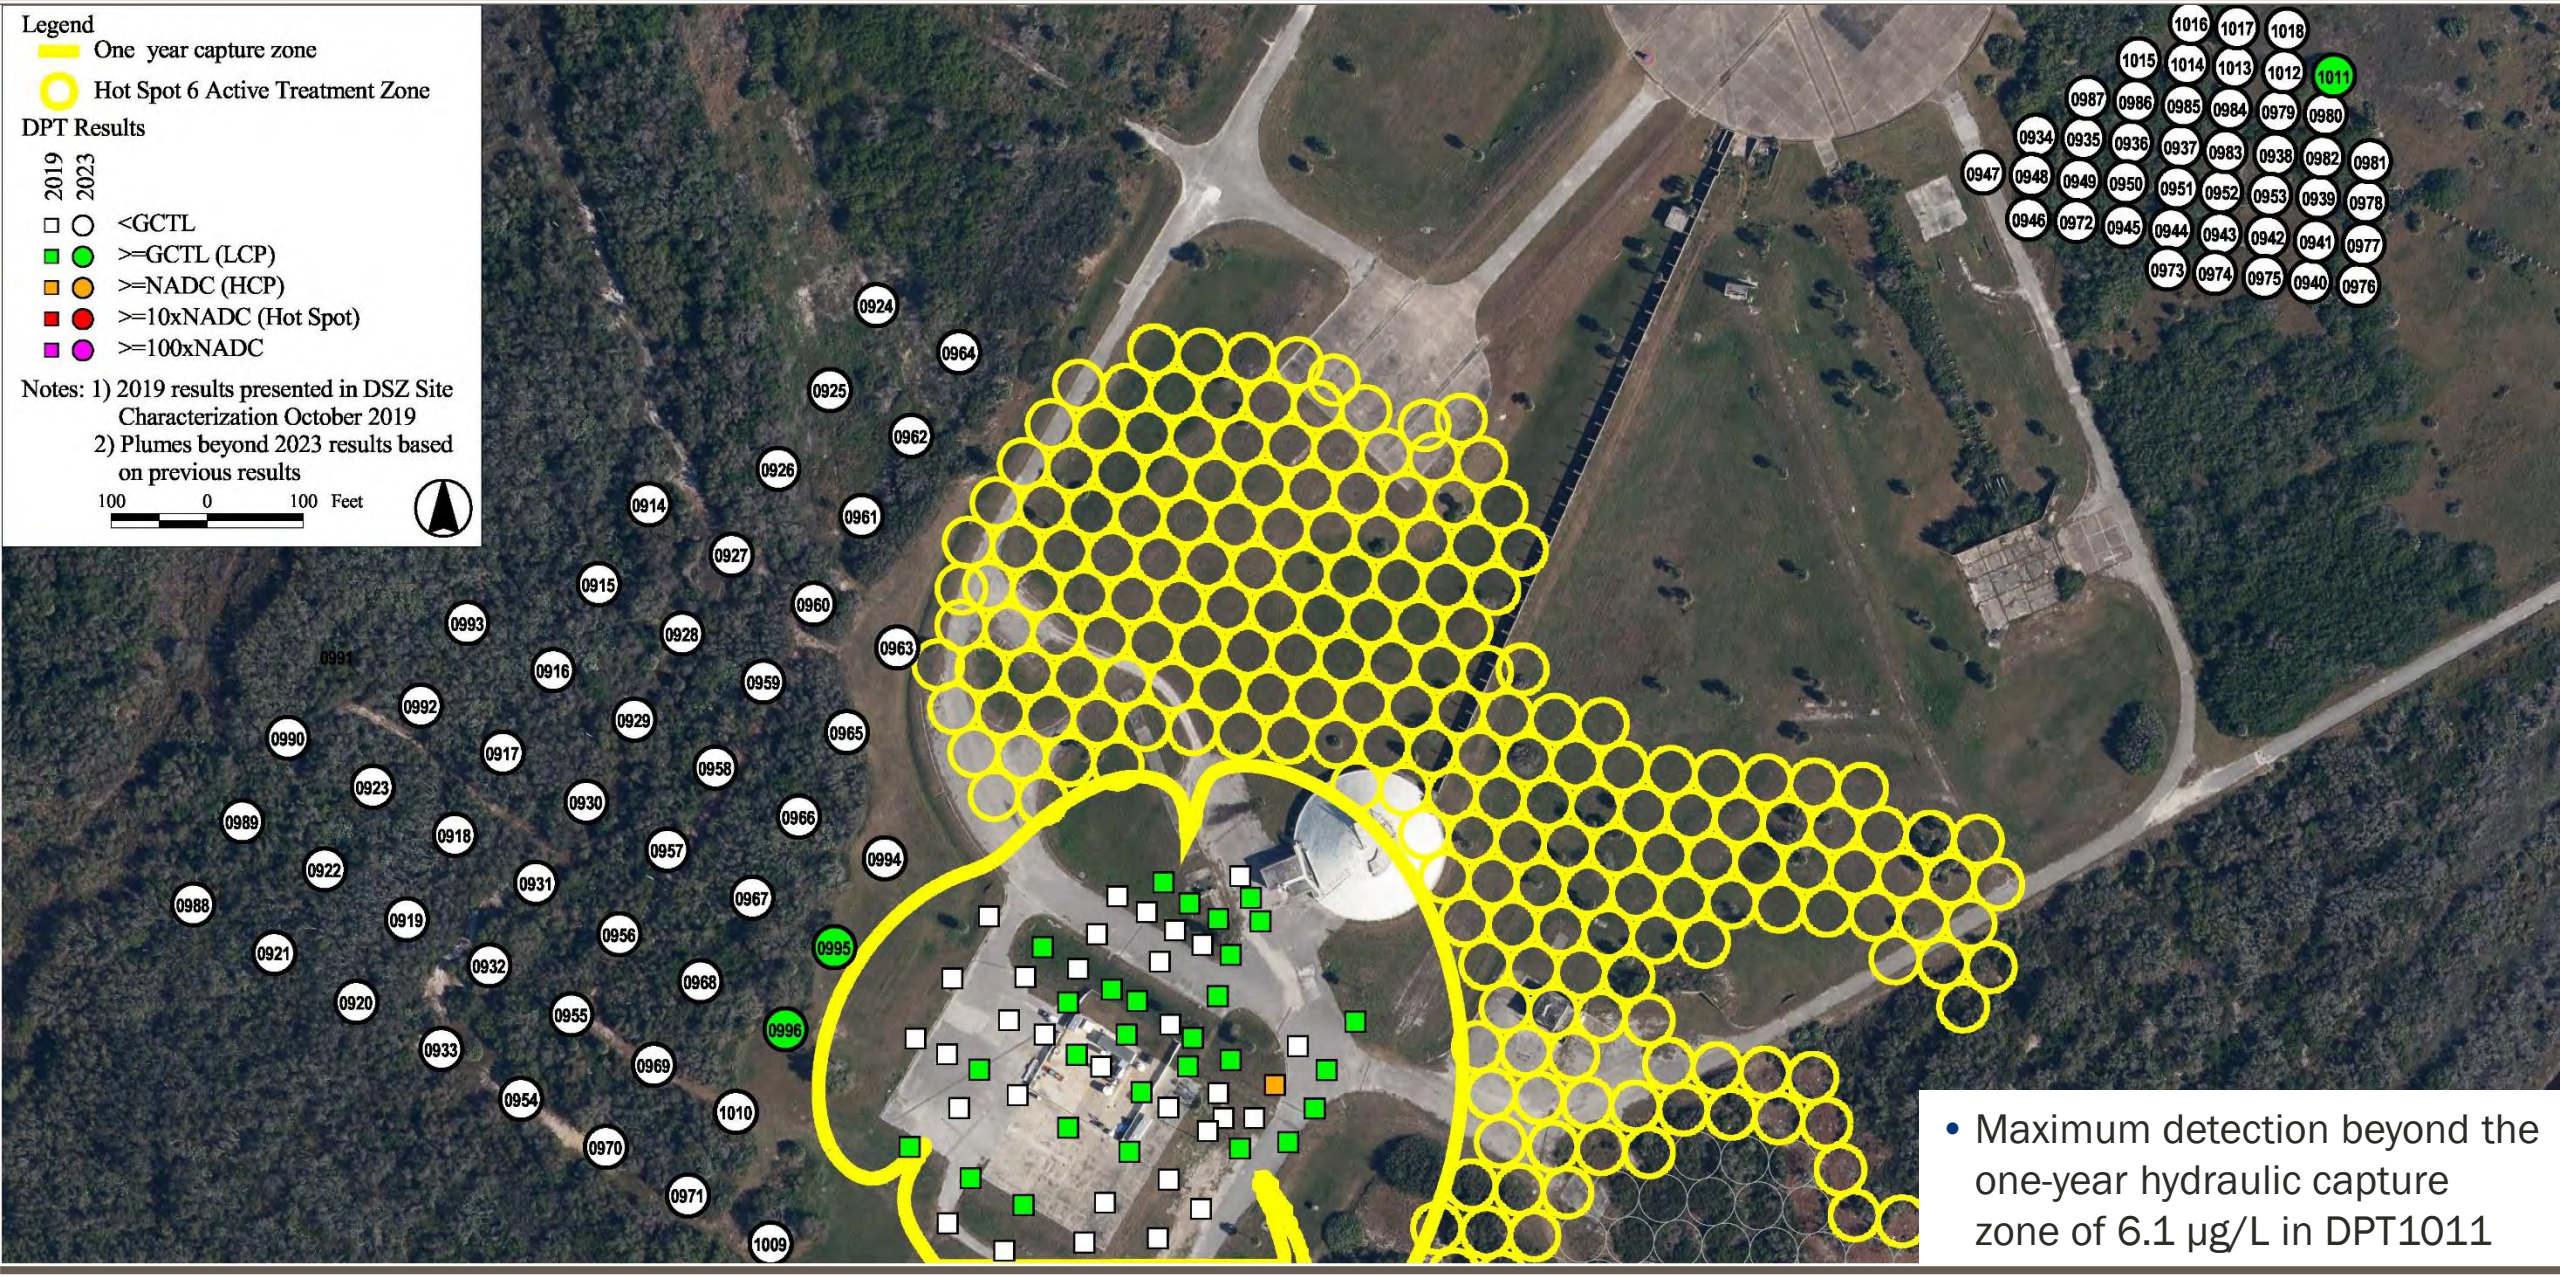
- Freon was not detected in any of the 275 samples
- TCE was detected in 2 samples exceeding GCTL
- cDCE was detected in 57 samples and 6 samples exceeding GCTL and NADC respectively
- tDCE was detected in 5 samples exceeding GCTL
- VC exceeded GCTL, NADC, and 10xNADC

Contouring and data evaluation:



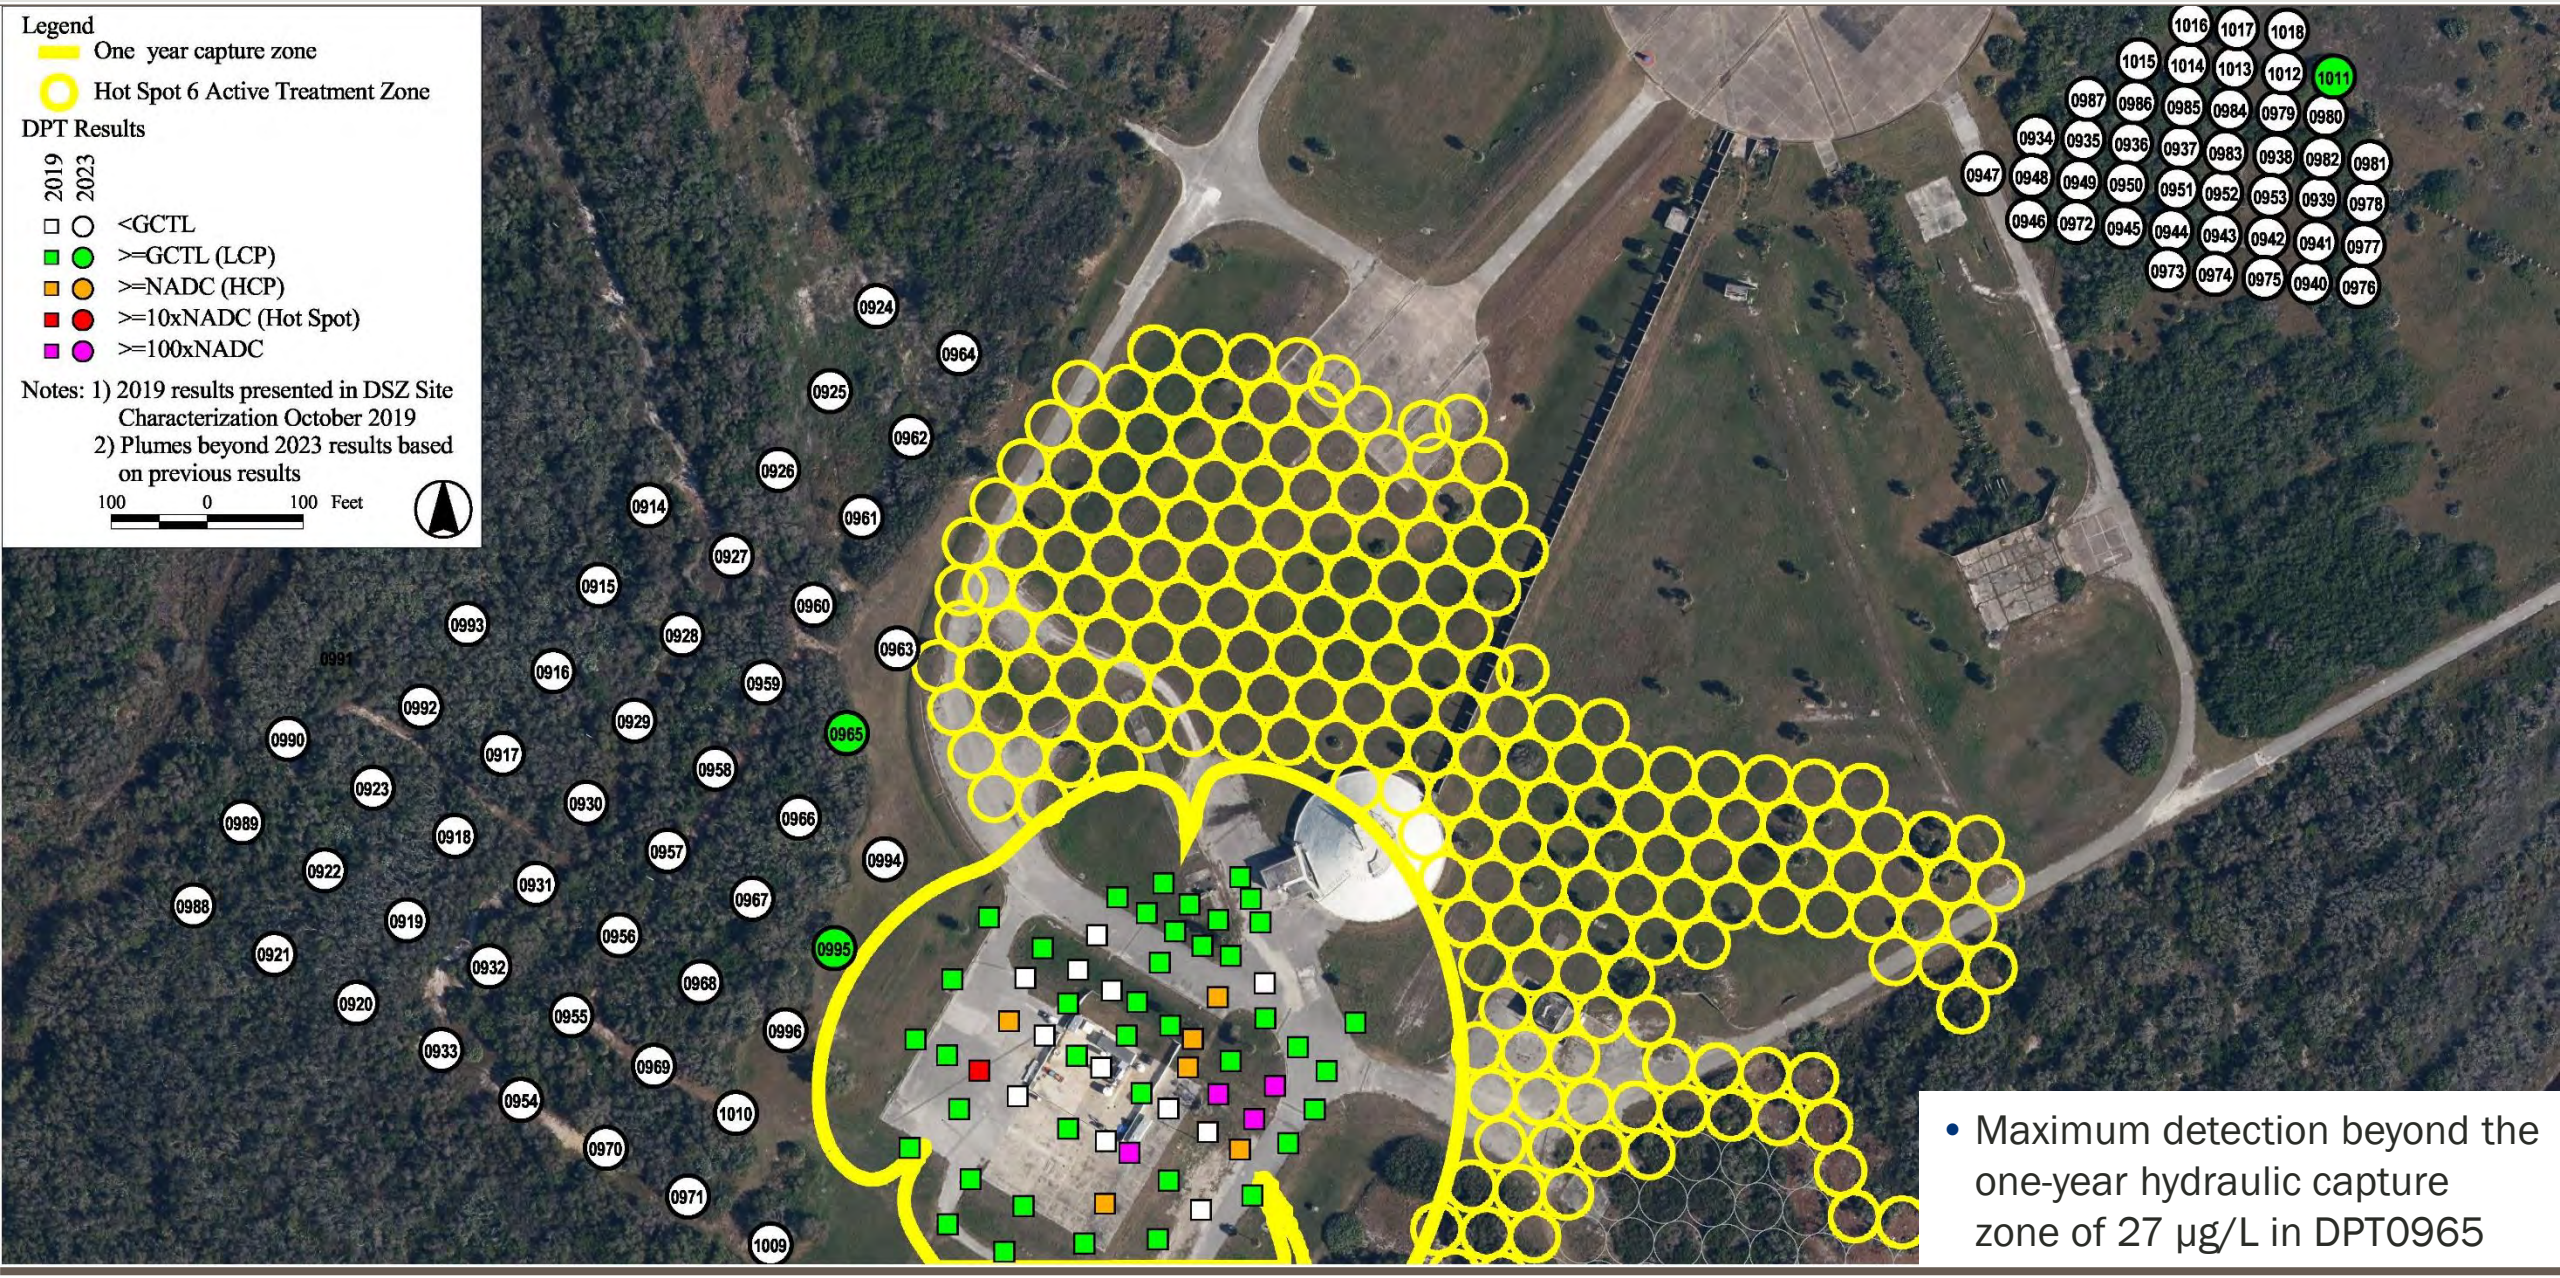
- Results within one-year HCS capture zone and performance results within Hot Spot 6 treatment zone were used to:
  - Generate TCE, cDCE, and tDCE interval slides, results not contoured
  - Generate interval slides for VC, results were contoured
- Intervals 0-10', 10'-15', 15'-20', 20'-28', 28'-34', 34'-40', and >40' bls
  - 0-10' included all data from ground surface to and including 10' bls
  - 10'-15' included all data greater than 10' bls to and including 15' bls
  - Deeper intervals followed same logic
- If an interval had multiple results, maximum was used for contouring
- Elevated non-detected values for cDCE > 140, and VC > 20 µg/L not used in contouring, non-detected values less than those values were assumed to be zero
- All sample locations have labels; only locations with symbol used in contouring
- Vertical Profiles provided for vertical evaluation

TCE, Interval: 0 to 10 feet bls (Layer 1)



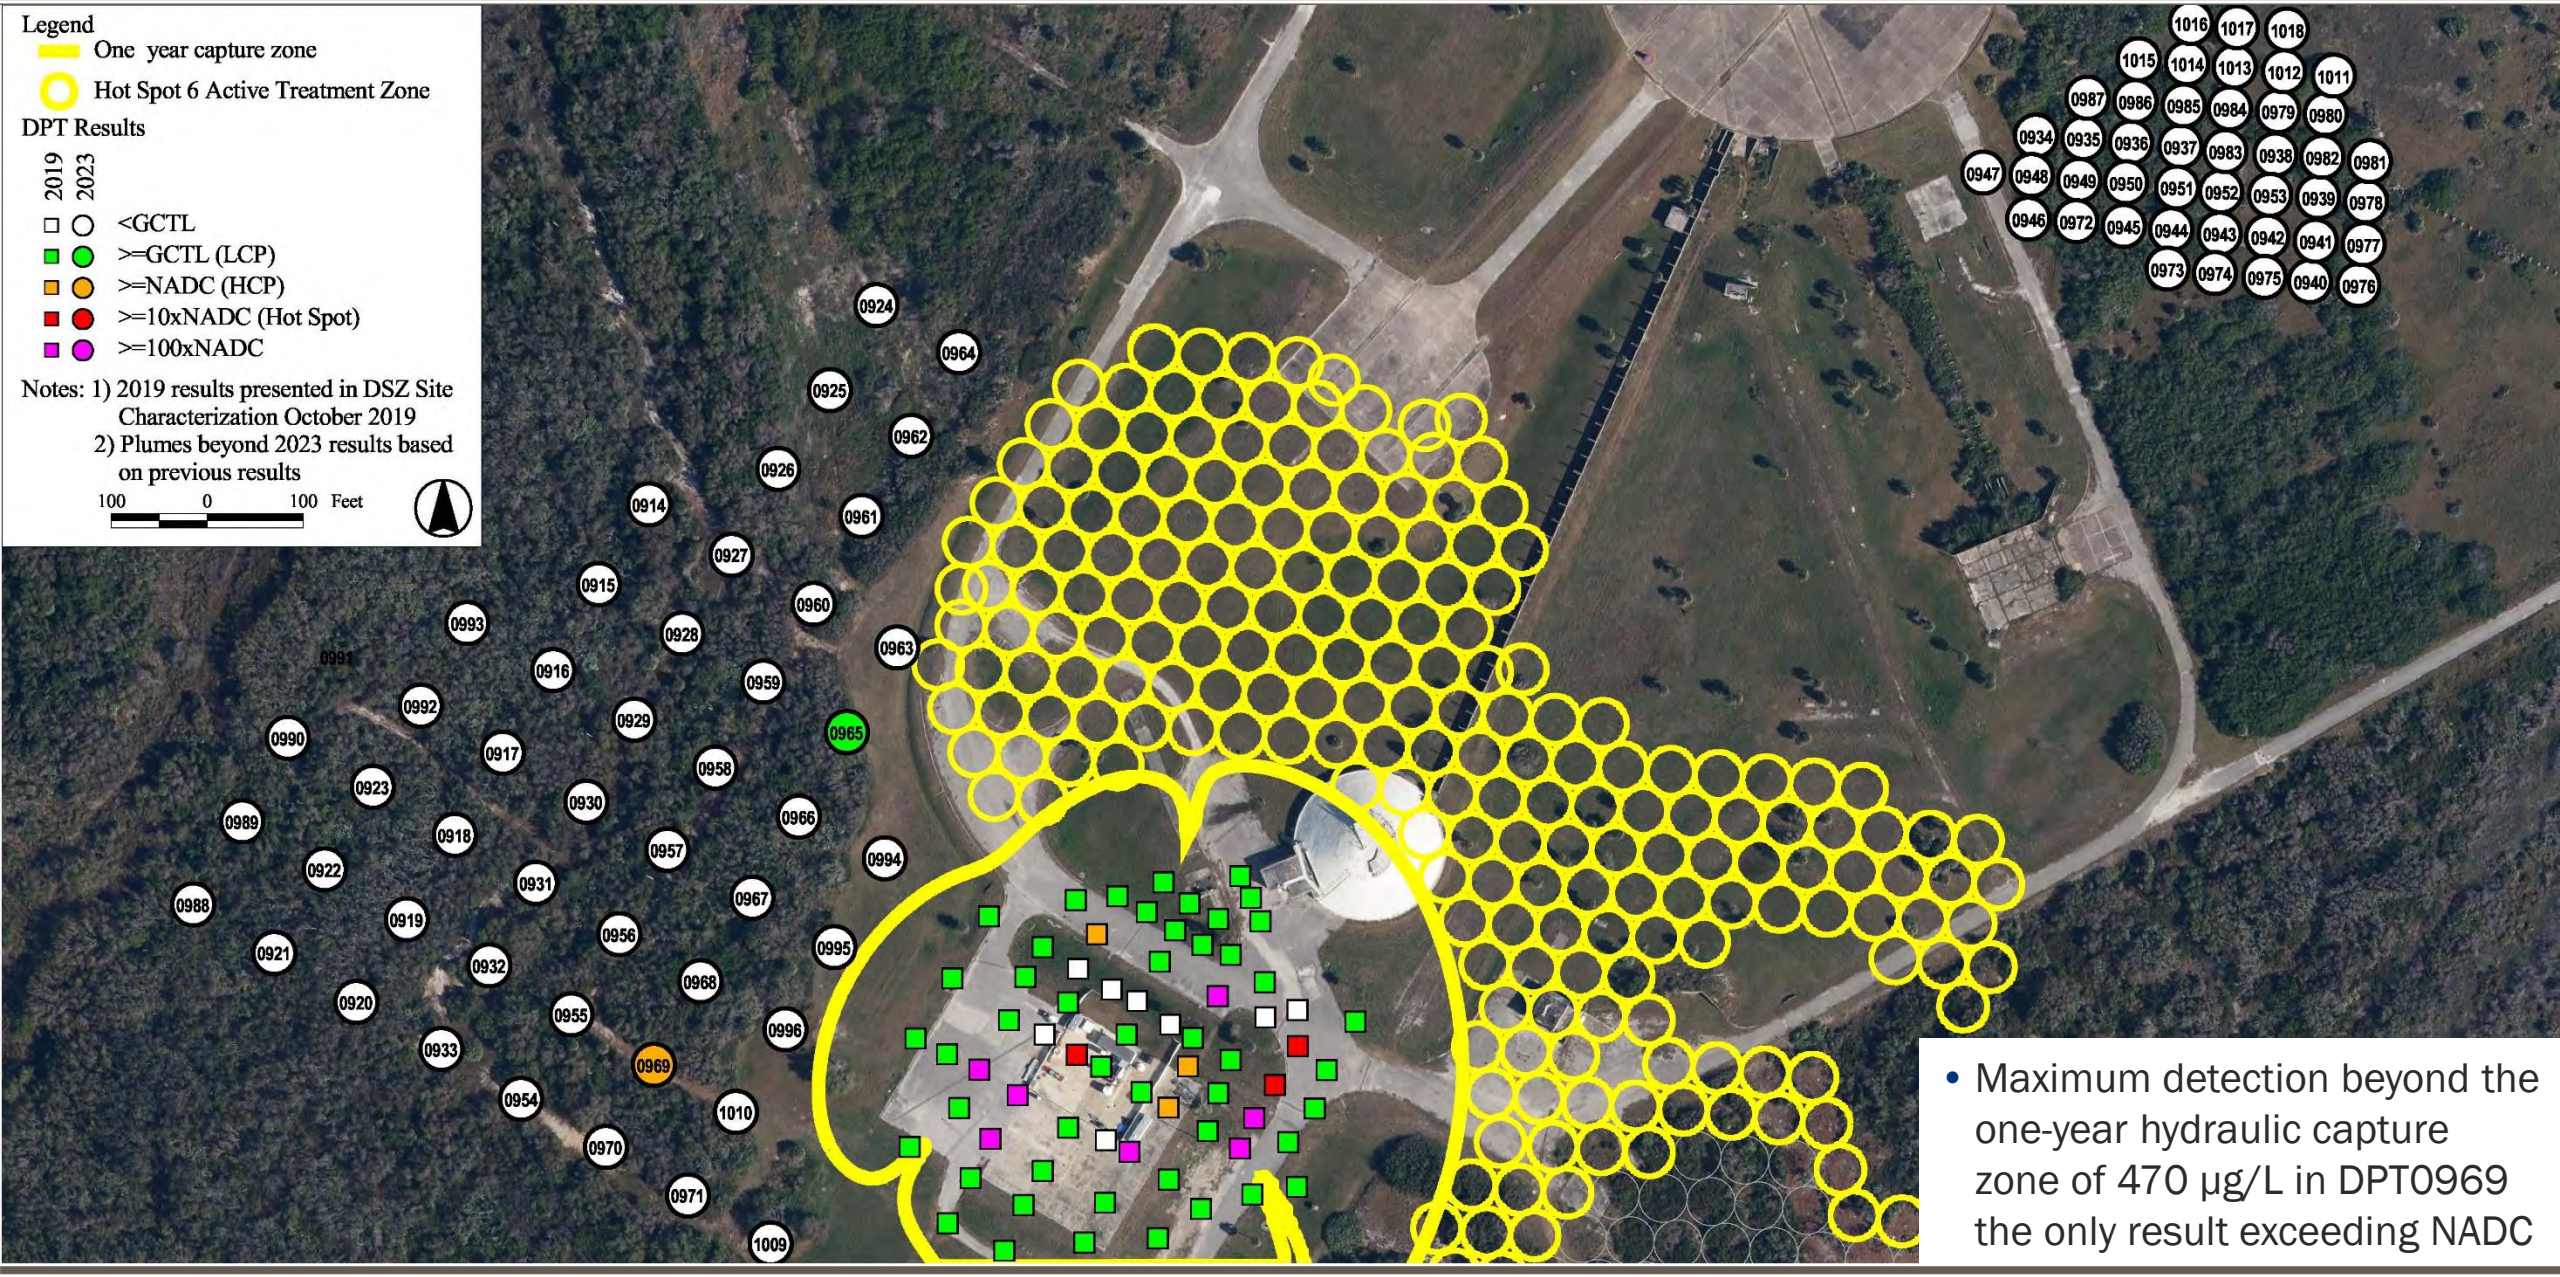
- Maximum detection beyond the one-year hydraulic capture zone of 200 µg/L in DPT0994

TCE, Interval: 10 to 15 feet bls (Layer 1)



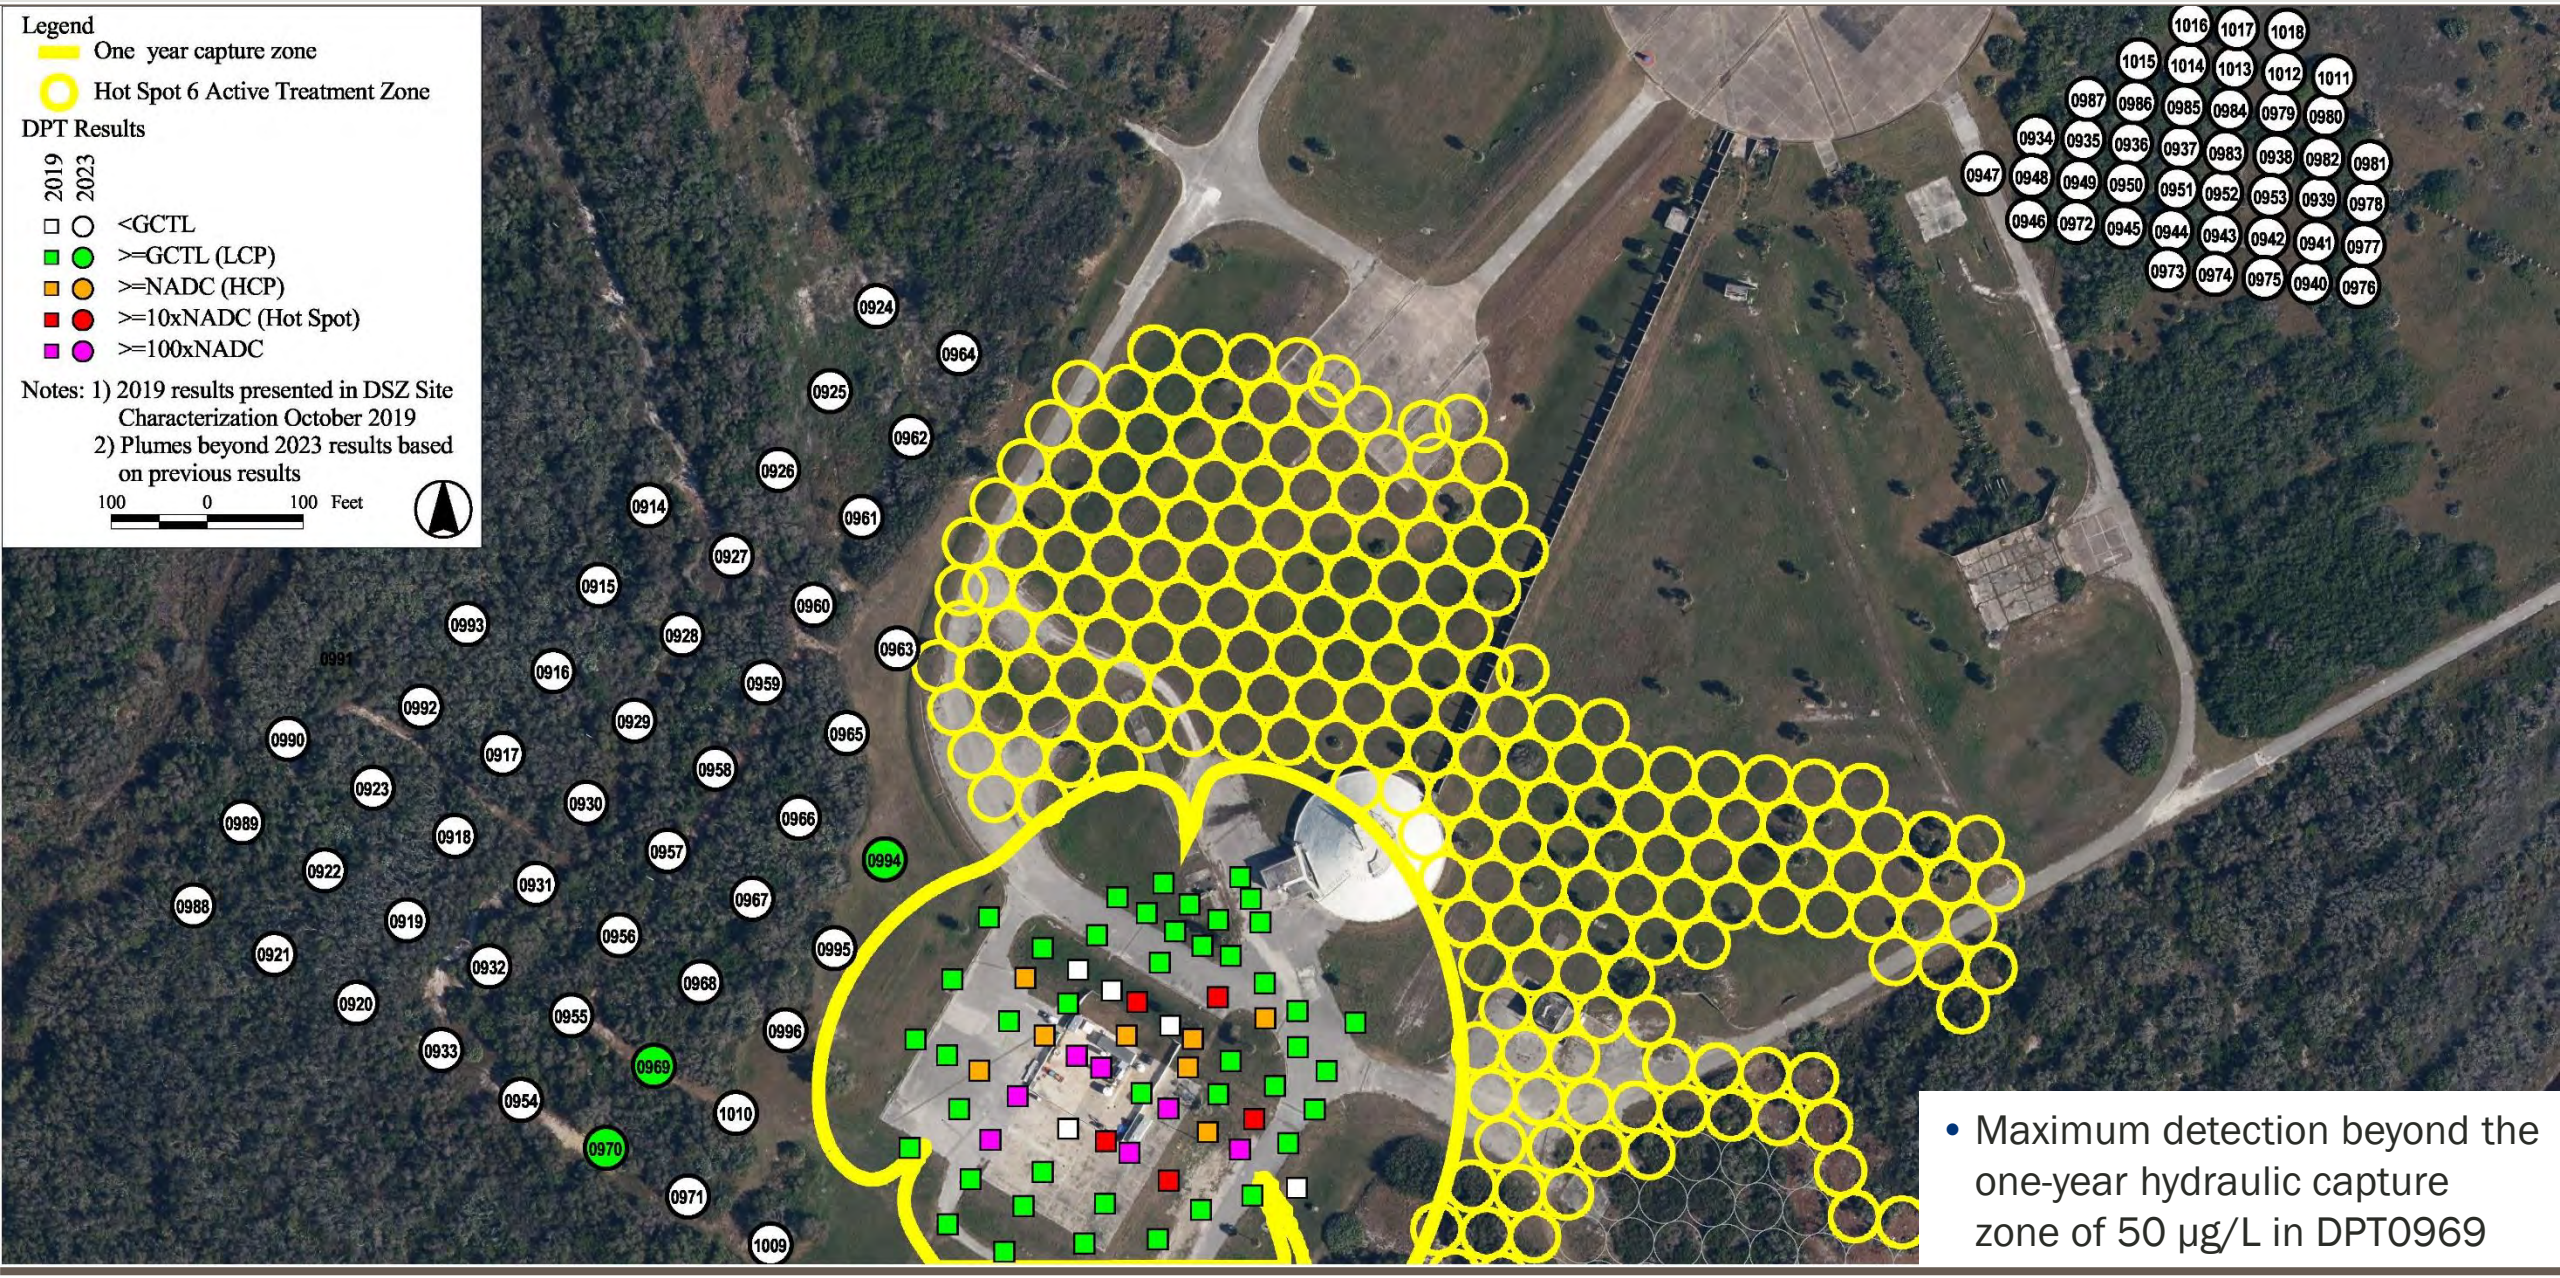
- Maximum detection beyond the one-year hydraulic capture zone of 83 µg/L in DPT0994

TCE, Interval: 15 to 20 feet bls (Layer 1)



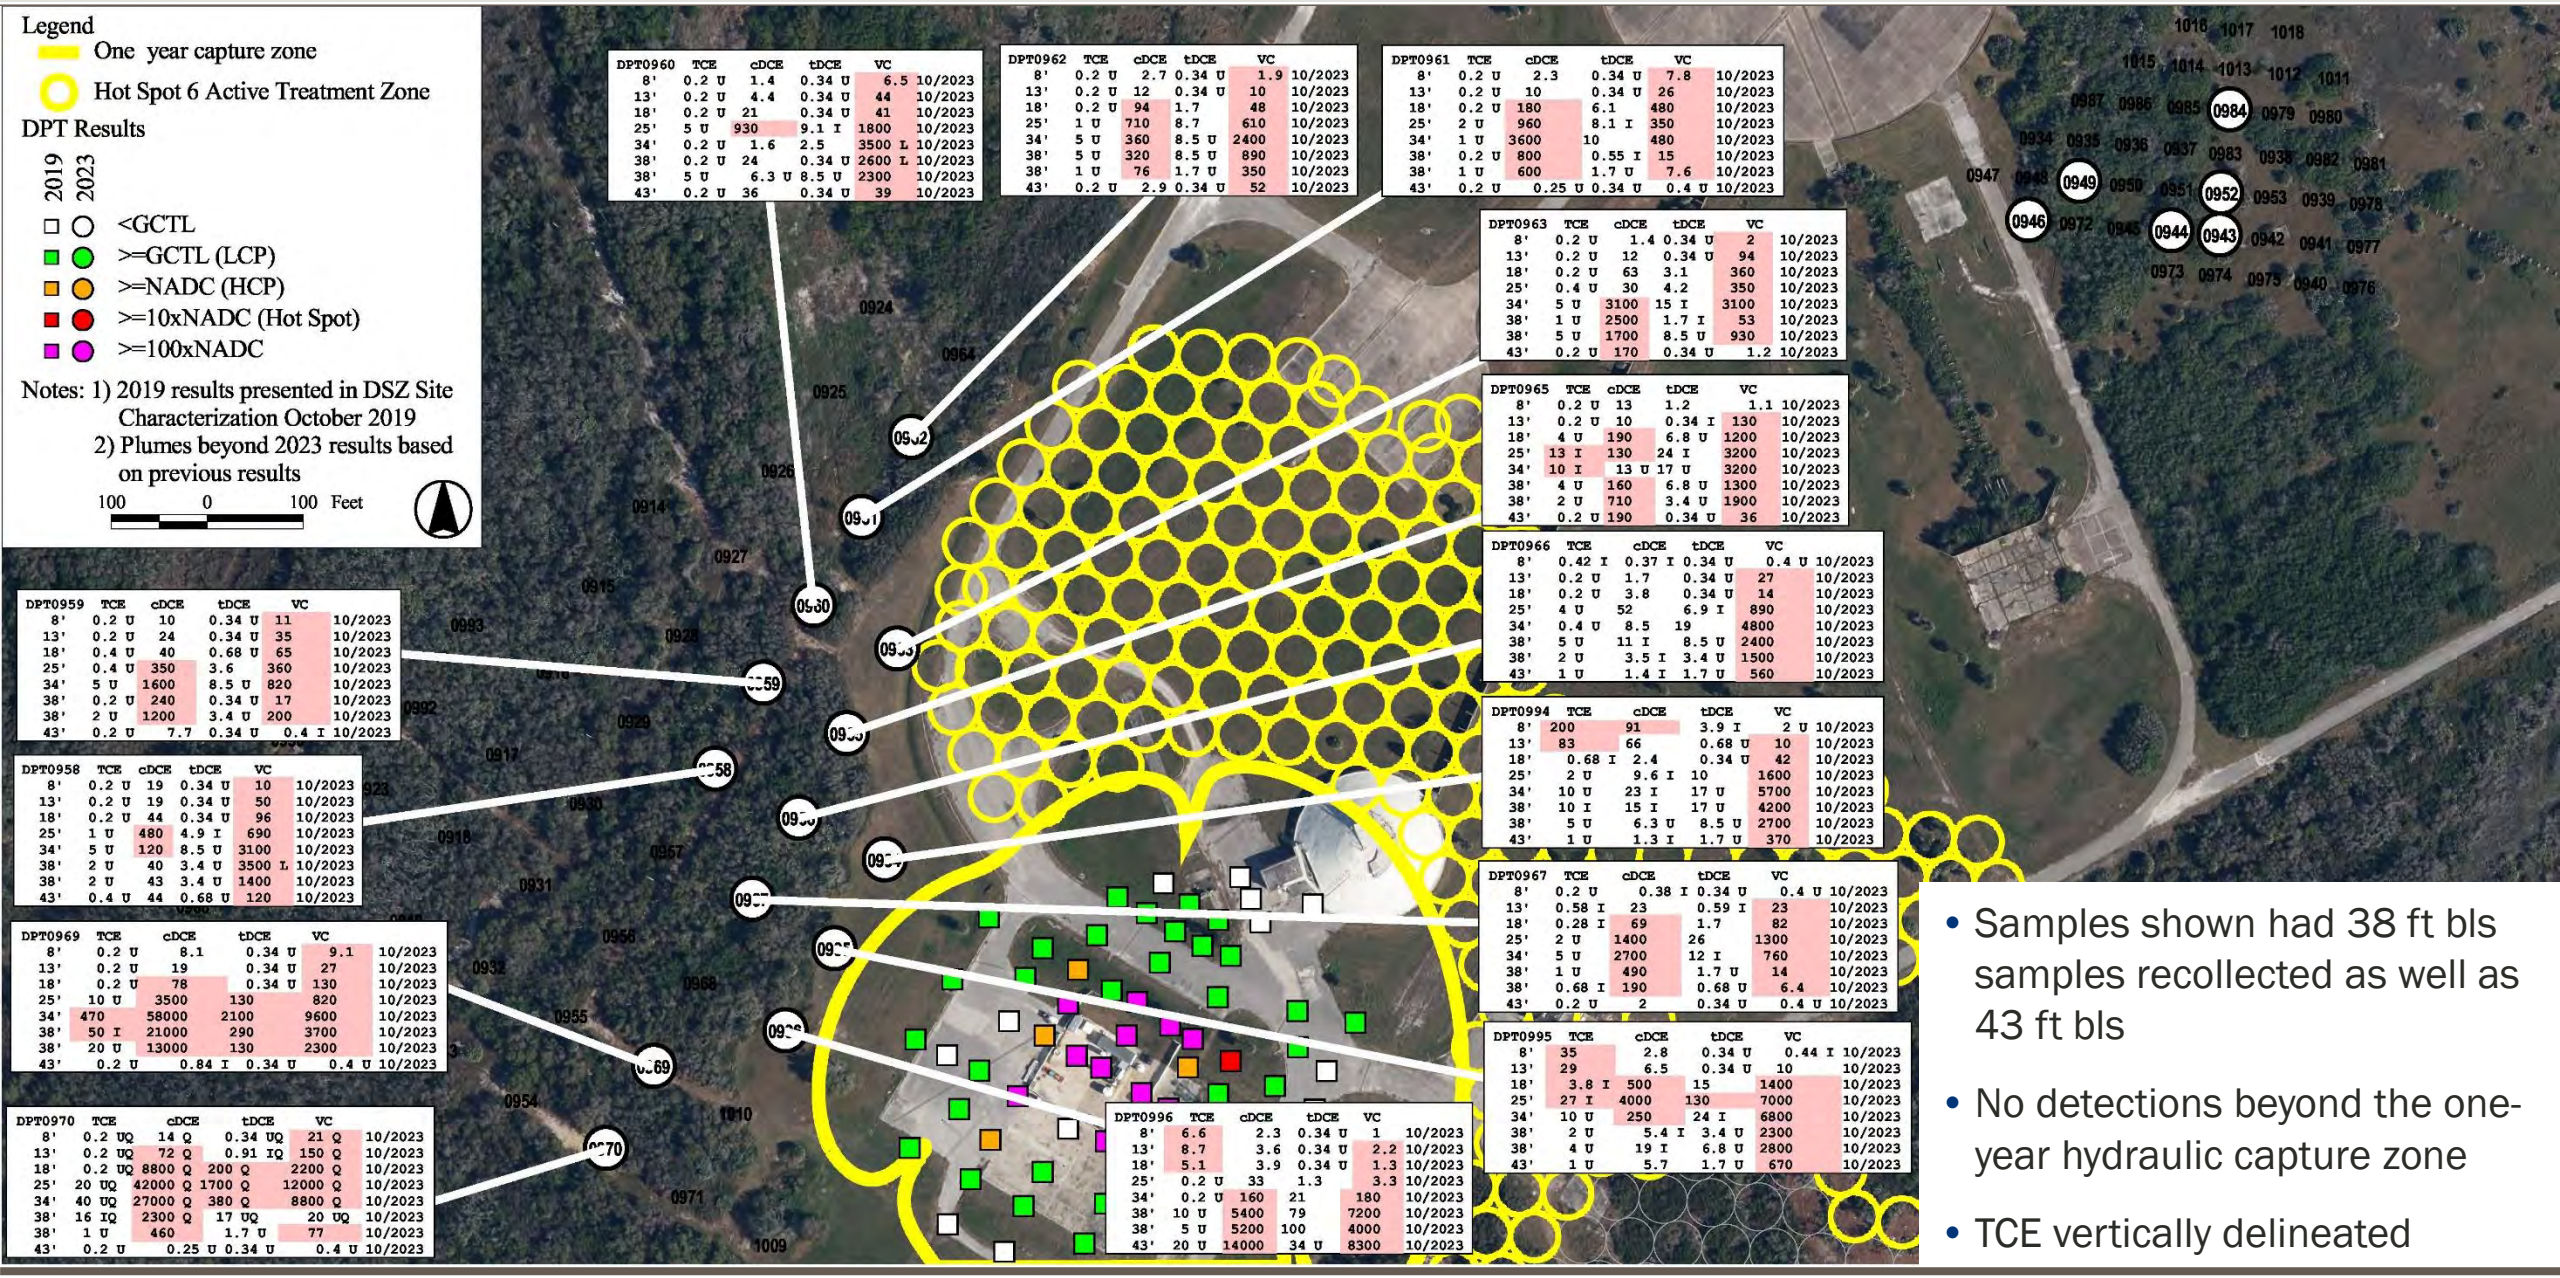
- Maximum detection beyond the one-year hydraulic capture zone of 6.1 µg/L in DPT1011

TCE, Interval: 20 to 28 feet bls (Layer 1/2)



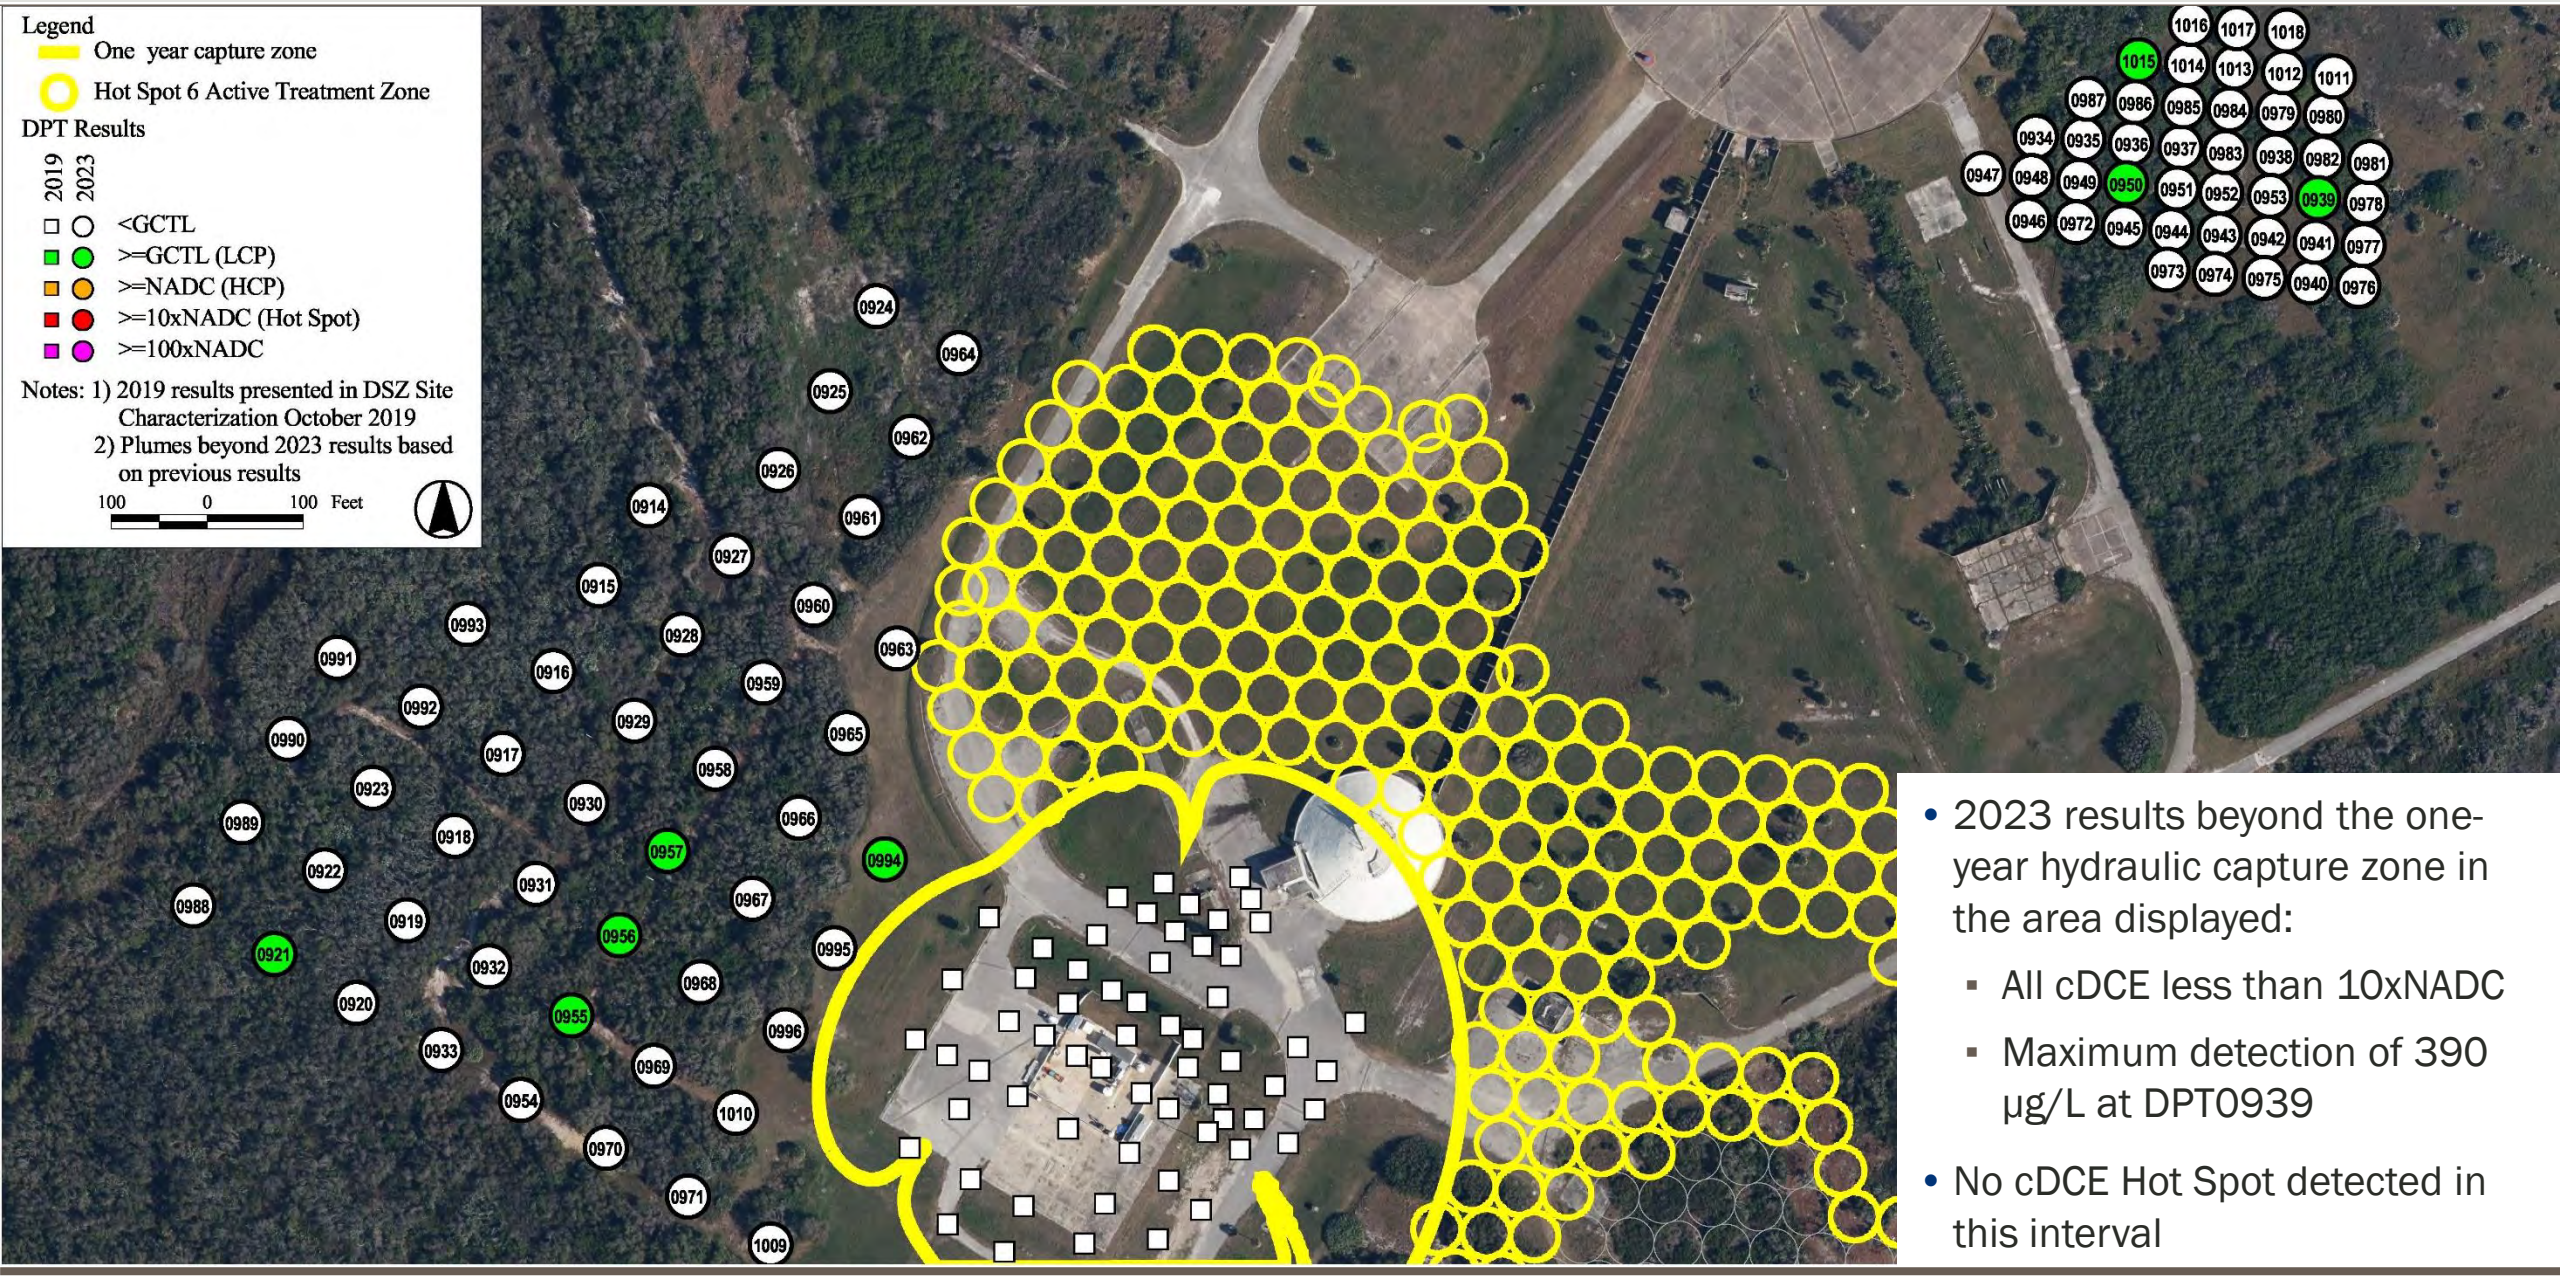
- Maximum detection beyond the one-year hydraulic capture zone of 27 µg/L in DPT0965

TCE, Interval: 28 to 34 feet bls (Layer 3)



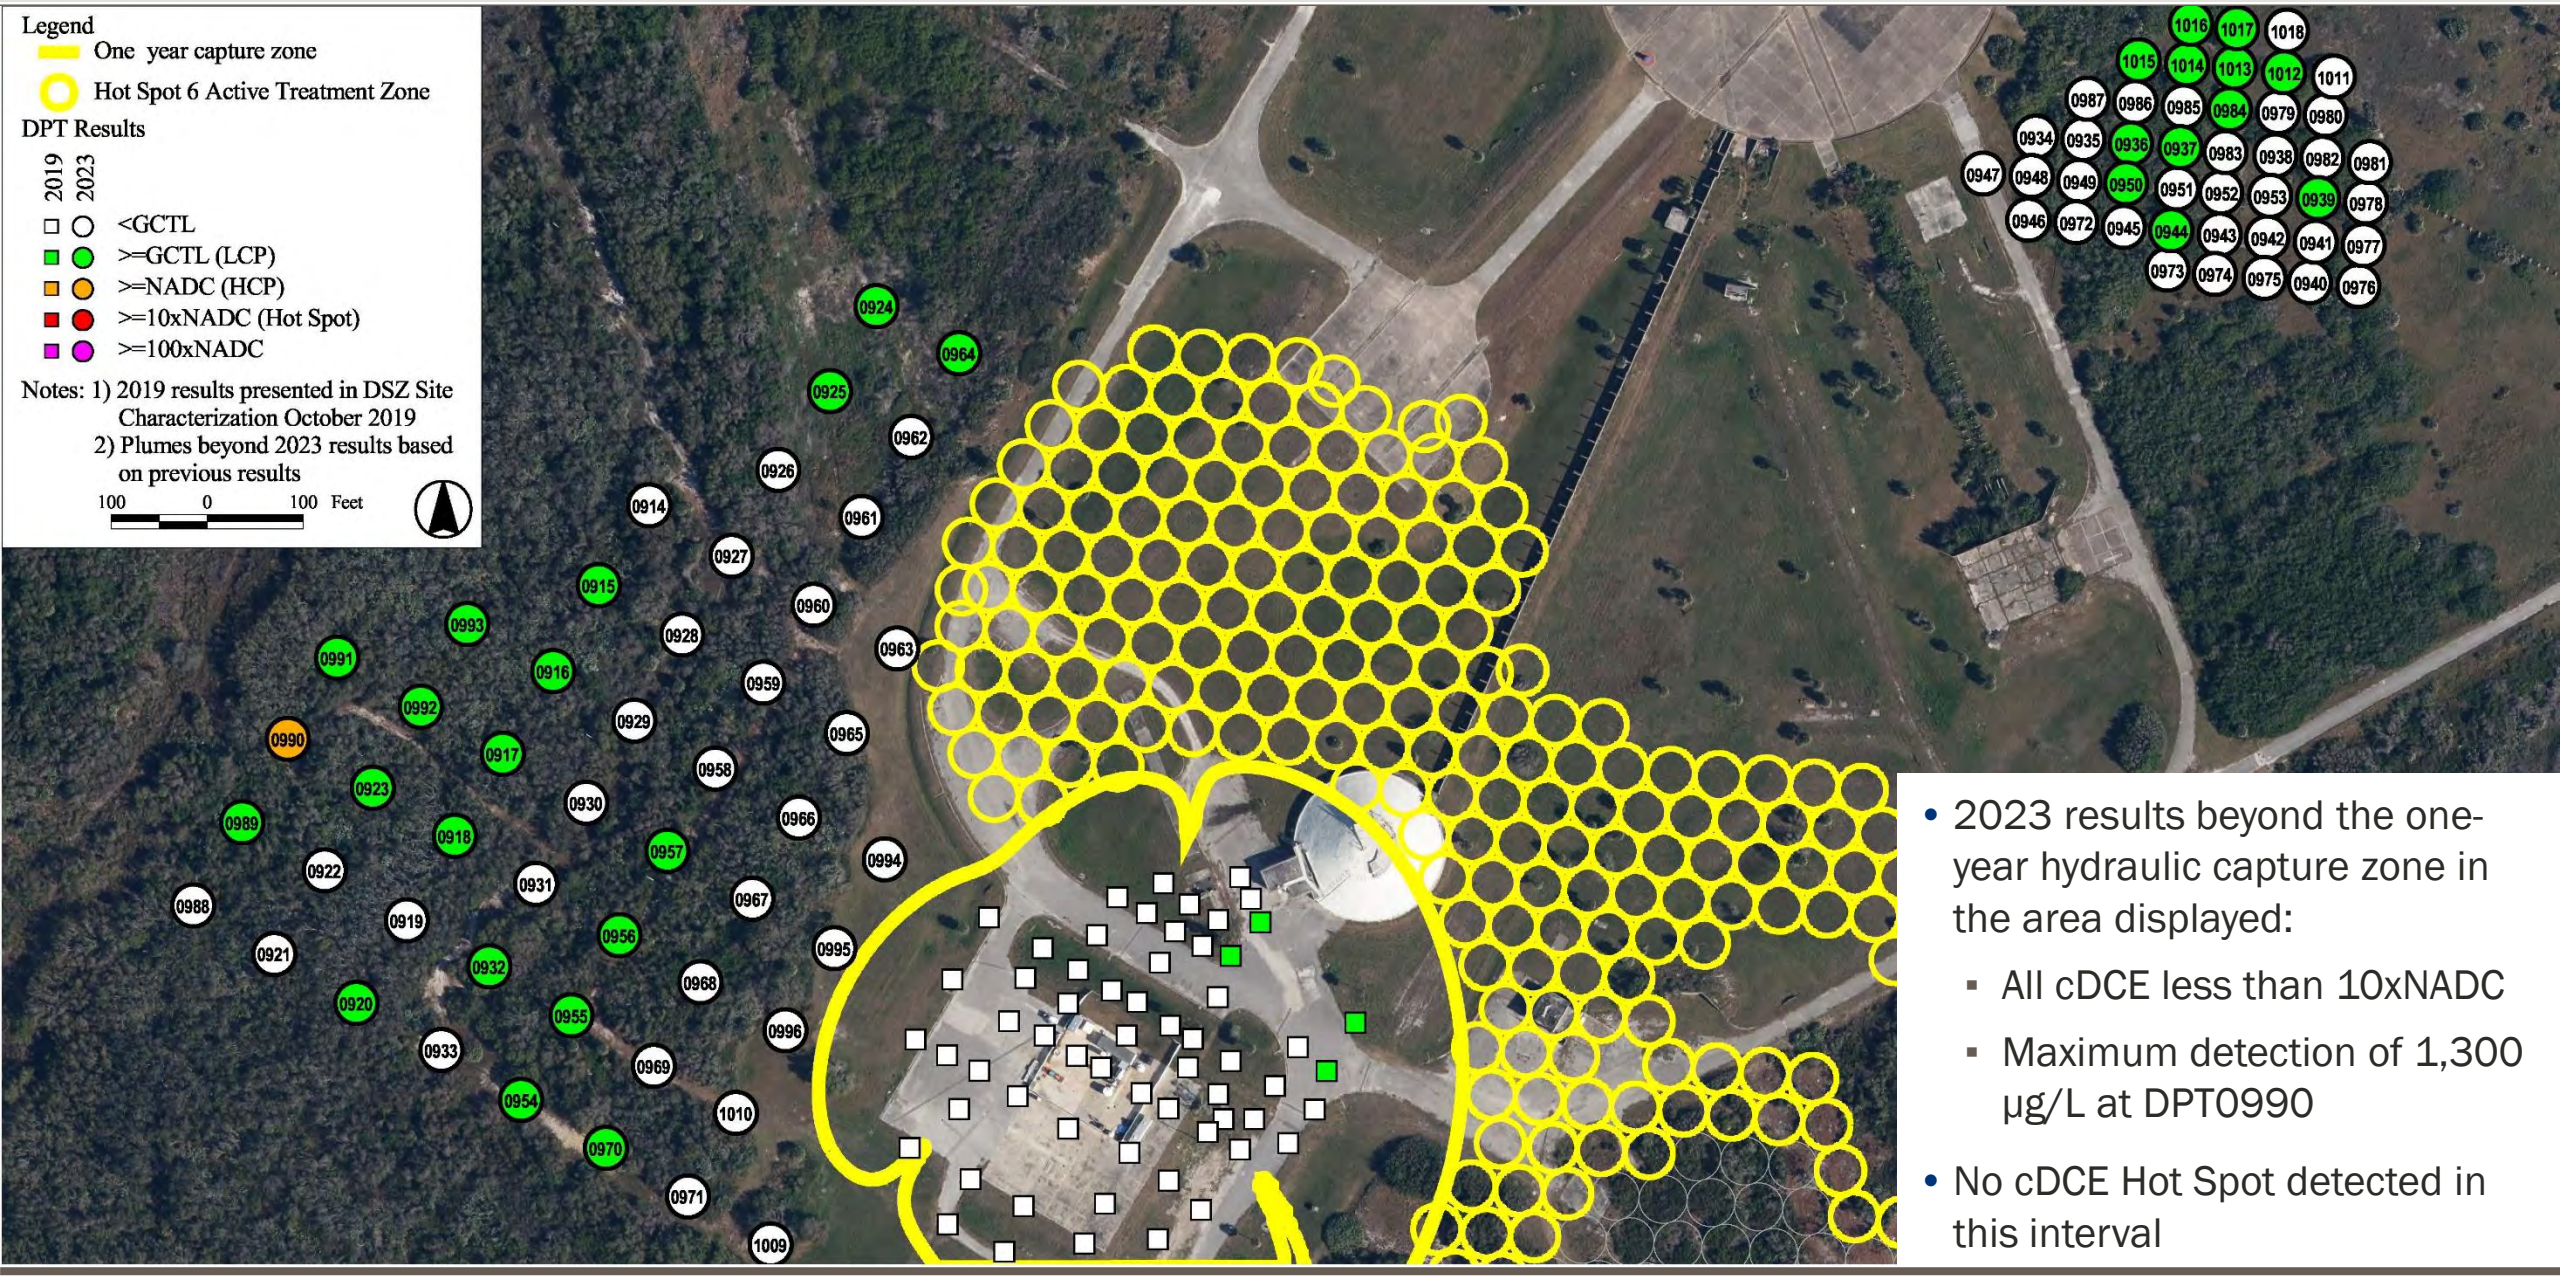
- Maximum detection beyond the one-year hydraulic capture zone of 470 µg/L in DPT0969 the only result exceeding NADC

TCE, Interval: 34 to 40 feet bls (Layer 3)



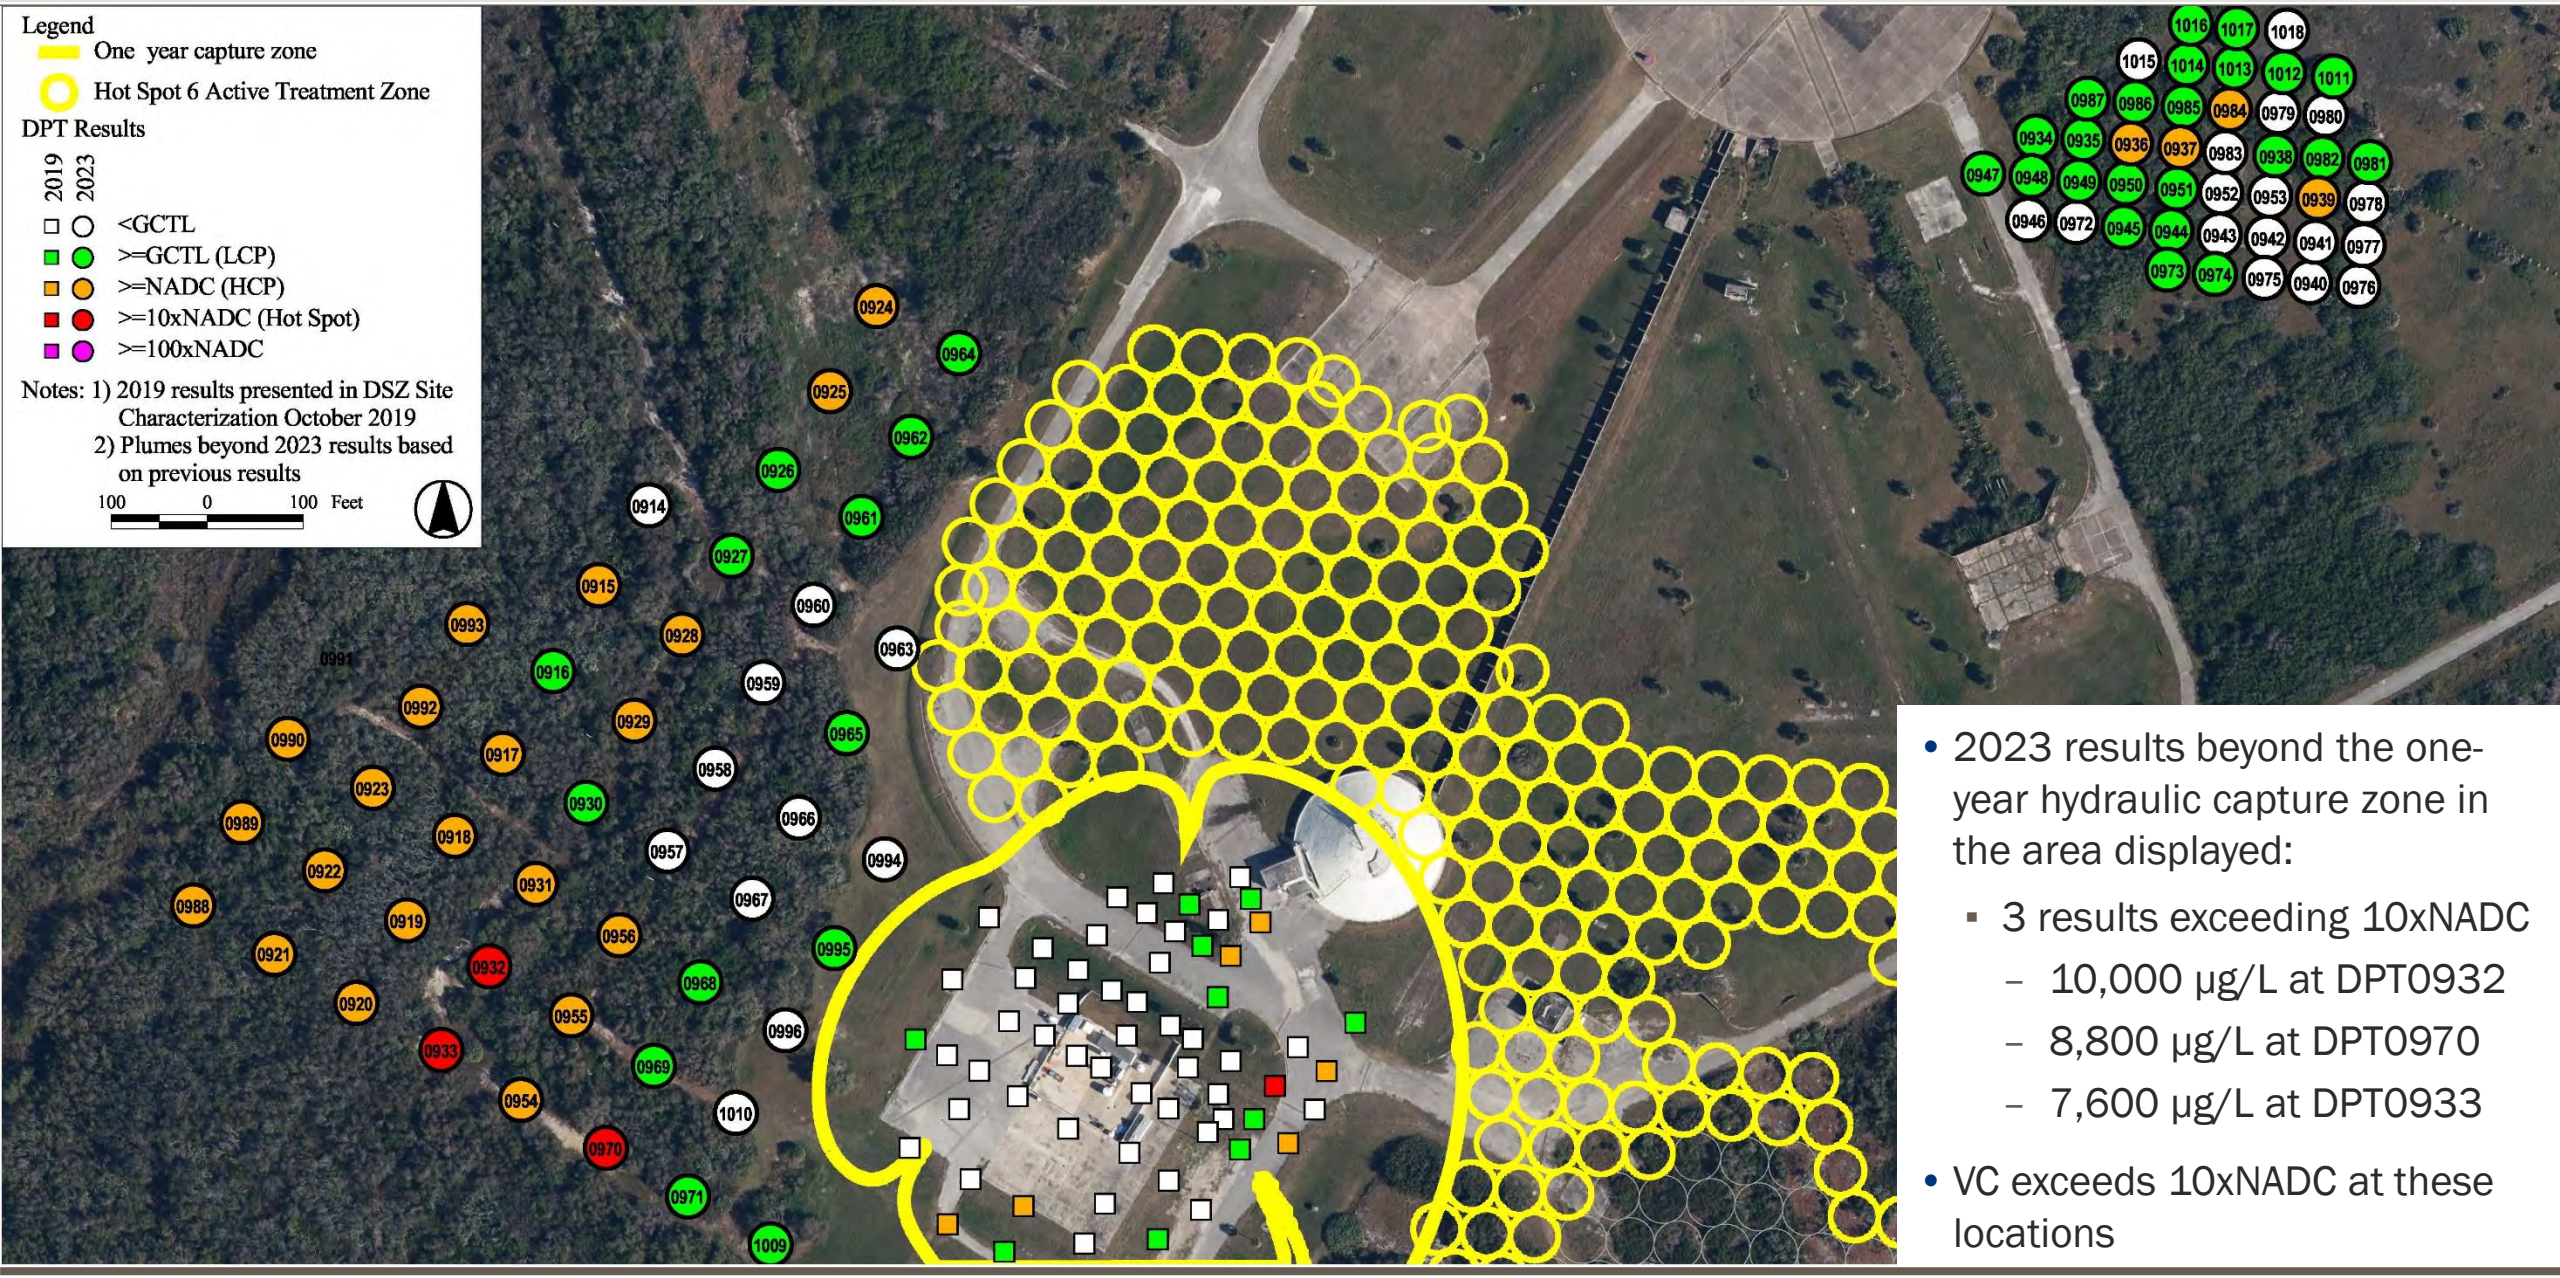
- Maximum detection beyond the one-year hydraulic capture zone of 50 µg/L in DPT0969

TCE, Interval: >40 feet bls (Layer 3/4)



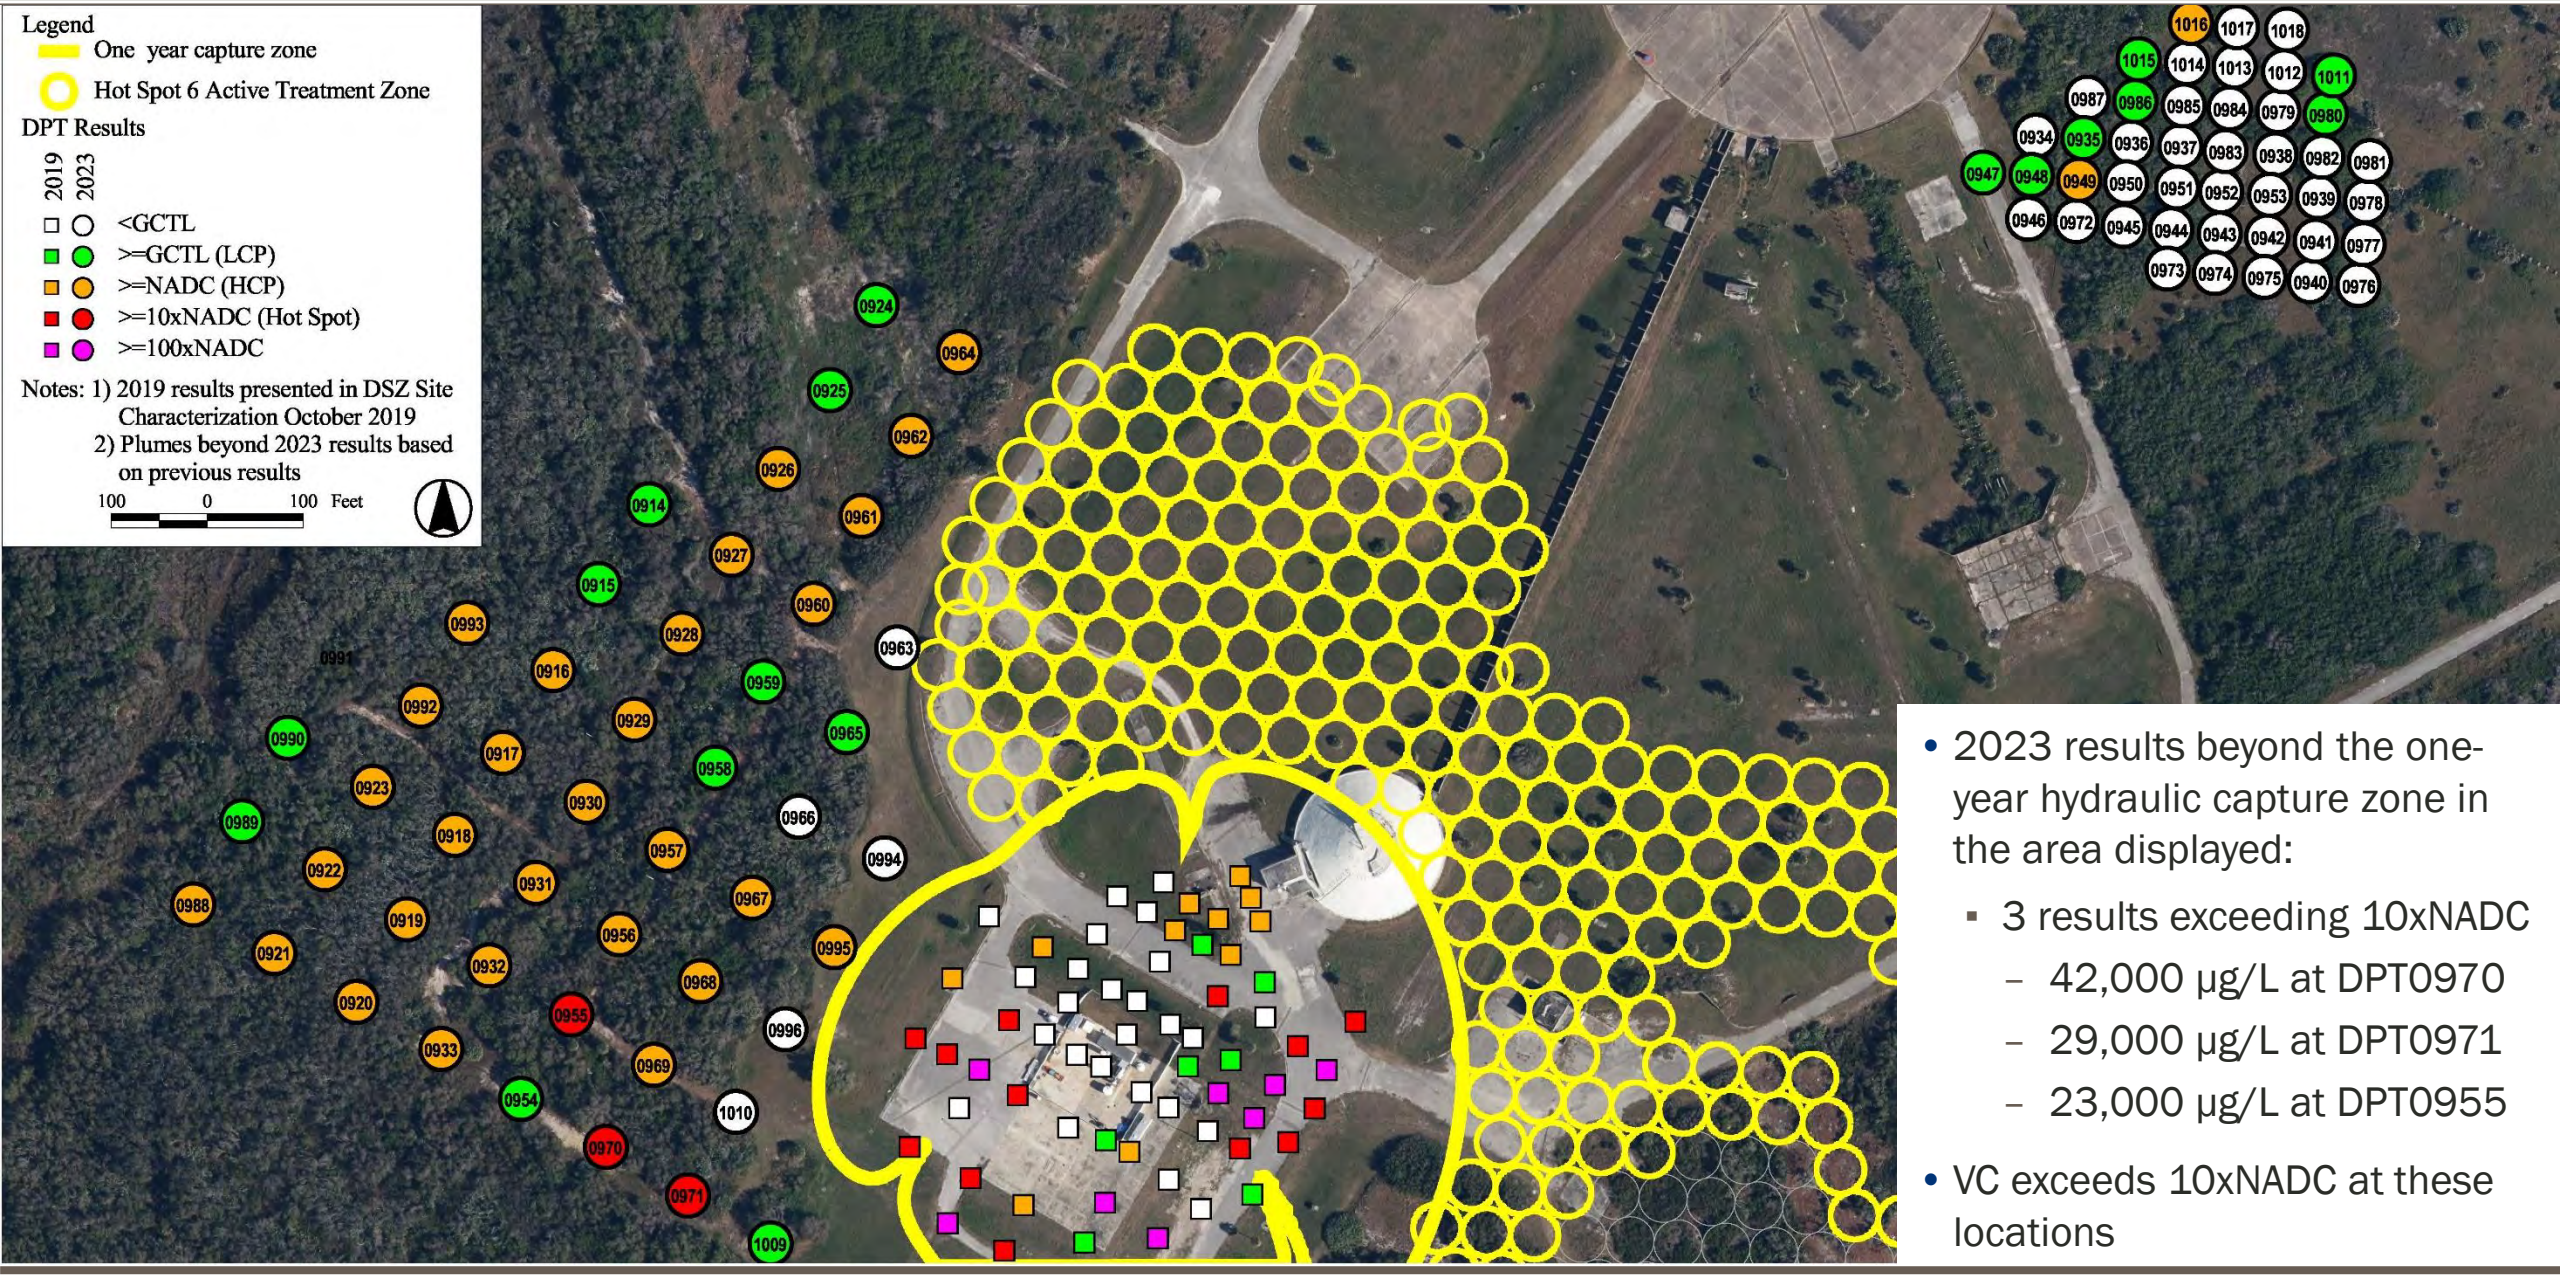
- Samples shown had 38 ft bls samples recollected as well as 43 ft bls
- No detections beyond the one-year hydraulic capture zone
- TCE vertically delineated

cDCE, Interval: 0 to 10 feet bls (Layer 1)



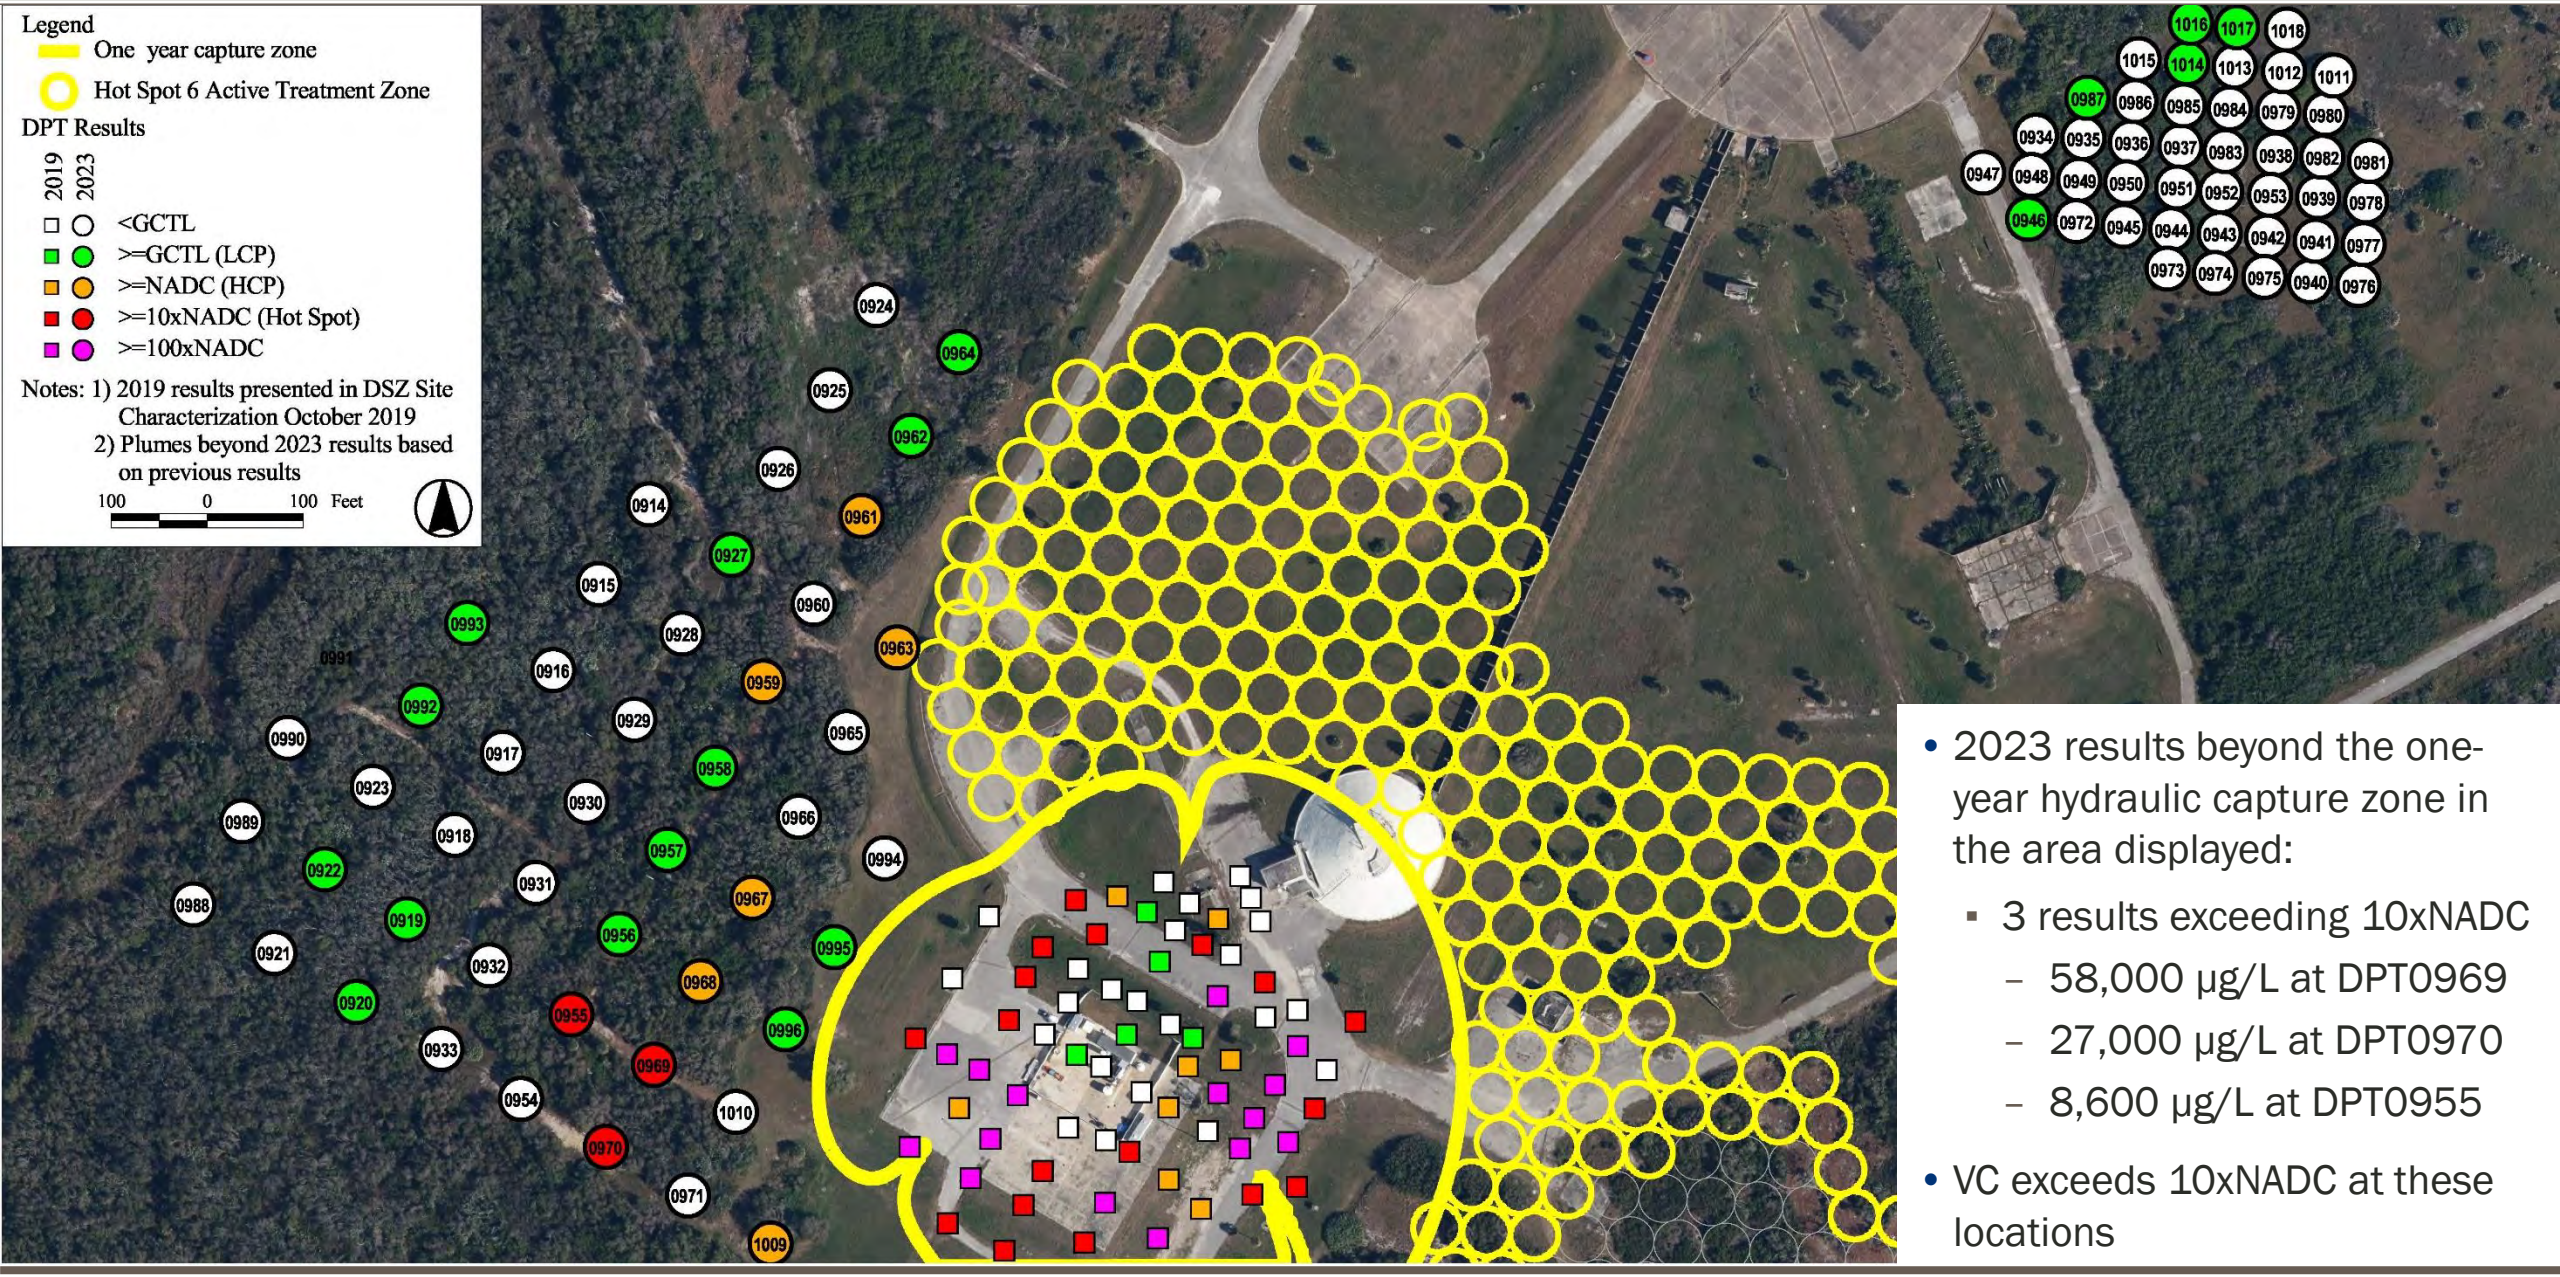
- 2023 results beyond the one-year hydraulic capture zone in the area displayed:
  - All cDCE less than 10xNADC
  - Maximum detection of 390 µg/L at DPT0939
- No cDCE Hot Spot detected in this interval

cDCE, Interval: 10 to 15 feet bls (Layer 1)



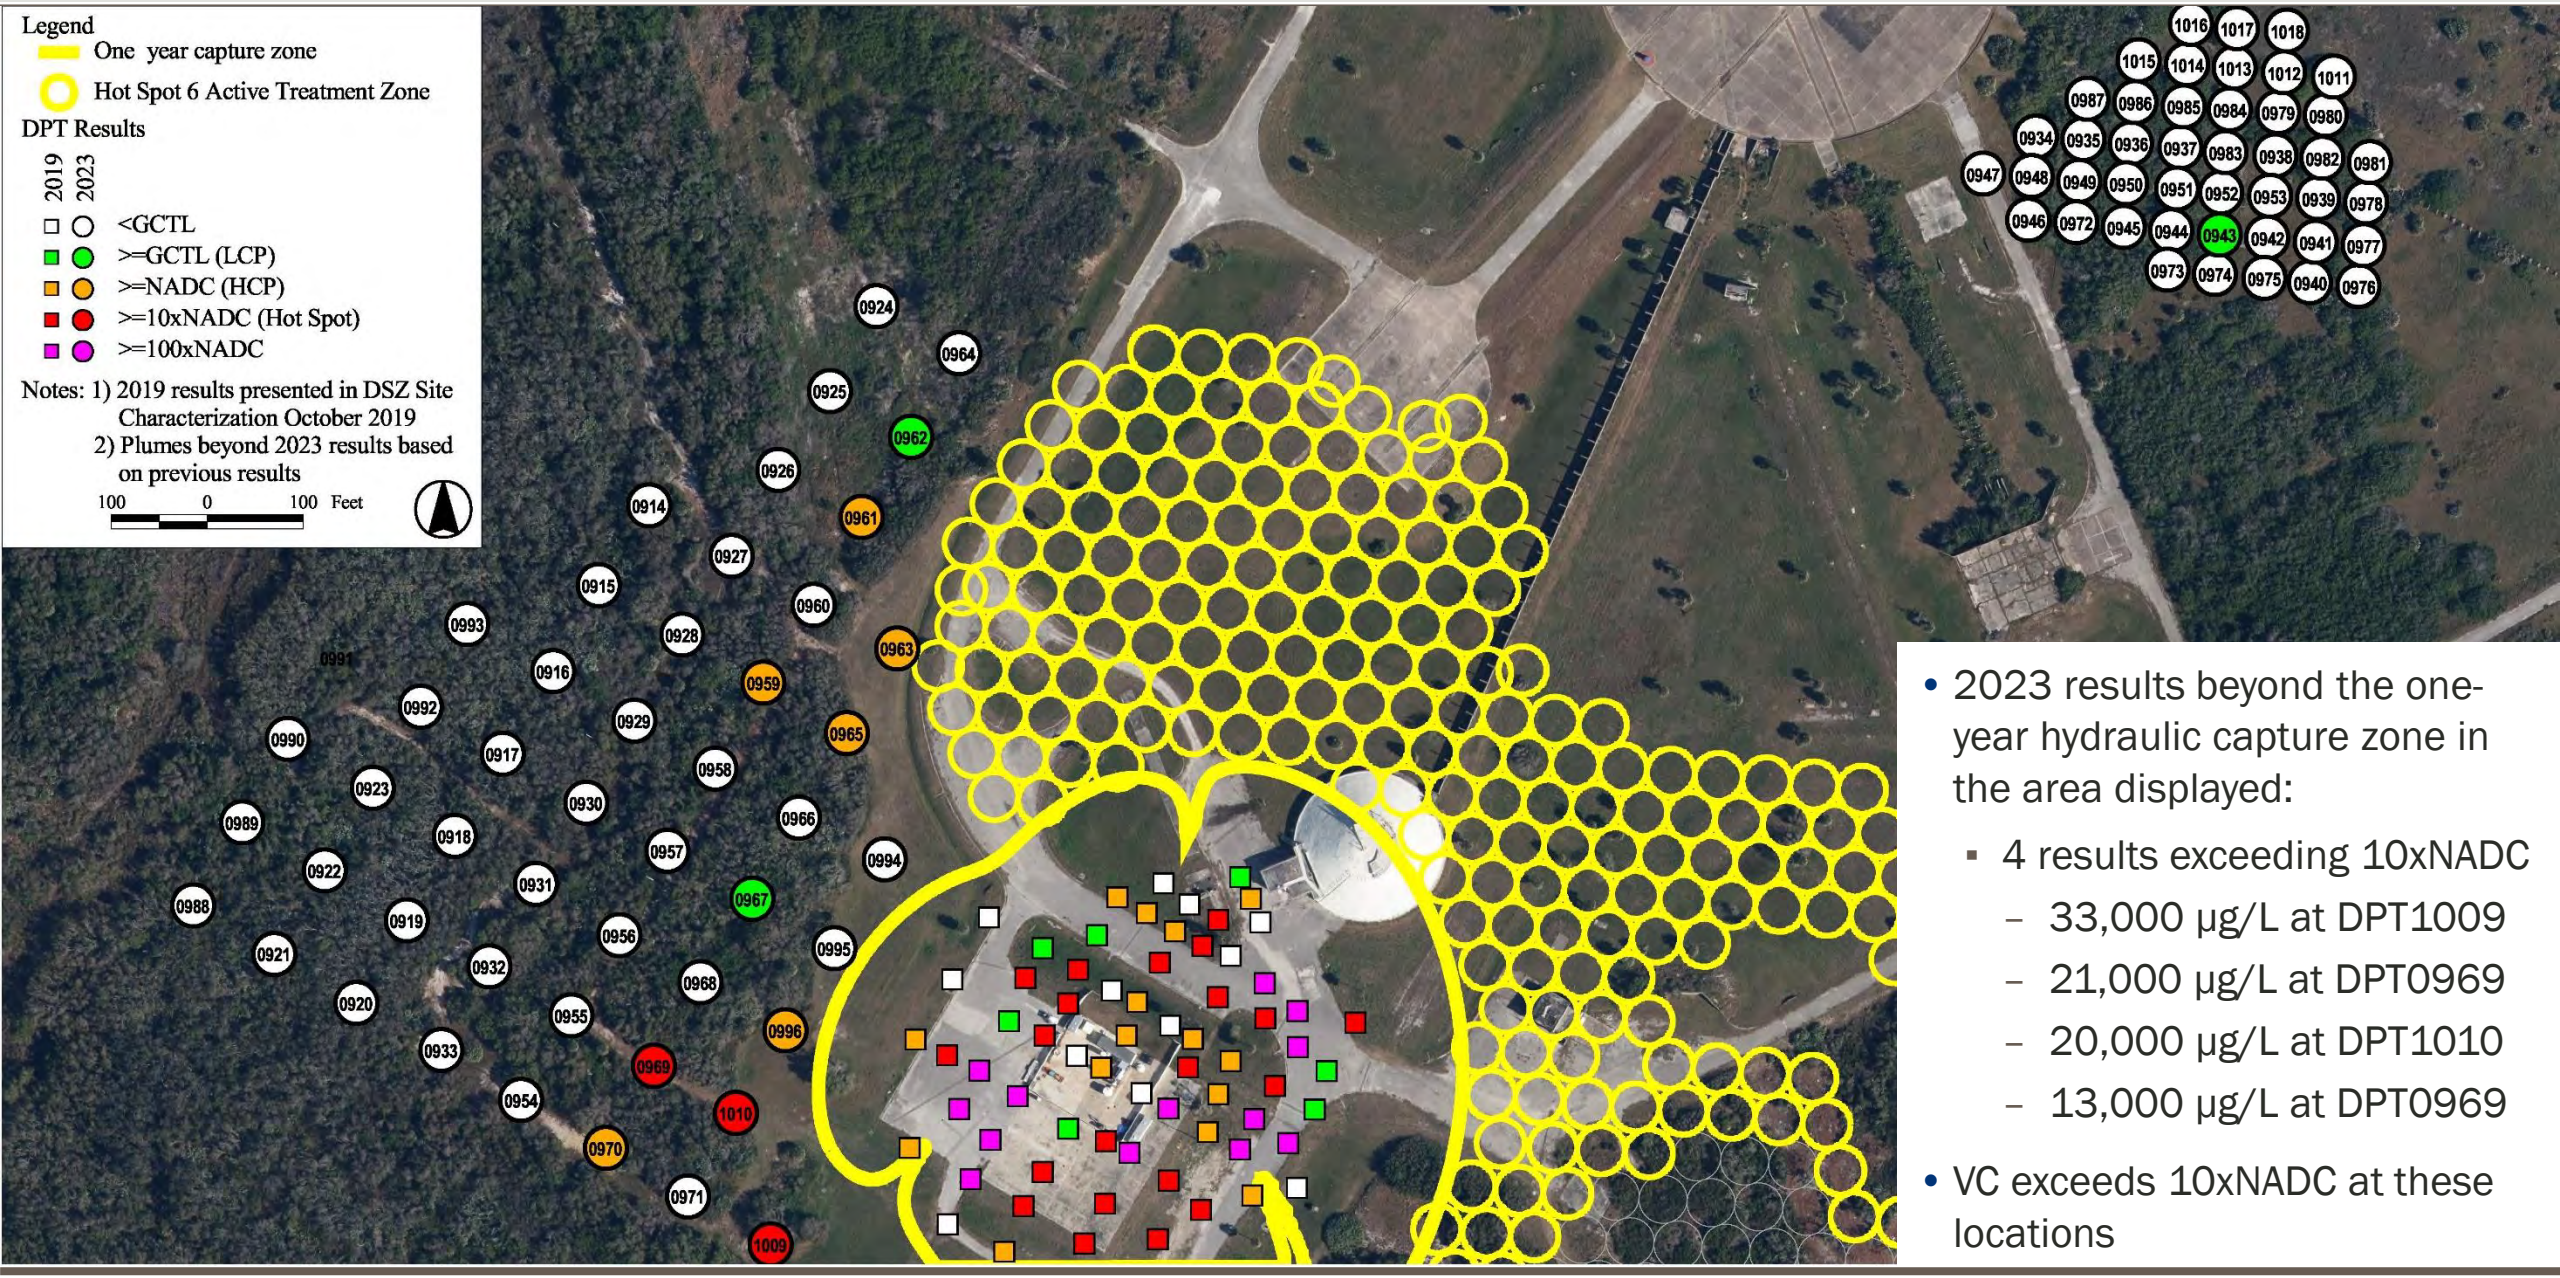
- 2023 results beyond the one-year hydraulic capture zone in the area displayed:
  - All cDCE less than 10xNADC
  - Maximum detection of 1,300 µg/L at DPT0990
- No cDCE Hot Spot detected in this interval

cDCE, Interval: 15 to 20 feet bls (Layer 1)



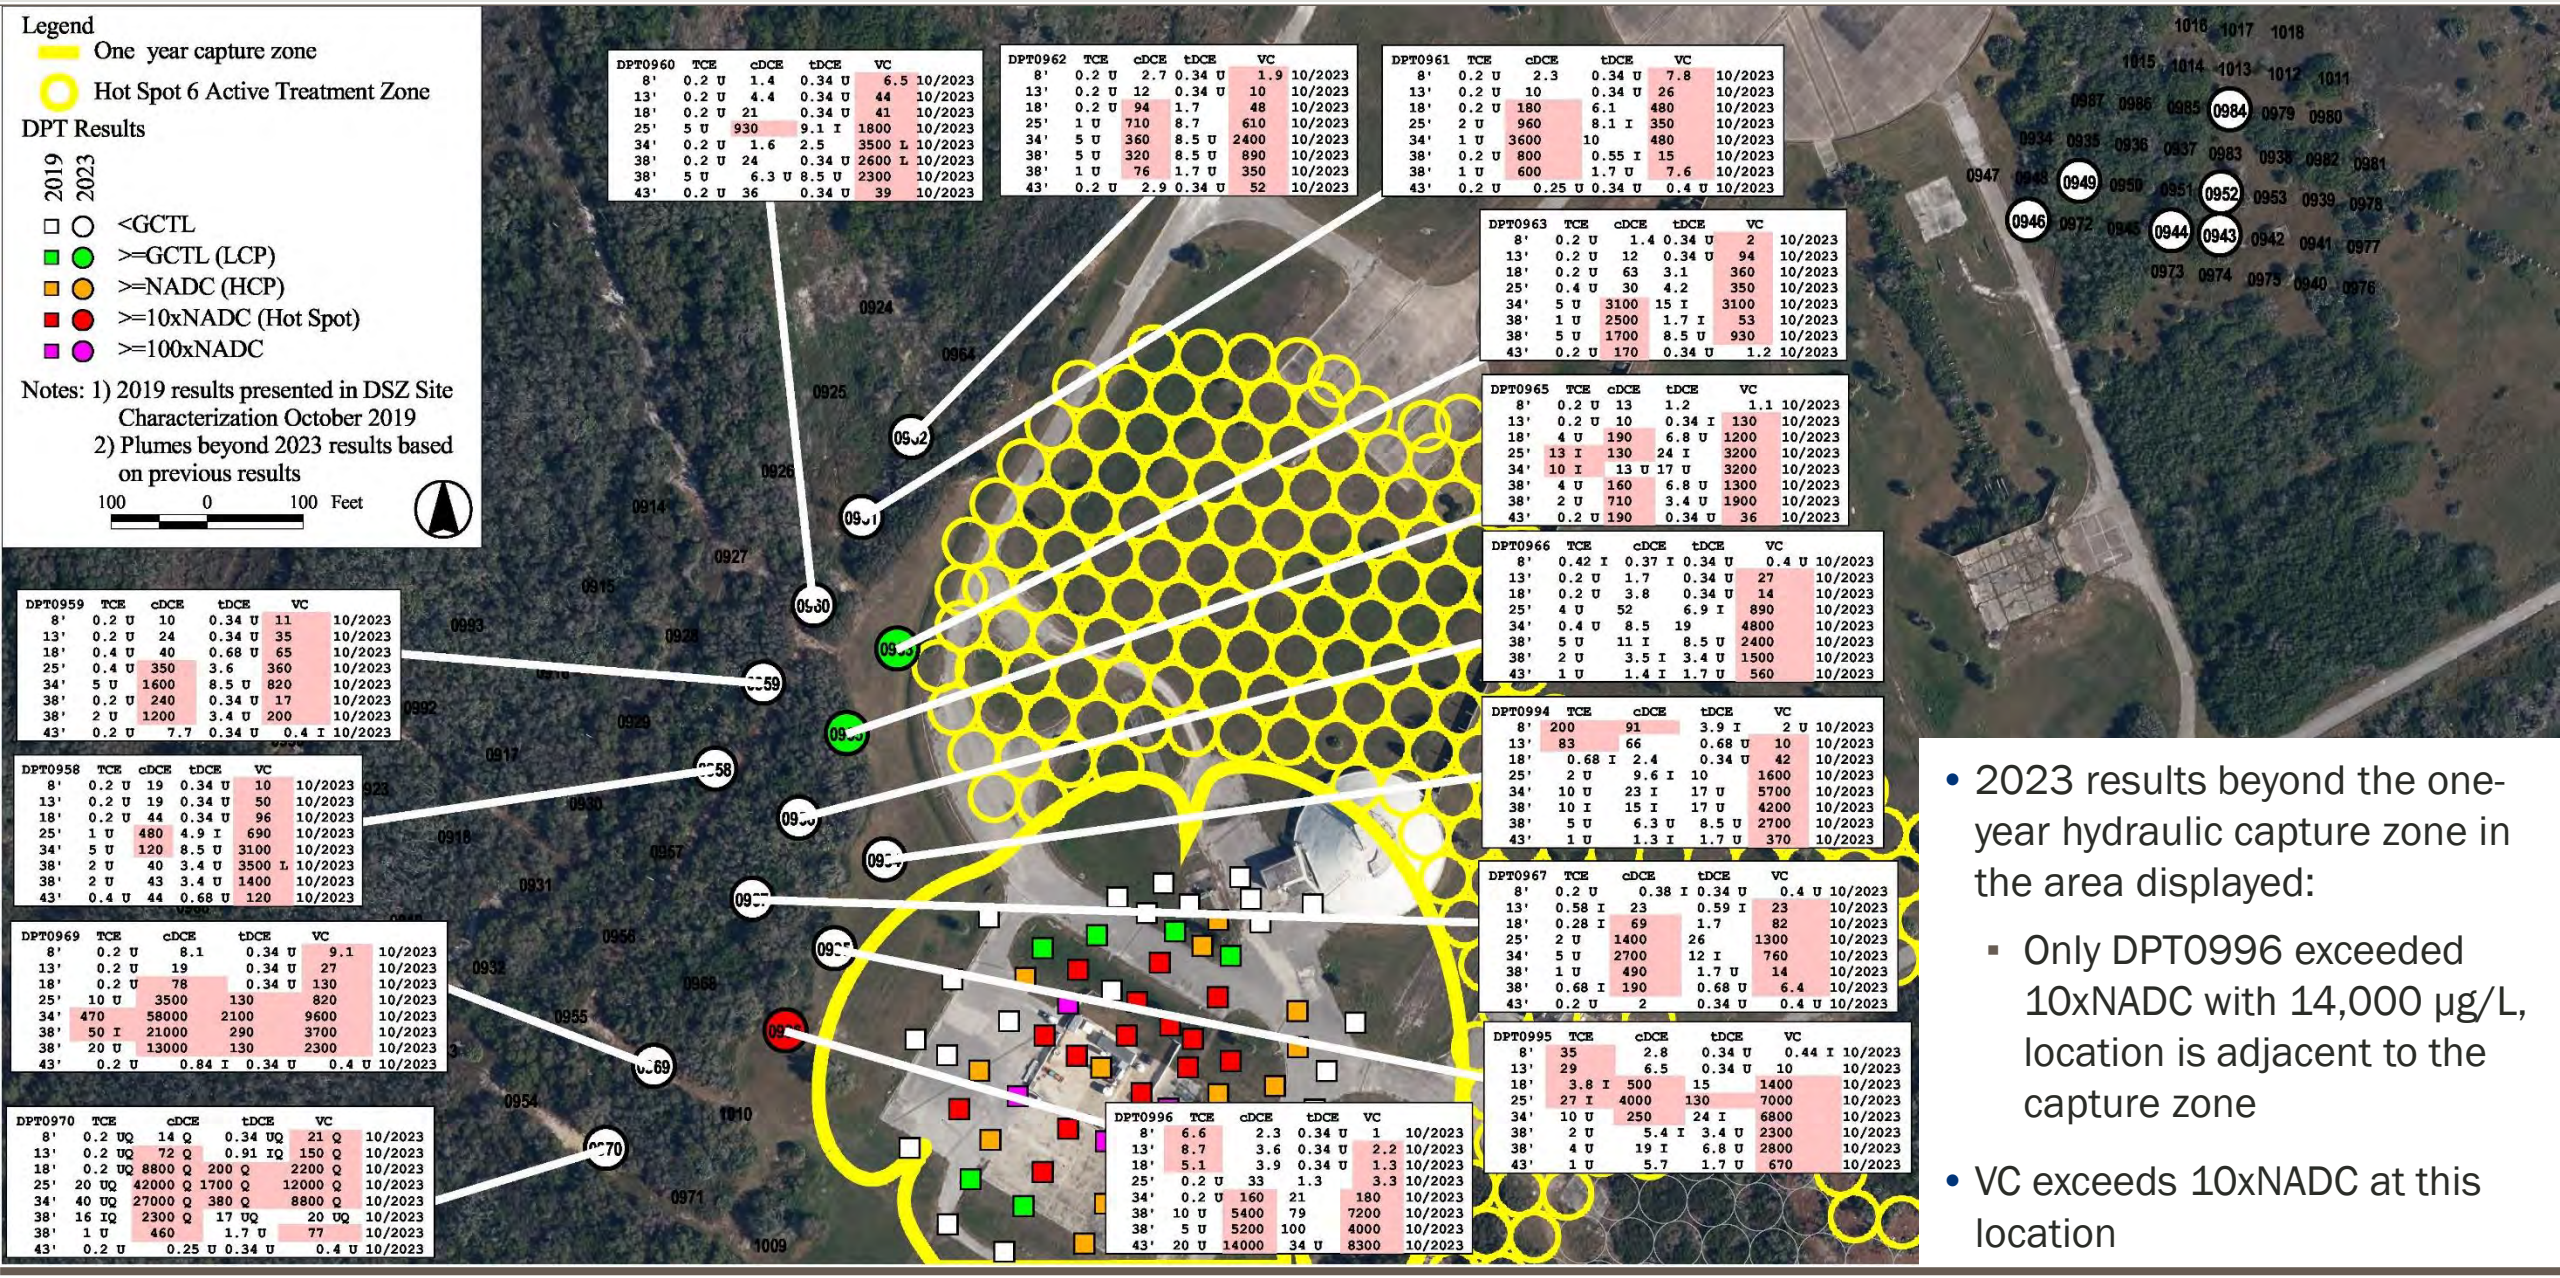
- 2023 results beyond the one-year hydraulic capture zone in the area displayed:
  - 3 results exceeding 10xNADC
    - 10,000 µg/L at DPT0932
    - 8,800 µg/L at DPT0970
    - 7,600 µg/L at DPT0933
- VC exceeds 10xNADC at these locations

cDCE, Interval: 20 to 28 feet bls (Layer 1/2)



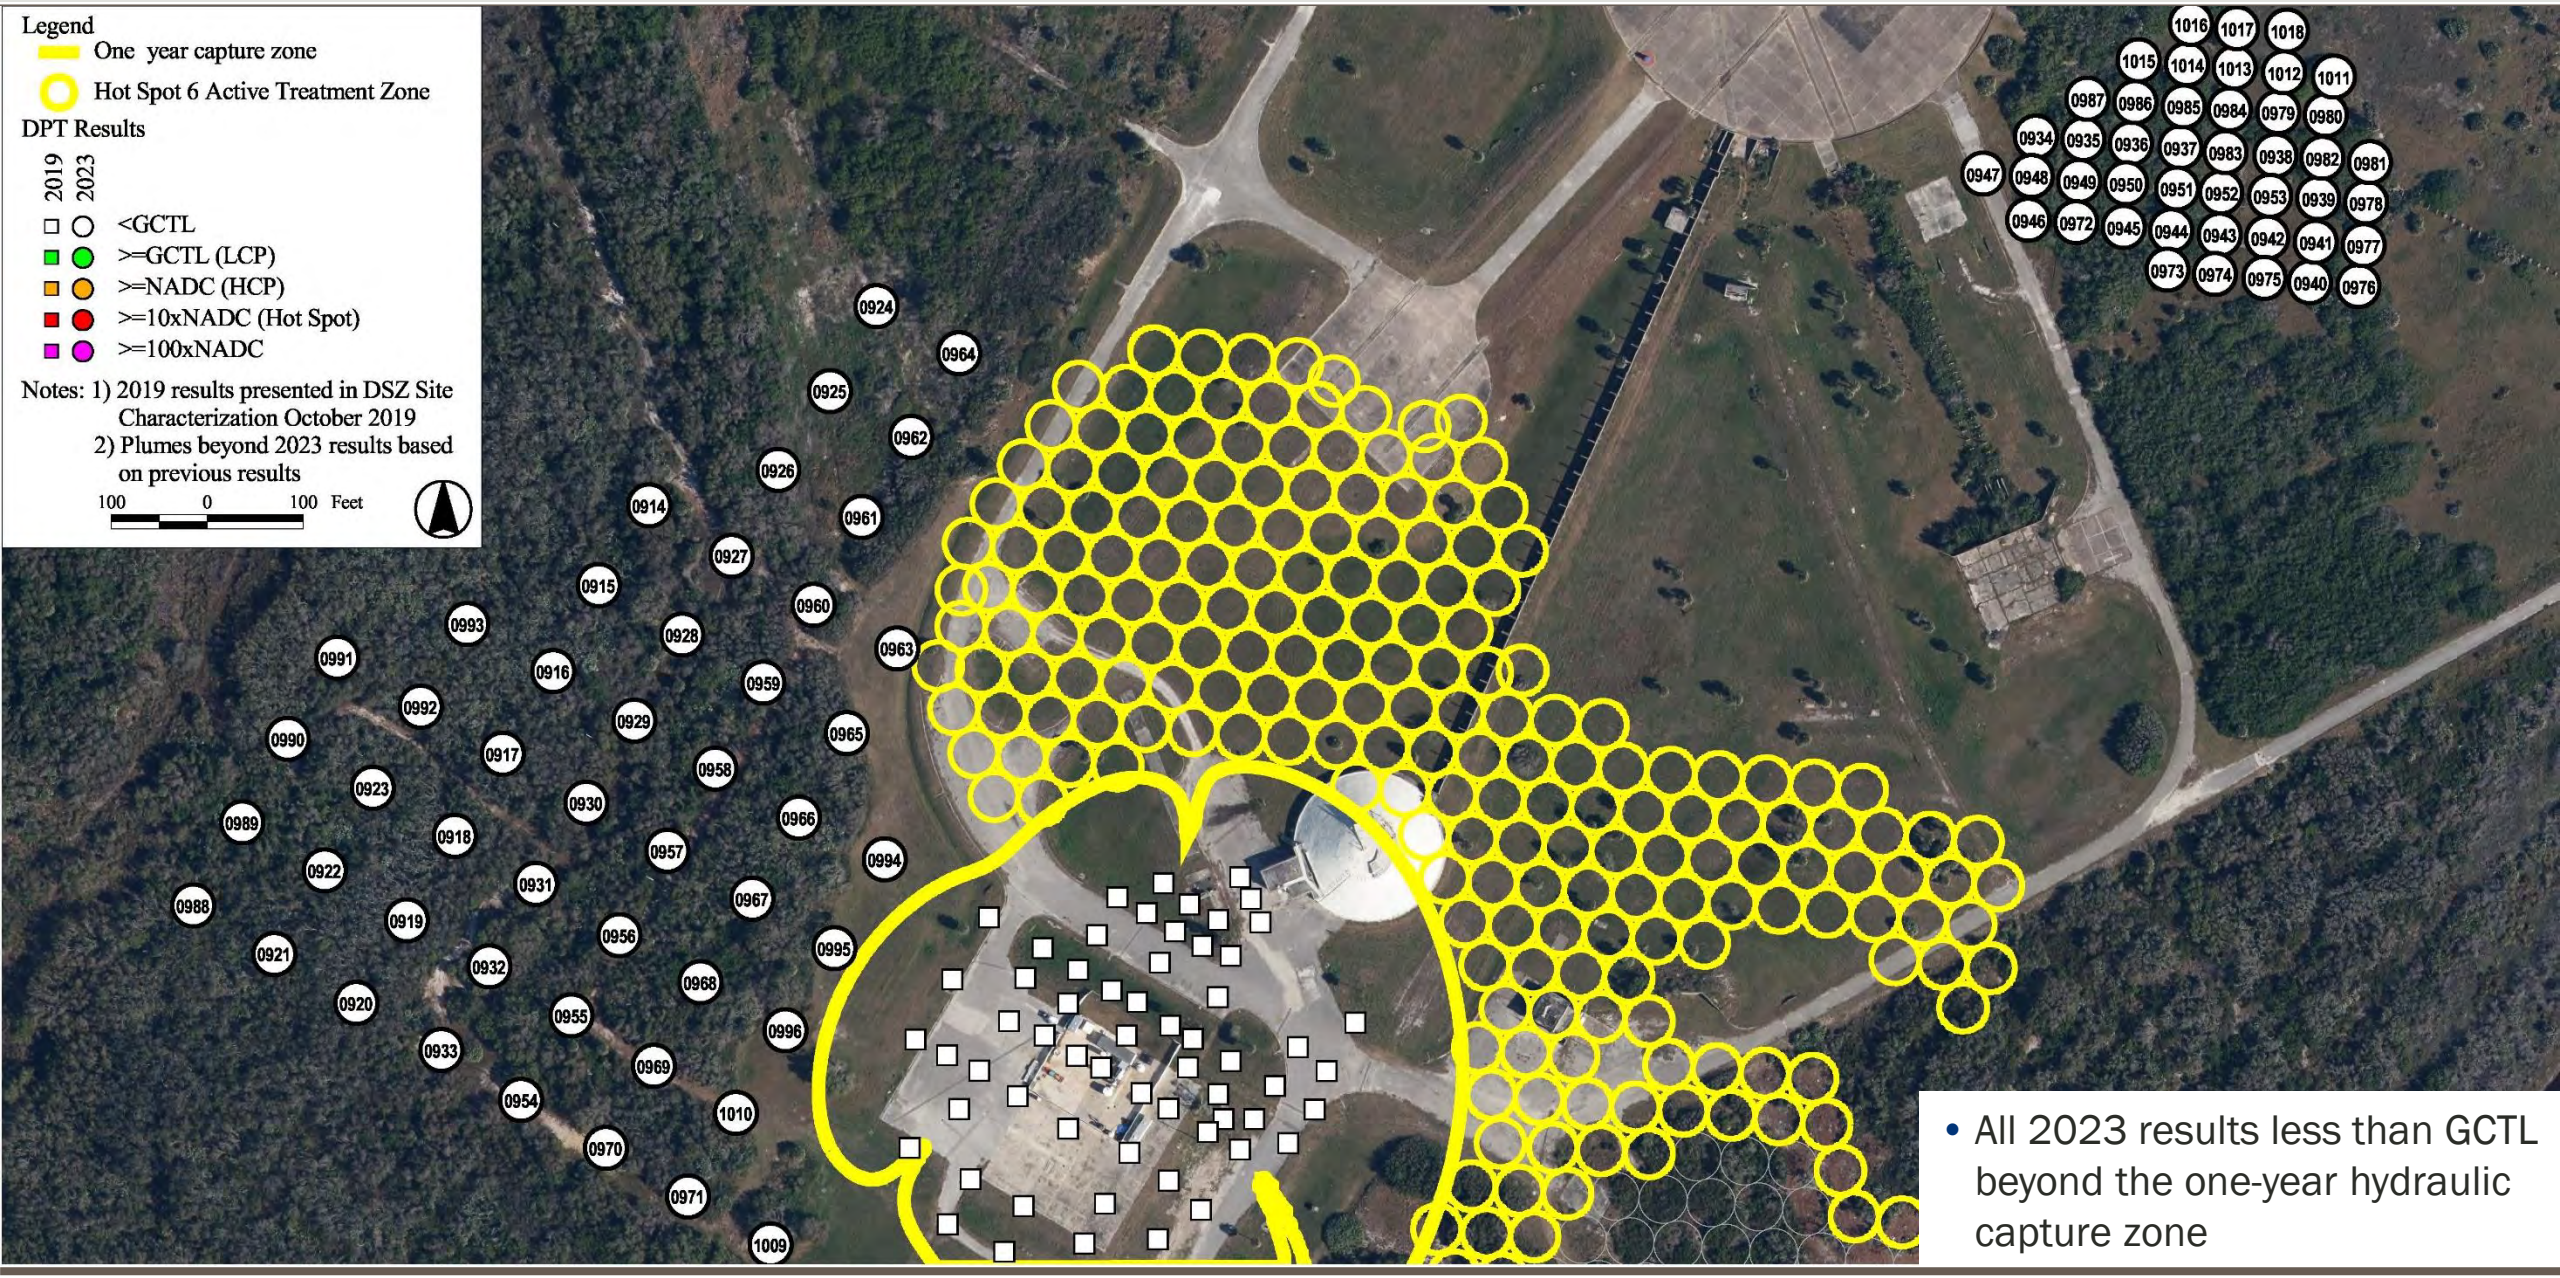
- 2023 results beyond the one-year hydraulic capture zone in the area displayed:
  - 3 results exceeding 10xNADC
    - 42,000 µg/L at DPT0970
    - 29,000 µg/L at DPT0971
    - 23,000 µg/L at DPT0955
- VC exceeds 10xNADC at these locations

cDCE, Interval: 28 to 34 feet bls (Layer 3)



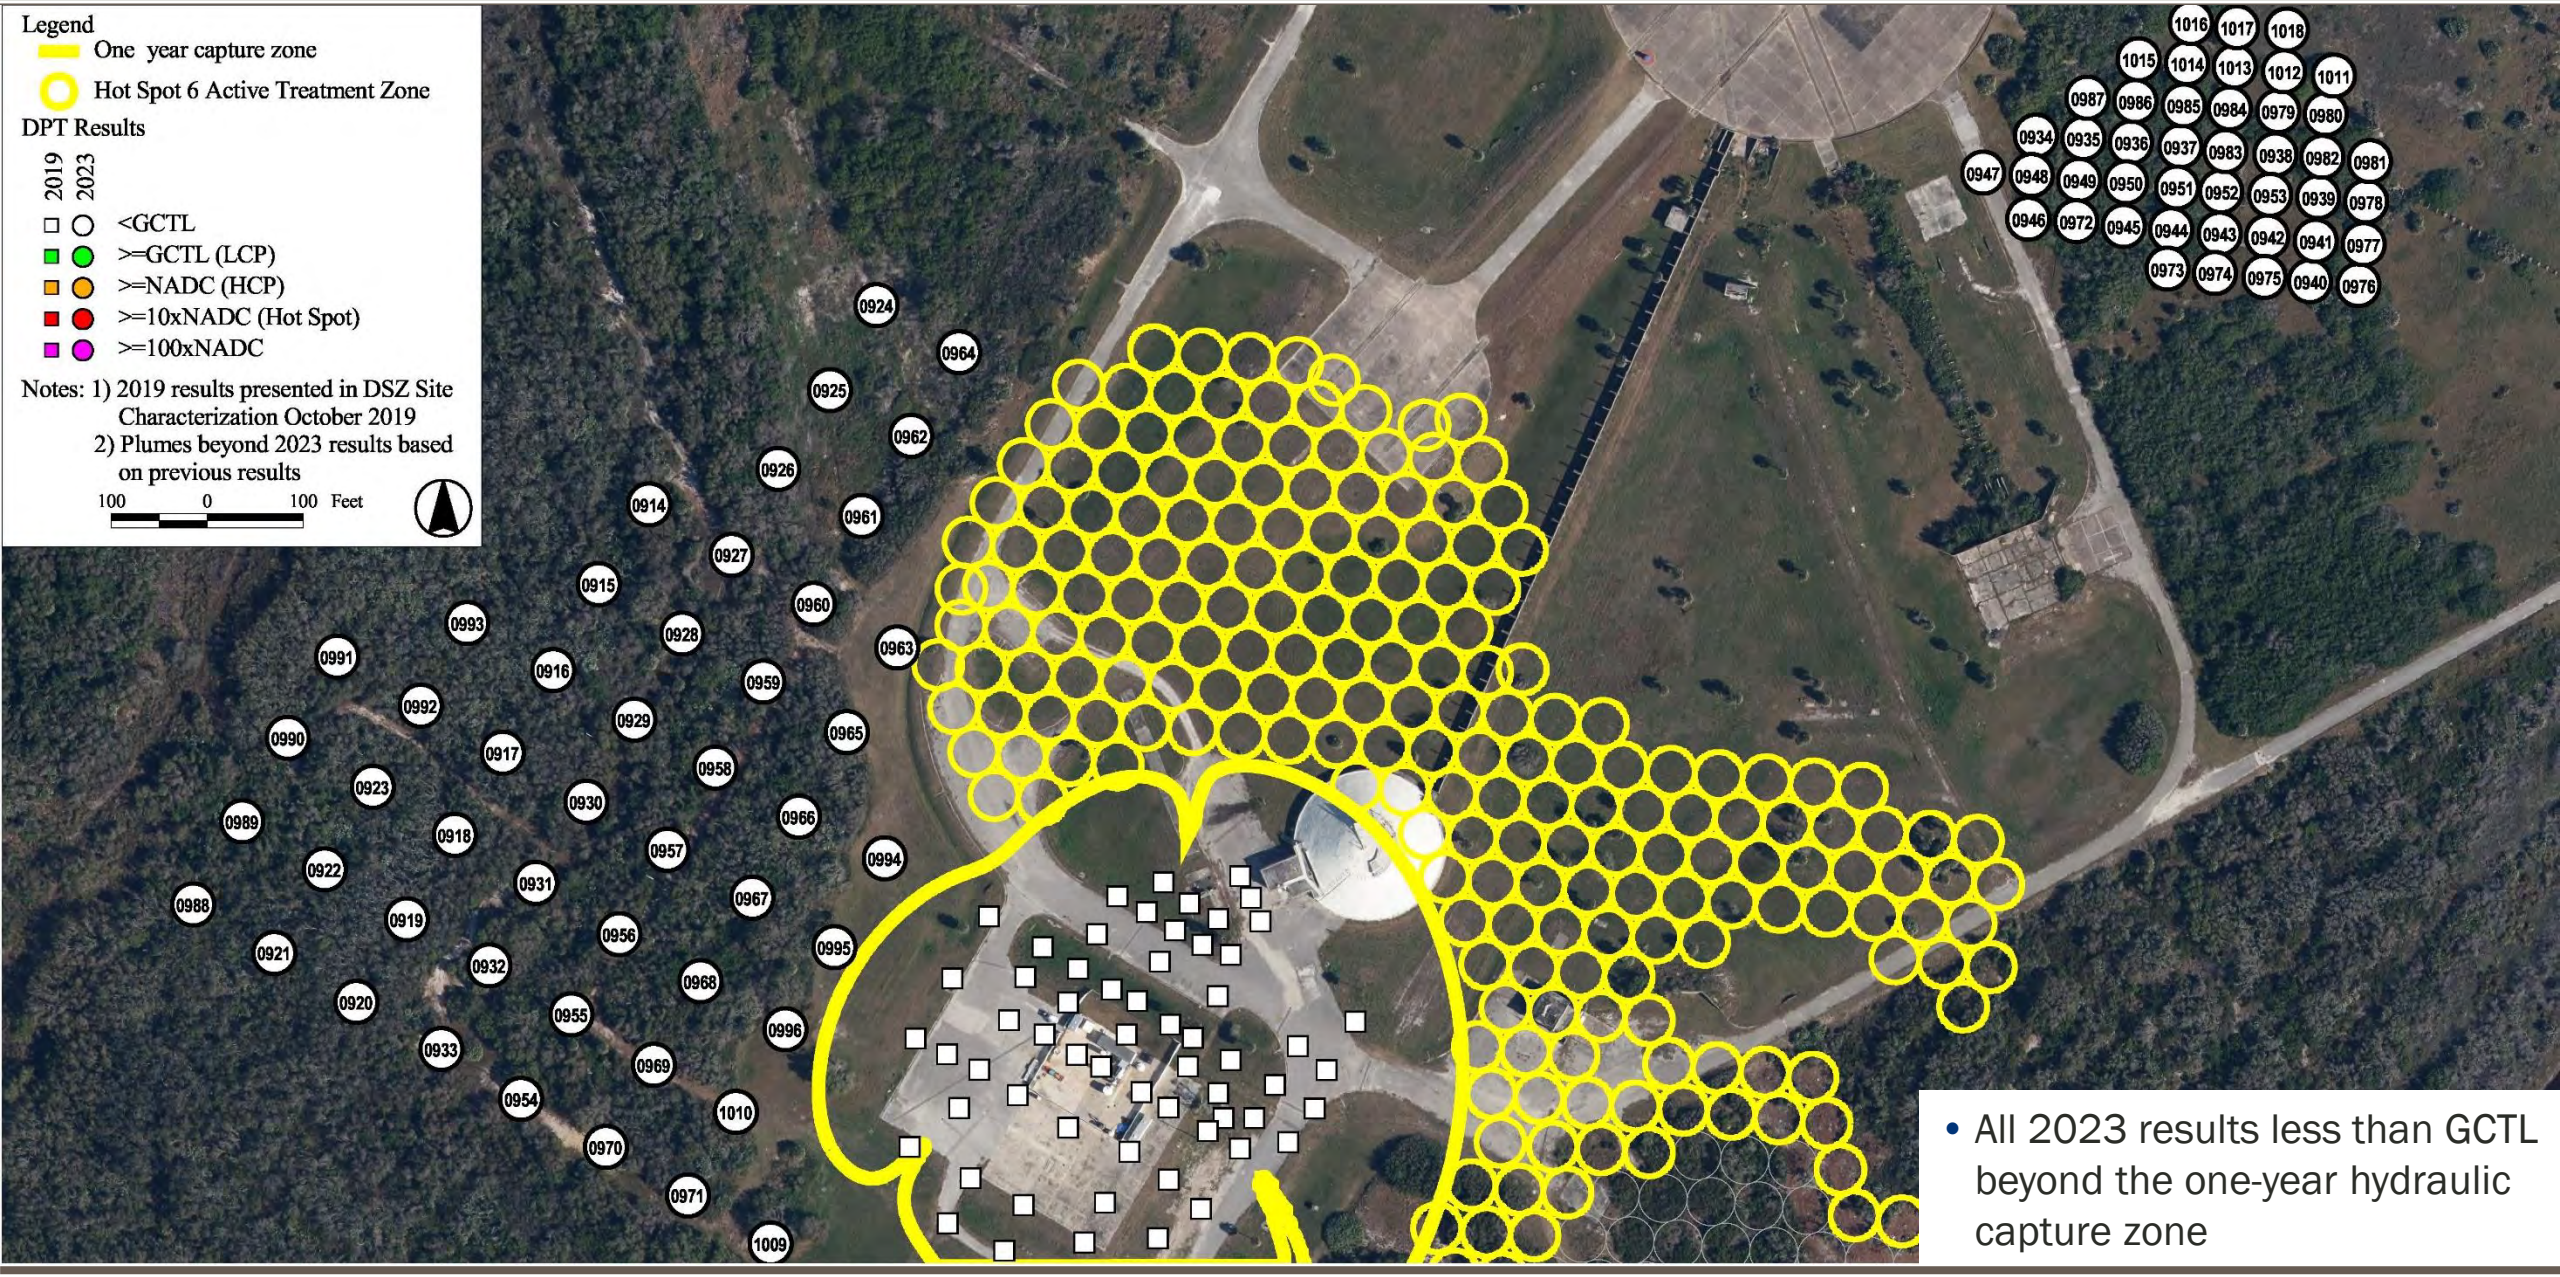
- 2023 results beyond the one-year hydraulic capture zone in the area displayed:
  - 3 results exceeding 10xNADC
    - 58,000 µg/L at DPT0969
    - 27,000 µg/L at DPT0970
    - 8,600 µg/L at DPT0955
- VC exceeds 10xNADC at these locations

cDCE, Interval: 34 to 40 feet bls (Layer 3)



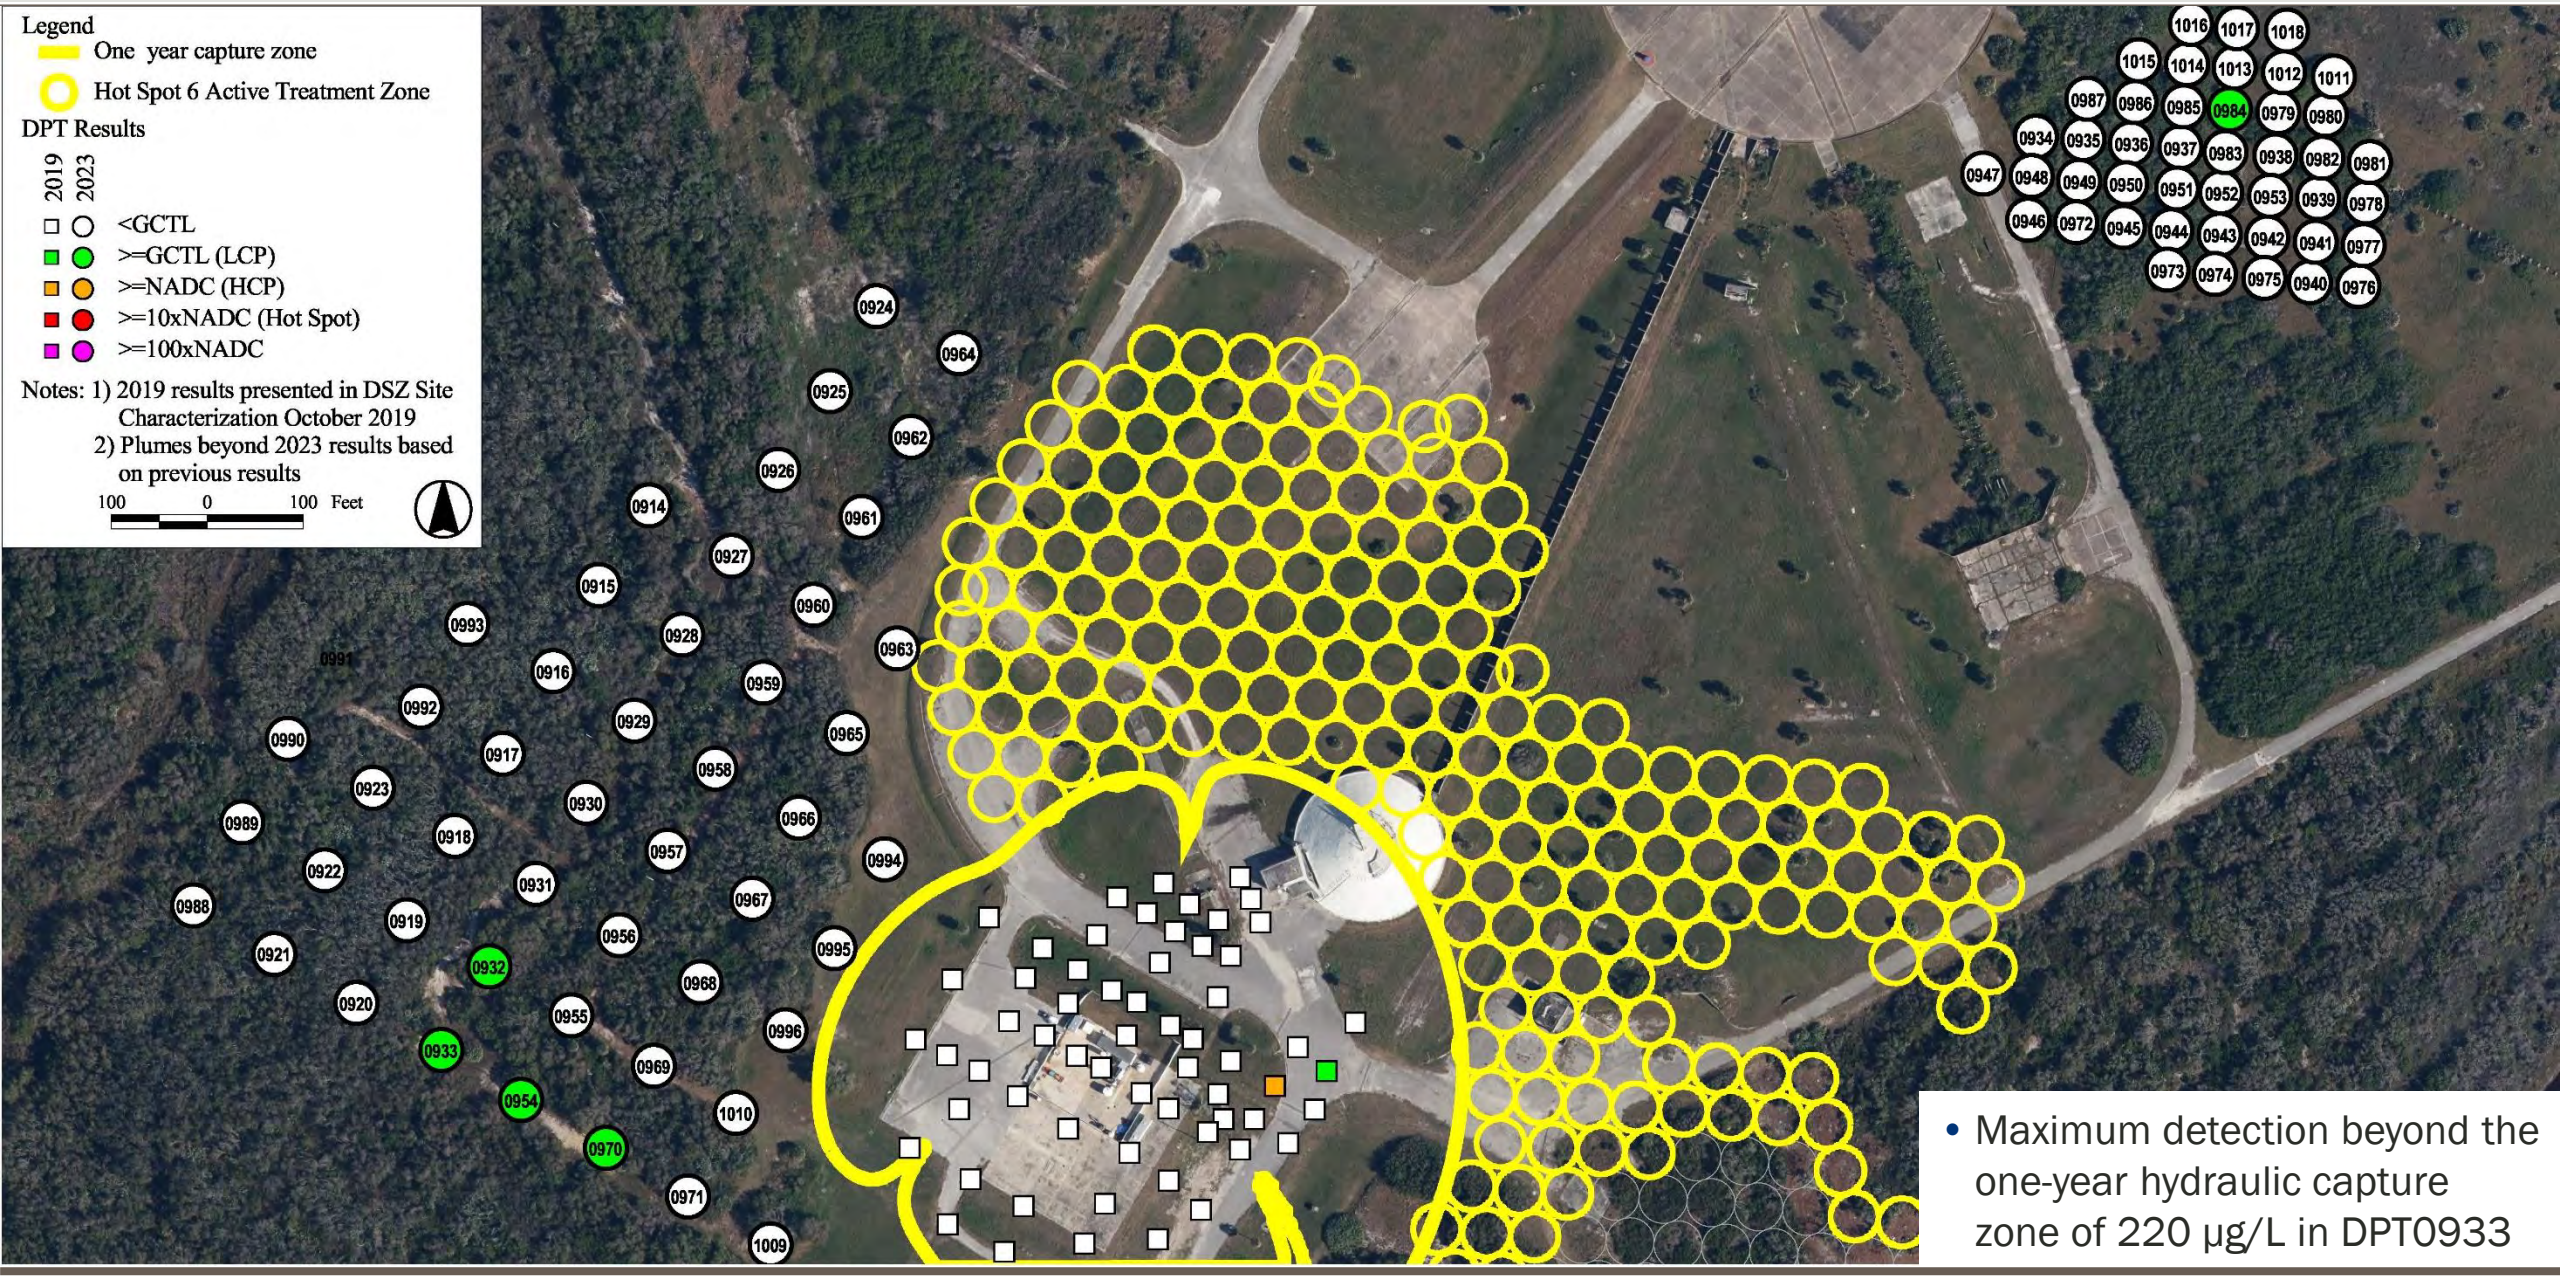
- 2023 results beyond the one-year hydraulic capture zone in the area displayed:
  - 4 results exceeding 10xNADC
    - 33,000 µg/L at DPT1009
    - 21,000 µg/L at DPT0969
    - 20,000 µg/L at DPT1010
    - 13,000 µg/L at DPT0969
- VC exceeds 10xNADC at these locations

cDCE, Interval: >40 feet bls (Layer 3/4)



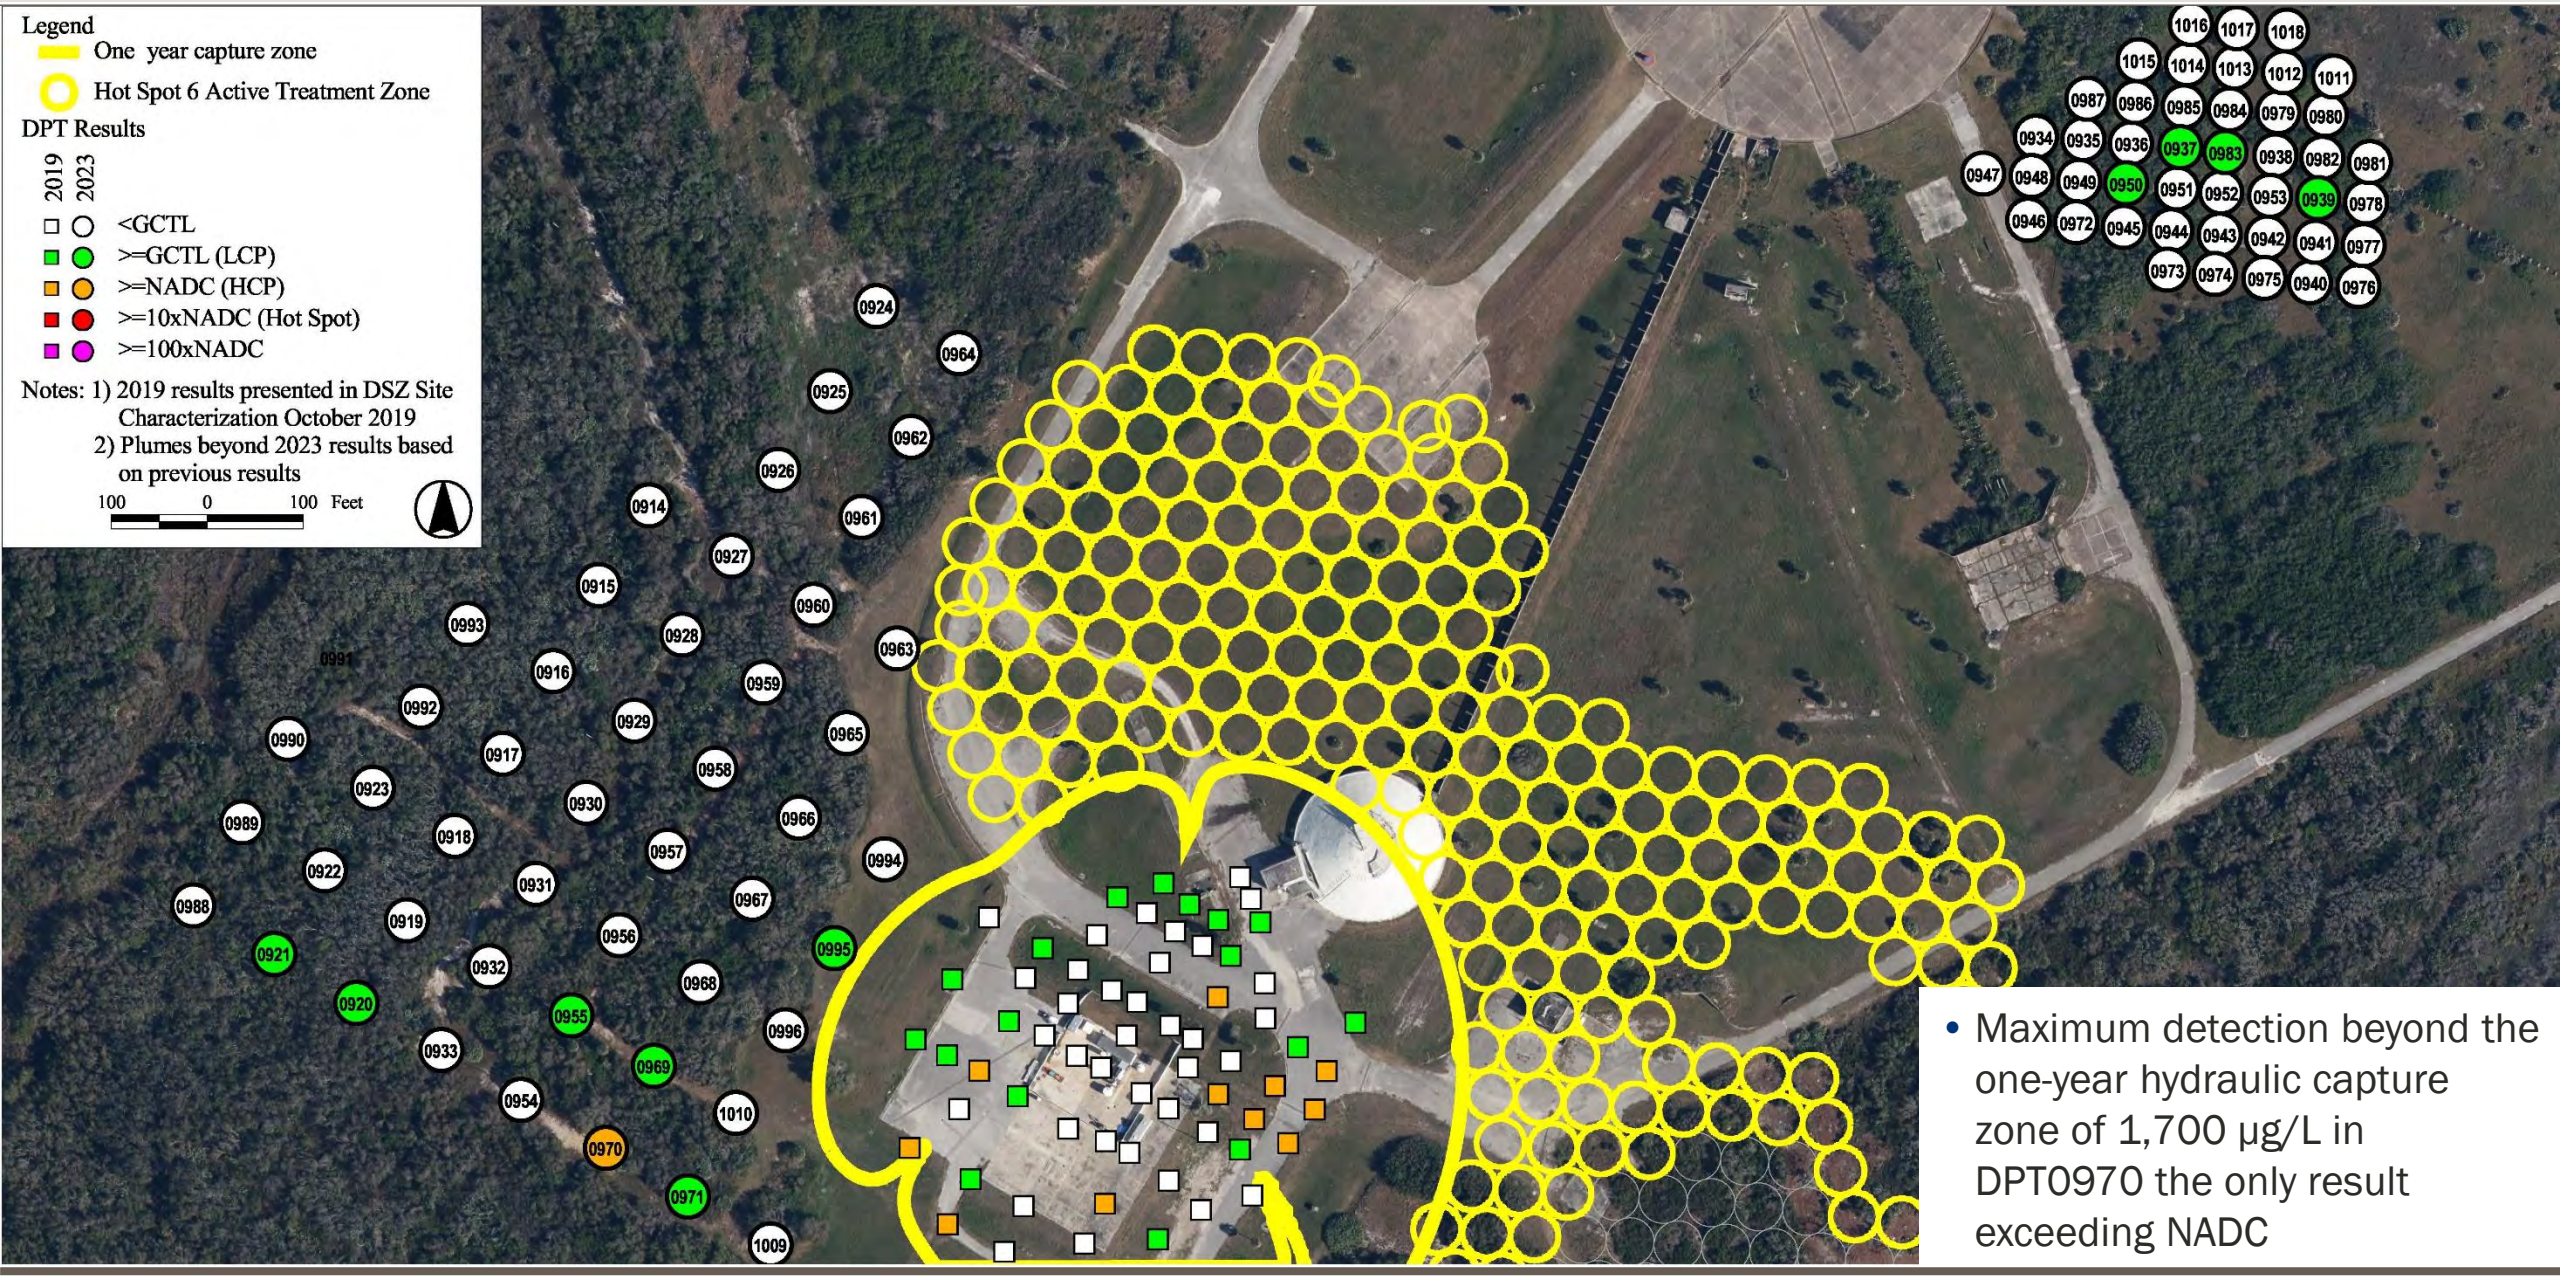
- 2023 results beyond the one-year hydraulic capture zone in the area displayed:
  - Only DPT0996 exceeded 10xNADC with 14,000 µg/L, location is adjacent to the capture zone
- VC exceeds 10xNADC at this location

tDCE, Interval: 0 to 10 feet bls (Layer 1)



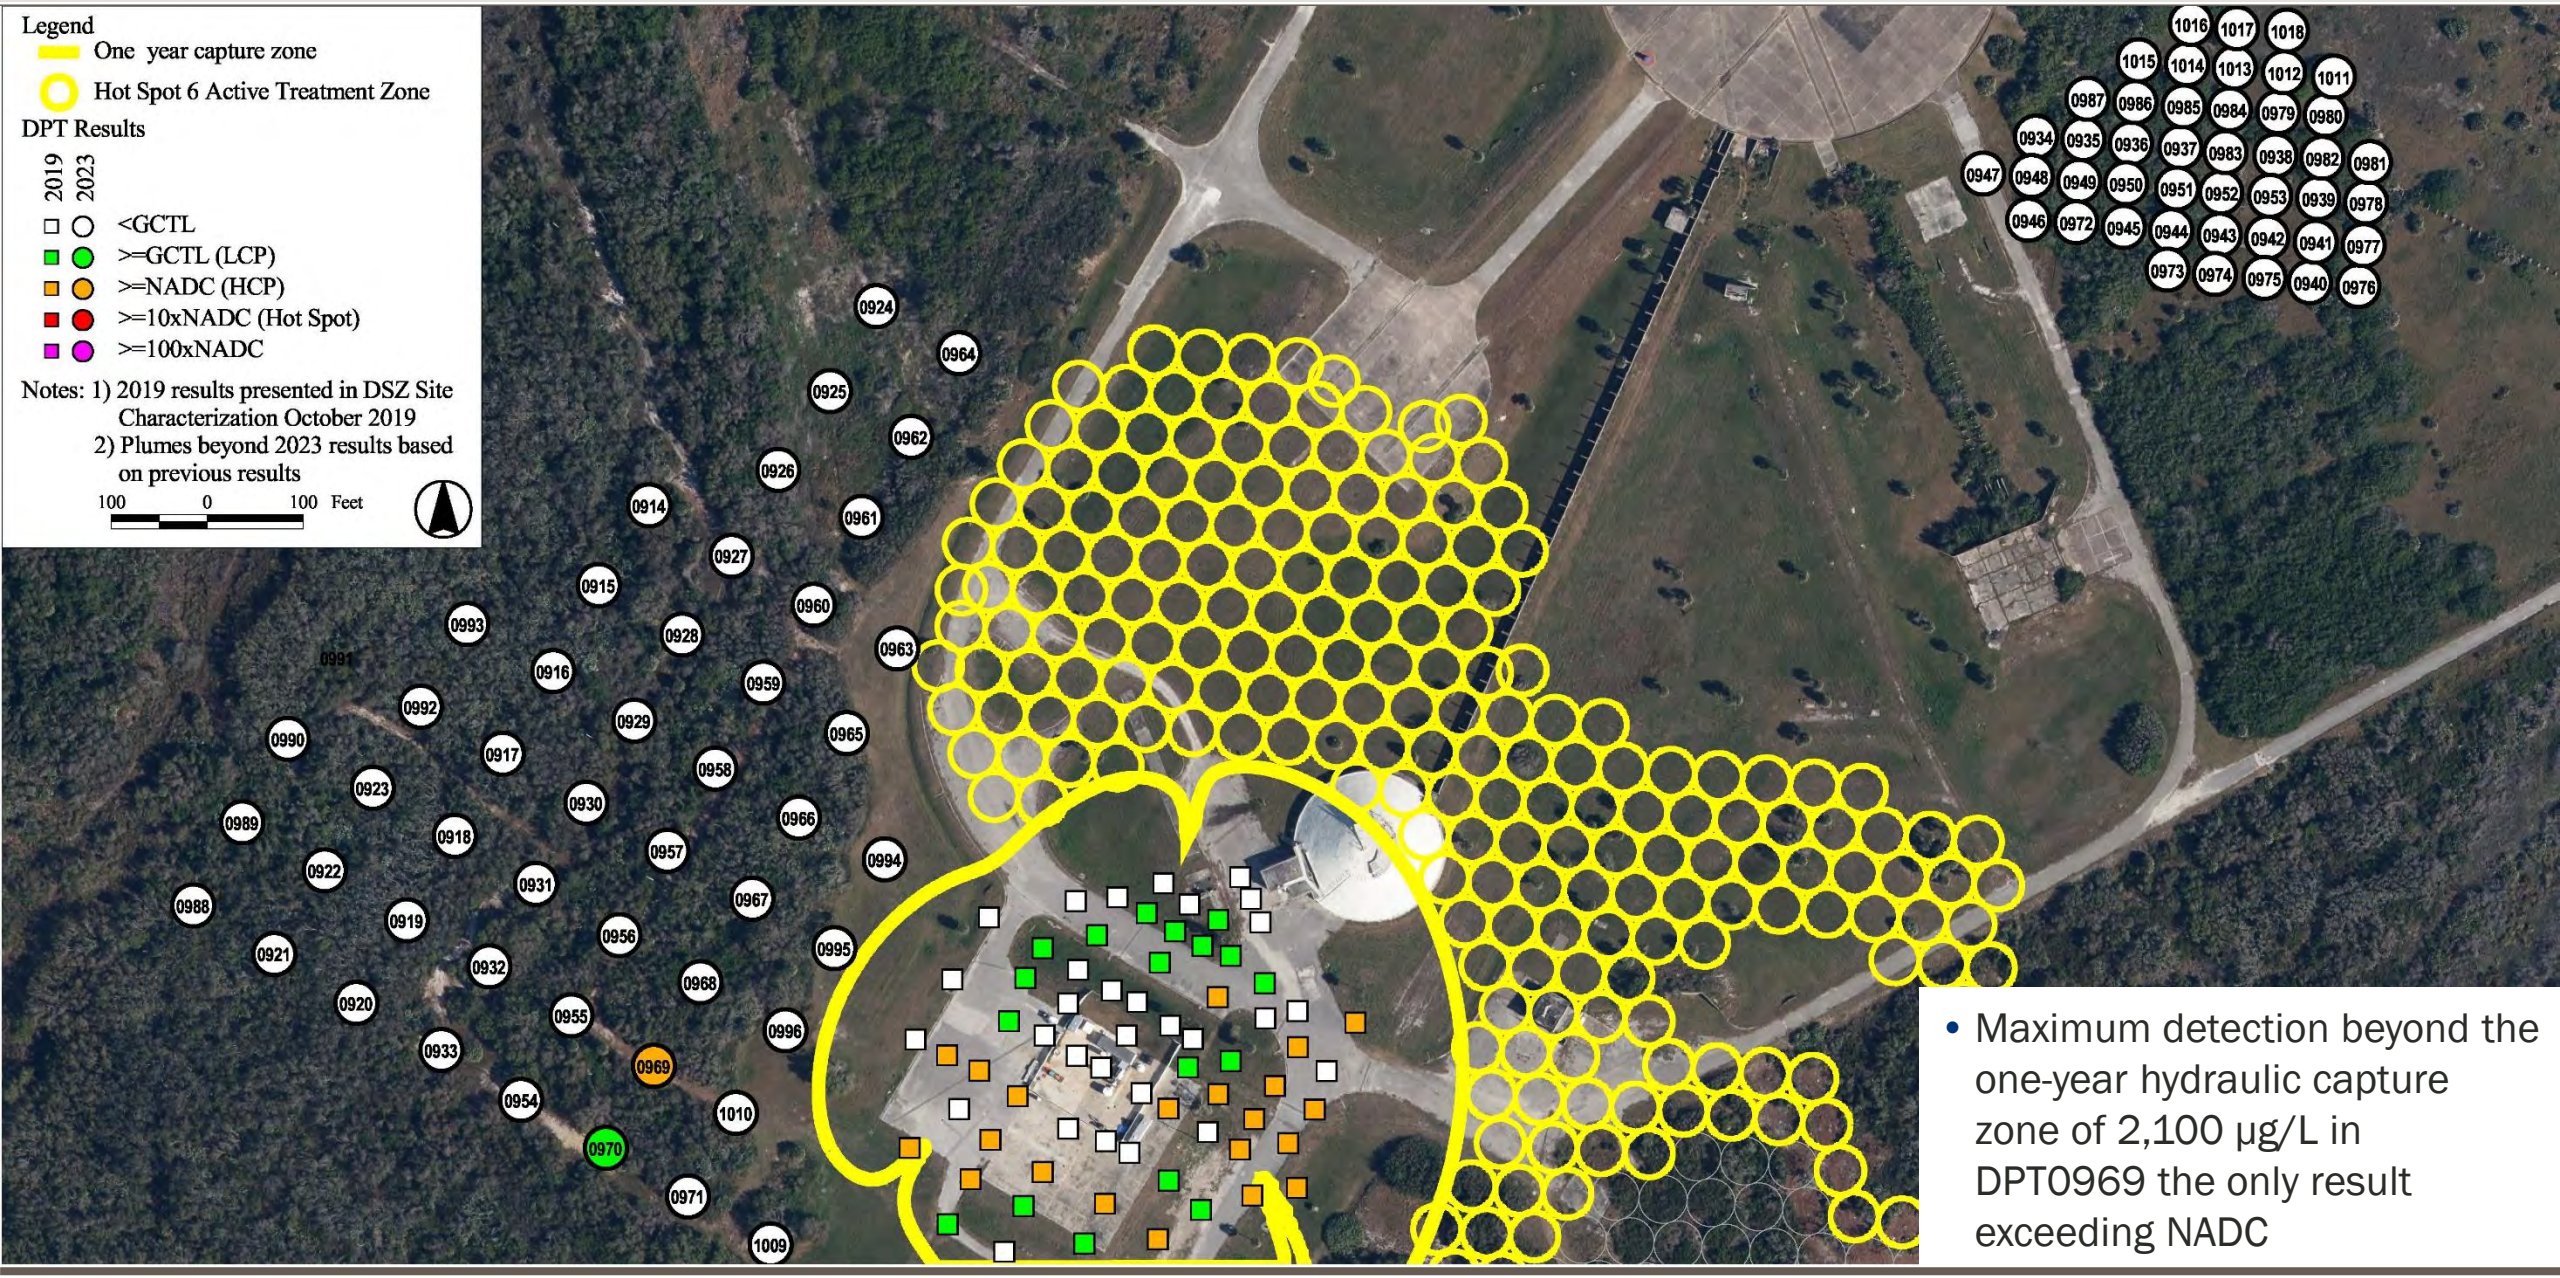
- All 2023 results less than GCTL beyond the one-year hydraulic capture zone

tDCE, Interval: 10 to 15 feet bls (Layer 1)



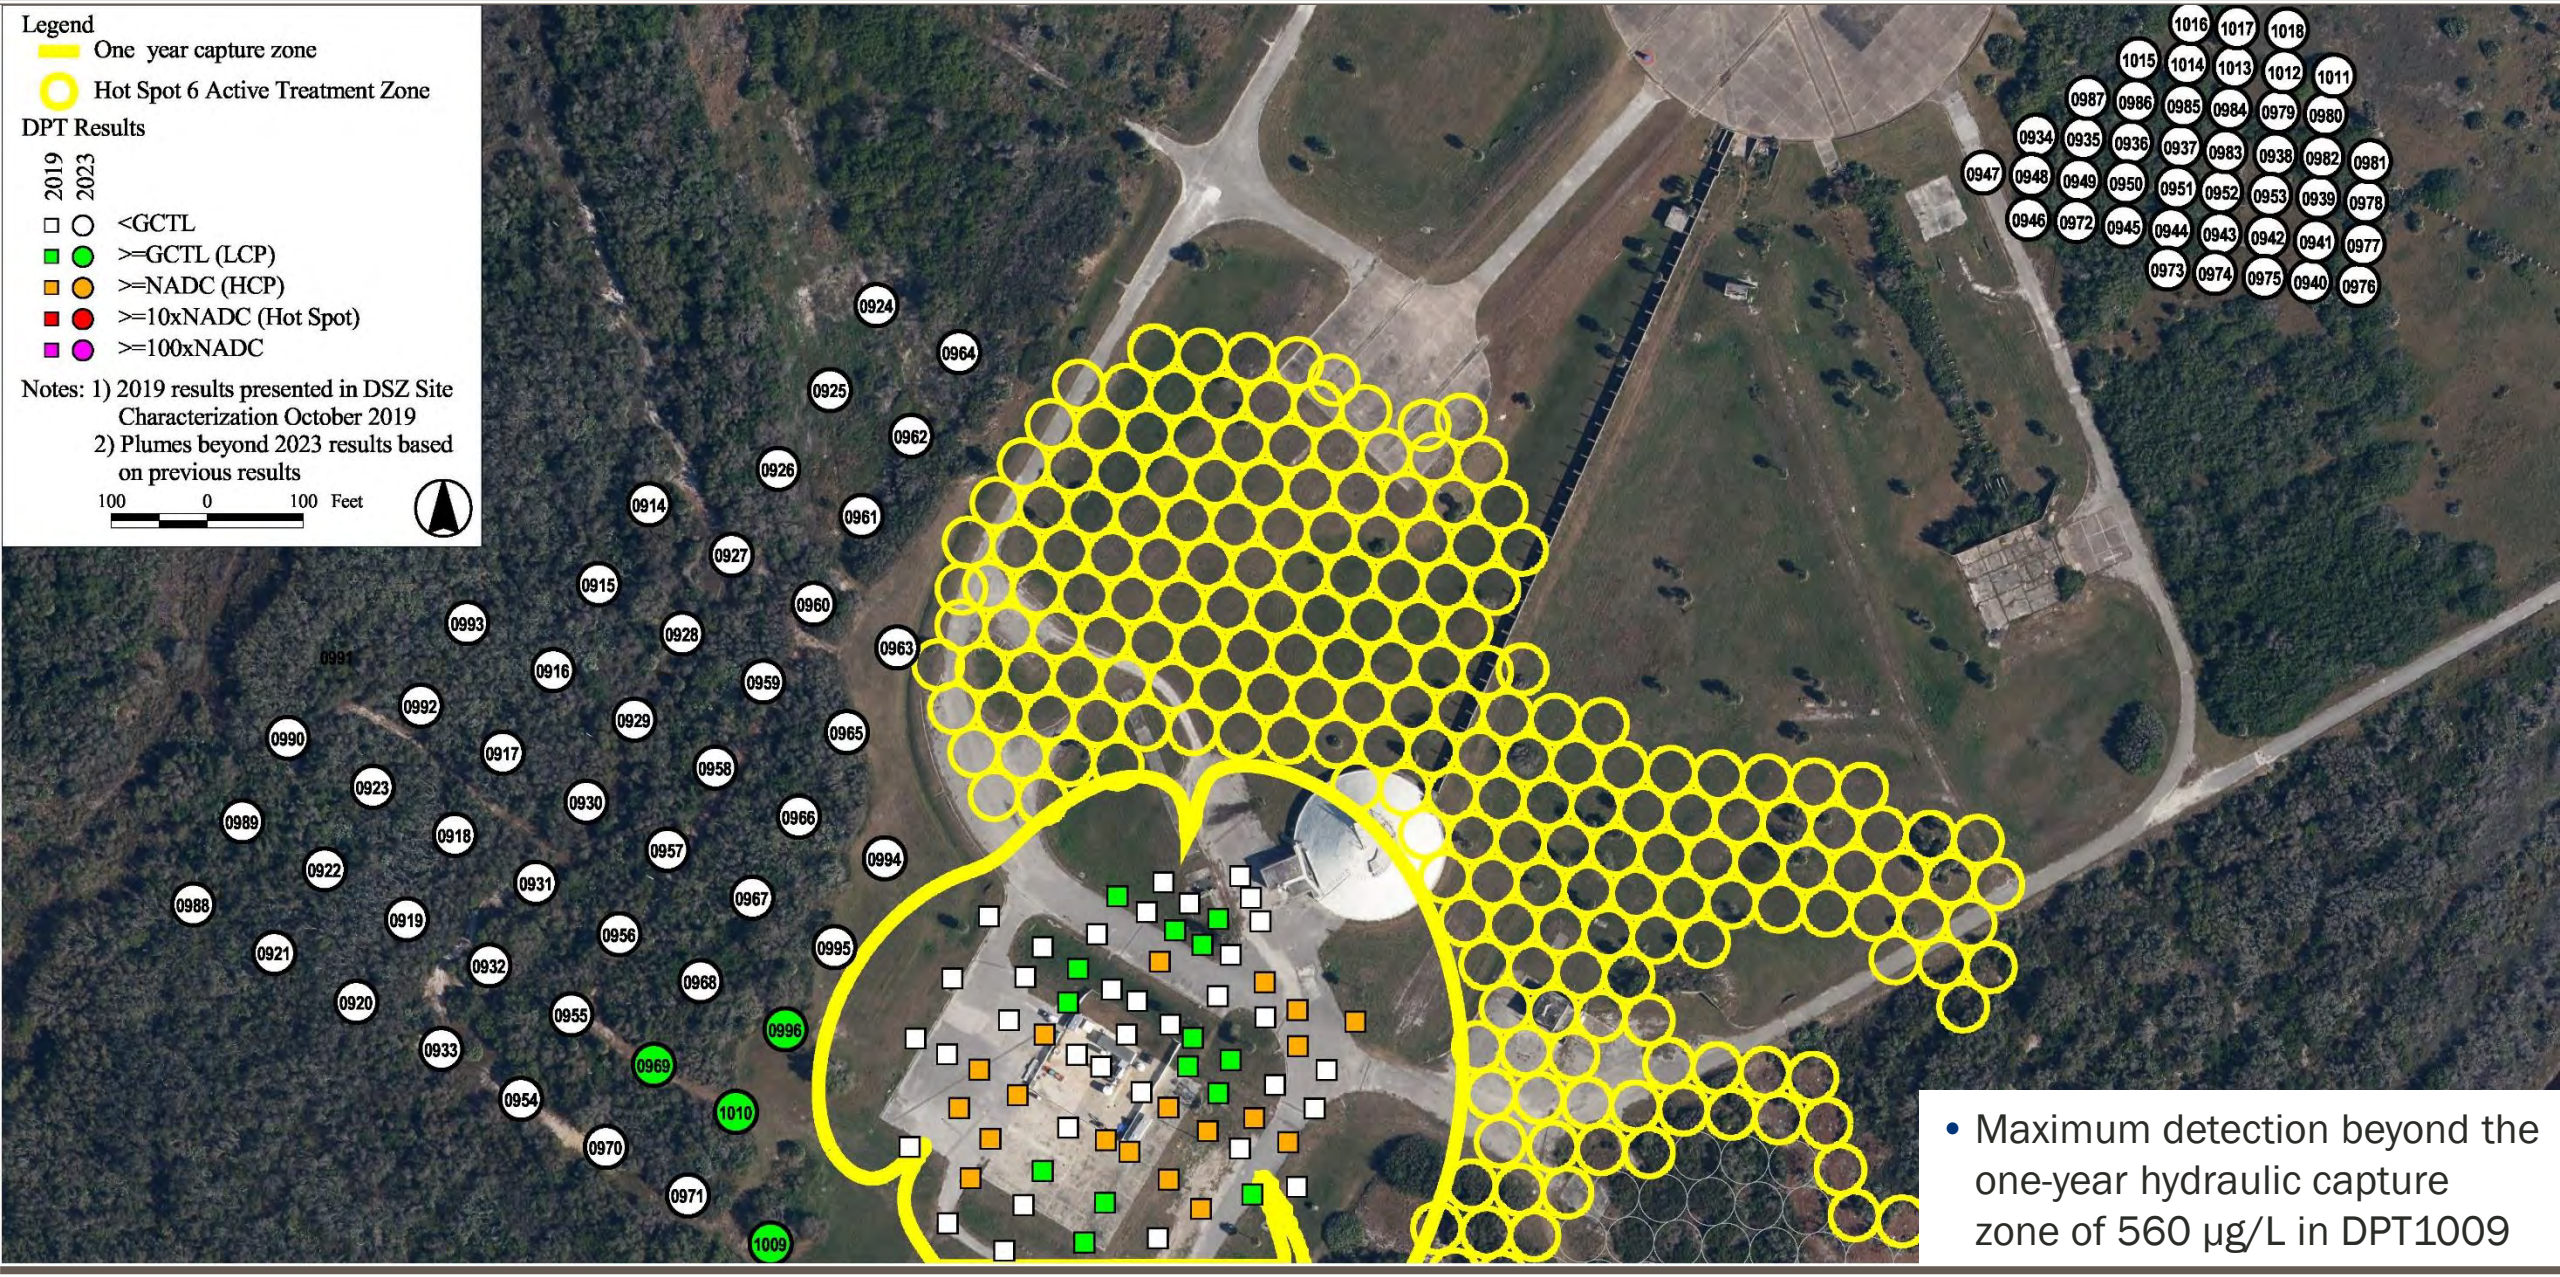
- All 2023 results less than GCTL beyond the one-year hydraulic capture zone

tDCE, Interval: 15 to 20 feet bls (Layer 1)



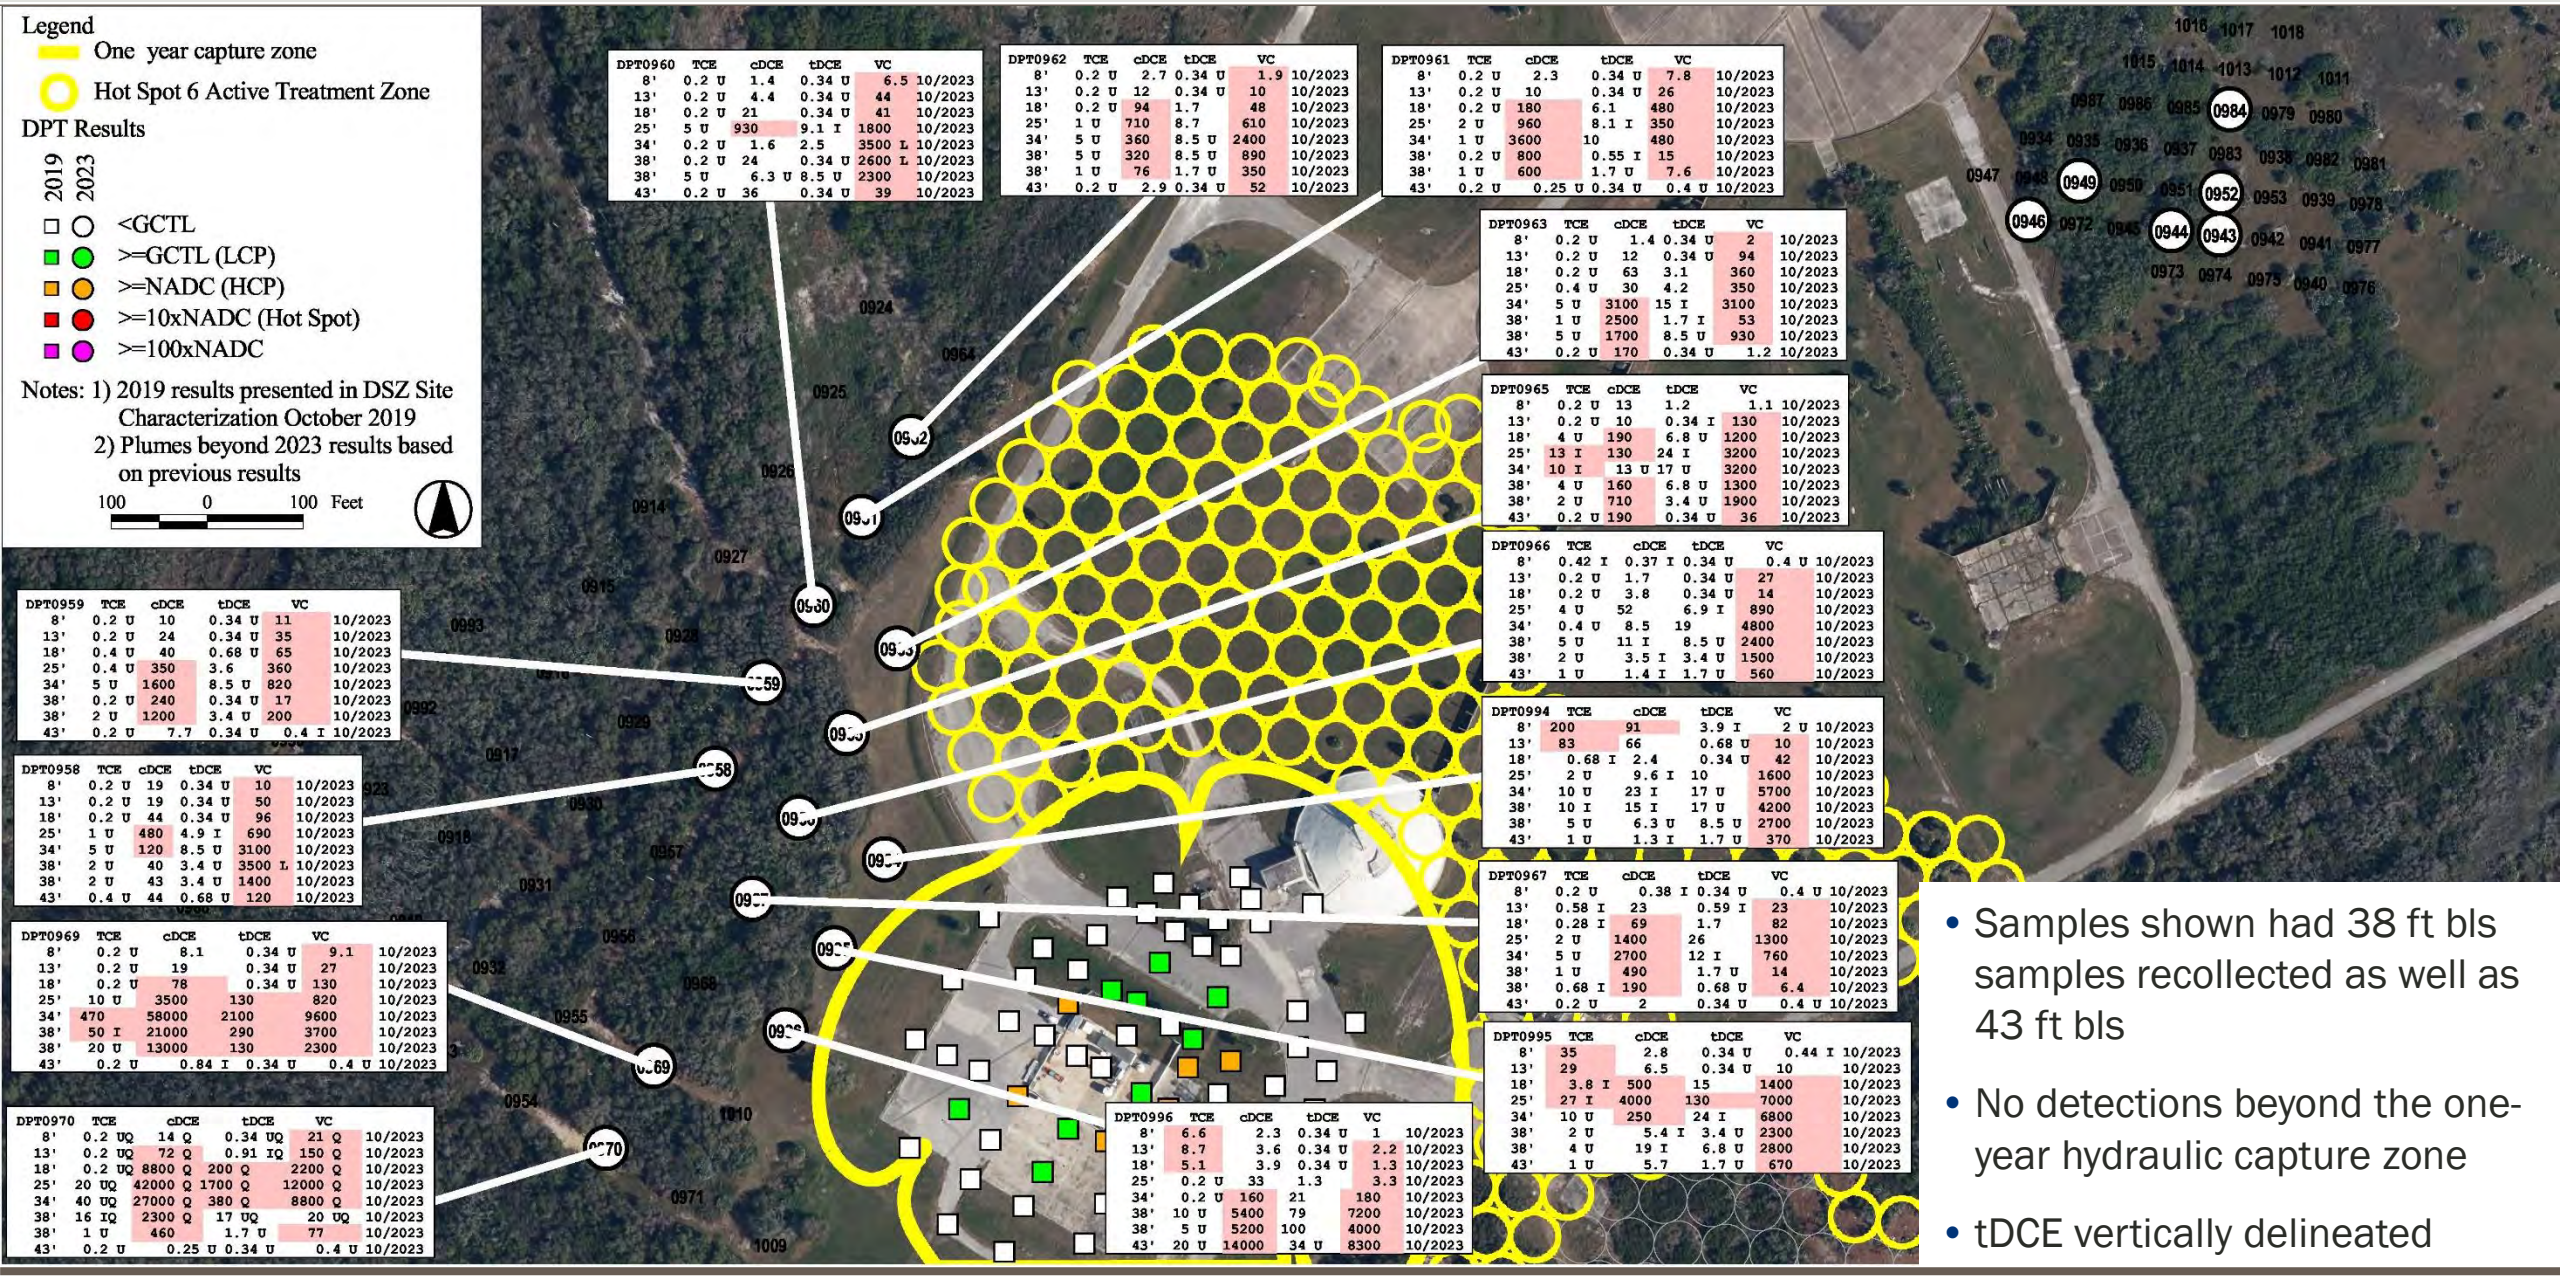
- Maximum detection beyond the one-year hydraulic capture zone of 220 µg/L in DPT0933

tDCE, Interval: 20 to 28 feet bls (Layer 1/2)



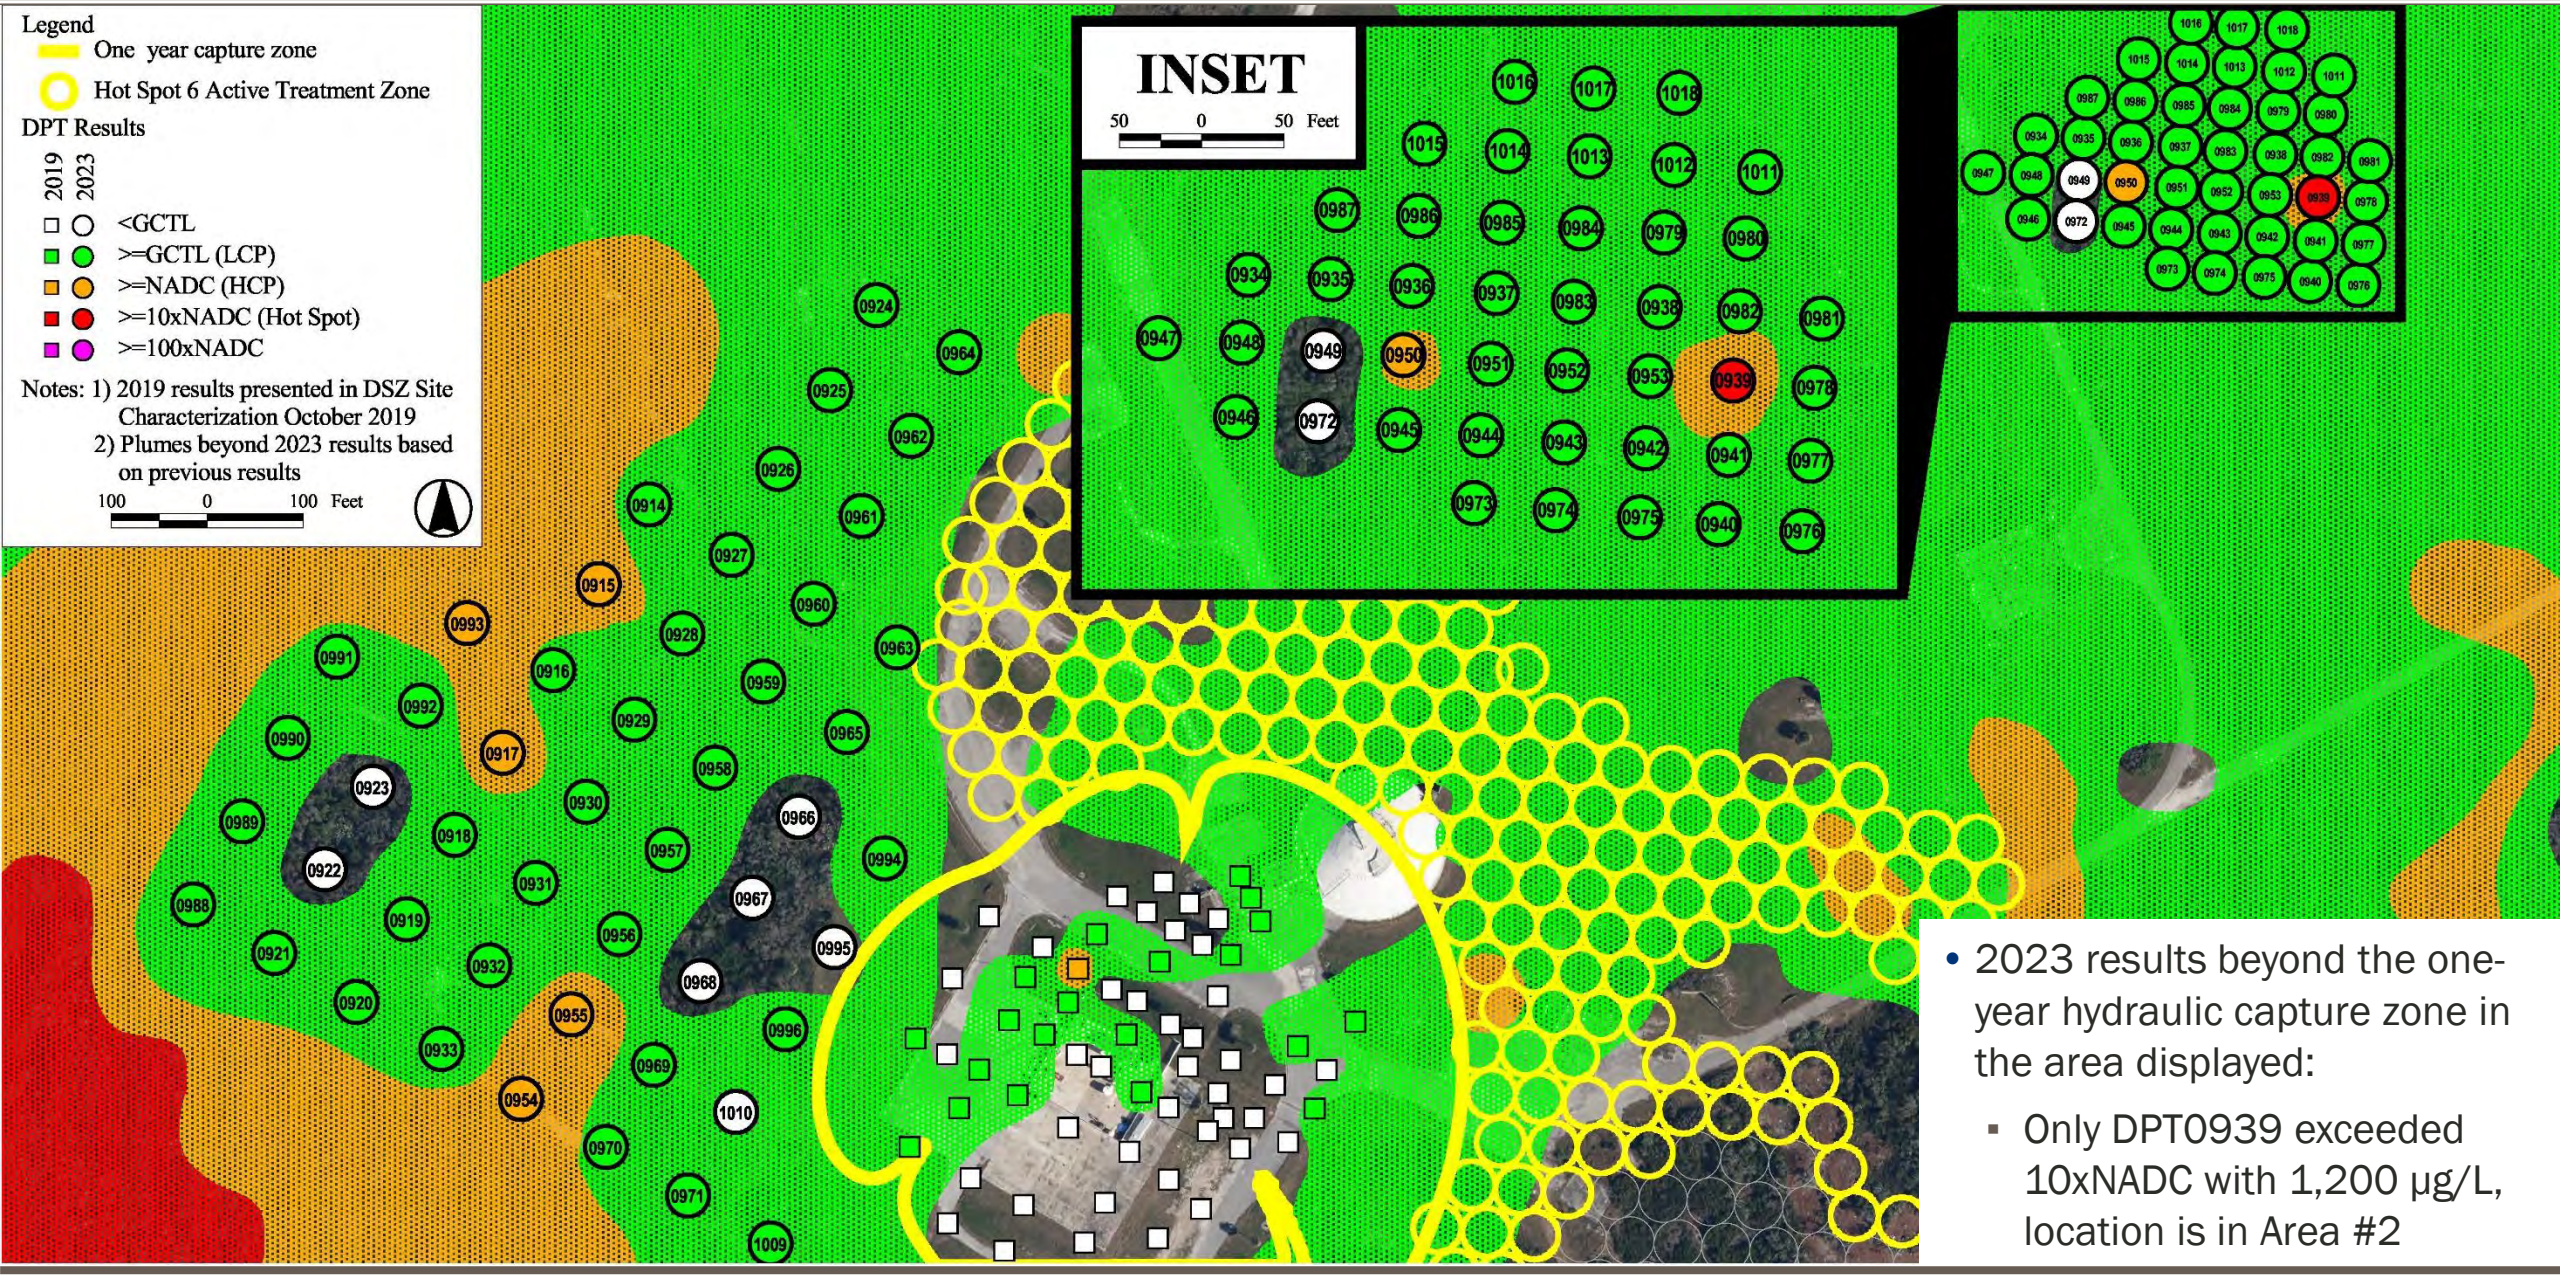
- Maximum detection beyond the one-year hydraulic capture zone of 1,700 µg/L in DPT0970 the only result exceeding NADC

tDCE, Interval: 28 to 34 feet bls (Layer 3)



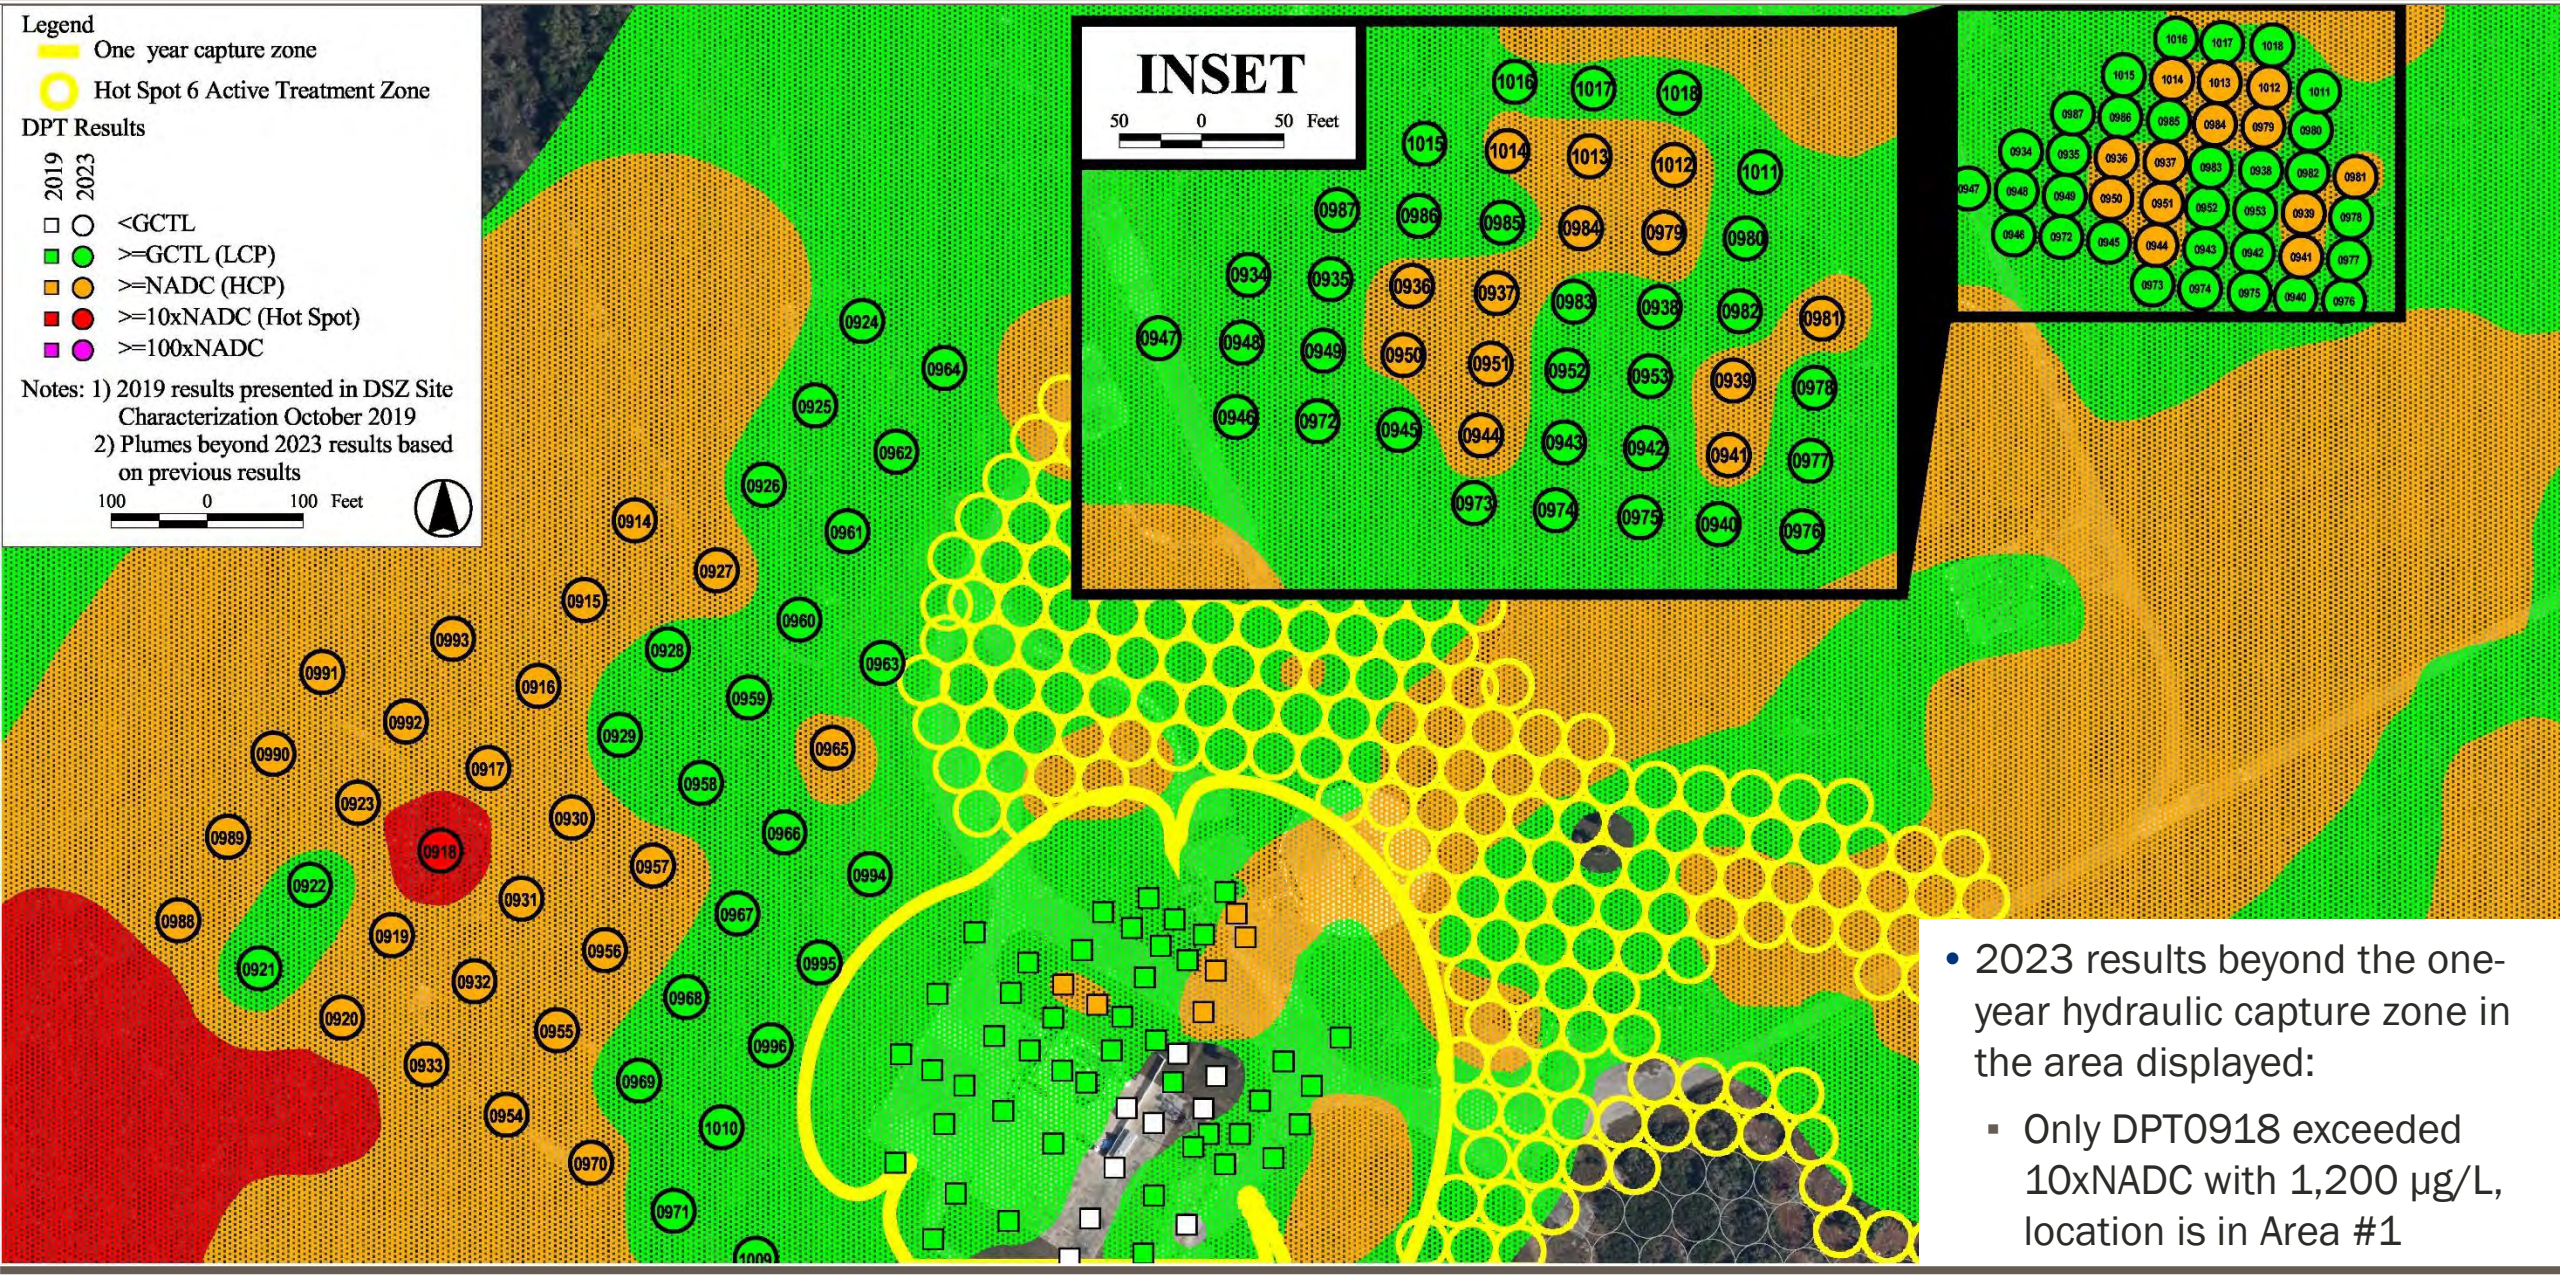
- Maximum detection beyond the one-year hydraulic capture zone of 2,100 µg/L in DPT0969 the only result exceeding NADC

tDCE, Interval: 34 to 40 feet bls (Layer 3)



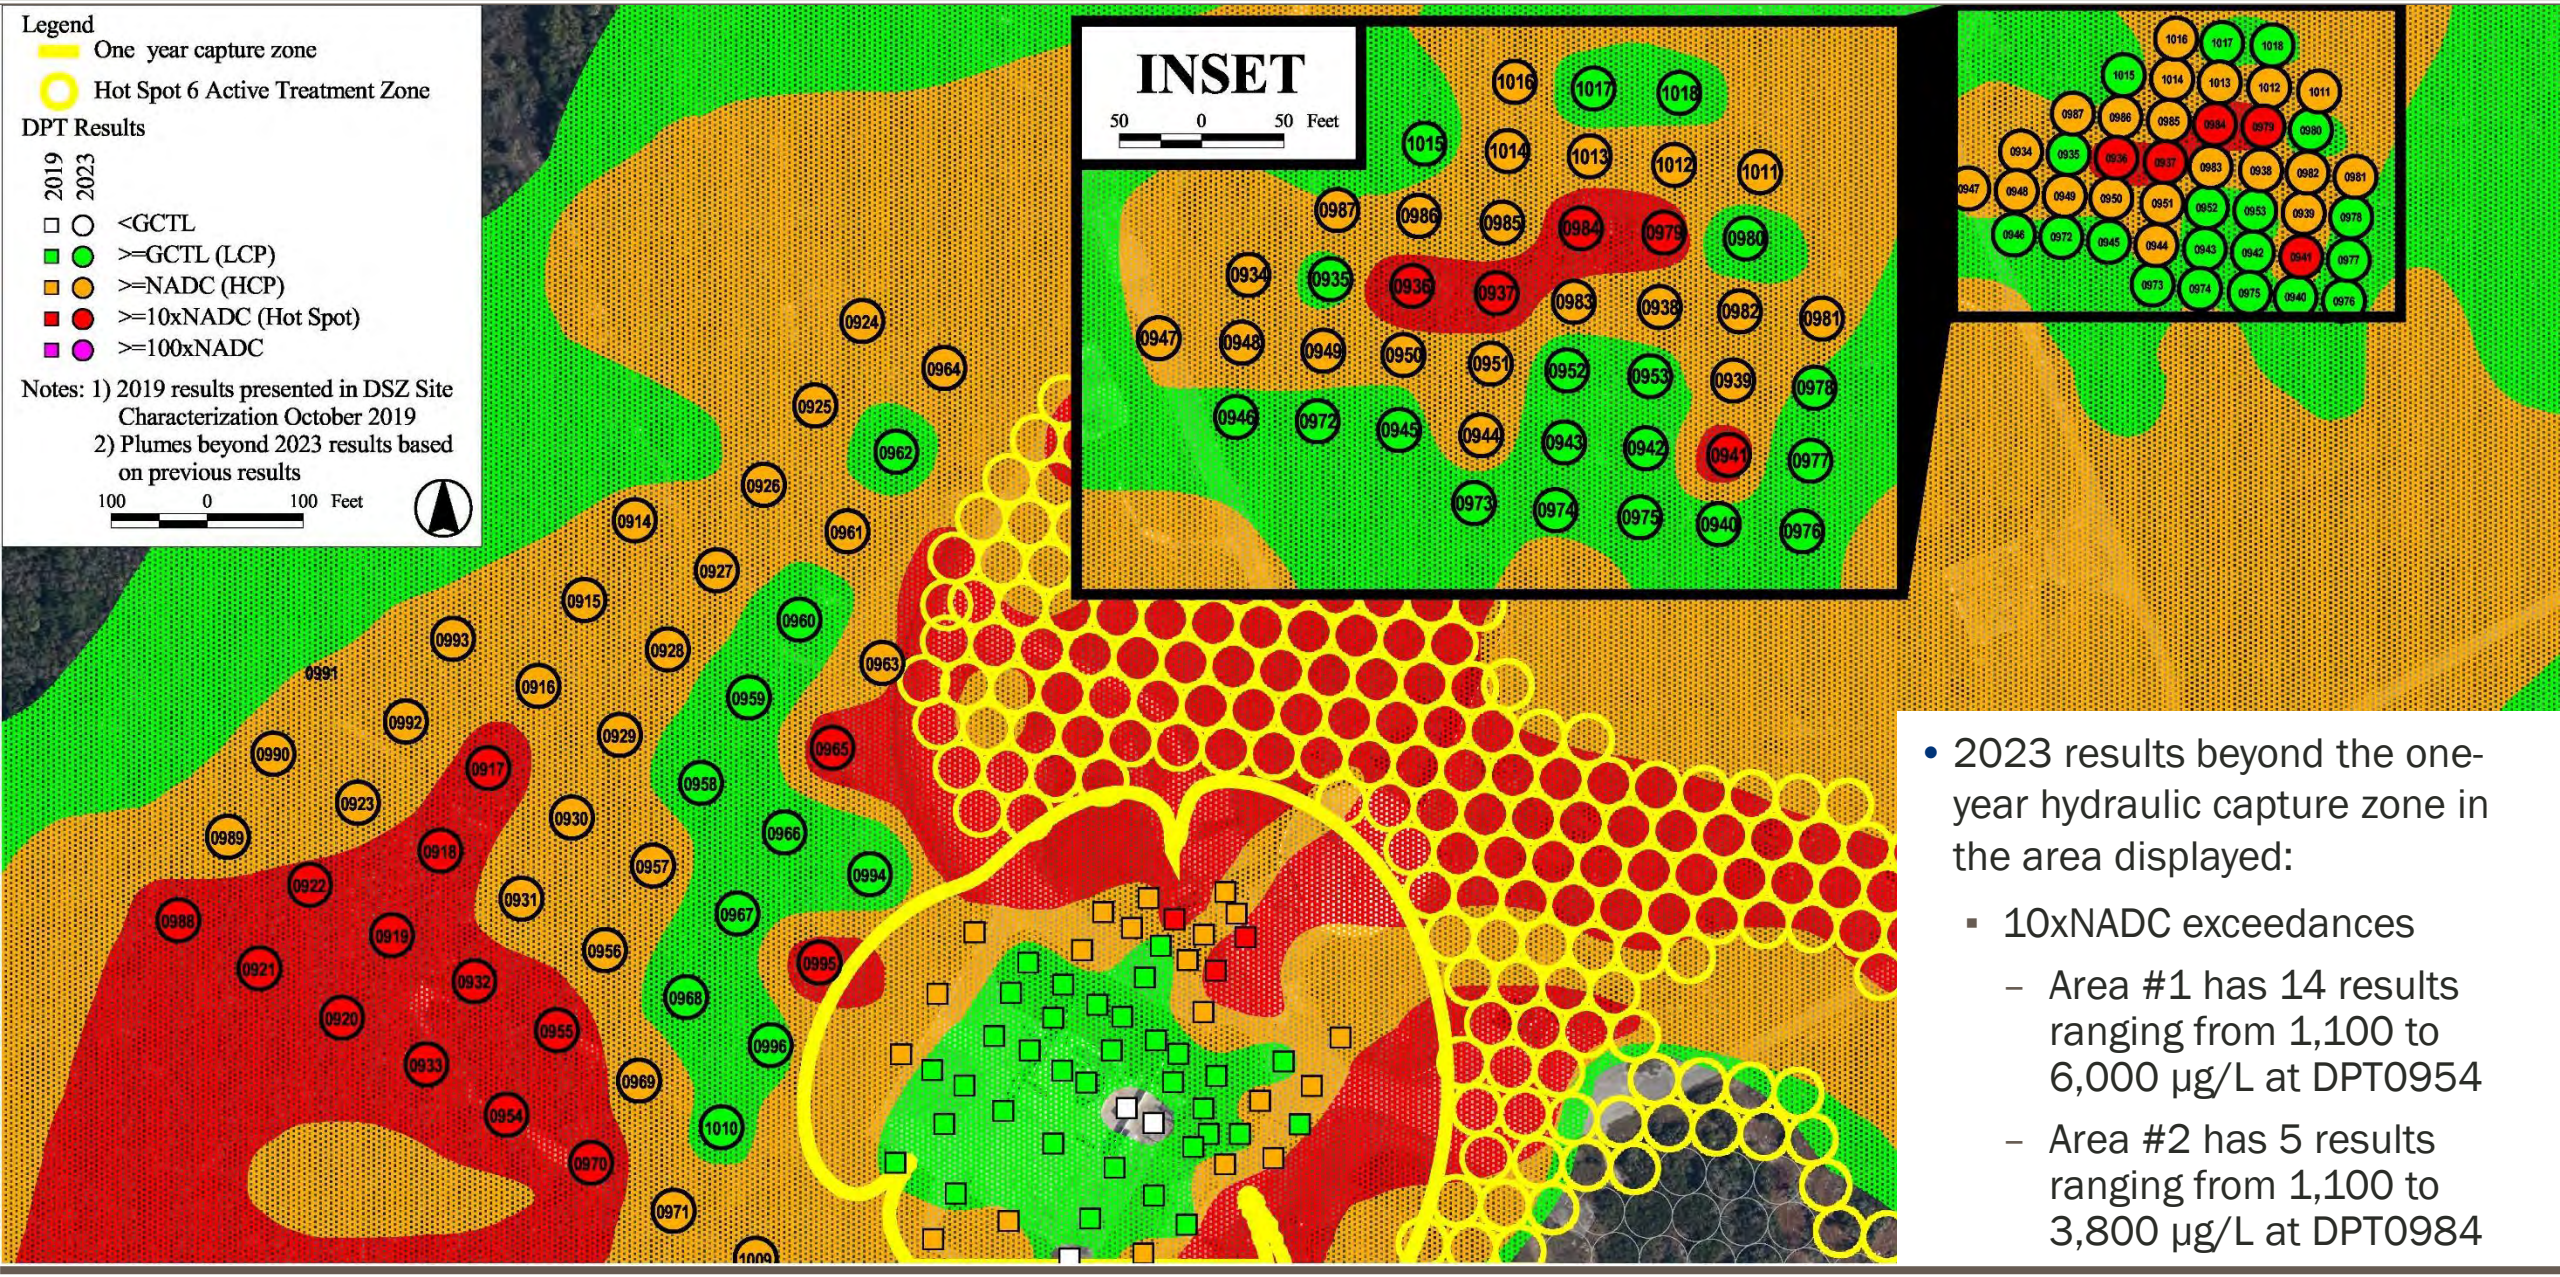
- Maximum detection beyond the one-year hydraulic capture zone of 560 µg/L in DPT1009

tDCE, Interval: >40 feet bls (Layer 3/4)



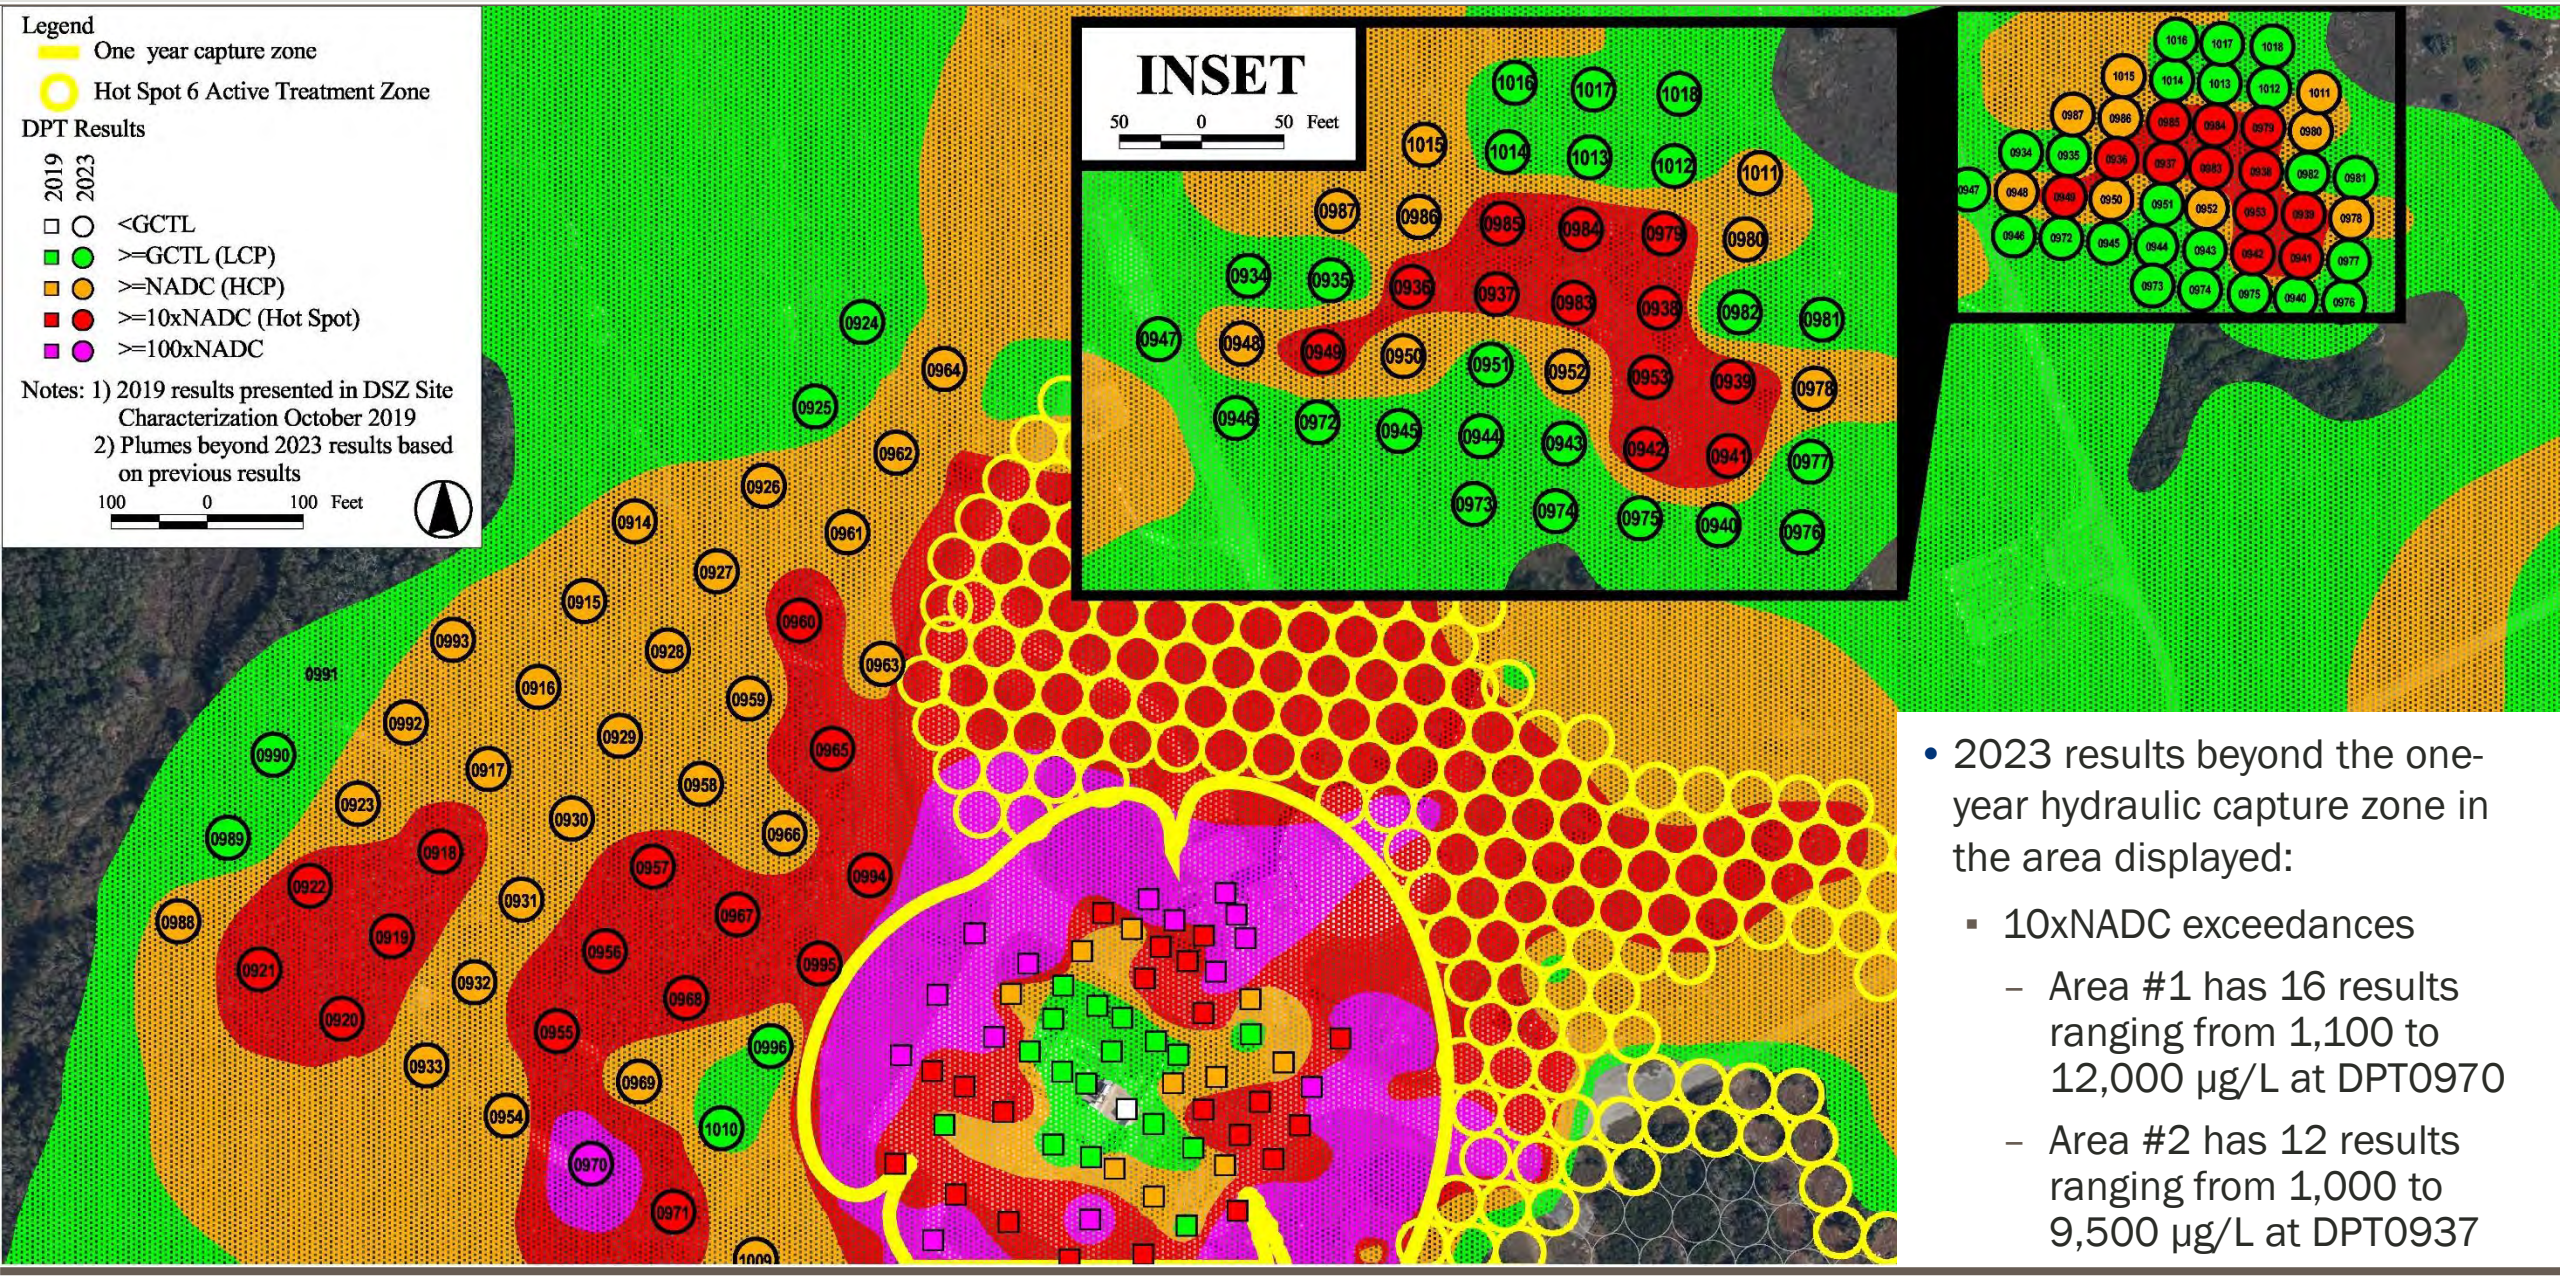
- Samples shown had 38 ft bls samples recollected as well as 43 ft bls
- No detections beyond the one-year hydraulic capture zone
- tDCE vertically delineated

VC, Interval: 0 to 10 feet bls (Layer 1)



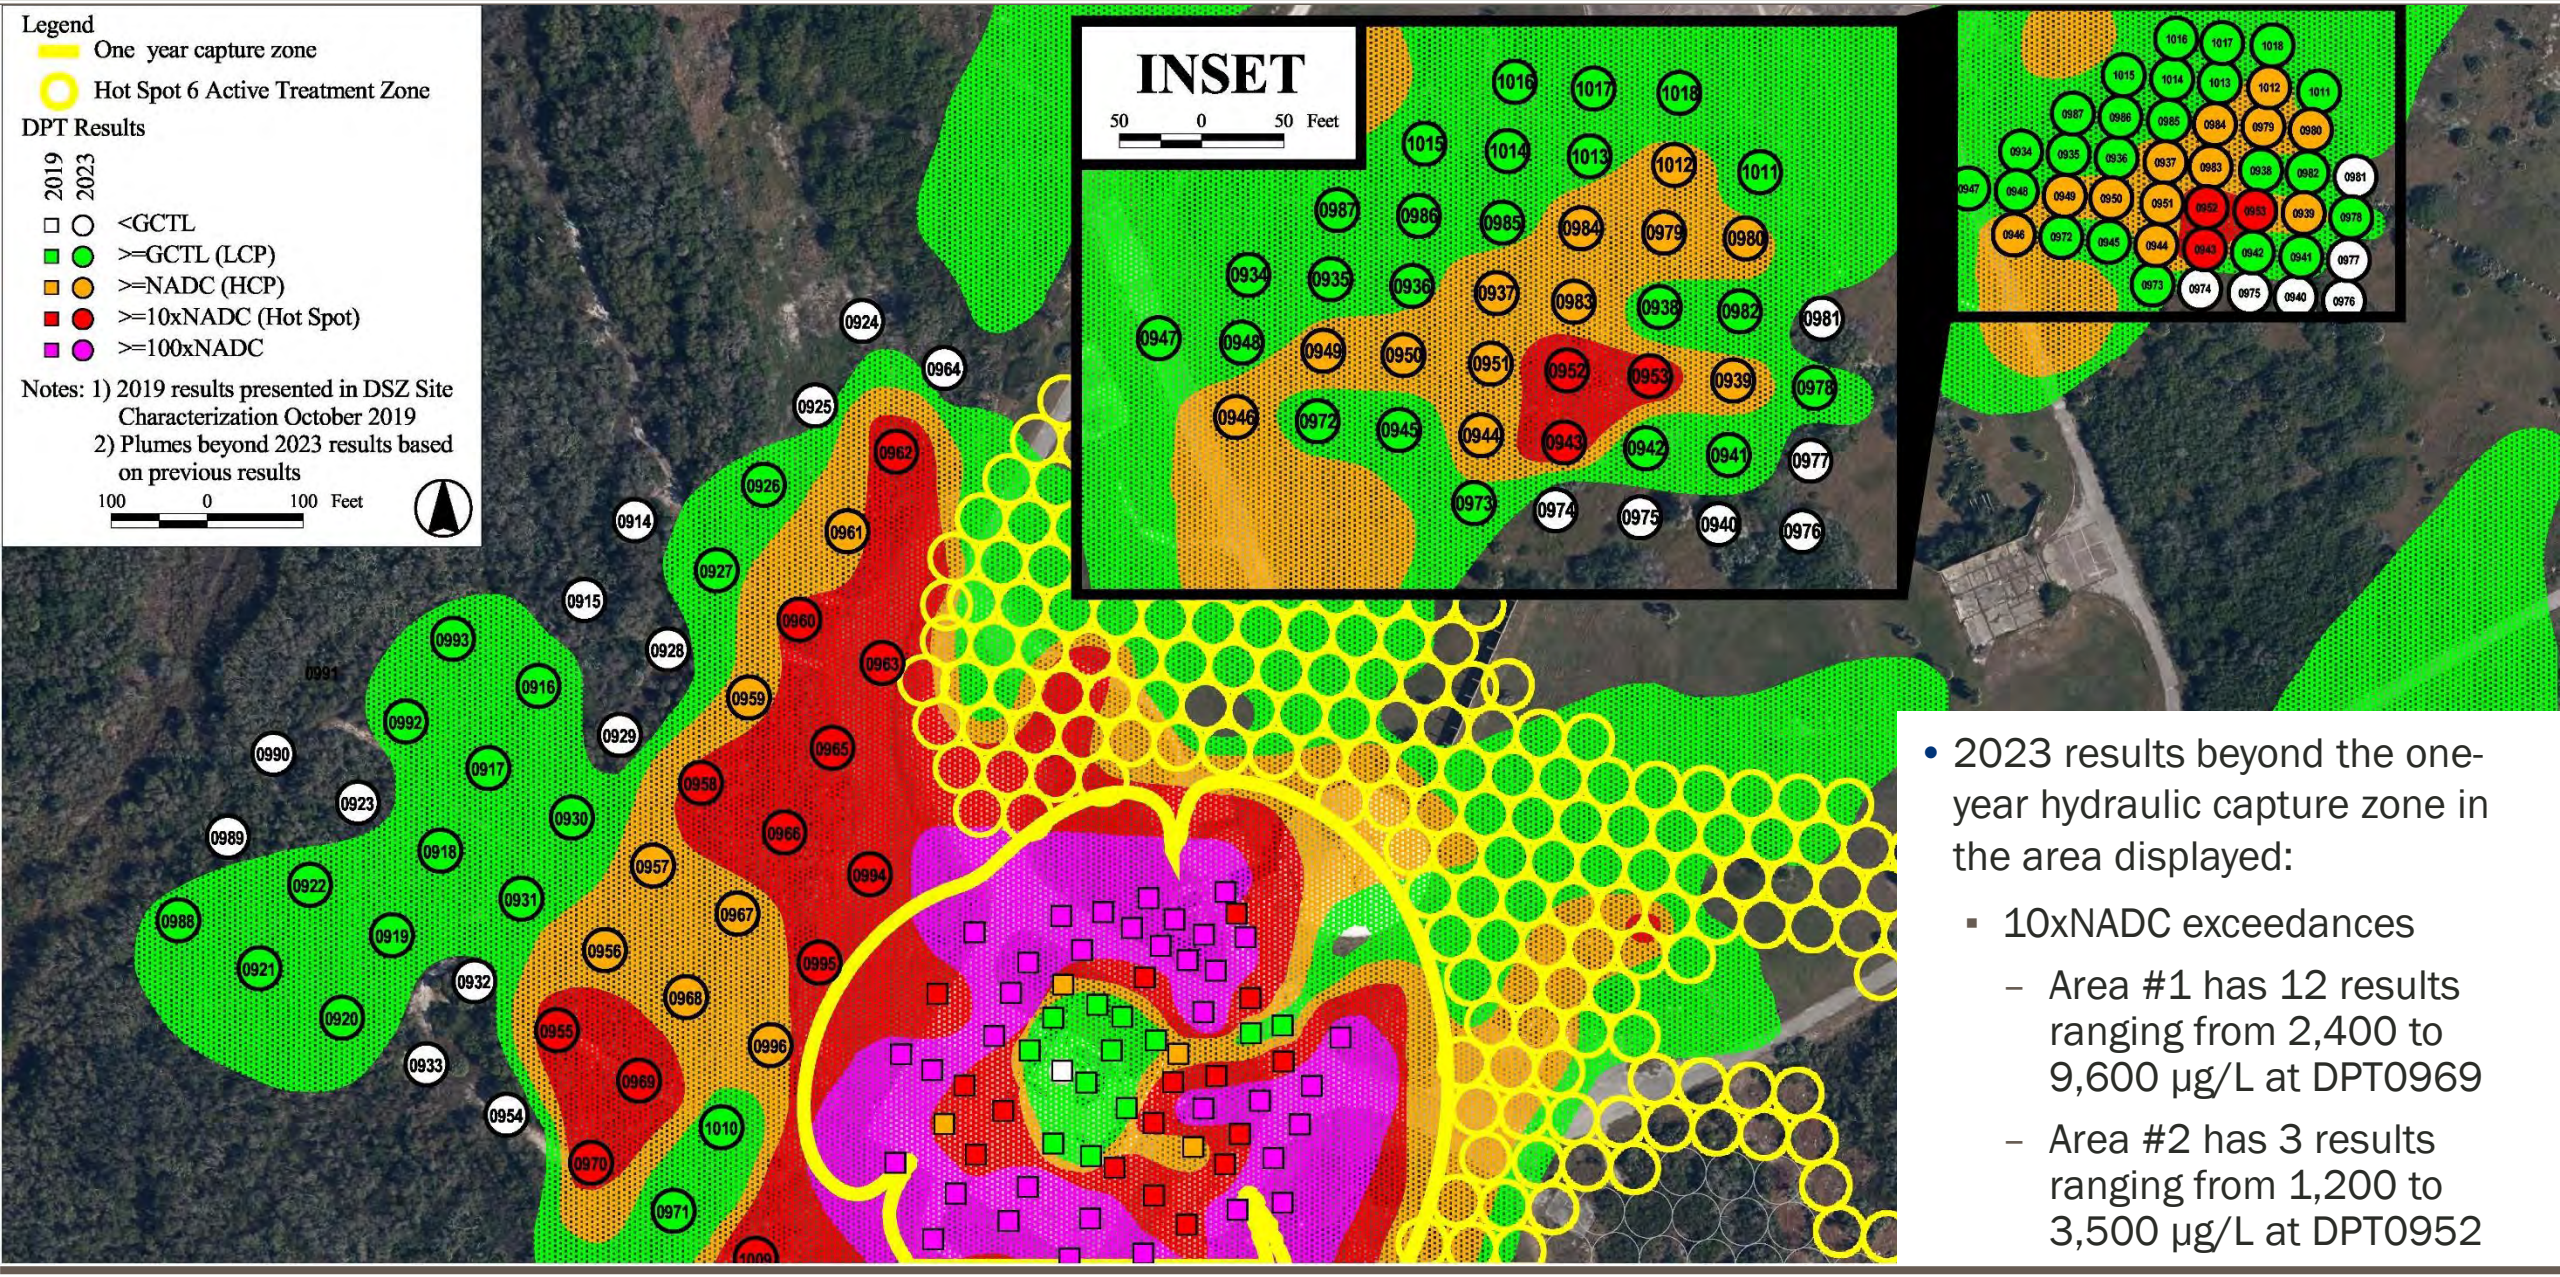
- 2023 results beyond the one-year hydraulic capture zone in the area displayed:
  - Only DPT0939 exceeded 10xNADC with 1,200 µg/L, location is in Area #2

VC, Interval: 10 to 15 feet bls (Layer 1)



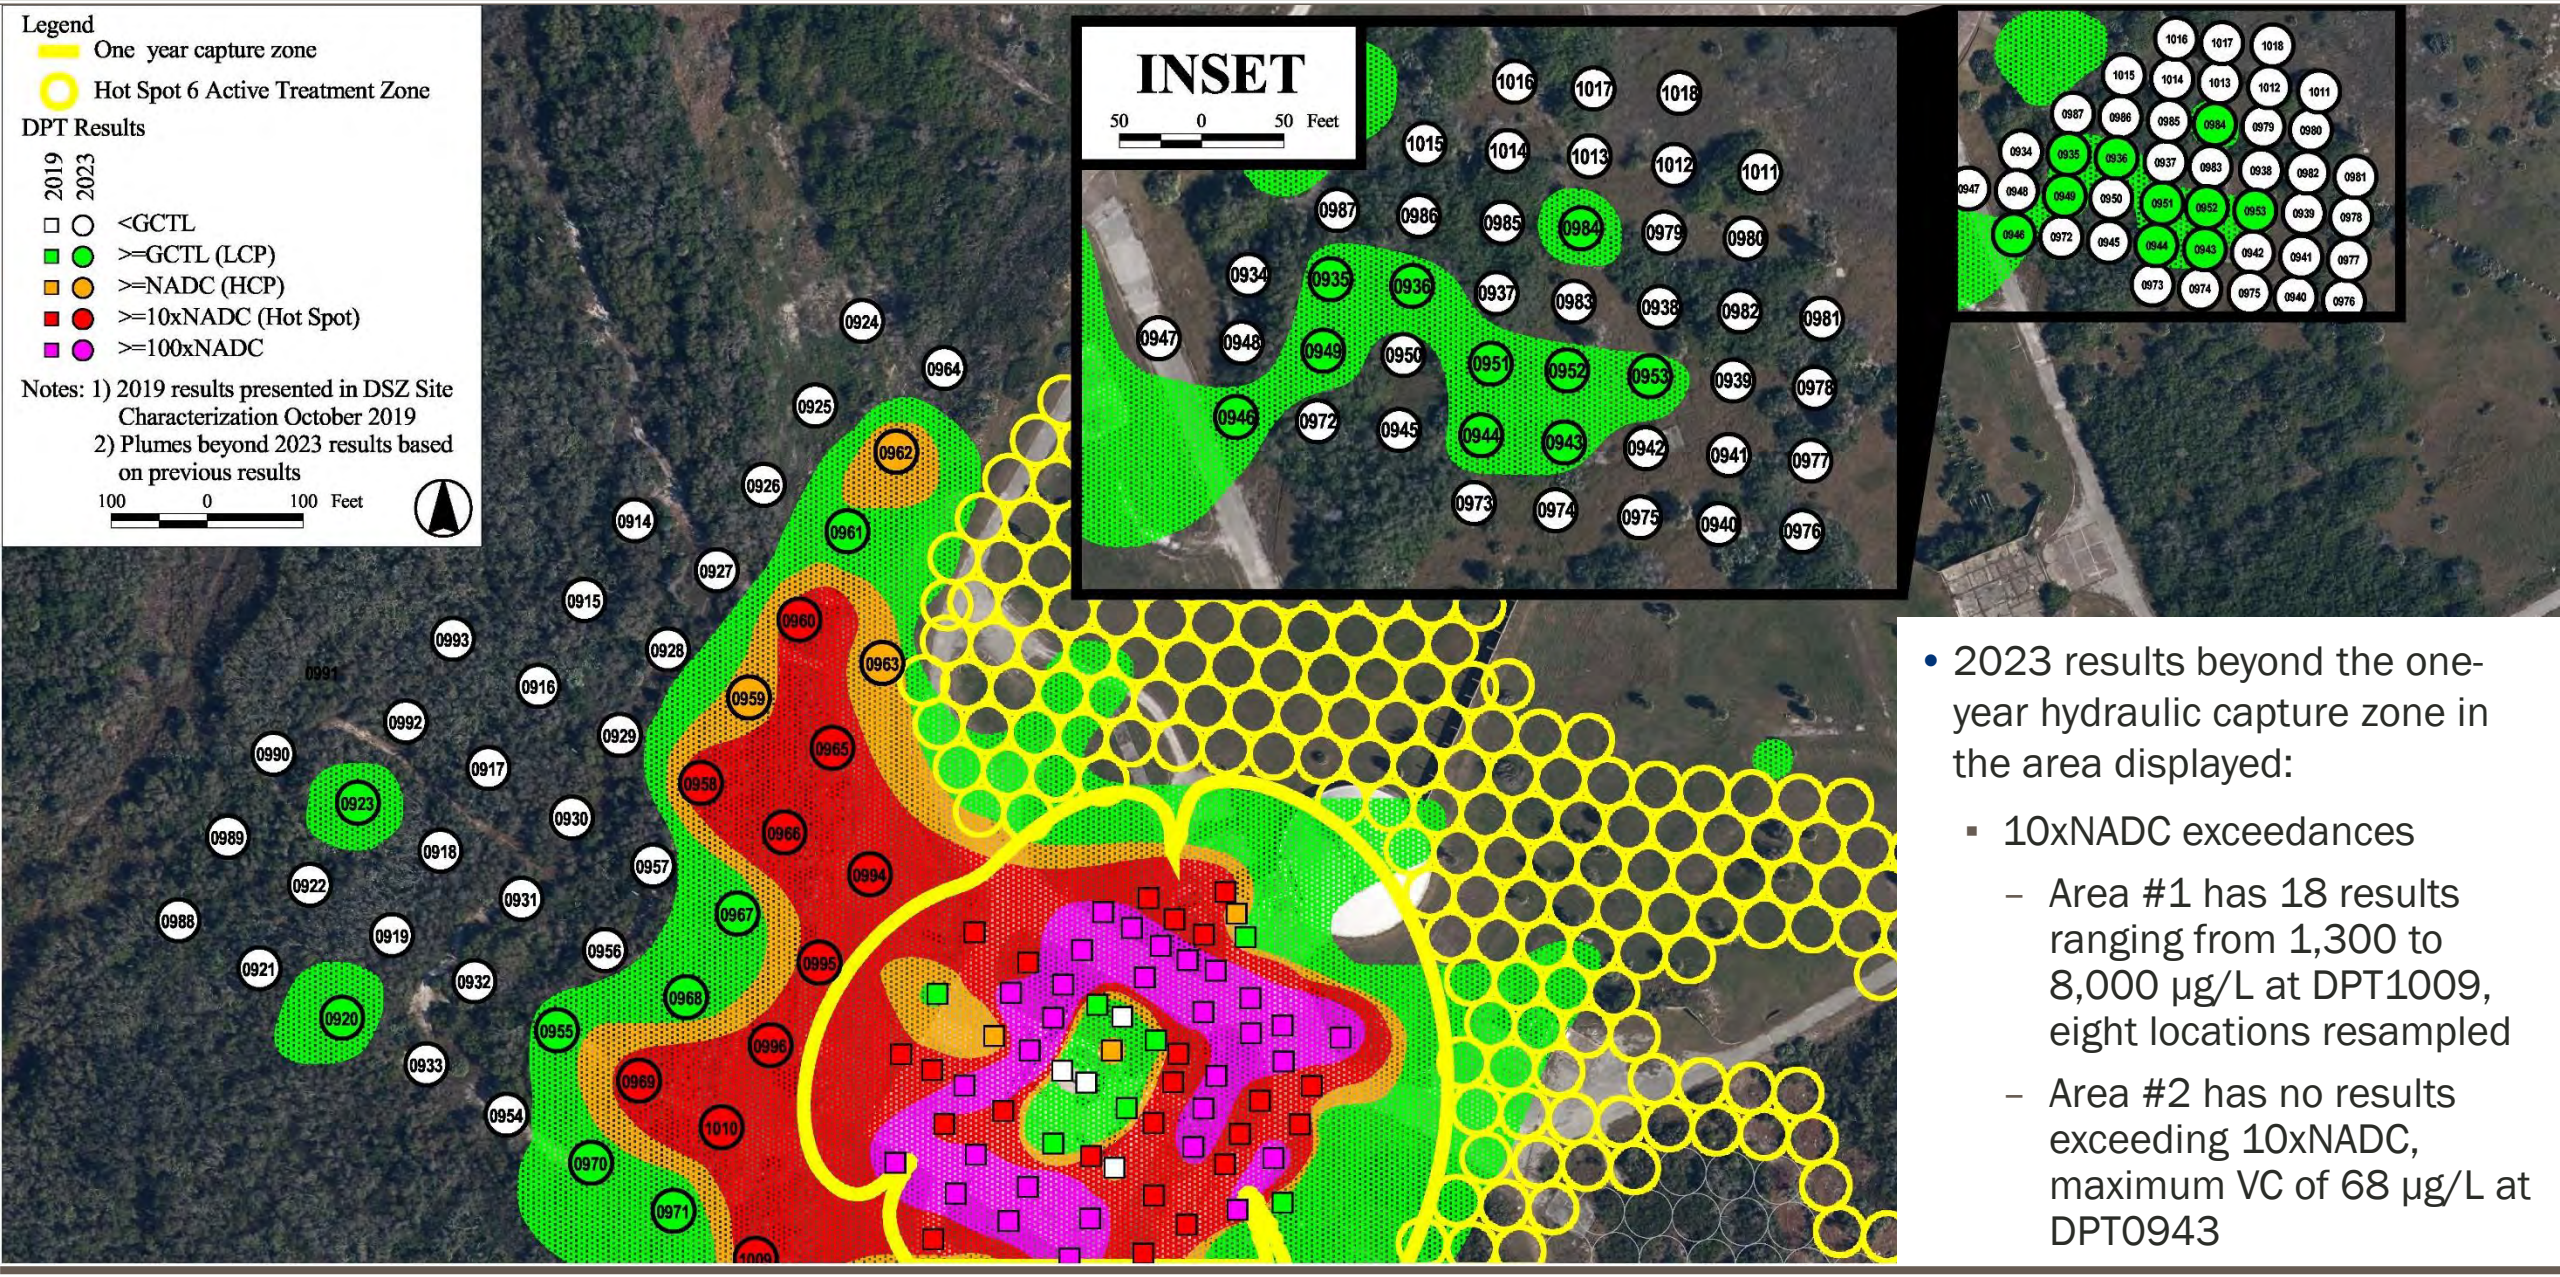
- 2023 results beyond the one-year hydraulic capture zone in the area displayed:
  - Only DPT0918 exceeded 10xNADC with 1,200 µg/L, location is in Area #1

VC, Interval: 15 to 20 feet bls (Layer 1)



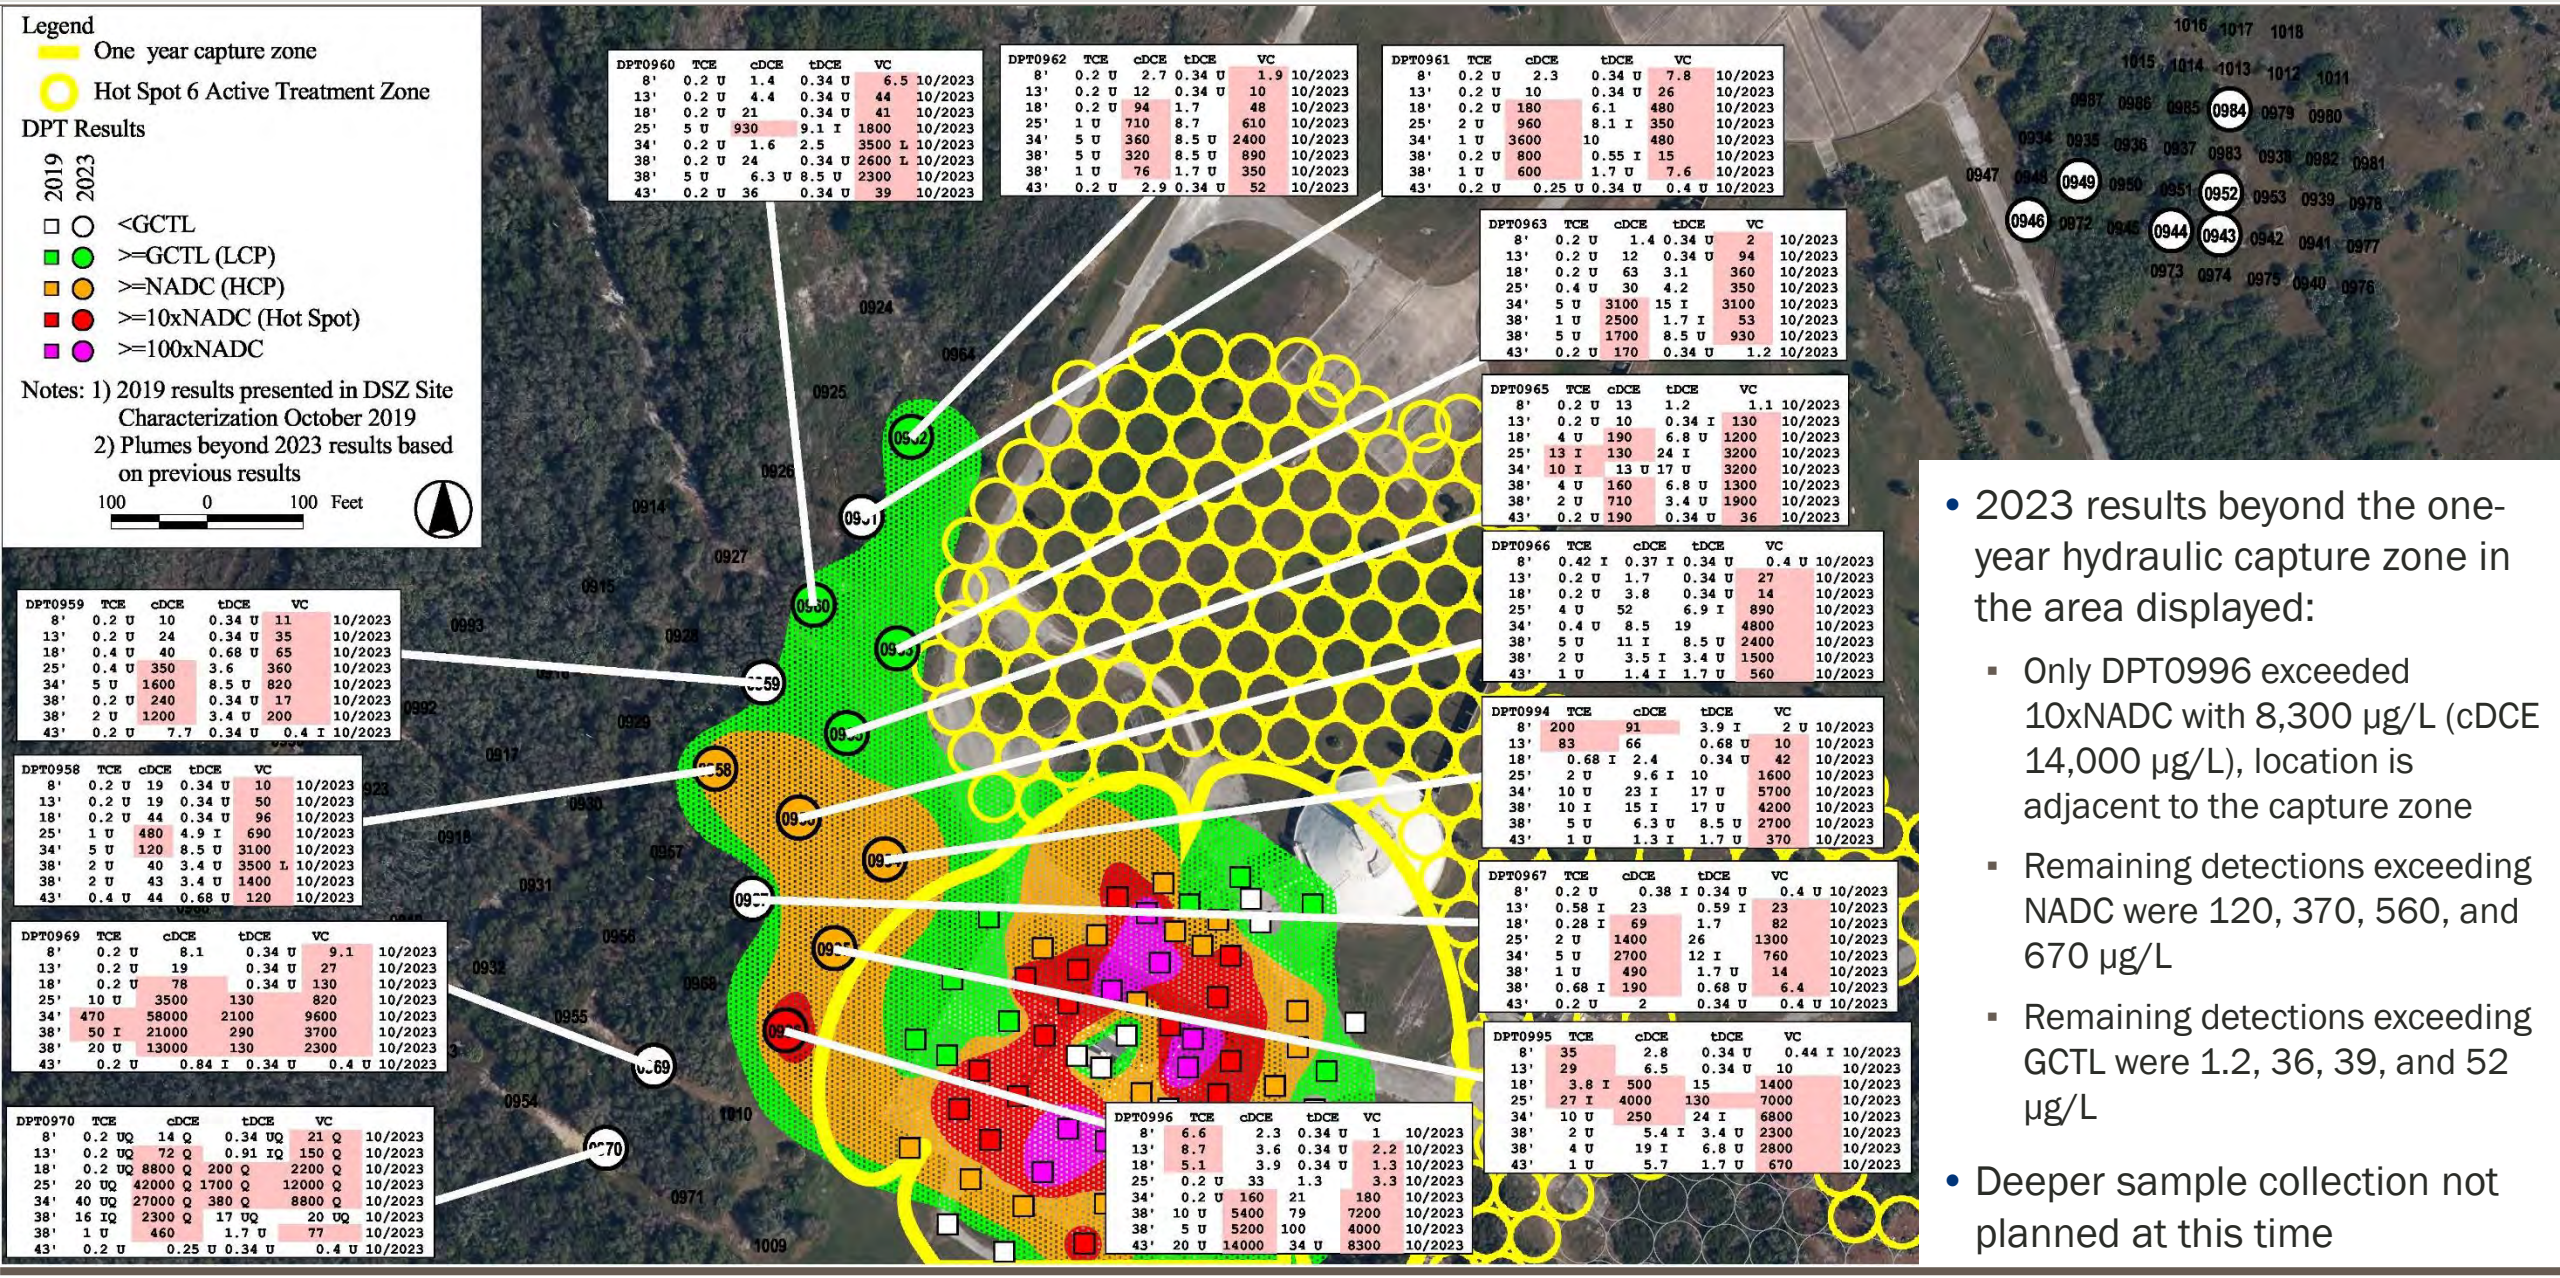
- 2023 results beyond the one-year hydraulic capture zone in the area displayed:
  - 10xNADC exceedances
    - Area #1 has 14 results ranging from 1,100 to 6,000 µg/L at DPT0954
    - Area #2 has 5 results ranging from 1,100 to 3,800 µg/L at DPT0984

VC, Interval: 20 to 28 feet bls (Layer 1/2)



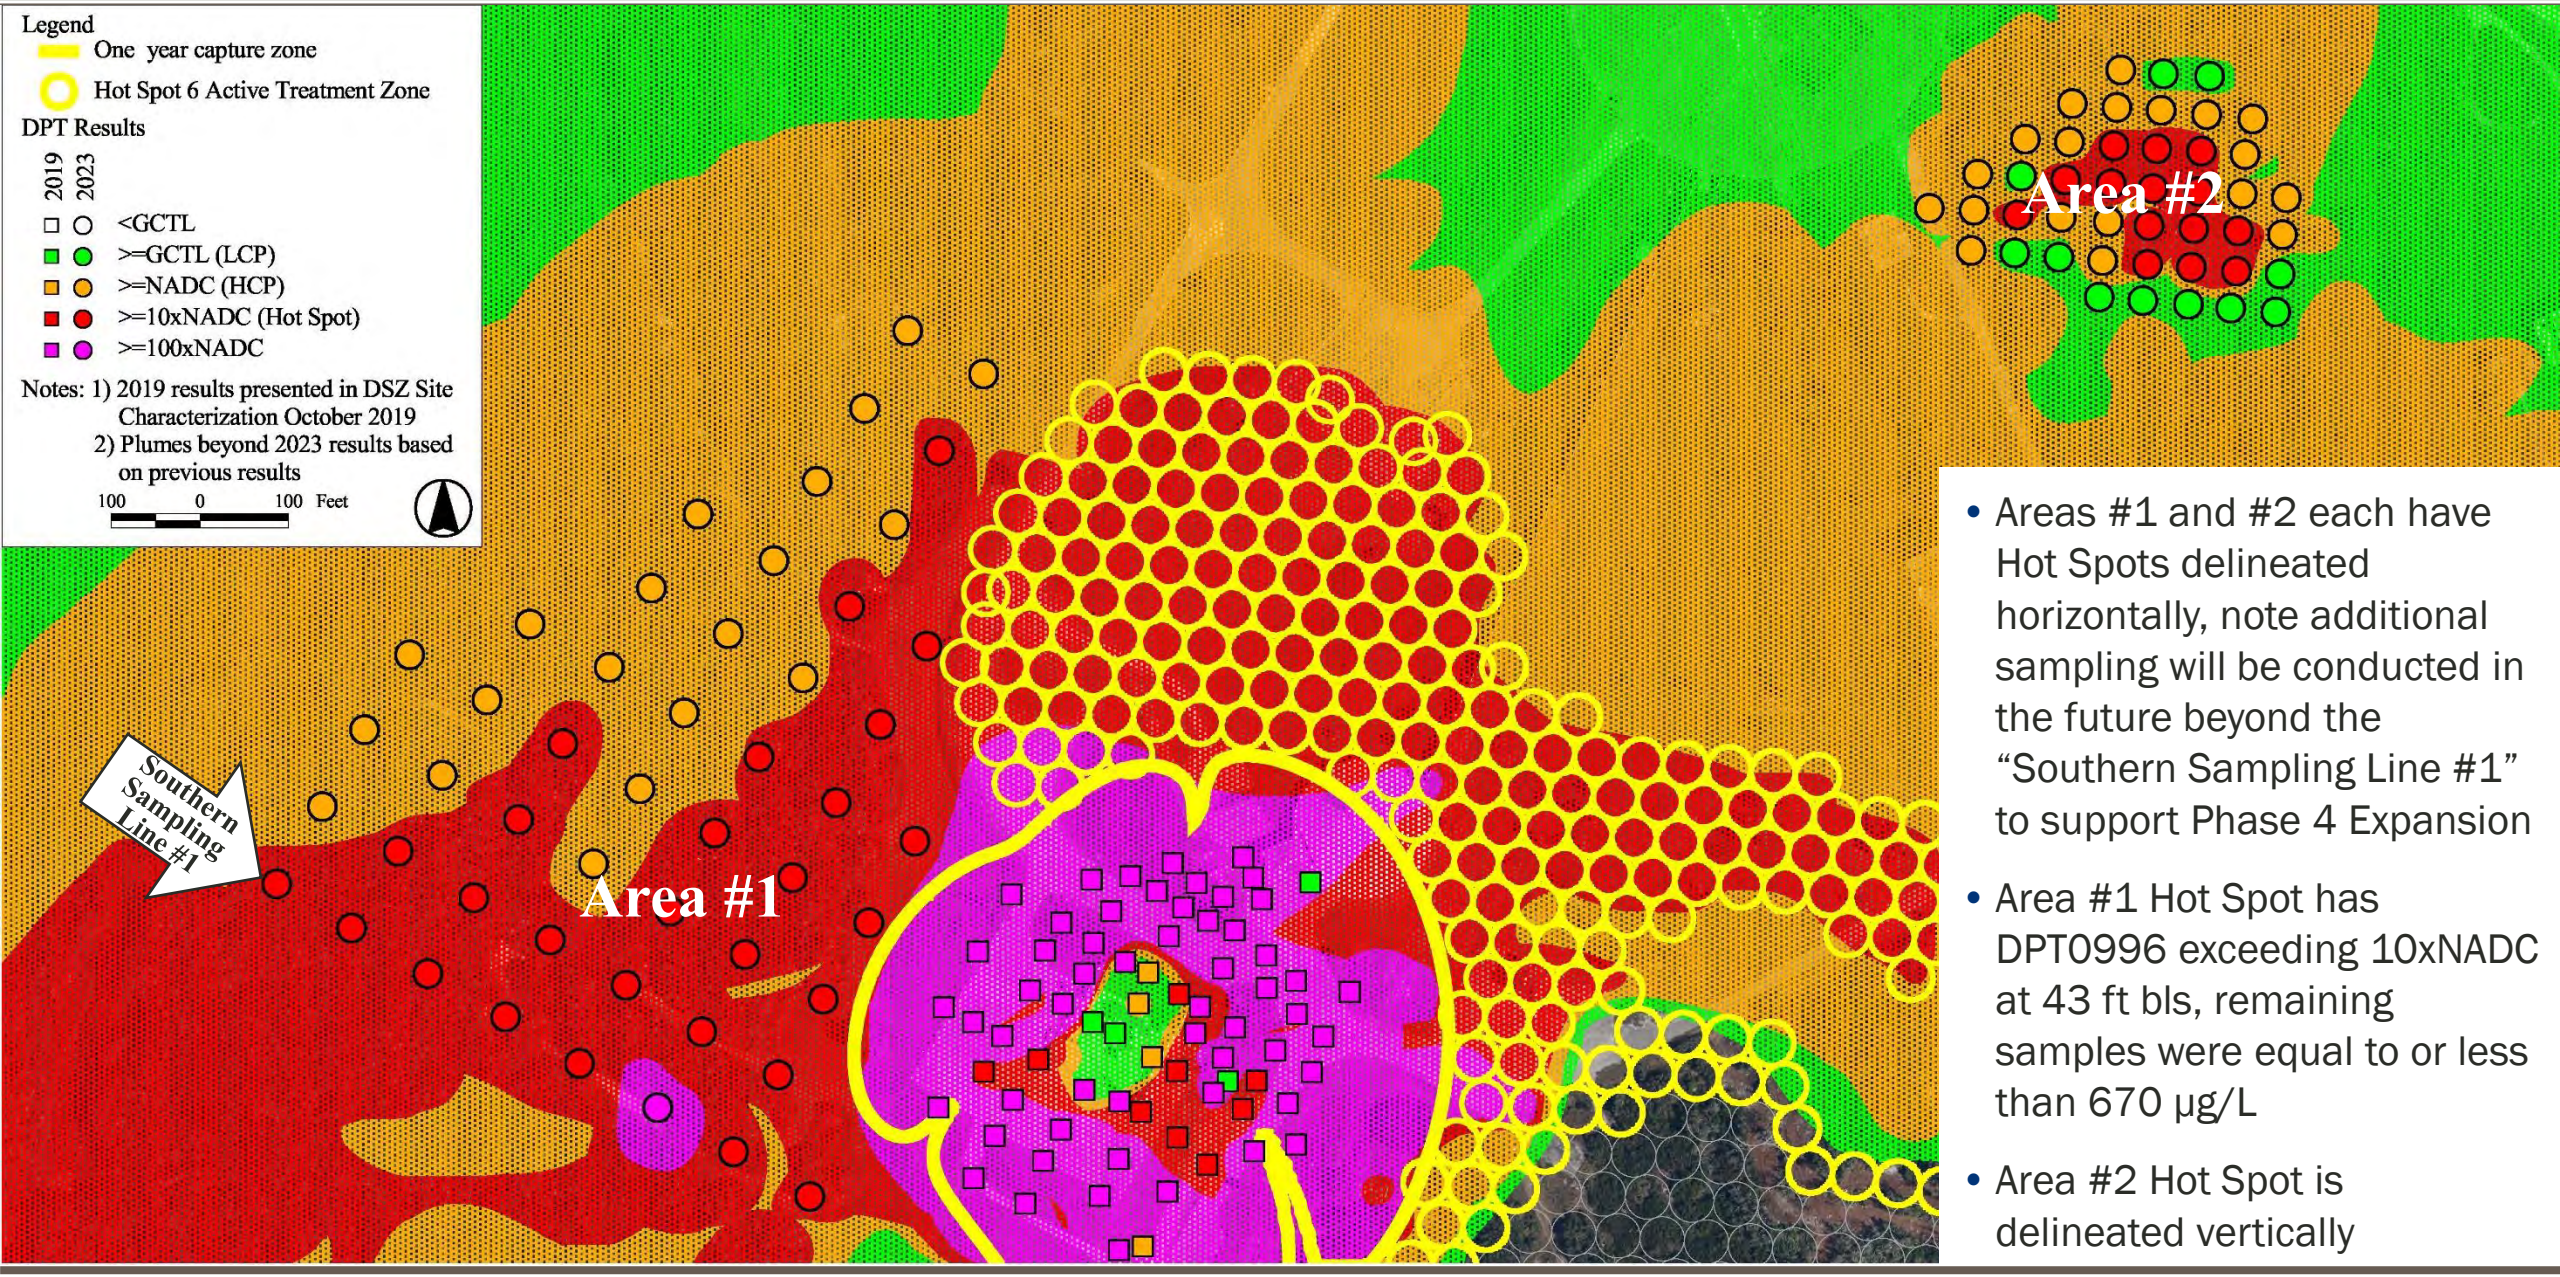
- 2023 results beyond the one-year hydraulic capture zone in the area displayed:
  - 10xNADC exceedances
    - Area #1 has 16 results ranging from 1,100 to 12,000 µg/L at DPT0970
    - Area #2 has 12 results ranging from 1,000 to 9,500 µg/L at DPT0937

VC, Interval: 28 to 34 feet bls (Layer 3)



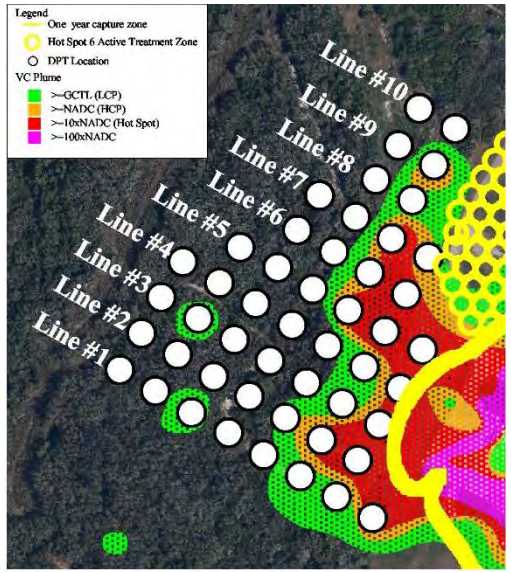
- 2023 results beyond the one-year hydraulic capture zone in the area displayed:
  - 10xNADC exceedances
    - Area #1 has 12 results ranging from 2,400 to 9,600 µg/L at DPT0969
    - Area #2 has 3 results ranging from 1,200 to 3,500 µg/L at DPT0952

VC, Interval: 34 to 40 feet bls (Layer 3)

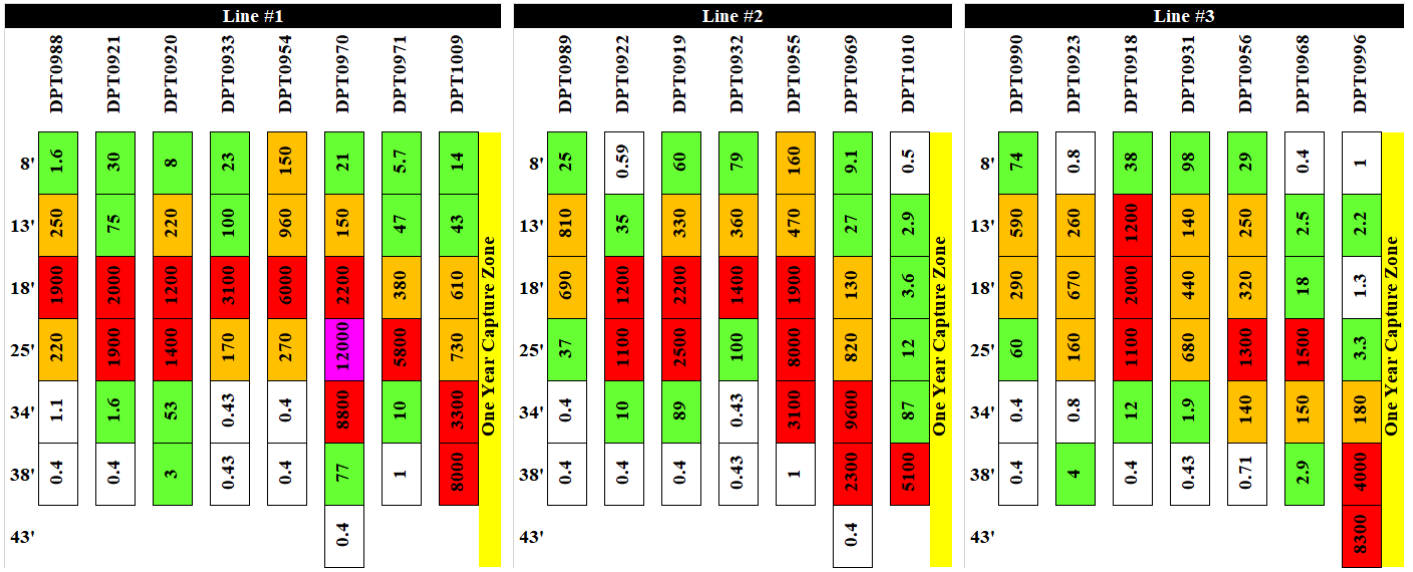


- 2023 results beyond the one-year hydraulic capture zone in the area displayed:
  - 10xNADC exceedances
    - Area #1 has 18 results ranging from 1,300 to 8,000 µg/L at DPT1009, eight locations resampled
    - Area #2 has no results exceeding 10xNADC, maximum VC of 68 µg/L at DPT0943

VC, Interval: >40 feet bls (Layer 3/4)



- 2023 results beyond the one-year hydraulic capture zone in the area displayed:
  - Only DPT0996 exceeded 10xNADC with 8,300 µg/L (cDCE 14,000 µg/L), location is adjacent to the capture zone
  - Remaining detections exceeding NADC were 120, 370, 560, and 670 µg/L
  - Remaining detections exceeding GCTL were 1.2, 36, 39, and 52 µg/L
- Deeper sample collection not planned at this time

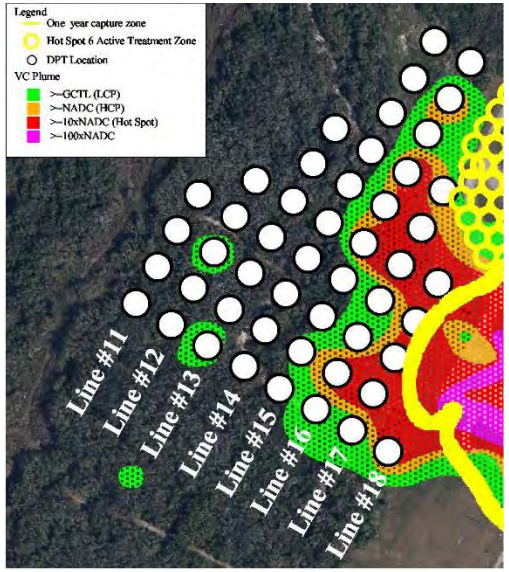


VC Plume

- Areas #1 and #2 each have Hot Spots delineated horizontally, note additional sampling will be conducted in the future beyond the "Southern Sampling Line #1" to support Phase 4 Expansion
- Area #1 Hot Spot has DPT0996 exceeding 10xNADC at 43 ft bls, remaining samples were equal to or less than 670 µg/L
- Area #2 Hot Spot is delineated vertically

Area #1 VC Vertical Profiles – West to East

Graph location image displays VC 35 to 40 ft bls plumes



All locations vertically delineated to GCTLs except:

- >10xNADC
  - Line #1 DPT1009 (One Year Capture Zone)
  - Line #2 DPT1010 (One Year Capture Zone)
  - Line #3 DPT0996 (One Year Capture Zone)
- >NADC
  - Line #4 DPT0995 (One Year Capture Zone)
  - Line #5 DPTs 0958, 0966, and 0994 is adjacent to One Year Capture Zone
- >GCTL
  - Line #3 DPTs 0923 and DPT0968
  - Line #6 DPT0965 (Hot Spot 6 ASW Zone)
  - Line #7 DPT0960
  - Line #9 DPT0962

Deeper sample collection not planned at this time

- 43 ft bls samples at the bottom of Layer 3
- Hot Spot 6 ASW Phase 3 Expansion will propose ASWs be set on the top of Layer 4 same as previous ASW installations

  - Line #4 DPT0935 VC is 4.6 µg/L
  - Line #4 DPT0936 VC is 2.4 µg/L

Deeper sample collection not planned

- 43 ft bls samples at the bottom of Layer 3
- Hot Spot 6 ASW Phase 3 Expansion proposes ASWs be set on the top of Layer 4 same as previous ASW installations

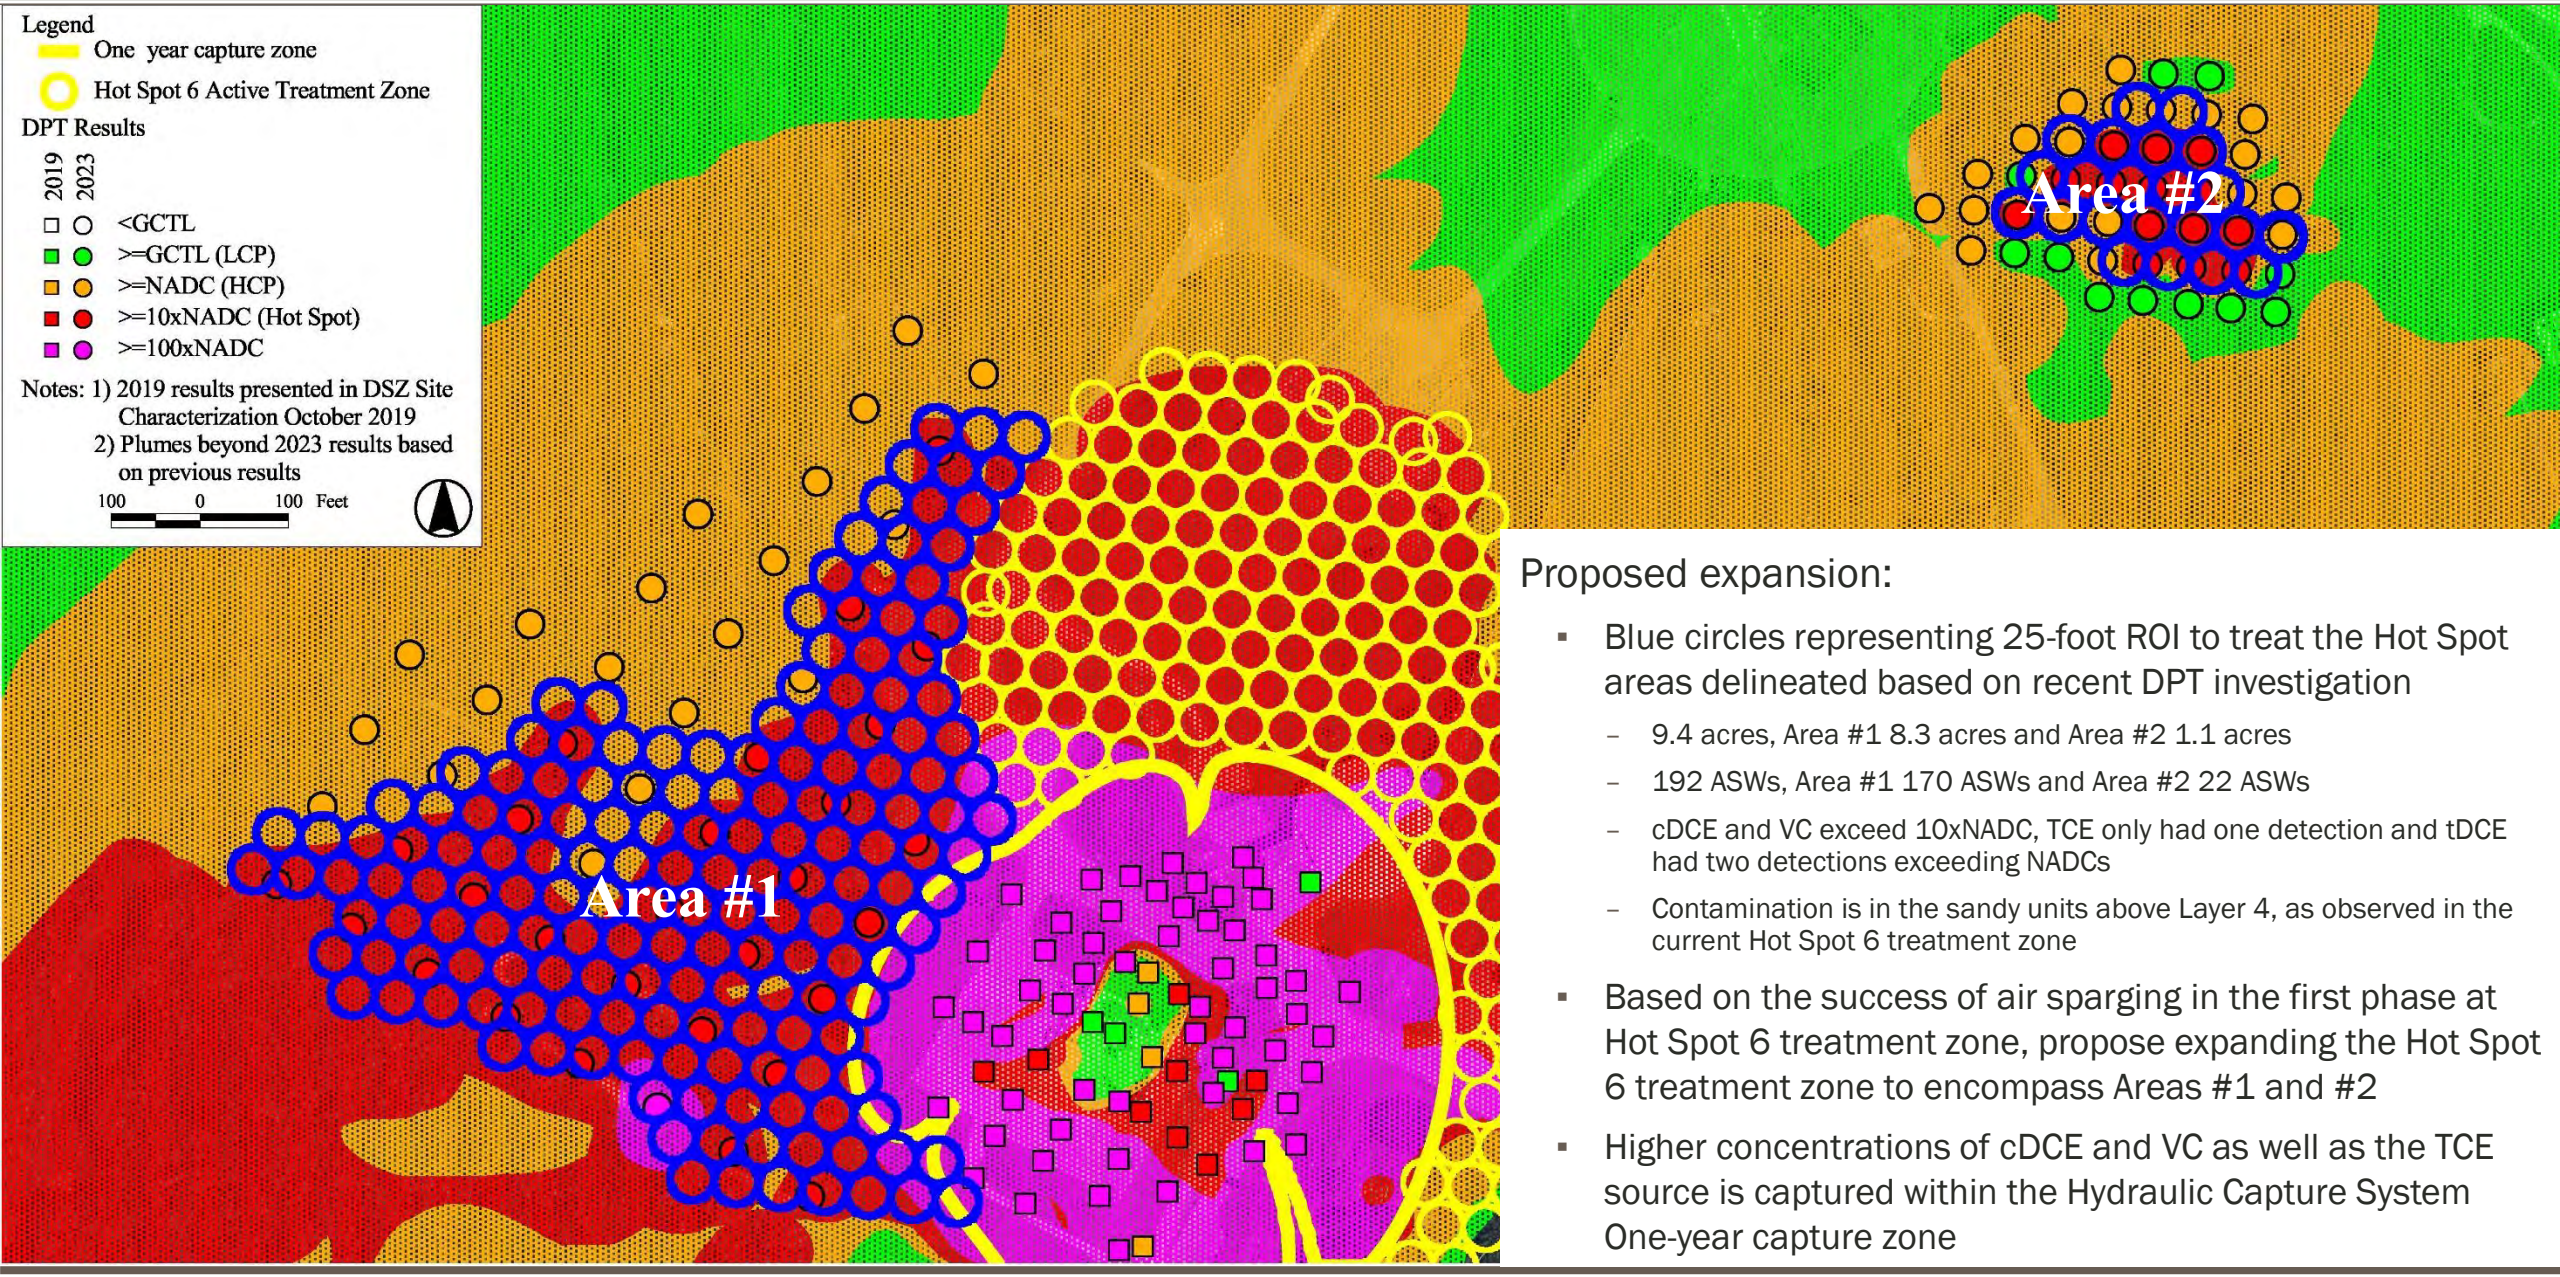
Area #2 VC Vertical Profiles – South to North

Lines #8 to #16 are perpendicular to Lines #1 to #7

Graph location image displays VC 35 to 40 ft bls plumes

All locations vertically delineated to GCTLs except:

- >GCTL
  - Line #4 DPT0935 VC is 4.6 µg/L
  - Line #4 DPT0936 VC is 2.4 µg/L



Team Consensus: Area #2 is adequately delineated horizontally and vertically to support expansion of the Hot Spot 6 Air Sparging IM

Mass Calculation for Proposed Treatment Areas

- To determine the mass of a contaminant in the aqueous phase, the volume of groundwater was first estimated by multiplying the area of the footprint of the plume by the thickness of the plume by the porosity. This volume was multiplied by the estimated average concentration of the contaminant to yield the mass in the aqueous phase.
- To determine the mass of a contaminant in the sorbed phase, the mass of soil was first estimated by multiplying the area of the footprint of the plume by the thickness of the plume by the bulk density of the soil. The concentration of the contaminant in the sorbed phase was estimated by multiplying the average groundwater concentration by the organic carbon partition coefficient by the estimated fraction organic carbon. The mass of the soil was multiplied by the estimated average concentration in the sorbed phase to yield the mass in the sorbed phase.
- Organic carbon coefficients used in mass calculation are cDCE = 45 and VC = 17 L/kg (Principles and Practices of Enhanced Anaerobic Bioremediation of Chlorinated Solvents, AFCEE, 2004)
- Porosity and Bulk Density assumed to be 0.3 and 110 lb/ft3, respectively
- FOC values from LC34-SBs 1002-028.0, 1003-028.0, 1002-034.0, 1003-034.0, and 1003-034.0 collected in January 2011
- Total mass estimated to be 469.49 pounds
  - 435.45 pounds Area #1
  - 34.04 pounds Area #2
- SVE is not proposed for the treatment area
  - Based on an estimated remedial time frame of more than one year
  - Hazardous Air Pollutants emission limits exceed total mass of 470 pounds
    - Single contaminant less than 1,000 pounds annually
    - Total contaminants less than 2,500 pounds annually
  - Cumulative LC34 calculated hydraulic containment system emissions and potential Phase 2 AS system operations emissions less than emission limits

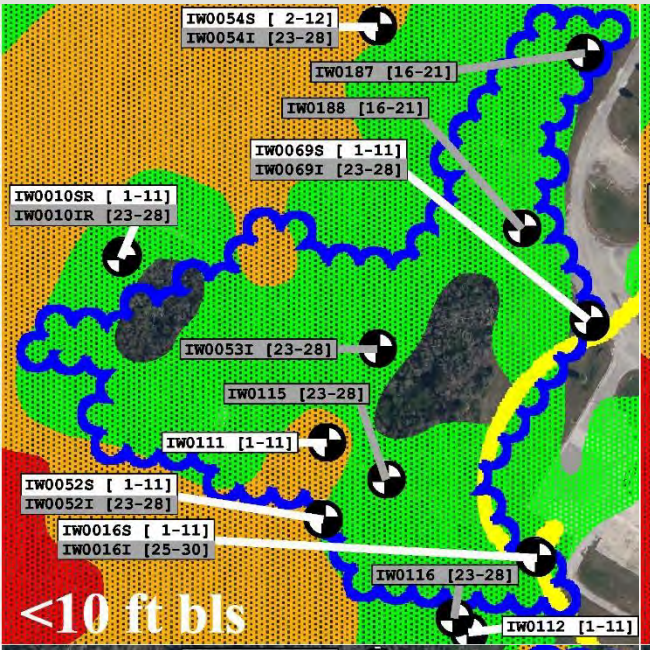
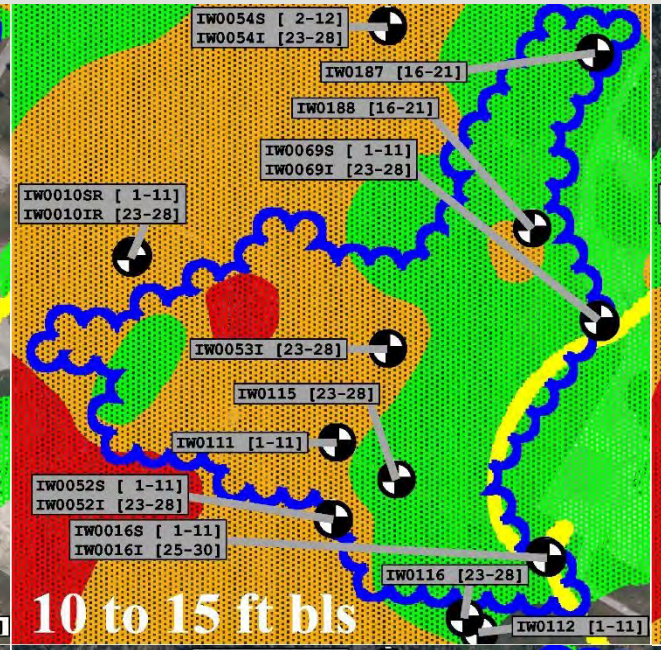
Proposed Hot Spot Area 6 Expansion Treatment Area

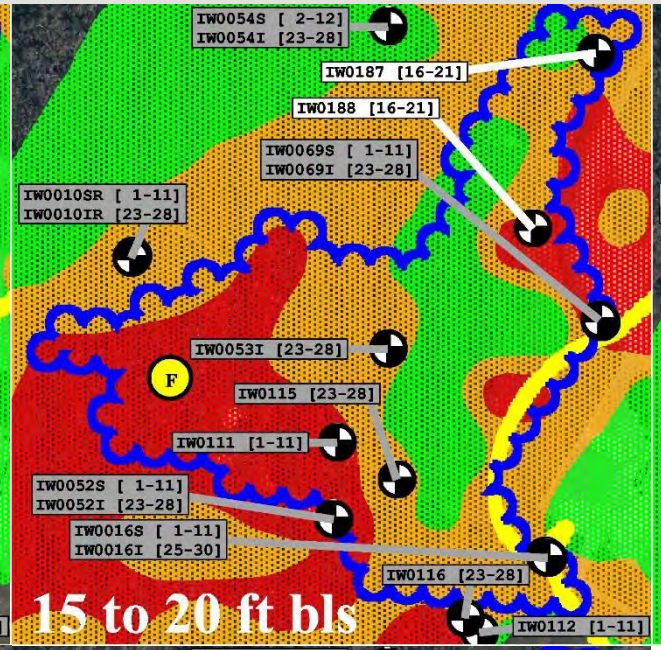
Proposed expansion:

- Blue circles representing 25-foot ROI to treat the Hot Spot areas delineated based on recent DPT investigation
  - 9.4 acres, Area #1 8.3 acres and Area #2 1.1 acres
  - 192 ASWs, Area #1 170 ASWs and Area #2 22 ASWs
  - cDCE and VC exceed 10xNADC, TCE only had one detection and tDCE had two detections exceeding NADCs
  - Contamination is in the sandy units above Layer 4, as observed in the current Hot Spot 6 treatment zone
- Based on the success of air sparging in the first phase at Hot Spot 6 treatment zone, propose expanding the Hot Spot 6 treatment zone to encompass Areas #1 and #2
- Higher concentrations of cDCE and VC as well as the TCE source is captured within the Hydraulic Capture System One-year capture zone

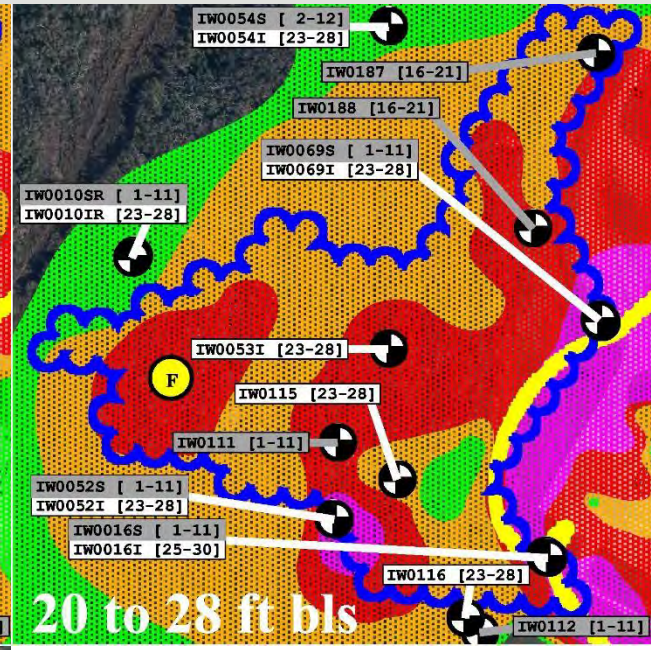


Proposed Treatment Layout and Details

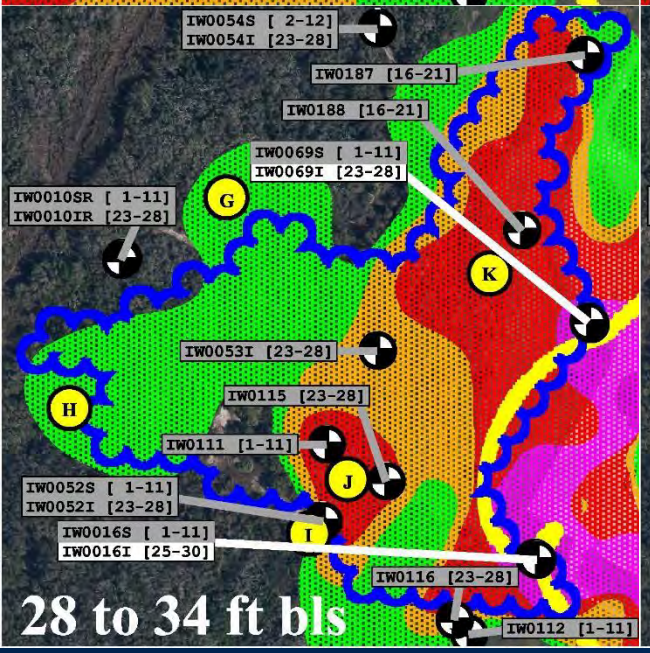




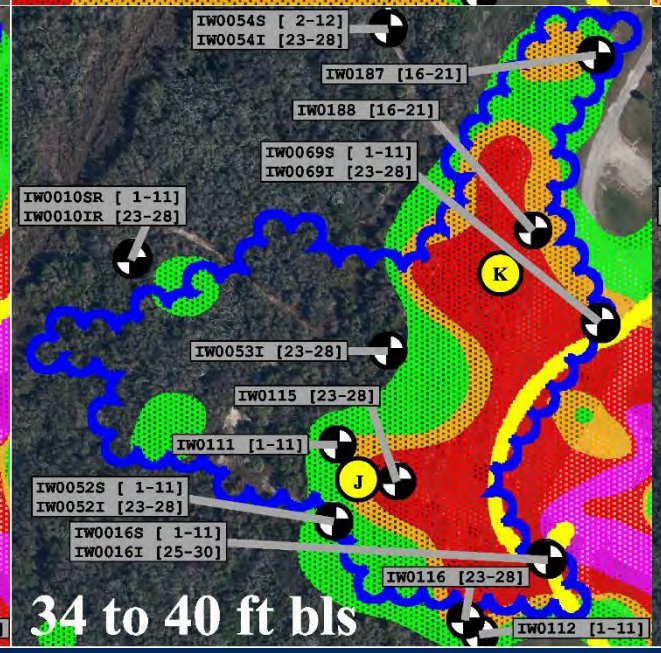
Expansion design parameters:

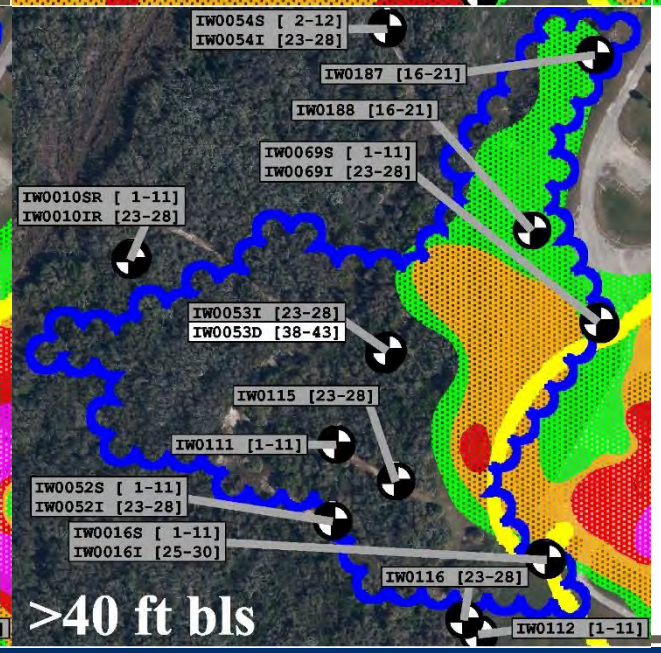


- Existing air compressor will supply compressed air via 2-inch diameter HDPE lines
- ASWs:
  - 1-inch ID PVC installed by sonic drilling methods
  - Spaced 50' c/c based on 25' radius of influence as proven effective in the first phase at Hot Spot 6
  - Installation depth ~40' bls (Top of Layer 4), soil cores were collected to guide installation depth for each ASW
  - 5 CFM per ASW
  - 1-inch diameter HDPE lines will supply air to each ASW from the manifold distribution trailer
- Area #1 includes 170 ASWs in 5 zones (34 ASWs per zone) treating 8.3 acres
  - Pressure requirements (36.8 psi):
    - 12.9 psi, pressure loss based on 1,250 feet of 2-inch HDPE (compressor trailer to manifold trailer)
    - 0.4 psi, pressure loss based on 750 feet of 1-inch HDPE (longest run from manifold trailer to ASW)
    - 5.0 psi, ancillary equipment such has elbows, valves, flow meter, pressure gauge, etc.
    - 18.5 psi well head pressure
- Area #2 includes 22 ASWs in 1 zone treating 1.1 acres
  - Pressure requirements (30.8 psi):
    - 7.2 psi, pressure loss based on 2,000 feet of 2-inch HDPE (compressor trailer to manifold trailer)
    - 0.1 psi, pressure loss based on 250 feet of 1-inch HDPE (longest run from manifold trailer to ASW)
    - 5.0 psi, ancillary equipment such has elbows, valves, flow meter, pressure gauge, etc.
    - 18.5 psi well head pressure



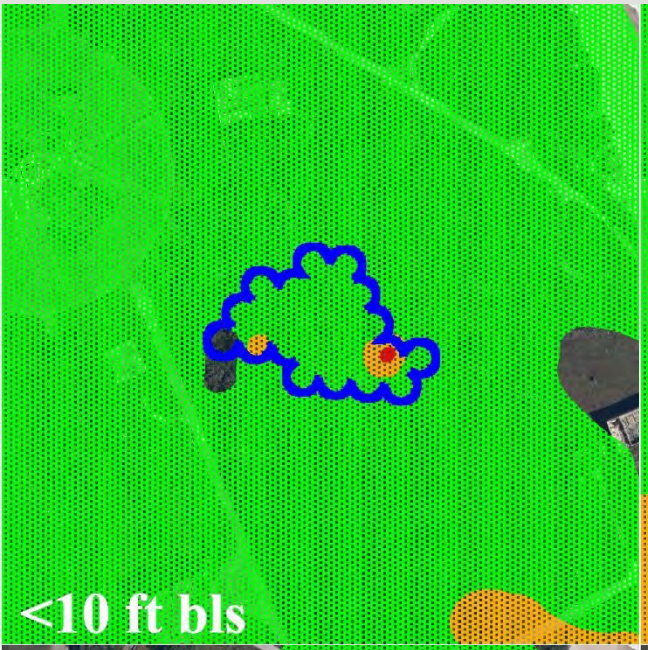
Proposed Performance Monitoring Evaluation– Area #1



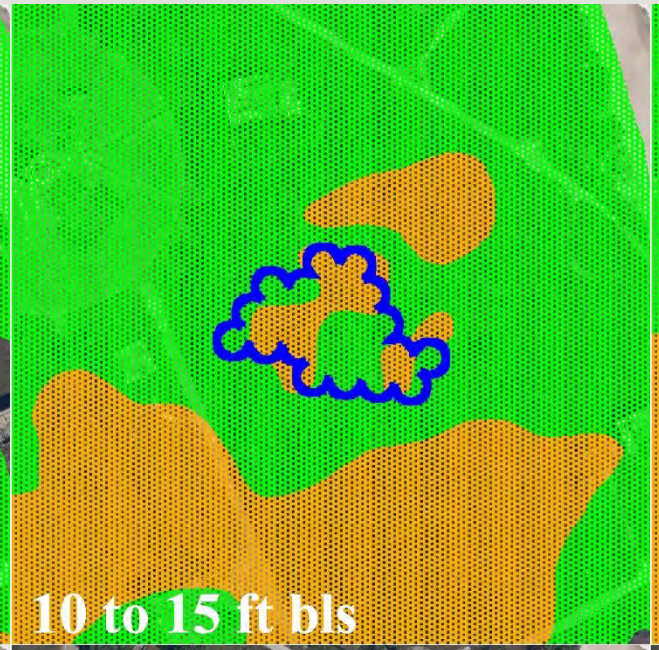


Monitoring well evaluation:

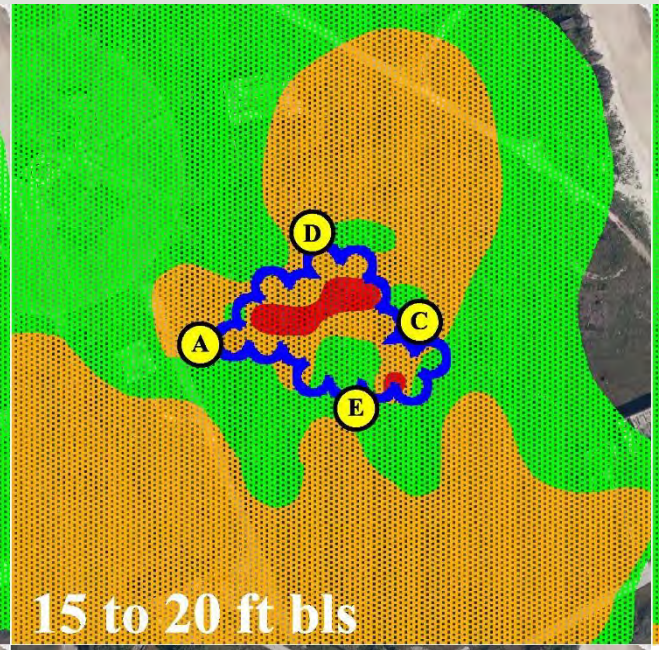
- Each image displays
  - Title defines plume depth interval
  - White shading proposed to be sampled and screened in interval shown
  - Gray shading proposed to be sampled but not screened in interval shown



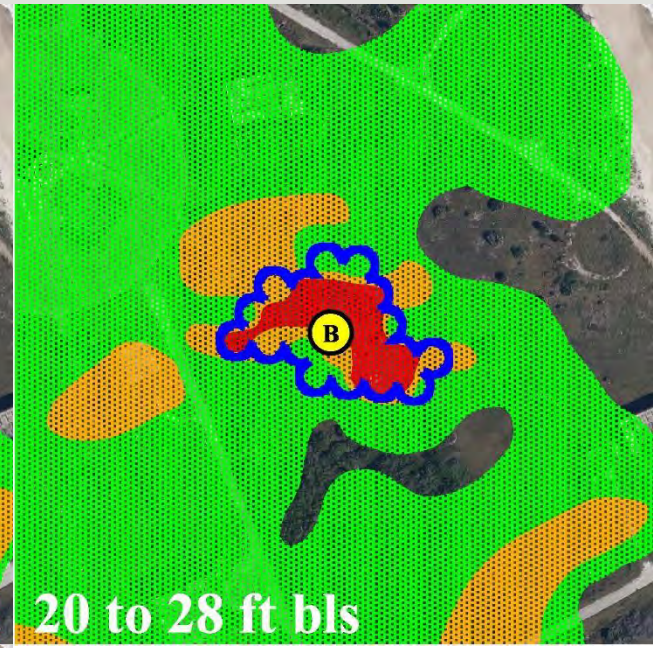
Proposed monitoring well network:



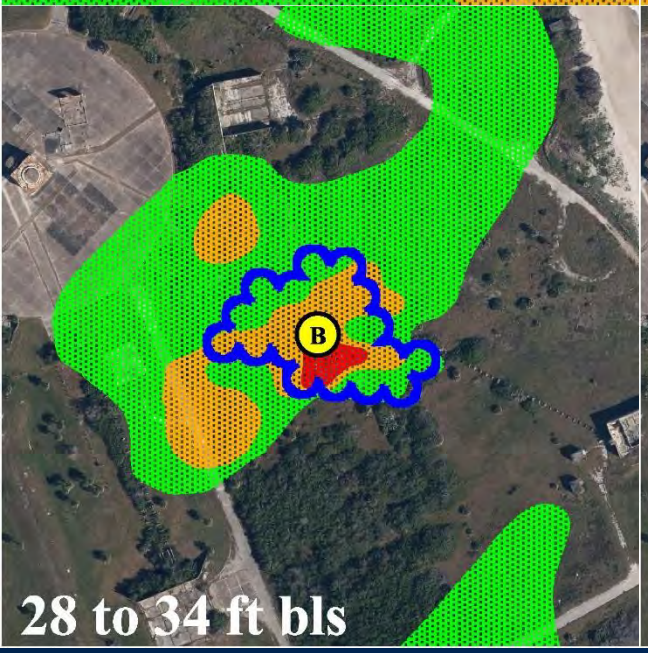
- Utilize 17 existing monitoring wells



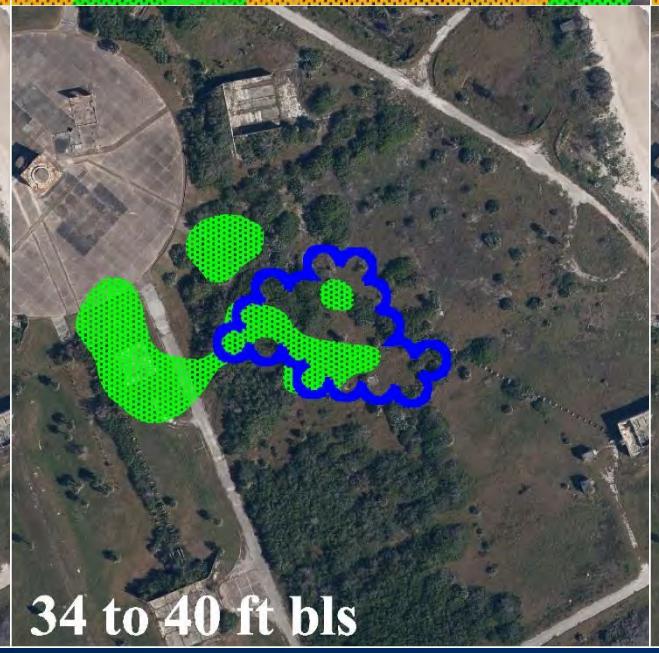
Revision:

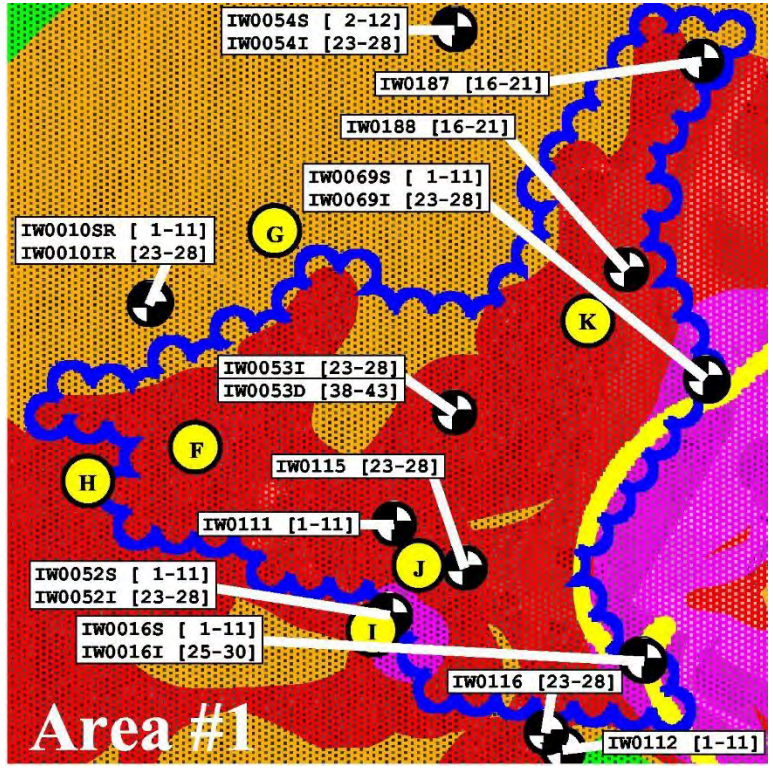


- Add IW0053D
- Install 1-inch ID PVC wells at F, G, H, I, J, and K via sonic drilling methods

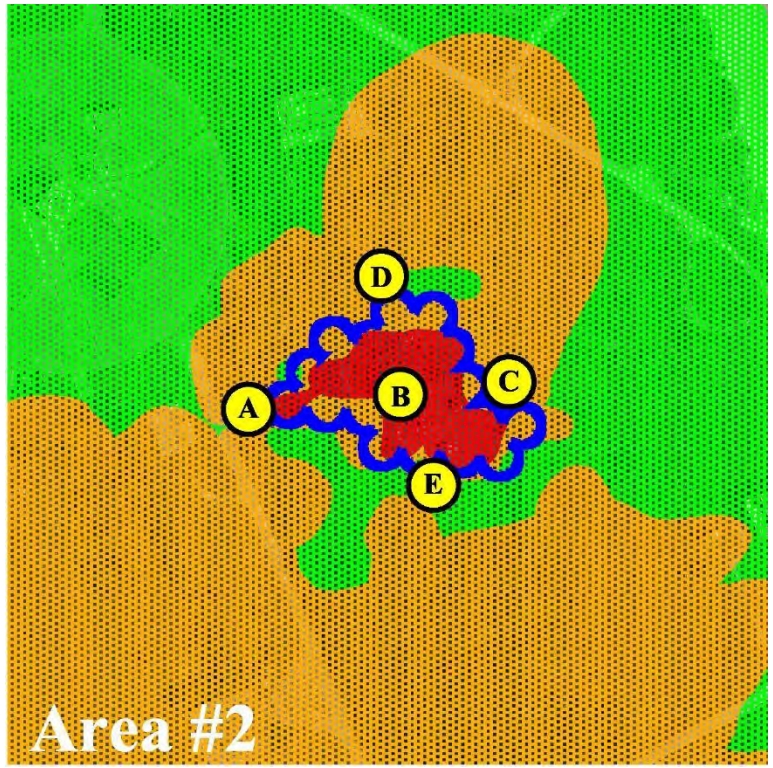


Proposed Performance Monitoring Evaluation– Area #2





Monitoring well evaluation:

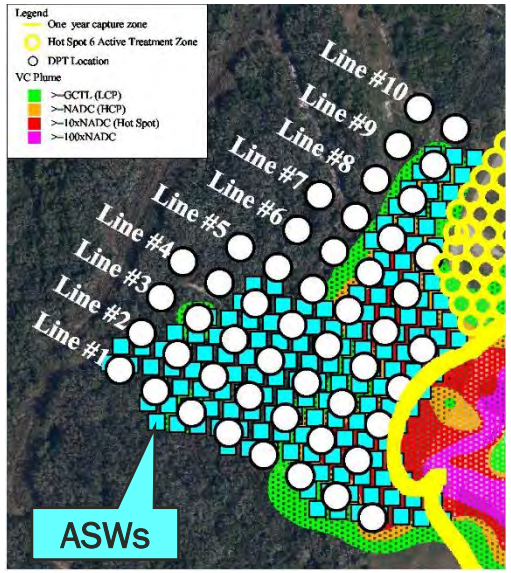


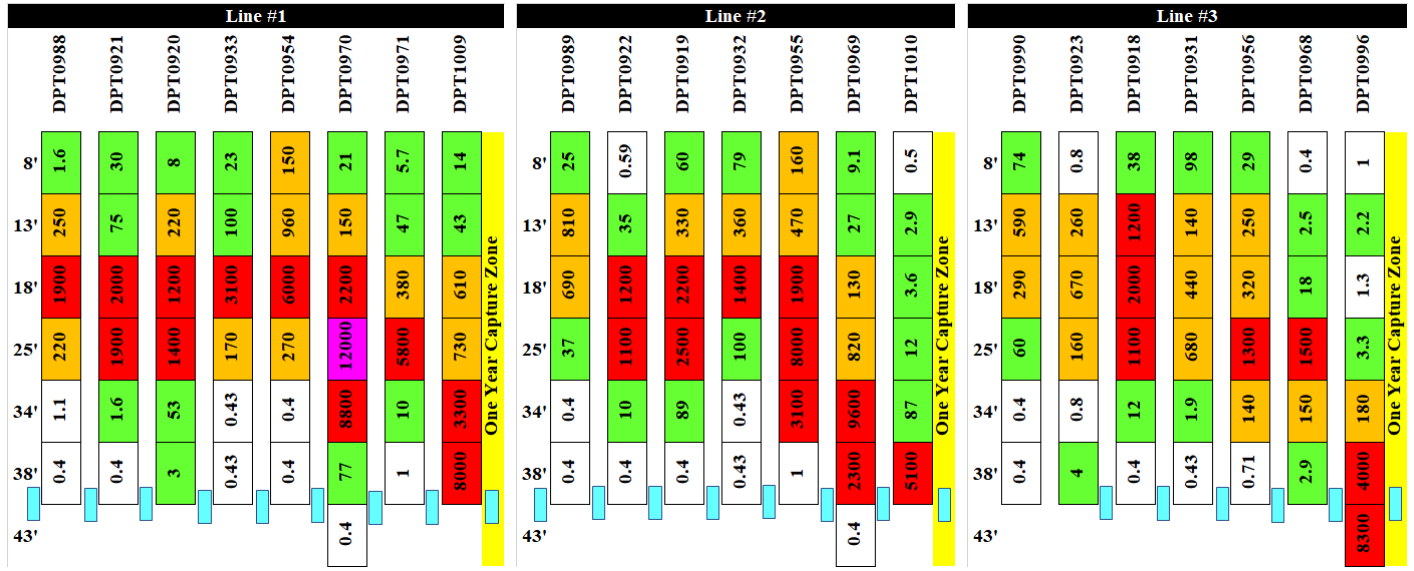
- No existing monitoring wells present
- Each image displays
  - Title defines plume depth interval
  - Yellow symbol with label designates proposed well

Proposed monitoring well network:

- Installation of six monitoring wells
- Installation method by sonic drilling
- 1-inch ID PVC
- Screened intervals shown on next slide

Proposed Performance Monitoring





- Proposed monitoring well network:
  - ~~Utilize 17 existing monitoring wells in Area #1~~
  - Utilize 18 existing monitoring wells and install wells at locations F, G, H, I, J, and K in Area #1
  - No monitoring wells are present in Area #2, propose installing 6 monitoring wells
  - Wells will be sampled quarterly
    - Field parameters collected
    - Samples will be submitted for VOC analysis via EPA Method 8260B
    - Results will be evaluated to determine if operational adjustments are required

Air sparging screens displayed as cyan rectangles on profiles

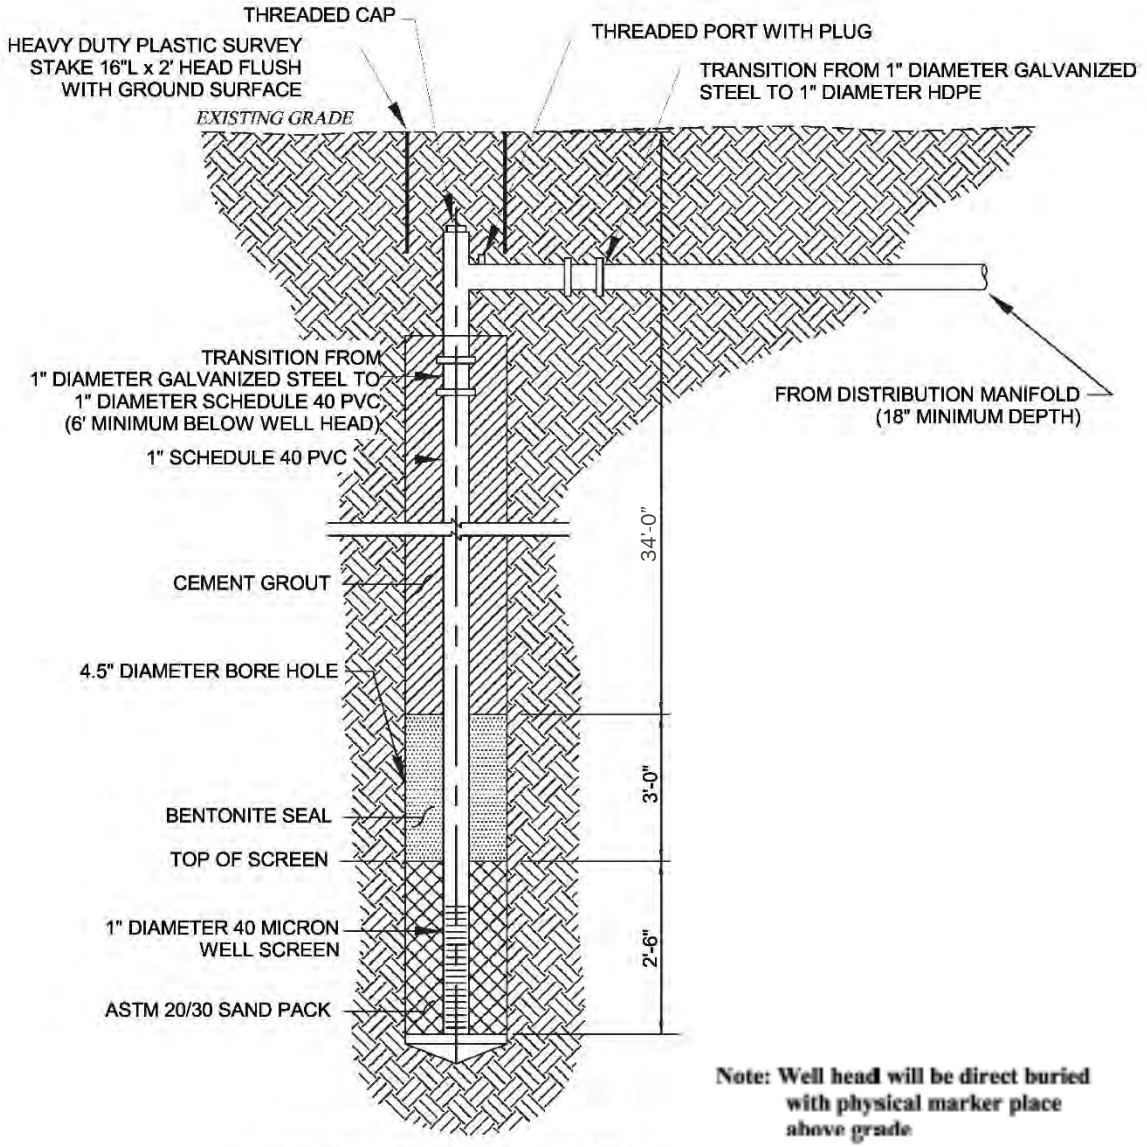
Proposed Phase Three Expansion

HS6 Interim Measures

- System Design
  - Installation depth ~40’ bls (Top of Layer 4)
  - 25’ ROI, spaced 50’ on center (c/c)
  - 5 CFM per ASW
- Full-scale operations
  - July 2018 – 160 ASWs
  - May 2019 – 300 ASWs, 140 new ASWs
  - August 2023 – 238 ASWs, 190 new ASWs
- To date, 15.1 acres treated to less than GCTLs
- Phase 3 has similar contaminant concentrations as previous treatment areas

Team Consensus:



- Implement the Phase 3 expansion of the Hot Spot 6 Air Sparging IM based on this ADP and submission of the Implementation Work Plan to FDEP

Support Information

ANALYTICAL REPORT

PREPARED FOR

Attn: Mr. Mark Jonnet
Tetra Tech, Inc.
Foster Plaza 7
661 Anderson Drive
Suite 200
Pittsburgh, Pennsylvania 15220-2745

Generated 9/28/2023 12:27:00 PM

JOB DESCRIPTION

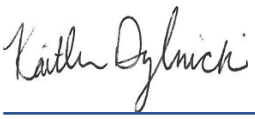
NASA KSC LC34 DPT

JOB NUMBER

670-27076-1

Eurofins Orlando
481 Newburyport Avenue
Altamonte Springs FL 32701

See page two for job notes and contact information.



my EOL

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Definitions/Glossary

Client: Tetra Tech, Inc.
Project/Site: NASA KSC LC34 DPT

Job ID: 670-27076-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 670-27076-1

Laboratory: Eurofins Orlando

Narrative

Job Narrative
Client PM: Mark Jonnet
Project: NASA KSC LC34 DPT
Project Number: 112G08985
Job: 670-27076-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 9/20/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.5°C

Receipt Exceptions
The following sample(s) was submitted for analysis; however, it was not listed on the Chain-of-Custody (COC):
LC34-DPT0917-038.0-20230919

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 680-799359 was outside the method criteria for the following analyte(s): 1,2,4-Trichlorobenzene, 1,2-Dibromo-3-Chloropropane, 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone, Chloromethane, Trichlorofluoromethane and Vinyl chloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The laboratory control sample (LCS) for analytical batch 680-799359 recovered outside control limits for the following analytes: 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone and Acetone. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The laboratory control sample duplicate (LCSD) for analytical batch 680-799359 recovered outside control limits for the following analytes: 2-Butanone (MEK). These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0918-025.0-20230919 (670-27076-27), LC34-DPT0919-013.0-20230919 (670-27076-31), LC34-DPT0919-018.0-20230919 (670-27076-32) and LC34-DPT0919-025.0-20230919 (670-27076-33). Elevated reporting limits (RLs) are provided.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-799359.

Method 8260D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 680-799359 recovered outside control limits for the following analyte(s): Trichlorofluoromethane. Trichlorofluoromethane has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: The continuing calibration verification (CCV) analyzed in batch 680-799355 was outside the method criteria for the following analyte(s): 1,2-Dibromo-3-Chloropropane, 2-Butanone (MEK), 2-Hexanone, Chloromethane, Dichlorodifluoromethane,

Job ID: 670-27076-1 (Continued)

Laboratory: Eurofins Orlando (Continued)

Trichlorofluoromethane and Vinyl chloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 680-799355 recovered outside control limits for the following analyte(s): 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone, Acetone and Chloromethane. 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone, Acetone and Chloromethane have been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0916-025.0-20230918 (670-27076-16) and LC34-DPT0917-025.0-20230919 (670-27076-22). Elevated reporting limits (RLs) are provided.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-799355.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-799638.

Method 8260D: The continuing calibration verification (CCV) analyzed in batch 680-799831 was outside the method criteria for the following analyte(s): 2-Hexanone, 4-Methyl-2-pentanone, Bromomethane, Chloroethane, Methyl acetate and Trichlorofluoromethane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The method blank for preparation batch 680-799831 contained Toluene above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-799831.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Vinyl chloride - DL	2500		25	10	ug/L	25		8260D	Total/NA

Client Sample ID: LC34-DPT0917-038.0-20230919 — Lab Sample ID: 670-27076-34

Analyte	Result	Qualifier	PQL	MDL	Unit	Dil Fac	D	Method	Prep Type
Carbon disulfide	1.0	I	2.0	0.43	ug/L	1		8260D	Total/NA
cis-1,2-Dichloroethene	0.70	I	1.0	0.25	ug/L	1		8260D	Total/NA

This Detection Summary does not include radiochemical test results.

Client: Tetra Tech, Inc.
Project/Site: NASA KSC LC34 DPT

Job ID: 670-27076-1

Client Sample ID: LC34-DPT0914-008.0-20230918
Date Collected: 09/18/23 10:20
Date Received: 09/20/23 08:00

Lab Sample ID: 670-27076-1
Matrix: Water

Method: SW846 8260D - Volatile Organic Compounds by GC/MS

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Received extra samples not listed on COC.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	True

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J1	Estimated value; value may not be accurate. Surrogate recovery outside of criteria.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
L	Off-scale high. Actual value is known to be greater than the value given.
Q	Sample held beyond the accepted holding time.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
Client: Tetra Tech
Client PM: Mark Jonnet
Project: NASA KSC LC34
Project Number: 112G08985
670-27160-1

Revision
The report being provided is a revision of the original report sent on 10/12/2023. The report (revision 1) is being revised to include secondary results not intially included. LC34-DPT0920-025.0-20230919 (670-27160-6)

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 9/21/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.3°C

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 680-800234 recovered above the upper control limit for Bromomethane, Chloroethane and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-800234 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane, 2-Butanone (MEK), 2-Hexanone, Acetone, Chloromethane and Methyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 680-800234 recovered outside control limits for the following analytes: Bromomethane, Chloroethane and Trichlorofluoromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 680-800234 recovered outside control limits for the following analyte(s): 1,2-Dibromo-3-Chloropropane. 1,2-Dibromo-3-Chloropropane have been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0919-034.0-20230919 (670-27160-1), LC34-DPT00920-013.0-20230919 (670-27160-4), LC34-DPT0920-018.0-20230919 (670-27160-5), LC34-DPT0920-025.0-20230919 (670-27160-6) and LC34-DPT0920-034.0-20230919 (670-27160-7). Elevated reporting limits (RLs) are provided.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-800234.

Method 8260D: Surrogate recovery for the following sample was outside control limits: LC34-DPT0923-018.0-20230920 (670-27160-23). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-800321 recovered outside acceptance criteria, low biased, for Dichlorodifluoromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The method blank for analytical batch 680-800321 contained 1,3-Dichlorobenzene above the method detection limit (MDL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0921-013.0-20230920 (670-27160-10). Elevated reporting limits (RLs) are provided.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-800321.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-800533 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane, 2-Butanone (MEK), 2-Hexanone, Acetone, Chloromethane and Methyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 680-800533 recovered outside control limits for the following analyte(s): 1,2-Dibromo-3-Chloropropane. 1,2-Dibromo-3-Chloropropane have been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-800533 recovered above the upper control limit for Bromomethane, Chloroethane and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 680-800533 recovered outside control limits for the following analytes: Bromomethane, Chloroethane and Trichlorofluoromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0923-013.0-20230920 (670-27160-22). Elevated reporting limits (RLs) are provided.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) precision for preparation batch 680-800294 and analytical batch 680-800533 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 680-800294 and analytical batch 680-800533 were outside control limits. Sample matrix interference is suspected.

Method 8260D: The matrix spike/ the matrix spike duplicate (MS/MSD) analyzed in batch 680-800533 was outside the method criteria for the 12 hour window. The data integrity was not impacted and the data has been reported and addressed. All other QC criteria have been met.(680-240706-L-7-A MS) and (680-240706-L-7-A MSD)

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-800923.

Method 8260D: Reanalysis of the following sample was performed outside of the analytical holding time due to dilution required due to abundance of target analytes for Vinyl Chloride and Cis 1,2-Dichloroethene. : LC34-DPT0920-025.0-20230919 (670-27160-6), LC34-DPT0922-018.0-20230920 (670-27160-17), LC34-DPT0922-025.0-20230920 (670-27160-18), LC34-DPT0923-018.0-20230920 (670-27160-23) and LC34-DPT0923-025.0-20230920 (670-27160-24).

Method 8260D: Sample was reanalyzed out of hold for confirmation. LC34-DPT0920-025.0-20230919 (670-27160-6)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southeast, LLC.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Project/Site: NASA KSC LC34 DPT

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 670-27244-1

Laboratory: Eurofins Orlando

Narrative

Job Narrative
Client: Tetra Tech
Client PM: Mark Jonnet
Project: NASA KSC LC34
Project Number: 112G08985
670-27244-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 9/22/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.3°C

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 680-800524 was outside the method criteria for the following analyte(s): Acetone, Bromomethane, Chloroethane and Vinyl chloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0927-013.0-20230921 (670-27244-20). Elevated reporting limits (RLs) are provided.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-800524.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-800743 recovered above the upper control limit for Bromomethane, Chloroethane and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-800743 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane, 2-Hexanone, Acetone, Chloromethane, Dichlorodifluoromethane and Methyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 680-800743 recovered outside control limits for the following analytes: Trichlorofluoromethane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 680-800743 recovered outside control limits for the following analyte(s): 1,2-Dibromo-3-Chloropropane. 1,2-Dibromo-3-Chloropropane have been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: The laboratory control sample duplicate (LCSD) for analytical batch 680-800743 recovered outside control limits for the

Job ID: 670-27244-1 (Continued)

Laboratory: Eurofins Orlando (Continued)

following analytes: Chloroethane. This analyte was biased high in the LCSD and was not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The method blank for 1,2,4-Trichlorobenzene contained <AffectedAnalytes> above the detection limit (DL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0924-013.0-20230920 (670-27244-2), LC34-DPT0924-018.0-20230920 (670-27244-3), LC34-DPT0925-018.0-20230921 (670-27244-9), LC34-DPT0925-025.0-20230921 (670-27244-10), LC34-DPT0926-018.0-20230921 (670-27244-15), LC34-DPT0926-025.0-20230921 (670-27244-16), LC34-DPT0927-018.0-20230921 (670-27244-21) and LC34-DPT0927-025.0-20230921 (670-27244-22). Elevated reporting limits (RLs) are provided.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 680-800161 and analytical batch 680-800743 were outside control limits. Sample matrix interference is suspected.

Method 8260D: The following sample was analyzed at a dilution factor based on screening data. There was insufficient volume to analyze the sample at a lower dilution so the data was reported.LC34-DPT0924-025.0-20230920 (670-27244-4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Job ID: 670-27359-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 670-27359-1

Laboratory: Eurofins Orlando

Narrative

Job Narrative
670-27359-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 9/23/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.7°C and 1.2°C

GC/MS VOA
Method 8260D: The following samples were diluted due to the nature of the sample matrix: LC34-DPT0928-018.0-20230921 (670-27359-3), LC34-DPT0929-018.0-20230922 (670-27359-9), LC34-DPT0929-025.0-20230922 (670-27359-10) and LC34-DPT0930-025.020230922 (670-27359-16). Elevated reporting limits (RLs) are provided.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0930-018.0-20230922 (670-27359-15). Elevated reporting limits (RLs) are provided.

Method 8260D: The following samples were diluted due to the nature of the sample matrix: LC34-DPT0931-018.0-20230922 (670-27359-21) and LC34-DPT0931-025.0-20230922 (670-27359-22). Elevated reporting limits (RLs) are provided.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0928-025.0-20230921 (670-27359-4). Elevated reporting limits (RLs) are provided.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0928-018.0-20230921 (670-27359-3), LC34-DPT0929-018.0-20230922 (670-27359-9), LC34-DPT0929-025.0-20230922 (670-27359-10) and LC34-DPT0930-025.020230922 (670-27359-16). Elevated reporting limits (RLs) are provided.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0929-018.0-20230922 (670-27359-9), LC34-DPT0929-025.0-20230922 (670-27359-10) and LC34-DPT0931-013.0-20230922 (670-27359-20). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Surrogate Summary

Client: Tetra Tech, Inc.
Job ID: 670-27359-1
Project/Site: NASA KSC LC34 DPT

Method: 8260D - Volatile Organic Compounds by GC/MS (Continued)

Matrix: Water
Prep Type: Total/NA

Accreditation/Certification Summary

Client: Tetra Tech, Inc.
Job ID: 670-27359-1
Project/Site: NASA KSC LC34 DPT

Laboratory: Eurofins Houston

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Florida	NELAP	E871002	06-30-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260D		Water	Cyclohexane

Method Summary

Client: Tetra Tech, Inc.
Project/Site: NASA KSC LC34 DPT

Job ID: 670-27359-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET HOU
5030C	Purge and Trap	SW846	EET HOU

Protocol References:

SW846 = "Test Methods For Evaluating Solid Waste, Physical/Chemical Methods", Third Edition, November 1986 And Its Updates.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Definitions/Glossary

Client: Tetra Tech, Inc.
Project/Site: NASA KSC LC34

Job ID: 670-27487-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 670-27487-1

Laboratory: Eurofins Orlando

Narrative

Job Narrative
Client: Tetra Tech
Client PM: Mark Jonnet
Project: NASA KSC LC34
Project Number: 112G08985
670-27487-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 9/27/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.5°C

GC/MS VOA
Method 8260D: The matrix spike (MS) recoveries for analytical batch 860-124268 were outside control limits. Non-homogeneity is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8260D: The matrix spike (MS) recoveries for analytical batch 860-124262 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS/LCSD) recovery is within acceptance limits.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0932-013.0-20230925 (670-27487-2), LC34-DPT0932-018.0-20230925 (670-27487-3), LC34-DPT0932-025.0-20230925 (670-27487-4), LC34-DPT0933-018.0-20230925 (670-27487-9), LC34-DPT0933-025.0-20230925 (670-27487-10), LC34-DPT0936-013.0-20230926 (670-27487-26), LC34-DPT0936-018.0-20230926 (670-27487-27), LC34-DPT0936-025.0-20230926 (670-27487-28), LC34-DPT0937-013.0-20230926 (670-27487-32), LC34-DPT0937-018.0-20230926 (670-27487-33), LC34-DPT0937-025.0-20230926 (670-27487-34) and LC34-DPT0937-034.0-20230926 (670-27487-35). Elevated reporting limits (RLs) are provided.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 860-124308 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0937-034.0-20230926 (670-27487-35). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

This Detection Summary does not include radiochemical test results.

Eurofins Orlando

Detection Summary

Client: Tetra Tech, Inc.
Project/Site: NASA KSC LC34

Job ID: 670-27487-1

Client Sample ID: LC34-DPT0937-038.0-20230926 **Lab Sample ID: 670-27487-36**

No Detections.

This Detection Summary does not include radiochemical test results.

Client: Tetra Tech, Inc.
Project/Site: NASA KSC LC34

Job ID: 670-27487-1

Client Sample ID: LC34-DPT0932-008.0-20230925

Lab Sample ID: 670-27487-1

Date Collected: 09/25/23 09:25

Matrix: Water

Date Received: 09/27/23 08:00

Method: SW846 8260D - Volatile Organic Compounds by GC/MS

Accreditation/Certification Summary

Client: Tetra Tech, Inc.
Project/Site: NASA KSC LC34

Job ID: 670-27487-1

Laboratory: Eurofins Houston

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Florida	NELAP	E871002	06-30-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260D		Water	Cyclohexane

Method Summary

Client: Tetra Tech, Inc.
Project/Site: NASA KSC LC34

Job ID: 670-27487-1

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET HOU
5030C	Purge and Trap	SW846	EET HOU

Protocol References:

SW846 = "Test Methods For Evaluating Solid Waste, Physical/Chemical Methods", Third Edition, November 1986 And Its Updates.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southeast, LLC.

Possible Hazard Identification *Unconfirmed*	***Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)*** ☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For* _____ *Months*

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southeast, LLC.

Possible Hazard Identification *Unconfirmed*	***Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)*** ☐ Return To Client ☐ Disposal By Lab ☐ Archive For _____ Months

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
Client: Tetra Tech
Client PM: Mark Jonnet
Project: NASA KSC LC34
Project Number: 112G08985
670-27576-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 9/28/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.5°C and 1.2°C

GC/MS VOA
Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0938-018.0-20230926 (670-27576-3), LC34-DPT09380-025.0-20230926 (670-27576-4), LC34-DPT0939-008.0-20230926 (670-27576-7), LC34-DPT0939-013.0-20230926 (670-27576-8), LC34-DPT0939-018.0-20230926 (670-27576-9), LC34-DPT0939-025.0-20230926 (670-27576-10), LC34-DPT0939-034.0-20230926 (670-27576-11) and LC34-DPT0941-013.0-20230927 (670-27576-20). Elevated reporting limits (RLs) are provided.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-800695.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-800707 recovered above the upper control limit for 1,1-Dichloroethene and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-800707 recovered outside acceptance criteria, low biased, for Methyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0941-018.0-20230927 (670-27576-21), LC34-DPT0941-025.0-20230927 (670-27576-22) and LC34-DPT0942-025.0-20230927 (670-27576-28). Elevated reporting limits (RLs) are provided.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-800707.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Vinyl chloride	16		1.0	0.40	ug/L	1		8260D	Total/NA

This Detection Summary does not include radiochemical test results.

Detection Summary

Client: Tetra Tech, Inc.
Project/Site: NASA KSC LC34 DPT

Job ID: 670-27576-1
SDG: 670-27576-1

Client Sample ID: LC34-DPT0942-025.0-20230927 — Lab Sample ID: 670-27576-28

Analyte	Result	Qualifier	PQL	MDL	Unit	Dil Fac	D	Method	Prep Type
trans-1,2-Dichloroethene	93		20	6.8	ug/L	20		8260D	Total/NA
Vinyl chloride	1200		20	8.0	ug/L	20		8260D	Total/NA

Client Sample ID: LC34-DPT0942-034.0-20230927 — Lab Sample ID: 670-27576-29

Analyte	Result	Qualifier	PQL	MDL	Unit	Dil Fac	D	Method	Prep Type
Carbon disulfide	1.1	I	2.0	0.43	ug/L	1		8260D	Total/NA
cis-1,2-Dichloroethene	2.9		1.0	0.25	ug/L	1		8260D	Total/NA
Vinyl chloride	16		1.0	0.40	ug/L	1		8260D	Total/NA

Client Sample ID: LC34-DPT0942-038.0-20230927 — Lab Sample ID: 670-27576-30

Analyte	Result	Qualifier	PQL	MDL	Unit	Dil Fac	D	Method	Prep Type
Carbon disulfide	1.6	I	2.0	0.43	ug/L	1		8260D	Total/NA

This Detection Summary does not include radiochemical test results.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southeast, LLC.

Possible Hazard Identification *Unconfirmed*	***Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)*** ☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For* _____ *Months*

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southeast, LLC.

Possible Hazard Identification	*Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)*

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

SDG: 670-27652-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J1	Estimated value; value may not be accurate. Surrogate recovery outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 670-27652-1

Laboratory: Eurofins Orlando

Narrative

Job Narrative
Client: Tetra Tech
Client PM: Mark Jonnet
Project: NASA KSC LC34
Project Number: 112G08985
670-27652-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 9/29/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 4.9°C

GC/MS VOA
Method 8260D: Surrogate recovery for the following samples were outside control limits due to possible matrix interference: LC34-DPT0943-034.0-20230928 (670-27652-5), LC34-DPT0944-025.0-20230928 (670-27652-10), LC34-DPT0945-008.0-20230928 (670-27652-13), LC34-DPT0945-025.0-20230928 (670-27652-16), LC34-DPT0945-034.0-20230928 (670-27652-17), LC34-DPT0945-038.0-20230928 (670-27652-18), LC34-DPT0946-008.0-20230928 (670-27652-19), LC34-DPT0946-013.0-20230928 (670-27652-20) and LC34-DPT0946-025.0-20230928 (670-27652-22).

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-800818 recovered above the upper control limit for Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-800818 recovered outside acceptance criteria, low biased, for Methyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0943-034.0-20230928 (670-27652-5), LC34-DPT0944-018.0-20230928 (670-27652-9) and LC34-DPT0944-034.0-20230928 (670-27652-11). Elevated reporting limits (RLs) are provided.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-800818.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-800978 recovered above the upper control limit for Bromomethane and Chloroethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-800978.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southeast, LLC.

Possible Hazard Identification	***Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)***

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 670-27764-1

Laboratory: Eurofins Orlando

Narrative

Job Narrative
Client: Tetra Tech
Client PM: Mark Jonnet
Project: NASA KSC LC34
Project Number: 112G08985
Job: 670-27764-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 9/30/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.8°C

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 680-800978 recovered above the upper control limit for Bromomethane and Chloroethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-801481 recovered above the upper control limit for Bromomethane, Chloroethane and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-801481 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane, Acetone, Chloromethane and Methyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 680-801481 recovered outside control limits for the following analytes: Chloroethane and Trichlorofluoromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The laboratory control sample duplicate (LCSD) for analytical batch 680-801481 recovered outside control limits for the following analytes: Bromomethane. This analyte was biased high in the LCSD and was not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0949-034.0-20230929 (670-27764-17). Elevated reporting limits (RLs) are provided.

Method 8260D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 680-801481 recovered outside control limits for the following analyte(s): 1,2-Dibromo-3-Chloropropane. 1,2-Dibromo-3-Chloropropane have been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-801481.

Job ID: 670-27764-1 (Continued)

Laboratory: Eurofins Orlando (Continued)

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-801631 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane, 2-Hexanone, Acetone, Chloromethane and Methyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-801631 recovered above the upper control limit for Bromomethane, Chloroethane and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 680-801631 recovered outside control limits for the following analytes: Chloroethane and Trichlorofluoromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 680-801631 recovered outside control limits for the following analyte(s): 1,2-Dibromo-3-Chloropropane. These analytes have been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-801631.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-801819 recovered above the upper control limit for Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 680-801819 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Client: Tetra Tech, Inc.
