NASA Tech Briefs announce new technology derived from the U.S. space program. They are issued to encourage commercial application. Tech Briefs are available on a subscription basis from the National Technical Information Service, Springfield, Virginia 22151. Requests for individual copies or questions relating to the Tech Brief program may be directed to the Technology Utilization Division, NASA, Code UT, Washington, D.C. 20546.

Replaceable Filters and Cones for Flared-Tubing Connectors

Standard connectors (types AN and MS) for flared tubing can be modified for incorporation of in-line filters and replaceable cones for seating of the flares. For example, the cone is machined from one end of an MS connector (see fig.) before the fitting is bored to accommodate a metallic-filament type of slip-in filter. A new cone is machined from a heat-treatable stainless steel; its shank slips into the enlarged bore, behind the filter which it holds in place. Thus, when the surface of a cone is damaged, the cone only need be replaced without replacement of the complete connector.

Tests have disclosed no leakage past the metal-to-metal contacts around the replaceable cone.

Note:
No additional documentation is available. Specific questions, however, may be directed to:
