Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southeast, LLC.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
Client: Tetra Tech
Client PM: Mark Jonnet
Project: NASA KSC LC34
Project Number: 112G08985
670-28953-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 10/20/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.9°C

GC/MS VOA

Method 8260D: The continuing calibration verification (CCV) analyzed in batch 680-804481 was outside the method criteria for the following analyte(s): 1,2-Dibromo-3-Chloropropane, Bromoform and Chloroethane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT1000-025.0-20231018 (670-28953-9) and LC34-DPT1000-018.0-20231018 (670-28953-10). Elevated reporting limits (RLs) are provided.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-804481.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-804460 recovered outside acceptance criteria, low biased, for 2-Butanone (MEK). A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0999-025.0-20231018 (670-28953-3) and LC34-DPT0999-018.0-20231018 (670-28953-4). Elevated reporting limits (RLs) are provided.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-804460.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-804647.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT1001-025.0-20231019 (670-28953-15), LC34-DPT1002-025.0-20231019 (670-28953-21) and LC34-DPT1003-025.0-20231019 (670-28953-27). Elevated reporting limits (RLs) are provided.

Job ID: 670-28953-1 (Continued)

Laboratory: Eurofins Orlando (Continued)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
The cooler's custody seal, if present, is intact.		
Sample custody seals, if present, are intact.		
The cooler or samples do not appear to have been compromised or tampered with.		
Samples were received on ice.		
Cooler Temperature is acceptable.		
Cooler Temperature is recorded.		
COC is present.		
COC is filled out in ink and legible.		
COC is filled out with all pertinent information.		
Is the Field Sampler's name present on COC?		
There are no discrepancies between the containers received and the COC.		
Samples are received within Holding Time (excluding tests with immediate HTs)		
Sample containers have legible labels.		
Containers are not broken or leaking.		
Sample collection date/times are provided.		
Appropriate sample containers are used.		
Sample bottles are completely filled.		
Sample Preservation Verified.		
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs		
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").		
Multiphasic samples are not present.		
Samples do not require splitting or compositing.		
Residual Chlorine Checked.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J1	Estimated value; value may not be accurate. Surrogate recovery outside of criteria.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
L	Off-scale high. Actual value is known to be greater than the value given.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 10/21/2023 9:13 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.5°C and 1.0°C

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 680-804679 recovered above the upper control limit for Bromomethane, Chloroethane, Dichlorodifluoromethane and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 680-804679/3).

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-804679 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane, 2-Butanone (MEK) and Bromoform. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: LC34-DPT-1005- 025.0-20231019 (670-29049-9). Elevated reporting limits (RLs) are provided.

Method 8260D: The RPD of the laboratory control sample (LCS) and/or laboratory control sample duplicate (LCSD) for analytical batch 680-804679 recovered outside control limits for the following analytes: Chloroethane, Dichlorodifluoromethane and Trichlorofluoromethane.

Method 8260D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 680-804696 recovered outside control limits for the following analytes: 1,1-Dichloroethene and Chloromethane.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-804696 recovered above the upper control limit for Chloroethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 680-804696/2).

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-804696 recovered outside acceptance criteria, low biased, for 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone, Bromoform and Methyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT-1004-025.0-20231019 (670-29049-3) and LC34-DPT-1004-018.0-20231019 (670-29049-4). Elevated reporting limits (RLs) are provided.

Job ID: 670-29049-1 (Continued)

Laboratory: Eurofins Orlando (Continued)

Method 8260D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 680-804696 recovered outside control limits for the following analytes: Chloromethane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT-1004-025.0-20231019 (670-29049-3) and LC34-DPT-1004-018.0-20231019 (670-29049-4). Elevated reporting limits (RLs) are provided.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-804696.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-805008 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-805008 recovered above the upper control limit for Chloroethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 680-805008/3).

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT-1009-018.0-20231020 (670-29049-33), LC34-DPT-1009-025.0-20231020 (670-29049-34), LC34-DPT-1009-034.0-20231020 (670-29049-35) and LC34-DPT-1009-038.0-20231020 (670-29049-36). Elevated reporting limits (RLs) are provided.

Method 8260D: The initial calibration verification (ICV) analyzed in batch 680-804446 was outside method criteria for the following analyte(s): Trichlorofluoromethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 680-805008 recovered outside control limits for the following analytes: Chloroethane.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 680-805008 were outside control limits. Sample matrix interference is suspected.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) precision for analytical batch 680-805008 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

Method 8260D: The continuing calibration verification (CCV) analyzed in batch 680-804880 was outside the method criteria for the following analyte(s): 1,2-Dibromo-3-Chloropropane, Bromoform and Chloroethane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The laboratory control sample (LCS) for analytical batch 680-804880 recovered outside control limits for the following analytes: Chloroethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT-1006- 025.0-20231020 (670-29049-15), LC34-DPT-1006-018.0-20231020 (670-29049-16), LC34-DPT-1007- 018.0-20231020 (670-29049-22), LC34-DPT-1008-025.0-20231020 (670-29049-27) and LC34-DPT-1008-018.0-20231020 (670-29049-28). Elevated reporting limits (RLs) are provided.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with

analytical batch 680-804880.

Method 8260D: Internal standard (ISTD) response for the following sample was outside of acceptance limits: LC34-DPT-1007-025.0-20231020 (670-29049-21-DL). The sample was not re-analyzed due to insufficient volume and comparable results were obtained between the two analyses. The initial analysis was over range for cis-1,2-dichloroethene and vinyl chloride, sample was reanalyzed at a dilution for confirmation. Only the original results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southeast, LLC.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	ISTD response or retention time outside acceptable limits
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J1	Estimated value; value may not be accurate. Surrogate recovery outside of criteria.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 10/25/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.5°C

GC/MS VOA
Method 8260D: Surrogate recovery was outside acceptance limits for the following matrix spike/matrix spike duplicate (MS/MSD) samples: (670-29236-D-6 MS) and (670-29236-D-6 MSD). The parent sample's surrogate recovery was within limits. The MS/MSD sample has been qualified and reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-805207 recovered outside acceptance criteria, low biased, for 1,2,4-Trichlorobenzene, 1,2-Dibromo-3-Chloropropane, 2-Butanone (MEK) and Bromoform. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-805207 recovered above the upper control limit for Bromomethane, Chloroethane and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 680-805207 recovered outside control limits for the following analytes: Trichlorofluoromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The laboratory control sample (LCS) for analytical batch 680-805207 recovered outside control limits for the following analyte(s): 1,2-Dibromo-3-Chloropropane. 1,2-Dibromo-3-Chloropropane have been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT1010-038.0-20231023 (670-29236-6), LC34-DPT0962-038.0-20231023 (670-29236-8) and LC34-DPT0961-038.0-20231023 (670-29236-10). Elevated reporting limits (RLs) are provided.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 680-805207 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-805498 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the

Laboratory: Eurofins Orlando (Continued)

associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The laboratory control sample duplicate (LCSD) for analytical batch 680-805498 recovered outside control limits for the following analytes: 2-Hexanone, 4-Methyl-2-pentanone, Acetone and Bromoform. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-805493 recovered outside control limits for the following analyte(s): Acetone, Bromomethane and Chloroethane . These analytes have been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 680-805493 recovered outside control limits for the following analyte(s): Acetone. Acetone has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0969-038.0-20231024 (670-29236-26). Elevated reporting limits (RLs) are provided.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-805493.

Method 8260D: Surrogate recovery for the following sample was outside control limits: LC34-DPT0969-038.0-20231024 (670-29236-26). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8260D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 680-805498 recovered outside control limits for the following analytes: 2-Hexanone.

Method 8260D: The laboratory control sample duplicate (LCSD) for analytical batch 680-805498 recovered outside control limits for the following analyte(s): 2-Butanone (MEK). 2-Butanone (MEK) has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0963-038.0-20231024 (670-29236-18), LC34-DPT0965-038.0-20231024 (670-29236-20), LC34-DPT0966-043.0-20231024 (670-29236-21), LC34-DPT0966-038.0-20231024 (670-29236-22), LC34-DPT0967-038.0-20231024 (670-29236-24), LC34-DPT0970-038.0-20231024 (670-29236-28), LC34-DPT0994-043.-20231024 (670-29236-29) and LC34-DPT0994-038.0-20231024 (670-29236-30). Elevated reporting limits (RLs) are provided.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-805498.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J1	Estimated value; value may not be accurate. Surrogate recovery outside of criteria.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
Client: Tetra Tech
Client PM: Mark Jonnet
Project: NASA KSC LC34
Project Number: 112G08985
670-29324-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 10/26/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.5°C

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 680-805498 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The laboratory control sample duplicate (LCSD) for analytical batch 680-805498 recovered outside control limits for the following analytes: 2-Hexanone, 4-Methyl-2-pentanone, Acetone and Bromoform. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-805493 recovered outside control limits for the following analyte(s): Acetone, Bromomethane and Chloroethane . These analytes have been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 680-805493 recovered outside control limits for the following analyte(s): Acetone. Acetone has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-805493.

Method 8260D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 680-805498 recovered outside control limits for the following analytes: 2-Hexanone.

Method 8260D: The laboratory control sample duplicate (LCSD) for analytical batch 680-805498 recovered outside control limits for the following analyte(s): 2-Butanone (MEK). 2-Butanone (MEK) has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT1011-018.0-20231024 (670-29324-3) and LC34-DPT1011-025.0-20231024 (670-29324-4). Elevated reporting limits (RLs) are provided.

Job ID: 670-29324-1 (Continued)

Laboratory: Eurofins Orlando (Continued)

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-805498.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-805700 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The laboratory control sample duplicate (LCSD) for analytical batch 680-805700 recovered outside control limits for the following analytes: 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone, Acetone and Methyl acetate. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 680-805700 recovered outside control limits for the following analytes: 2-Butanone (MEK) and 2-Hexanone.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-805700.

Method 8260D: The laboratory control sample and The laboratory control sample duplicated (LCS/LCSD) was biased high for 1,2-Dichloroethane-d4 surrogate by 1% and 4% respectively. All other QC and sample recoveries were acceptable and within control limits, and sample target analyte recoveries were acceptable. The data has been qualified and reported.

Method 8260D: The continuing calibration verification (CCV) analyzed in batch 680-805692 was outside the method criteria for the following analyte(s): 1,2,4-Trichlorobenzene, 1,2-Dibromo-3-Chloropropane, 2-Butanone (MEK), Bromoform, Bromomethane, Chloromethane and Trichlorofluoromethane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 680-805692 recovered outside control limits for the following analytes: Trichlorofluoromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT1012-013.0-20231025 (670-29324-8), LC34-DPT1012-018.0-20231025 (670-29324-9) and LC34-DPT1014-018.0-20231025 (670-29324-21). Elevated reporting limits (RLs) are provided.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-805692.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
Q	Sample held beyond the accepted holding time.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
Client: Tetra Tech
Client PM: Mark Jonnet
Project: NASA KSC LC34
Project Number: 112G08985
670-29412-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 10/27/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.5°C

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 680-806030 recovered outside acceptance criteria, low biased, for Bromomethane and Trichlorofluoromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 680-806030 recovered outside control limits for the following analytes: 1,1,2,2-Tetrachloroethane, 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone and Methyl acetate. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 680-806030 recovered outside control limits for the following analyte(s): 2-Butanone (MEK) and Acetone. These analytes have been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: The laboratory control sample duplicate (LCSD) for analytical batch 680-806030 recovered outside control limits for the following analytes: Bromoform. This analyte was biased high in the LCSD and was not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT1015-025.0-20231025 (670-29412-4), LC34-DPT1017-013.0-20231026 (670-29412-14) and LC34-DPT1017-034.0-20231026 (670-29412-17). Elevated reporting limits (RLs) are provided.

Method 8260D: Preserved vials were received with headspace. Unpreserved vial was not analyzed with in 7 days. Out of hold, headspace free vial was analyzed. LC34-DPT1015-025.0-20231025 (670-29412-4)

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-806030.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-806240 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane, Bromomethane and Trichlorofluoromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Job ID: 670-29412-1 (Continued)

Laboratory: Eurofins Orlando (Continued)

Method 8260D: The laboratory control sample duplicate (LCSD) for analytical batch 680-806240 recovered outside control limits for the following analytes: 2-Hexanone and Bromoform. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 680-806240 recovered outside control limits for the following analytes: 2-Hexanone.

Method 8260D: Elevated reporting limits are provided for the following sample: LC34-DPT1018- 018.0-20231026 (670-29412-21). Sample was reanalyzed out of hold at lower dilution. Sample is reported as over dilute per client request.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J3	Estimated value; value may not be accurate. Spike recovery or RPD outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
Client: Tetra Tech
Client PM: Mark Jonnet
Project: NASA KSC LC34
Project Number: 112G08985
670-29481-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 10/28/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.5°C

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 680-806030 recovered outside acceptance criteria, low biased, for Bromomethane and Trichlorofluoromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 680-806030 recovered outside control limits for the following analytes: 1,1,2,2-Tetrachloroethane, 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone and Methyl acetate. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 680-806030 recovered outside control limits for the following analyte(s): 2-Butanone (MEK) and Acetone. These analytes have been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: The laboratory control sample duplicate (LCSD) for analytical batch 680-806030 recovered outside control limits for the following analytes: Bromoform. This analyte was biased high in the LCSD and was not detected in the associated samples; therefore, the data have been reported.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-806030.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-806132 recovered above the upper control limit for 1,1,2,2-Tetrachloroethane, 1,2-Dibromo-3-Chloropropane and 2-Hexanone. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 680-806132 recovered outside control limits for the following analytes: 1,2-Dibromo-3-Chloropropane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 680-806132

Job ID: 670-29481-1 (Continued)

Laboratory: Eurofins Orlando (Continued)

recovered outside control limits for the following analyte(s): Trichlorofluoromethane. Trichlorofluoromethane has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: The method blank for analytical batch 680-806132 contained 1,2,4-Trichlorobenzene above the method detection limit (MDL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-806132.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-806222 recovered outside acceptance criteria, low biased, for 2-Butanone (MEK), Bromoform and Methyl tert-butyl ether. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 680-806222 recovered outside control limits for the following analytes: Chloroethane.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0995-043.0-20231027 (670-29481-11), LC34-DPT0995-038.0-20231027 (670-29481-12), LC34-DPT0996-043.0-20231027 (670-29481-13), LC34-DPT0996-038.0-20231027 (670-29481-14) and LC34-DPT0998-025.0-20231027 (670-29481-16). Elevated reporting limits (RLs) are provided.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-806222.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southeast, LLC.

INSTRUCTIONS

The BCE work clearance request is used for any work (contract or in-house) that may disrupt aircraft or vehicular traffic flow, base utility services, protection provided by fire and intrusion alarm system, or routine activities of the installation. This form is used to coordinate the required work with key base activities and keep customer inconvenience to a minimum. It is also used to identify potentially hazardous work conditions in an attempt to prevent accidents. The work clearance request is processed just prior to the start of work. If delays are encountered and the conditions at the job site change (or may have changed) this work clearance request must be reprocessed.

18. REMARKS. *(This section must describe specific precautionary measure to be taken before and during work accomplishment. Specific comments concerning the approved method of excavation, hand or powered equipment, should be included.)*

Install 170 air sparge wells (ASWs) in Area #1 and 22 ASWs in Area #2 to treat impacted groundwater associated with the Launch Complex 34 groundwater plume (see Figures 1, 2 and 3 included in the AF 332). This will be an expansion of the existing Hot Spot 6 air sparging treatment system already in place, and will use the compressor trailer already installed at the site. The ASWs will be completed below grade (no well pads or stick-ups), and will be installed at sufficient distance away from historical features to avoid impact. Subsurface piping will connect the ASWs to the existing compressor trailer located under Van Shelter 22004. Trenching will be required to install subsurface piping, and will be routed to avoid impact to historical features. Two distribution trailers will be installed to support the ASWs. Additionally, a network of 12 new monitoring wells will be installed in the expansion areas (see Figure 3 attached) to monitor performance of the system. The new monitoring wells will be flush-mount with ground surface.

Note: NASA is working with 45 CES/CEIE on environmental requirements identified in the AF 332. NASA Cultural Resources will document this project in NASA's Annual Report to SHPO to cover Section 106 consultation requirements.

8. DESCRIPTION OF WORK TO BE ACCOMPLISHED *(Include Sketch or Plan, when appropriate)*

Install 170 air sparge wells (ASWs) in Area #1 and 22 ASWs in Area #2 to treat impacted groundwater associated with the Launch Complex 34 groundwater plume (see Figures 1, 2 and 3 attached). This will be an expansion of the existing Hot Spot 6 air sparging treatment system already in place, and will use the compressor trailer already installed at the site. The ASWs will be completed below grade (no well pads or stick-ups), and will be installed at sufficient distance away from historical features to avoid impact. Subsurface piping will connect the ASWs to the existing compressor trailer located under Van Shelter 22004. Trenching will be required to install subsurface piping, and will be routed to avoid impact to historical features. Two distribution trailers will be installed to support the ASWs. Additionally, a network of 12 new monitoring wells will be installed in the expansion areas (see Figure 3 attached) to monitor performance of the system. The new monitoring wells will be flush-mount with ground surface. Note, this area was included in the 2022 USFWS Biological Opinion.

9. BRIEF JUSTIFICATION FOR WORK TO BE ACCOMPLISHED *(Not required for maintenance and repair)*

1. PROJECT INFORMATION

Project Title: Air Sparging Interim Measure Expansion at Launch Complex 34 (LC34)

Project Lead: Deda Johansen, SI-E2, 321-508-2289

Project No.: ENV 1634A_03-03-2021 (REV B)

Project Description:

03/18/2024 Update for third expansion: Install 170 air sparge wells (ASWs) in Area #1 and 22 ASWs in Area #2 to treat impacted groundwater associated with the Launch Complex 34 groundwater plume (see attached figures). This will be an expansion of the existing Hot Spot 6 air sparging treatment system already in place, and will use the compressor trailer already installed at the site. The ASWs will be completed below grade (no well pads or stick-ups), and will be installed at sufficient distance away from historical features to avoid impact. Subsurface piping will connect the ASWs to the existing compressor trailer located under Van Shelter 22004. Trenching will be required to install subsurface piping, and will be routed to avoid impact to historical features. Two distribution trailers will be installed to support the ASWs. Additionally, a network of 12 new monitoring wells will be installed in the expansion areas (see Figure 3 attached) to monitor performance of the system. The new monitoring wells will be flush-mount with ground surface. These areas are included in the 2022 USFWS Biological Opinion and in approved AF332 30663325

09/08/2022: Update for second expansion of the existing air sparge system.

Original Project Description: The purpose of the interim measure is to install 76 air sparge wells (ASWs) in an area northeast of the Blockhouse to treat contaminated groundwater at the Launch Complex 34 (LC34) site, located at Cape Canaveral Space Force Station. This will be an expansion of the existing Hot Spot 6 air sparging treatment system, and will use the compressor trailer already installed at the site (located under Van Shelter 22004). Subsurface piping will connect the ASWs to the existing compressor trailer. Trenching will be required to install subsurface piping, and will be routed to avoid impact to historical features. A distribution trailer will be installed to support the 76 ASWs. See Figure 1 for the location of the air sparge expansion and Figure 2 for the proposed layout of the expansion. The ASWs will be completed below grade (no well pads or stick-ups), and will be installed at sufficient distance away from historical features (i.e., Blockhouse, Communications wall) to avoid impact. Additionally, a network of 11 new monitoring wells will be installed in the expansion area (see Figure 3) to monitor performance of the system. The new monitoring wells will be flush-mount with ground surface. An underground compressed air line will also be installed from the existing compressor to the Hydraulic Capture System. The existing fence around the Hydraulic Capture System will be expanded to the east as shown on Figure 2.

Note: A NASA Site Plan has already been approved for this project (Site Plan #21-0007). A 332 has also been submitted (Work Request #30323192) and NASA is working with 45 CES/CEIE on environmental requirements. Based on discussions with NASA Cultural Resources, this project will be included in NASA's Annual Report to SHPO, which will cover Section 106 consultation requirements.

2.a.1. CATEGORICAL EXCLUSION (CATEX): This project is categorically excluded (CATEX) from further NEPA review as defined in 14 CFR 1216.304(d)(2)(i) Routine maintenance, minor construction or rehabilitation, minor demolition, minor modification, minor repair, and continuing or altered operations at, or of, existing NASA or NASA-funded or -approved facilities and equipment, such as buildings, roads, grounds, utilities, communication systems, and ground support systems, such as space tracking and data systems. For additional information, please contact James Brooks of the NASA Environmental Management Branch (SI-E3, 321-867-9081).

2.g.1. NASA PROJECT ON AF PROPERTY: This project is located on CCAFS property. Coordination with the 45th CES/CEIE is required prior to any construction activity at this facility. AF Form 813 must be completed for project review by the Air Force. Contact Taylor Janise (853-6638, 45 CES/CEIE) if clarification is required.
NOTE: A 332 has been submitted for this project and NASA is coordinating with 45 CES/CEIE.
03/21/2024 Update: AF332 30663325 has been approved.

3.a.1. SOLID WASTE MANAGEMENT UNIT (SWMU): This project includes work within the boundary of SWMU #C054, "Launch Complex 34". A SWMU designation means a site has had historical operations with the potential to impact the environment. This area is being investigated by the NASA Remediation Group under Remediation Project Manager (RPM) Deda Johansen (SI-E2, 321-508-2289) of the Environmental Assurance Branch. A Land Use Control Implementation Plan (LUCIP) has been prepared for the SWMU. These controls are necessary to prohibit residential exposure to groundwater present at the site.

All workers involved in subsurface/dewatering work must be notified (HAZCOM) of the potential for contamination present and it is recommended that an Industrial Hygienist be consulted for determination of required personal protective equipment (PPE). Handle potentially contaminated soils or groundwater in accordance with site work plan. Utilize PPE as required by Health and Safety Plan.

3.a.2. HAZARDOUS/NON-HAZARDOUS WASTE: All hazardous and non-hazardous wastes generated during the interim measure must be properly containerized, stored, labeled, manifested, shipped, and disposed of in full regulatory compliance. Hazardous wastes generated by this activity must be manifested, shipped, and disposed of under either the remediation contractor's or NASA's Environmental Protection Agency (EPA) identification number. The contractor shall maintain copies of waste management records and manifests onsite and make them available for review by NASA upon request. The onsite hazardous waste site environmental coordinator/point of contact shall have formal RCRA training and provide proof of training as identified in 40 CFR 262.17 and subpart M. Please contact NASA Environmental Assurance Branch at 861-0863 if assistance is required.

If wastes are managed, controlled and disposed of using the NASA EPA identification number, the KSC Waste Management requirements outlined in KNPR 8500.1 must be followed. A Process Waste Questionnaire (PWQ), KSC Form 26-551 along with any supporting documentation (SDS, product formulation, lab analyses) must be submitted to the NEMCON Waste Management Office for each waste stream generated. That office will then generate a Technical Response Package (TRP) which will give direction on proper handling, storage, and disposal of the waste stream. Please contact NEMCON Waste Management Services at 867-8642 if assistance is required.

The remediation contractor is responsible for any spills, releases, or other environmental contamination that occurs as a result of the proposed activities. A KSC Pollution Incident Report (PIR) Form (KSC Form 21-555) must be completed and submitted to the NASA Environmental Assurance Branch within three (3) calendar days of the incident.

3.a.3. ARCHAEOLOGICAL: LC34 is part of the Cape Canaveral National Historic Landmark District (8Br216). Per Tom Penders, Space Force Cultural Resources Manager (CRM), the entire area has been surveyed and there are no issues for the project to proceed, however if any archaeological material (e.g., artifacts and/or cultural features or human remains) is found, work must stop immediately and the SLD 45 CRM is to be contacted at 321-307-0075 or at thomas.penders@spaceforce.mil. Materials and remains will need to be identified per NAGPRA (Native American Graves Protection and Repatriation Act). For more information please contact Katherine Zeringue (SI-E3) at 867-8454.

3.a.4. PROTECTED SPECIES: This project has the potential to affect the protected gopher tortoise. Measures must be taken to minimize impacts to their habitat. A biological survey will be required to identify potential impacts prior to disturbances. Please contact Russ Lowers (NEM-022, 321-759-6022) or Aleena Hess (NEM-022, 440-413-9439), 14 days prior to beginning work to schedule a biological survey. A biological survey of vegetated areas to be impacted will be required to identify potential impacts to habitat and wetlands prior to disturbances.

Update 09/09/2022: Abide by the Reasonable and Prudent Measures necessary to minimize incidental take as required by the Biological Opinion (BO) for the NASA Air Sparging System at Cape Canaveral Space Force Station, dated 06/22/2022 (FWS Log #04E1000-2021-F-1498 / 2022-0050398). Terms and Conditions as detailed in the BO must also be complied with in order to carry out the Reasonable and Prudent Measures.

3.a.5. CONCRETE WASHOUT: Water used to rinse out concrete trucks and other equipment used for concrete work must not be allowed to discharge to surface waters. Concrete washout water shall be diverted to a leakproof container for appropriate disposal.

Remove and dispose of hardened concrete waste consistent with your handling of other construction wastes. After drying/settling, the residue may be disposed of at the Diverted Aggregate Reclamation and Collection Yard (DARCY). Clean, unstained, unpainted concrete residue is accepted at the DARCY without any sampling and analysis. Contact Doug Durham (SI-E2, 867-8429) with any question on this requirement.

3.a.6. WETLANDS AND SURFACE WATER PROTECTION: Best management practices (BMPs) are to be implemented during the proposed activity. Care must be taken to avoid disturbance to wetlands or surface waters known to be on site. BMPs shall ensure no rutting, filling or other disturbances to the soils, or discharge of fill/sediments into surface waters. Wetland stabilization mats must be used as necessary to prevent rutting of the soil. When the work is complete, the wetlands shall retain similar function and value as before the survey line clearing. Every effort should be made to perform work in wetland areas during dry periods. If BMPs are not sufficient to eliminate permanent impacts to wetlands and/or surface waters, permits will be required.

3.b.1. EXCAVATION PERMIT: A KSC Excavation Permit will be required for any digging proposed by this project. Please contact the Utility Locate/Excavation Permit Request Customer Helpline at 867-2406 or go to website at http://epr.ksc.nasa.gov/Home/ for an underground utility scan and dig permit. NOTE: If a trench or pit is to be left open all day or overnight, the trench/pit must be checked for trapped animals at the beginning and end of each work shift. If an animal is observed trapped, contact Russ Lowers (NEM-022, 321-759-6022) or the Duty Office (861-5050, email KSC-BOSS-DutyOffice@mail.nasa.gov) to arrange removal/release. Do not handle the animal(s).

3.b.2. AIR EMISSIONS: NASA/KSC has Remedial Activities listed on the Title V Air Permit as an insignificant activity. The proposed groundwater remediation system would be considered insignificant if the Remediation system/unit/activity would not emit or have the potential to emit (PTE):

a. 500 pounds per year or more of lead and lead components expressed as lead;
b. 1,000 pounds per year or more of any hazardous air pollutant;
c. 2,500 pounds per year or more of total hazardous air pollutants; or
d. 5.0 tons per year or more of any other regulated pollutant, Per Rule 62-213.430(6), F.A.C.

If the above criteria cannot be met, a construction permit would be required. Contact the Environmental Assurance Branch (Zach Hall, SI-E2, 867-5178) if you have any questions.

3.b.3. DEWATERING: Construction dewatering is exempted from permitting under conditions of Rule 40C-2.051 (7) providing the conditions of exemption are met including: limiting withdrawal methods, limiting withdrawal to less than 300,000 gpd and limiting withdrawal to 30 days. Additional limitations are placed on discharge of produced water to prevent harm to the environment. If conditions of the exemption cannot be met, a construction dewatering general permit is required from SJRWMD using Form 40C-2.900(12). No dewatering may begin until 10 days after submittal of the complete form. If the dewatering activity does not qualify for a general permit by rule under Rule 40C-2.042(9), F.A.C., you must complete and submit a SJRWMD application for an individual Consumptive Use Permit pursuant to Rule 40C-2.041, F.A.C. Approval of the application must be obtained before starting the dewatering activity. If produced water discharge will reach surface waters, an FDEP permit may be required under Rule 62-621.300-2. Contact Doug Durham (SI-E2, 867-8429) with questions related to these requirements.

3.b.4. FDEP NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) CONSTRUCTION ACTIVITY PERMIT: This project may require an NPDES Phase II construction permit. If 1 acre or more of land will be disturbed, a NPDES Construction Activity Permit from the Florida Department of Environmental Protection (FDEP) is required under F.A.C. 62-621.300(4), Notice of Intent to Use Generic Permit for Stormwater Discharge from Large (If over 5 Acres) and Small (1 Acre To 5 Acres) Construction Activities http://www.dep.state.fl.us/water/stormwater/npdes/forms/cgp_noi.pdf. This includes construction activity which will disturb less than one acre of land area that is part of a larger common plan of development that will ultimately disturb equal to or greater than one acre of land. Construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of the site. A condition of this permit is to provide a Stormwater Pollution Prevention Plan (SWPPP) detailing erosion and turbidity controls for the site. Information on completing the permit application and development of the SWPPP can be obtained by contacting Doug Durham (SI-E2, 867-8429).

3.b.5. WATER WELL: Installation or abandonment of a water well requires use of a licensed contractor, a KSC dig permit, and registration of the well with St. Johns River Water Management District (SJRWMD). Dependent on water use, wells may require a Florida Department of Health (FDOH) operating permit. Contact Doug Durham (SI-E2, 867-8429) for details.

No other environmental issues were identified based upon the information provided in the KSC Environmental Checklist. This Record of Environmental Consideration (REC) does not relinquish the project lead from obtaining and complying with any other internal NASA permits or directives necessary to ensure all organizations potentially impacted by this project are notified and concur with the proposed project.

Due to potential changes in regulations, permit requirements and environmental conditions, statements in this REC are valid for 6 months, and subject to review after this period. It is the responsibility of the project lead to submit current project information for a REC update prior to project commencement if REC is older than 6 months; and also to notify the Environmental Management Branch (SI-E3) if the scope of the project changes at any time after the REC is issued.

SECTION I
INTRODUCTION

This Stormwater Pollution Prevention Plan (SWPPP) was prepared by Tetra Tech, Inc., for the National Aeronautics and Space Administration (NASA) under Indefinite Delivery Indefinite Quantity (IDIQ) Contract 80KSC019D0011-80KSC019F0067. Under this contract, Tetra Tech is implementing an Air Sparging (AS) Interim Measure (IM) to remediate contaminated groundwater at Hot Spot (HS) Area 6 at Launch Complex 34 (LC34), Cape Canaveral Space Force Station (CCSFS), Florida. This SWPPP was prepared in accordance with the United States Environmental Protection Agency (EPA) Developing Your Stormwater Pollution Prevention Plan: A Guide for Construction Sites summary guidance published in 2007. LC34 has been designated as Solid Waste Management Unit (SWMU) CC054 under the Kennedy Space Center (KSC) Resource Conservation and Recovery Act (RCRA) Corrective Action Program.

1.1 SITE HISTORY

LC34 is located in Section 6, Township 23 South, and Range 38 East in the False Cape Quadrangle. The facility is located on CCSFS (renamed from Cape Canaveral Air Force Station in December 2020) and is bordered by Launch Complex 37 to the north, Launch Complex 20 to the south, by ICBM Road (Samuel Phillips Parkway) to the west, and by the Atlantic Ocean to the east. The location and site map of LC34 within CCSFS are shown on Figures A-1 and A-2, respectively, provided in Appendix A of this SWPPP. The launch pad and associated facilities at LC34 were built in the late 1950s and used by NASA's Apollo Space Program for the launching of Saturn rockets from 1960 to 1968. Historical information suggests that rocket engines and other parts were cleaned at the site using solvent degreasers, most notably trichloroethene (TCE). It is speculated that releases of solvents occurred during cleaning operations through both intentional and unintentional discharges to nearby areas. Based on groundwater sampling data, these releases occurred primarily in the immediate vicinity of the former Engineering Support Building (ESB) located southwest of the Blockhouse. Following shutdown of the launch pad in 1968, LC34 has remained largely inactive, although several site features (e.g., Blockhouse, camera pad, etc.) are still present.

Most operational equipment (service towers, fuel storage tanks, piping, etc.) has been dismantled, and the majority of the on-site buildings and structures were abandoned-in-place. Native and invasive vegetation has overgrown much of the site, and dense wooded areas currently surround the site. For additional site information, refer to the LC34 HS 6 Expansion – Phase Three Implementation Work Plan (IWP).

1.2 PROJECT DESCRIPTION

This IM project (LC34 HS 6 Expansion – Phase Three) includes the installation an additional 192 AS wells, and associated piping and infrastructure, in areas west and north of the current HS 6 AS treatment area. This is the third phase of expansion for the HS 6 AS IM; the initial IM was completed in 2018 (160 AS wells), the first phase of expansion was completed in 2019 (additional 140 AS wells), and second expansion was completed in 2023 (additional 190 AS wells). The IM objective for this project is to remediate contaminated groundwater within the treatment zones (approximately 9.4 acres in the phase three expansion areas) to support transition to long-term monitoring. The construction area for this project, where land disturbance will occur (i.e., trenching) covers approximately 1.3 acres. The IM objective was developed to provide a flexible treatment train approach where certain metrics such as remedial performance, plume dynamics, and natural attenuation characteristics can be evaluated to determine whether the remedial objective has been met and ultimately an endpoint to the IM. The overall Corrective Action Objective for HS 6 is to reduce concentrations of contaminants of concern (cis-1,2-dichloroethene and vinyl chloride) from greater than 10-times Florida Department of Environmental Protection (FDEP) Natural Attenuation Default Concentrations (NADCs) to less than NADCs via AS. The overall Corrective Action Objective for the LC34 groundwater plume, as a whole, is to reduce concentrations of all groundwater contaminants to below Groundwater Cleanup Target Levels (GCTLs). Based on the treatment performance of the IM, AS operations may be modified, as appropriate, to achieve the IM objective. The AS wells and conveyance piping for the proposed AS system is shown on Figure A-2.

1.3 REPORT OBJECTIVE AND CONTENT

The objectives of this report are to describe the project and to present the stormwater pollution prevention measures that will be used during implementation of the IM for the LC34 HS 6 expansion (phase three).

Section 2.0 presents a description of control measures to be implemented during the IM and the sequence of proposed construction activities. Section 3.0 presents state and local documents referenced for stormwater management. Section 4.0 presents the inspection and maintenance program proposed for IM construction efforts. Section 5.0 presents a summary of non-stormwater discharges and pollution prevention measures to be employed during the IM. Sections 6.0 and 7.0 present the required plan certifications. Copies of the EPA SWPPP checklists are presented in Appendix B, and an inspection report form is provided in Appendix C. Completed weekly inspection report forms will also be included in Appendix C, as they are completed. Appendix D provides a location to post any revisions or additions to this SWPPP.

SECTION II
DESCRIPTION OF CONTROLS

This section presents a description of stormwater controls, including erosion and sediment controls proposed for the IM. Copies of the completed EPA Preconstruction Checklist and the Construction/Implementation Checklist are provided in Appendix B. Requirements specified in these checklists are incorporated into this SWPPP. Any modifications to the proposed erosion and sediment control devices, maintenance schedules, construction sequence, and spill prevention plans presented in this SWPPP must be provided in Appendix D.

2.1 EXISTING SITE CONDITIONS

LC34 is located on CCSFS and is bordered by Launch Complex 37 to the north, by Launch Complex 20 to the south, by ICBM Road (Samuel Phillips Parkway) to the west, and by the Atlantic Ocean to the east. Prior to development, LC34 consisted of relict sand dunes and interdunal swales typical of barrier island depositional environments. Native and invasive vegetation has overgrown much of the site, and dense wooded areas currently surround the site. A portion of the project will be implemented in a grassy field, with few trees that will be maintained to the best extent possible, and a portion of the project extends into the dense wooded area, which will be cleared, as needed. A project area map is provided as Figure A-2.

HS 6 is designated as the area located east and northeast (downgradient) of the LC34 dense non-aqueous phase liquid (DNAPL) source zone (DSZ). However, the phase three expansion of the HS 6 IM extends to areas west of the DSZ and southeast of the launch pad as shown on Figure A-2. A drainage ditch is located east of the HS 6 phase three expansion area along Perimeter Road (Area #1, the larger of the two expansion areas shown on Figure A-2). There are two stormwater culverts along the header trench path to the northeast expansion area by the launch pad (Area #2, the smaller of the two expansion areas shown on Figure A-2), which run underneath Perimeter Road and the adjacent roadway. The topography in the project areas show little relief. Precipitation infiltrates into surface soils or runs off towards the proposed trench areas. Control measures are discussed in the following section.

2.2 EROSION AND SEDIMENT CONTROL MEASURES

Erosion and sediment control measures will be implemented and maintained according to the standards and specifications of the Florida Stormwater Erosion and Sedimentation Control Inspector's Manual, dated October 2018, unless otherwise noted in this SWPPP and/or the LC34 HS 6 Expansion – Phase Three IWP.

The required erosion and sediment control measures are shown on Figure A-3 prior to any earth disturbance. Filter socks will be used to filter stormwater runoff from graded areas and to prevent the migration of sediment prior to establishing permanent stabilization. Additionally, soil spoils will be placed upgradient of the trench as much as possible to minimize sediment transport to drainage swales.

2.2.1 STRUCTURAL PRACTICES. The following describes the types of erosion and sediment control best management practices (BMPs) proposed to prevent sediments (contaminated or uncontaminated) from being transported beyond the limits of disturbance. The references presented along with the erosion and sediment control BMPs below refer to the Florida Stormwater Erosion and Sedimentation Control Inspector's Manual. Installation of the erosion and sediment control devices will be overseen by a certified person that has completed the Florida stormwater erosion and sedimentation control inspector training program.

Filter Socks: A filter sock is a temporary sediment barrier and stormwater runoff filtration device consisting of a three-dimensional, tubular, sediment control filled with biodegradable material placed on the ground and attached to supporting posts. The purpose of a filter sock is to intercept and detain small amounts of sediment from disturbed areas during construction operations and to decrease the velocity of sheet flows and low- to moderate-level channel flows. The filter socks will be placed where indicated on Figure A-3 (Appendix A). Figure A-4 presents construction details for the filter sock.

Temporary Seeding: Temporary seeding is the establishment of a temporary vegetative cover on disturbed areas by seeding with appropriate rapidly growing annual plants. The purpose of

temporary seeding is to reduce erosion and sedimentation by stabilizing disturbed areas that will not be brought to final grade for 30 days or more and to reduce problems associated with mud and dust production from bare soil surfaces during construction. Temporary seeding will be used when required within the limits of disturbance when dictated by the construction sequence.

Permanent Seeding: Permanent seeding is the establishment of perennial vegetative cover on disturbed areas by planting seed. The purpose of permanent seeding is to reduce erosion and to decrease sediment yield from disturbed areas. Additionally, permanent seeding permanently stabilizes disturbed areas in a manner that is economical, adaptable to site conditions, and allows selection of the most appropriate plant material. Permanent seeding and/or sod will be used within the limits of disturbance in all earthen areas.

2.2.2 MANAGEMENT STRATEGIES. The following is a list of erosion and sediment control management strategies that will be followed during implementation of the IM expansion (phase three):

1) Unstable and/or disturbed areas will be minimized, and construction activities will be staged.

2) Seeding or other stabilization measures will follow immediately after backfilling.

3) Areas that will be disturbed will be clearly marked by flags, signs, etc.

4) The Tetra Tech Construction Supervisor will be responsible for ensuring the installation and maintenance of all erosion and sediment control devices.

5) Erosion and sediment control devices will be installed and/or constructed before the start of any earth-disturbance activities.

6) Erosion and sediment control devices will remain in place until permanent stabilization is established over the disturbed surfaces.

2.3 SEQUENCE OF CONSTRUCTION

The time required to perform the proposed construction activities for this IM is estimated to be approximately 6 months. The generalized sequence of construction activities is as follows:

1. Hold a pre-construction meeting.

2. Inspect the site prior to construction to verify existing site conditions, wetlands, ecological impacts, and underground utility locations.

3. Construct project support facilities, as required.

4. Prepare the areas for IM construction activities and establish horizontal and vertical control for construction. Stake the locations of areas to be disturbed prior to actual work.

5. Conduct vegetation site clearing activities, as necessary.

6. Install erosion and sediment controls for excavation areas. The controls to be installed include but may not be limited to filter socks. Additional controls may be warranted by site conditions and best construction practices.

7. Mow areas previously cleared of trees and shrubbery, as necessary, within IM project areas.

8. Following installation of AS components, restore IM project areas by backfilling to re-establish existing grades using off-site borrow soil. Following the backfilling of all excavation areas, use the appropriate seed mixtures to stabilize disturbed areas brought to final grades.

9. When all areas have been stabilized and have been accepted by the NASA Remediation Project Manager (RPM), remove all remaining perimeter controls.

2.4 PERMANENT STABILIZATION

All areas disturbed by construction activities associated with this IM will be restored/stabilized using permanent stabilization practices. Permanent stabilization seeding will be performed as soon as possible following backfilling of trenches but no later than 30 days following final grading. If permanent stabilization is not achievable prior to 30 days after final grading, temporary seeding will be implemented.

A permanent seed mixture, fertilizer, and mulch will be applied after disturbed areas are backfilled and graded. The seed will consist of a mixture of permanent grasses (i.e., Bermuda and Pensacola Bahia) and quick-growing grasses. The quick-growing grasses to be used will be dependent on the seeding season, with annual rye to be used during winter months and millet to be used during summer months. The seed, fertilizer, and mulch will be applied in accordance with Florida Department of Transportation specifications. If areas are brought to final grades and permanent seeding is not scheduled within 30 days, the area will be seeded using an appropriate temporary seed mixture from Table 1.65a of the Florida Development Manual. Six weeks after demobilization, the restored areas will be inspected and reseeded or sodded as necessary.

2.5 STORMWATER RUNOFF CONSIDERATIONS

The intent of the IM is to install an AS system. Surface conditions following IM activities will be the same as conditions prior to IM activities, to the fullest extent. Under these circumstances, the volume of post-construction runoff is expected to be the same as pre-construction runoff. Therefore, no pre- or post-construction runoff calculations have been prepared for this IM. No permanent stormwater runoff control structures are proposed for this IM.

SECTION III
STATE AND LOCAL REQUIREMENTS

This plan was prepared in accordance with the EPA Developing Your Stormwater Pollution Prevention Plan: A Guide for Construction Sites summary guidance (May 2007) and in part with the erosion and sediment control program requirements specified in the Florida Stormwater Erosion and Sedimentation Control Inspector's Manual (October 2018).

SECTION IV
INSPECTION AND MAINTENANCE PROCEDURES

In general, all erosion and sediment control measures will be checked weekly and after each storm event producing ½ inch or more of rainfall until site restoration activities are completed and stabilized. Each inspection will be recorded on an inspection report form, provided as Appendix C. Any required repairs will be made immediately. The following items will be checked during each weekly inspection:

- The filter socks will be checked for undermining or deterioration of the filter sock material and its structural integrity. Sediment will be removed when the level of sediment deposition reaches one-half of the filter sock height.

- The seeded areas will be checked to ensure that an adequate stand of grass is maintained, and areas will be fertilized and reseeded as needed. Vegetation areas will be maintained until formal acceptance by the NASA RPM.

SECTION V
NON-STORMWATER DISCHARGES AND POLLUTION PREVENTION

This section presents a description of non-stormwater discharges and pollution prevention measures that will be employed during the IM.

5.1 NON-STORMWATER DISCHARGES

The non-stormwater discharges anticipated during construction activities will be water resulting from decontamination efforts associated with field equipment and vehicle wash waters. All decontamination water will be collected in a temporary, heavy-duty, double-lined, curbed, decontamination pad capable of containing decontamination fluids, pumped to drums, characterized, and properly disposed of off-site.

5.2 POLLUTION PREVENTION MEASURES

The following is a list of materials or substances that are anticipated to be stored on site during the IM:

- Detergents for decontamination efforts;
- Gasoline and other vehicle maintenance substances;
- Small quantities of laboratory chemicals, polyvinyl chloride (PVC) glue, primer, paint, and other flammable substances;
- Contaminated groundwater extracted during site sampling activities; and
- Untreated compressed air condensate in conveyance headers and lateral lines.

These materials, when not in use, will be stored in a centralized staging area. Practices that will be followed to reduce risks associated with these materials include the following:

- Products will be kept in original containers unless they are not resealable.
- Original labels and Safety Data Sheets (SDSs) will be retained on site.

- If surplus product must be disposed of, manufacturer or local and state recommended methods for proper disposal will be followed.

The following paragraphs describe specific spill prevention and material management practices that will be employed during the IM.

GOOD HOUSEKEEPING

The following are the material management practices that will be used to reduce the risk of spills or other accidental exposure of materials and substances to stormwater runoff:

- An effort will be made to store only enough products required to accomplish each active task.
- All materials stored on site will be stored in a neat orderly manner in their appropriate containers and, if possible, under a roof or other enclosure.
- Products will be kept in their original containers with the manufacturer's original label, unless they are not resealable.
- Substances will not be mixed with one another unless recommended by the manufacturer.
- Whenever possible, all of a product will be used before the container is disposed of.
- Manufacturers' recommendations for proper use and disposal will be followed.
- Storage and use areas will be inspected daily to ensure proper use and disposal of materials on site.

SPILL CONTROL PRACTICES

Spill control practices are outlined in Section 8.5 of the LC34 HS 6 Expansion – Phase Three IWP. In addition to the good housekeeping and material management practices discussed in the IWP, the following practices will be followed for spill prevention and cleanup:

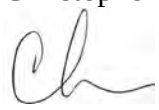
- Manufacturers' recommended methods for spill cleanup are included in the Site-Specific Safety and Health Plan. Site personnel will be made aware of the procedures and the locations of the information and cleanup supplies.

- Materials and equipment necessary for spill cleanup will be kept in the material storage area on site. Equipment and materials will include, but not be limited to, brooms, dust pans, mops, rags, gloves, goggles, absorbent material, and plastic and metal containers designed specifically for this purpose.

- All spills will be cleaned up immediately after discovery.

- The spill area will be kept well ventilated, and personnel will wear appropriate protective clothing to prevent injury from contact with hazardous substances.

- Spills of toxic or hazardous material will be reported to the NASA RPM.



- If a spill occurs, this SWPPP will be modified to include measures to prevent the type of spill from reoccurring and will include information about how to clean up the spill if there is a recurrence. A description of the spill, what caused the spill event, and cleanup measures will also be included.

- The Tetra Tech Construction Supervisor responsible for day-to-day site operations will be the spill prevention and cleanup coordinator. The Construction Supervisor may designate other site personnel to assume these duties. These individuals will each become responsible for a particular phase of prevention and cleanup. The names of responsible spill personnel will be posted with the on-site copy of this SWPPP.

SECTION VI
POLLUTION PREVENTION PLAN CERTIFICATION

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with the system designed to ensure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

EPA DOCUMENTS

EPA CONSTRUCTION GENERAL PERMIT REQUIREMENTS
PRECONSTRUCTION CHECKLIST

Storm Water Pollution Prevention Plans

1. A site description, including:

   ☒ The nature of the activity.

   Refer to Section 1.2 of the Storm Water Pollution Prevention Plan.

   ☒ Intended sequence of major construction activities.

   Refer to Section 2.3 of the Storm Water Pollution Prevention Plan.

   ☒ The total area of the site.

   Refer to Section 1.2 of the Storm Water Pollution Prevention Plan.

   ☒ The area of the site that is expected to undergo excavation.

   Refer to Section 2-1 and Figure A-2 of the Storm Water Pollution Prevention Plan.

   ☒ The runoff coefficient of the site after construction is complete.

   Because construction activities will not increase peak runoff from the site, pre- and post-construction runoff calculations were not performed. Therefore, the runoff coefficient of the site following construction was not determined.

   ☒ Existing soil or storm water data.

   Because construction activities will return the areas of disturbance to existing grades and existing conditions, existing soil types and storm data were not inventoried for the purpose of evaluation changes due to construction.

A site map with:

   ☒ Drainage patterns.

   Because construction activities will not increase peak runoff from the site, pre- and post-construction runoff calculations were not performed. Therefore, drainage patterns were not defined.

   ☒ Approximate slopes after major grading.

   Stormwater Pollution Prevention Plan indicates post construction grading conditions will be the same as the pre-construction conditions. No grading plans are presented.

   ☒ Area of soil disturbance.

   Refer to Figure A-3 of the Storm Water Pollution Prevention Plan.

   ☒ Outline of areas which will not be disturbed.

   Refer to Figure A-2 of the Storm Water Pollution Prevention Plan.

☒ Location of major structural and non-structural controls.

Refer to Figure A-3 of the Storm Water Pollution Prevention Plan.

☒ Areas where stabilization practices are expected to occur.

Refer to Figure A-3 of the Storm Water Pollution Prevention Plan.

☒ Surface waters.

Refer to Figures A-1 and A-3 of the Storm Water Pollution Prevention Plan.

☒ Storm water discharge locations.

Refer to Section 2.1 of the Storm Water Pollution Prevention Plan.

☒ The name of the receiving water(s).

Refer to Section 2.1 of the Storm Water Pollution Prevention Plan.

2. A description of controls:

2.1 Erosion and sediment controls, including:

☒ Stabilization practices for all areas disturbed by construction.

Refer to Sections 2.2, 2.2.1, and 2.4 of the Storm Water Pollution Prevention Plan.

☒ Structural practices for all drainage/discharge locations.

Refer to Sections 2.2 and 2.2.1 of the Storm Water Pollution Prevention Plan.

2.2 Storm water management controls, including:

☒ Measures used to control pollutants occurring in storm water discharges after construction activities are complete.

Refer to Sections 2.2 and 2.4 of the Storm Water Pollution Prevention Plan.

☒ Velocity dissipation devices to provide non-erosive flow conditions from the discharge point along the length of any outfall channel.

Refer to Section 2.2.1 of the Storm Water Pollution Prevention Plan.

2.3 Other controls including:

☒ Waste disposal practices which prevent discharge of solid materials to waters of the U.S.

Refer to Section 5 of the Storm Water Pollution Prevention Plan.

☒ Measures to minimize offsite tracking of sediments by construction vehicles.

Refer to Section 5.1 of the Storm Water Pollution Prevention Plan.

☒ Measures to ensure compliance with State or local waste disposal, sanitary sewer, or septic system regulations.

N/A.

2.4 ☒ Description of the timing during the construction when measures will be implemented.

Refer to Section 2.3 of the Storm Water Pollution Prevention Plan.

3. ☒ State or local requirements incorporated into the plans.

Refer to Sections 2.0, 2.2.1 and 3.0 of the Storm Water Pollution Prevention Plan.

4. ☒ Inspection and maintenance procedures for control measures identified in the plan.

Refer to Section 4.0 of the Storm Water Pollution Prevention Plan.

5. ☒ Identification of allowable non-storm water discharges and pollution prevention measures.

Refer to Section 5.0 of the Storm Water Pollution Prevention Plan.

6. ☒ Contractor certification.

Refer to Section 7.0 of the Storm Water Pollution Prevention Plan.

7. ☒ Plan certification.

Refer to Section 6.0 of the Storm Water Pollution Prevention Plan.

EPA CONSTRUCTION GENERAL PERMIT CHECKLIST

Storm Water Pollution Prevention Plan
Construction/Implementation Checklist

1. Maintain Records of Construction Activities, including:

   - ☐ Dates when major grading activities occur
   - ☐ Dates when construction activities temporarily cease on a portion of the site
   - ☐ Dates when construction activities permanently cease on a portion of the site
   - ☐ Dates when stabilization measures are initiated on the site

2. Prepare Inspection Reports summarizing:

   - ☐ Name of inspector
   - ☐ Qualifications of inspector
   - ☐ Measures/areas inspected
   - ☐ Observed conditions
   - ☐ Changes necessary to the SWPPP

3. Report Release of Reportable Quantities of Oil or Hazardous Materials (if they occur);

   - ☐ Notify National Response Center 800/424-8802 immediately
   - ☐ Notify permitting authority in writing within 14 days
   - ☐ Modify the pollution prevention plan to include:

     - The date of release
     - Circumstances leading to the release
     - Steps taken to prevent reoccurrence of the release

4. Modify Pollution Prevention Plan as necessary to:

   - ☐ Comply with minimum permit requirements when notified by EPA that the plan does not comply.
   - ☐ Address a change in design, construction, operation, or maintenance which has an effect on the potential for discharge of pollutants
   - ☐ Prevent reoccurrence of reportable quantity releases of a hazardous material or oil.
