Update 09/09/2022: Abide by the Reasonable and Prudent Measures necessary to minimize incidental take as required by the Biological Opinion (BO) for the NASA Air Sparging System at Cape Canaveral Space Force Station, dated 06/22/2022 (FWS Log#: 04E1000-2021-F-1498 / 2022-0050398). Terms and Conditions as detailed in the BO must also be complied with in order to carry out the Reasonable and Prudent Measures.

3.a.5. CONCRETE WASHOUT: Water used to rinse out concrete trucks and other equipment used for concrete work must not be allowed to discharge to surface waters. Concrete washout water shall be diverted to a settling pond where suspended material will settle out and the water can percolate into the ground. Contact Doug Durham (SI-E2, 867-8429) with any question on this requirement.
Remove and dispose of hardened concrete waste consistent with your handling of other construction wastes. After drying/settling, the residue may be disposed of at the Diverted Aggregate Reclamation and Collection Yard (DARCY); and the ground restored. Clean, unstained, unpainted concrete residue is accepted at the DARCY without any sampling and analysis. Contact Alexander Garcia (SI-E2, 867-8448) with any questions on this requirement.

3.b.1. EXCAVATION PERMIT: A KSC Excavation Permit will be required for any digging proposed by this project. Please contact the Utility Locate/Excavation Permit Request Customer Helpline at 867-2406 or go to website at http://epr.ksc.nasa.gov/Home/ for an underground utility scan and dig permit. NOTE: If a trench or pit is to be left open all day or overnight, the trench/pit must be checked for trapped animals at the beginning and end of each work shift. If an animal is observed trapped, contact Russ Lowers (NEM-022, 321-759-6022) or the Duty Office (861-5050, email KSC-BOSS-DutyOffice@mail.nasa.gov) to arrange removal/release. Do not handle the animal(s).

3.b.2. AIR EMISSIONS: NASA/KSC has Remedial Activities listed on the Title V Air Permit as an insignificant activity. The proposed groundwater remediation system would be considered insignificant if the Remediation system/unit/activity would not emit or have the potential to emit (PTE):

a. 500 pounds per year or more of lead and lead components expressed as lead;
b. 1,000 pounds per year or more of any hazardous air pollutant;
c. 2,500 pounds per year or more of total hazardous air pollutants; or
d. 5.0 tons per year or more of any other regulated pollutant, Per Rule 62-213.430(6), F.A.C.
If the above criteria cannot be met, a construction permit would be required. Contact the Environmental Assurance Branch (Zach Hall, SI-E2, 867-5178) if you have any questions.

3.b.3. DEWATERING: Construction dewatering is exempted from permitting under conditions of Rule 40C-2.051 (7) providing the conditions of exemption are met including: limiting withdrawal methods, limiting withdrawal to less than 300,000 gpd and limiting withdrawal to 30 days. Additional limitations are placed on discharge of produced water to prevent harm to the environment. If conditions of the exemption cannot be met, a construction dewatering general permit is required from SJRWMD using Form 40C-2.900(12). No dewatering may begin until 10 days after submittal of the complete form. If the dewatering activity does not qualify for a general permit by rule under Rule 40C-2.042(9), F.A.C., you must complete and submit a SJRWMD application for an individual Consumptive Use Permit pursuant to Rule 40C-2.041, F.A.C. Approval of the application must be obtained before starting the dewatering activity. If produced water discharge will reach surface waters, an FDEP permit may be required under Rule 62-621.300-2. Contact Doug Durham (SI-E2, 867-8429) with questions related to these requirements.

3.b.4. FDEP NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) CONSTRUCTION ACTIVITY PERMIT: This project may require an NPDES Phase II construction permit. If 1 acre or more of land will be disturbed, a NPDES Construction Activity Permit from the Florida Department of Environmental Protection (FDEP) is required under F.A.C. 62-621.300(4), Notice of Intent to Use Generic Permit for Stormwater Discharge from Large (If over 5 Acres) and Small (1 Acre To 5 Acres) Construction Activities http://www.dep.state.fl.us/water/stormwater/npdes/forms/cgp_noi.pdf.

Avoid Verbal Orders

TO: SI-E2/Deda Johansen **DATE: 09/09/2022**

FROM: SI-E3/Environmental Management Branch

SUBJECT: KSC Record of Environmental Consideration (REC) **REC #: 11953**

This includes construction activity which will disturb less than one acre of land area that is part of a larger common plan of development that will ultimately disturb equal to or greater than one acre of land. Construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of the site. A condition of this permit is to provide a Stormwater Pollution Prevention Plan (SWPPP) detailing erosion and turbidity controls for the site. Information on completing the permit application and development of the SWPPP can be obtained by contacting Doug Durham (SI-E2, 867-8429).

3.b.5. WATER WELL: Installation or abandonment of a water well requires use of a licensed contractor, a KSC dig permit, and registration of the well with St. Johns River Water Management District (SJRWMD). Dependent on water use, wells may require a Florida Department of Health (FDOH) operating permit. Contact Doug Durham (SI-E2, 867-8429) for details.

No other environmental issues were identified based upon the information provided in the KSC Environmental Checklist. This Record of Environmental Consideration (REC) does not relinquish the project lead from obtaining and complying with any other internal NASA permits or directives necessary to ensure all organizations potentially impacted by this project are notified and concur with the proposed project.

Due to potential changes in regulations, permit requirements and environmental conditions, statements in this REC are valid for 6 months, and subject to review after this period. It is the responsibility of the project lead to submit current project information for a REC update prior to project commencement if REC is older than 6 months; and also to notify the Environmental Management Branch (SI-E3) if the scope of the project changes at any time after the REC is issued.

INSTRUCTIONS

The BCE work clearance request is used for any work (contract or in-house) that may disrupt aircraft or vehicular traffic flow, base utility services, protection provided by fire and intrusion alarm system, or routine activities of the installation. This form is used to coordinate the required work with key base activities and keep customer inconvenience to a minimum. It is also used to identify potentially hazardous work conditions in an attempt to prevent accidents. The work clearance request is processed just prior to the start of work. If delays are encountered and the conditions at the job site change (or may have changed) this work clearance request must be reprocessed.

18. REMARKS. *(This section must describe specific precautionary measure to be taken before and during work accomplishment. Specific comments concerning the approved method of excavation, hand or powered equipment, should be included.)*

Install 192 air sparge wells (ASWs) in the area northeast and north of the Blockhouse to treat impacted groundwater associated with the Launch Complex 34 groundwater plume (see Figures 1 & 2 in AF332). This will be an expansion of the existing Hot Spot 6 air sparging treatment system already in place, and will use the compressor trailer already installed at the site. The ASWs will be completed below grade (no well pads or stick-ups), and will be installed at sufficient distance away from historical features (i.e., Blockhouse, Communications wall) to avoid impact. Subsurface piping will connect the ASWs to the existing compressor trailer located under Van Shelter 22004. Trenching will be required to install subsurface piping, and will be routed to avoid impact to historical features. Two distribution trailers will be installed to support the ASWs. Additionally, a network of 21 new monitoring wells will be installed in the expansion area (see Figure 3 in AF332) to monitor performance of the system. The new monitoring wells will be flush-mount with ground surface.

Note: NASA is working with 45 CES/CEIE on environmental requirements identified in the AF 332. NASA Cultural Resources will document this project in NASA's Annual Report to SHPO to cover Section 106 consultation requirements.

Subject: RE: 103 request FW: 30323192 332 INSTALL 76 AIR SPARGE WELLS RE: LC34 Hot Spot 6 Groundwater Interim Measure Expansion AF 332

James/Mark: I had a teleconference with USFWS yesterday to discuss several projects, one of which was the remediation going on at SLC 34. Due to the recent beach mouse detections at the site, they are requesting

that we formally enter into Section 7 with them on this project. As you know, but James may not, we have been conducting informal consultations each time a new air sparging system is installed. After my discussion with Mark regarding the long-term plan at this site, our office set out several camera buckets to determine the presence of beach mice on the site, which resulted in several detections. As a result of this and the future impacts to scrub-jay habitat, they are requesting that a BA be submitted that covers the long-term actions proposed for this site.

James/Don – Our office does not currently have the time/manpower to write this BA and since this is a NASA site, I am requesting that NASA take the lead on this. Please let me know your thoughts so that we can move forward on this.

Thanks.

Scott – I believe this 103 was on an environmental hold. We have since received the required documentation and are ready to sign off, however they want to add some additional area to the 103. I told them I wasn't sure if you would require submittal of a new 103 or not. Please advise. Thanks.

Subject: RE: 103 request FW: 30323192 332 INSTALL 76 AIR SPARGE WELLS RE: LC34 Hot Spot 6 Groundwater Interim Measure Expansion AF 332

James/Mark: I had a teleconference with USFWS yesterday to discuss several projects, one of which was the remediation going on at SLC 34. Due to the recent beach mouse detections at the site, they are requesting that we formally enter into Section 7 with them on this project. As you know, but James may not, we have been conducting informal consultations each time a new air sparging system is installed. After my discussion with Mark regarding the long-term plan at this site, our office set out several camera buckets to determine the presence of beach mice on the site, which resulted in several detections. As a result of this and the future impacts to scrub-jay habitat, they are requesting that a BA be submitted that covers the long-term actions proposed for this site.

James/Don – Our office does not currently have the time/manpower to write this BA and since this is a NASA site, I am requesting that NASA take the lead on this. Please let me know your thoughts so that we can move forward on this.

Thanks.

Good morning,

The IRP does not have any issues with this 103. A NASA/KSC Environmental Remediation Contractor is performing the work and is familiar with LUCs and hazards present at LC-34.

Please let me know if there are any issues or questions.

Thanks

Gainesville, Florida

Date

CONSULTATION HISTORY

This section lists key events and correspondence during the course of this consultation. A complete administrative record of this consultation is on file in the Service's Jacksonville Field Office.

20210811 - Informal consultation request sent to Florida Ecological Services Field Office located in Jacksonville, Florida by National Aeronautical Space Agency (NASA).

2021114 - Request for additional information sent to NASA and Cape Canaveral Space Force Station (CCSFS) regarding additional maps and information for Florida scrub jays and Southeastern beach mouse (beach mouse).

20211129 - Consultation changed from informal to formal due to effects on the beach mouse.

20211129 - Additional information on species within Action Area provided.

BIOLOGICAL OPINION

A Biological Opinion (BO) is the document that states the opinion of the U.S. Fish and Wildlife Service (Service) under the Endangered Species Act of 1973, as amended (ESA), as to whether a Federal action is likely to:

- jeopardize the continued existence of species listed as endangered or threatened; or
- result in the destruction or adverse modification of designated critical habitat.

The Federal action addressed in this BO is the National Aeronautics and Space Administration (NASA) proposed the continuation of the Air Sparging System at Cape Canaveral Space Force Station (CCSFS) (Project). This BO considers the effects of the Project on the Southeastern beach mouse (*Peromyscus polionotus niveiventris*). It also includes and summarizes our concurrence for the threatened eastern indigo snake (*Drymarchon corais couperi*) (indigo snake) and threatened Florida scrub-jay (*Aphelocoma coeruluscens*). The Project does not affect designated critical habitat; therefore, this BO does not further address critical habitat.

A BO evaluates the effects of a Federal action along with those resulting from interrelated and interdependent actions, and from non-Federal actions unrelated to the proposed Project (cumulative effects), relative to the status of listed species and the status of designated critical habitat. A Service opinion that concludes a proposed Federal action is *not* likely to jeopardize species and is *not* likely to destroy or adversely modify critical habitat fulfills the Federal agency's responsibilities under §7(a)(2) of the ESA. In this BO, only the jeopardy definition is relevant, because the Project does not affect designated critical habitat. "*Jeopardize the continued existence*" means to engage in an action that reasonably would be expected, directly or indirectly, to reduce appreciably the likelihood of both the survival and recovery of a listed species in the wild by reducing the reproduction, numbers, or distribution of that species (50 CFR §402.02).

This BO uses hierarchical numeric section headings. Primary (level-1) sections are labeled sequentially with a single digit (e.g., 1. PROPOSED PROJECT). Secondary (level-2) sections within each primary section are labeled with two digits (e.g., 1.1. Project Area), and so on for level-3 sections.

1. PROPOSED PROJECT

Launch Complex (LC)-34 at CCSFS is contaminated by volatile compounds used in previous cleaning operations. The area contaminated is estimated to be 330 acres in size (contaminated footprint). Remediation of the groundwater is required under a Resource Conservation and Recovery Act (RCRA) operating permit issued by the state of Florida. Groundwater treatment in this area by air sparging began in 2018, with 300 air sparge wells currently in use. NASA will continue to investigate five-acre portions of the 330-acre area in a phased approach. The proposed Project site encompasses 53.5 acres of the contaminated footprint.

Access to the Proposed Project Area will require vegetation removal outside of currently established roads, mowed road shoulders and additional impervious areas of LC 34. This will

include the cutting and mulching of native and exotic vegetation using forestry-type equipment, and the hand removal or mulching of exotic plant species followed by herbicide applications. Native species will be trimmed or mowed during the life of the proposed project to maintain access to the areas. Trails will be approximately 10 feet wide and spaced approximately 50 feet apart. Components installed within these trails include air sparge wells, airline distribution pipes to each well, and an air supply line from a compressor to a distribution manifold. Air sparge wells will be installed at depths of 30-50 feet, dependent on contamination profiles at each location. Groundwater monitoring wells will be installed in the immediate vicinity of the air sparging wells to monitor the effectiveness of this system and determine when contamination levels have reached acceptable thresholds. Trenches approximately 2 feet in depth will be excavated for the installation of air supply lines from the distribution trailer to the air sparge wells. The air sparging system will have no surface structures other than the distribution trailer, with all air supply lines and air sparge wells buried below surface levels.

When contaminant reduction targets have been reached for all or part of an air sparge system, the airline distribution pipes and air supply lines will be capped and left in place or removed and trenches created from their removal will be backfilled and graded to match the surrounding land profiles. Air sparge wells will remain in place and filled with grout. The distribution trailer will be demobilized and removed from the Proposed Project Area. It is expected that native vegetation growth will continue after the abandonment and ending of biannual maintenance of the access trails.

1.1. Action Area

For purposes of consultation under ESA §7, the action area is defined as "all areas to be affected directly or indirectly by the Federal action and not merely the immediate area involved in the action" (50 CFR §402.02). The "Action Area" for this consultation is the 53.5 acres of the overall 330-acre groundwater contamination footprint. The Proposed Action area contains several habitat types including upland hardwood forests (32.3 acres), ruderal-herbaceous (11.5 acres), ruderal-woody (4.9 acres), developed infrastructure (3.0 acres), wetlands (1.3 acres), ruderal-herbaceous/woody mix (0.4 acres) and oak scrub (0.1 acres). See Figure 1.

1.2. Vegetation Clearing and Installation of Air Sparge System and Ground Monitoring Wells

NASA will implement the use of mechanical mulching equipment to establish access paths approximately 10 feet wide and spaced approximately 50 feet apart within the vicinity of LC-34 at CCSFS. Access paths will not be exact lengths and widths due to the presence of wetlands, terrain, and wildlife burrows or habitat that will necessitate the need of deviations. There will be minimal soil disturbance by the use of mulching equipment within the access paths associated with the clearing of vegetation. The establishment of these trails will occur within the 53.5-acre Proposed Project Area of the known 330-acre contamination footprint at LC-34. The vegetation clearing will be conducted in a phased 5-acre approach over a 10-year period. The area expected to be impacted by the creation of these paths and installation of the air sparge system is estimated to be fifty percent of the 53.5-acre Proposed Project Area, approximately 26.75 acres. This approach is expected to mitigate the impacts to known listed wildlife species

occurring within the Proposed Project Area by allowing listed species to displace from the areas of vegetation clearance and within the Proposed Project Area and minimize adverse effects to listed species.

Following the clearing of vegetation within the Proposed Project Area, NASA will install air supply lines and air sparging wells within the established access paths. This will include air sparge wells installed at depths of 30-50 feet, dependent on contamination profiles at each location. Trenches approximately 2 feet in depth will be excavated for the installation of air supply lines from the distribution trailer to the air sparge wells. The air sparging system will have no surface structures other than the distribution trailer, with all air supply lines and air sparge wells buried below surface levels once installation has been completed. An air supply distribution trailer will be installed within the Proposed Project Area, but within previously disturbance or paved areas.

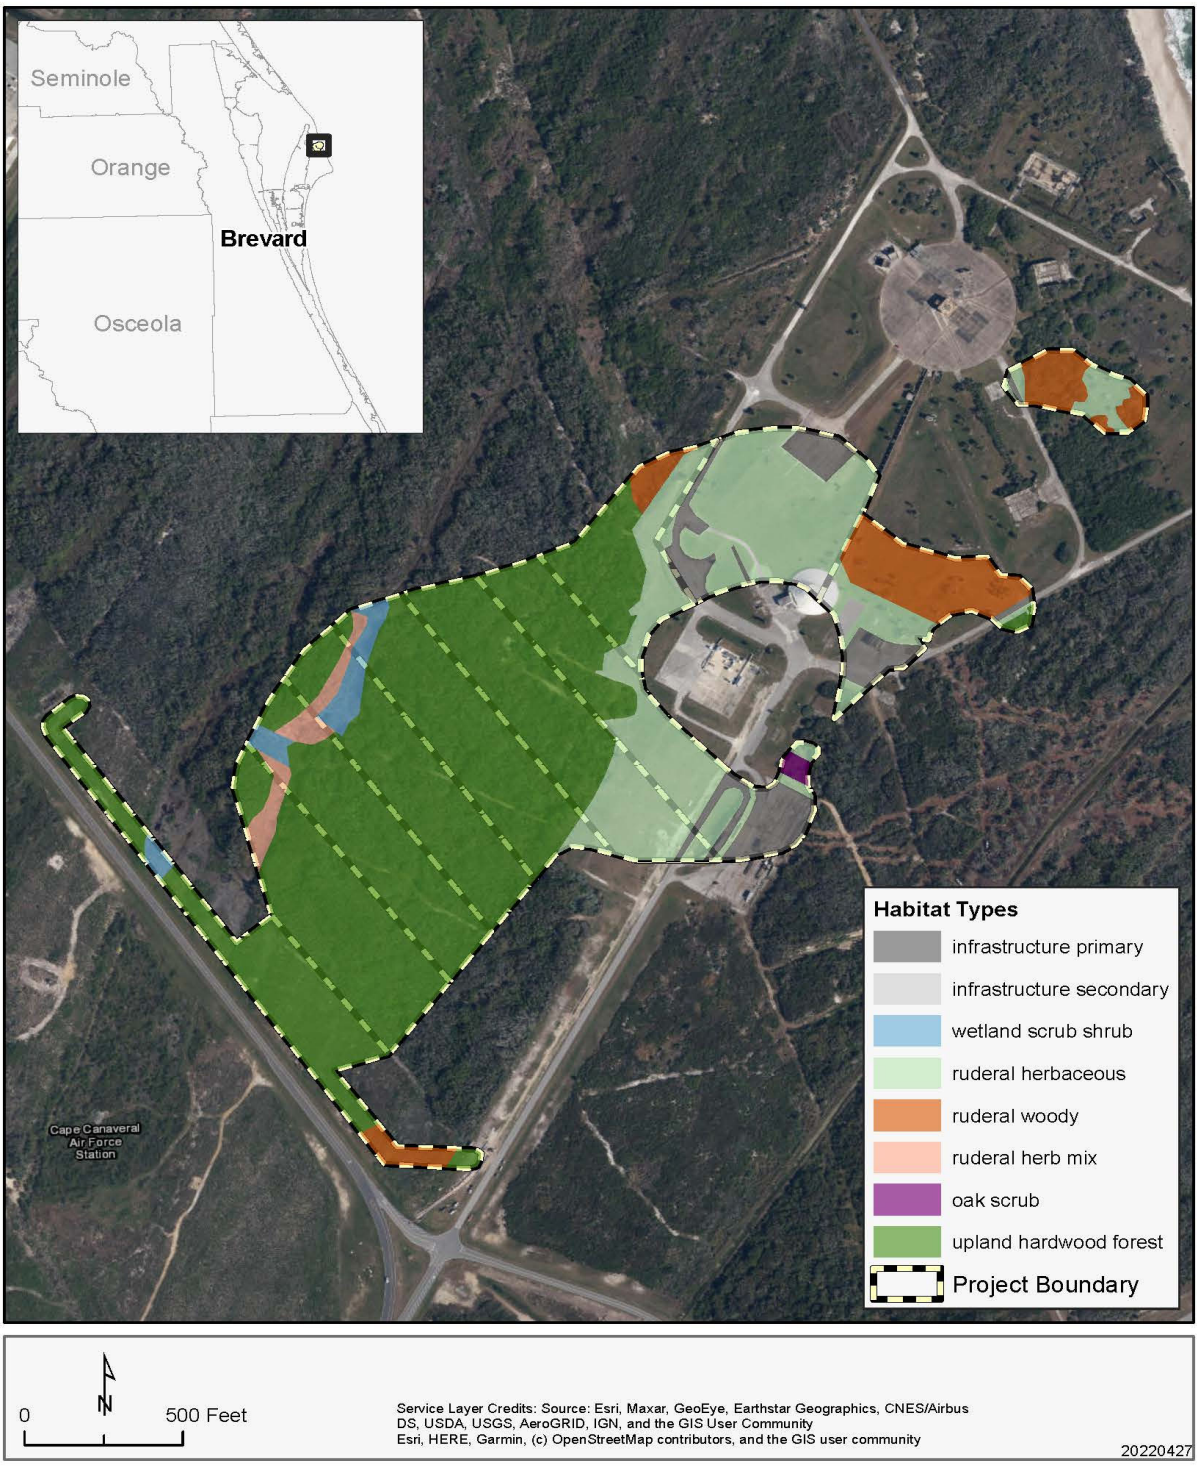
Ground monitoring wells will be installed at the same depth as air sparge wells to monitor contamination levels of associated groundwater.

Access paths will be maintained by removal of vegetation through hand cutting or the use of mulching forestry equipment twice a year for the entirety of the project. Exotic vegetation encountered within the access paths and within 10 feet on either side of them during these maintenance vegetations removals will be treated with herbicide appropriate for the specific species of plants encountered. In areas where the CCSFS is actively managing for Florida scrub-jay habitat, the entire area will be monitored and treated with the appropriate herbicide.

After it has been determined that groundwater remediation has been successful for part or all of an air sparge system, air sparge wells will be left in place, filled with grout, and capped. The air supply lines will be handled in one of two methods: capped and left in place or removed from the ground and disposed of. If the air supply lines are removed from the ground, the resulting removal trenches will be backfilled and graded to match the surrounding land surface. Groundwater monitoring wells will be left in place to assist with continuing monitoring of groundwater contamination. Air distribution trailers will be demobilized and removed from the Proposed Project Area.

1.3. Interrelated and Interdependent Actions

A BO evaluates the effects of a proposed Federal action. For purposes of consultation under ESA §7, the effects of a Federal action on listed species or critical habitat include the direct and indirect effects of the action, plus the effects of interrelated or interdependent actions. “Indirect effects are those that are caused by the proposed action and are later in time, but still are reasonably certain to occur. Interrelated actions are those that are part of a larger action and depend on the larger action for their justification. Interdependent actions are those that have no independent utility apart from the action under consideration” (50 CFR §402.02).



In its request for consultation, NASA did not describe, and the Service is not aware of, any interrelated or interdependent actions to the Project. Therefore, this BO does not further address the topic of interrelated or interdependent actions.

1.4. Conservation and Minimization Measures

During all phases of the 10-year Proposed Action, NASA will implement pre-construction meetings with contractors, superintendents, project managers, and crews working within the Proposed Action Area to educate about the proper procedures when working in the vicinity of federally listed wildlife species. In addition, the *2013 Eastern Indigo Snake Standard Protection Measures* will be implemented during all phases of the Proposed Action. Gopher tortoise (*Gopherus polyphemus*) and small mammal burrow surveys will be implemented prior to and during the Proposed Action to identify, mark, and avoid these burrows. Gopher tortoise burrows will have a 25-foot buffer marked and all components of the sir sparge system will be located at least 25 feet away from identified these burrows. Small mammal burrow surreys will be conducted, and all potential Southeastern beach mouse burrows will be marked and avoided.

Florida scrub-jay nest surveys will be conducted prior to vegetation removal if this phase occurs during the Florida scrub-jay nesting season (March 1 – June 30). If a nest is confirmed through these surveys within the Proposed Action Area, consultation will be reinitiated with the Service, and the work will be rerouted to avoid disturbance of the nest or postponing of the work until chicks have fledged from the nest.

1.5. Figure for Proposed Project

2. SPECIES NOT LIKELY TO BE ADVERSELY AFFECTED BY THE PROPOSED ACTION

NASA determined that the Proposed Project is not likely to adversely affect the Florida scrub-jay and indigo snake. The Service concurs with these determinations, for reasons we explain in this section.

Eastern indigo snake

The Proposed Project Area is within the Florida Ecological Services Field Office Consultation Area for the indigo snake. The Service considers the indigo snake a habitat generalist with a large home range (Layne and Steiner 1996; Service 1999; Bauder et al. 2016). The Project site and surrounding area consists of a mosaic of suitable habitat types, excluding the existing developed and maintained areas. Project activities would convert approximately 26.75 acre of suitable upland forest to accommodate the installation of air sparging wells.

The Service's Geographic Information System database for recorded locations includes sightings of an indigo snake within 0.3 mile of the Project site. Due to the presence of suitable habitat, available refugia, and the absence of significant barriers between the observation point and the Project parcel, we consider indigo snakes reasonably certain to occupy the Project site.

In Bauder et al. (2016), indigo snake radio telemetry data was summarized to provide an estimated mean annual home-range size of 369 ac for males and 121 ac for females. The suitable indigo snake habitat within the Project area consists of 26.75 ac that buffer two existing roadways and are contiguous with suitable habitat outside of the Project area. Based on the size and configuration of the habitat within the Project site, we do not expect the suitable habitat identified above is large enough to support the entirety of a single indigo snake's home range.

The proposed Project would convert approximately 26.75 ac of fragmented indigo snake habitat into cleared habitat. This habitat is likely used intermittently as indigo snakes travel to adjacent habitat. Based on the phased approach of the Project over a long temporal time (10 years), the Project area is not expected to contain an individual's home range in its entirety; thus, the habitat change is not expected to significantly impair an individual snake's ability to feed, breed, or shelter because they would be able shift to adjacent suitable habitat. To diminish the likelihood of adversely affecting indigo snakes on site, if any are present during construction, NASA has agreed that the permit instrument would be conditioned such that all gopher tortoise burrows, active or inactive, will be excavated prior to site manipulation in the vicinity of the burrow. If an indigo snake is encountered, the snake must be allowed to vacate the area prior to additional site manipulation in the vicinity. Any permit would also be conditioned such that holes, cavities, and snake refugia other than gopher tortoise burrows will be inspected each morning before planned site manipulation of a particular area, and, if occupied by an indigo snake, no work will commence until the indigo snake has vacated the vicinity of proposed work. Based on the aforementioned reasons, the Service concurs with NASA's determination that the proposed Project may affect but is not likely to adversely affect indigo snakes.

Florida scrub-jay

The Proposed Project Area is within the Florida Ecological Service North Florida Field Office Consultation Area for the Florida scrub-jay and contains a small amount of appropriate habitat, 0.1 acres of oak scrub, for this species. There have been confirmed locations of Florida scrub-jay nests approximately 700 feet southwest and southeast of the Proposed Project Area over the past seven years, but no nests identified within the Proposed Project Area over this time period.

The following conservation measures will be implemented by NASA. Survey for Florida scrub-jay nests prior to the removing vegetation during Florida scrub-jay nesting season (March 1 – June 30). If a nest is located during these surveys, NASA will re-initiate further consultation with the Service and the nest will be avoided and the vegetation clearing activities will suspend until all Florida scrub-jay chicks have fledged from identified nests. Invasive plant species along the western portion of the Proposed Project Area (Phillips Parkway) will be treated with DoD-approved herbicides to reduce the invasion of invasive plant species due to vegetation disturbance. NASA will provide annual reporting to the US Space Force 45 Space Launch Delta Environmental Element staff describing the implementation of the conservation measures previously described. Based on the conservation measures implemented and the of suitable habitat within the Proposed Project Area, the Service concurs with the determination of may affect, not likely to adversely affect the Florida scrub-jay.

This concurrence concludes consultation for the listed species and designated critical habitats named in this section, and these are not further addressed in this BO. The circumstances described in the Reinitiation Notice of this BO that require reinitiating consultation for the Project, except for exceeding the amount or extent of incidental take, also apply to these species and critical habitats.

3. STATUS OF SPECIES

This section summarizes best available data about the biology and current condition of Southeastern beach mouse (*Peromyscus olionotus niveiventris*) throughout its range that are relevant to formulating an opinion about the Project. The Service published its decision to list Southeastern beach mouse as threatened on May, 12, 1989 (52 FR 20598-20602). The current specie's recovery plan was created in 1993 and needs revision and updates based on the most recent 5-year review of the species, and has not currently reached recovery levels (Service 2019).

3.1.Species Description

The SEBM is one of 16 recognized subspecies of old field mice *Peromyscus polionotus* (Hall 1981); it is one of the eight of those subspecies that are called beach mice. The SEBM is a small mouse that reaches an average length of 136 mm with an average body mass of 14.5 g (Stout 1992). Southeastern beach mice have pale, buffy coloration from the back of their head to their tail, and their underparts are white.

3.2. Life History

SEBM are generally nocturnal, semifossorial, and monogamous. The subspecies occupies foredunes (i.e., frontal, primary, and secondary), transitional (i.e., coastal grasslands and coastal strand) dunes, coastal scrub dunes. SEBM also occur in interior scrub and other landward habitats, though the extent to which these areas utilized is unclear. Below is a summary of the various elements of the SEBM life history, including reproduction, survival and mortality, foraging, home range, burrowing behavior, and habitat.

3.2.1. Habitat

Beach mouse habitat includes a heterogeneous mix of interconnected coastal communities on barrier islands. Holler (1992) described beach mouse habitat at the time as including primary and secondary dunes vegetated by sea oats, beach grass (*Panicum amarum*), and blue stem (*Andropogon maritimus*). Contemporary understandings of the geographic distribution of beach mouse habitat are that they inhabit coastal dune, strand, and scrub habitats (where available) that range from being comprised mostly of grasses to mostly shrubs (Sneckenberger 2001, Suazo et al. 2009, Stout et al. 2012, Wilkinson et al. 2012, Breininger et al. 2018). Additionally, the coastal strand and scrub plant communities (e.g., Cape Canaveral area) likely serve as refugia for and sources of individuals that disperse into dune systems after storm events (Stout et al. 2012).

Coastal communities of Florida can be classified into three general zones. These zones, as described by Johnson and Barbour (1990) and used in the draft Species Status Assessment include ***foredunes*** (frontal, primary, and secondary), ***transitional dunes*** (coastal grasslands and strands), and ***coastal scrub dunes***. Additionally, beach mice are known to utilize adjacent or connected landward habitats including ***interior scrub*** (particularly within the Cape Canaveral), ruderal or old-field environments, and mowed roadside edges and rights-of-way.

While the predominance of SEBM occurrence within scrub type habitats is in the coastal scrub dunes, SEBM are known to occur in more interior scrub environments within the Cape Canaveral Complex. The cape feature at Cape Canaveral is unique among SEBM habitats as it includes a broad expanse of upland habitats between the Atlantic coast and the Banana and Indian Rivers. Beyond the Cape Canaveral, SEBM habitat generally occurs in narrow stretches along the shoreline.

3.2.2. Survival and Mortality

The average life span of beach mice in the wild is 9 months to one year (Bird et al. 2016, Oddy 2000, Swilling 2000), although a few individuals have been known to live longer than two years. Studies at CCSFS found the mean longevity of SEBM on across study grids was 113 days with no significant differences between sexes (Oddy 2000). Maximum longevity in this study was 596 days. Swilling and Wooten (2002) found longer persistence times associated with mice dispersing further away from their natal home range.

3.2.3. Foraging

Beach mice are food generalists and feed on a variety of seeds of dune and scrub plants and insects (Moyers 1996, Sneckenberger 2001, Keserauskis 2007). Studies show that the diet of the SEBM varies seasonally and among and within habitats, and fruits, seeds and arthropods that feed on them comprise most of their diet (Keserauskis 2007). In most cases, fruits and seeds that are consumed by beach mice are produced by low growing, prostrate plants, on supple stems easily manipulated by mice, or as the fruits and seeds become available as fallen seeds (Moyers 1996). Beach mice also consume invertebrates, especially during late winter or early spring when seeds are scarce (Ehrhart 1978).

3.2.4. Home Range

Beach mouse home range size varies among subspecies (Service 2010) and may vary seasonally and in relation to density as well as habitat and food resources. Beach mouse home ranges average approximately 1.2 acres (Bird et al. 2016). Swilling and Wooten (2002) found the mean home range for Anastasia beach mice (ABM) (both sexes) was approximately 0.89 acres, whereas using radio telemetry data, Lynn (2000) found home ranges of 1.68 acres and 1.73 acres for males and females respectively; neither study noted significant differences in home range size between males and females.

Blair (1951) found home ranges of beach mice living in the comparatively dense cover of the beach dunes averaged significantly larger in the spring than in the fall. Beach mice tend to inhabit a single home range throughout their lifetime and will often maintain several burrows within their home range (Blair 1951). Extine and Stout (1987, Service 1999) reported movements of the SEBM between the primary dunes and interior scrub on Kennedy Space Center (KSC) and Merritt Island National Wildlife Refuge (MINWR) and concluded that home ranges can overlap and reach high densities within preferred habitats.

3.2.5. Burrows

SEBM is the only member of the genus that excavates its own burrow, which is extensive (Ehrhart 1978, Service 1999). Beach mice are semifossorial and may utilize as many as 20 burrows within their home range (Service 1999). Beach mice will use burrows as a place to rest during the day and between nightly foraging bouts. Burrows are also used for escape from predators, birthing and caring for young.

Burrows generally consist of an entrance tunnel, nest chamber, and escape tunnel (Weber et al. 2013). High predation risk and the harsh coastal environment make selection of quality burrow sites critical for survival of beach mice (Swilling and Wooten 2002). Beach mice have been found to select burrow sites based on a suite of biotic and abiotic features. (Lynn 2000; Sneckenberger 2001).

Bird et al. (2004) found that patch use was affected by the presence of illumination, light type, and distance from light source. In this study, foraging frequency was significantly higher in dark arrays and that more seeds were removed from resource patches as distance from illumination

increased. This is consistent with the observation that beach mice activity decreases in response to increased levels of moonlight due to elevated risk perceptions (Stoddard et al. 2018).

3.3. Numbers, Reproduction, and Distribution

3.3.1. Numbers and Distribution

SEBM are found in coastal habitats of Florida's east coast. The 1989 Final Listing Rule states that the subspecies was known to occur on Canaveral National Seashore (CNS), MINWR, CCSFS, the north and south ends of Orchid Island at Sebastian Inlet area and Fort Pierce Inlet State Park (also known as north Hutchinson Island) on the north side of Ft. Pierce Inlet.

In the SSA, the Service reviewed the extant and historic distribution of the species range wide and grouped the populations into geographic segments: Canaveral North, Canaveral South, Orchid Island/ Hutchinson Island North, Hutchinson Island, Jupiter Island, Jupiter South, Palm Beach, Boynton, and Hillsboro. To assess current condition of the species, the SSA characterizes the amount of habitat within the geographic segments across the range of species. The geographic segments are parsed in eight different resilience units. The Canaveral Complex resilience unit is the most important for the recovery of the species (Service 2019). The Canaveral Complex Unit is a metapopulation and has the most habitat to support the species. The Canaveral Complex has 92% of the total protected habitat, with the most acres of dune habitat, 2,362 acres, and 17,389 landward habitats.

3.3.2. Reproduction

Beach mice have a monogamous mating system (Blair 1951, Smith 1966, Lynn 2000). Mated pairs tend to remain associated in acquiring food and sharing burrows (Blair 1951). Beach mice reach sexual maturity at 55 days of age; however, some mice are capable of breeding earlier (Ehrhart 1978).

Peak breeding season for beach mice appears to occur between November and early January (Blair 1951) and appears to coincide with increased availability of food from the previous growing season (Rave and Holler 1992); although pregnant and lactating SEBM have been observed in all seasons (Stout 1979, Oddy 2000). While the reproductive potential of beach mice is generally high, Blair (1951) reported only 19.5 percent of beach mice within his study survived from January to May in the same year indicating that mortality of adult beach mice is also quite high.

3.4. Conservation Needs

3.4.1. Conservation Needs

There is considerable uncertainty regarding beach mouse use of the scrub and more stable, interior habitats, particularly within the CCSFS. Future research is needed to better define optimal habitat conditions for SEBM in coastal scrub and interior scrub habitats. Habitat

conditions within the interior scrub areas that benefit the threatened Florida Scrub-jay (*Aphelocoma coerulescens*) may also benefit SEBM (Suazo et al. 2009).

3.4.2. Threats

Habitat loss and fragmentation due to destruction associated with residential and commercial development has created disjunct and isolated populations of SEBM along the east coast of Florida. South of the Port Canaveral Entrance Chanel, five inlets between Indian River and Broward Counties create additional barriers to dispersal. Most remaining SEBM habitat occurs on public conservation lands, though some private lands also support areas of natural dune vegetation that could be occupied by beach mice (e.g., St. Lucie Nuclear Power Plant, undeveloped lots, and undeveloped portions of residential and commercial lots). As a result, extant populations of SEBM are geographically and genetically isolated. Within the current landscape configuration, natural dispersal between existing populations is highly unlikely.

Other threats to the species include shoreline armoring to protect coastal to protect coastal properties from erosion, coastal lighting at facilities or residential development, vehicular or foot traffic near developments, and climate change.

4. ENVIRONMENTAL BASELINE

This section is an analysis of the effects of past and ongoing human and natural factors leading to the current status of the Southeastern beach mouse, its habitat, and ecosystem within the Project Area. The environmental baseline is a "snapshot" of the species' health in the Project Area at the time of the consultation and does not include the effects of the Project under review.

4.1. Project Area Numbers, Reproduction, and Distribution

The SEBM is found along the entire reach of immediate coastline and within coastal strand on CCSFS in addition to the KSC and Cape Canaveral National Seashore. Recent surveys using tracking tubes have found this species is present in close proximity too and within the Proposed Project Area (Pers comms Brust, 2021). Based on this information, the Service has enough information to support that the species occurs within SLC-34 and is expected to use the Proposed Project Area for foraging, movement, and burrow construction.

To estimate the number of individuals that may be affected by construction activities, we reviewed home range data and compared it to the acreage that will be disturbed within the Project area. The Proposed Project will impact approximately half of the Project area resulting in 26.75 ac of impact. However, this impact is not confined to 26.75 contiguous acres and will be spread throughout the Project area by the creation of a network of access paths. We estimate a total of 32 – 60 pairs will be affected over the course of the project (10 years) due to the creation of these access paths and habitat alterations. This was obtained by utilizing the low and high estimated home range sizes described in Section 3.2.4 and assuming that these home ranges are utilized by SEBM pairs and not individuals.

4.2. Project Area Conservation Needs

The Proposed Project Area for the air sparging system is located within the SLC-34 footprint and contains ruderal open habitat and coastal strand habitat. Both of these habitat types are used by SEBM for foraging and nesting activities. Previous air sparging systems have been implemented to the east of the Proposed Project Area and SEBM habitat has been altered due to the implementation of these systems.

There is no additional lighting system(s) associated with the air sparging system and no assumed increased risk to SEBM predation.

4.3. Tables and Figures for Environmental Baseline

5. EFFECTS OF THE PROJECT

This section analyzes the direct and indirect effects of the Project on the Southeastern beach mouse, which includes the direct and indirect effects of interrelated and interdependent actions. Direct effects are caused by the Project and occur at the same time and place. Indirect effects are caused by the Project but are later in time and reasonably certain to occur. Our analyses are organized according to the description of the Project in section 1 of this BO.

5.1. Effects of Vegetation Clearing, Installation of Air Sparge System, and Herbicide Vegetation Maintenance

Clearing activities will include heavy equipment to cut and remove vegetation and install air sparge systems and wells within the provided proposed project area. Based on plans for clearing and installation of air sparging systems, the Service expects harm to any individuals present via the destruction of burrows during clearing activities. Using proposed Project area baseline estimates outlined in section 4.1, we expect all SEBM within these areas will be exposed to the effects of habitat conversion and installation of the air sparging systems. There is also a risk that clearing activities and air sparge system installation activities within the proposed Project area may adversely affect the SEBM that may be using the area as a movement corridor or foraging area.

Clearing and air sparge installation activities could collapse burrows within the propose Project area. The scale of the Project area is a small amount of the geographic segment of the Canaveral Complex Unit. SEBM occupies approximately 80 km (50 miles) of coastline within the Cape Canaveral Complex, though the exact acreage is not known, and the Project Area encompasses 53.5 ac of potential SEBM habitat (Service 2008). The loss of individuals will not result in adverse population effects or reduce appreciably the species' likelihood of survival and recovery. After vegetation clearing and air sparge installation activities have concluded, we expect the species will have access to and can use the unaffected area as a corridor for movement, refugia and forage opportunities.

Maintenance herbicide applications will be conducted biannually after the establishment of air sparging systems and in accordance with other invasive plant species treatments that occur at

CCSFS. These include applications to invasive plant species within the established transects to maintain open areas for access to the air sparging systems. There are no additional anticipated effects to SEBM from the application of herbicides due to the targeted nature of herbicide application, the nocturnal nature of the species and application of herbicide during daylight hours and the intermittent nature of herbicide treatments.

5.2. Air Sparge System Removal or Abandonment

The removal of air sparge systems will occur when target levels of contamination reduction are reached. These systems will either be left in place and capped/filled with grout, or the lateral lines will be removed from the ground and the wells will be filled with grout. Due to the prior establishment of transects for the air sparging systems, there are no anticipated negative effects on SEBM due to the implementation of conservation measures including pre-work surveys for small mammal burrows and the avoidance of these burrows. Functional groundwater monitoring wells will be left in place.

6. CUMULATIVE EFFECTS

For purposes of consultation under ESA §7, cumulative effects are those caused by future state, tribal, local, or private actions that are reasonably certain to occur in the Project area. Future Federal actions that are unrelated to the proposed Project are not considered, because they require separate consultation under §7 of the ESA.

The proposed project is occurring on federal property and all other actions conducted within the property boundaries must undergo separate consultation under §7 of the ESA. There are no non-federal actions that fit the definition of cumulative effects. Therefore, cumulative effects are not relevant to formulating our opinion for the Project.

7. CONCLUSION

"*Jeopardize the continued existence*" means to engage in an action that reasonably would be expected, directly or indirectly, to reduce appreciably the likelihood of both the survival and recovery of a listed species in the wild by reducing the reproduction, numbers, or distribution of that species (50 CFR §402.02). After reviewing the current status of the species, the environmental baseline for the Project Area, the effects of the Project and the cumulative effects, it is the Service's biological opinion that the Project is not likely to jeopardize the continued existence of the **SOUTHEASTERN BEACH MOUSE**.

The Service has come to this conclusion based on the following:

1. The loss of individuals within the Project area will not result in adverse population effects or reduce appreciably the species' likelihood of survival and recovery. The Cape Canaveral population size is unknown (Service 2019) and the Proposed Project is estimated to impact approximately 3 – 6 pairs per year over a 10-year period. The

Proposed Project is further located in secondary SEBM habitat and not primary dune habitat, further reducing the potential effects on the SEBM population within the Cape Complex.

2. The Proposed Project will impact SEBM habitat through the creation of transects over the 53.5 ac, though the anticipated impacts will be approximately 26.75 ac through the creation of access paths. However, SEBM home ranges will not be limited to the access path impacts and the estimated effects are expected over the entire 53.5 ac Proposed Project area.
3. After clearing activities and air sparge system installation we expect the species will access and continue to use the areas in between established transects for movement, refugia, or forage opportunities.

8. INCIDENTAL TAKE STATEMENT

ESA §9(a)(1) and regulations issued under §4(d) prohibit the take of endangered and threatened fish and wildlife species without special exemption. The term "take" in the ESA means "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct" (ESA §3). In regulations at 50 CFR §17.3, the Service further defines:

- "harass" as "an intentional or negligent act or omission which creates the likelihood of injury to wildlife by annoying it to such an extent as to significantly disrupt normal behavioral patterns which include, but are not limited to, breeding, feeding, or sheltering;"
- "harm" as "an act which actually kills or injures wildlife. Such act may include significant habitat modification or degradation where it actually kills or injures wildlife by significantly impairing essential behavioral patterns, including breeding, feeding, or sheltering;" and
- "incidental take" as "any taking otherwise prohibited, if such taking is incidental to, and not the purpose of, the carrying out of an otherwise lawful activity."

Under the terms of ESA §7(b)(4) and §7(o)(2), taking that is incidental to and not intended as part of the agency action is not considered prohibited, provided that such taking is in compliance with the terms and conditions of an incidental take statement (ITS). The Project considered in this BO includes the NASA Air Sparging Remediation System. This BO considers the effects of the Project on southeastern beach mice (*Peromyscus polionotus niveiventris*). The Project does not affect designated critical habitat; therefore, this BO does not address critical habitat.

For the exemption in ESA §7(o)(2) to apply to the Project considered in this BO, NASA must undertake the non-discretionary measures described in this ITS and the project description (e.g., conservation measures), and these measures must become binding conditions of any permit, contract, or grant issued for implementing the Project. Consistent with ESA section 7(b)(4)(C)(iv), NASA has a continuing duty to regulate the Project activities covered by this ITS that are under its jurisdiction. NASA is responsible for the Project activities covered by this ITS that are under its control and jurisdiction. The protective coverage of §7(o)(2) may lapse if NASA does not:

- adhere to the proposed conservation measures within the project description
- assume and implement the terms and conditions; or
- require a permittee, contractor, or grantee to adhere to the terms and conditions of the ITS through enforceable terms that are added to the permit, contract, or grant document.

In order to monitor the impact of incidental take, NASA must report the progress of the Project and its impact on the species to the Service as specified in this ITS.

8.1. Amount or Extent of Take

This section specifies the amount or extent of take of Southeastern beach mouse that the Project is reasonably certain to cause, which we estimated in the "Effects of the Project" section of this BO. We reference, but do not repeat, these analyses here.

The Service anticipates that the Project is reasonably certain to cause incidental take of individual Southeastern beach mouse consistent with the definition of harm resulting from clearing activities and installation of air sparging systems (see section 5.4, Summary of the Effects of the Project).

Anticipated Take of Southeastern Beach Mouse

Common Name	Life Stage	# of Pairs and/or Juveniles	Form of Take	BO Effects Analysis
Southeastern beach mouse	All	32 - 60	Harm	5.1

Surrogate measures for monitoring take of listed wildlife species caused by the Project, based on the cited BO effects analyses

Common Name	Life Stage	Surrogate (units)	Quantity	BO Effects Analysis
Southeastern beach mouse	All	Acres coastal habitat within the proposed Project limits	53.5	5.1

Due to the difficulty of detecting take of Southeastern beach mouse caused by the Project due to the nocturnal nature of the species, the difficulty of surveying and identifying burrows and confirming mortality of individuals during construction activities, NASA will monitor the extent of taking using the surrogate specified in the table above.

Instructions for monitoring and reporting take are provided in section 8.4.

8.2. Reasonable and Prudent Measures

The Service believes that no reasonable and prudent measures are necessary or appropriate to minimize the impact of incidental take caused by the Project on southeastern beach mouse.

Minor changes that do not alter the basic design, location, scope, duration, or timing of the Project will not reduce incidental take below the amount or extent anticipated for the Project as proposed. Therefore, this ITS does not provide RPMs.

8.3. Terms and Conditions

No reasonable and prudent measures to minimize the impacts of incidental take caused by the Project are provided in this ITS; therefore, no terms and conditions for carrying out such measures are necessary.

8.4. Monitoring and Reporting Requirements

In order to monitor the impacts of incidental take, NASA must report the progress of the Project and its impact on the species to the Service as specified in the incidental take statement (50 CFR §402.14(i)(3)). This section provides the specific instructions for such monitoring and reporting. As necessary and appropriate to fulfill this responsibility, NASA must require any permittee, contractor, or grantee to accomplish the monitoring and reporting through enforceable terms that are added to the permit, contract, or grant document. Such enforceable terms must include a requirement to immediately notify NASA and the Service if the amount or extent of incidental take specified in this ITS is exceeded during Project implementation.

M&R 1. Reporting After vegetation clearing is completed for each phase, report to the Service the sum (in acres) that was modified or cleared. The sum shall not exceed 27 acres within the Project area. Reports containing acreage amounts, dates of clearing, and a map or figure detailing the location of clearing will be submitted electronically within 60 days of clearing to the Florida Ecological Services email inbox at FW4FLESRegs@fws.gov or in writing to the Florida Ecological Services – Jacksonville Field Office 7915 Baymeadows Way Suite 200, Jacksonville, FL 32256-7517..

M&R 2. Monitoring After clearing is completed for each phase, continue to monitor the Project area for indications of SEBM activity.

M&R 3. Reporting Any serious situations, particularly mortalities, contact the North Florida Ecological Services Field Office (904)-731-3336 and the CCSFS Environmental Element (321)-853-6822 within 24 hours.

M&R 4. Disposition of Dead or Injured Upon locating a dead, injured, or sick threatened or endangered species, notification must be made to the North Florida Ecological Services Field Office at 904-731-3336 and by email to FW4FLESRegs@fws.gov within 24 hours. If an injured or sick specimen is found and North Florida Ecological Services Field Office staff is unable to be reached, contact the Florida Fish and Wildlife Conservation Commission Wildlife Alert Hotline at 1-888-404-3922.

Care should be taken in handling dead specimens to ensure biological material is preserved in the best possible state for later analysis as to the cause of death. If a dead specimen is found in the project area, the specimen should be thoroughly soaked in water and frozen for later analysis of

cause of death. In conjunction with the preservation of biological materials from a dead animal, the finder has the responsibility to carry out instructions provided by Law Enforcement to ensure that evidence intrinsic to the specimen is not unnecessarily disturbed.

9. CONSERVATION RECOMMENDATIONS

§7(a)(1) of the ESA directs Federal agencies to use their authorities to further the purposes of the ESA by conducting conservation programs for the benefit of endangered and threatened species. Conservation recommendations are discretionary activities that an action agency may undertake to avoid or minimize the adverse effects of a proposed action, implement recovery plans, or develop information that is useful for the conservation of listed species. The Service offers the following recommendations that are relevant to the listed species addressed in this BO and that we believe are consistent with the authorities of NASA.

1. Avoid, to the greatest extent practical, applying herbicides within 10 feet of identified burrows that may contain small mammals.
2. Survey for, adequately mark, and avoid to the greatest extent practical, burrows that may contain small mammals and gopher tortoise burrows that establish within cleared transects.
3. Provide informational material about SEBM to all contractors, superintendents, project managers, and crews working within the Proposed Project Area.

10.REINITIATION NOTICE

Formal consultation for the Project considered in this BO is concluded. Reinitiating consultation is required if NASA retains discretionary involvement or control over the Project (or is authorized by law) when:

a. the amount or extent of incidental take is exceeded;
b. new information reveals that the Project may affect listed species or designated critical habitat in a manner or to an extent not considered in this BO;
c. the Project is modified in a manner that causes effects to listed species or designated critical habitat not considered in this BO; or
d. a new species is listed or critical habitat designated that the Project may affect.

In instances where the amount or extent of incidental take is exceeded, NASA is required to immediately request a reinitiation of formal consultation.

Confirmation# **785770**
Date: **10/11/2022**
Official Use Only

10. *Distance from Septic System if ≤ 200 ft. ____ 11. Facility Description ____ 12. Estimated Start Date **01/09/2023**

13. *Estimated Well Depth **21** ft. *Estimated Casing Depth **16** ft. *Primary Casing Diameter **1** in. Open Hole: From ____ To ____ ft.

14. Estimated Screen Interval: From **16** To **21** ft.

15. *Primary Casing Material: ____ Black Steel ____ Galvanized **X** PVC ____ Stainless Steel ____ Not Cased ____ Other: ____

16. Secondary Casing: ____ Telescope Casing ____ Liner ____ Surface Casing Diameter ____ in.

17. Secondary Casing Material: ____ Black Steel ____ Galvanized ____ PVC ____ Stainless Steel ____ Other ____

18. *Method of Construction, Repair, or Abandonment: ____ Auger ____ Cable Tool ____ Jetted ____ Rotary **X** Sonic ____ Combination (Two or More Methods) ____ Hand Driven (Well Point, Sand Point) ____ Hydraulic Point (Direct Push) ____ Horizontal Drilling ____ Plugged by Approved Method ____ Other (Describe) ____

19. Proposed Grouting Interval for the Primary, Secondary, and Additional Casing:

From **0**	To **16**	Seal Material (____ Bentonite	____ Neat Cement	**X** Other	**Cement with Bentonite, < 5% by weight**	)
From ____	To ____	Seal Material (____ Bentonite	____ Neat Cement	____ Other	____	)
From ____	To ____	Seal Material (____ Bentonite	____ Neat Cement	____ Other	____	)
From ____	To ____	Seal Material (____ Bentonite	____ Neat Cement	____ Other	____	)

20. Indicate total number of existing wells on site ____ List number of existing unused wells on site ____

21. *Is this well or any existing well or water withdrawal on the owner's contiguous property covered under a Consumptive/Water Use Permit (CUP/WUP) or CUP/WUP Application? ____ Yes **X** No If Yes, complete the following: CUP/WUP No. ____ District Well ID No. **533537**

22. Latitude **283111.51** Longitude **803341.54**

23. Data Obtained From: ____ GPS **X** Map ____ Survey Datum: ____ NAD 27 **X** NAD 83 ____ WGS 84

I hereby certify that I will comply with the applicable rules of Title 40, Florida Administration Code, and that a water use permit or artificial recharge permit, if needed, has been or will be obtained prior to commencement of well construction. I further certify that information provided in this application is accurate and that I will obtain necessary approval from other federal, state, or local governments, if applicable. I agree to provide a well completion report to the District within 30 days after completion of the construction, repair, modification, or abandonment authorized by this permit, or the permit expiration, whichever occurs first.

James P Hinst (*Signature of Contractor) | **9311** (*License No.)

I certify that I am the owner of the property, that the information provided is accurate, and that I am aware of my responsibilities under Chapter 373, Florida Statutes, to maintain or properly abandon this well; or, I certify that I am the agent for the owner, that the information provided is accurate, and that I have informed the owner of his responsibilities as stated above. Owner consents to allowing personnel of this WMD or Delegated Authority access to the well site during the construction, repair, modification, or abandonment authorized by this permit.

James P Hinst (*Signature of Owner or Agent) | **10/11/2022** (*Date)

BELOW THIS LINE – FOR OFFICIAL USE ONLY

Approval Granted By *Cynthia Leckey* Issue Date **10/11/2022** Expiration Date **10/10/2023** Hydrologist Approval ____ initials

Fee Received $ **100** Receipt No. **96233** Check No. **OnLine-04698G-785775**

THIS PERMIT IS NOT VALID UNTIL PROPERLY SIGNED BY AUTHORIZED OFFICER OR REPRESENTATIVE OF THE WMD OR DELEGATED AUTHORITY. THE PERMIT SHALL BE AVAILABLE AT THE WELL SITE DURING ALL CONSTRUCTION, MODIFICATION, OR ABANDONMENT ACTIVITIES.

I hereby certify that I will comply with the applicable rules of Title 40, Florida Administration Code, and that a water use permit or artificial recharge permit, if needed, has been or will be obtained prior to commencement of well construction. I further certify that information provided in this application is accurate and that I will obtain necessary approval from other federal, state, or local governments, if applicable. I agree to provide a well completion report to the District within 30 days after completion of the construction, repair, modification, or abandonment authorized by this permit, or the permit expiration, whichever occurs first.

James P Hinst (*Signature of Contractor) | **9311** (*License No.)

I certify that I am the owner of the property, that the information provided is accurate, and that I am aware of my responsibilities under Chapter 373, Florida Statutes, to maintain or properly abandon this well; or, I certify that I am the agent for the owner, that the information provided is accurate, and that I have informed the owner of his responsibilities as stated above. Owner consents to allowing personnel of this WMD or Delegated Authority access to the well site during the construction, repair, modification, or abandonment authorized by this permit.

James P Hinst (*Signature of Owner or Agent) | **10/11/2022** (*Date)

BELOW THIS LINE – FOR OFFICIAL USE ONLY

Approval Granted By *Cynthia Leckey* Issue Date **10/11/2022** Expiration Date **10/10/2023** Hydrologist Approval ____ initials

Fee Received $ **100** Receipt No. **96233** Check No. **OnLine-04698G-785775**

THIS PERMIT IS NOT VALID UNTIL PROPERLY SIGNED BY AUTHORIZED OFFICER OR REPRESENTATIVE OF THE WMD OR DELEGATED AUTHORITY. THE PERMIT SHALL BE AVAILABLE AT THE WELL SITE DURING ALL CONSTRUCTION, MODIFICATION, OR ABANDONMENT ACTIVITIES.

From ____	To ____	Seal Material (	____ Bentonite	____ Neat Cement	____ Other	____)

20. Indicate total number of existing wells on site ____ List number of existing unused wells on site ____

21. *Is this well or any existing well or water withdrawal on the owner's contiguous property covered under a Consumptive/Water Use Permit (CUP/WUP) or CUP/WUP Application? ____ Yes X No If Yes, complete the following: CUP/WUP No. ____ District Well ID No. **533539**

22. Latitude **283110.07** Longitude **803343.36**

23. Data Obtained From: ____ GPS X Map ____ Survey Datum: ____ NAD 27 X NAD 83 ____ WGS 84

I hereby certify that I will comply with the applicable rules of Title 40, Florida Administration Code, and that a water use permit or artificial recharge permit, if needed, has been or will be obtained prior to commencement of well construction. I further certify that information provided in this application is accurate and that I will obtain necessary approval from other federal, state, or local governments, if applicable. I agree to provide a well completion report to the District within 30 days after completion of the construction, repair, modification, or abandonment authorized by this permit, or the permit expiration, whichever occurs first.

James P Hinst (*Signature of Contractor) | **9311** (*License No.)

I certify that I am the owner of the property, that the information provided is accurate, and that I am aware of my responsibilities under Chapter 373, Florida Statutes, to maintain or properly abandon this well; or, I certify that I am the agent for the owner, that the information provided is accurate, and that I have informed the owner of his responsibilities as stated above. Owner consents to allowing personnel of this WMD or Delegated Authority access to the well site during the construction, repair, modification, or abandonment authorized by this permit.

James P Hinst (*Signature of Owner or Agent) | **10/11/2022** (*Date)

BELOW THIS LINE – FOR OFFICIAL USE ONLY

Approval Granted By *Cynthia Leckey* Issue Date **10/11/2022** Expiration Date **10/10/2023** Hydrologist Approval ____ initials

Fee Received $ **100** Receipt No. **96233** Check No. **OnLine-04698G-785775**

THIS PERMIT IS NOT VALID UNTIL PROPERLY SIGNED BY AUTHORIZED OFFICER OR REPRESENTATIVE OF THE WMD OR DELEGATED AUTHORITY. THE PERMIT SHALL BE AVAILABLE AT THE WELL SITE DURING ALL CONSTRUCTION, MODIFICATION, OR ABANDONMENT ACTIVITIES.

7. *County Brevard *Section 6 Land Grant _____ *Township 23S *Range 38E
8. Latitude 283112.9249 Longitude 803346.3195
9. Data Obtained From: ___GPS [X] Map ___Survey Datum: ___NAD 27 [X] NAD 83 ___WGS 84

10. *Type of Work: [X] Construction ___Repair ___Modification ___Abandonment Reason: _____
11. *Specify Intended Use(s) of Well(s):

___Domestic
___Bottled Water Supply
___Public Water Supply (Limited Use/DOH)
___Public Water Supply (Community or Non-Community/DEP)
___Class I Injection
___Landscape Irrigation
___Recreation Area Irrigation
___Agricultural Irrigation
___Livestock
___Nursery Irrigation
___Commercial/Industrial
___Golf Course Irrigation
___Site Investigation
[X] Monitoring
___Test
___Earth-Coupled Geothermal
___HVAC Supply
___HVAC Return

Class V Injection: ___Recharge ___Commercial/Industrial Disposal ___Aquifer Storage and Recovery ___Drainage
Remediation: ___Recovery ___Air Sparge ___Other (Describe) _____
___Other (Describe) _____

12. *Drill Method: ___Auger ___Cable Tool ___Rotary ___Combination (Two or More Methods) ___Jetted [X] Sonic
    ___Horizontal Drilling ___Hydraulic Point (Direct Push) ___Other _____
13. *Measured Static Water Level 4 ft. Measured Pumping Water Level 4 ft. After 1 Hours at 1 GPM
14. *Measuring Point (Describe) ground surface Which is .4 ft. ___Above [X] Below Land Surface *Flowing: ___Yes [X] No
15. *Casing Material: ___Black Steel ___Galvanized [X] PVC ___Stainless Steel ___Not Cased ___Other _____
16. *Total Well Depth 35 ft. Cased Depth 30 ft. *Open Hole: From ___To ___ft. *Screen: From 30 To 35 ft. Slot Size .01

17. *Abandonment: Other(Explain _____)
From ___ft. To ___ft. No. of Bags___ Seal Material (Check One): ___Neat Cement ___Bentonite ___Other _____
From ___ft. To ___ft. No. of Bags___ Seal Material (Check One): ___Neat Cement ___Bentonite ___Other _____
From ___ft. To ___ft. No. of Bags___ Seal Material (Check One): ___Neat Cement ___Bentonite ___Other _____
From ___ft. To ___ft. No. of Bags___ Seal Material (Check One): ___Neat Cement ___Bentonite ___Other _____
From ___ft. To ___ft. No. of Bags___ Seal Material (Check One): ___Neat Cement ___Bentonite ___Other _____

18. *Surface Casing Diameter and Depth:
Dia ___in. From ___ft. To ___ft. No. of Bags___ Seal Material (Check One): ___Neat Cement ___Bentonite ___Other _____
Dia ___in. From ___ft. To ___ft. No. of Bags___ Seal Material (Check One): ___Neat Cement ___Bentonite ___Other _____

19. *Primary Casing Diameter and Depth:

Dia 1 in.	From 0 ft.	To 26 ft.	No. of Bags 1.5	Seal Material (Check One):	___Neat Cement	___Bentonite	[X] Other	Cement with Bentonite, < 5% by weight
Dia 1 in.	From 26 ft.	To 30 ft.	No. of Bags 1	Seal Material (Check One):	___Neat Cement	___Bentonite	[X] Other	Sand
Dia ___in.	From ___ft.	To ___ft.	No. of Bags___	Seal Material (Check One):	___Neat Cement	___Bentonite	___Other	
Dia ___in.	From ___ft.	To ___ft.	No. of Bags___	Seal Material (Check One):	___Neat Cement	___Bentonite	___Other	
Dia ___in.	From ___ft.	To ___ft.	No. of Bags___	Seal Material (Check One):	___Neat Cement	___Bentonite	___Other	

20. *Liner Casing Diameter and Depth:
Dia ___in. From ___ft. To ___ft. No. of Bags___ Seal Material (Check One): ___Neat Cement ___Bentonite ___Other _____
Dia ___in. From ___ft. To ___ft. No. of Bags___ Seal Material (Check One): ___Neat Cement ___Bentonite ___Other _____
Dia ___in. From ___ft. To ___ft. No. of Bags___ Seal Material (Check One): ___Neat Cement ___Bentonite ___Other _____

21. *Telescope Casing Diameter and Depth:
Dia ___in. From ___ft. To ___ft. No. of Bags___ Seal Material (Check One): ___Neat Cement ___Bentonite ___Other _____

Depth:	

Well Casing

Diameter:	1"
Type:	PVC
Schedule:	40
Length:	59' Ft.

Grout Seal

Type:	I / II PORTLAND
Feet:	56'
Amount:	2 Bags

Well Seal

Type:	Bent. Pellets
Feet:	3'

Well Screen

Diameter:	1"
Type:	PVC
Slot:	Schuma
Length:	2' Ft.
Note:	

Filter Pack

Type:	20/30
Feet:	2'
No. of Bags:	1 / 50 lbs.

Sump

Length:	Ft.
Type:	

Well Development

Water Level:	4'		
Method:	Honda		
Start:	Cloudy	Finish:	Clear
Time:	.25 Hr.		
GPM:	1		

Contractor Information

Contractor #:	9311
Completion:	Fed 2023
Driller:	David Longino
Lead Hand:	Joel Aponte
3rd Man:	
Drill Rig:	SR 7

Company:	Drillpro LLC d/b/a Groundwater Protection
Address:	2300 Silver Star Road
C,S,Z:	Orlando, Florida 32804-3310
Phone/FAX:	(407) 426-7885 / (407) 426-7586

LC34-DPT0817	DPT0817	08/17/2022	0835	34'	None	Gray	

SAMPLE COLLECTION INFORMATION

Analysis	Preservative	Container Requirements	Collected
V8260TCL42/V8260TCL42+	HCl/4°C	(2) 40 mL vials (HCl), (2) 40 mL vials (None)	X

OBSERVATIONS / NOTES

All intervals purged a minimum of five (5) screen volumes (1.5 L) prior to sample collection.
Hand auger five feet to clear utilities
Borehole abandoned via pressure grouting through boring rods
Rig, Rods, and associated tooling decon'd with pressurized steam

Circle if Applicable:

Project Number: 112G08985 **Project Name:** launch complex 34, hot spot 6

Date: 11/27/23 **Weather:** cloudy, humid, cool

Personnel: Natalie Volk (NAV) (Engineer), Chuck Sorden (CS) (Geologist)

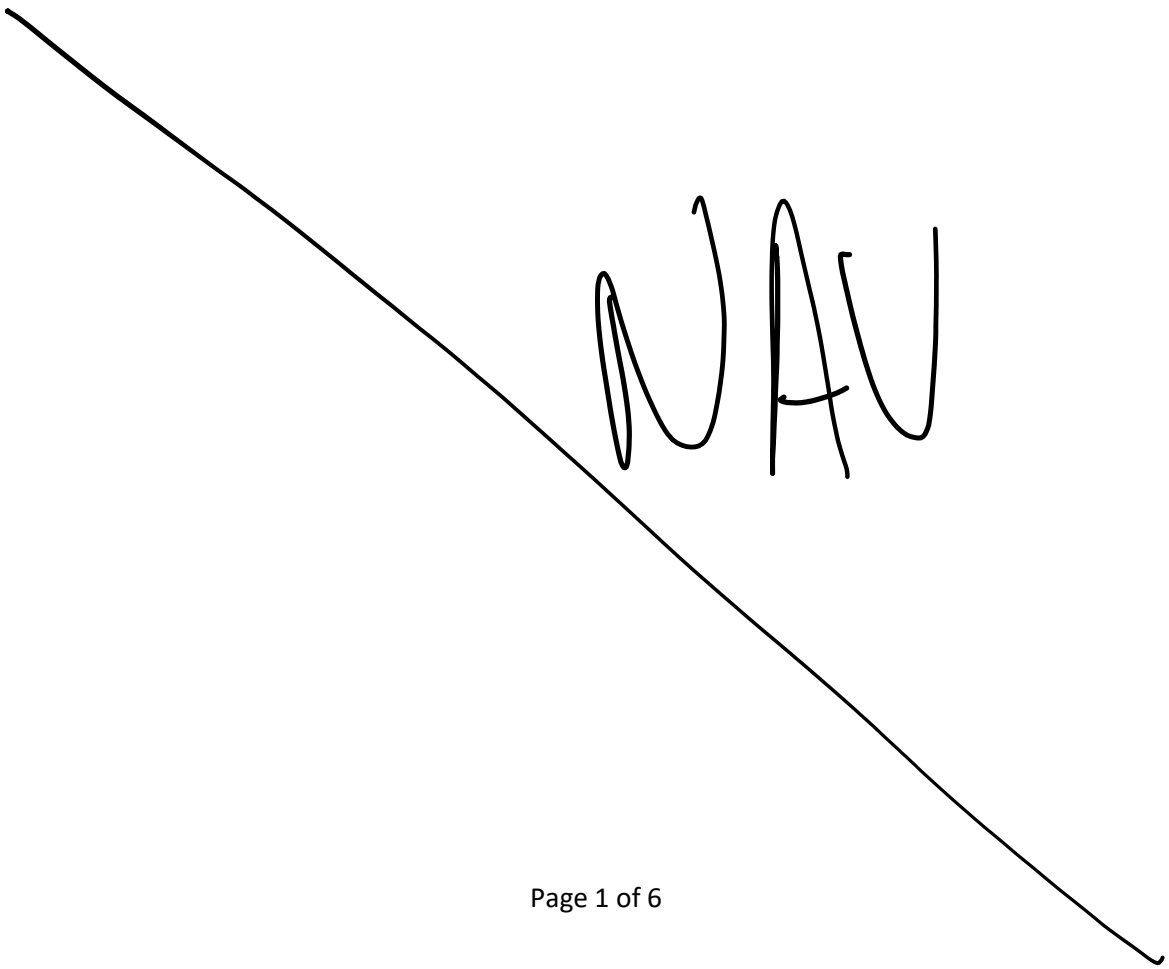
Health and Safety: stinging insects, weather

PPE: Choose an item. **Objective:** complete LC34 HS6 sampling and water levels

Equipment: Choose an item. Choose an item. Choose an item. Choose an item.

Field Notes:

0715 NAV on base. Calibrate equipment



0750 CS on base. Team up in one vehicle for WL as only CS truck will make it through woody/wet area in back

0910 on-site (LC34) opening wells for WL gauging

1230 begin collecting DTW measurements

1545 finish DTW measurements, off site

1600 off base

Date: 11/28/23 **Weather:** cloudy, humid, cool

Personnel: Natalie Volk (NAV) (Engineer), Chuck Sorden (CS) (Geologist)

APPENDIX G

HS 6 PHASE TWO EXPANSION WELL INSTALLATION RECORDS
(PRVIDED IN ELECTRONIC VERSION ONLY)

AIR SPARGE AND MONITORING WELL INSTALLATION FIELD NOTES

10/17/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Terry Winstead	(TW)	Tech	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Partly Cloudy 780 degrees F

Health and Safety (HAS): Topics: SSHASP; PPE; IDW

PPE: Level D

Objective: Begin Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion

*Tetra Tech note: See end of record for monitoring well ID modifications.

0800: CS at LC34 with Dan Forester (DF) going over utility markings as well as threatened or endangered species locations

0830: CS received call from DL, GPI just leaving shop

1030: GPI on site; HAS Meeting; unloading equipment and supplies; rig/equipment inspections; daily prep

1150: Set up on AS0304; GPI offsite for lunch

1230: GPI on site; getting water for rig; hand clear 5'

1250: Drilling Commenced

1310: Pulling Core 35' to 45'

1340: Core Pulled, setting well 40' TD; no layer 4 observed in core.

-Lithology is as follows:

- 35' -45': Gray Soft SAND – FINE TO VERY FINE; little to some silt; little shell in beds; trace clay (SP/SM) Shelly from 39' to 41

1405: Well set – Screen 38-40; 20/30 sand – 37.5-40; bentonite 34.5-37.5;

1420: Hydration Complete; grouting borehole

1430: Installation Complete

1445: Set up on AS0305; hand clear 5'

1450: Drilling Commenced

1505: Pulling Core 30'-40'

1520: Core Pulled; setting well 39'TD

1530: Well set; hydrating

1545: Hydration Complete; grouting borehole

1600: Installation Complete

1615: Site secured; Tt/GPI offsite

NO ALTERATION BEYOND
10/18/2022 @ 1615

10/18/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Terry Winstead	(TW)	Tech	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Partly Cloudy 73 degrees F

Health and Safety (HAS): Topics: SSHASP; PPE; IDW

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS Meeting; Daily prep
0730: Set up on LC34-AS0306; hand clear 5'
0740: Drilling Commenced
0755: Pulling Core 30'-40'
0810: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-35: SHELL; little to some sand – fine to very fine; trace to little silt
    - 35-37.5: SAND – FINE TO VERY FINE; little shell and silt
    - 37.5-38.5: SHELL; little sand – very fine and silt; trace clay
    - 38.5-40: SAND – MEDIUM TO VERY FINE; little to some shell; little silt; trace clay

0825: Well set; begin hydration
0840: Hydration complete; grouting borehole
0855: installation Complete
0900: Set up on LC34-AS0307; hand clear 5'
0905: Drilling Commenced
0925: Pulling Core 30' to 40'
0940: Core Pulled; setting well 40' TD

- Lithology is as follows:
    - 30-31.5: SAND – MEDIUM TO VERT FINE; little to some shell
    - 31.5-35.5: SHELL; little to some sand – medium to very fine; trace silt
    - 35.5-36.5: SAND – FINE TO VERY FINE; little shell; trace to little silt
    - 36.5-38: SHELL; little sand – fine to very fine and silt
    - 38-40: SAND – FINE TO VERY FINE: little to some silt

0950: Well set; begin hydration
1015: Hydration Complete; grouting borehole
1030: Installation Complete
1035: Set up on LC34-AS0308; hand clear 5'
1045: Drilling Commenced
1100: Pulling Core 30' to 40'
1110: Core Pulled; setting well 40'TD

- Lithology is as follows:
    - 30-33.5: Gray Soft SHELL;little to some sand – medium to very fine; trace to little silt
    - 33.5-35: Gray soft SAND – FINE TO VERY FINE; little silt; trace to little shell
    - 35–38.5: Gray Soft SHELL; little to some sand – fine to very fine: little silt; trace clay
    - 38.5-40: Gray Soft SAND – FINE TO VERY FINE; little silt; trace to little shell

1125: Well set; begin hydration; GPI taking Lunch

1205: GPI on site; hydration complete, grouting borehole.
1220: Installation Complete
1230: Set up on LC34-AS0312; Hand clear 5'
1240: Drilling Commenced
1300: Pulling Core 30' to 40'
1310: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-34: SHELL; little to some sand – medium to very fine; trace silt
    - 34-35: SAND – FINE TO VERY FINE; little silt; trace shell
    - 35-35.5: SILT AND CLAY; little to some sand – very fine; trace shell
    - 35.5-38: SHELL; little to some sand – medium to very fine; trace to little silt
    - 38-40: SAND – FINE TO VERY FINE; little silt; trace shell

1325: Well Set; begin hydration
1340: Hydration Complete; grouting borehole
1355: Installation Complete
1415: Set up on AS0311; hand clear 5'
1440: Drilling Commenced
1505: Pulling core 30' to 40'
1550: Core pulled; NO RECOVERY; setting well default depth of 40' TD
1605: Well set; begin hydration
1625: Hydration complete; grouting borehole
1640: Installation Complete
1700: Site Secured; Tt offsite

NO ALTERATION BEYOND
10/18/2022 @ 1615

10/19/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Terry Winstead	(TW)	Tech	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Mostly Cloudy, 56 degrees F

Health and Safety (HAS): Topics: SSHASP; PPE; IDW

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS Meeting; daily prep
0750: Set up on AS0315; hand clear 5'
0800: Unknown pipe identified during hand clearing appears to be coming from abandoned man hole behind the three sided structure; moving location 3.5' east in an attempt to avoid pipe
0820: Pulling core 30' to 40'
0835: Core pulled; clayey zone encountered at 35' to 38'; spoke with Mark Jonnet (MJ) – Tt PM; setting well 35' TD

- Lithology is as follows:
    - 30-32: SAND – FINETO VERY FINE; little silt and shell
    - 32–34.5: SHELL; little to some sand – fine to very fine; little silt; trace clay
    - 34.5-35.0: SAND – FINE TO VERY FINE; little to some shell; little silt; trace clay
    - 35-35.5: CLAY; little to some silt; little sand – very fine; trace shell
    - 35.5-37.5: SHELL with interbedded with CLAY; little to some sand – medium to very fine and silt; sticky, soft
    - 37.5-38: CLAY; moderately firm; little silt; trace shell and sand – very fine
    - 38-40: SHELL; little sand – medium to very fine

0850: Well set; begin hydration
0910: Hydration Complete; grouting borehole
0925: Installation Complete
0935: Set up on AS0314; hand clear 5'
0940: Drilling Commenced
0955: Pulling core 30' to 40'
1005: Core Pulled; setting well 39' TD

- Lithology is as follows:
    - 30-32: SHELL; little to some sand – fine to very fine; little silt
    - 32-36: SAND – FINE TO VERY FINE: little shell and silt
    - 36-37.5: GRAY TO DARK GRAY SHELL; little sand – fine to very fine and silt
    - 37.5-38.5: SHELL; little clay and sand – very fine and silt
    - 38.5-39.5: CLAY; soft; little to some silt; little sand – very fine and shell
    - 39.5-40.0: SAND – MEDIUM TO VERY FINE; little to some clay; little silt and shell

1020: Well set; begin hydration
1040: Hydration complete; grouting borehole
1055: Installation Complete
1105: Set up on AS0317; hand clear 5'; unable to set up on AS0313 due to location in swale between parking areas. Will use SR5 to install
1110: Drilling Commenced

1125: Pulling Core 30’ to 40’
1140: Core pulled; setting well 39’ TD
- Lithology is as follows:
    - 30-32: SHELL; little to some sand – fine to very fine; little silt
    - 32-36: SAND – FINE TO VERY FINE: little shell and silt
    - 36-37.5: GRAY TO DARK GRAY SHELL; little sand – fine to very fine and silt
    - 37.5-38.5: SHELL; little clay and sand – very fine and silt
    - 38.5-39.5: CLAY; soft; little to some silt; little sand – very fine and shell
    - 39.5-40.0: SAND – MEDIUM TO VERY FINE; little to some clay; little silt and shell

1155: Well set; begin hydration; GPI taking lunch
1230: GPI on site; grouting borehole
1245: Installation Complete
1255: Set up on AS0324; hand clear 5’
1300: Drilling Commenced
1320: Pulling Core 30’ to 40’
1335: Core pulled; setting well 38’TD
- Lithology is as follows:
    - 30-31: SHELL; little to some sand – fine to very fine; trace silt
    - 31-35: SAND – FINE TO VERY FINE; little shell and silt
    - 35-37: SHELL; little to some sand – fine to very fine; little silt
    - 37-38: SAND – MEDIUM TO VERY FINE: little shell; silt, and clay
    - 38-40: SAND – FINE TO VERY FINE: some clay; little to some silt; little shell

1350: Well set; begin hydration
1410: Hydration complete; grouting borehole
1430: Installation Complete
1435: Set up on AS0341; hand clear 5’
1445: Drilling Commenced
1515: Pulling core 30’ to 40’
1540: Core pulled; setting well 38’ TD
- Lithology is as follows:
    - 30-31: SHELL; little to some sand – fine to very fine; trace silt
    - 31-34: SAND – FINE TO VERY FINE; little shell and silt
    - 34-36: SHELL; little to some sand – fine to very fine; little silt
    - 36-38: SHELL; some sand – fine to very fine; little to some silt; trace clay
    - 38-39: SAND – FINE TO VERY FINE; some clay; little to some silt; trace shell
    - 39-40: SAND – MEDIUM TO VERY FINE: little to some silt; little clay; and shell

1555: Well set; begin hydration
1615: Hydration Complete; grouting borehole
1635: Installation Complete
1650: Site Secured; Tt/GPI off site

NO ALTERATION BEYOND

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Terry Winstead	(TW)	Tech	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Mostly Cloudy, 56 degrees F

Health and Safety (HAS): Topics: SSHASP; PPE; IDW

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS Meeting; daily prep
0735: Set up on AS0354; hand clear 5'
0750: Drilling Commenced
0805: Pulling Core 30' to 40'
0815: Core Pulled; setting well 40' TD

- Lithology is as follows:
    - 30-32.5: SAND – FINE TO VERY FINE; little silt and shell
    - 32.5-38: SHELL; little to some sand – fine to very fine; trace to little silt
    - 38-39: SAND – FINE TO VERY FINE; little to some silt; little shell; trace clay; thin clay lens at 39
    - 39-40: SAND – MEDIUM TO VERY FINE; little to some shell fragments from small pebble to coarse grained size

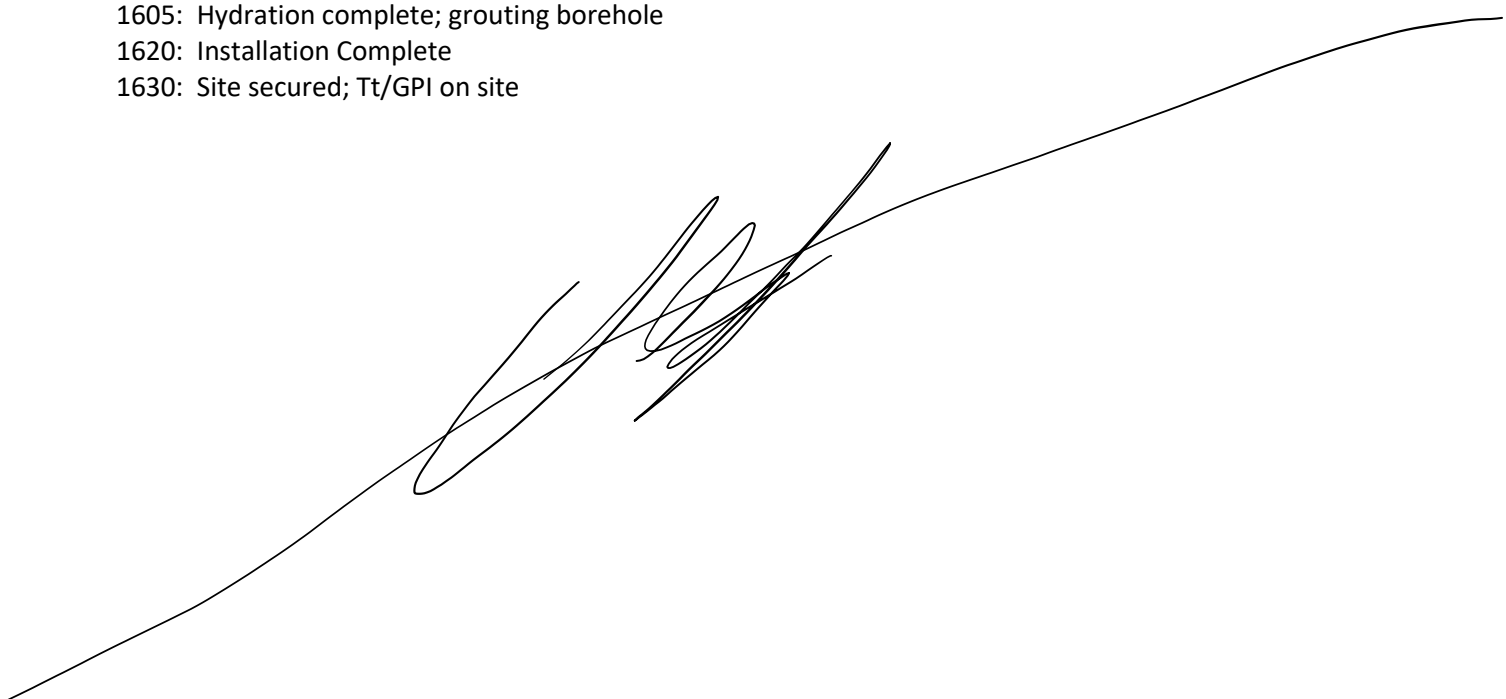
0825: Well set; begin hydration
0845: hydration Complete; grouting borehole
0900: Installation Complete
0905: Drilling Commenced on AS0366; previously hand cleared 5'
0920: Pulling Core 30' to 40'
0935: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-32.5: SAND – FINE TO VERY FINE; little silt and shell
    - 32.5-36: SHELL; little to some sand – fine to very fine; trace to little silt
    - 36-37: SHELL; little to some sand – fine to very fine and silt; little clay
    - 37-39: SHELL; little sand – fine to very fine and silt
    - 39-40: SAND – MEDIUM TO VERY FINE; little to some shell fragments from small pebble to coarse grained size

0950: Well set; begin hydration
1005: Hydration Complete; grouting borehole
1020: Installation Complete
1030: Drilling Commenced on AS0375; previously hand cleared 5'
1045: Pulling core 30' to 40'
1100: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-33: SAND – FINE TO VERY FINE; little silt and shell
    - 33-36: SHELL; little to some sand – fine to very fine; trace to little silt
    - 36-37: SHELL; little to some sand – fine to very fine and silt; little clay
    - 37-38: SAND – FINE TO VERY FINE; little silt; trace to little shell

  - 38-40: SAND – MEDIUM TO VERY FINE; little to some shell fragments from small pebble to coarse grained size



1120: Well set; begin hydration
1140: Hydration Complete; grouting borehole
1155: Installation Complete
1205: Drilling Commenced on AS0374; previously hand cleared 5'
1220: Pulling Core 30' to 40'
1235: Core pulled; setting well 40'

- Lithology is as follows:
  - 30-33: SAND – FINE TO VERY FINE: little to some silt; trace clay; little shell
  - 33-37: SHELL; little sand – fine to very fine and silt; trace clay
  - 37-40: SAND – MEDIUM TO VERY FINE; little to some pebble to coarse grain sized shell fragments

1245: Well set; begin hydration
1300: Hydration complete; grouting borehole
1315: Installation Complete
1325: Drilling Commenced on AS0376; previously hand cleared 5'
1340: Pulling Core 30' to 40'
1355: No Recovery; setting well 40' TD
1410: Well set; begin hydration
1425: Hydration complete; grouting borehole
1435: Installation Complete
1445: Drilling commenced on AS0373; previously hand cleared 5'
1505: Pulling core 30' to 40'
1530: Core pulled; setting well 38' TD

- Lithology is as follows:
  - 30-33.5: SAND – FINE TO VERY FINE: little to some silt; trace clay; little shell
  - 33-37.5: SHELL; little sand – fine to very fine and silt; trace clay
  - 37.5-38.5: SHELL; little to some sand – fine to very fine and silt; little clay
  - 38.5-40: SAND – MEDIUM TO VERY FINE; little to some pebble to coarse grain sized shell fragments

1545: Well set; begin hydration
1605: Hydration complete; grouting borehole
1620: Installation Complete
1630: Site secured; Tt/GPI on site

0650: Tt/GPI on site; HAS meeting; daily prep
0725: Set up on AS0364; hand clear 5'
0735: Drilling commenced
0750: Pulling core 30' to 40'
0805: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-32.5: SAND – FINE TO VERY FINE: little silt and shell
    - 32.5-33.5: SHELL; little sand – fine to very fine and silt; trace clay
    - 33.5-36: SHELL; little sand – fine to very fine
    - 36-37: SHELL; little sand – fine to very fine, silt, and clay
    - 37-40: SAND – MEDIUM TO VERY FINE; little to some pebble to coarse grain sized shell fragments

0820: Well set; begin hydration
0835: Hydration Complete; grouting borehole
0845: Installation Complete
0850: Drilling Commenced on AS0352; previously hand cleared 5'
0905: Pulling Core 30' to 40'
0920: Core pulled; setting well 39'

- Lithology is as follows:
    - 30-33: SHELL; little to some sand – fine to very fine; little silt
    - 33-35: SAND – FINE TO VERY FINE: little silt and shell
    - 35-39.5: SHELL; little sand – fine to very fine; little to some silt trace clay
    - 39.5-40: SAND – MEDIUM TO VERY FINE; little silt

0935: Well set; begin hydration
0955: Hydration complete; grouting borehole
1010: Installation Complete
1015: Set up on AS0365; hand clear 5'
1020: Drilling Commenced
1035: Pulling core 30' to 40'
1045: Core pulled; setting well 40'

- Lithology is as follows:
    - 30-32.5: SAND – FINE TO VERY FINE: little silt and shell
    - 32.5-33.5: SHELL; little sand – fine to very fine and silt; trace clay
    - 33.5-36: SHELL; little sand – fine to very fine
    - 36-37: SHELL; little sand – fine to very fine, silt, and clay

    - 37-40: SAND – MEDIUM TO VERY FINE; little to some pebble to coarse grain sized shell fragments

1100: Well set; begin hydration
1125: Hydration Complete; grouting borehole
1140: Installation Complete
1150: Drilling AS0353; previously hand cleared 5’
1210: Pulling core 30’ to 40’
1225: Core pulled; setting well 40’ TD

- Lithology is as follows:
    - 30-37: Gray to Dark Gray SHELL; little sand – fine to very fine and silt
    - 37-38: SHELL; little to some silt; little sand – very fine; trace clay
    - 38-40: SAND – MEDIUM TO VERY FINE; trace to little silt and shell

1240: Well set; begin hydration
1300: Hydration complete; grouting borehole
1320: Installation complete; GPI offloading water tank off of flatbed, conducting materials inventory
1400: Site secured; Tt/GPI offsite

10/24/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Terry Winstead	(TW)	Tech	GPI

Weather: Sunny 73 degrees F

Health and Safety (HAS): Topics: SSHASP; PPE; IDW

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0800: CS on site
0905: GPI on site; HAS Meeting; daily prep; unloading materials and supplies
1000: Set up on LC34-AS0367; hand clear 5'
1015: Drilling Commenced
1035: Pulling Core 30' to 40'
1045: Joel Aponte (JA) with GPI on site
1050: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-32: SAND – FINE TO VERY FINE; little silt and shell
    - 32-35: SHELL; little sand – fine to very fine and silt
    - 35-38: SHELL; little to some sand – fine to very fine and silt; trace clay
    - 38-40: SHELL; little sand – medium to very fine; trace silt

1105: well set; begin hydration/well development
1120: GPI offsite for lunch
1205: GPI on site; hydration/development complete; grouting borehole
1220: Installation Complete
1230: Drilling Commenced on AS0368; previously hand cleared 5'
1245: Pulling core 30' to 40'
1300: Core pulled; setting well 38' TD

- Lithology is as follows:
    - 30-31: SAND – FINE TO VERY FINE; little silt and shell
    - 31-38: SHELL; little to some sand – fine to very fine; little silt
    - 38-39: CLAY; little sand – fine to very fine, silt, and shell
    - 39-40: SAND – MEDIUM TO VERY FINE; little to some shell

1315: Well set; begin hydration/development
1335: hydration/development complete; grouting borehole
1350: Installation Complete
1400: Drilling commenced on AS0369; previously hand cleared 5'
1430: Pulling Core 30' to 40'
1455: Core pulled; convoluted recovery. Core layers became jumbled. Unable to photo or log. Lithology appears similar based on what was recovered. Setting well 38' TD based on AS0368
1515: Well set; begin hydration/development
1535: Hydration/Development Complete; grouting borehole
1555: Installation Complete
1610: Set up on AS0370; hand clear 5'
1630: Site secured; Tt/GPI offsite

10/25/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt

	Joel Aponte	(JA)	Tech	GPI

Weather: Sunny 66 degrees F

Health and Safety (HAS): Topics: Hydration; Slips-Trips-Falls; PPE

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS Meeting; Daily Prep
0730: Unable to get rig to position with pipe trailer properly due to swale slope near AS0370; moving to set up on AS0371 and will complete AS0370 with SR-5
0740: Set up on AS0371; hand clear 5'
0750: Drilling Commenced
0800: Pulling Core 30' to 40'
0815: Core pulled; setting well 36' TD

- Lithology is as follows:
    - 30-33: SAND – FINE TO VERY FINE; little silt and shell
    - 33-36: SHELL; little to some sand – fine to very fine and silt; trace to little clay
    - 36-37: CLAY; little sand – very fine and silt; trace shell
    - 37-40: SAND – MEDIUM TO VERY FINE: little to some shell; little silt and clay; sticky

0825: Well set; begin hydration/development
0840: Hydration/development complete; grouting borehole
0850: Installation Complete
0900: Drilling Commenced on AS0372; previously hand cleared 5'
0915: Pulling core 30' to 40'
0930: Core Pulled; setting well 37'

- Lithology is as follows:
    - 30-35: SAND – FINE TO VERY FINE; little silt and shell
    - 35-37: Gray to dark gray SHELL; little to some sand – very fine and silt; trace clay
    - 37-38; CLAY; little sand – very fine and silt; trace to little shell
    - 38-40: SHELL; little to some sand – medium to very fine; little silt; trace to little clay

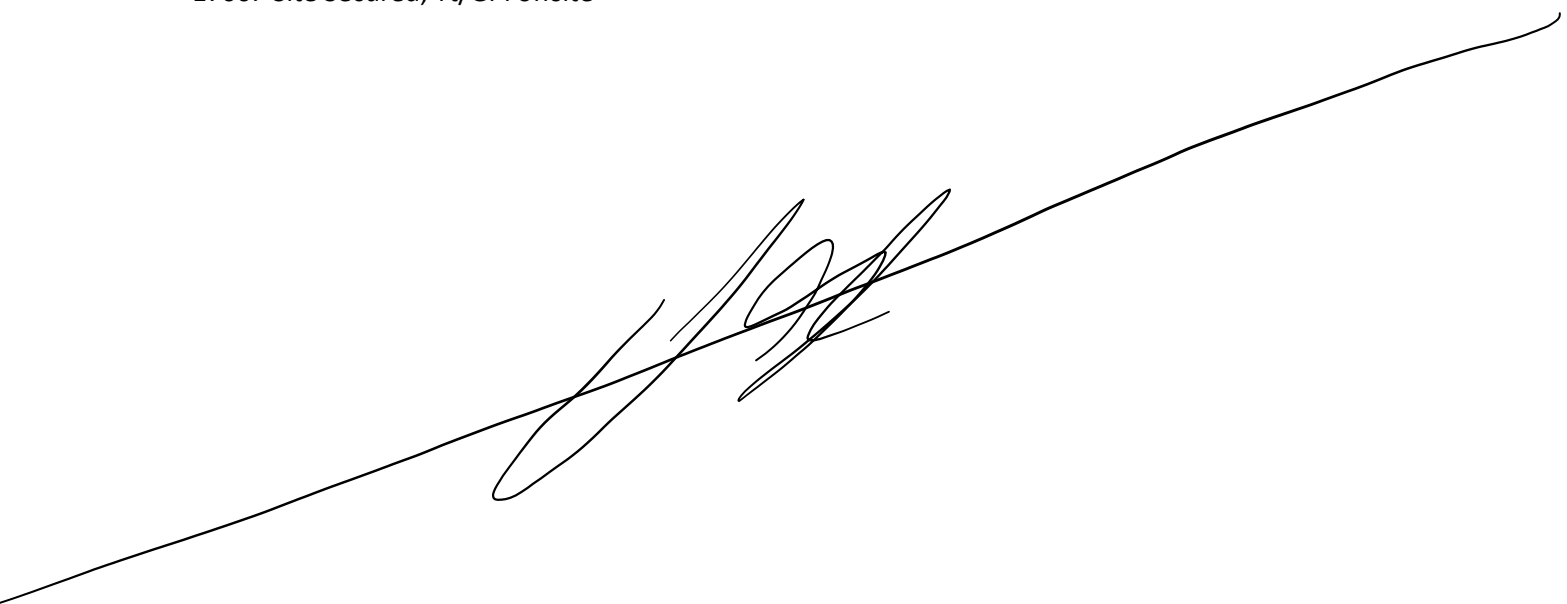
0940: Well set; begin hydration/development
0955: hydration/development complete; grouting borehole
1010: Installation Complete
1015: Drilling commenced on AS0363; previously hand cleared 5'
1030: Pulling Core 30' to 40'
1045: Core pulled; setting well 35' TD

- Lithology is as follows:
    - 30-35: SAND – FINE TO VERY FINE; little silt and shell
    - 35-36: SILT AND CLAY; little sand – very fine; trace shell
    - 36-40: SHELL; little to some sand – fine to very fine; little silt; trace clay

1100: Well set; begin hydration/development
1115: Hydration/development complete; grouting borehole
1125: Installation complete

1200: Drilling commenced on AS0361; previously hand cleared 5'
1220: Pulling core 30' to 40'
1230: Core Pulled; setting well 34' TD

- Lithology is as follows:
    - 30-34: SAND – FINE TO VERY FINE; little silt and shell
    - 34-36: CLAY; firm 34-34.5; little to some silt; little sand – very fine and shell
    - 36-40: SHELL; little to some sand – fine to very fine and silt; little clay in beds and throughout



1245: Well set; begin hydration/development
1300: Hydration/development complete; grouting borehole
1310: Installation Complete
1320: Drilling Commenced on AS0360; previously hand cleared 5'
1340: Pulling Core 30' to 40'
1355: Core pulled; setting well 37' TD

- Lithology is as follows:
    - 30-34: SAND – FINE TO VERY FINE; little silt and shell; trace clay
    - 34-37: SHELL; little sand – fine to very fine and silt; trace clay
    - 37-38: CLAY; little sand – very fine, silt, and shell
    - 38-39.5: SHELL; little to some sand – very fine, silt, and clay
    - 39.5-40: SHELL; little to some sand – medium to very fine

1405: Well Set; begin hydration/development
1435: Hydration/development complete; grouting borehole
1450: Installation Complete
1505: Drilling commenced on AS0359; previously hand cleared 5'
1535: Pulling Core 30' to 40'
1555: Core pulled; setting well 38' TD

- Lithology is as follows:
    - 30-34: SAND – FINE TO VERY FINE; little silt and shell
    - 34-38: SHELL; little to some sand – medium to very fine; little silt; trace clay
    - 38-39.5: CLAY; little to some silt; little sand – very fine; trace shell
    - 39.5-40: SAND – MEDIUM TO VERY FINE; little shell; trace clay

1610: Well set; begin hydration/development
1630: Hydration/Development Complete; grouting borehole
1650: Installation Complete; moving rig up top for repairs in the morning
1700: Site Secured; Tt/GPI offsite

10/26/2022 **LC34 HS6** **112G08985**

Health and Safety (HAS): Topics: Hydration; Slips-Trips-Falls; PPE

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0745: Tt/GPI on site; HAS Meeting; daily prep; JA/TW Developing wells from week one
0830: Claude Harriet (CH) – GPI mechanic on site to replace head slide pucks on rig
1115: Rig repaired; CH offsite; moving rig back to field to resume drilling
1130: Set up on AS0370; hand clear 5'
1135: Drilling Commenced
1150: Pulling core 30'-40'
1200: CS offsite for EOR training at KSC
1300: CS on site; resuming pulling core 30' to 40'
1320: Core pulled; setting well 39'

- Lithology is as follows:
    - 30-31: SHELL; little sand – fine to very fine and silt
    - 31-36: SAND – FINE TO VERY FINE; little silt and shell
    - 36-39: SHELL; little to some sand – fine to very fine; little silt; trace clay
    - 39-40: SAND – MEDIUM TO VERY FINE; little clay and shell

1335: Well set; begin hydration/development
1355: Hydration/Development Complete; grouting borehole
1410: Installation Complete
1420: Drilling Commenced on AS0358; previously hand cleared 5'
1440: Pulling Core 30' to 40'
1450: Core pulled; setting well 38' TD

- Lithology is as follows:
    - 30-35: SAND – FINE TO VERY FINE; little silt and shell
    - 35-38: SHELL; little to some sand – very fine and silt; trace to little clay
    - 38-39.5: SHELL AND SAND – FINE TO VERY FINE; little to some clay in beds and throughout and silt; little sand – very fine
    - 39.5-40: SHELL; little to some sand – medium to very fine

1510: Well set; begin hydration/development
1530: Hydration/Development complete; grouting borehole
1550: Installation Complete
1610: Site secured; Tt/GPI offsite

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS meeting; daily prep
0720: Set up on AS0357; hand clear 5'
0730: Drilling Commenced
0750: Pulling Core 30' to 40'
0805: Core pulled; setting well 38; TD

- Lithology is as follows:
    - 30-32: SAND – FINE TO VERY FINE; little silt and shell
    - 32-38: SHELL; little sand – fine to very fine and silt; trace clay
    - 38-40: SHELL; little sand – very fine and silt; little clay

0820: Well set; begin hydration/development
0835: Hydration/development complete; grouting borehole
0850: Installation Complete
0900: Drilling Commenced on AS0356; previously hand cleared 5'
0905: Blown hydraulic line on table; Spill contained with visquene/oil absorbent pads. Diagnosing/troubleshooting
0930: Hose removed; GPI offsite to Central Hydraulic in Cocoa to get new hose made
1105: GPI on site; replacing hose
1245: Hose repair complete; drilling resumed on AS0356
1305: Pulling Core 30' to 40'
1320: Core pulled; setting well 36' TD

- Lithology is as follows:
    - 30-40: SHELL; little to some sand – fine to very fine; silt, and clay; sticky

1340: Well set; begin hydration/development
1405: Hydration/development complete; grouting borehole
1425: Installation complete
1445: Site secured; Tt/GPI offsite

0700: Tt/GPI on site; HAS meeting; daily prep
0720: Set up on AS0355; hand clear 5'
0730: Drilling Commenced
0745: Pulling core 30' to 40'
0755: Core pulled; setting well 37' TD

- Lithology is as follows:
    - 30-33: SAND – FINE TO VERY FINE; little silt and shell; clay lens 31.25-31.75
    - 33-35: SHELL; little to some sand – medium to very fine; trace to little silt
    - 35-37: SAND – MEDIUM TO VERY FINE; little shell; trace to little silt and clay
    - 37-38: SHELL; little to some sand – fine to very fine: little silt and clay
    - 38-40: SAND – MEDIUM TO VERY FINE; some shell in pebble to coarse size

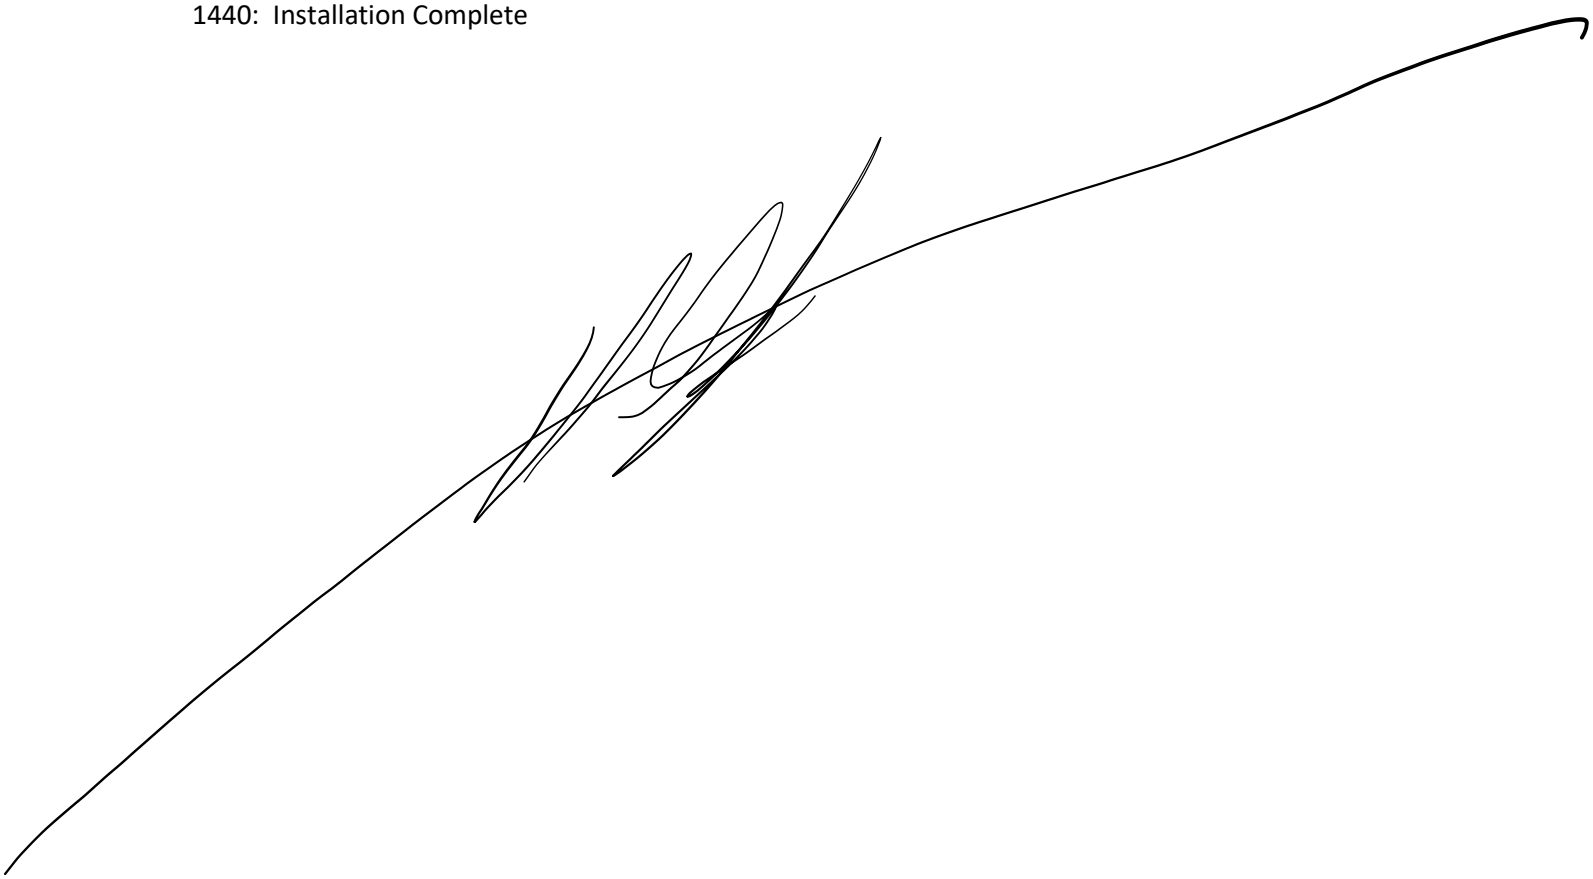
0810: Well set; begin hydration/development
0825: Hydration/Development Complete; grouting borehole
0840: Installation Complete
0845: Drilling commenced on AS0342; previously hand cleared 5'
0900: Pulling Core 30' to 40'
0915: Core pulled; setting well 37' TD

- Lithology is as follows:
    - 30-32: SAND -FINE TO VERY FINE; little silt and shell
    - 32-33: SILT AND CLAY
    - 33-37: SHELL; little to some sand – fine to very fine; little silt; trace to little clay
    - 37-38: SHELL; some sand – very fine; silt, and clay
    - 38-40: SAND – MEDIUM TO VERY FINE; little to some shell

0925: Well set; begin hydration/development
0940: Hydration/Development Complete; grouting borehole
0955: Installation Complete
1000: Drilling commenced on AS0343; previously hand cleared 5'
1015: Pulling core 30' to 40'
1025: Core pulled; setting well 35' TD

- Lithology is as follows:
    - 30-31.5: SAND – FINE TO VERY FINE; little silt and shell
    - 31.5-32: SILT; some clay
    - 32-35: SHELL; little sand – fine to very fine AND SILT; trace to little clay
    - 35-38.5SHELL AND CLAY; little to some sand – very fine and silt
    - 38-40: SAND – MEDIUM TO VERY FINE; little to some shell

1050: Well set; begin hydration/development



1110: Hydration/development complete; grouting borehole
1130: Installation Complete
1135: Drilling Commenced on AS0344; previously hand cleared 5'
1150: Pulling Core 30' to 40'
1200: Core pulled; setting well 35' TD

- Lithology is as follows:
    - 30-35: SHELL; little to some sand – fine to very fine and silt; trace to little clay; silty31-32
    - 35-39: SHELL; little to some clay interbedded and throughout; little sand – fine to vert fine and silt
    - 39-40: SAND – MEDIUM TO VERY FINE; little to some shell in pebble to coarse size; trace clay

1215: Well set; begin hydration/development
1230: Hydration/development complete; grouting borehole
1245: Installation Complete
1255: Drilling Commenced on AS0345; previously hand cleared 5'
1315: Pulling Core 30' to 40'
1335: Core pulled setting well 38' TD

- Lithology is as follows:
    - 30-31: SHELL; little sand – fine to very fine and silt
    - 31-35: SAND – FINE TO VERY FINE; little to some shell; little silt
    - 35-38: SHELL; little sand – fine to very fine and silt
    - 38-40: SHELL; little to some clay interbedded and throughout; little sand – fine to vert fine and silt

1355: Well set; begin hydration/development
1420: Hydration/Development Complete; grouting borehole
1440: Installation Complete

10/31/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Terry Winstead	(TW)	Tech	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Sunny 66 degrees F

Health and Safety (HAS): Topics: Hydration; Slips-Trips-Falls; PPE

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0800: CS on site
1025: TW/JA on site; HAS Meeting; daily prep; unloading materials
1100: Set up on AS0346; hand clear 5'
1110: Drilling Commenced
1135: Pulling Core 30' to 40'
- Unable to log or photograph core; core was damaged during transport (Dropped) when trying to reposition

1155: Core pulled; setting well 36' TD
1215: Well set; begin hydration/development; GPI offsite for lunch
1300: GPI on site; hydration/development complete; grouting borehole
1320: Installation Complete
1340: Drilling commenced on AS0348 (Skipping AS0347 due to need for clearing); previously hand cleared 5'
1405: Pulling Core 30' to 40'
1425: Core pulled; setting well 40'
- Lithology is as follows:
    - 30-36: SAND – FINE TO VERY FINE; little silt and shell; silty clay lens at 36'
    - 36-39: SHELL; little sand – very fine and silt; trace clay
    - 39-40: SAND – MEDIUM TO VERY FINE; little to some pebble to coarse shell fragments

1440: Well set; begin hydration/development
1500: hydration/development complete; grouting borehole
1520: Installation Complete
1530: Drilling Commenced on AS0349; previously hand cleared 5'
1550: Pulling Core 30' to 40'
- Lithology is as follows:
    - 30-37: SAND – FINE TO VERY FINE; little silt and shell; silty clay lens at 36'
    - 37-39: SHELL; little sand – very fine and silt; trace clay
    - 39-40: SAND – MEDIUM TO VERY FINE; little to some pebble to coarse shell fragments

1625: Well set; begin hydration/development
- Will grout boring in the am

1645: Site secured; Tt/GPI offsite

11/01/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Terry Winstead	(TW)	Tech	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Sunny 66 degrees F

Health and Safety (HAS): Topics: Hydration; Slips-Trips-Falls; PPE

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS meeting; daily prep
0750: Grouting borehole on AS0349
0810: Installation Complete
0820: Set up on AS0350; hand clear 5'
0830: Drilling Commenced
0855: Pulling Core 30' to 40'
0915: Core pulled; setting well 38' TD

- Lithology is as follows:
    - 30-32: SHELL; little sand – medium to very fine
    - 32-38.5: SAND – FINE TO VERY FINE; little to some shell; little silt; dense clay bed 38-38.25
    - 38.5-40: SHELL; little sand – fine to very fine

0920: CS had drillers on wrong stake. Drillers were on Location D instead of AS0350. Will be setting the deep well (IW0155) screened 30'-35'; Mark Jonnet (MJ) – Tt PM was notified of the mistake.
1000: Setting MW after launch
1015: Well set:

- Screen: 30' -35'
- 20/30 Sand: 36'-29.5'
- 30/65 Sand: 29.5'27.5'

- Grouting Borehole

1035: Installation Complete
1045: Drilling Commenced on AS0351; previously hand cleared 5'
1110: Pulling Core 30' to 40'
1120: CCSFS Explosive Ordinance Disposal (EOD) crew alerted Tt that they are requesting us to stand down UFN due to potential suspect items located on the beach near LC34
1150: EOD stated all clear; drilling resumed; pulling core 30' to 40'
1200: Core pulled; setting well 39' TD

- Lithology is as follows:
    - 30-37: SAND – FINE TO VERY FINE; little silt and shell
    - 37-39: SHELL; little sand – fine to very fine and silt; trace clay
    - 39-40: SAND – MEDIUM TO VERY FINE; little to some pebble to coarse sized shell; trace to little clay

1215: Well set; begin hydration/development
1235: Hydration/development complete; grouting borehole
1250: Installation Complete
1300: Set up on AS0332; hand clear 5'
1310: Drilling Commenced
1335: Pulling Core 30' to 40'

1355: Core pulled; setting well 39’ TD

- Lithology is as follows:
    - 30-37: SAND – FINE TO VERY FINE; little to some shell; little silt; shell bed 33-34; silt lens 37’
    - 37-39: SHELL; little sand – fine to very fine and silt
    - 39-40: SILT; trace to little clay and sand – very fine

1415: Well set; begin hydration/development
1430: Hydration/development complete; grouting borehole
1445: Installation Complete
1455: Drilling Commenced on AS0331; previously hand cleared 5’
1515: Pulling Core 30’ to 40’
1535: No recovery; setting 39’ based on AS0332
1555: Well set; begin hydration/development
1615: Hydration/development complete; grouting borehole
1635: Installation complete
1650: Site secured; Tt/GPI offsite

11/02/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Terry Winstead	(TW)	Tech	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Sunny 66 degrees F

Health and Safety (HAS): Topics: Hydration; Slips-Trips-Falls; PPE

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS Meeting; daily prep
0750: Set up on AS0330; hand clear 5'
0800: Drilling Commenced
0820: Pulling Core 30' to 40'
0840: Core pulled; setting well 36' TD

- Lithology is as follows:
    - 30-34: SAND – FINE TO VERY FINE; little silt and shell
    - 34.5-36: SHELL; little sand – very fine and silt
    - 36-37: CLAY; little sand – very fine and silt; trace to little shell
    - 37-39: SHELL; little sand – very fine and silt; trace clay
    - 39-40: SAND – MEDIUM TO VERY FINE; little to some pebble to coarse shell fragments

0900: Well set; begin hydration/development
0920: hydration/development complete; grouting borehole
0935: Installation Complete
0945: Drilling Commenced on AS0329; previously hand cleared 5'
1000: Pulling Core 30' to 40'
1020: Core pulled; setting well 36' TD

- Lithology is as follows:
    - 30-34: SAND – FINE TO VERY FINE; little silt and shell
    - 34.5-36: SHELL; little sand – very fine and silt
    - 36-37: CLAY; little sand – very fine and silt; trace to little shell
    - 37-39: SHELL; little sand – very fine and silt; trace clay
    - 39-40: SAND – MEDIUM TO VERY FINE; little to some pebble to coarse shell fragments

1035: Well set; begin hydration/development
1050: hydration/development complete; grouting borehole
1105: Installation Complete
1115: Drilling Commenced on AS0328; previously hand cleared 5'
1130: Pulling Core 30' to 40'
1145: Core pulled; setting well 36'

- Lithology is as follows:
    - 30-34: SAND – FINE TO VERY FINE; little silt and shell
    - 34.5-36: SHELL; little sand – very fine and silt
    - 36-37: CLAY; little sand – very fine and silt; trace to little shell
    - 37-39: SHELL; little sand – very fine and silt; trace clay
    - 39-40: SAND – MEDIUM TO VERY FINE; little to some pebble to coarse shell fragments

1205: Well set; begin hydration/development

- GPI taking lunch

1245: GPI on site; hydration/development complete; grouting borehole
1305: Installation Complete
1315: Drilling Commenced on AS0327; previously hand cleared 5'
1330: Pulling Core 30' to 40'
1355: Core pulled; setting well 37' TD

- Unable to log or properly photo document the core; core came out of core barrel too fast and bunched up causing the core to become convoluted.

1415: Well set; begin hydration/development
1435: Hydration/development complete; grouting borehole
1455: Installation Complete
1515: Drilling Commenced on AS0326; previously hand cleared 5'
1540: Pulling Core 30' to 40'
1605: Core pulled; setting well 35' TD

- Lithology is as follows:
    - 30-33: SAND – FINE TO VERY FINE; little silt and shell
    - 33-33.25: CLAY; little silt
    - 33.25-35: SHELL; little sand – fine to very fine and silt
    - 35-38.5: SHELL; little to some silt; little clay and sand – very fine
    - 38.5-40.0 SAND – MEDIUM TO VERY FINE; little silt and shell; trace clay

1625: Well set; begin hydration/development
1640: hydration/development complete; grouting borehole
1655: Installation Complete
1710: Site secured; Tt/GPI offsite

11/03/2022 **LC34 HS6** **112G08985**

0700: Tt/GPI on site; HAS Meeting; daily prep; JA repairing tremmie pipe cam lock fitting
0815: Set up on AS0320; hand clear 5'
0825: Drilling Commenced
0840: Pulling Core 30' to 40'
0900: Core Pulled; setting well 37' TD

- Lithology is as follows:
    - 30-32.5: SHELL; little sand – fine to very fine
    - 32.5-35: SAND – FINE TO VERY FINE; little silt and shell
    - 35-37: SHELL; little sand – very fine and silt
    - 37-39: CLAY; little sand – very fine and silt
    - 39-40: SAND – MEDIUM TO VERY FINE; little silt and shell; trace clay

0915: Well set; begin hydration/development
0935: Hydration/Development Complete; grouting borehole
0950: Installation Complete
1000: Drilling Commenced on AS0321; previously hand cleared 5'
1020: Pulling Core 30' to 40'
1040: Core pulled; setting well 34.5' TD

- Lithology is as follows:
    - 30-33: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 33-34.5: SHELL; little sand – very fine and silt
    - 34.5-39: CLAY; little to some silt; little sand – fine to very fine and shell; clay in beds and throughout
    - 39-40: SAND – MEDIUM TO VERY FINE; little silt and shell; trace clay

1100: Well set; begin hydration/development
1120: Hydration/Development Complete; grouting borehole
1140: Installation Complete
1150: Drilling Commenced on AS0322; previously hand cleared 5'
1210: Pulling Core 30' to 40'
1225: Core pulled; setting well 36' TD

- Lithology is as follows:
    - 30-31.5: SHELL; little to some sand – fine to very fine
    - 31.5-34.5: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 34.5-36: SHELL; little sand – very fine and silt
    - 36-40: SILT; trace to little sand – very fine

1245: Well set; begin hydration/development

- GPI Taking Lunch

1330: GPI on site; hydration/development complete; grouting borehole
1355: Installation Complete
1405: Set up on AS0347; hand clear 5'
1410: Drilling Commenced
1430: Pulling Core 30' to 40'
1445: Core pulled; setting well 38' TD

- Lithology is as follows:
    - 30-31.5: SHELL; little sand – fine to very fine
    - 31.5-35: SAND – FINE TO VERY FINE; little silt and shell
    - 37-37: SHELL; little sand – very fine and silt
    - 37-39.5: SAND – VERY FINE; some clay and silt; little shell
    - 39.5-40: SAND – MEDIUM TO VERY FINE; little silt and shell; trace clay

1505: Well set; begin hydration/development
1520: Hydration/development complete; grouting borehole
1540: Set up on AS0333; hand clear 5'
1555: Drilling Commenced
1610: Pulling Core 30' to 40'
1630: Core pulled; setting well 38' TD

- Lithology is as follows:
    - 30-35.5: SAND – FINE TO VERY FINE; little silt and shell; clay bed 35.5-35.75. Appears to be anomalous
    - 35.5-38: SHELL; little sand – very fine and silt; trace clay
    - 38-39.5: SAND – FINE TO VERY FINE; little to some clay in beds and throughout and silt; little shell
    - 39.5-40: SHELL; little to some sand – medium to very fine; trace clay

1650: Well set; begin hydration/development
1710: Will grout in the morning; site secured; Tt/GPI offsite

1350: Well set:
    - Screen: 16' -21'
    - 20/30 Sand: 21'-15.5'
    - 30/65 Sand: 15.5'-13.5'

- Grouting Borehole

1410: Installation Complete
1415: Installations complete for the day; begin demobilization in preparation for potential hurricane Nicole

12/01/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Terry Winstead	(TW)	Tech	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Clear 76 degrees F windy

Health and Safety (HAS): Topics: SSHASP; PPE; IDW

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

1145: CS on site; Evaluating site post Hurricane Nicole; GPI will be on site shortly as they had to get inspected at CCSFS main gate
1215: GPI on site
1230: GPI grabbing lunch at CCSFS cafeteria
1305: GPI on site; HAS Meeting; unloading tooling, equipment, materials, and supplies; daily prep
1335: Set up on LC34-AS0318; hand clear 5'
1350: Drilling Commenced; pulling Core 30' to 40'
1410: Pulling Core 30' to 40'
1435: Core Pulled; setting well 37' TD

- Lithology is as follows:
    - 30-33: SHELL; little to some sand – coarse to very fine
    - 33-35: SAND – MEDIUM TO VERY FINE; little to some silt; trace to little shell; trace clay
    - 35-37: Gray to dark gray shell; little sand – fine to very fine
    - 37-40: SAND – FINE TO VERY FINE; little to some silt; trace to little clay and shell

1450: Well set; begin hydration/development
1505: Hydration Complete; grouting borehole
1520: Installation Complete
1530: Drilling Commenced on AS0313
1545: Pulling Core 30' to 40'
1600: Core Pulled; setting well 38' TD

- Lithology is as follows:
    - 30-31.5: SHELL; little sand – fine to very fine and silt
    - 31.5-35: SAND – FINE TO VERY FINE; little silt; trace shell
    - 35-38: SHELL; little sand – very fine and silt
    - 38-39: SAND – VERY FINE; little to some silt; trace to little clay
    - 39-40: SAND – MEDIUM TO VERY FINE; little shell and silt

1615: Well Set; begin hydration/development
1630: Hydration Complete; grouting borehole
1645: Installation Complete
1700: Site Secured; Tt/GPI offsite

12/02/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Terry Winstead	(TW)	Tech	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Clear 76 degrees F windy

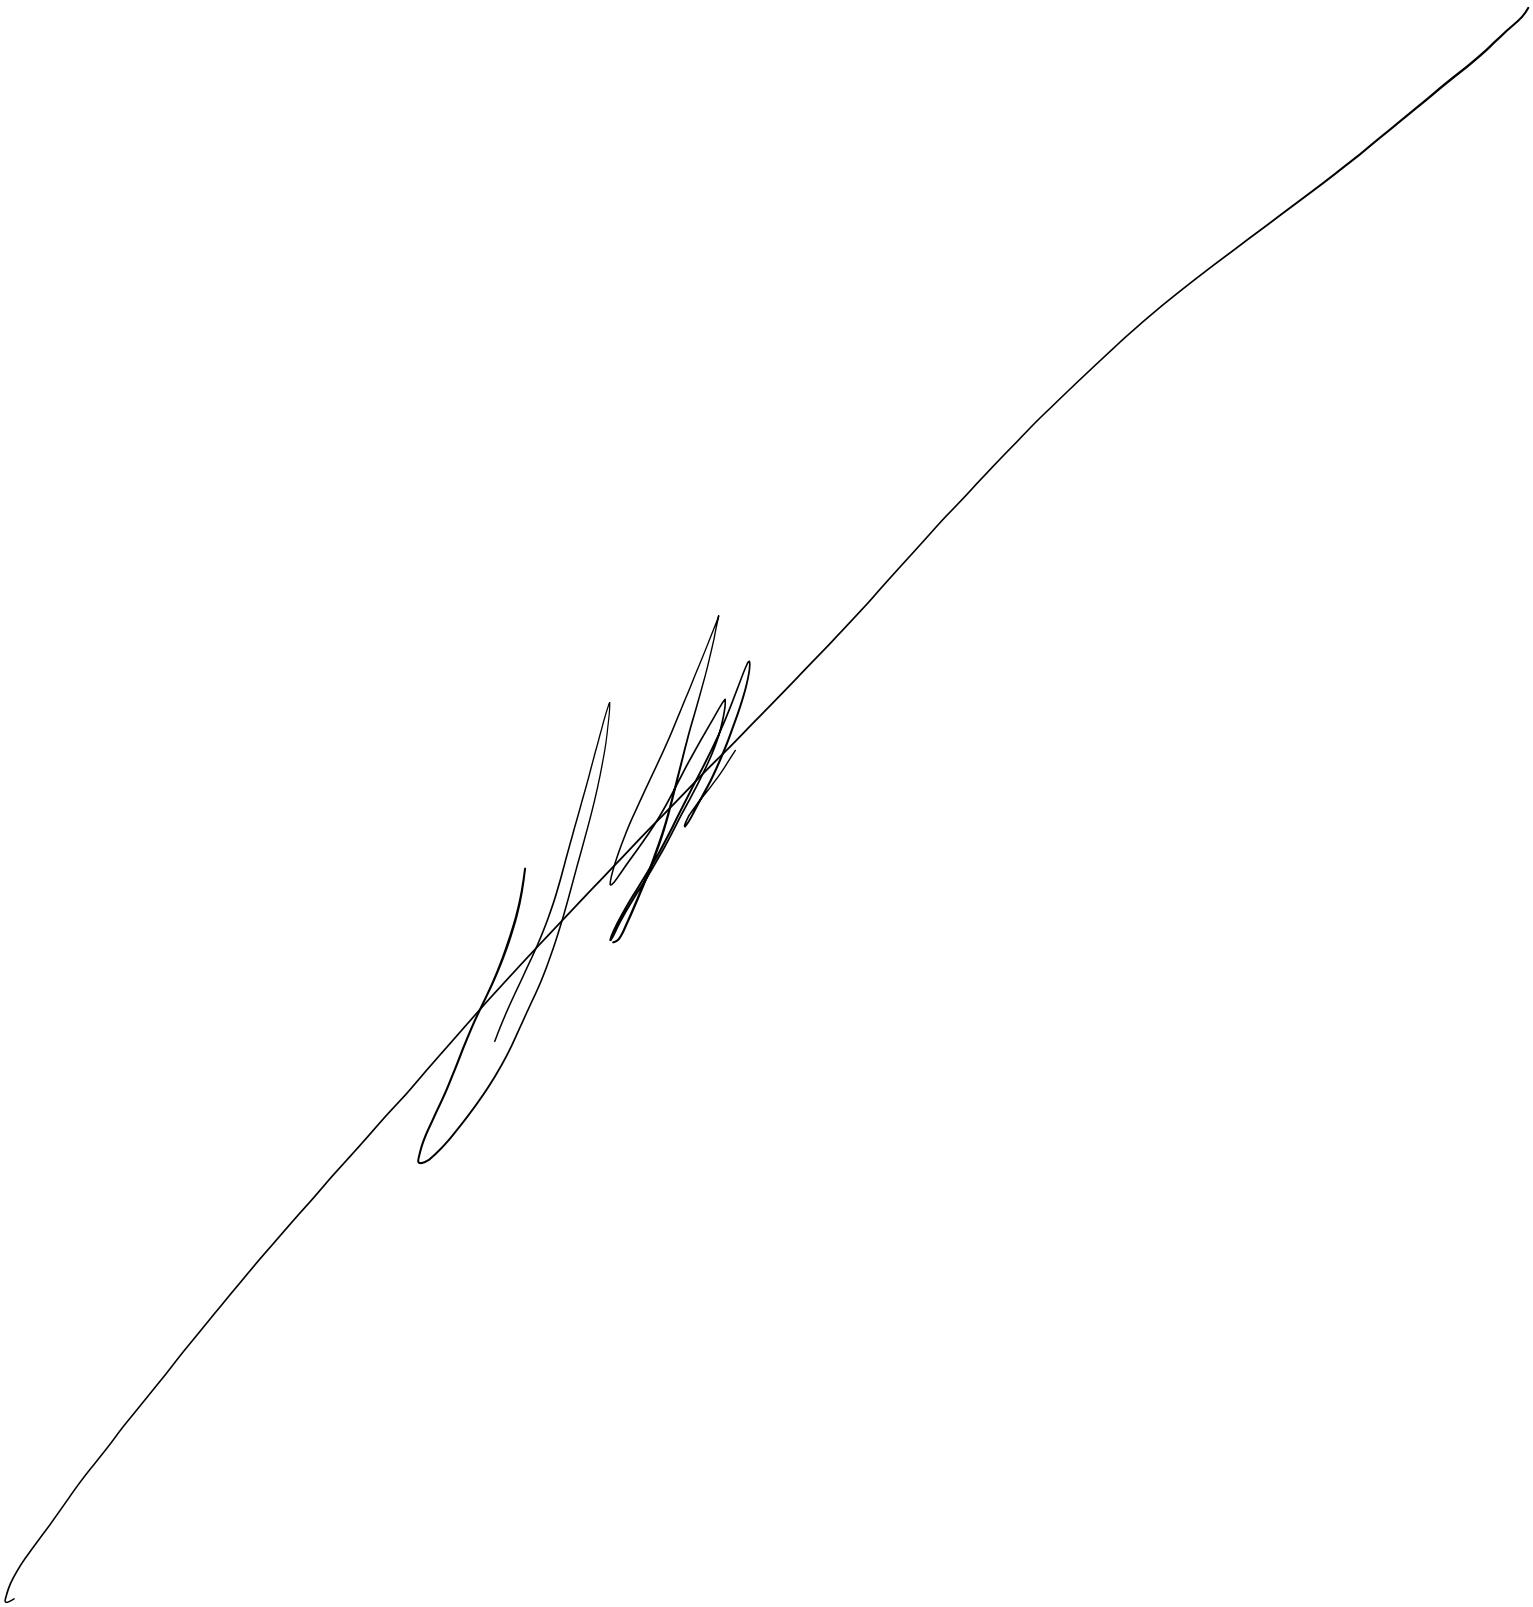
Health and Safety (HAS): Topics: SSHASP; PPE; IDW

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS Meeting; daily prep
0800: Set up on AS0301; hand clear 5'
0815: Drilling Commenced
0850: Pulling Core 30' to 40'
0925: Core pulled; setting well 35' TD

- Lithology is as Follows:
    - 30-33: SHELL; little to some sand – fine to very fine; little silt
    - 33-34.5: Sand – fine to very fine; little silt and shell
    - 34.5-35: SHELL; little sand – fine to very fine, silt, and clay
    - 35-35.5: CLAY; dense; little silt and shell
    - 35.5-37.5: SHELL; little sand – fine to very fine, silt, and clay
    - 37.5-40: SAND – VERY FINE AND SILT; dense tight formation



0945: Well set; begin hydration/development
1000: Hydration/development complete; grouting borehole
1015: Installation Complete; DL changing pipe table jaws
1045: repair complete; Drilling commenced on LC34-AS0302; previously hand cleared 5'
1115: Pulling Core 30' to 40'
1135: Core pulled; setting well 36' TD

- Lithology is as follows:
    - 30-34: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 34-36: SHELL; little to some silt; little sand – fine to very fine; trace clay
    - 36-38: SAND VERY FINE AND SILT; dense tight formation
    - 38-40: SAND COARSE TO FINE AND SHELL in coarse to pebble size

1200: Well set; begin hydration/development; GPI also taking lunch
1240: Hydration/development complete; grouting borehole
1255: Installation Complete
1310: Drilling Commenced on AS0303; location changed from angle well to vertical well after conversation with Mark Jonnet. Location hand cleared 5'
1340: Pulling Core 30' to 40'
1400: Core pulled; setting well 37' TD

- Lithology is as follows:
    - 30-32.5: SHELL; little sand – fine to very fine and silt
    - 32.5-35.0: SAND – FINE TO VERY FINE; little silt and shell
    - 35-37: SHELL; little sand – fine to very fine and silt; trace to little clay 36.5-37
    - 37-40: SAND – FINE TO VERY FINE AND SILT; trace shell and clay

1420: Well set; begin hydration/development
1440: Hydration/development complete; grouting borehole
1500: Installation complete; GPI conducting materials Inventory, offloading tank off of flatbed to gather materials for next week.
1535: Site Secure; Tt/GPI offsite

12/05/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Clear 76 degrees F windy

Health and Safety (HAS): Topics: Heat stress/hydration; PPE; IDW

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0730: CS at CCB assisting with MW sampling and resupplying crew
0830: CS at LC34; awaiting arrival of drillers
0950: GPI on site; unloading materials, putting tank back on truck for water; HAS Meeting; daily prep
1030: Set up on LC34-AS0309; Originally proposed to be an angle well but converted to vertical well
1040: Drilling Commenced
1110: Pulling Core 30' to 40'
1125: Core pulled; setting well 37' TD

- Lithology is as follows:
    - 30-33.5: SHELL; some sand – medium to very fine: trace silt
    - 33.5-35: SAND – FINE TO VERY FINE; little silt and shell
    - 35-37: SHELL; little sand – fine to very fine and silt
    - 37-40: SAND – MEDIUM TO VERY FINE; little to some silt; trace to little clay; little to some clay 37-38.5

1140: Well set; begin hydration/development; GPI offsite for lunch
1220: GPI on site; hydration/development complete; grouting borehole
1240: Installation complete; moving rig and equipment to install the eastern most wells across swale; using mud mats and a portable tank to drill well and access
1310: Set up on AS0338; hand clear 5'
1335: Drilling Commenced
1400: Pulling Core 30' to 40'
1410: Core pulled; No clay; setting well 40' TD

- Lithology is as follows:
    - 30-35: SAND – FINE TO VERY FINE; little silt and shell
    - 35-40: SHELL; little sand – medium to very fine; trace silt and clay 37-38

1430: Well set; begin hydration/development
1450: Hydration/development complete; grouting borehole
1510: Installation Complete
1520: Drilling Commenced on AS0337; previously hand cleared 5'
1605: Pulling Core
1620: Core pulled; no clay observed; small silt zone at 37'; no issue; will set 40' in am; mosquitos are absolutely unbearable and are not responding to bug spray; unable to Photo core due to core being damaged during transport

- Lithology is as follows:
    - 30-35: SAND – FINE TO VERY FINE; little silt and shell; silty zone 34-34.5
    - 35-40: SHELL; little sand – medium to very fine; trace silt and 37-38

1630: Site secured; Tt/GPI offsite

12/06/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Clear 76 degrees F windy

Health and Safety (HAS): Topics: Heat stress/hydration; PPE; IDW

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

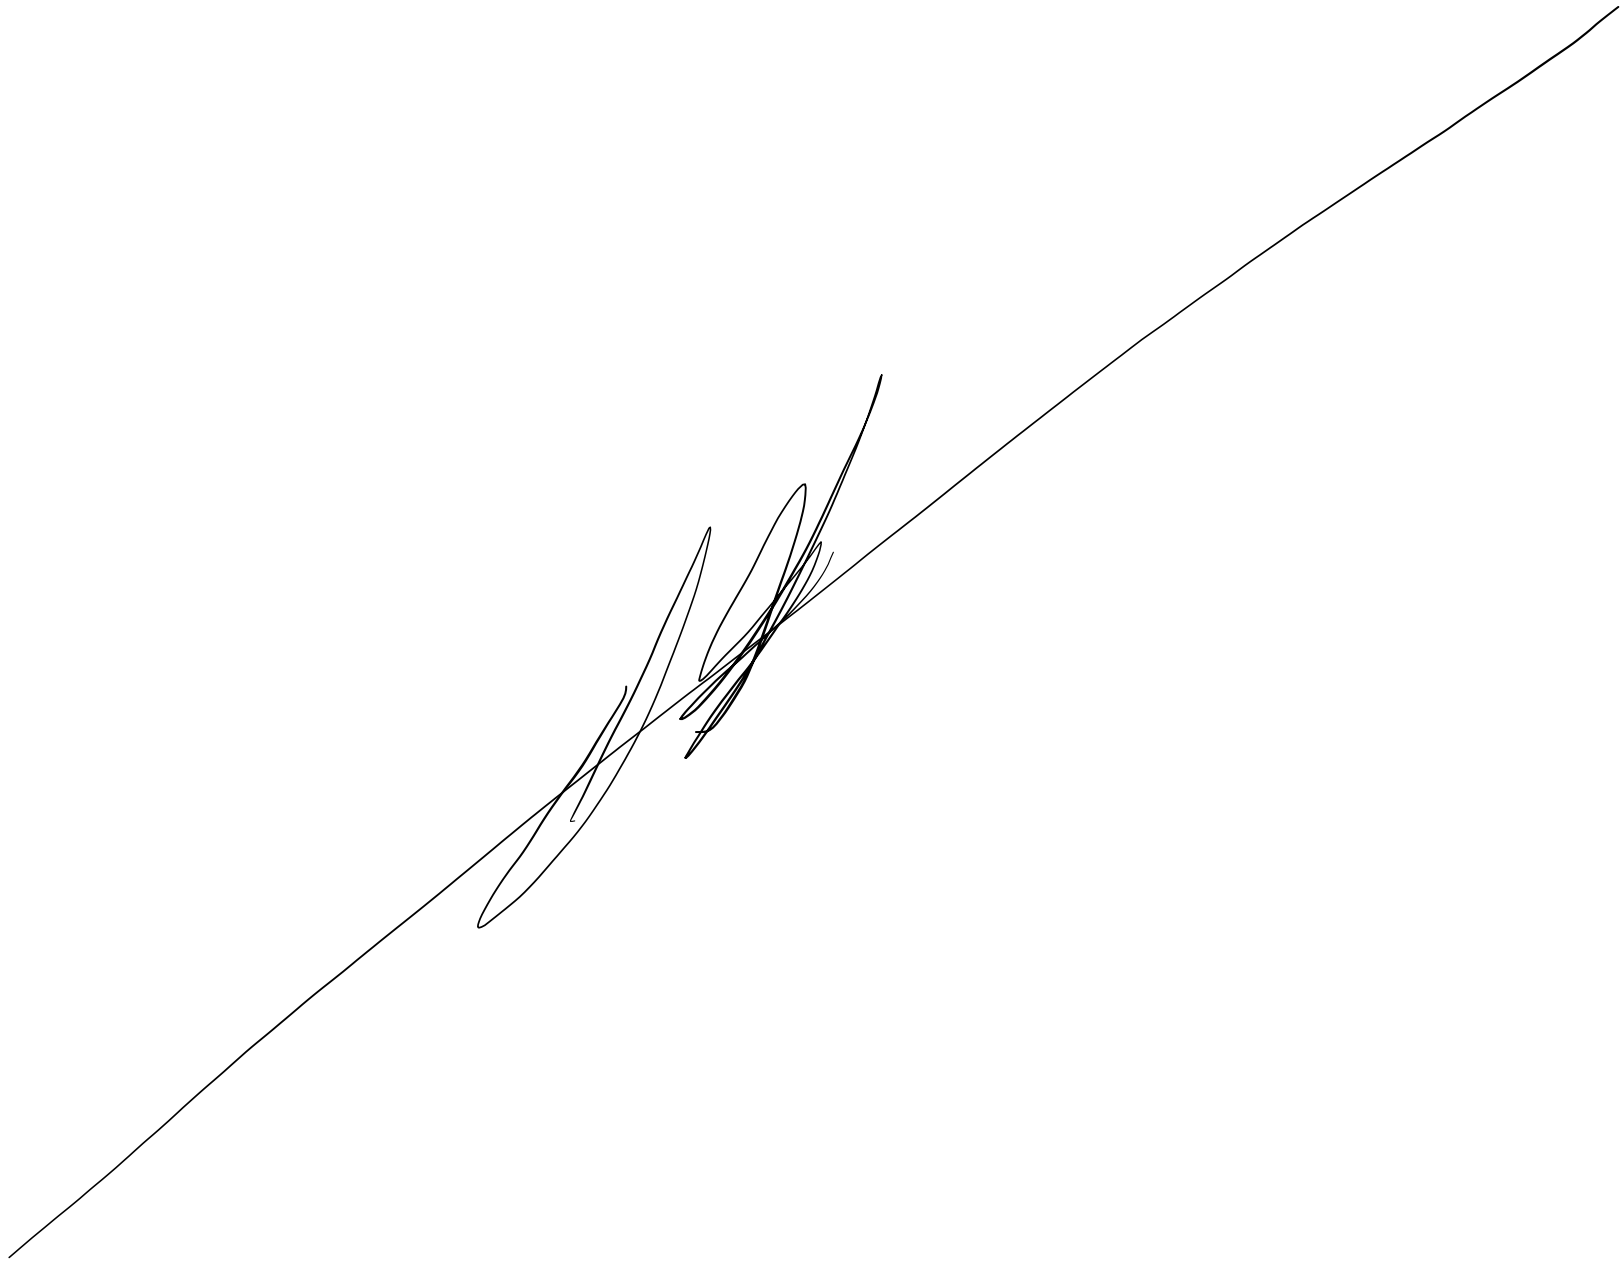
0700: Tt/GPI on site; HAS Meeting; Daily Prep
0745: Setting AS0337 40' TD
0805: Well set; begin hydration/development
0825: Hydration/development complete; grouting borehole
0845: Installation Complete
0900: Set up on IW0156 at Location E; hand clear 5'; proposed screen depth of 16' to 21'
0915: Drilling Commenced
0940: Setting well 16' to 21'
0950: Well set; grouting borehole

- Screen: 16'-21'
- 20/30 Sand: 21'-15'
- 30/65 Sand: 15'-13'
- Portland to surface

1005: Installation Complete
1015: Setting up on AS0334. Moved entry point 5' along road on distance arc from termination point to gain better access for rig because of palm tree; hand clear 5'; propose setting well 73.6 degrees, 41.7 (42') length; attempting to pull core 32' to 42'
1040: Drilling commenced
1100: Pulling Core 32' to 42'
1125: Core pulled; setting well 39' length

- Lithology is as follows:
    - 32-35 Length: SHELL; little to some sand – fine to very fine; little silt
    - 35-38.5 length: SAND – FINE TO VERY FINE; little silt and shell
    - 38-39 length: SHELL; little sand – fine to very fine and silt; trace clay
    - 39-39.5 length: CLAY; little sand — very fine and silt
    - 39.5-42 length: SHELL; little to some sand – fine to very fine and silt; trace to little clay

1140: Well set; begin hydration/development
1200: Hydration/development complete; grouting borehole
1225: Installation Complete



- GPI taking lunch

1255: GPI on site; setting up on LC34-AS0336; hand clear 5'
1315: Drilling Commenced
1350: Pulling Core 30' to 40'
1405: Core pulled; setting well 39' TD

- Lithology is as follows:
    - 30-31.5: SHELL; little to some sand – fine to very fine; little silt

- 31.5-35: SAND – FINE TO VERY FINE; little to some silt; trace to little shell; trace clay
- 35-39: SHELL; little to some sand – fine to very fine; little silt; trace clay
- 39-39.5: CLAY; little sand – very fine and silt
- 39.5-40: SHELL; little sand – fine to very fine

1420: Well set; begin hydration/development
1440: Hydration/development complete; grouting borehole
1500: Installation complete
1515: Set up on AS0335; recalculated angle and hypotenuse to achieve a total depth of 38' rather than 40' based on surrounding wells. Unable to pull core on this hole due to angle. Proposed angle – 64.7 (65 degrees); proposed length – 42'
1525: Drilling Commenced
1550: Setting well
1610: Well set; will develop and grout in the morning; mosquitos are out of control
1630: Site secured; Tt/GPI offsite

12/07/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Clear 76 degrees F windy

Health and Safety (HAS): Topics: Heat stress/hydration; PPE; IDW

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS Meeting; daily prep
0740: Begin development on AS0335
0755: Development complete; grouting borehole
0815: Installation complete on AS0335
0830: Setting up on AS0316; location is currently on mound of soil unable to be accessed with rig. Converting well into an angle well. 18' horizontal offsetting; based on average set depth of surrounding wells; will propose setting at 36'
0840: Confirmed with PM that proposed depth is adequate; New angle is 63.43 degrees (63 degrees), 40.25' (40') hypotenuse length.
0845: Drilling Commenced; setting well 63 degrees, 40.5' which should set well at 36.1' BLS at targeted termination point
0930: Setting well 40.5'
0950: Well set; begin hydration/development
1010: hydration/development complete; grouting borehole
1025: Installation Complete
1035: Set up on LC34-AS0310; moved entry point 5' off of proposed entry as it was too close to the building for work. New calculated angle is 57 degrees with a hypotenuse length 47.7 or 48'. Average of surrounding wells is 39.7 so still setting with original proposed depth of 40'
1045: Drilling Commenced
1125: Setting well 48' Length; O-Ring blew on hose fitting; spill contained with visquene. GPI repairing hose
1145: Repair complete
1155: Well set; begin hydration/development
1200: GPI taking lunch
1230: Hydration/development complete; grouting borehole
1300: Installation complete
1400: Set up on AS0339; proposed to PM to set total depth to 38' BLS based on surrounding well information; PM agreed; new angle = 51 degrees, 49' hypotenuse length.
1410: Drilling Commenced
1450: Issue with cylinder that was replaced last week; GPI troubleshooting
1600: Drilling resumed; repair complete
1615: At depth; setting well 49' hypotenuse length
1635: Well set; will hydrate and grout in the am
1650: Site secured; Tt/GPI offsite

12/08/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Clear 76 degrees F windy

Health and Safety (HAS): Topics: Heat stress/hydration; PPE; IDW

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS Meeting; daily prep; GPI replacing pin on pipe jaws
0800: Repair complete; Developing well
0820: Development complete; grouting borehole
0840: Installation Complete
0855: Set up on AS0319; hand clear 5'
0905: Drilling Commenced
0925: Pulling Core 30' to 40'
0940: Core pulled; setting well 37' TD

- Lithology is as follows:
    - 30-33: SHELL; little sand – fine to very fine and silt
    - 33-35: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 37-37: Gray to dark gray SHELL; little silt and sand – very fine
    - 37-39: CLAY; little to some sand – very fine, silt, and shell
    - 39-40: SHELL; little sand – medium to very fine; trace silt and clay

1000: Well set; begin hydration/development
1020: hydration/development complete; grouting borehole
1040: Installation complete

- AS and MW Installation complete east of the blockhouse; begin mobilizing equipment, tooling, and materials to West of blockhouse

1130: Set up on AS0395; hand clear 5'

- GPI taking Lunch

1200: Drilling Commenced on AS0395
1225: Pulling Core 30' to 40'
1240: Core pulled; setting well 36' TD

- Lithology is as follows:
    - 30-35: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 35-36.5: SHELL; little sand – fine to very fine and silt
    - 36.5-39: SHELL; little to some clay, silt, and sand – fine to very fine
    - 39-40: SHELL; little to some sand – medium to very fine

1255: Well set; begin hydration/development
1315: Hydration/development complete; grouting borehole
1335: Installation Complete
1340: Set up on AS0394; hand clear 5'
1345: Drilling Commenced
1410: Pulling core 30' to 40'
1425: Core pulled; setting well 38'

- Lithology is as follows:

- 30-32: SAND – FINE TO VERY FINE; little silt and shell
- 32-37.5: SAND – MEDIUM TO VERY FINE interbedded with SHELL, CLAY, and SILT
- 37.5-40: SHELL; some sand – coarse to very fine

1445: Well set; begin hydration/development
1505: Hydration/development complete; grouting borehole
1525: Installation complete
1535: Set up on AS0393; hand clear 5'
1545: Drillijng Commecned
1605: pulllig Core 30-40'
1620: Core pulled; setting well 38'

- Lithology is as follows:
  - 30-34: SAND – FINE TO VERY FINE; little to some silt; little shell
  - 34-38.5: SAND – FINE TO VERY FINE interbedded with SHELL, CLAY, and SILT
  - 38.5-40: SHELL; some sand – coarse to very fine

1640: Well set; will develop and grout in the am
1700: Site secured; Tt/GPI offsite

12/09/2022 **LC34 HS6** **112G08985**

	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Clear 76 degrees F windy

Health and Safety (HAS): Topics: Heat stress/hydration; PPE; IDW

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

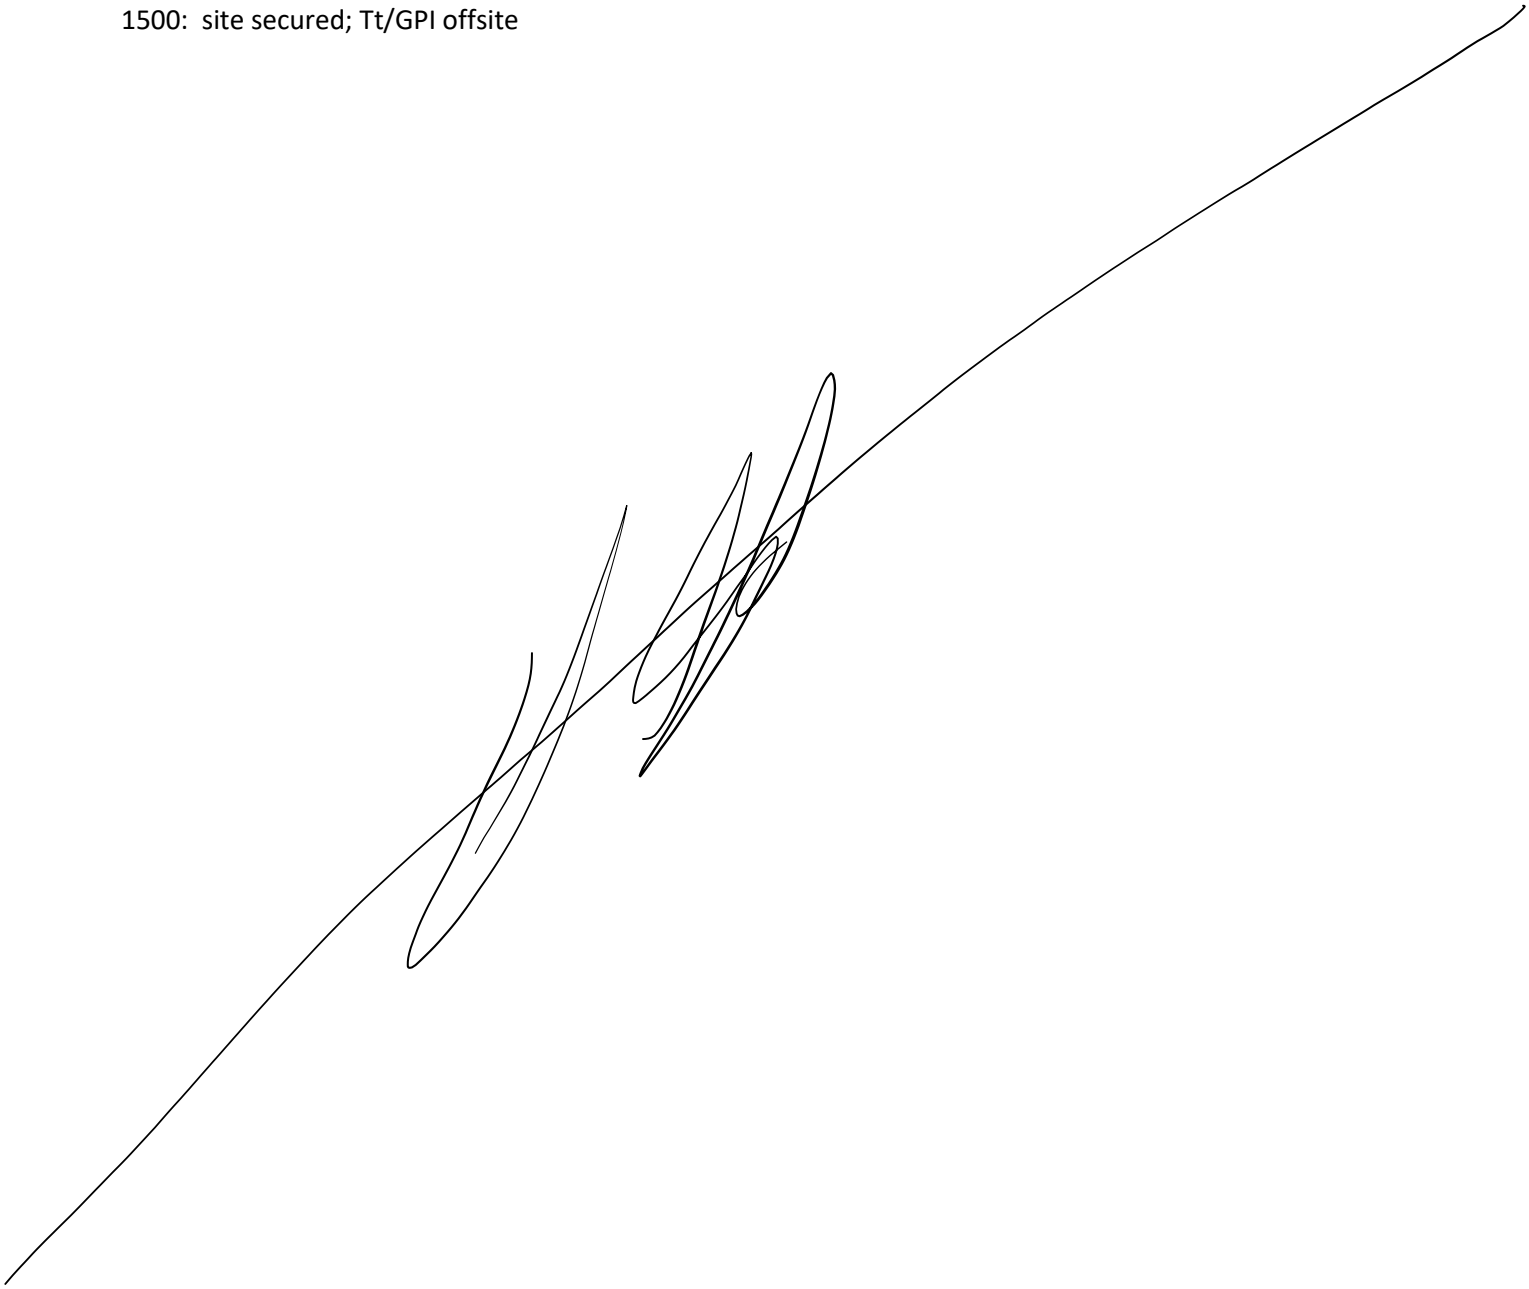
0700: Tt/GPI on site; HAS Meeting daily prep
0735: Begin development on AS0393
0750: Development complete; grouting borehole
0810: Installation complete
0820: Set up on AS0392; hand clear 5'
0830: Drilling Commenced
0850: Pulling Core 30' to 40'
0910: Core Pulled; setting well 38'

- Lithology is as Follows:
    - 30-32: SAND – COARSE TO VERY FINE
    - 32-33.5: sand – fine to very fine; little to some silt; little shell;
    - 33.5-35: SAND – VERY FINE; little to some silt; trace clay and shell
    - 35-40: INTERBEDDED SHELL, SILT, CLAY, AND SAND – VERY FINE

0925: Well set; begin hydration/development
0945: Hydration/development complete; grouting borehole
1005: Installation Complete
1015: Set up on AS0391; hand clear 5'
1020: Drilling Commenced
1040: Pulling Core 30' to 40'
1055: Core pulled; setting well 39' TD

- Lithology is as follows:
    - 30-32.5: SHELL; little sand – fine to very fine and silt
    - 32.5-35: SAND – FINE TO VERY FINE; little to some silt; little shell; trace clay
    - 35-37: SHELL; little sand – very fine and silt; trace clay
    - 37-39: SAND – FINE TO VERY FINE; little to some silt; little shell and clay
    - 39-40: SHELL; little to some sand – fine to very fine; trace clay

1115: Well set; begin hydration/development



- GPI taking lunch

1155: hydration/development complete; grouting borehole
1215: Installation complete
1225: Set up on AS0390; hand clear 5'
1235: Drilling Commenced
1255: Pulling Core 30' to 40'
1315: Core pulled; setting well 38' TD

- Lithology is as follows:
    - 30-33: SHELL; little to Somme sand – fine to very fine; little silt
    - 33-35: SAND – FINE TO VERY FINE; little to some silt; little shell

- 35-36: SHELL; little to some sand – fine to very fine and silt
- 36-38: SAND – FINE TO VERY FINE; little to some silt; little shell and clay; interbedded
- 38-39: SAND – VERY FINE; little to some silt and clay; moderately dense
- 39-40: SAND – MEDIUM TO VERY FINE and COARSE TO VERY COARSE GRAINED SHELL

1335: Well set; begin hydration/development
1355: hydration/development complete; grouting borehole
1415: Installation Complete
1435: Set up on AS0389; will begin drilling after repairs on rig on Monday
1500: site secured; Tt/GPI offsite

Health and Safety (HAS): Topics: SSHASP; Heat stress/hydration; PPE; IDW

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion. Begin Annual DNAPL Source Zone (DSZ) DPT GW Sampling Event

0730: Tt on site; in-house HAS Meeting; Calibrating PID; daily prep
0915: GPI on site; Full HAS Meeting with Tt/GPI crew; Explanation of tasks; pre work decon with PID verification; DL/JA repairing sonic rig (Fuel filter and jaw cylinder
1100: Sonic Rig Operational; DL/JA Offsite for lunch
1145: DL/JA on site
1200: Drilling Commenced on AS0389; previously hand cleared 5'
1220: Pulling core 30' to 40'
1235: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-32: SHELL; little to some sand – fine to very fine
    - 32-35: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 35-39: SHELL; little to some sand – very fine and silt; trace to little clay
    - 39-40: SAND – MEDIUM TO VERY FINE AND SHELL; little silt

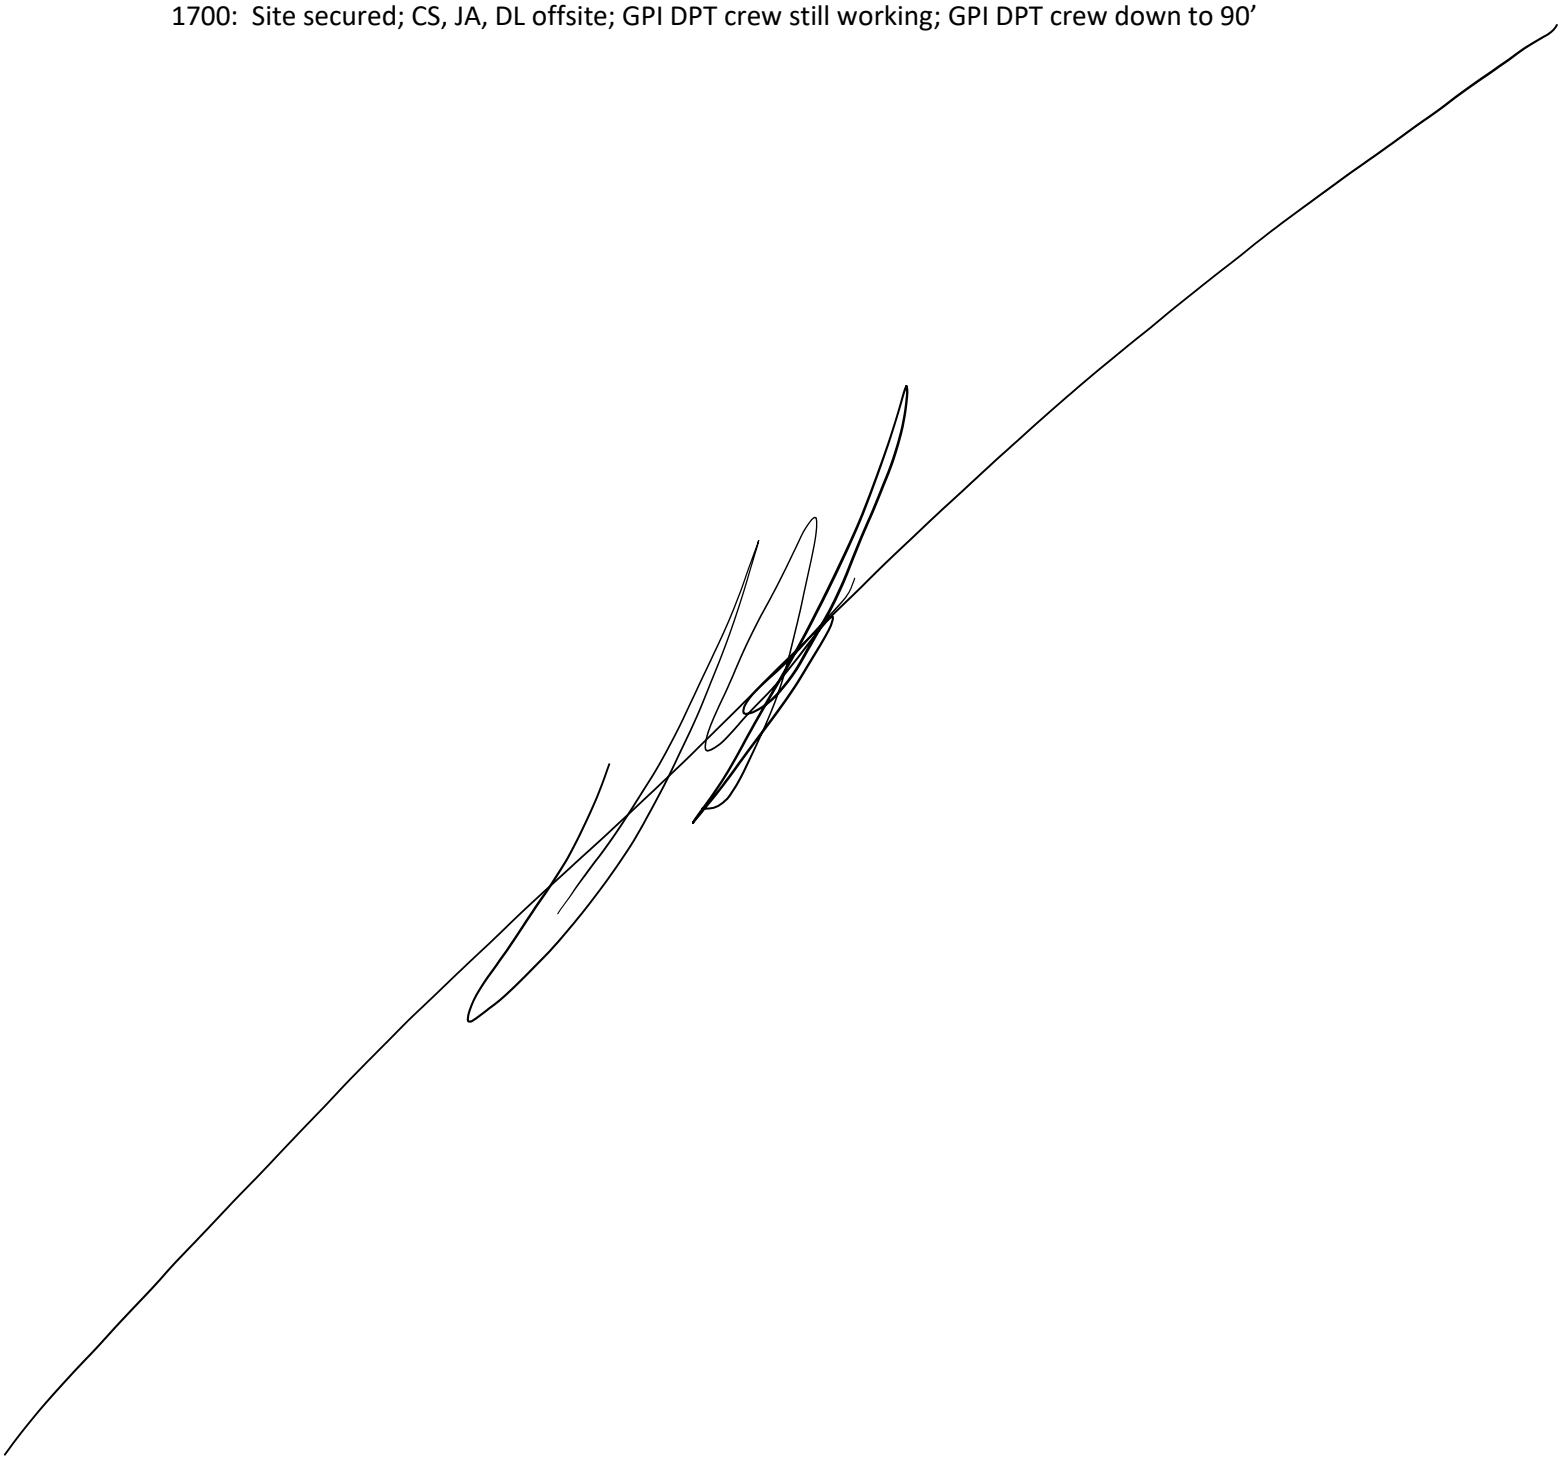
1250: Well set; begin hydration/development
1310: Hydration/development complete; grouting borehole
1330: Installation Complete
1335: Drilling Commenced on AS0388; previously hand cleared 5'
1405: Pulling Core 30' to 40'
1420: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-33: SHELL; little to some sand – fine to very fine
    - 33-35: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 35-38: SHELL; little to some sand – very fine and silt; trace to little clay
    - 38-40: SAND – MEDIUM TO VERY FINE AND SHELL; little silt

1435: Well set; begin hydration/development
1455: Hydration/Development complete; grouting borehole
1515: Installation Complete
1525: Drilling commenced on AS0382; previously hand cleared 5'
1545: Pulling core 30' to 40'

12/12/2022 **LC34 HS6** **112G08985**

1600: Core pulled; setting well 40' TD



- Lithology is as follows:
    - 30-33: SHELL; little to some sand – fine to very fine
    - 33-35: SAND – FINE TO VERY FINE; little to some silt and shell
    - 35-38: SHELL; little to some sand – very fine and silt; trace to little clay
    - 38-40: SAND – MEDIUM TO VERY FINE AND SHELL; little silt

1615: Well set; begin hydration/development

1635: Hydration/development complete; grouting borehole

1655: Installation complete

1700: Site secured; CS, JA, DL offsite; GPI DPT crew still working; GPI DPT crew down to 90'

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion. Continue Annual DNAPL Source Zone (DSZ) DPT GW Sampling Event

0650: Tt/GPI on site; HAS Meeting; daily prep; Drilling resumed on 595 and 598
0740: DL/JA/TS (Sonic Crew) set up on AS0381; hand clear 5'
0745: Drilling Commenced
0805: Pulling Core 30' to 40'
0820: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-33: SHELL; little to some sand – fine to very fine
    - 33-35: SAND – FINE TO VERY FINE; little to some silt and shell
    - 35-38: SHELL; little to some sand – very fine and silt; trace to little clay
    - 38-40: SAND – MEDIUM TO VERY FINE AND SHELL; little silt

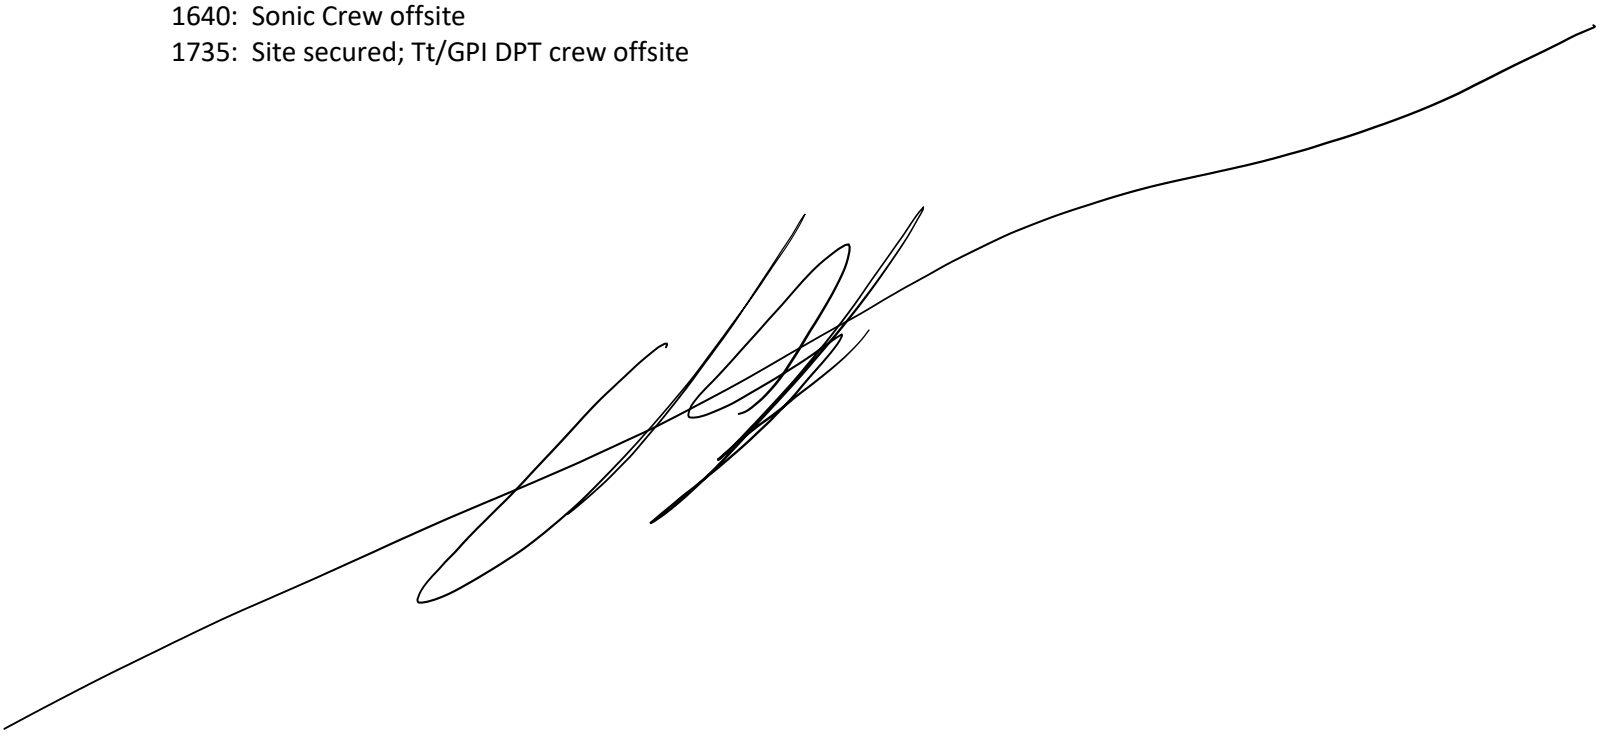
0835: Well set; begin hydration/development
0855: Hydration/development complete; grouting borehole
0915: Installation Complete
0925: Drilling Commenced on AS0380; hand cleared 5'
0945: Pulling Core 30' to 40'
0955: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-32: SHELL; little to some sand – fine to very fine
    - 32-35: SAND – FINE TO VERY FINE; little to some silt and shell
    - 35-38: SHELL; little to some sand – very fine and silt; trace clay
    - 38-40: SAND – MEDIUM TO VERY FINE AND SHELL; little silt

1015: Well set; begin hydration/development
1045: hydration/development complete; long hydration due to heavy rain; grouting borehole
1105: Installation complete
1120: Set up on AS0378. Moved away from curb 1'; hand clear 5'
1125: Drilling Commenced
1145: Pulling Core 30' to 40'
1205: Core pulled; setting well 40'; same lithology as AS0380

- Lithology is as follows:

- 30-32: SHELL; little to some sand – fine to very fine
- 32-35: SAND – FINE TO VERY FINE; little to some silt and shell
- 35-38: SHELL; little to some sand – very fine and silt; trace to little clay; silty clay bed 35-36
- 38-40: SAND – MEDIUM TO VERY FINE AND SHELL; little silt



1225: Well set; begin hydration/development
1245: Hydration/development complete; grouting borehole
1300: Installation Complete; unable to photo document AS0378 core due to heavy rain
1305: Set up on AS0387; hand clear 5'
1310: Drilling Commenced
1330: Pulling Core 30' to 40'
1345: Core pulled; setting well 40' TD

- Lithology is as follows:
  - 30-33: SHELL; little to some sand – fine to very fine
  - 33-35: SAND – FINE TO VERY FINE; little to some silt and shell
  - 35-38.5: SHELL; little to some sand – very fine and silt; trace clay
  - 38.5-40: SAND – MEDIUM TO VERY FINE AND SHELL; little silt

1400: Well Set; begin hydration/development
1420: Hydration/development complete; grouting borehole
1440: Installation Complete
1450: Drilling Commenced on AS0398; previously hand cleared 5'
1510: Pulling Core 30' to 40'
1525: Core pulled; setting well 40'

- Lithology is as follows:
  - 30-33: SHELL; little to some sand – fine to very fine
  - 33-35: SAND – FINE TO VERY FINE; little to some silt and shell
  - 35-38.5: SHELL; little to some sand – very fine and silt; trace clay
  - 38.5-40: SAND – MEDIUM TO VERY FINE AND SHELL; little silt

1545: Well set; begin hydration/development
1605: hydration/development complete; grouting borehole
1620: installation Complete
1640: Sonic Crew offsite
1735: Site secured; Tt/GPI DPT crew offsite

12/14/2022 **LC34 HS6** **112G08985**

Weather: Partly Cloudy 66 degrees F windy

Health and Safety (HAS): Topics: SSHASP; inclement Weather; PPE; IDW

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion. Continue Annual DNAPL Source Zone (DSZ) DPT GW Sampling Event

0645: GPI DPT crew on site with Tt
0700: CS on site; HAS Meeting; Daily prep
0730: Sonic crew set up on AS0399; hand clear 5'
0735: Drilling Commenced
0800: Pulling Core 30' to 40'
0815: Core pulled; setting well 38'

- Lithology is as follows:
    - 30-33: SHELL; little sand – fine to very fine and silt
    - 33-36: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 36-38: SHELL; little sand – fine to very fine and silt; trace clay
    - 38-40: SAND – MEDIUM TO VERY FINE; little silt and clay

0830: Well set; begin hydration/development
0845: Hydration/development complete; grouting borehole
0900: Installation Complete
0905: Drilling Commenced on AS0400; Previously hand cleared 5'
0925: Pulling Core 30' to 40'
0940: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-33: SHELL; little to some sand – fine to very fine
    - 33-36: SAND – FINE TO VERY FINE; little to some silt and shell; trace clay
    - 36-38.5: SHELL; little to some sand – very fine and silt; trace clay
    - 38.5-40: SAND – MEDIUM TO VERY FINE AND SHELL; little silt

0955: Well set; begin hydration/development
1010: Hydration/development complete; grouting borehole
1025: Installation complete
1030: Unable to drill AS0401. Obstruction in ground approximately 4.5' BLS. Moved location 2' away and still hit it. Calling CCSFS Utility locator to verify. Moving to AS0401
1035: Drilling Commenced on AS0402; previously hand cleared 5'

1055: Pulling Core 30’ to 40’
1110: Core pulled; setting well 38’ TD
- Lithology is as follows:
    - 30-33: SHELL; little sand – fine to very fine and silt
    - 33-35.5: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 35.5-38: SHELL; little sand – fine to very fine and silt; trace clay
    - 38-40: SAND – MEDIUM TO VERY FINE; little silt and clay

1125: Well set; begin hydration/development
1145: hydration/development complete; grouting borehole
1200: Installation Complete
1210: Drilling Commenced on AS0403; previously hand cleared 5’
1225: Pulling Core 30’ to 40’
1240: Core pulled; setting well 37’ TD
- Lithology is as follows:
    - 30-32: SHELL; little to some sand – fine to very fine; little silt
    - 32-35: SAND – FIJNE TO VERY FINE; little silt and shell
    - 35-35.5: Gray to Dark Gray SHELL; little sand – fine to very fine
    - 35.5-37: SHELL: little to some silt; little sand – fine to very fine, and clay
    - 37-39: SAND – FINE TO VERY FINE; little to some silt and clay; trace to little shell
    - 39-40: SAND – FINE TO VERY FINE AND SHELL; little silt; trace clay

1255: Well set; begin hydration/development
1315: Hydration/development complete; grouting borehole
1330: Installation Complete
1340: Drilling Commenced on AS0404; previously hand cleared 5’
1400: Pulling Core 30’ to 40’
1410: Core pulled; setting well 37’ TD
- Lithology is as follows:
    - 30-35: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 35-36: Gray to dark Gray SHELL
    - 36-37: SHELL; little to some sand — very fine and silt; trace clay
    - 37-39: CLAY; little to some sand – very fine and silt; trace shell
    - 39-40: SAND – MEDIUM TO VERY FINE; little shell and silt; trace clay

1425: Well set; Begin Hydration/development
1440: hydration/development complete; grouting borehole
1455: Installation Complete
1505: Drilling Commenced on AS0405; previously hand cleared 5’
1520: Pulling Core 30’ to 40’
1530: Core pulled; setting well 35’ TD
- Lithology is as follows:
    - 30-33: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 33-35: SHELl coarse to very coarse; little sand – fine to very fine
    - 35-38: SAND – VERY FINE; some silt; little to some clay; trace to little shell
    - 38-40: SAND – MEDIUM TO VERY FINE; little to some coarse to v. Coarse shell

1545: Well set; begin hydration/development
1605: Hydration/development complete; grouting borehole
1625: Installation Complete

12/14/2022 **LC34 HS6** **112G08985**

1645: Sonic Crew offsite
1700: Tt/GPI offsite

12/15/2022 **LC34 HS6** **112G08985**

Weather: Partly Cloudy72 degrees F windy; risk of severe weather today

Health and Safety (HAS): Topics: SSHASP; inclement Weather; PPE; IDW

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion. Continue Annual DNAPL Source Zone (DSZ) DPT GW Sampling Event

0700: CS on site; DPT crew and TT DPT crew already on site and working; DL called CS that he will be running late due to diesel fuel theft out of his work truck
0740: Set up on AS0406; hand clear 5'
0755: Drilling Commenced
0815: Pulling Core 30' to 40'
0825: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-35: SAND – FINE TO VERY FINE; little silt and shell; gray to dark gray shell 34-35
    - 35-38: SHELL: little to some sand – fine to very fine and silt; trace clay
    - 38-40: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SIZED SHELL

0840: Well set; begin hydration/development
0855: Hydration/development complete; grouting borehole
0915: Installation Complete
0925: Drilling Commenced on AS0407; previously hand cleared 5'
1000: Pulling Core 30' to 40'
1015: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-34: SAND – FINE TO VERY FINE; little silt and shell
    - 34-35: Gray to dark Gray SHELL; little sand – medium to very fine
    - 35-38: SHELL: little to some sand – fine to very fine and silt; trace clay
    - 38-40: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SIZED SHELL

1030: Well set; begin hydration/development
1045: Hydration/development complete; grouting borehole
1100: Installation complete
1110: Drilling Commenced on AS0419; moved 4' off if original location to grass instead of sidewalk
1125: Pulling Core 30' to 40'
1140: Core pulled; setting well 33' TD

- Lithology is as follows:

- 30-33: SAND – FINE TO VERY FINE; little to some shell; little silt
- 33-34: SAND – VERY FINE AND SILT; interbedded with silty clay; clay beds dense and relatively dry and stiff
- 34-35.5: SAND – VERY FINE; some silt; little shell; trace clay
- 35.5-38: SHELL; little sand – very fine and silt; trace clay
- 38-39: SHELL; some silt and clay; little sand – very fine; firm
- 39-40: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL; trace clay

1155: Well set; begin hydration/development
1230: Phase II lightning warning in effect; all personnel secured in vehicles
1330: Spoke with DL; GPI boss called him and stated that the drillers need to leave site and not wait out storm; CS informed Tt PM of this. GPI offsite; Tt packing coolers for sample delivery
1400: Site secured Tt offsite

Personnel:	Chuck Sorden	(CS)	Geologist	Tt

Weather: Partly Cloudy 58 degrees F windy

Health and Safety (HAS): Topics: SSHASP; PPE; IDW; Demob

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion. Complete Annual DNAPL Source Zone (DSZ) DPT GW Sampling Event

0650: Tt on site; GPI DPT crew on site; Sonic crew in route; HAS Meeting; daily prep
0740: Grouting borehole on AS0419
0755: Installation complete on AS0419
0805: Drilling Commenced on AS0418; previously hand cleared 5'
0820: Pulling Core 30' to 40'
0835: Core pulled; setting well 38' TD

- Lithology is as follows:
    - 30-31.5: SAND – COARSE TO VERY FINE; little shell and silt
    - 31.5-35: SAND – FINE TO VERY FINE; little to some silt
    - 35-38: SHELL; little to some silt; little sand – very fine and clay
    - 38-39: SAND – MEDIUM TO VERY FINE; little to some clay and silt
    - 39-40: SAND – MEDIUM TO FINE; some shell

0850: Well set; begin hydration/development
0905: Hydration/development complete; grouting borehole
0920: Installation complete
0930: Drilling Commenced on AS0417; previously hand cleared 5'
0945: Pulling Core 30' to 40'
1000: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-35: SAND – MEDIUM TO VERY FINE; little to some silt and shell; trace clay; thin silty clay bed at 34'
    - 35-36.5; SHELL; little to some silt; little sand – very fine and clay
    - 36.5-38: SAND – FINE TO VERY FINE; little to some silt; little shell; trace to little clay
    - 38-40: SAND – MEDIUM TO VERY FINE; some shell in coarse to very coarse sized; trace clay at 40'

1015: Hydration/Development complete; grouting borehole
1035: Installation Complete
1045: Drilling Commenced on AS0416; previously hand cleared 5'
1105: Pulling Core 30' to 40'

1120: Core pulled; setting well 35’ TD
- Lithology is as follows:
    - 30-33: SAND – FINE TO VERY FINE; little silt and shell
    - 33-35: Gray to Dark Gray SHELL; little sand — fine to very fine and silt; trace clay
    - 35-39: SAND – FINE TO VERY FINE; little to some silt; little clay in beds and throughout.
    - 39-40: SAND – MEDIUM TO VERY FINE; little to some silt; little clay and shell

1135: Well set; begin hydration/development
1155: Hydration/development complete; grouting borehole
1215: Installation complete
1225: Drilling Commenced in IW0160 (Location H) Monitoring well; setting screen 30’ to 35’; previously hand cleared 5’
1240: Setting well 35’
1250: Well set; grouting borehole
- Screen: 30’ to 35’
- 20/30 sand: 35’ to 29’
- 30/65 sand: 29’ to 27’
- Portland to surface

1305: Installation Complete
1310: Drilling Commenced on IW0159 at Location H; setting well screen 17’ to 27’
1320: Setting well
1335: Well set; grouting borehole
- Screen: 17’ to 27’
- 20/30 Sand: 27’ to 16’
- 30/65 Sand: 16’ to 14’
- Portland to surface

1355: Installation Complete
1430: GPI offsite
1530: CS offsite

12/19/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI
	Tyree Sanders	(TS)	Tech	GPI

Weather: Sunny 48 degrees F windy

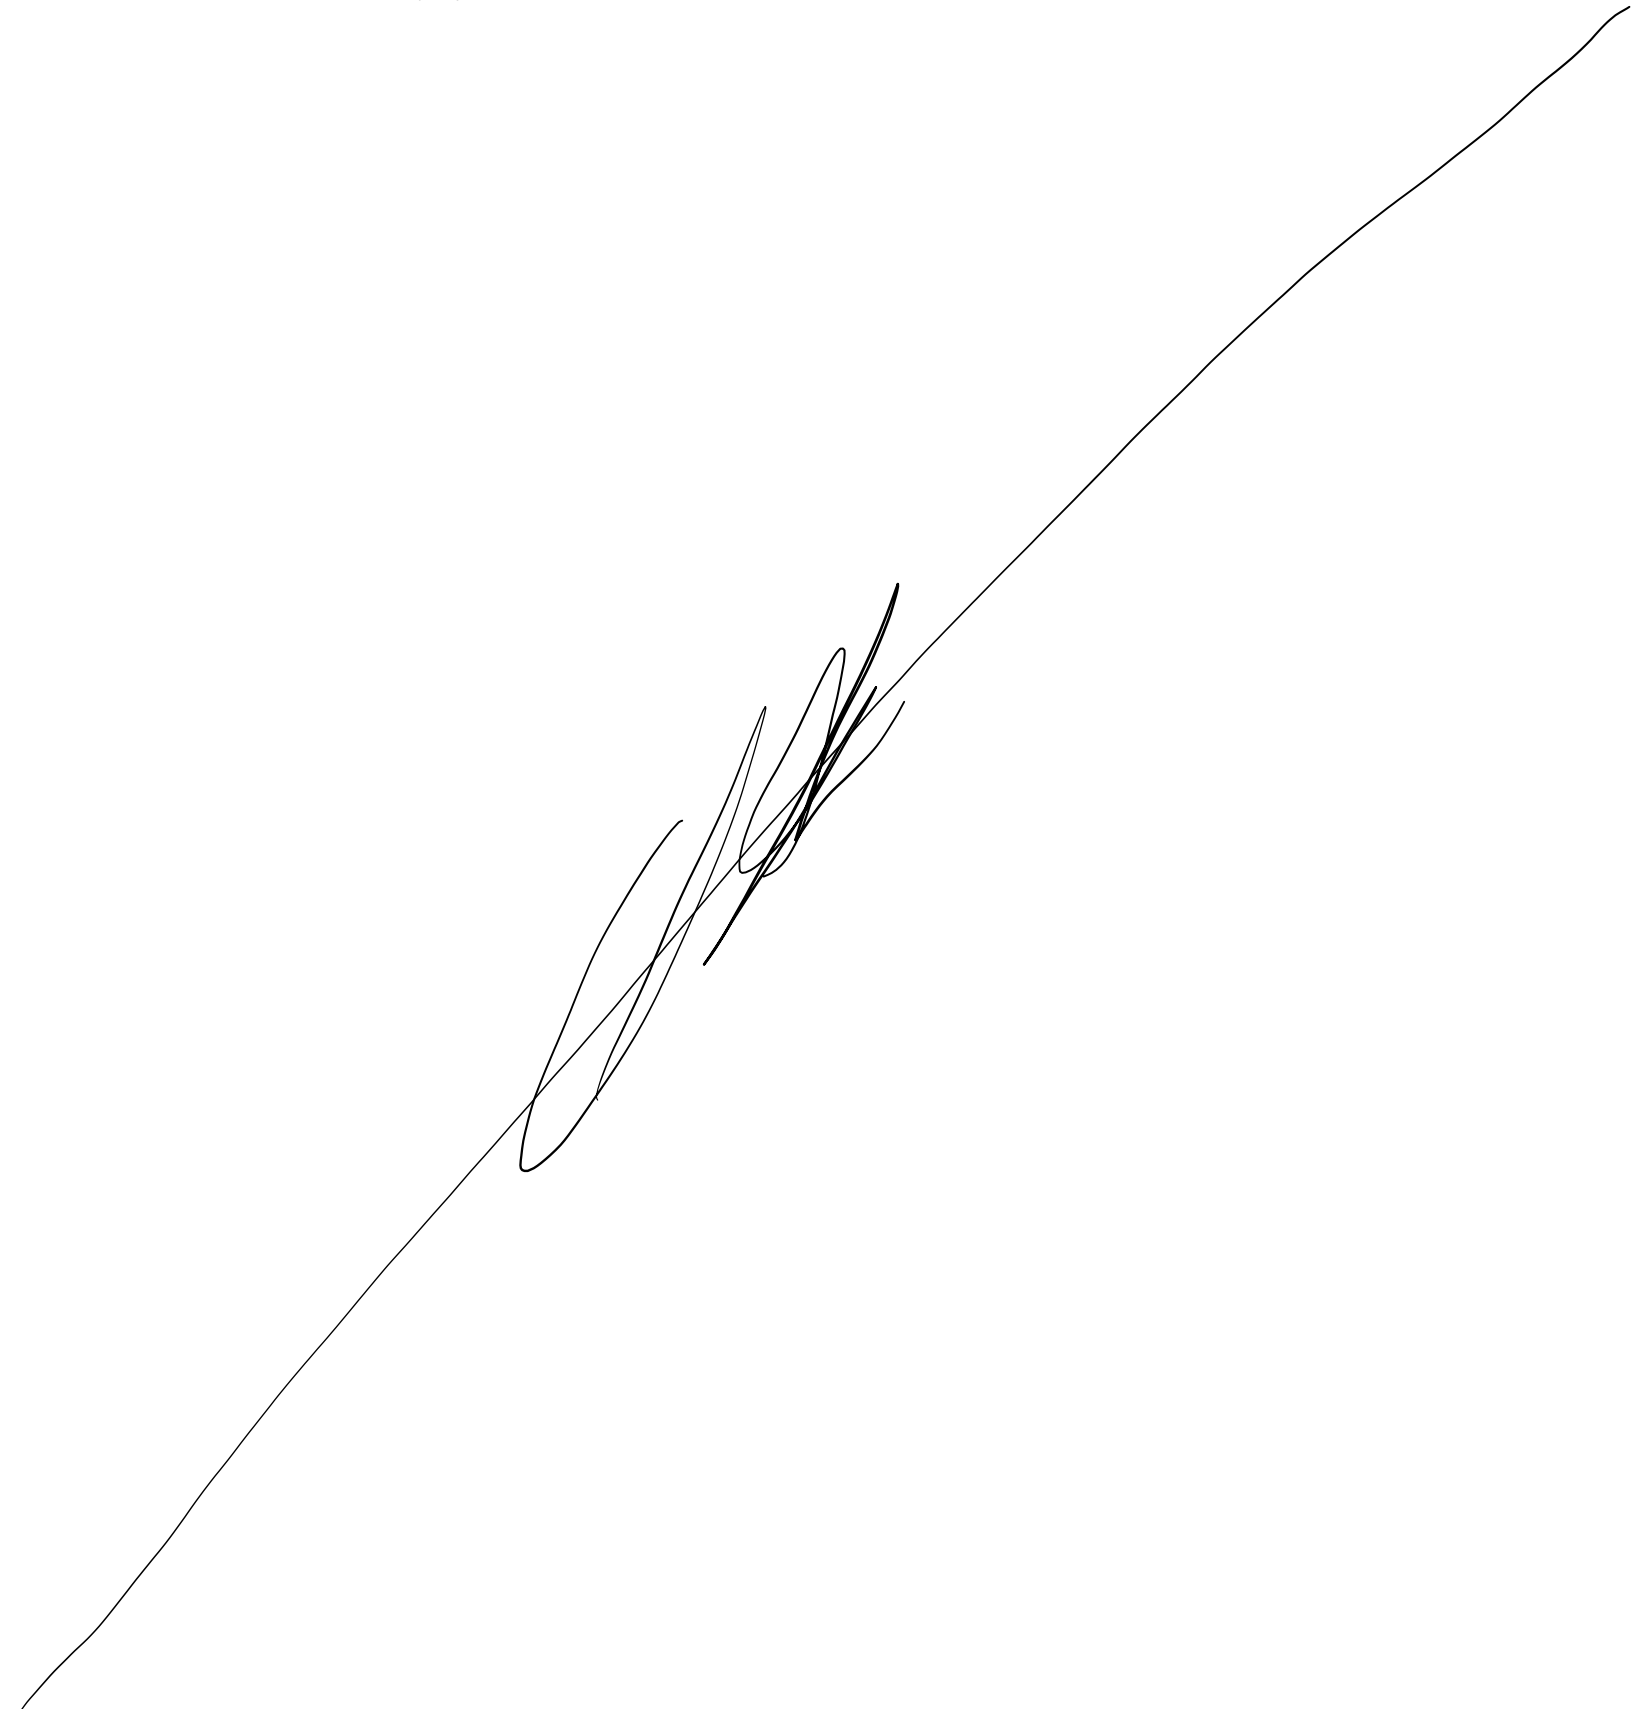
Health and Safety (HAS): Topics: SSHASP; PPE; IDW; Demob

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0715: CS on base;
0830: CS arrives at LC34; awaiting GPI sonic crew
0900: GPI on site; HAS Meeting; daily prep
0940: Set up on AS0415; hand clear 5'
0950: Pin sheared on pipe jaws; replacing
1030: Drilling Commenced on AS0415; repair complete
1045: Pulling Core 30' to 40'
1100: Core pulled; setting well 38' TD

- Lithology is as follows:
    - 30-32: SHELL; little sand – fine to very fine and silt
    - 32-35: SAND -FINE TO VERY FINE; little to some silt; little shell; trace clay
    - 35-38: SHELL; little silt and sand – fine to very fine; trace clay
    - 38-40: SAND – FINE TO VERY FINE; little to some silt; little clay and shell



1115: Well set; begin hydration/development
1130: GPI offsite for lunch
1150: GPI on site; hydration/development complete; grouting borehole
1220: Installation complete
1230: Drilling Commenced on AS0414; previously hand cleared 5'
1245: Pulling Core 30' to 40'
1300: Core pulled; setting well 38'

- Lithology is as follows:
    - 30-33: SHELL; little sand – fine to very fine and silt
    - 33-35: SAND -FINE TO VERY FINE; little to some silt; little shell; trace clay
    - 35-38: SHELL; little silt and sand – fine to very fine; trace clay
    - 38-40: SAND – FINE TO VERY FINE; little to some silt; little clay and shell

1315: Well set; begin hydration/development
1335: Hydration/development complete; grouting borehole
1350: Installation complete
1400: Drilling Commenced on AS0413; previously hand cleared 5'
1420: Pulling Core 30' to 40'
1440: Core pulled; setting well 39' TD

- Lithology is as follows:
    - 30-34: SHELL; little sand – fine to very fine and silt
    - 34-37: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 37-39: SHELL; little sand – fine to very fine; trace clay
    - 39-40: SAND – FINE TO VERY FINE; little to some silt; little clay and shell

1500: Well set; begin hydration/development
1520: Hydration/Development Complete; grouting borehole
1535: Installation Complete; replacing lower jaws on rig;
1600: Site secured; Tt/GPI off site

12/20/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI

	Tyree Sanders	(TS)	Tech	GPI

Weather: Sunny 48 degrees F windy

Health and Safety (HAS): Topics: SSHASP; PPE; IDW; Demob

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

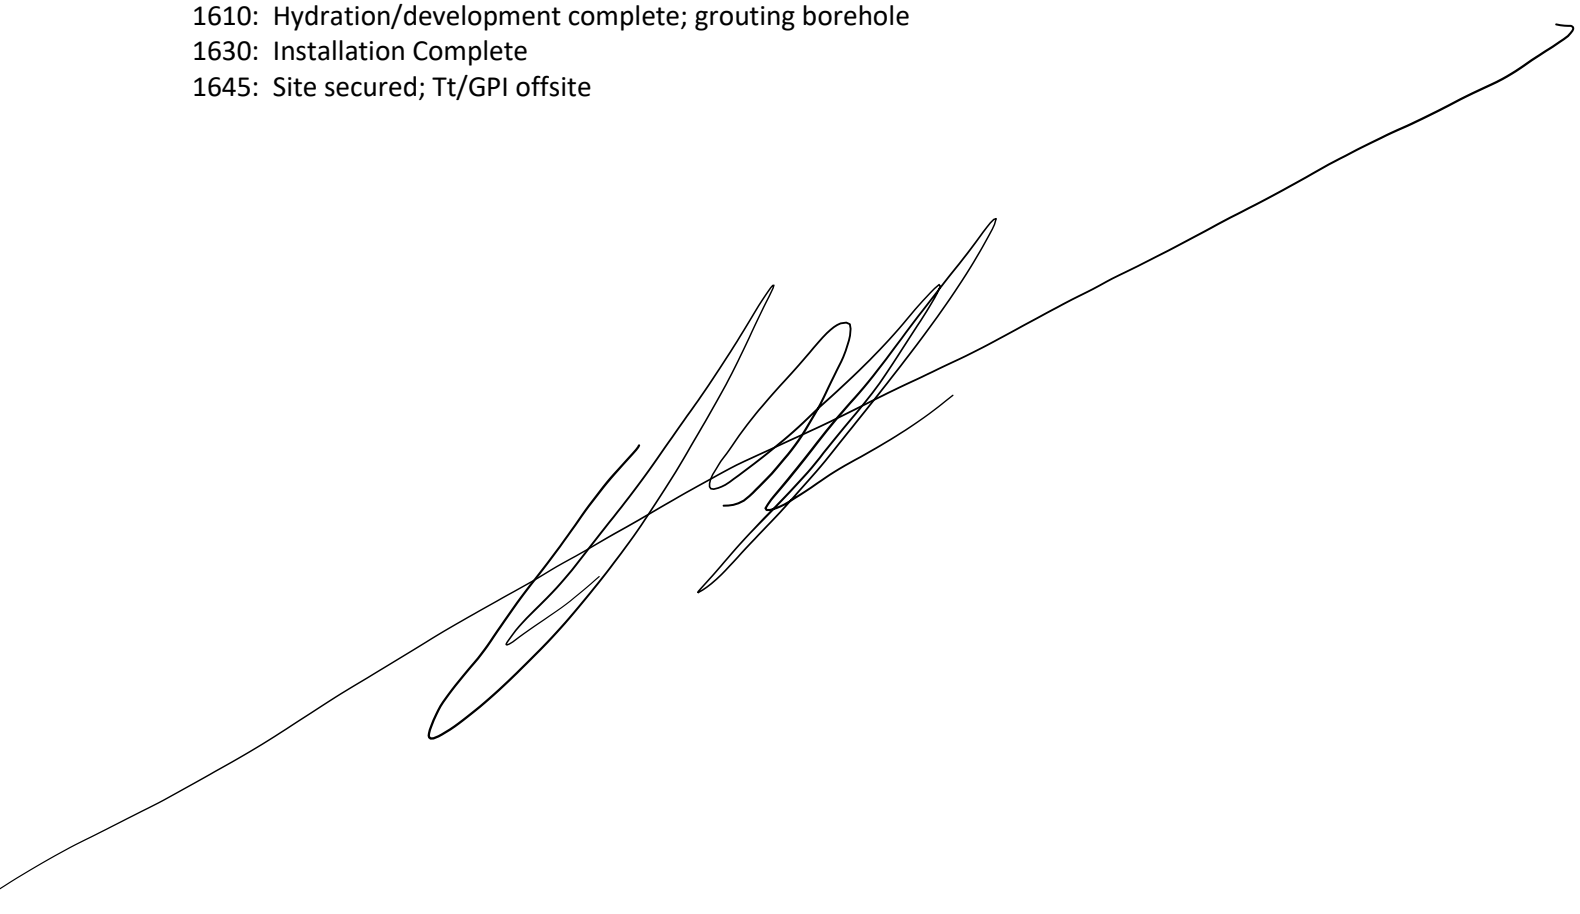
0700: Tt/GPI on site; HAS Meeting; Daily Prep
0755: Set up on AS0412; hand clear 5'
0805: Drilling Commenced
0825: Pulling Core
0840: Core pulled; setting well 39' TD

- Lithology is as follows:
    - 30-33: SHELL; little sand – fine to very fine and silt
    - 33-36: SAND – FIUNE TO VERY FINE; little to some silt; little shell; trace clay
    - 36-39: SHELL; little to some silt and sand – fine to very fine; trace to little clay
    - 39-40: SAND – MEDIUM TO VERY FINE; little to some clay and silt; little shell; dense clay 39-39.5 with shell below

0850: Well set; begin hydration/development
0910: hydration/development complete; grouting borehole
0925: Installation complete
0935: Drilling AS0411; previously hand cleared 5'; JA Developing IW0159 and IW0160
0950: Pulling Core 30' to 40'
1005: Core pulled; setting well 39' TD

- Lithology is as follows:
    - 30-33: SHELL; little sand – fine to very fine and silt
    - 33-36: SAND – FINE TO VERY FINE; little to some silt; little shell; trace clay
    - 36-39: SHELL; little to some silt and sand – fine to very fine; trace to little clay
    - 39-40: SAND – MEDIUM TO VERY FINE; little to some clay and silt; little shell; dense clay 39-39.5; shell below

1015: Well set; begin hydration/development
1035: Hydration/development complete; grouting borehole; development complete on Location H MWs
1050: Installation Complete
1055: Set up on AS0410; moved 2' east along line to get better distance from utility; hand clear 5'
1120 Drilling Commenced
1140: Pulling Core 30' to 40'
1155: Core pulled; setting well 38' TD



- Lithology is as follows:
    - 30-33: SHELL; little sand – fine to very fine and silt
    - 33-36: SAND – FIUNE TO VERY FINE; little to some silt; little shell; trace clay
    - 36-38: SHELL; little to some silt and sand – fine to very fine; trace to little clay
    - 38-40: SAND – MEDIUM TO VERY FINE; little to some shell; little silt and clay

1215: Well set; begin hydration/development
- GPI taking lunch

1245: Drilling resumed; hydration/development complete; grouting borehole
1310: Installation complete
1320: Drilling Commenced on AS0409; hand cleared 5'
1340: Pulling Core 30' to 40'
1355: Core pulled; setting well 40' TD
- Lithology is as follows:
    - 30-33: SHELL; little to some sand – fine to very fine; little silt
    - 33-35: SAND – FINE TO VERY FINE; little silt and shell
    - 35-39: SHELL; little to some sand – fine to very fine; little silt; trace clay
    - 39-40: SAND – MEDIUM TO VERY FINE; little to some shell; trace silt and clay

1410: Well set; begin hydration/development
1430: Hydration/development complete; grouting borehole
1445: Installation Complete
1450: Set up on AS0421; hand clear 5'
1455: Drilling Commenced
1515: Pulling Core 30' to 40'
1530: Core Pulled; setting well 40' TD
- Lithology is as follows:
    - 30-33: SHELL; little to some sand – fine to very fine; little silt
    - 33-35: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 35-39: SHELL; little to some sand – fine to very fine, silt and clay
    - 39-40: SAND – MEDIUM TO VERY FINE AND COARSE TO V. COARSE SHELL
- Unable to photograph core due to heavy rain

1550: Well set; begin hydration/development
1610: Hydration/development complete; grouting borehole
1630: Installation Complete
1645: Site secured; Tt/GPI offsite

12/21/2022 **LC34 HS6** **112G08985**

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS Meeting; daily prep
0740: Set up on AS0422; hand clear 5'; moved 2' west along line to avoid utility
0755: Drilling Commenced
0820: Pulling Core 30' to 40'
0835: Core pulled; setting well 40' TD

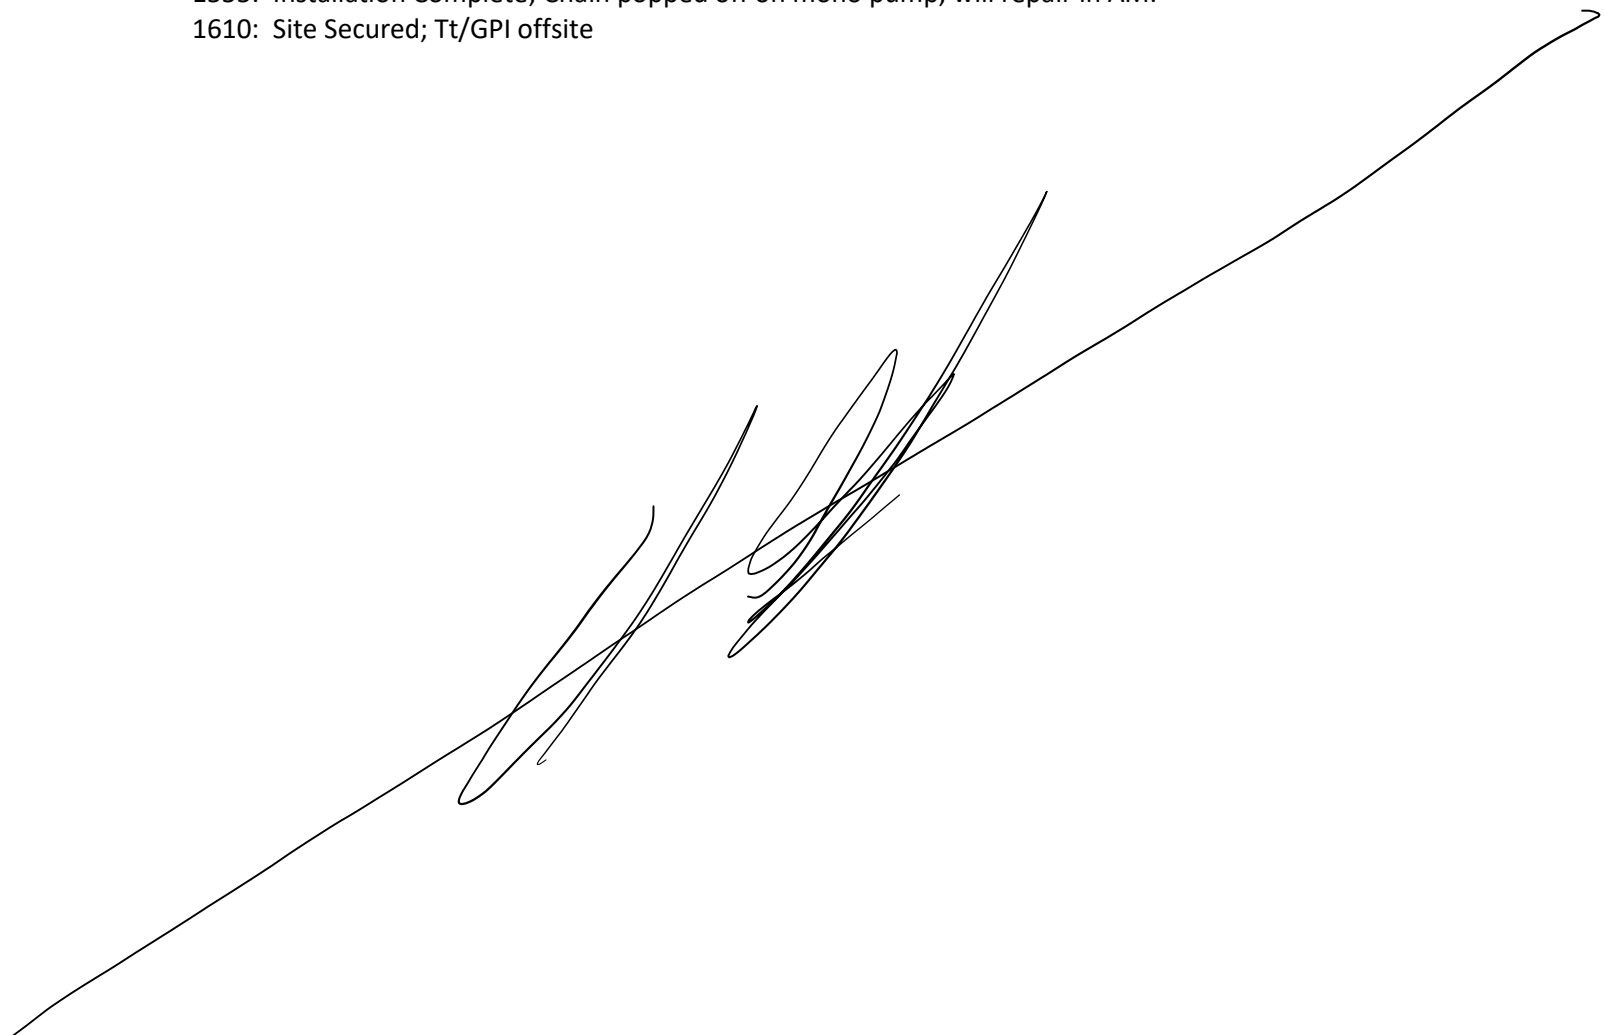
- Lithology is as follows:
    - 30-33.5: SHELL; little to some sand – fine to very fine
    - 33.5-35: SAND – FINE TO VERY FINE; little silt and shell
    - 35-39: SHELL; little to some sand – fine to very fine and silt; trace to little clay
    - 39-40: SAND – MEDIUM TO VERY FINE AND SHELL (C-VC); little silt; trace clay

0850: Well set; begin hydration/development
0910: hydration/development complete; grouting borehole
0930: Installation complete
0940: Drilling Commenced on AS0423; previously hand cleared 5'
0955: Pulling Core 30' to 40'
1005: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-32: SHELL; little sand – fine to very fine
    - 32-35: SAND – FINE TO VERY FINE; little to some silt; little shell; trace clay; silty clay bed 34.5-35
    - 35-36.5: SHELL; little sand – fine to very fine and silt; trace clay
    - 36.5-38: SAND – FINE TO VERY FINE; little shell and silt; trace clay
    - 38-40: SAND – MEDIUM TO VERY FINE AND COARSE TO V. COARSE SHELL; little silt

1020: Well set; begin hydration/development
1040: Hydration/development complete; grouting borehole
1055: Installation Complete
1105: Drilling Commenced on MW Location N (IW0168); previously hand cleared 5'; proposed setting screen 16' to 21'
1115: Setting well screen 16' to 21'
1135: Well set; grouting borehole

- Screen: 16' to 21'
- 20/30 Sand: 21' to 15'
- 30/65 Sand; 15' to 13'
- Portland to surface



1155: Installation Complete; GPI taking lunch
1230: GPI getting water for rig, moving to location M (IW0167)

1255: Drilling Commenced; hand cleared 5’
1315: Setting well screen 16’ to 21’
1330: Well set; grouting borehole
- Screen: 16’ to 21’
- 20/30 Sand: 21’ to 15’
- 30/65 Sand; 15’ to 13’
- Portland to surface

1340: Installation Complete
1350: Drilling Commenced on MW Location “I” (IW0162); setting screen 30’ to 35’; hand cleared 5’
1415: Setting Well screen 30’ to 35’
1425: Well set; grouting borehole
- Screen: 30’ to 35’
- 20/30 Sand: 35’ to 29’
- 30/65 Sand: 29’ to 27’

1435: Installation Complete
1440: Drilling Commenced on IW0161 at Location I; setting screen 17’ to 27’; previously hand cleared 5’
1515: Setting well 17’ to 27’
1535: Well set:
    - Screen: 17’ -27’
    - 20/30 Sand: 27’-16’
    - 30/65 Sand: 16’-14.’
- Grouting Borehole

1555: Installation Complete; Chain popped off on mono pump; will repair in AM.
1610: Site Secured; Tt/GPI offsite

12/22/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt

Weather: Dense Fog 57 degrees F

Health and Safety (HAS): Topics: SSHASP; PPE; IDW; Demob

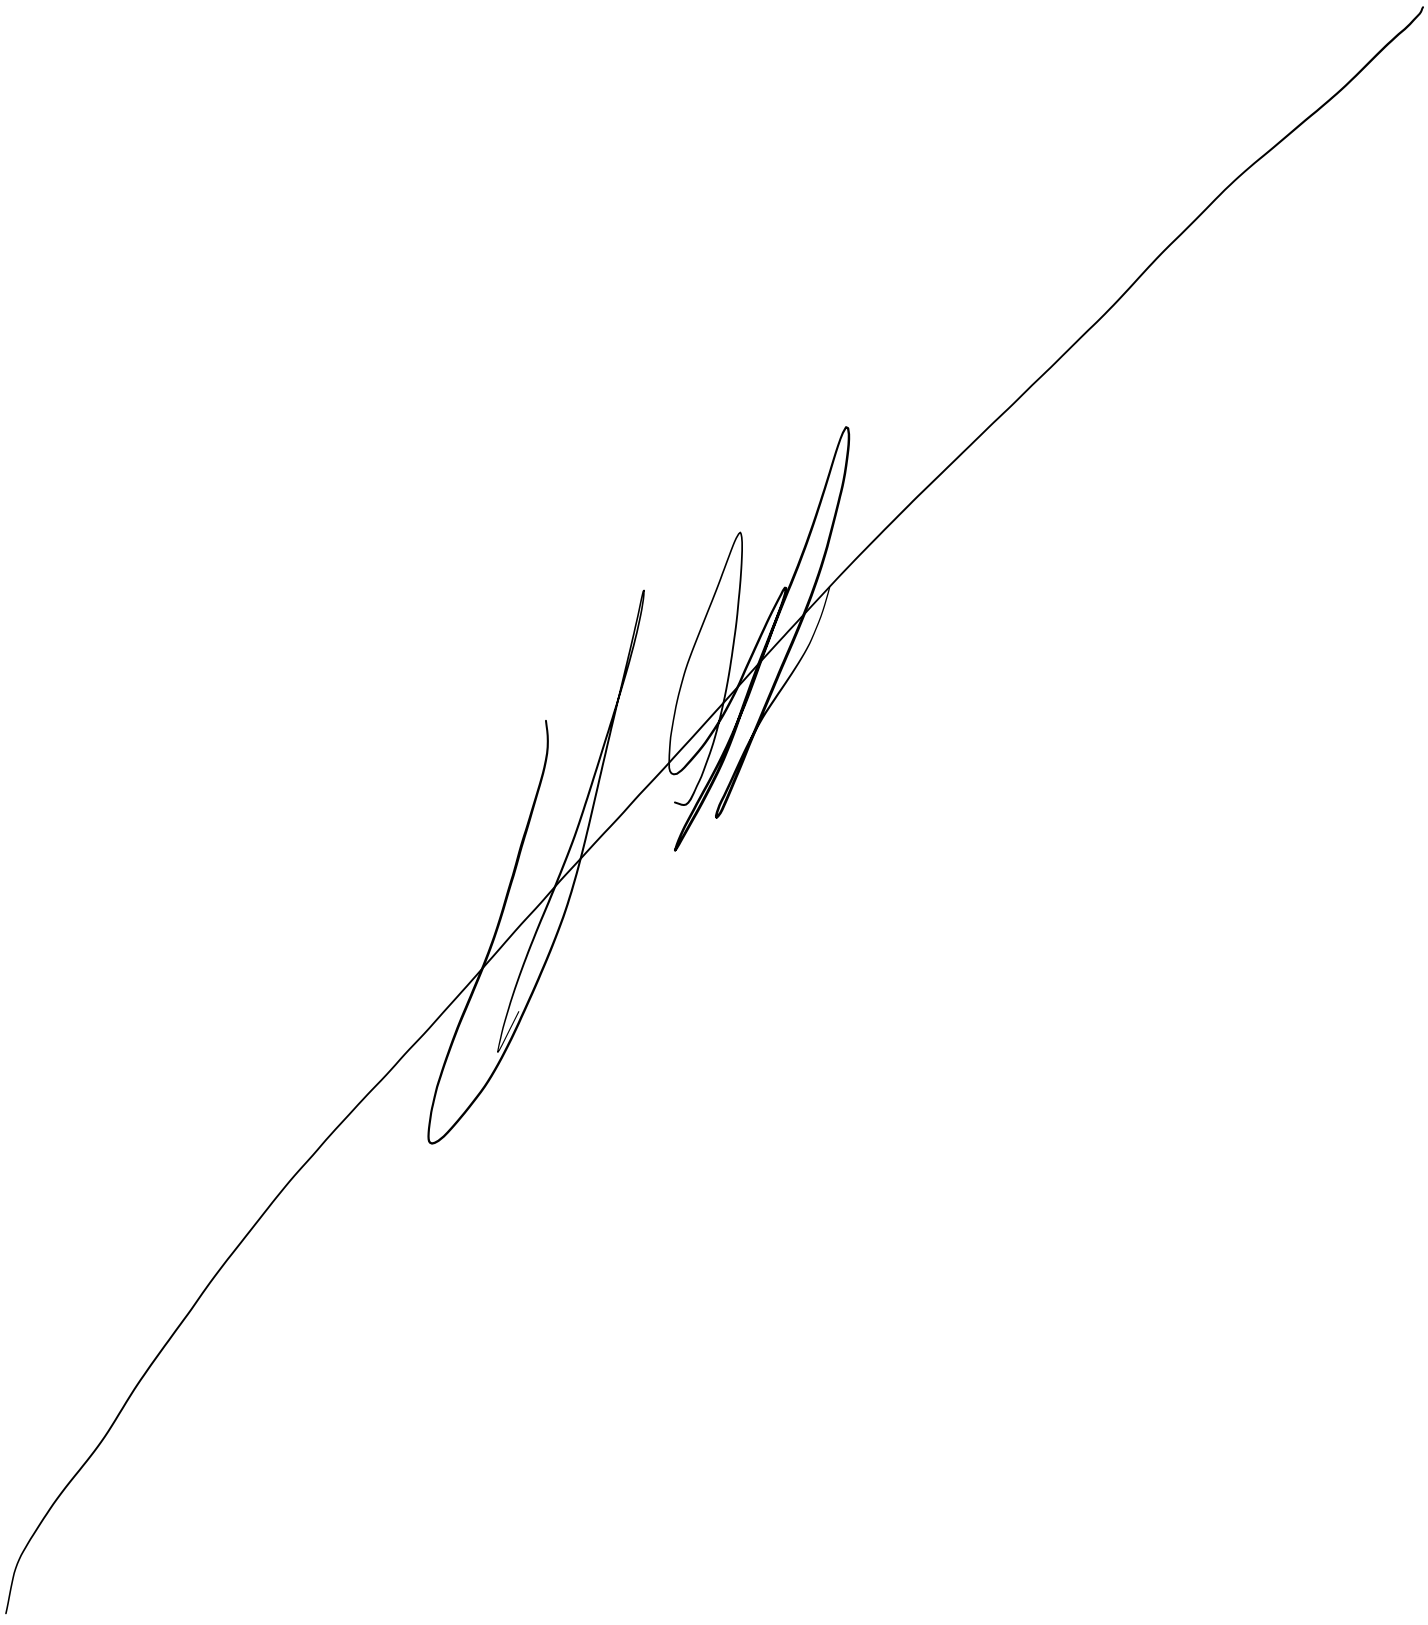
PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0655: Tt/GPI on site; HAS Meeting; Daily prep; repairing chain that popped off on mono pump
0830: Chain is broken, not just off; GPI calling mechanic
0900: Mechanic will be bringing new chain to replace. 0910: Set up on AS0424; hand clear 5'
0910: Drilling Commenced
0950: Claude Hairel (CH) on site to replace Mono pump chain
1025: Repair complete; pulling Core 30' to 40'
1040: Core pulled; setting well 39'

- Lithology is as follows:
    - 30-34: SHELL; little to some sand – fine to very fine; little silt
    - 34-35: SAND – FINE TO VERY FINE; some silt; little shell
    - 35-38: SHELL: little sand fine to very fine and silt; trace clay
    - 38-39: CLAY; little sand – very fine and silt
    - 39-40: SAND – FINE TO VERY FINE; some silt; little shell; trace clay

1055: Well set; begin hydration/development
1115: Hydration/development complete; grouting borehole
1130: Installation Complete
1140: GPI taking lunch
1220: Drilling Commenced on AS0425; previously hand cleared 5'
1245: Pulling Core 30' to 40'
1300: Core pulled; setting well 35'



- Lithology is as follows:
    - 30-33: SHELL; little to some sand – fine to very fine
    - 33-35: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 35-36: CLAY; little sand – very fine, silt, and shell; firm
    - 36-38: SHELL; little sand – fine to very fine, silt, and clay
    - 38-40: SAND – FINE TO VERY FINE; little to some silt; little shell and clay

1315: Well set; begin hydration/development
1335: Hydration/development complete; grouting borehole
1400: Installation Complete
1410: Drilling Commenced on AS0426; previously hand cleared 5'
1430: Pulling Core 30' to 40'
1450: Core pulled; setting well 38' TD

- Lithology is as follows:
    - 30-33: SHELL; little to some sand – fine to very fine; little silt
    - 33-36: SAND – FINE TO VERY FINE; little to some silt; trace to little clay; clayey 35-35.5
    - 36-38: SHELL; little sand – fine to very fine and silt; trace clay

- 38-40: SAND – FINE TO VERY FINE; little to some silt; little shell; trace clay

1510: Well set; begin hydration/development
1530: Hydration/development complete; grouting borehole
1550: Installation Complete
1600: Drilling Commenced on AS0427; previously hand cleared 5’
1630: Down to 30’; will pull core in AM; site secured; Tt/GPI offsite

12/23/2022 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI
	Tyree Sanders	(TS)	Tech	GPI

Weather: Sunny 71 degrees F

Health and Safety (HAS): Topics: SSHASP; PPE; IDW; Demob

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS Meeting; Daily Prep
0740: Pulling Core on AS0427
0745: Blown hydraulic line on table. Fluid contained
0800: GPI offsite to replace hose
0930: GPI on site; replacing hose
0950: Repair complete; drilling resumed; pulling core on AS0427 30' to 40'
1005: Core pulled; setting well 38' TD

- Lithology is as follows:
    - 30-34: SAND – FINE TO VERY FINE; little to some shell and silt; Shelly from 30-31.5
    - 34-38: SHELL; little to some sand – fine to very fine and silt; trace to little clay
    - 38-40: SAND – FINE TO VERY FINE; some silt; little to some clay. Dense clay bed 39.5;

1025: Well set; begin hydration/development
1045: Hydration/development complete; grouting borehole
1105: Installation Complete; conducting site cleanup

01/04/2023 **LC34 HS6** **112G08985**

Health and Safety (HAS): Topics: SSHASP; PPE; IDW; Heat Stress

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0730: CS on site; managing IDW
0900: GPI on site; HAS Meeting; daily prep; unloading materials and loading tank for water
0940: Set up on AS0428; hand clear 5'
0950: Drilling Commenced
1010: Pulling Core 30' to 40'
1025: Core pulled; setting well 40' TD.

- Lithology is as follows:
    - 30-35: SAND – FINE TO VERY FINE; little to some shell; little silt
    - 35-38.5: SAND – FINE TO VERY FINE; little to some silt; little shell; trace to little clay
    - 38.5-40: SAND – MEDIUM TO VERY FINE; little to some silt; little shell

1040: Well set; begin hydration/development

- GPI taking lunch

1110: GPI on site; hydration/development complete; grouting borehole
1130: Installation Complete
1135: Set up on AS0429; hand clear 5'
1140: Drilling Commenced
1200: Pulling Core 30' to 40'
1215: Core pulled; setting well 36' TD

- Lithology is as follows:
    - 30-34: SAND – FINE TO VERY FINE; little to some shell and silt
    - 34-36: SHELL; little sand – fine to very fine, silt, and clay
    - 36-37: CLAY; little to some shell and sand – fine to very fine; little silt
    - 37-40: SAND – MEDIUM TO VERY FINE; little silt; trace to little clay

1230: Well set; begin hydration/development
1245: Hydration/development complete; grouting borehole
1300: Installation complete
1305: Set up on AS0430; hand clear 5'
1310: Drilling Commenced
1340: Pulling Core 30' to 40'
1355: Core pulled; setting well 37' TD

- Lithology is as follows:
    - 30-35: SAND – FINE TO VERY FINE; little to some shell; little silt
    - 35-37: SHELL; little sand – fine to very fine and silt; trace clay
    - 37-38: SAND – FIEN TO VERY FINE; little to some silt; little shell and clay
    - 38-40: SAND – MEDIUM TO VERY FINE; little silt and shell; trace clay

1410: Well set; begin hydration/development

1430: Hydration/development complete; grouting borehole
1445: Installation Complete
1450: Drilling Commenced on AS0431; previously hand cleared 5’
1510: Pulling Core 30’ to 40’
1525: Core pulled; setting well 40’ TD

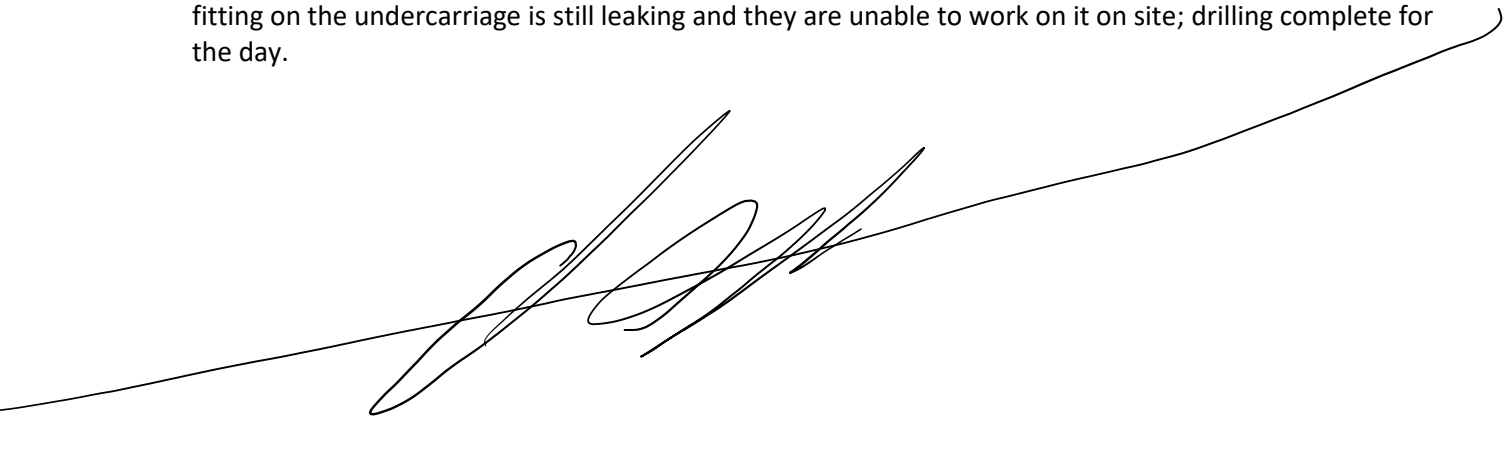
- Lithology is as follows:
    - 30-35: SAND – FINE TO VERY FINE; little to some shell; little silt
    - 35-38: SHELL; little sand – fine to very fine and silt; trace clay
    - 38-40: SAND – MEDIUM TO VERY FINE; little shell and silt; trace clay any 40’

1535: Well set; begin hydration/development
1555: Hydration/development complete; grouting borehole
1615: Installation Complete
1630: Site secured; Tt/GPI offsite

01/05/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI
	David Galvan	(DG)	Tech	GPI

Weather: Sunny 71 degrees F



Health and Safety (HAS): Topics: SSHASP; PPE; IDW; Heat Stress

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI onsite; HAS Meeting; daily prep
0750: Setting up on AS0384 which is a preexisting angle well; recalculating angle to place bottom of screen at 37' TD; Surveyed bottoms do not line up with lines. Setting up rig to be roughly in line with 407and 395.
0800: Drilling Commenced on AS0384; Angle – 60.50 degrees, 42.5' hypotenuse length putting the bottom of the screen at 37' TD per discussions with Mark Jonnet (MJ) – Tt PM
0825: Setting Well 42.5' Length
0835: Well set; begin hydration/development
0905: Hydration/development complete; grouting borehole
0920: Installation Complete
0930: Set up on AS0383; Surveyed entry and bottom stakes seems a bit off. 383 should be in line with 393 and 404. Moved entry point roughly 4' west in arc to put more in line with row; setting well 55 degrees; 46.5' to set bottom of screen at 38'
0940: Drilling Commenced
1010: Setting well 46.5' length
1025: Well set; begin hydration/development
- GPI taking lunch

1055: GPI on site; Hydration/Development complete; grouting borehole
1125: Installation complete
1140: Set up on AS0377 (Angle Well); setting well per spec to set bottom of screen at 40' TD based on cores from AS0378 and AS0380. Setting well 52 degrees, 50.5' hypotenuse length
1150: Drilling Commenced
1230: Leaking hydraulic hose on undercarriage of rig, GPI repairing; spill contained on visquene
1345: Drilling resumed
1350: Setting well
1405: Well set; begin hydration/development
1410: Heavy rain
1450: Heavy rain ended; hydration/development complete; grouting borehole
1515: Installation Complete; repair earlier was not a permanent fix. Rig will have to go back to shop as fitting on the undercarriage is still leaking and they are unable to work on it on site; drilling complete for the day.

01/09/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI
	David Galvan	(DG)	Tech	GPI

Weather: Sunny 71 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Heat Stress

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

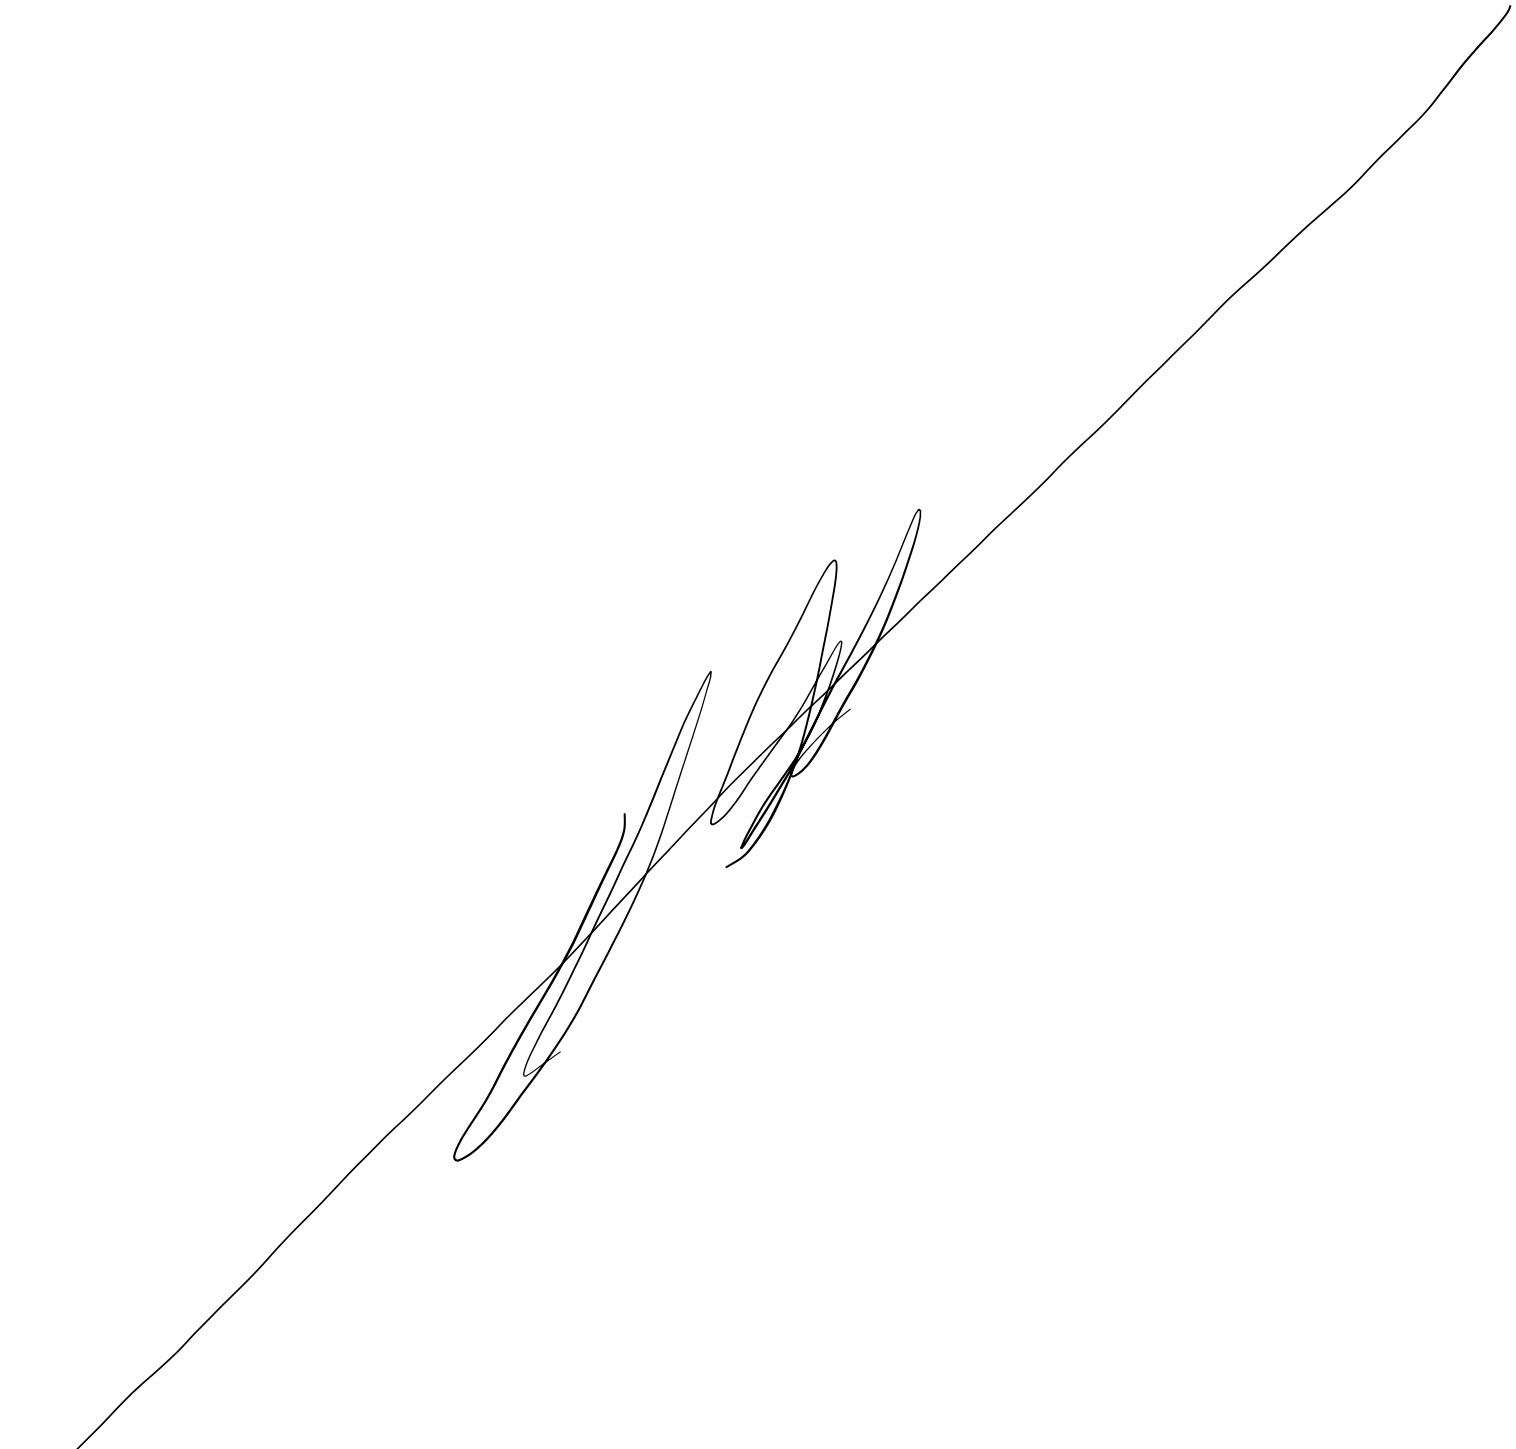
0800: CS on site
0900: GPI on site; HAS Meeting; daily prep; unloading Rig, materials, and tooling
0950: Set up on AS0401; moved 2.5' roughly east to avoid relict utility at 4.5' BLS encountered in previous boring attempts
1005: Drilling Commenced
1025: Pulling Core
1040: Core pulled; setting well 34.5'

- Lithology is as follows:
    - 30-32: SAND – FINE TO VERY FINE; some shell
    - 32-34.5: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 34.5-35: CLAY; dense; trace to little silt and sand – very fine
    - 35-38: SHELL; little sand – fine to very fine and silt; trace clay
    - 38-39: SAND – FINE TO VERY FINE; little shell, silt, and clay
    - 39-40: SAND – MEDIUM TO VERY FINE; fractured pieces of lithified coquina; little silt; trace clay

1100: Well set; begin hydration/development
1120: Hydration/development complete; grouting borehole

- GPI taking lunch

1200: GPI on site; grouting borehole
1220: Installation complete
1235: Set up on AS0433; hand clear 5'
1245: Drilling Commenced
1300: Pulling Core 30' to 40'
1315: Core pulled; setting well 40' TD



- Lithology is as follows:
    - 30-32: SHELL; little sand – fine to very fine and silt
    - 32-35: SAND – FINE TO VERY FINE; little silt and shell
    - 35-38: SHELL; little sand – fine to very fine and silt; trace clay
    - 38-40: SAND – COARSE TO VERY FINE; little to some coarse to very coarse shell

1335: Well set; begin hydration/development
1355: Hydration/Development complete; grouting borehole
1410: Installation complete
1420: Drilling Commenced on AS0434; previously hand cleared 5'
1440: Pulling Core 30' to 40'
1455: Core pulled; setting well 40' TD

- Lithology is as follows:

- 30-32: SHELL; little sand – fine to very fine and silt
- 32-35: SAND – FINE TO VERY FINE; little silt and shell; thin soft silty clay bed 34.5’
- 35-38: SHELL; little sand – fine to very fine and silt; trace clay
- 38-40: SAND – COARSE TO VERY FINE; little to some coarse to very coarse shell

1515: Well set; begin hydration/development
1535: Hydration/Development complete; grouting borehole
1555: Installation Complete
1605: Drilling Commenced on AS0435; previously hand cleared 5’
1620: Pulling Core 30’ to 40’
1635: Down to 40’; will wash over core barrel and pull first thing tomorrow; site secured; Tt/GPI offsite

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS Meeting; daily prep
0730: Drilling resumed on AS0435
0745: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-35: SAND – MEDIUM TO VERY FINE; little to some shell; trace silt
    - 35-38: SHELL; little to some sand – fine to very fine and silt
    - 38-40: SAND – COARSE TO VERY FINE; little to some shell and silt; trace clay

0800: Well set; begin hydration/development
0815: Hydration/development complete; grouting borehole
0830: Installation complete
0840: Drilling Commenced on AS0436; previously hand cleared 5'
0900: Pulling Core 30' to 40'
0910: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-35: SAND – MEDIUM TO VERY FINE; little to some shell; trace to little silt
    - 35-37: SAND – FINE TO VERY FINE; little to some silt; little shell; trace clay in bed at 36
    - 37-39: SHELL; little sand – fine to very fine and silt; trace clay
    - 39-40: SAND – MEDIUM TO VERY FINE AND COARSE TO V. COARSE SHELL; trace clay

0925: Well set; begin hydration/development
0940: hydration/development complete; grouting borehole
1000: Installation Complete
1005: Drilling Commenced on AS0437; previously hand cleared 5'
1020: Pulling Core 30' to 40'
1030: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-35: SAND – FINE TO VERT FINE; little to some silt; little shell
    - 35-38: SHELL; little to some sand – fine to very fine and silt; trace clay
    - 38-40: SAND – FINE TO VERY FINE; little to some silt; little shell; trace clay

1040: Well set; begin hydration/development
1100: Hydration/development complete; grouting borehole
1120: Installation complete
1130: GPI taking lunch
1200: Set up on AS0438; hand clear 5'
1215: Drilling Commenced
1230: Pulling Core 30' to 40'

1245: Core pulled; setting well 39' TD
- Lithology is as follows:
    - 30-37: SAND – FINE TO VERY FINE; little to some silt and shell; silty zone at 37'; trace clay
    - 37-39: SHELL; little sand – fine to very fine and silt
    - 39-40: SAND – VERY FINE; little to some silt; little shell

1300: Well set; begin hydration/development
1320: Hydration/Development complete; grouting borehole
1335: Installation Complete
1340: Drilling Commenced on AS0439; previously hand cleared 5'
1355: Pulling Core 30' to 40'
1425: Core pulled; setting well 35' TD
- Lithology is as follows:
    - 30-33: SAND – FINE TO VERY FINE; little silt and shell
    - 33-35: SHELL: little to some sand – fine to very fine and silt; trace clay
    - 35-38: SAND – FINE TO VERY FINE; little to some silt; little shell; trace to little clay
    - 38-40: SAND – MEDIUM TO VERY FINE; little to some silt; little shell and clay

1445: Well set; begin hydration/development
1520: Hydration/Development Complete; grouting borehole
1535: Installation Complete
1540: Drilling Commenced on AS0440; previously hand cleared 5'
1555: Pulling Core 30' to 40'
1605: Core pulled; setting well 35' TD
- Lithology is as follows:
    - 30-33: SAND – FINE TO VERY FINE; little silt and shell
    - 33-35: SHELL: little to some sand – fine to very fine and silt; trace clay; silty clayey fine sand 34.5-35
    - 35-39: SAND – FINE TO VERY FINE; little to some silt; little shell; trace to little clay
    - 39-40: SAND – MEDIUM TO VERY FINE; little to some silt; little shell and clay

1620: Well set; begin hydration/development
1640: Hydration/Development complete; will grout in the morning; site secured; Tt/GPI offsite

Health and Safety (HAS): Topics: PPE; IDW; Heat Stress

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

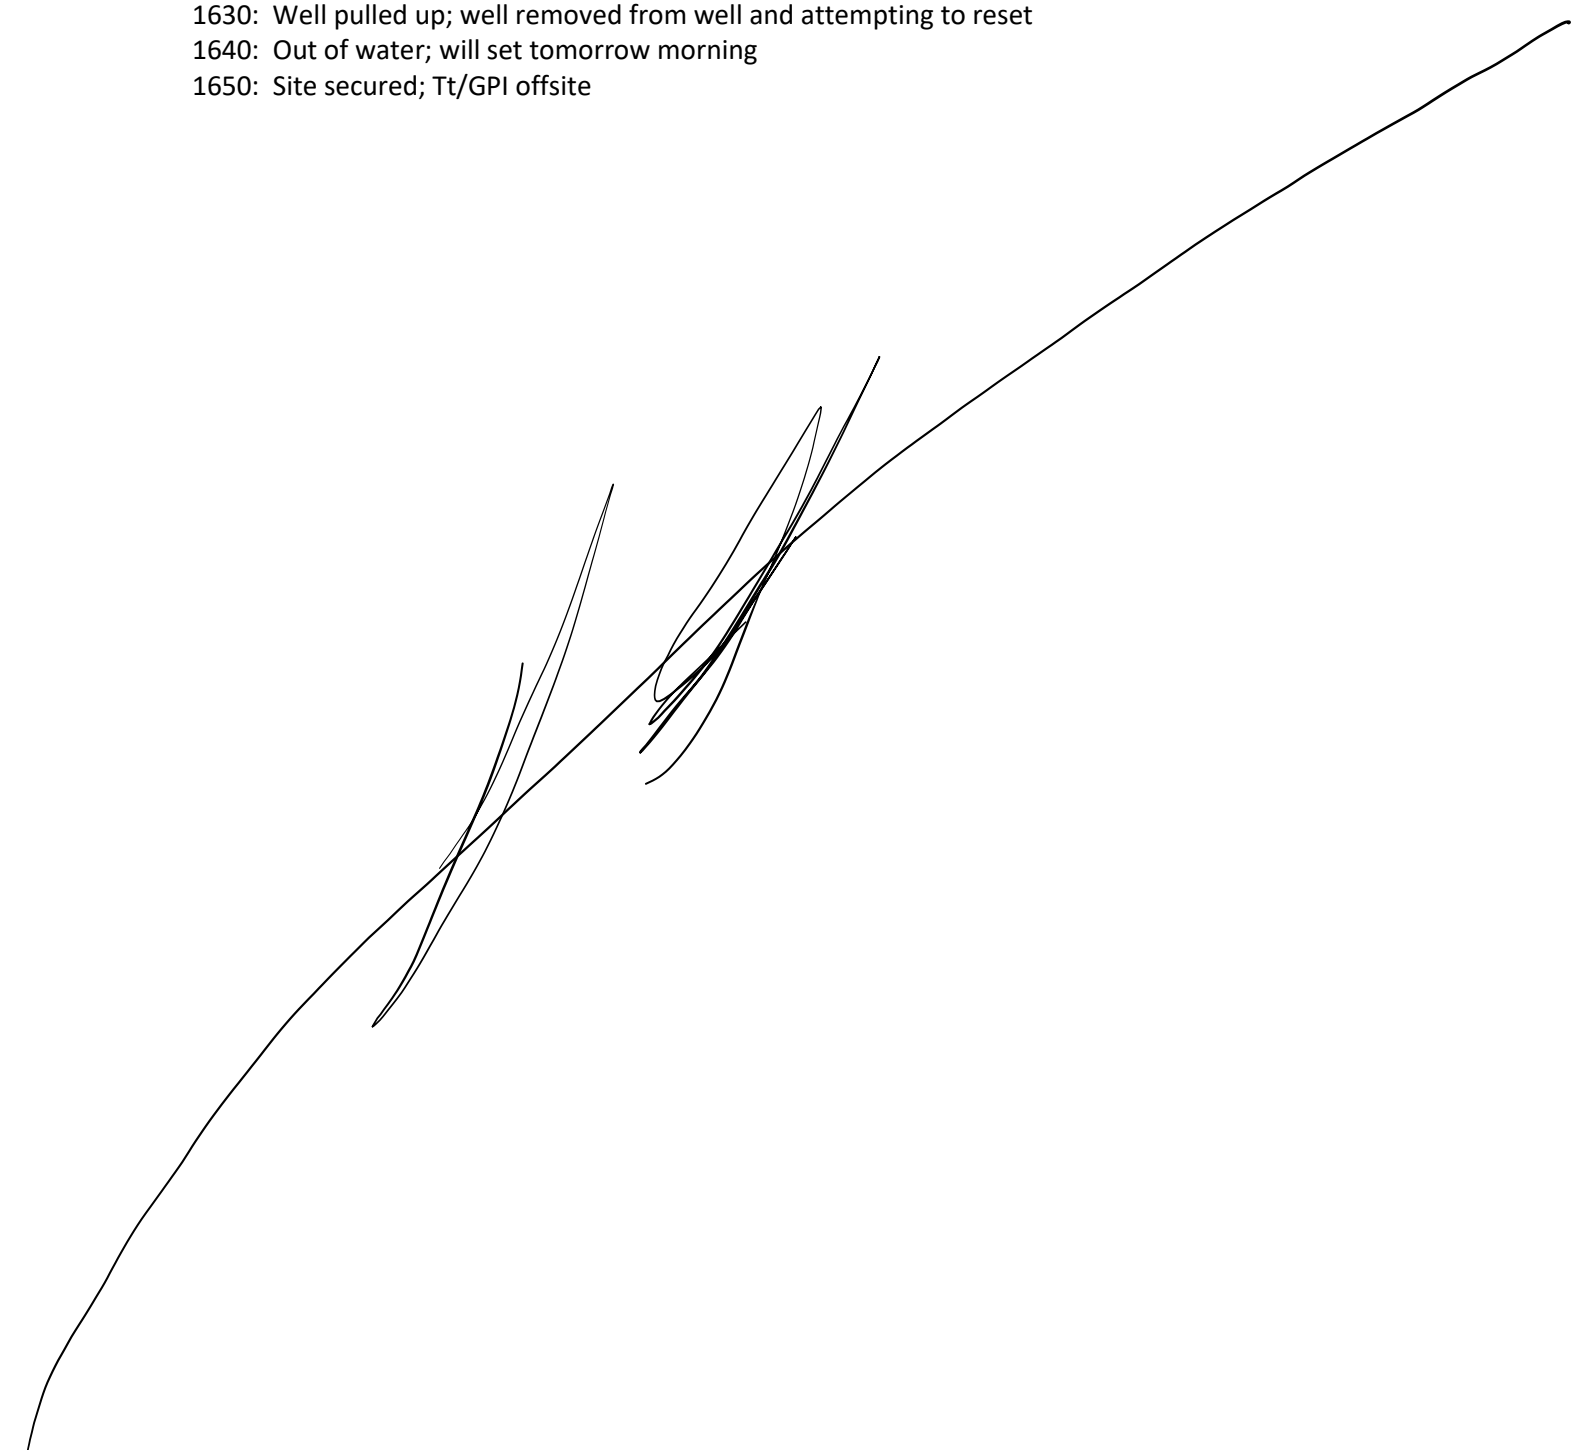
0700: Tt/GPI on site; HAS meeting; daily prep
0800: begin laying pads on IWs 0154, 0155, 0156, and 0157
0930: Pads complete on IW0154, IW0155, and IW0156; Claude Hariell on site to replace sensor and conduct o ring replacement on jack cylinder valve
1035: Repair complete; set up on AS0442; hand clear 5'
1045: Claude Harriel offsite
1050: Drilling Commenced on AS0442
1110: Pulling Core 30' to 40'
1125: Core pulled; setting well 32' TD

- Lithology is as follows:
    - 30-32: SAND – FINE TO VERY FINE; little to some shell; little silt
    - 32-34: SAND – FINE TO VERY FINE; little to some interbeddd clays and silt; little shell
    - 34-38: SHELL; little to some sand – fine to very fine, interbedded clay and silt
    - 38-40: SAND – MEDIUM TO VERY FINE AND COARSE TO V. COARSE SHELL

1140: Well set; begin hydration/development
1200: Hydration/development complete; GPI taking lunch
1230: Grouting Borehole
1245: Installation Complete on AS0442
1250: Drilling commenced on AS0443; previously hand cleared 5'
1305: Pulling Core 30' to 40'
1320: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-32: SAND – FINE TO VERY FINE; little to some shell; little silt
    - 32-38: SHELL; little sand – fine to very fine and silt; trace to little clay mixed in
    - 38-40: SAND – MEDIUM TO VERY FINE AND COARSE TO V. COARSE SHELL



1335: Well set; begin hydration/development
1355: Hydration/Development Complete; grouting borehole
1410: Installation Complete
1420: Drilling Commenced on AS0455; previously hand cleared 5'
1435: Pulling Core 30' to 40'
1445: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-33: SAND – FINE TO VERY FINE; little to some shell; little silt
    - 33-34: SAND – VERY FINE; some silt; trace shell
    - 34-38: SHELL: little sand – fine to very fine and silt; trace to little clay
    - 38-40: SAND – MEDIUM TO VERY FINE AND COARSE TO V. COARSE SHELL

1500: Well set; begin hydration/development
1520: Hydration/Development complete; grouting borehole
1535: Installation Complete
1550: Drilling Commenced on AS0466; previously hand cleared 5'; Deda Johansen (DJ) – NASA RPM on site
1605: Pulling Core 30' to 40'
1615: Core pulled; setting well 40' TD; DJ offsite

- Lithology is as follows:
    - 30-33: SAND – FINE TO VERY FINE; little to some shell and silt; silty clay at 30'
    - 33-38: SAND – MEDIUM TO VERY FINE; little to some shell; little silt; trace to little clay
    - 38-40: SAND – MEDIUM TO VERY FINE AND COARSE TO V. COARSE SHELL

1630: Well pulled up; well removed from well and attempting to reset
1640: Out of water; will set tomorrow morning
1650: Site secured; Tt/GPI offsite

01/13/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI
	David Galvan	(DG)	Tech	GPI

Weather: Sunny 47 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Heat Stress; inclement weather

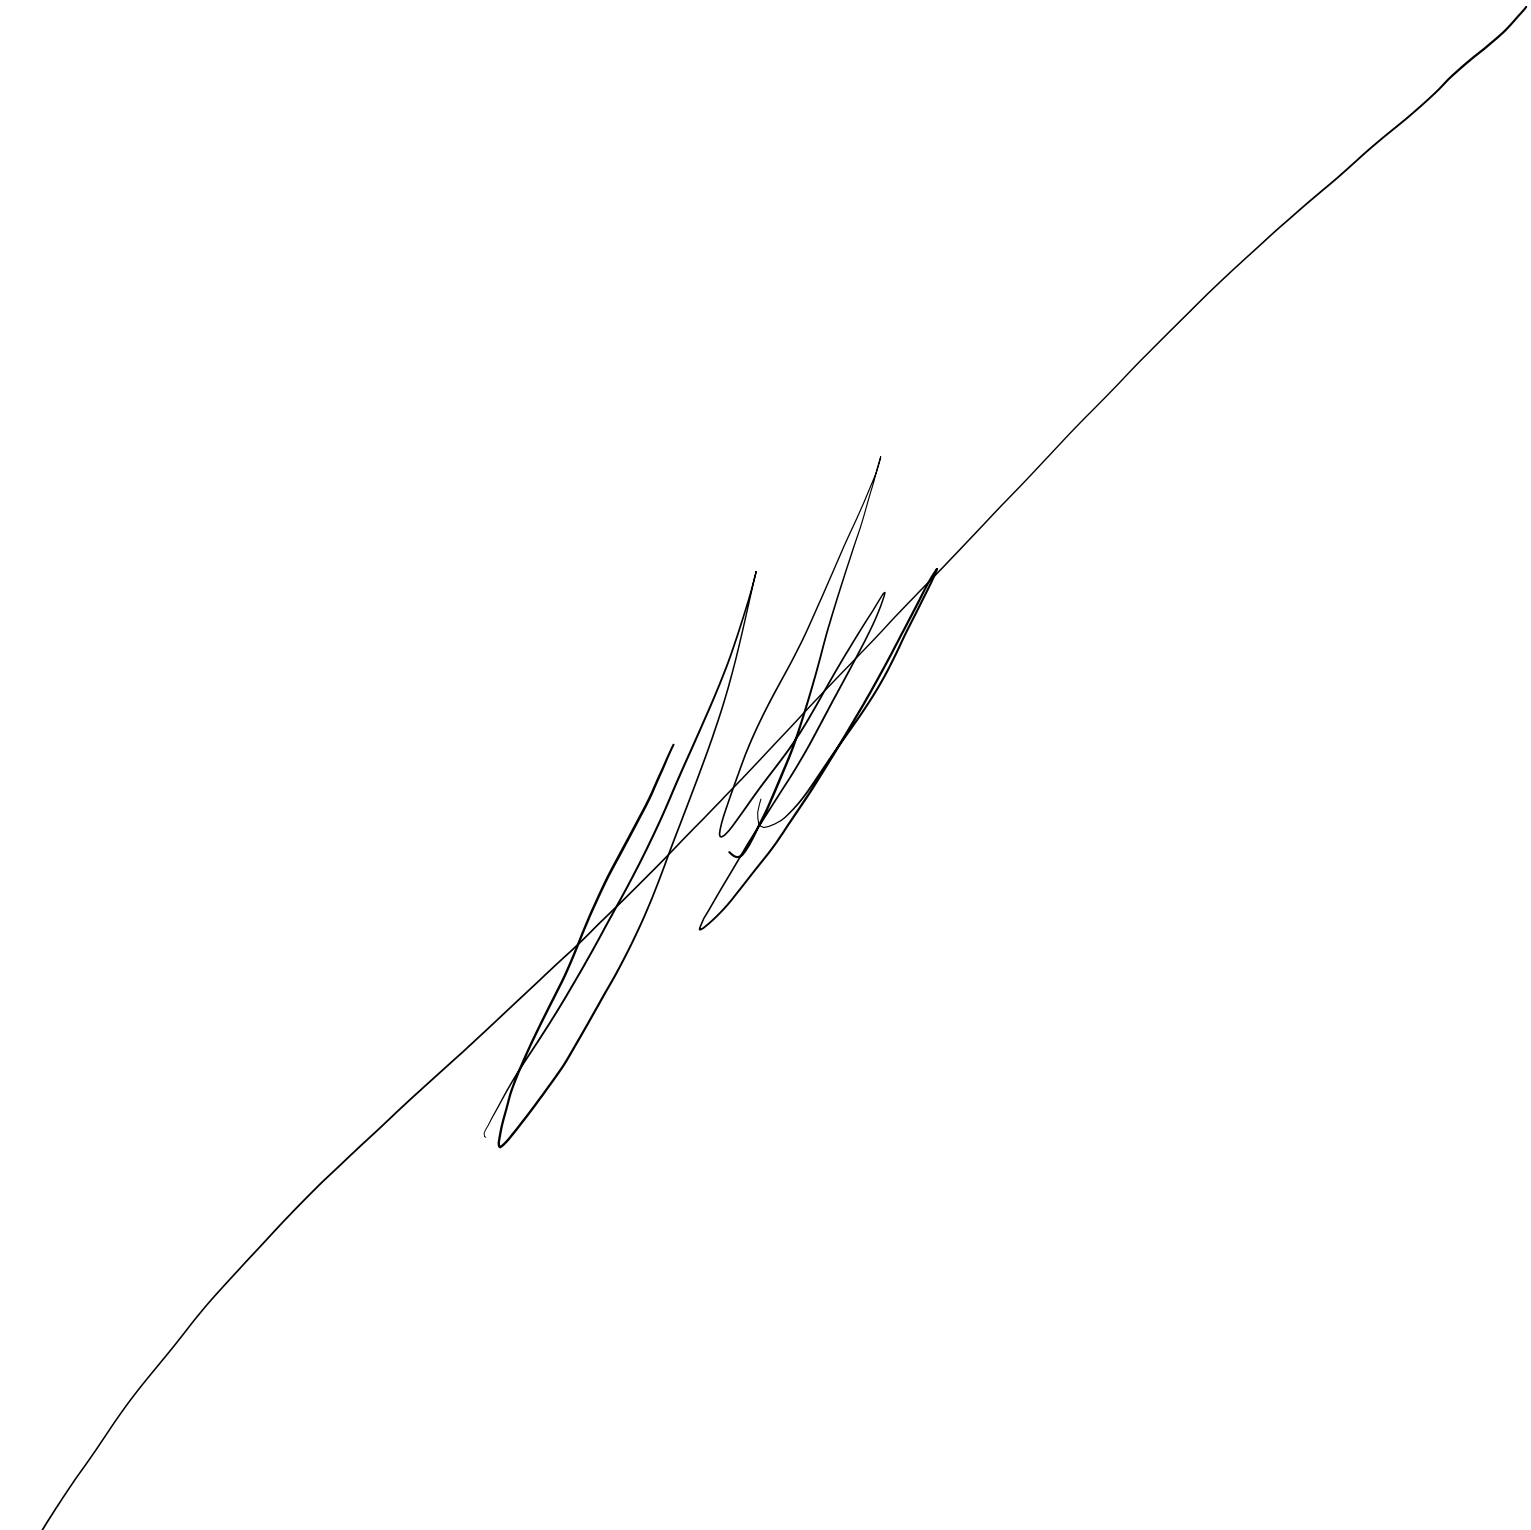
PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS Meeting; daily prep
0730: Heavy rain
0800: Setting AS0466to 40' TD
0815: Well set 40' TD; begin hydration/development
0830: Hydration/Development complete; heavy rain; will grout after rain stops
0955: Rain ended; drilling resumed on AS0466; grouting borehole
1010: Installation Complete
1020: Drilling Commenced on IW0165 (Location K); previously hand cleared 5'; setting well screen 16' to 21'
1030: Setting well 16' to 21'
1040: Well set; grouting borehole

- Screen: 16' to 21'
- 20/30 Sand: 21' to 15'
- 30/65 Sand: 15' to 13'
- Portland to surface

1050: Installation Complete
1100: Set up on AS0454; hand clear 5'
1105: Drilling Commenced
1120: Pulling Core 30' to 40'
1135: Core pulled; setting well 36' TD; Core bag ripped making it difficult to determine depth of lithology.



- Estimated Lithology is as follows:
    - 30-33: SAND – FINE TO VERY FINE; little silt and shell
    - 33-36.5: SHELL; little sand – fine to very fine and silt; trace clay
    - 36.5-37: CLAY; moderately dense bed; little silt and sand – very fine and shell
    - 37-40: SAND – MEDIUM TO VERY FINE; little to some shell; little clay; sticky/firm

1145: Well set; begin hydration/development
1200: Hydration/development complete; grouting borehole
1215: Installation Complete
1225: Set up on AS0453; hand clear 5'
1230: Drilling Commenced
1245: Pulling Core 30' to 40'
1300: Core pulled; setting well 37' TD

- Lithology is as follows:
    - 30-35: SAND - FINE TO VERY FINE; little to some shell; little silt
    - 35-38: SHELL; little sand – fine to very fine and silt; trace clay

- 38-39: SHELL; little sand – fine to very fine and silt
- 39-40: SAND – MEDIUM TO VERY FINE AND COARSE TO V. COARSE SHELL; trace to little clay

1315: Well set; begin hydration/development
1345: Hydration/development complete; grouting borehole
1405: Installation Complete
1420: Set up on AS0452; hand clear 5'
1440: GPI is out of core bags. Will begin drilling AS0452 on Monday; conducting materials inventory.
1500: Site secured; Tt/GPI offsite

01/16/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GP

Weather: Sunny 41 degrees F

Health and Safety (HAS): Topics: PPE; IDW; pinch points

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0800: Tt on site
0900: GPI on site; HAS Meeting; unloading tooling and materials; daily prep
0940: Drilling Commenced on AS0452; previously hand cleared 5'
1000: Pulling Core 30' to 40'
1015: Core pulled; setting well 37' TD

- Lithology is as follows:
    - 30-37: SAND – MEDIUM TO VERY FINE; little to some silt; little shell
    - 37-39: SHELL; little to some sand – very fine, silt, and clay
    - 39-40: SAND – MEDIUM TO VERY FINE AND COARSE TO V. COARSE SHELL; little clay

1030: Well set; begin hydration/development
1050: Hydration/development complete; grouting borehole
1110: Installation Complete
1120: Set up on AS0451; GPI offsite to take lunch
1235: GPI on site; Base cafeteria closed due to MLK day; GPI had to go off base for lunch
1240: Drilling Commenced on AS0451; previously hand cleared 5'
1300: Pulling Core 30' to 40'
1310: Core pulled; setting well 34' TD

- Lithology is as follows:
    - 30-32.5: SHELL; little to some sand – fine to very fine and silt
    - 32.5-34: SAND – FINE TO VERY FINE; little silt and shell
    - 34-35: CLAY; little sand – very fine, silt, and shell
    - 35-39: SHELL; little to some sand – medium to very fine; little silt; trace to little clay
    - 39-40: SAND – FINE TO VERY FINE; little shell, silt, and clay

1335: Well set; begin hydration/development
1355: Hydration/development complete; grouting borehole
1415: Installation Complete
1430: Drilling Commenced on AS0450; previously hand cleared 5'
1445: Pulling Core 30' to 40'
1500: Core pulled; setting well 38' TD

- Lithology is as follows:
    - 30-38: SAND – FINE TO VERY FINE; little to some shell and silt
    - 38-38.5: CLAY; dense; little sand – very fine and silt
    - 38.5-40: SAND – FINE TO VERY FINE; little to some shell and silt

1520: Well set; begin hydration/development
1540: Hydration/Development complete; grouting borehole
1600: Installation Complete
1620: Site secured; Tt/GPI offsite

01/17/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt

Weather: Sunny 37 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Hydration

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS Meeting; daily prep; warming hydraulics
0730: Set up on AS0449; hand clear 5'
0740: Drilling Commenced on AS0449
0755: Pulling Core 30' to 40'
0810: Core pulled; setting well 34'; Poor recovery (5'/10'); core presumed to be recovered from 30' to 35' based on observed lithology and stratigraphy.

- Presumed lithology is as follows:
    - 30-34: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 34-34.5: CLAY; dense; little sand – very fine and silt
    - 34.5-35: Dark Gray SHELL: little sand – fine to vey fine and silt; trace clay

0825: Well set; begin hydration/development
0840: Hydration/development complete; grouting borehole
0855: Installation Complete
0905: Drilling Commenced on AS0448; previously hand cleared 5'
0920: Pulling Core 30' to 40'
0930: Core pulled; setting well 39' TD

- Lithology is as follows:
    - 30-33: SHELL; little sand – fine to very fine and silt
    - 33-35: SAND – VERY FINE; some silt; trace to little clay and shell
    - 35-39: SHELL; little to some sand – fine to very fine and silt
    - 39-40: SAND – MEDIUM TO VERY FINE; little clay and silt; dense

0940: Well set; begin hydration/development
0955: hydration/development complete; grouting borehole
1005: Installation Complete
1010: Drilling Commenced on AS0447; previously hand cleared 5'
1030: Pulling Core 30' to 40'
1045: Core pulled; setting well 38' TD

- Lithology is as follows:
    - 30-32: SHELL: little sand – fine to very fine and silt
    - 32-35.5: SAND – FINE TO VERY FINE; little to some silt; little shell; trace clay
    - 35.5-38: SHELL; little to some silt; little sand – fine to very fine
    - 38-39: SHELL; little to some sand – very fine, silt, and clay
    - 39-40: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL

1100: Well set; begin hydration/development
1120: hydration/development complete; GPI taking lunch
1140: Grouting borehole

1155: Installation Complete
1205: Drilling Commenced on AS0446; previously hand cleared 5'
1220: Pulling Core 30' to 40'
1230: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-31.5: SAND – FINE TO VERY FINE; little to some silt; little shell; trace clay; moderately soft silty clay bed 31.25-31.5
    - 31.5-36: SHELL; little to some sand – fine to very fine and silt; trace clay; thin clay bed at 35.5-35.75
    - 36-40: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL

1245: Well set; begin hydration/development
1305: Hydration/development complete; grouting borehole
1325: Installation complete
1335: Drilling Commenced on AS0445; previously hand cleared 5'
1350: Pulling Core 30' to 40'
1400: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-33: SAND – FINE TO VERY FINE; little silt and shell
    - 33-37: SHELL; little to some sand – fine to very fine and silt; trace clay; clay bed 36-36.25; moderately dense
    - 37-40: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL

1415: Well set; begin hydration/development
1440: Hydration/development complete; grouting borehole
1500: Installation Complete
1510: Drilling Commenced on AS0457; previously hand cleared 5'
1525: Pulling Core 30' to 40'
1535: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-32.5: SAND – FINE TO VERY FINE; some silt; little shell
    - 32.5-35: SHELL; little to some sand – fine to very fine and silt; trace clay; clay bed 34.25-34.5
    - 35-40: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL

1545: Well set; begin hydration/development
1605: Hydration/development complete; grouting borehole
1625: Installation complete
1645: Site secured; Tt/GPI offsite

01/18/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt

Weather: Sunny 44 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Hydration

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS Meeting; daily prep
0750: Set up on AS0458; hand clear 5'
0800: Drilling Commenced
0825: Pulling Core 30' to 40'
0835: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-33: SAND - FINE TO VERY FINE; little to some silt; little shell
    - 33-36: SHELL; little sand – fine to very fine and silt; trace clay
    - 36-40: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL; trace clay

0850: Well set; begin hydration/development
0905: Hydration/development complete; grouting borehole
0920: Installation Complete
0925: Drilling Commenced on AS0469; previously hand cleared 5'
0940: Pulling Core 30' to 40'
0950: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-32: SHELL; little sand – fine to very fine and silt
    - 32-36: SAND – FINE TO VERY FINE; little to some silt; little shell; trace clay
    - 36-40: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL; trace clay

1005: Well set; begin hydration/development
1020: Hydration/development complete; grouting borehole
1030: Installation Complete
1035: Drilling Commenced on AS0479; previously hand cleared 5'
1050: Pulling Core 30' to 40'
1100: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-32: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 32-37: SHELL; little to some sand – fine to very fine; little silt; trace to little clay in beds at 33-33.25 and 35; trace clay throughout
    - 37-40: SAND -MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL

1110: Well set; begin hydration/development
1125: Hydration/development complete; grouting borehole
1140: Installation Complete
1150: Set up on AS0487; hand cleared 5'; GPI taking lunch
1215: Drilling Commenced on ASo487

1230: Pulling Core 30’ to 40’
1245: Core pulled; setting well 32’ TD
- Lithology is as follows:
    - 30-32: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 32-32.5: CLAY; moderately dense; little silt
    - 32.5-35: SHELL; little to some silt; little sand – very fine and clay throughout and in beds
    - 35-40: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL; trace clay

1305: Well set; begin hydration/development
1320: hydration/development complete; grouting borehole
1335: Installation complete
1345: Drilling Commenced on AS0486; previously hand cleared 5’
1400: Pulling Core 30’ to 40’
1415: Core pulled; setting well 32’ TD
- Lithology is as follows:
    - 30-32: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 32-33: CLAY; moderately dense; little silt
    - 33-37: SHELL; little to some silt; little sand – very fine and clay throughout and in beds
    - 37-40: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL; trace clay

1430: Well set; begin hydration/development
1445: Hydration/development complete; grouting borehole
1500: Installation Complete
1510: Drilling Commenced on AS0478; Previously hand cleared 5’
1530: Pulling Core 30’ to 40’
1540: Core pulled; setting well 33’ TD
- Lithology is as follows:
    - 30-33: SAND – FINE TO VERY FINE; some silt; little shell; trace clay
    - 33-38: SHELL; little to some sand – fine to very fine and silt; little clay in beds and throughout; dense dry clay 33-33.5
    - 38-40: SAND – MEDIUM TO VERY FINE; little to some silt; little coarse to very coarse shell

1600: Well set; begin hydration/development
1615: Hydration/development complete; grouting borehole
1630: Installation Complete
1640: Set up on AS0468; hand clear 5’
1700: Site secured; Tt/GPI offsite.

01/19/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI
	David Galvan	(DG)	Tech	GPI

Weather: Sunny 63 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Hydration

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt on site; DL texted CS stating that GPI will be late
0745: GPI on site; HAS Meeting; daily prep
0825: Drilling Commenced on AS0468; previously hand cleared 5'
0840: Pulling Core 30' to 40'
0850: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-32.5: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 32.5-37: SHELL; little to some sand – fine to very fine; little clay and silt
    - 37-40: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL

0905: Well set; begin hydration/development
0920: Hydration/development complete; grouting borehole
0940: Installation complete
0955: Drilling Commenced on AS0459; previously hand cleared 5'
1010: Pulling Core 30' to 40'
1020: Core pulled; setting well 38' TD

- Lithology is as follows:
    - 30-33: SHELL; some sand – fine to very fine; little silt
    - 33-35: SAND – FINE TO VERY FINE; little to some silt; little shell; trace clay
    - 35-38: SHELL; little sand – fine to very fine and silt; trace to little clay
    - 38-39: CLAY; little sand – very fine, silt, and shell
    - 39-40: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL; little silt; trace to little clay

1030: Well set; begin hydration/development
1050: Hydration/Development complete; grouting borehole
1105: Installation Complete
1115: Drilling Commenced on AS0460; previously hand cleared 5'
1130: Pulling Core 30' to 40'
1145: Core pulled; setting well 36' TD

- Lithology is as follows
    - 30-31: SAND – MEDIUM TO VERY FINE; little to some shell and silt
    - 31-36: SHELL; little to some sand – fine to very fine and silt; trace clay
    - 36-37: CLAY; little to some sand – very fine and silt; little shell
    - 37-39: SAND – FINE TO VERY FINE; little to some silt; little clay and shell
    - 39-40: SAND MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL; trace clay

1200: Well set; begin hydration/development; GPI taking lunch
1230: Hydration/development complete; grouting borehole

1250: Installation Complete
1300: Drilling Commenced on AS0461; previously hand cleared 5’
1315: Pulling Core 30’ to 40’
1325: Core pulled; setting well 38’ TD

- Lithology is as follows:
    - 30-33: SHELL; little to some sand- medium to very fine; little silt
    - 36-36: SAND – VERY FINE; little to some silt; trace to little shell; trace clay
    - 36-38: SHELL; little sand – fine to very fine and silt
    - 38-40: SAND – FINE TO VERY FINE; little to some silt; little clay

1340: Well set; begin hydration/development
1400: Hydration/development complete; grouting borehole
1420: Installation Complete
1430: Drilling Commenced on AS0462; previously hand cleared 5’
1445: Pulling Core 30’ to 40’
1500: Core pulled; setting well 35’ TD

- Lithology is as follows:
    - 30-35: SAND – MEDIUM TO VERY FINE AND SHELL; little to some silt
    - 35-40: Interbedded SAND – FINE TO VERY FINE, SHELL, SILT, AND CLAY

1515: Well set; begin hydration/development
1535: Hydration/development complete; grouting borehole
1555: Installation Complete
1615: Site secured; Tt/GPI offsite

01/20/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI

	David Galvan	(DG)	Tech	GPI

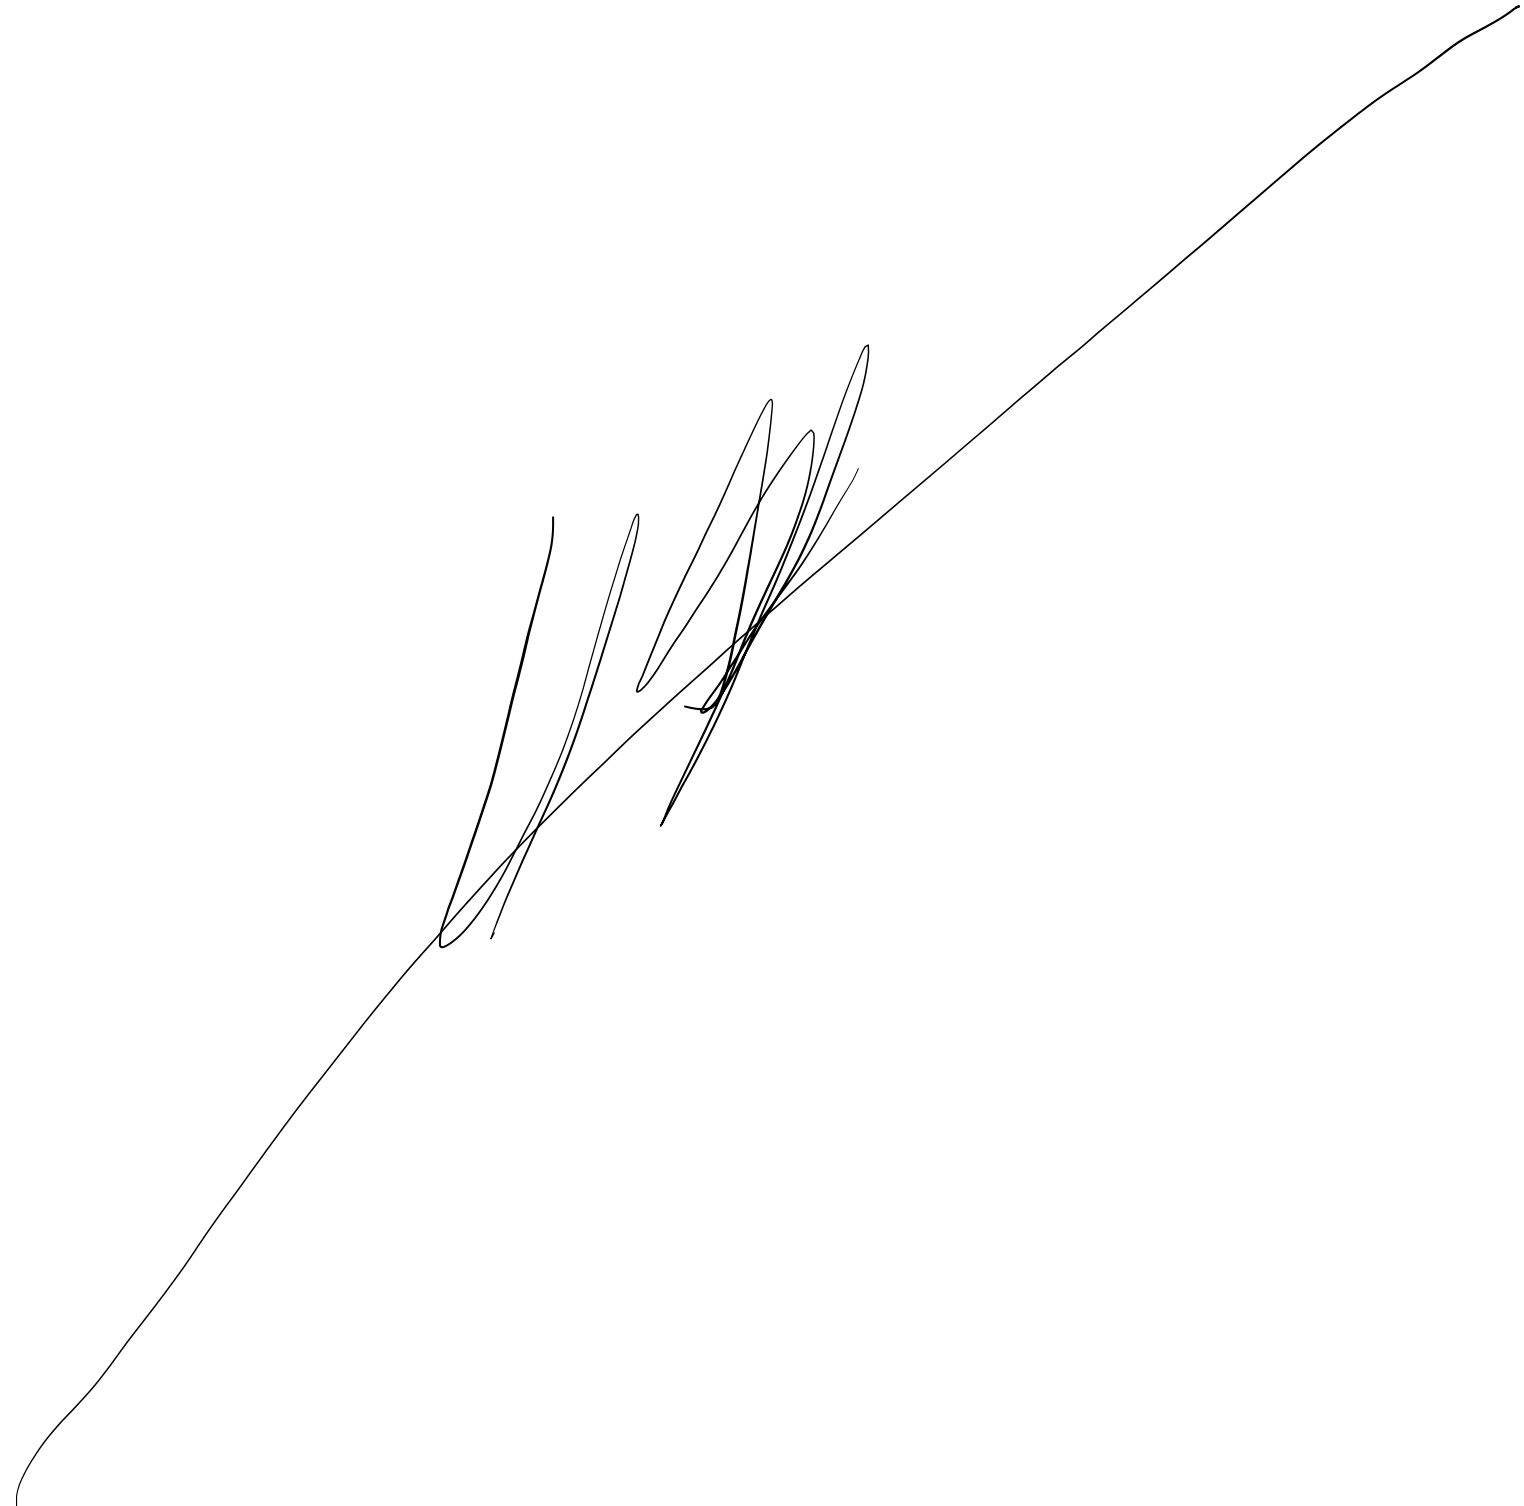
Weather: Sunny 63 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Hydration

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS Meting; daily prep
0735: Set up on MW Location J (IW0163 and IW0164); hand clearing 5'; will be installing IW0164 first screened 30' to 35'
0745: Drilling Commenced
0800: Setting well 30' to 35'
0815: Well set; grouting borehole
- Screen: 30' to 35'
- 20/30 Sand: 35' to 29'
- 30/65 Sand: 29' to 27'
- Portland to surface



0835: Installation Complete; Geoff Card (NASA Safety) on site
0840: Drilling Commenced on IW0163; setting well screen 17' to 27'
0850: Setting well 17' to 27'
0900: Well set; grouting borehole
- Screen: 17' to 27'
- 20/30 Sand: 27' to 16'
- 30/65 Sand: 16' to 14'
- Portland to surface

0910: Installation Complete
0920: Set up on MW Location L (IW0166); hand clear 5'; setting screen 16' to 21'
0925: Drilling Commenced
0935: Setting well 16' to 21'
0940: Well set; grouting borehole
- Screen: 16' to 21'
- 20/30 Sand: 21' to 15'
- 30/65 Sand: 15' to 13'
- Portland to surface

0950: Installation Complete
1020: GPI taking early lunch and running to Home Depot in Titusville; a crack has opened up on their tank on the truck and will need to be repaired before drilling is resumed to ensure the tank does not split open
1140: GPI on site; set up on AS0470; hand clear 5'
1150: Drilling Commenced
1210: Pulling Core 30' to 40'
1250: Core pulled; setting well 40' TD
- Lithology is as follows:

- 30-35: SHELL; little to some sand – fine to very fine; little silt
- 35-38: SAND – FINE TO VERY FINE; little to some silt; little shell; trace clay
- 38-40: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL; little silt; trace to little clay 38-39

1305: Well set; begin hydration/development
1330: Hydration/development complete; grouting borehole
1350: Installation Complete; begin partial demob to bring pipe and materials in next week. Repairing tank
1445: Site secured; Tt/GPI offsite

01/23/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI
	David Galvan	(DG)	Tech	GPI

Weather: Sunny 63 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Hydration

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0800: Tt on site; CS received text from DL; GPI loading materials for RW install and should be on site around 0930-1000
1000: GPI on site; unloading materials; HAS Meeting; daily prep
1100: GPI offsite to get lunch and retrieve 10" pipe from other crew at Wilson's Corner
1250: GPI on site; unloading 10" pipe at new RW location
1350: Set up on AS0472; hand clear 5'
1400: Drilling Commenced
1420: Pulling Core 30' to 40'
1430: Core pulled; setting well 38' TD

- Lithology is as follows:
    - 30-36: SAND – MEDIUM TO VERY FINE AND SHELL
    - 36-38: SAND – FINE TO VERY FINE; little to some silt
    - 38-39: SILT; little to some sand – very fine
    - 39-39.5: CLAY; little to some silt
    - 39.5-40: SAND – MEDIUM TO VERY FINE; some coarse to very coarse shell; trace to little clay

1450: Well set; begin hydration/development
1510: Hydration/development complete; grouting borehole
1525: Installation Complete
1535: Drilling Commenced on AS0471; previously hand cleared 5'
1550: Pulling Core 30' to 40'
1600: Core pulled; setting well 39' TD

- Lithology is as follows:
    - 30-35: SAND – MEDIUM TO VERY FINE; little to some shell; little silt
    - 35-39: SAND – FINE TO VERY FINE; little to some shell and silt; trace clay
    - 39-40: CLAY; Little sand – very fine, silt, and shell

1615: Well set; begin hydration/development
1635: Hydration/development complete grouting borehole
1650: Installation Complete
1700: Site secured; Tt/GPI offsite

01/26/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI
	David Galvan	(DG)	Tech	GPI

Weather: Sunny 63 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Hydration

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0945: Tt/GPI at HS6 after completing RW installation at RW021D; HAS Meeting completed at HCS area; set up on AS0480; hand clear 5'
0955: Drilling Commenced
1010: Pulling Core 30' to 40'
1020: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-33: SHELL: little sand – fine to very fine and silt
    - 33-35: SAND – FINE TO VERY FINE; little to some silt; little shell; trace clay
    - 35-38: Gray to Dark Gray SHELL; little sand – fine to very fine and silt; trace clay
    - 38-40: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL; trace clay and silt

1035: Well set; begin hydration/development
1055: Hydration/development complete; grouting borehole
1110: Installation Complete
1130: Set up on AS0481; GPI taking lunch
1200: Lunch Over; hand clearing AS0481
1230: Drilling Commenced on AS0481; previously hand cleared 5'
1245: Pulling Core 35' to 45'
1255: Core pulled; setting well 43' TD

- Lithology is as follows:
    - 35-38.5: SHELL; little sand – fine to very fine and silt
    - 38.5-40: SAND – FINE TO VERY FINE; little to some silt; trace clay
    - 40-43: SHELL; little sand – very fine, silt, and clay
    - 43-43.5: CLAY; moderately dense; little, silt, shell, and sand – very fine
    - 43.5-45: SAND – FINE TO VERY FINE; little to some shell and silt; little clay

1310: Well set; begin hydration/development
1330: Hydration/development complete; grouting borehole
1350: Installation Complete
1405: Drilling Commenced on AS0482; previously hand cleared 5'; previously angled well. Moved termination point 1.5' away from original staked position and converted to vertical well; pulling core 40' to 50'
1430: Pulling Core 40' to 50'
1445: Core pulled; setting well 48' TD

- Lithology is as follows:
    - 40-44: SAND – FINE TO VERY FINE; little to some shell and silt

- 44-48.5: SHELL; little sand – fine to very fine, silt, and clay; moderately dense clay bed 48-48.5
- 48.5-50: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL

1455: Well set; begin hydration/development
1515: Hydration/development complete; grouting borehole
1535: Installation complete
1545: Set up on AS0473; hand clear 5’
1555: Drilling Commenced
1620: Down to 35’; out of water; will resume drilling in am
1640: Site secured; Tt/GPI offsite

01/27/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI
	David Galvan	(DG)	Tech	GPI

Weather: Sunny 63 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Hydration

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: DL/Tt on site; waiting on JA/DG
0800: JA/DG on site; HAS Meeting; daily prep
0825: Drilling resumed on AS0473
0830: Pulling Core 40' to 50'
0840: Core pulled; setting well 50' TD

- Lithology is as follows:
    - 40-42.5: SAND – FINE TO VERY FINE; little to some silt; little shell
    - 42.5-48: SHELL; little to some sand – fine to very fine and silt; little clay; sticky
    - 48-50: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL; trace to little clay and silt

0855: Well set; begin hydration/development
0915: Hydration/development complete; grouting borehole
0930: Installation Complete
0940: Drilling Commenced on AS0464; previously hand cleared 5'
1000: Pulling Core 40' to 50'
1010: Core pulled; setting well 46' TD

- Lithology is as follows:
    - 40-42.5: SAND - FINE TO VERY FINE; little to some silt; little shell; trace clay
    - 42.5-46: SHELL; little to some silt; little sand – very fine; trace to little clay
    - 46-47: CLAY; dense clay 46-46.5; little sand – very fine and silt 46.5-47
    - 47-50: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL; little granule sized shell; little silt; trace clay 47-48

1025: Well set; begin hydration/development
1045: Hydration/development complete; grouting borehole
1110: Installation Complete
1120: Drilling Commenced on AS0475: Former angle well; converted to vertical. New vertical location is approximately 3' from original termination point for angle well; pulling core 40' to 50'
1140: Pulling Core 40' to 50'
1155: Core pulled; setting well 50' TD

- Lithology is as follows:
    - 40-43: SAND – FINE TO VERY FINE; little to some silt; little shell; trace to little clay; thin clay bed at 33'
    - 43-47: SHELL; little sand – fine to very fine and silt; trace to little clay; sticky
    - 47-50: SAND- MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL; trace clay

1210: Well set; begin hydration/development
1230: Hydration/development complete; GPI taking lunch

1250: Grouting borehole
1310: Installation Complete; begin moving rig and equipment off launch pad area in preparation for this evenings Apollo 1 ceremony.
1400: Conducting site cleanup/materials inventory; loading up 10” casing to take back to Orlando
1445: Site Secured; Tt/GPI offsite

01/30/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Sunny 63 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Hydration

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0830: Tt on site
0945: GPI on site; HAS Meeting; daily prep; unloading materials
1015: Set up on AS0386; hand clear 5'
1035: Drilling Commenced
1050: Pulling Core 30' to 40'
1100: Core pulled; setting well 40' TD

- Lithology is as follows:
    - 30-33: SAND – FINE TO VERY FINE; little to some silt; trace to little clay and shell
    - 33-38: SHELL; little sand – very fine, and silt; trace clay
    - 38-40: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL

1115: Well set; begin hydration/development

- GPI taking lunch

1210: GPI on site; hydration/development complete; grouting borehole
1230: Installation Complete
1245: Set up on AS0397; hand clear 5'
1255: Drilling Commenced
1315: Pulling Core 30' to 40'
1330: Core pulled; poor recovery; setting 40' TD
1345: Well set; begin hydration/development
1405: Hydration/development complete; grouting borehole
1420: Installation complete
1435: Set up on AS0463; hand clear 5'
1450: Drilling Commenced; pulling core 35' to 45' due to position on slope
1515: Pulling Core 35' to 45'
1530: Core pulled; setting well 38' TD

- Lithology is as follows:
    - 35-36: SHELL; little sand – fine to very fine
    - 36-38: SAND -FINE TO VERY FINE; little to some silt; trace to little shell
    - 38-39: CLAY; little to some silt; moderately firm
    - 39-42: SHELL; little to some sand – fine to very fine and silt; little clay
    - 42-45: SAND – MEDIUM TO VERY FINE AND COARSE TO VERY COARSE SHELL; little silt

1550: Well set; begin hydration/development
1610: Hydration/development complete; grouting borehole
1630: Installation Complete
1645: Setting up on AS0488
1700: Site secured; Tt/GPI offsite

01/31/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Sunny 63 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Hydration

PPE: Level D

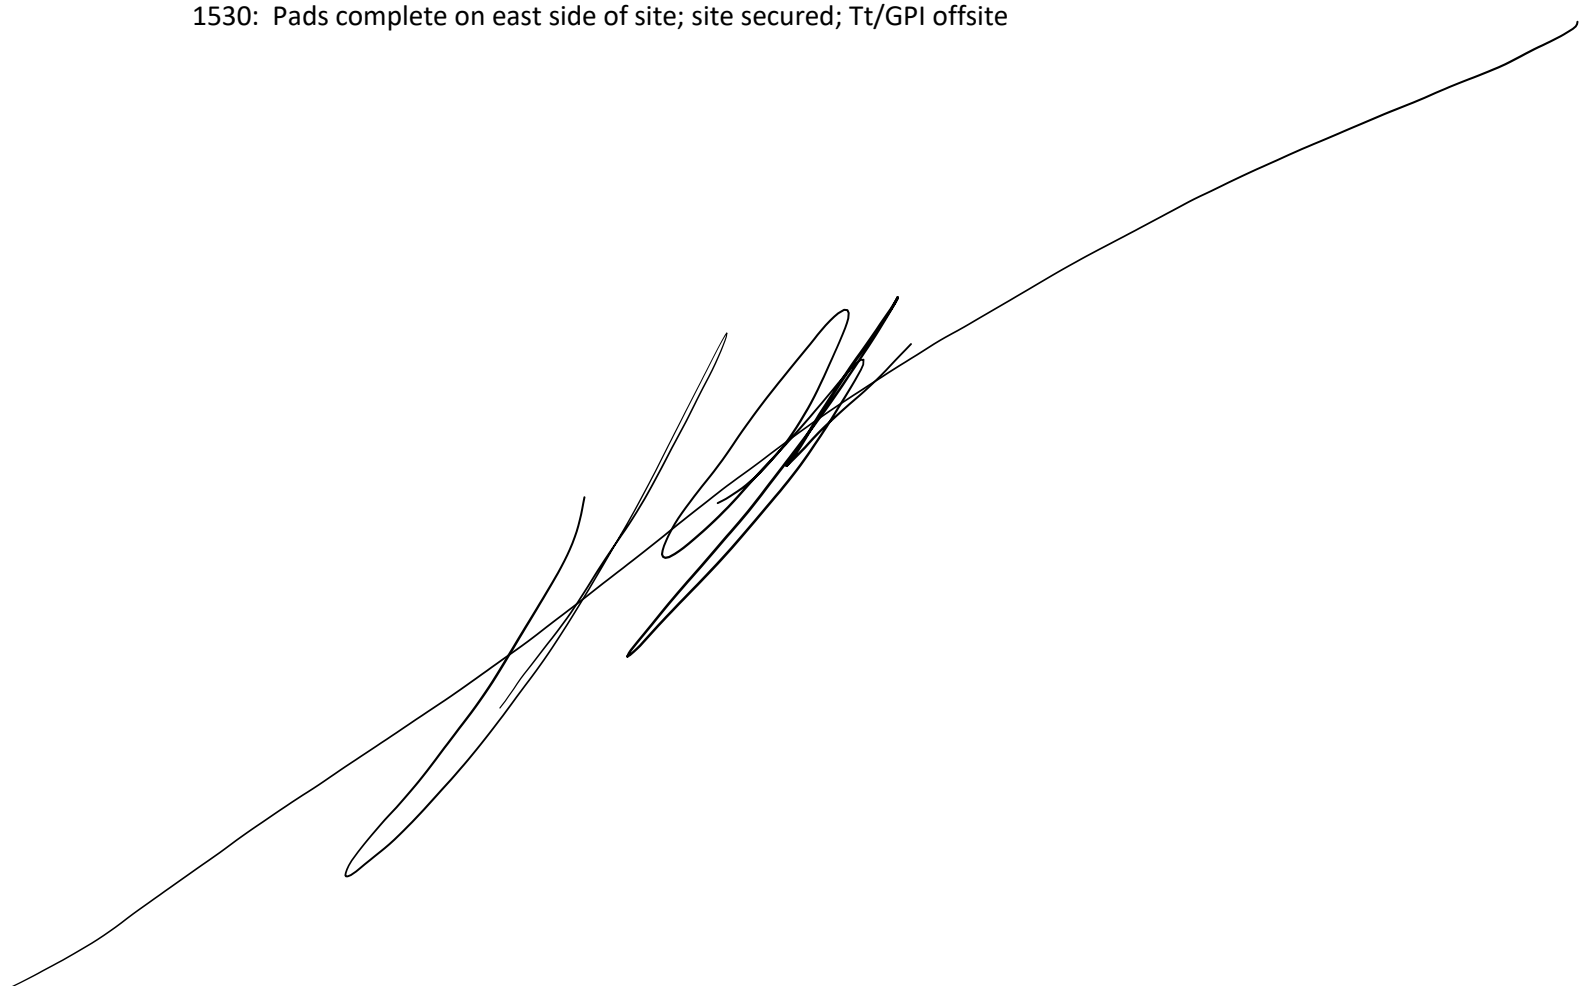
Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion.

0700: Tt/GPI on site; HAS Meeting; daily prep; setting up on AS0488; hand clear 5'
0820: Drilling Commenced on AS0488; DL states that they may not be able to pull a core on this hole, but will try
0850: Unable to pull core due to positioning of the rig and rack with pipe due to slope; CS spoke with Mark Jonnet (MJ) – Tt PM; will set AS0488 at 45' TD without core
0905: Setting well 45' TD
0915: Well set; begin hydration/development
0935: Hydration/development complete; grouting borehole
0955: Installation complete; All vertical wells that have accessibility with the rig have been completed; DL/JA installing angle well attachment on rig to begin installing angle wells.
1025: Adapter installed; setting up on AS0489; setting well 70.5 degrees 50' total hypotenuse length positioning the bottom of the screen at 47' TD vertically
1040: Drilling Commenced; not pulling core due to angle
1105: Setting well 50' length along hypotenuse
1120: Well set; begin hydration/development
- GPI taking lunch

1200: Hydration/development complete; grouting borehole
1220: Installation Complete
1230: Setting up on AS0490; 51.5 degree angle; 60' length; hand clear 5'
1245: Drilling Commenced
1320: Down to 40' length; rig has lost vibe, rotation, and cannot pull pipe; troubleshooting
1500: Possible sonic head lube pump sending unit problem. When operating, the pump keeps sending oil back to the reservoir instead of leaving it in the sonic head. Attempting to get back on the pipe; DL is having to manually fill the sonic head to keep moving
1535: Drilling Resumed
1540: Rig stopped again…
1600: Unable to repair rig; part ordered and will be on site tomorrow morning; site secured; Tt/GPI offsite at 1630

02/01/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI



Weather: Sunny 63 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Hydration

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion

0700: Tt/GPI on site; HAS Meeting; daily prep; laying pads at MWs/developing while rig is being repaired
0745: Laying Pads at MW Location A (IW0148 and IW0149)
0845: Begin Development on IW0148
0915: Development complete on IW0148; developing IW0149; Pads complete at Location A
0945: Development complete on IW0149; laying Pads at MW Location B
1030: Developing IW0150; Claude Harriel on site to replace sending unit on rig
1100: Development complete on IW0150; Begin Developing IW0151; repair complete on rig; testing repair; JA laying pad at MW Location G
1120: Part did not fix problem… Back to pads and Development
1130: CH offsite; Development complete on IW0151
1200: GPI taking lunch
1240: GPI on site; resuming work
1255: Developing IW0158; laying pads at MW Location C
1325: Development complete at IW0158
1530: Pads complete on east side of site; site secured; Tt/GPI offsite

02/02/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Sunny 63 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Hydration

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion

0700: Tt/GPI on site; Has Meeting; daily prep
0715: Developing Wells at Location C
0800: Laying Pad at MW Location K
0900: Pad Installation complete at Location K Development complete at Location C; laying pads at MW Location H
1015: Developing MW Location K; laying Pads at MW Location I
1045: Development at Location K Complete
1100: Developing MW Location H
1200: Development Complete; Installing Pads at MW Location H
1350; Pad Installation complete
1415: Laying pad at MW Location M; Developing MW Location N
1445: Development complete at Location N
1515: installation Complete on Pad at MW Location M
1530: Laying Pad at MW Location N

02/06/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Sunny 63 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Hydration

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion

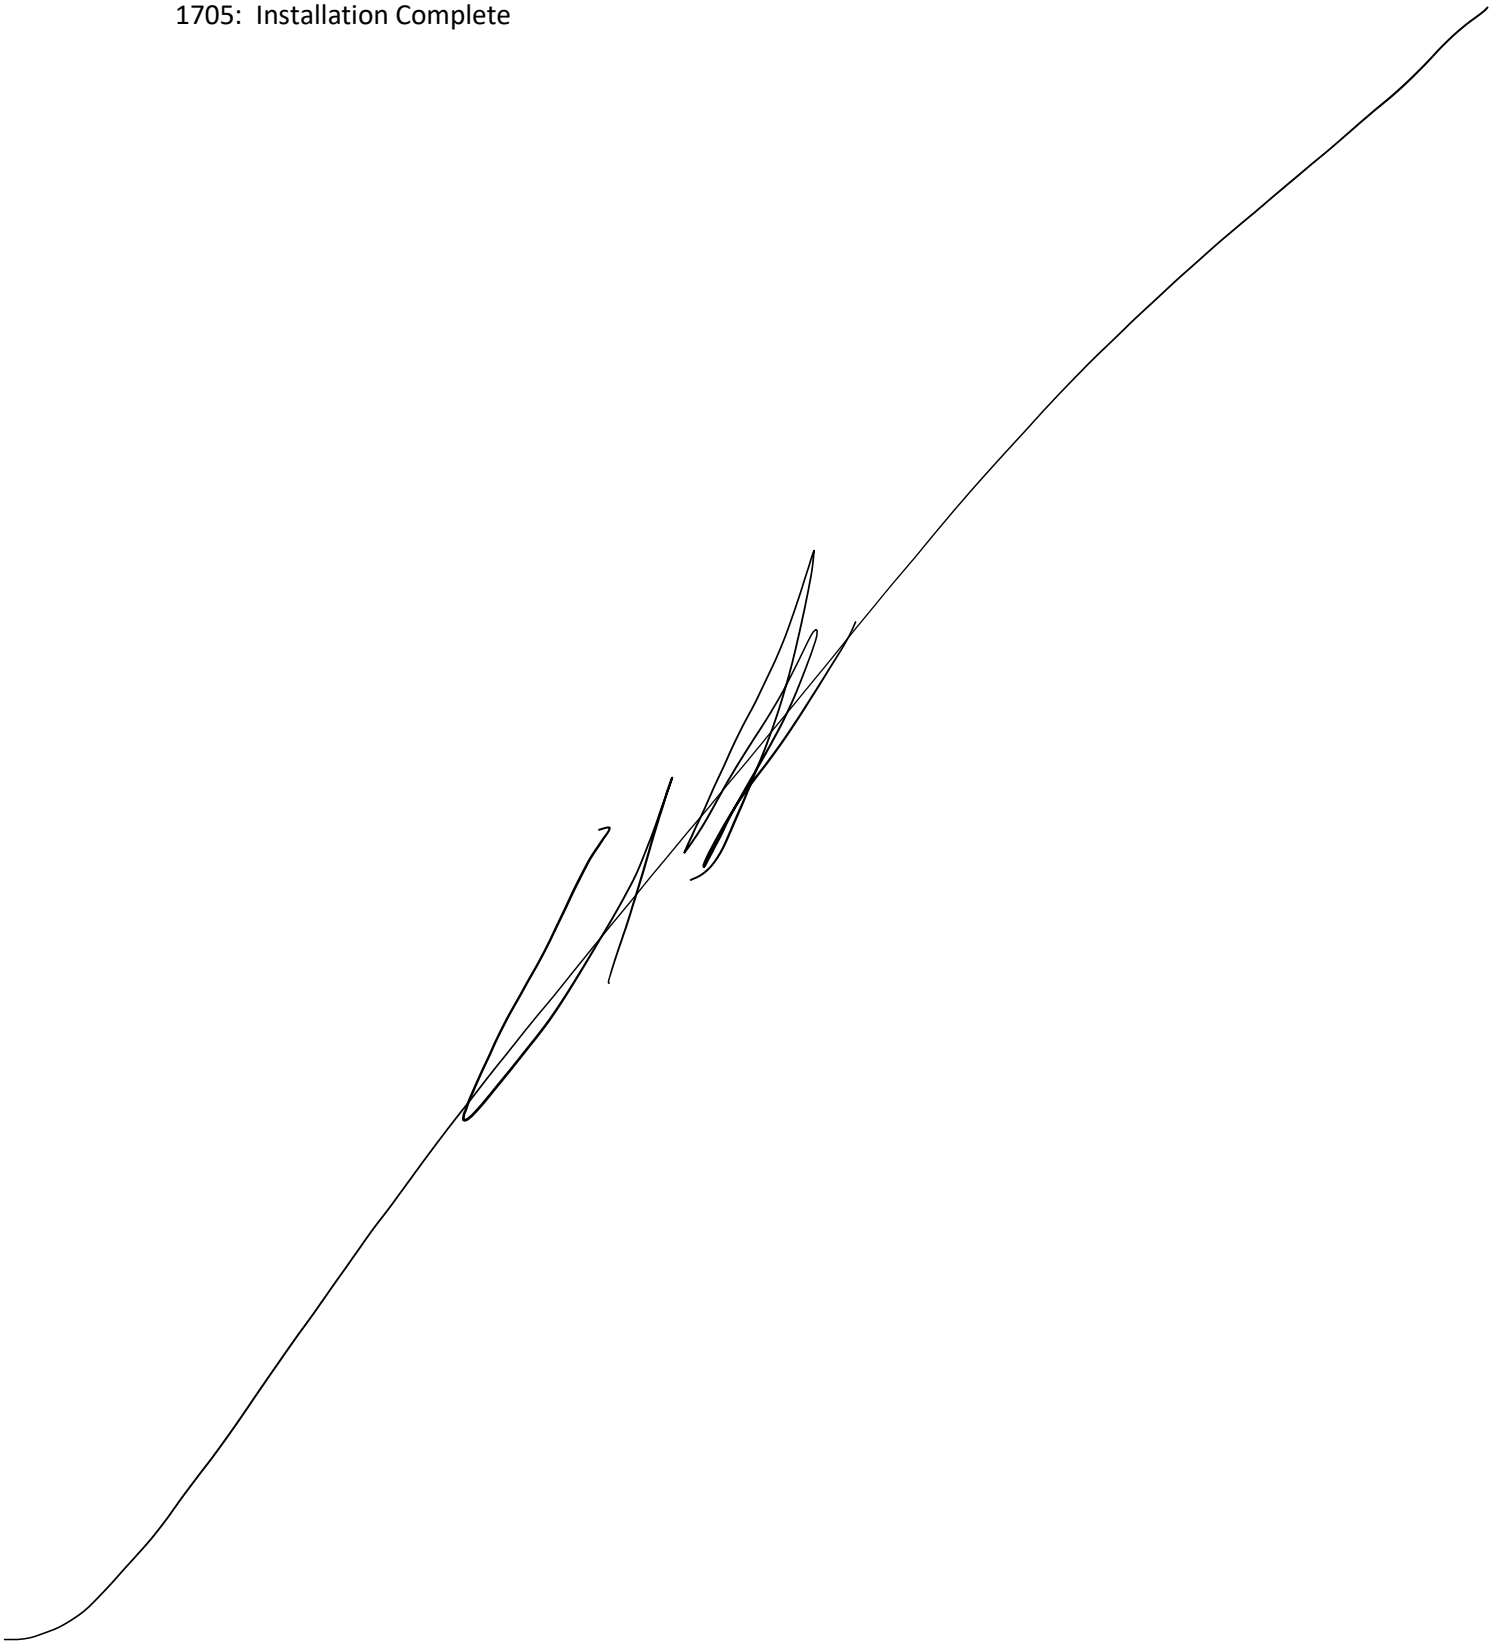
0800: Tt on site
0935: GPI on site; no part yet; GPI retrieving SR 5 from Wilson's corner
0955: GPI offsite
1100: GPI on site; unloading SR 5 and setting up on AS0379; setting well 51 degrees, 52' length
1145: GPI offsite for lunch
1215: GPI on site; Claude Harriel (CH) on site as well; replacing Part on SR-9
1315: Repair complete; attempting to resume drilling on AS0490; setting well 51.5 degrees; 60' length on hypotenuse
1345: CH offsite; repair complete
1410: Setting well 60' length
1425: Well set; begin hydration/development
1450: Hydration/Development complete; grouting borehole
1505: Installation Complete
1530: Set up on AS0483; hand clear 5'; setting well 52 degrees 59.5' hypotenuse length
1540: Drilling Commenced
1630: Setting well 60' TD
1645: Well set; begin hydration/development
1705: Hydration/development complete; will grout in am
1715: Site secured; Tt/GPI offsite

02/07/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Sunny 63 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Hydration



PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion

0700: Tt/GPI on site; HAS Meeting; daily prep
0740: Begin grouting AS0483
0800: Installation Complete
0810: Set up on AS0474; hand clear 5'; adjusted angle to reflect adjusted depth based on lithology; new proposed angle and hypotenuse length = 71.6 degrees (72 degrees); 50' hypotenuse length
0815: Drilling Commenced
0840: Setting well
0855: Well set; begin hydration/development
0915: Hydration/development complete; grouting borehole
0935: Installation Complete
0945: Set up on AS0484; hand clear 5'; adjusted angle to reflect adjusted depth based on lithology; new proposed angle and hypotenuse length = 51.3 degrees (51 degrees), 60.8' (61')
1005: Drilling Commenced
1045: Setting well 61' Hypotenuse length
1100: Well set; begin hydration/development
1120: Hydration/development complete; GPI taking lunch
1140: Grouting Borehole
1155: Installation Complete
1200: Set up on AS0485; hand clear 5'; adjusted angle to reflect adjusted depth based on lithology; new proposed angle and hypotenuse length = 74 degrees, 49.5' length
1215: Drilling Commenced
1250: Setting well 49.5' hypotenuse length
1300: Well set; begin hydration/development; well pulled up from approximately 49.5' to 49' during installation; TD along hypotenuse is 49'
1330: Hydration/development complete; grouting borehole
1350: Installation Complete
1405: Setting up on AS0476; Previous vertical well converted to angle well due to slope on apron of pad and proximity to an endangered mouse burrow. Horizontal offset – 22'; Angle – 60 degrees, length – 44' to set bottom of well screen at 38' BLS
1425: Drilling Commenced
1450: Setting well 44' length
1500: Well set; begin hydration/development
1525: Hydration/development complete; grouting borehole
1540: Installation Complete
1550: Set up on AS0465; Previous vertical well converted to angle well due to slope on apron of pad and proximity to an endangered mouse burrow. Horizontal offset – 22'; Angle – 60 degrees, length – 44' to set bottom of well screen at 38' BLS

02/07/2023 **LC34 HS6** **112G08985**

1555: Drilling Commenced
1615: Setting well 44’ length
1625: Well set; begin hydration/development
1645: Hydration/development complete; grouting borehole
1705: Installation Complete

02/08/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Sunny 63 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Hydration

PPE: Level D

Objective: Continue Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion

0700: Tt/GPI on site; HAS meeting; daily prep; moving rig to AS0477
0745: Set up on AS0477; hand clear 5'; setting well 66 degrees, 44' hypotenuse length to set screen vertically 40' BLS
0755: Drilling Commenced
0830: Setting well 44' length
0840: Well set; begin hydration/development
0900: Hydration/development complete; grouting borehole
0920: Installation Complete
0930: Set up on AS0467; Angle Well; setting well 61 degrees, 46' hypotenuse length
0940: Drilling Commenced
1000: Setting well 46' hypotenuse length
1015: Well set; begin hydration/development
1035: Hydration/development complete; grouting borehole
1055: Installation Complete
1105: Set up on AS0456; moved location approximately 9' south along arc of offset to gain better access for rig due to palm tree; hand clear 5'; proposed angle well; setting 56.5 degrees, 48' hypotenuse length
1130: Drilling Commenced
1155: Setting well 48' Length Hypotenuse
1215: Well set; begin hydration/development; GPI taking lunch
1245: GPI on site; Hydration/development complete; grouting borehole
1305: Installation Complete
1320: Set up on AS0444; hand clear 5'; Angle well; setting well 52 degrees, 50.7' (51') hypotenuse length
1335: Drilling Commenced
1400: Setting well 51' Hypotenuse length
1420: Well set; begin hydration/development
1440: Hydration/development complete; grouting borehole
1455: Installation Complete
1500: Set up on AS0432; moved location 3' south along road to avoid marked utility; adjusted angle from 47.2 degrees to 50 degrees for rig to avoid sonic head cavitation. New angle – 50 degrees, New Hypotenuse length – 52'; doing this moves the termination point 3.5' closer to entry with a vertical BLS of 40'
1510: Drilling Commenced
1540: Setting well 52' hypotenuse length
1555: Well set; begin hydration/development
1615: Hydration/Development complete; grouting borehole
1635: Installation Complete; Site secured; Offsite at 1650

02/09/2023 **LC34 HS6** **112G08985**

Personnel:	Chuck Sorden	(CS)	Geologist	Tt
	Dave Longino	(DL)	Driller	GPI
	Joel Aponte	(JA)	Tech	GPI

Weather: Sunny 63 degrees F

Health and Safety (HAS): Topics: PPE; IDW; Hydration

PPE: Level D

Objective: Complete Launch Complex 34 (LC34) Hot Spot 6 (HS6) Air Sparge (AS) system expansion

0700: Tt/GPI on site; HAS Meeting; Daily Prep
0800: Set up on AS0420; hand clear 5'; angle well; setting well 58 degrees, 47' hypotenuse length
0810: Drilling Commenced
0840: Setting well 47' length
0850: Well set; begin hydration/development
0915: Hydration/Development complete; grouting borehole
0935: Installation Complete
0945: set up on AS0408; hand clear 5'; angle well; Angle – 70 degrees; 42.5' hypotenuse length
1020: Setting well 42.5' Length
1030: Well set; begin hydration/development
1050: Hydration/Development Complete; grouting borehole
1110: Installation Complete
1120: Set up on AS0396; hand clear 5'; angle well; setting well 50.5 degrees; 52; hypotenuse length
1130: Drilling Commenced
1150: Setting well 52' TD length
1205: Well set; begin hydration/development
- GPI taking lunch

1240: Hydration/development complete; grouting borehole
1300: Installation Complete
1310: Set up on AS0385; Hand clear 5'; angle well; setting well 62.3 (62.5) degrees, 45.2' (45') hypotenuse length
1320: Drilling Commenced
1340: Setting well 45.2'
1355: Well Set; begin hydration/development
1415: Hydration/development complete; grouting borehole
1435: Installation Complete
1440: Set up on AS0379; hand clear 5'; Angle well; setting well 50.5 degrees, 51.5' hypotenuse length
1520: Setting well 51.5' Length
1535: Well set; begin hydration/development
1555: Hydration/Development complete; grouting borehole
1620: Installation Complete
1630: LC34 HS6 AS WELL INSTALLATION COMPLETE!

*Tetra Tech Note:
The proposed monitoring well IDs contained in these field notes (IW0148 through IW0168) were used for planning purposes, but after the installation event was completed they were re-numbered. The well IDs changed by an order of 20, i.e., well LC34-IW0148 was re-numbered as LC34-IW0168; LC34-IW0149 was re-numbered as IW0169, and so on. The following presents a crosswalk of how the wells were re-numbered:

Proposed Well ID	Final Well ID
LC34-IW0148	LC34-IW0168
LC34-IW0149	LC34-IW0169
LC34-IW0150	LC34-IW0170
LC34-IW0151	LC34-IW0171
LC34-IW0152	LC34-IW0172
LC34-IW0153	LC34-IW0173
LC34-IW0154	LC34-IW0174
LC34-IW0155	LC34-IW0175
LC34-IW0159	LC34-IW0179
LC34-IW0157	LC34-IW0177
LC34-IW0158	LC34-IW0178
LC34-IW0159	LC34-IW0179
LC34-IW0160	LC34-IW0180
LC34-IW0161	LC34-IW0181
LC34-IW0162	LC34-IW0182
LC34-IW0163	LC34-IW0183
LC34-IW0164	LC34-IW0184
LC34-IW0165	LC34-IW0185
LC34-IW0166	LC34-IW0186
LC34-IW0167	LC34-IW0187
LC34-IW0168	LC34-IW0188

Type of Riser: 1" Sch. 40 PVC

Borehole Diameter: 4

Type of Backfill: Type I Portland Cement/Bentonite

Elevation / Depth of Seal: / 13.5

Type of Seal: 30/65 Silica Sand

Elevation / Depth of Top of Filter Pack: / 15.5

Elevation / Depth of Top of Screen: / 16.0

Type of Screen: Pre-Packed Screen

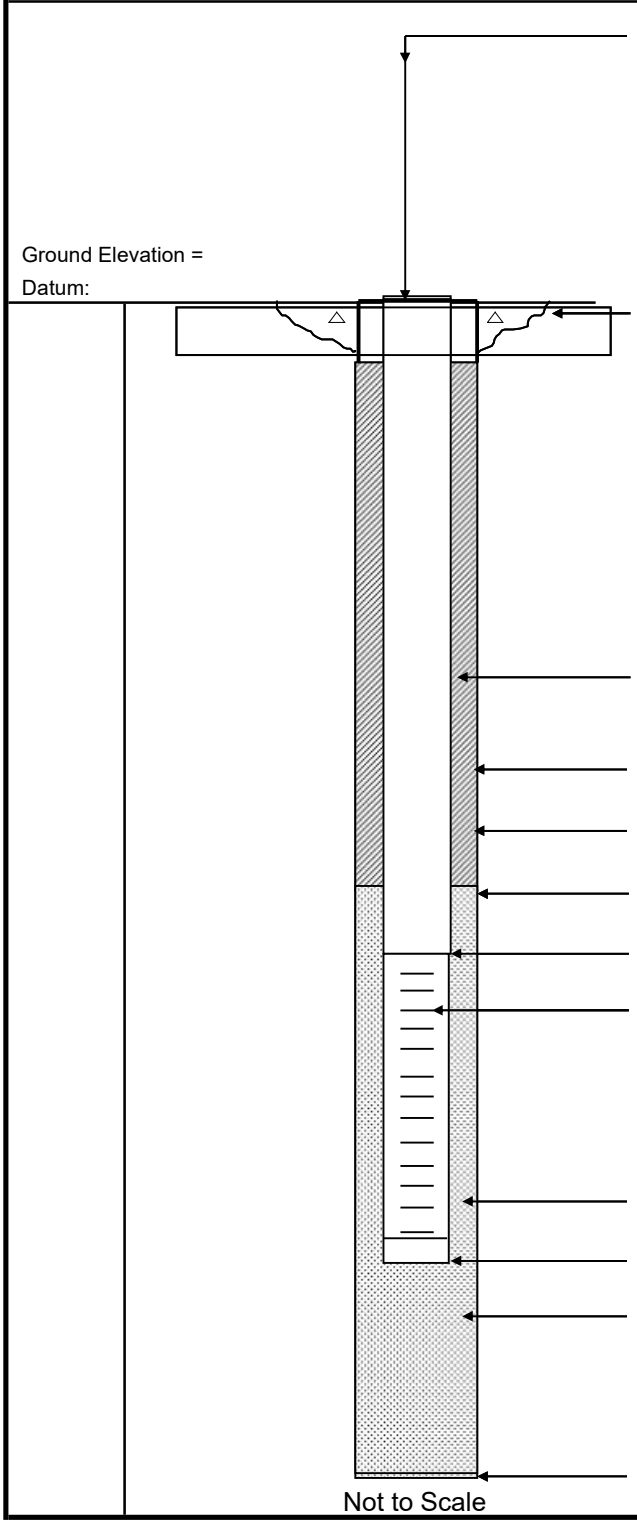
Slot Size x Length: 0.010 x 10

Type of Filter Pack: 20/30 Silica Sand

Elevation / Depth of Bottom of Screen: / 21.0

Elevation / Depth of Bottom of Filter Pack: / 21.0

Type of Backfill Below Well: Undisturbed Native Soil



Elevation / Total Depth of Borehole: / 21.0

MONITORING WELL SURVEYOR REPORT

Tetra Tech note: The well IDs were re-numbered after the survey was completed. The well IDs shown in this survey report changed by an order of 20. LC34-IW0148 was re-numbered as LC34-IW0168; LC34-IW0149 was re-numbered as LC34-IW0169, and so on.

SURVEYOR'S NOTES:

1. THE SPECIFIC PURPOSE OF THIS SURVEY IS TO DETERMINE THE POSITION AND ELEVATION OF INJECTION WELLS.
2. HORIZONTAL COORDINATES ARE REFERENCED TO THE FLORIDA STATE PLANE COORDINATE SYSTEM, EAST ZONE, NORTH AMERICAN DATUM OF 1983 (NAD83), 1990 ADJUSTMENT AND ARE BASED ON THE UNITED STATES COAST AND GEODETIC MONUMENT "MOTR 1990", HAVING PUBLISHED COORDINATES OF N. 1520936.90 , E.796381.42.

3. ELEVATIONS DEPICTED HEREON ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD 1988) AND ARE BASED ON UNITED STATES COAST AND GEODETIC SURVEY MONUMENT "MOTR 1990" HAVING A PUBLISHED ELEVATION OF 25.16 FEET.
4. UNDERGROUND FOUNDATIONS AND/OR UTILITIES NOT LOCATED AT TIME OF SURVEY.
5. THIS SURVEY WAS PREPARED FOR THE EXCLUSIVE USE OF THE CLIENT(S) SHOWN HEREON AND COPIES ARE VALID ONLY WITH THE SIGNATURE AND ORIGINAL RAISED SEAL OF A FLORIDA LICENSED PROFESSIONAL SURVEYOR & MAPPER UNLESS ELECTRONICALLY SIGNED AND SEALED IN ACCORDANCE WITH FLORIDA STATUTES CHAPTER 472.025 AND THE STANDARDS OF PRACTICE FOR SURVEYS AS REFERENCED BY CHAPTER 5J-17, FLORIDA ADMINISTRATIVE CODES.
AND SEALED IN ACCORDANCE WITH FLORIDA STATUTES CHAPTER 472.025 AND THE STANDARDS OF PRACTICE FOR SURVEYS AS REFERENCED BY CHAPTER 5J-17, FLORIDA ADMINISTRATIVE CODES.

HS 6 PHASE TWO EXPANSION AS SYSTEM INSTALLATION RECORDS AND PHOTOGRAPHIC LOG (PRVIDED IN ELECTRONIC VERSION ONLY)

DAILY ACTIVITY REPORTS

DAILY ACTIVITY REPORT

Project No.:	Project Title:		Date:	30-Jan
112G08985		Launch Complex 34, SWMU CC054 Hot Spot Area 6 Groundwater Remediation	Year:	2023
4045			Day:	Monday

Personnel Summary

Tetra Tech, Inc.			Onsite	Support Personnel:		Onsite
Program Manager:	Mark Speranza	MS		Wayne Crisafulli	WC	
Project Manager	Mark Jonnet	MJ		Ron Linton	RL	X
Project Engineer:				Kyle Hoard	KH	X
Field Operations Supervisor:	Dan Forester	DF	X	Chuck Sorden	CS	X
CM/Site Safety & Health Officer:	Christopher Neumann	CN		Rob Siegel	RS	
Field Engineer:	Dan Forester	DF	X			
Project Support:						

Subcontractor:			Onsite			Onsite
Dave Langaro	GPI	DL	X			
Joel Adues	GPI	JA	X			

Visitors:			Onsite			Onsite
Anne Crest	NASA Technical Lead	AC		Sean O'Brien	Dig Police	SO
Deda Johansen	NASA RPM	DJ		Brett	COMM Police	B
Jermy Ales	NASA Safety & Health	JA				
James Best	NASA Safety & Health	JB				

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:00	DF arrive onsite LC 34.
7:30	RL arrive onsite. DF and RL discuss the plan for the day.
8:00	Mini Ex arrives onsite and RL preforms the initial equipment inspection.
8:30	KH arrives onsite. All have a Site Safety Brief. All discuss the plan for HS6 expansion 3/4.
9:00	conclude work for HS6 exp 3/4
9:30	
10:00	CS, DL, driller onsite continue drilling Air Sparge wells.
10:30	
11:00	
11:30	
12:00

4045		Hot Spot Area 6 Groundwater Remediation	Day:	Thursday

Personnel Summary

Tetra Tech, Inc.			Onsite	Support Personnel:		Onsite
Program Manager:	Mark Speranza	MS		Wayne Crisafulli	WC	
Project Manager	Mark Jonnet	MJ		Ron Linton	RL	X
Project Engineer:				Kyle Hoard	KH	X
Field Operations Supervisor:	Dan Forester	DF	X	Chuck Sorden	CS	
CM/Site Safety & Health Officer:	Christopher Neumann	CN		Rob Siegel	RS	X
Field Engineer:	Dan Forester	DF	X			
Project Support:						

Subcontractor:			Onsite			Onsite
Dave Langaro	GPI	DL				
Joel Adues	GPI	JA				

Visitors:			Onsite			Onsite
Anne Crest	NASA Technical Lead	AC		Sean O'Brien	Dig Police	SO	
Deda Johansen	NASA RPM	DJ	X	Brett	COMM Police	B	
Jermy Ales	NASA Safety & Health	JA	X				
James Best	NASA Safety & Health	JB					

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:00	DF, RS arrive onsite LC 34.
7:30	RL arrive onsite preforms equipment inspections and continues trenching. DF, RS moves materials and organize 3 sided structure.
8:00	
8:30	
9:15	KH arrive onsite from mowing CCB berm and mowes 34 HCS.
9:30	KH helps DF and RS move materials.
10:00	
10:30	
11:00	
11:30	
12:00	RS, RL go to lunch.
12:30	
13:00	RS, RL resume.
13:30	KH departs for personnel appointment.
14:00	
14:30	
15:00	
15:30	
16:00	RL departs site.
16:30	RS departs site.
17:00	
17:30	
18:30	DF departs site. End Day Site Secure

Tetra Tech, Inc.				Onsite	Support Personnel:		Onsite
Program Manager:	Mark Speranza	MS			Wayne Crisafulli	WC	
Project Manager	Mark Jonnet	MJ			Ron Linton	RL	X
Project Engineer:					Kyle Hoard	KH	X
Field Operations Supervisor:	Dan Forester	DF			Chuck Sorden	CS	
CM/Site Safety & Health Officer	Christopher Neumann	CN		X	Mark Kendall	MK	
Field Engineer:	Dan Forester	DF			Steve Lane	SL	
Project Support:							

Subcontractor:			Onsite				Onsite

Visitors:			Onsite				Onsite
Deda Johansen	NASA RPM	DJ		Sean O'Brien	Dig Police	SO	
Ryan O'Meara	NASA RPM	RO		Brent Oakley	COMM Police	BO	
Jeremy Ales	NASA Safety & Health	JA		Michelle Moore	NEMCON	MM	
James Best	NASA Safety & Health	JB					

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:45	RL onsite; CN picking up KH after stop at Home Depot for unistrut
8:00	CN and KH onsite; Tailgate; CN call to Cape Support for Dig Clearance; Clear to excavate
8:30	All gathering tools and supplies to install pipe rack
8:45	RL on mini resumes trenching; CN and KH laying out rack and gathering parts
10:00	CN and KH inventory delivery; Synergy onsite to demobilize second mini
12:30	CN, KH, and RL offsite for lunch
1:30	CN, KH, and RL return and resume
3:00	Pipe rack complete; All housekeeping
3:45	All offsite

Description of Work Performed, Problems Encountered and Resolutions:

Time	
8:00	CN and KH onsite; Tailgate; CN call to Cape Support for Dig Clearance; Clear to excavate with waiver
8:05	DF onsite; RL called in, will be late
8:45	DF offsite; KH potholing for water line at trench crossing
9:15	RL onsite in mini assisting KH cross water lines with trench
11:00	Following 4 water line crossings RL continues trenching as KH goes to old manifold trailers to label lines
12:15	CN, KH, and RL offsite for lunch
1:15	CN, KH, and RL return and resume
3:30	CN assisting KH
3:45	CN fueling mini
4:00	All offsite

Jeremy Ales	NASA Safety & Health	JA		Michelle Moore	NEMCON	MM	
James Best	NASA Safety & Health	JB					

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:15	CN stop to fill diesel tank
7:30	CN stop to pick up KH
7:45	RL onsite
8:00	RL on mini resumes trenching
8:30	CN and KH onsite; CN call to Cape Support for Dig Clearance; Clear to excavate; KH fueling 4x4 then to old manifold trailer to resume labeling flex lines and pipe racks; CN moving rope barricades and marking ASWs
10:00	KH completes marking lines and begins spotting RL for utility crossings
12:15	CN and KH restoring rope boundary where it was moved for mini to more easily trench up to the boundary
12:30	RL offsite for appointment; CN and KH offsite for lunch
1:15	CN and KH return; KH in mini excavating last trench on north side of blockhouse
3:00	KH completes trenching; CN texts DF to request he GPS the trenches tomorrow; KH on tractor moving reels and spool to set up to deploy 1-inch HDPE piping tomorrow
4:00	CN and KH offsite

Field Engineer:	Dan Forester	DF			Steve Lane	SL	
Project Support:					Natalie Volk	NV	

Subcontractor:			Onsite				Onsite

Visitors:			Onsite				Onsite
Deda Johansen	NASA RPM	DJ		Sean O'Brien	Dig Police	SO	
Ryan O'Meara	NASA RPM	RO		Brent Oakley	COMM Police	BO	
Jeremy Ales	NASA Safety & Health	JA		Michelle Moore	NEMCON	MM	
James Best	NASA Safety & Health	JB					

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:45	RL onsite on mini resumes placing half backfill
8:20	CN onsite
9:41	Phase II
10:00	KH onsite
10:46	Phase II terminated; RL resumes, KH on skidsteer placing and grading backfill in trenches with tape, wire, and stakes
12:15	All offsite for lunch
1:15	All return, KH and RL resume
2:30	CN stopped KH due to tracks making odd noise. Found nut missing allowing pin in sprocket to back out but caught before any damage occurred. Looked for replacement nut onsite to no avail.
3:00	CN and KH load tractor onto flatbed for transport to HMFN for mowing HMFN, POL, and CHP tomorrow
3:15	CN and KH offsite to HMFN
3:45	CN and KH drop tractor at HMFN then trailer at POL
4:00	All offsite

Ryan O'Meara	NASA RPM	RO		Brent Oakley	COMM Police	BO	
Jeremy Ales	NASA Safety & Health	JA		Michelle Moore	NEMCON	MM	
James Best	NASA Safety & Health	JB		Chris Adkison	NASA RPM	CA	

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	CN text RL and KH to place tape and wire in header trench
8:30	CN onsite; KH going through CCSFS Inspection with skidsteer and trailer; RL off today
9:00	KH onsite offloading skidsteer; CN asked KH to get ice/water and measure lengths of steel pipe needed to erect header piping over blockhouse wall (10' 2" and 9' 7")
9:45	CN and KH load tractor and 2-inch steel pipe onto flatbed trailer
10:15	CN and KH offsite to assist Chuck Sorden and Aaron Kupper at SW3 site
11:30	CN and KH to WC's to cut and thread steel piping
11:45	Lunch
12:45	CN and KH set up band saw and cut 2-inch steel pipes to length
1:45	CN and KH set up threader and oiler to thread pipes; Threader teeth not biting after multiple attempts
2:30	CN and KH take pipe to SF Travis to have pipe threaded
3:30	KH takes CN to site to retireve pickup truck
4:15	CN to SF Travis to pick up pipe; KH to WC's to to clean up and put away threader
4:45	KH notices 8th pipe was left at WC's and takes it to SF Travis for threading
5:30	CN and KH leave SF Travis

James Best	NASA Safety & Health	JB		Chris Adkison	NASA RPM	CA	

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	CN, KH, and RL at WC's to hook up trailer with tractor and transfer pipe to KH's truck
8:00	CN to CCB to drop tractor and trailer for DF; RL and KH to LC34 to begin assembling steel piping to go over blockhouse wall
9:15	CN onsite assisting RL and KH
11:00	RL on mini lifting pipes guided by KH and CN to saddle on wall
12:00	All offsite for lunch
1:00	All return and proceed to place tape and wire in header trench
2:00	All gathering tools and supplies to rack 2-inch piping
2:25	RL on mini and KH on skidsteer placing and grading backfill
3:30	Air conditioning stopped working in skidsteer; KH loads it onto trailer to take offsite for repair; CN making calls for a replacement
4:00	All offsite

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	CN stop for fuel and gas
8:00	RL and KH onsite; RL on mini resumes placing backfill; CN at CCB picking up tractor
8:45	CN onsite offloading tractor
9:00	CN and RL gathering parts and tools and erecting unistrut bracing for 2-inch steel piping to existing unistrut embedded in the blockhouse wall
12:00	CN and KH pause to loosen all of the 1-inch HDPE in the north pipe rack to release tension from backfill being placed on the area
12:30	All offsite for lunch
1:30	All return; RL placing tape, wire, and ASW stakes in header trench and resumes backfilling; CN and KH resume mounting steel piping
3:15	All housekeeping due to incoming storms; Phase II
3:30	RL and KH offsite; Rains begin
3:45	CN offsite

Figure 42: 4/28/2023 2:35:34 PM; Looking north, excavated air sparge lateral trenching north of blockhouse.

Figure 43: 4/28/2023 2:35:50 PM; Looking northwest, excavating air sparge lateral trenching north of blockhouse.

Figure 44: 4/28/2023 2:37:00 PM; Looking east, graded backfill in air sparge lateral trenching and open header trench in foreground, east of blockhouse.

Figure 45: 4/28/2023 2:37:07 PM; Looking east, graded backfill in air sparge lateral trenching and open header trench in foreground, east of blockhouse.

Figure 46: 4/28/2023 2:37:19 PM; Looking east, graded backfill in air sparge lateral trenching and open header trench in foreground, east of blockhouse.

Figure 47: 5/2/2023 2:37:29 PM; Looking southeast, erecting pipe rack for manifold trailer north of blockhouse.

Figure 48: 5/2/2023 2:37:51 PM; Looking south, erecting pipe rack for manifold trailer north of blockhouse.

Figure 49: 5/4/2023 3:25:31 PM; Looking west, excavating air sparge lateral trenching north of blockhouse.

Figure 50: 5/4/2023 3:25:42 PM; Looking north, excavated air sparge lateral trenching north of blockhouse.

Figure 51: 5/4/2023 3:25:53 PM; Looking northwest, excavating air sparge lateral trenching north of blockhouse.

Figure 52: 5/4/2023 3:30:44 PM; Looking west, preparing to deploy 1-inch HDPE lateral piping north of blockhouse.

Figure 53: 5/5/2023 11:39:27 AM; Looking northeast, deploying 1-inch HDPE lateral piping north of blockhouse.

Figure 54: 5/9/2023 11:48:07 AM; Looking east, deploying 1-inch HDPE lateral piping north of blockhouse.

Figure 55: 5/9/2023 11:48:14 AM; Looking south, 1-inch HDPE lateral piping within trench.

Figure 56: 5/12/2023 12:40:17 PM; Looking northwest, 1-inch HDPE lateral piping temporarily racked on pipe rack.

Figure 57: 5/12/2023 12:40:36 PM; Looking northeast, 1-inch HDPE lateral piping temporarily racked on pipe rack.

Figure 58: 5/12/2023 12:40:59 PM; Looking southeast, 1-inch HDPE lateral piping temporarily racked on pipe rack.

Figure 59: 5/12/2023 12:41:40 PM; Looking southwest, 1-inch HDPE lateral piping temporarily racked on pipe rack.

Figure 60: 5/12/2023 12:41:53 PM; Looking northeast, 1-inch HDPE lateral piping within trench.

Figure 61: 5/12/2023 12:41:59 PM; Looking east, 1-inch HDPE lateral piping within trench.

Figure 62: 5/12/2023 12:42:04 PM; Looking northwest, 1-inch HDPE lateral piping within trench.

Figure 63: 5/12/2023 12:42:09 PM; Looking west, 1-inch HDPE lateral piping within trench.

Figure 64: 5/12/2023 12:42:50 PM; Looking west, 1-inch HDPE lateral piping temporarily racked on pipe rack.

Figure 65: 5/12/2023 12:43:34 PM; Looking northeast, 1-inch HDPE lateral piping within trench.

Figure 66: 5/12/2023 12:43:42 PM; Looking northeast, 1-inch HDPE lateral piping within trench, unfinished air sparge well in foreground.

Figure 67: 5/12/2023 12:43:51 PM; Looking south, 1-inch HDPE lateral piping within trench.

Figure 68: 5/16/2023 8:59:09 AM; Preparing to cut 1-inch HDPE lateral piping to length and 1-inch PVC air sparge well to depth for connection.

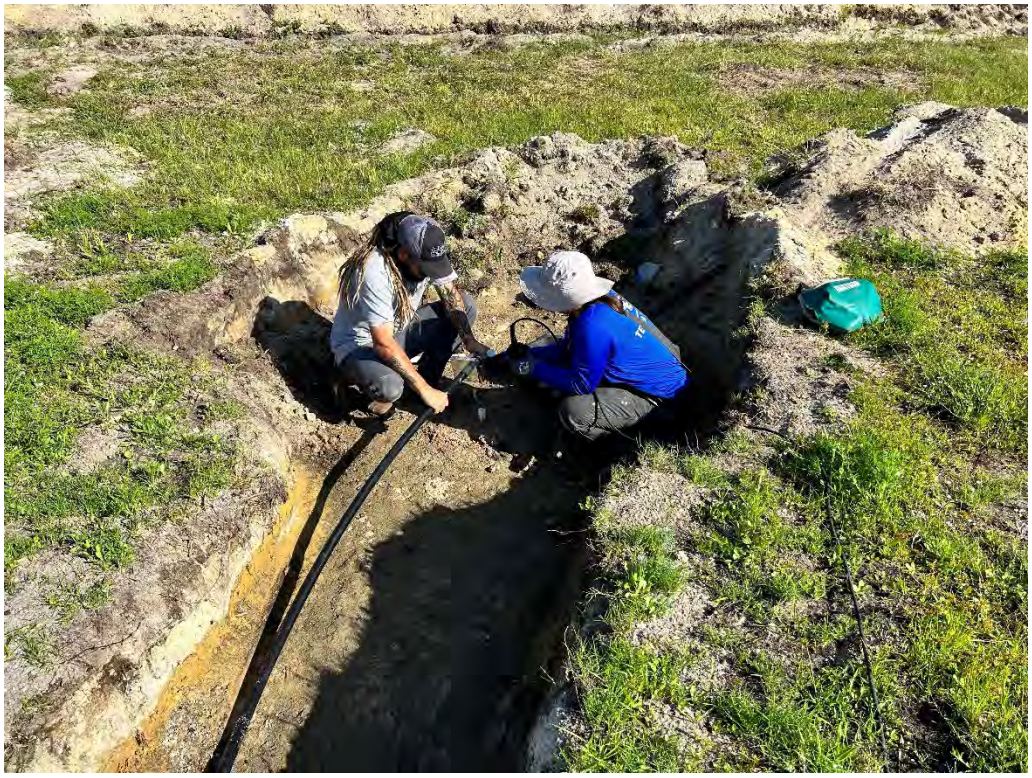

Figure 69: 5/16/2023 9:02:28 AM; Fusion welding 1-inch HDPE lateral piping to tee for connection to 1-inch PVC air sparge well.

Figure 70: 5/16/2023 9:02:35 AM; Fusion welding 1-inch HDPE lateral piping to tee for connection to 1-inch PVC air sparge well.

Figure 71: 5/16/2023 9:03:33 AM; PVC gluing tee to 1-inch PVC air sparge well.

Figure 72: 5/16/2023 9:03:37 AM; PVC gluing tee to 1-inch PVC air sparge well.

Figure 73: 5/16/2023 9:03:50 AM; PVC gluing tee to 1-inch PVC air sparge well.

Figure 74: 5/16/2023 1:10:03 PM; Buried asphalt chunks encountered during lateral trenching transported to Schwartz Road Landfill for disposal.

Figure 75: 5/16/2023 1:10:10 PM; Looking north, buried asphalt chunks encountered during lateral trenching transported to Schwartz Road Landfill for disposal.

Figure 76: 5/18/2023 10:33:25 AM; Looking southeast, laying warning tape and marking wire within lateral trenches.

Figure 77: 5/18/2023 10:34:13 AM; Looking southeast, laying warning tape and marking wire within lateral trenches.

Figure 78: 5/18/2023 10:35:15 AM; Looking southeast, placing backfill within lateral trenches.

Figure 79: 5/22/2023 11:31:10 AM; Looking northeast, placing backfill within lateral trenches.

Figure 80: 5/24/2023 11:12:51 AM; Looking south, placing and grading backfill within lateral trenches.

Figure 81: 6/1/2023 2:26:07 PM; Looking southeast, backfilled and rough graded lateral trenches.

Figure 82: 6/13/2023 9:56:25 AM; Looking northeast, excavated header trench across Perimeter Road.

Figure 83: 6/13/2023 12:12:09 PM; Looking northeast, shallow abandoned water line encountered during header trench excavation.

Figure 84: 6/13/2023 3:38:38 PM; Looking northeast, excavating header trench.

Figure 85: 6/15/2023 9:55:37 AM; Looking southwest, deploying 2-inch HDPE header piping.

Figure 86: 6/15/2023 9:58:34 AM; Looking northeast, deploying 2-inch HDPE header piping.

Figure 87: 6/15/2023 10:29:20 AM; Adding new spool of 2-inch HDPE header piping to reel for deployment.

Figure 88: 6/15/2023 10:46:53 AM; Looking northeast, deploying 2-inch HDPE header piping.

Figure 89: 6/15/2023 10:49:48 AM; Looking northeast, deploying 2-inch HDPE header piping.

Figure 90: 6/22/2023 1:19:10 PM; Looking southwest, placing backfill within header trench.

Figure 91: 6/26/2023 1:58:49 PM; Threading 2-inch steel piping.

Figure 92: 6/28/2023 3:19:50 PM; Installing 2-inch steel piping to continue header lines over blockhouse wall.

Figure 93: 6/28/2023 3:20:03 PM; Looking west, laying warning tape and marking wire within lateral trenches.

Figure 94: 6/29/2023 11:21:23 AM; Installing 2-inch steel piping to continue header lines over blockhouse wall.

Figure 95: 7/5/2023 9:44:12 AM; Erecting pipe rack for 2-inch HDPE header piping at sidewalk adjacent to blockhouse wall.

Figure 96: 7/6/2023 11:14:11 AM; Looking northeast, newly installed header piping plumbed to existing steel header lines with 2-inch hosing and cam-lock fittings.

Figure 97: 7/6/2023 3:17:07 PM; Looking east, HDPE header piping plumbed to steel header piping over blockhouse wall with 2-inch hosing and cam-lock fittings.

Figure 98: 7/6/2023 3:17:27 PM; Looking northeast, HDPE header piping plumbed to steel header piping over blockhouse wall with 2-inch hosing and cam-lock fittings.

Figure 99: 7/7/2023 11:21:40 AM; Looking south, fusion welding HDPE to brass transitions (toppers) to racked lateral piping for plumbing with ½-inch flex line to manifold trailer.

Figure 100: 7/7/2023 11:30:16 AM; Looking northeast, fusion welded HDPE to brass transitions (toppers) to racked lateral piping for plumbing with ½-inch flex line to manifold trailer.

Figure 101: 7/7/2023 11:30:46 AM; Looking northwest, fusion welded HDPE to brass transitions (toppers) to racked lateral piping for plumbing with ½-inch flex line to manifold trailer.

Figure 102: 7/7/2023 11:31:08 AM; Looking east, fusion welded HDPE to brass transitions (toppers) to racked lateral piping for plumbing with ½-inch flex line to manifold trailer.

Figure 103: 7/10/2023 3:40:42 PM; Looking west, fusion welded HDPE to brass transitions (toppers) to racked lateral piping for plumbing with ½-inch flex line to manifold trailer.

Figure 104: 7/10/2023 3:40:59 PM; Looking south, fusion welded HDPE to brass transitions (toppers) to racked lateral piping for plumbing with ½-inch flex line to manifold trailer.

Figure 105: 7/10/2023 3:53:04 PM; Looking southwest, placing backfill at manifold pipe rack.

Figure 106: 7/11/2023 1:27:21 PM; Looking north, relocating manifold trailer.

Figure 107: 7/12/2023 12:55:10 PM; Looking northwest, plumbing ½-inch flex line from toppers to manifold trailer.

Figure 108: 7/13/2023 11:47:24 AM; Looking northwest, plumbing ½-inch flex line from toppers to manifold trailer.

Figure 109: 7/13/2023 11:47:39 AM; Looking northwest, plumbing ½-inch flex line from toppers to manifold trailer.

Figure 110: 7/13/2023 11:47:42 AM; Looking northwest, plumbing ½-inch flex line from toppers to manifold trailer.

Note

Readings are automatically recorded each hour; for presentation purposes only one reading every six hours is shown.

Manifold 6 was turned off during Phase Two air sparge well install and remained off.

From 9/28/23 – 12/7/23 - The flash drive used to save the logs was corrupted and the files could not be recovered, but the system operated normally.

From 12/7/23 – 2/16/24 - Readings display as “0” because of an error with the programmable logic controller, but the system operated normally.
