Method 8260D: The continuing calibration verification (CCV) associated with batch 670-72525 recovered above the upper control limit for Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 670-72525/3).

Method 8260D: The continuing calibration verification (CCV) associated with batch 670-72525 recovered outside acceptance criteria, low biased, for Chloromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 670-72525 recovered outside control limits for the following analytes: Acetone.

Method 8260D: The laboratory control sample (LCS) for analytical batch 670-72525 recovered outside control limits for the following analytes: Methyl acetate. A low-level RL spiked at the reporting limit, was prepared with this batch. The affected target analytes recovered within acceptance limits; therefore, the RL demonstrates the analytical system had sufficient sensitivity to detect the compounds had they been present. Since the affected target compounds were not detected in the samples, the data have been reported and qualified.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 1/20/2024 9:11 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.5°C

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 670-72669 recovered above the upper control limit for 1,1-Dichloroethane, 1,2-Dichloropropane, Bromomethane, Carbon disulfide, Chloroethane, Cyclohexane and Methylene Chloride. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 670-72669/4).

Method 8260D: The continuing calibration verification (CCV) associated with batch 670-72669 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane and Methyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0593-063.0-20240118 (670-33457-7), LC34-DPT0594-073.0-20240118 (670-33457-8), LC34-DPT0595-088.0-20240118 (670-33457-9), LC34-DPT0597-088.0-20240119 (670-33457-10) and LC34-DPT0593-068.0-20240118 (670-33457-11). Elevated reporting limits (RLs) are provided.

Method 8260D: The continuing calibration verification (CCV) associated with batch 670-72672 recovered outside acceptance criteria, low biased, for 1,1,2,2-Tetrachloroethane, 1,2-Dibromo-3-Chloropropane, 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone, Acetone, Chloromethane and Methyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0593-053.0-20240118 (670-33457-1), LC34-DPT0595-078.0-20240118 (670-33457-2), LC34-DPT0594-063.0-20240118 (670-33457-3), LC34-DPT0593-058.0-20240118 (670-33457-4), LC34-DPT0595-083.0-20240118 (670-33457-5) and LC34-DPT0594-068.0-20240118 (670-33457-6). Elevated reporting limits (RLs) are provided.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for analytical batch 670-72674 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) precision was within acceptance limits.

Method 8260D: The continuing calibration verification (CCV) associated with batch 670-72674 recovered outside acceptance criteria, low biased, for Chloromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0595-093.0-20240118 (670-33457-13), LC34-DPT0593-073.0-20240118 (670-33457-14), LC34-DPT0594-083.0-20240118 (670-33457-15), LC34-DPT0595-098.0-20240118 (670-33457-16), LC34-DPT0593-078.0-20240118 (670-33457-17), LC34-DPT0594-088.0-20240118 (670-33457-18), LC34-DPT0593-083.0-20240119 (670-33457-19), LC34-DPT0594-098.0-20240119

(670-33457-20) and LC34-DPT0593-088.0-20240119 (670-33457-21). Elevated reporting limits (RLs) are provided.

Method 8260D: The continuing calibration verification (CCV) associated with batch 670-72862 recovered outside acceptance criteria, low biased, for Bromomethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0593-053.0-20240118 (670-33457-1), LC34-DPT0593-058.0-20240118 (670-33457-4), LC34-DPT0594-068.0-20240118 (670-33457-6), LC34-DPT0594-078.0-20240118 (670-33457-12), LC34-DPT0597-008.0-20240119 (670-33457-22), LC34-DPT0597-013.0-20240119 (670-33457-23), LC34-DPT0597-018.0-20240119 (670-33457-24), LC34-DPT0594-098.0-20240119 (670-33457-25), LC34-DPT0593-093.0-20240119 (670-33457-26), LC34-DPT0597-023.0-20240119 (670-33457-27), LC34-DPT0597-028.0-20240119 (670-33457-28), LC34-DPT0597-048.0-20240119 (670-33457-29), LC34-DPT0593-098.0-20240119 (670-33457-30), LC34-DPT0597-073.0-20240119 (670-33457-31), LC34-DPT0597-053.0-20240119 (670-33457-32), LC34-DPT0597-098.0-20240119 (670-33457-33) and LC34-DPT0597-033.0-20240119 (670-33457-34). Elevated reporting limits (RLs) are provided.

Method 8260D: The continuing calibration verification (CCV) associated with batch 670-72868 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane, 1,2-Dichloroethane, 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone, Acetone, Methyl acetate and Methyl tert-butyl ether. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 670-72868 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8260D: The laboratory control sample (LCS) for analytical batch 670-72868 recovered outside control limits for the following analytes: Methyl acetate. A low-level RL spiked at the reporting limit, was prepared with this batch. The affected target analytes recovered within acceptance limits; therefore, the RL demonstrates the analytical system had sufficient sensitivity to detect the compounds had they been present. Since the affected target compounds were not detected in the samples, the data have been reported and qualified.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0597-058.0-20240119 (670-33457-36). Elevated reporting limits (RLs) are provided.

Method 8260D: The continuing calibration verification (CCV) associated with batch 670-72903 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane and Bromomethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0597-088.0-20240119 (670-33457-10), LC34-DPT0593-068.0-20240118 (670-33457-11) and LC34-DPT0593-078.0-20240118 (670-33457-17). Elevated reporting limits (RLs) are provided.

Elevated reporting limits (RLs) are provided.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-DPT0594-078.0-20240118 (670-33457-12), LC34-DPT0595-093.0-20240118 (670-33457-13), LC34-DPT0597-053.0-20240119 (670-33457-32), LC34-DPT0597-093.0-20240119 (670-33457-35), LC34-DPT0597-058.0-20240119 (670-33457-36), LC34-DPT0597-078.0-20240119 (670-33457-38), LC34-DPT0597-063.0-20240119 (670-33457-40) and LC34-DPT0597-083.0-20240119 (670-33457-41). Elevated reporting limits (RLs) are provided.

Method 8260D: The continuing calibration verification (CCV) associated with batch 670-73081 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane, 2-Butanone (MEK), Acetone, Bromomethane, Carbon disulfide, Chloromethane, Dichlorodifluoromethane and Methyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

SGS North America Inc. - Orlando certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc.- Orlando is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

Receipt
The samples were received on 4/19/2023 3:20 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.2°C

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 400-622816 recovered outside acceptance criteria, low biased, for Bromomethane. A reporting limit (RL) standard was analyzed, and the target analyte is detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-622816 recovered above the upper control limit for Chloromethane and Methyl acetate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: LC34-IW0134-024.0-020230418 (670-18277-7). Elevated reporting limits (RLs) are provided.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: LC34-IW0134-024.0-020230418 (670-18277-7). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Receipt
The samples were received on 4/21/2023 2:30 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.8°C

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 400-622919 recovered above the upper control limit for Vinyl chloride. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-623114 recovered above the upper control limit for Bromomethane and Vinyl chloride. The samples associated with this CCV were below the reporting limits (RL) for the affected analytes; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-623114 recovered outside acceptance criteria, low biased, for Methyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The matrix spike duplicate (MSD) recovery for analytical batch 400-623361 was outside control limits for one or more analytes, see QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: LC34-iw0135-024.0-20230420 (670-18428-10). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS VOA
Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: LC34-IW0169-032.5-20230707 (670-22769-4). Elevated reporting limits (RLs) are provided.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-IW0188-018.5-20230707 (670-22769-1) and LC34-IW0169-032.5-20230707 (670-22769-4). Elevated reporting limits (RLs) are provided.

Method 8260D: Bromoform and Trichlorofluoromethane were reported with an E flag in the batch QC because the top two points were dropped from the ICAL. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.(ICV 680-786025/15)

Method 8260D: The initial calibration verification (ICV) analyzed in batch 680-787574 was outside method criteria for the following analyte(s): 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone, Acetone and Dichlorodifluoromethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-787910 recovered above the upper control limit for Bromomethane, Chloroethane, Chloromethane, Dichlorodifluoromethane, Trichlorofluoromethane and Vinyl chloride. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-787910 recovered outside acceptance criteria, low biased, for 2-Butanone (MEK) and Methyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 680-787910 recovered outside control limits for the following analytes: Chloromethane, Dichlorodifluoromethane and Vinyl chloride. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-788091 recovered outside acceptance criteria, low biased, for 1,1,2,2-Tetrachloroethane, 1,2-Dibromo-3-Chloropropane, 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone and Acetone. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 680-788091 recovered above the upper control limit for Chloroethane, Dichlorodifluoromethane and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 680-788091 recovered outside control limits for the following analyte(s): 2-Butanone (MEK) and 2-Hexanone. 2-Butanone (MEK) and 2-Hexanone have been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: The laboratory control sample duplicate (LCSD) for analytical batch 680-788091 recovered outside control limits for the

Laboratory: Eurofins Orlando (Continued)

following analytes: Carbon disulfide and Trichlorofluoromethane. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-788091.

Method 8260D: The continuing calibration verification (CCV) analyzed in batch 680-788254 was outside the method criteria for the following analyte(s): 1,1,2,2-Tetrachloroethane, 1,1-Dichloroethene, 2-Hexanone, Carbon disulfide, Chloroethane and Chloromethane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 680-788254 recovered outside control limits for the following analyte(s): Carbon disulfide. Carbon disulfide has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method 8260D: The laboratory control sample (LCS) for analytical batch 680-788254 recovered outside control limits for the following analytes: 1,1,2,2-Tetrachloroethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Receipt
The samples were received on 7/11/2023 5:15 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.0°C

GC/MS VOA
Method 8260D: The initial calibration verification (ICV) analyzed in batch 400-627009 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-634059 recovered above the upper control limit for Bromomethane. The samples associated with this CCV that were non-detects for the affected analyte have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-634059 recovered outside acceptance criteria, low biased, for Chloromethane, Dichlorodifluoromethane and Trichlorofluoromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-IW0172-022.0-20230710 (670-22941-4), LC34-IW0168-022.0-20230710 (670-22941-6) and LC34-IW0178-018.5-20230710 (670-22941-7). Elevated reporting limits (RLs) are provided.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-634057 recovered above the upper control limit for 1,2-Dibromo-3-Chloropropane, Methyl acetate and Methylene Chloride. The samples associated with this CCV were below the reporting limit (RL) for the affected analytes; therefore, the data have been reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-IW0170-022.0-20230710 (670-22941-8), LC34-IW0171-032.5-20230710 (670-22941-9), LC34-IW0181-022.0-20230710 (670-22941-10), LC34-IW0182-032.5-20230710 (670-22941-11), LC34-IW0179-022.0-20230710 (670-22941-12) and LC34-IW0183-022.0-20230710 (670-22941-14). Elevated reporting limits (RLs) are provided.

Method 8260D: The matrix spike duplicate (MSD) recovery for analytical batch 400-634228 was outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) precision for analytical batch 400-634228 was outside control limits. Sample matrix interference is suspected.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-634228 recovered above the upper control limit for Methyl acetate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D: The continuing calibration verification (CCV) associated with batch 400-634228 recovered outside acceptance criteria, low biased, for Chloromethane and Dichlorodifluoromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-IW0172-022.0-20230710 (670-22941-4), LC34-IW0173-032.5-20230710 (670-22941-5), LC34-IW0168-022.0-20230710 (670-22941-6), LC34-IW0178-018.5-20230710 (670-22941-7), LC34-IW0171-032.5-20230710 (670-22941-9), LC34-IW0181-022.0-20230710 (670-22941-10), LC34-IW0180-032.5-20230710 (670-22941-13), LC34-IW0183-022.0-20230710 (670-22941-14), LC34-IW0184-032.5-20230710 (670-22941-15) and LC34-IW0185-018.5-20230710 (670-22941-16). Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Revision
The report being provided is a revision of the original report sent on 12/13/2023. The report (revision 1) is being revised to update reported results for sample LC34-IW0134-024.0-20231129 (670-31051-43) to remove duplicate reported analytes..

Receipt
The samples were received on 12/1/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.7°C and 0.9°C

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 670-65972 recovered above the upper control limit for 1,1,2,2-Tetrachloroethane, Chloroethane, Dichlorodifluoromethane and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 670-65972/3).

Method 8260D: The laboratory control sample (LCS) for analytical batch 670-65972 recovered outside control limits for the following analytes: Dichlorodifluoromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-IW0168-022.0 -20231128 (670-31051-12), LC34-IW0178-018.5-20231128 (670-31051-13), LC34-IW0172-022.0-20231128 (670-31051-15), LC34-IW0174-018.5-20231128 (670-31051-22), LC34-IW0057I-025.5-20231129 (670-31051-23), LC34-IW0188-018.5-20231129 (670-31051-24), LC34-IW0181-022.0-20231129 (670-31051-26) and LC34-IW0182-032.5-20231129 (670-31051-29). Elevated reporting limits (RLs) are provided.

Method 8260D: The continuing calibration verification (CCV) associated with batch 670-65936 recovered above the upper control limit for 1,2,4-Trichlorobenzene, Carbon tetrachloride and Chloromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 670-65936/4).

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-IW0177-018.5-20231128 (670-31051-4), LC34-IW0170-22.0-20231128 (670-31051-5) and LC34-IW0169-032.5-20231128 (670-31051-10). Elevated reporting limits (RLs) are provided.

Method 8260D: The continuing calibration verification (CCV) associated with batch 670-66030 recovered above the upper control limit for Bromomethane and Chloroethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 670-66030/4).

Method 8260D: The continuing calibration verification (CCV) associated with batch 670-66030 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane, 4-Methyl-2-pentanone, Acetone and Tetrachloroethene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The laboratory control sample (LCS) for analytical batch 670-66030 recovered outside control limits for the following analytes: Chloroethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 670-66030 were outside control limits. Sample matrix is suspected as the cause of this failure; therefore, the data have been reported.

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-IW0184-032.5-20231129 (670-31051-32), LC34-IW0180-032.5-20231129 (670-31051-34), LC34-IW0179-022.0-20231129 (670-31051-36), LC34-IW0185-018.5-20231129 (670-31051-38), LC34-IW0176-018.5-20231129 (670-31051-39), LC34-IW0186-018.5-20231129 (670-31051-40) and LC34-IW0135-024.0-20231129 (670-31051-41). Elevated reporting limits (RLs) are provided.

Method 8260D: The continuing calibration verification (CCV) associated with batch 670-66108 recovered outside acceptance criteria, low biased, for Chloromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 670-66108 were outside control limits for one or more analytes. See QC Sample Results for detail. The associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8260D: The continuing calibration verification (CCV) associated with batch 670-66108 recovered above the upper control limit for Dichlorodifluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 670-66108/3).

REVISION

The report being provided is a revision of the original report sent on 3/1/2024. The report (revision 1) is being revised due to update of sample ID to match chain of custody. LC34-IW0178-018.5-20240215 (670-34898-17)

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 2/16/2024 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.5°C.

GC/MS VOA
Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: LC34-IW0180-032.5-20240214 (670-34898-1), LC34-IW0184-032.5-20240214 (670-34898-3), LC34-IW0186-018.5-20240214 (670-34898-5), LC34-IW0182-032.5-20240214 (670-34898-6), LC34-IW0170-022.0-20240214 (670-34898-11), LC34-IW0188-018.5-20240215 (670-34898-13), LC34-IW0187-018.5-20240215 (670-34898-14), LC34-IW0168-022.0-20240215 (670-34898-15), LC34-IW0169-032.5-20240215 (670-34898-16), LC34-IW0178-018.5-20240215 (670-34898-17), LC34-IW0172-022.0-20240215 (670-34898-18) and LC34-IW0177-018.5-20240215 (670-34898-20). Elevated reporting limits (RLs) are provided.

Method 8260D: The continuing calibration verification (CCV) associated with batch 670-76767 recovered above the upper control limit for 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone, Acetone, Chloromethane, Dichlorodifluoromethane and Methyl acetate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: CCVIS 670-76767/3.

Method 8260D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 670-76767 recovered outside control limits for the following analytes: Acetone and Dichlorodifluoromethane. Samples were ND for these analytes; data reported.

Method 8260D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 670-77094 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8260D: The following sample was diluted to bring the concentration of target analytes within the calibration range: LC34-IW0176-018.5-20240215 (670-34898-21). Elevated reporting limits (RLs) are provided.

Method 8260D: The continuing calibration verification (CCV) associated with batch 670-77094 recovered above the upper control limit for Cyclohexane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 670-77094/3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

1. PROJECT INFORMATION

Project Title: Air Sparging Interim Measure Expansion at Launch Complex 34 (LC34)

Project Lead: Deda Johansen, SI-E2, 321-508-2289

Project No.: ENV 1634A_03-03-2021 (REV A)

Project Description:

09/08/2022: Update for second expansion of the existing air sparge system.

Original Project Description: The purpose of the interim measure is to install 76 air sparge wells (ASWs) in an area northeast of the Blockhouse to treat contaminated groundwater at the Launch Complex 34 (LC34) site, located at Cape Canaveral Space Force Station. This will be an expansion of the existing Hot Spot 6 air sparging treatment system, and will use the compressor trailer already installed at the site (located under Van Shelter 22004). Subsurface piping will connect the ASWs to the existing compressor trailer. Trenching will be required to install subsurface piping, and will be routed to avoid impact to historical features. A distribution trailer will be installed to support the 76 ASWs. See Figure 1 for the location of the air sparge expansion and Figure 2 for the proposed layout of the expansion. The ASWs will be completed below grade (no well pads or stick-ups), and will be installed at sufficient distance away from historical features (i.e., Blockhouse, Communications wall) to avoid impact. Additionally, a network of 11 new monitoring wells will be installed in the expansion area (see Figure 3) to monitor performance of the system. The new monitoring wells will be flush-mount with ground surface. An underground compressed air line will also be installed from the existing compressor to the Hydraulic Capture System. The existing fence around the Hydraulic Capture System will be expanded to the east as shown on Figure 2.

Note: A NASA Site Plan has already been approved for this project (Site Plan #21-0007). A 332 has also been submitted (Work Request #30323192) and NASA is working with 45 CES/CEIE on environmental requirements. Based on discussions with NASA Cultural Resources, this project will be included in NASA's Annual Report to SHPO, which will cover Section 106 consultation requirements.

2.a.1. CATEGORICAL EXCLUSION (CATEX): This project is categorically excluded (CATEX) from further NEPA review as defined in 14 CFR 1216.304(d)(2)(i) Routine maintenance, minor construction or rehabilitation, minor demolition, minor modification, minor repair, and continuing or altered operations at, or of, existing NASA or NASA-funded or -approved facilities and equipment, such as buildings, roads, grounds, utilities, communication systems, and ground support systems, such as space tracking and data systems. For additional information, please contact Don Dankert of the NASA Environmental Management Branch (SI-E3, 321-861-1196).

2.g.1. NASA PROJECT ON AF PROPERTY: This project is located on CCAFS property. Coordination with the 45th CES/CEIE is required prior to any construction activity at this facility. AF Form 813 must be completed for project review by the Air Force. Contact Taylor Janise (853-6638, 45 CES/CEIE) if clarification is required.
NOTE: A 332 has been submitted for this project and NASA is coordinating with 45 CES/CEIE.

3.a.1. SOLID WASTE MANAGEMENT UNIT (SWMU): This project includes work within the boundary of SWMU #C054, "Launch Complex 34". A SWMU designation means a site has had historical operations with the potential to impact the environment. This area is being investigated by the NASA Remediation Group under Remediation Project Manager (RPM) Deda Johansen (SI-E2, 321-508-2289) of the Environmental Assurance Branch. A Land Use Control Implementation Plan (LUCIP) has been prepared for the SWMU. These controls are necessary to prohibit residential exposure to groundwater present at the site.

All workers involved in subsurface/dewatering work must be notified (HAZCOM) of the potential for contamination present and it is recommended that an Industrial Hygienist be consulted for determination of required personal protective equipment (PPE). Handle potentially contaminated soils or groundwater in accordance with site work plan. Utilize PPE as required by Health and Safety Plan.

3.a.2. HAZARDOUS/NON-HAZARDOUS WASTE: All hazardous and non-hazardous wastes generated during the interim measure must be properly containerized, stored, labeled, manifested, shipped, and disposed of in full regulatory compliance. Hazardous wastes generated by this activity must be manifested, shipped, and disposed of under either the remediation contractor's or NASA's Environmental Protection Agency (EPA) identification number. The contractor shall maintain copies of waste management records and manifests onsite and make them available for review by NASA upon request. The onsite hazardous waste site environmental coordinator/point of contact shall have formal RCRA training and provide proof of training as identified in 40 CFR 262.17 and subpart M. Please contact NASA Environmental Assurance Branch at 861-0863 if assistance is required.

If wastes are managed, controlled and disposed of using the NASA EPA identification number, the KSC Waste Management requirements outlined in KNPR 8500.1 must be followed. A Process Waste Questionnaire (PWQ), KSC Form 26-551 along with any supporting documentation (SDS, product formulation, lab analyses) must be submitted to the NEMCON Waste Management Office for each waste stream generated. That office will then generate a Technical Response Package (TRP) which will give direction on proper handling, storage, and disposal of the waste stream. Please contact NEMCON Waste Management Services at 867-8642 if assistance is required.

The remediation contractor is responsible for any spills, releases, or other environmental contamination that occurs as a result of the proposed activities. A KSC Pollution Incident Report (PIR) Form (KSC Form 21-555) must be completed and submitted to the NASA Environmental Assurance Branch within three (3) calendar days of the incident.

3.a.3. ARCHAEOLOGICAL: LC34 is part of the Cape Canaveral National Historic Landmark District (8Br216). Per Tom Penders, Space Force Cultural Resources Manager (CRM), the entire area has been surveyed and there are no issues for the project to proceed, however if any archaeological material (e.g., artifacts and/or cultural features or human remains) is found, work must stop immediately and the SLD 45 CRM is to be contacted at 321-307-0075 or at thomas.penders@spaceforce.mil. Materials and remains will need to be identified per NAGPRA (Native American Graves Protection and Repatriation Act). For more information please contact Katherine Zeringue (SI-E3) at 867-8454.

3.a.4. PROTECTED SPECIES: This project has the potential to affect the protected gopher tortoise. Measures must be taken to minimize impacts to their habitat. A biological survey will be required to identify potential impacts prior to disturbances. Please contact Russ Lowers (NEM-022, 321-759-6022), 14 days prior to beginning work to schedule a biological survey. A biological survey of vegetated areas to be impacted will be required to identify potential impacts to habitat and wetlands prior to disturbances.
