RE: Contract No. NAS5-21795 GFSC ID ST 355

Dear Sirs:

The Indiana Geological Survey and EarthSatellite Corporation (EarthSat) are pleased to submit a progress report for the period of January 1, 1973 to March 1, 1973. To facilitate for review by NASA a consistent summary format has been adopted for month to month reporting.

B. PRINCIPAL INVESTIGATOR: Dr. Charles E. Wier (SR #325)

C. CO-PRINCIPAL INVESTIGATOR: Dr. Frank J. Wobber

D. PRINCIPAL CONTRIBUTORS: Dr. Charles E. Wier
Mr. Orville R. Russell
Mr. Roger Amato

E. SUMMARY OF ACCOMPLISHMENTS:

• A Data Analysis Plan was submitted in January and approved on February 16, 1973.

• A Type II (six month) progress report has been submitted.

• Three test sites for intensive investigations to validate the theoretical basis for the program are under study.
These are (1) The Thunderbird Mine of (Sullivan County); (2) The King Station Mine (Gibson County) and (3) The Mecca Mine area (Parke County). All three sites are areas of underground coal mining. Surface Mines deserving special study will be selected at a later date.

Comparison of ERTS/high altitude aircraft-derived fracture data with sites of underground mining problems is continuing as follows:

(1) Data relating to rock falls and fracturing in the King Station Mine is being acquired. A visit to the mine is planned.

(2) Investigations have started on the Thunderbird Mine in Sullivan County where considerable data has been compiled on roof falls and fracturing. This mine was closed in 1972 because of severe roof fall problems.

F. **SIGNIFICANT RESULTS:**

The utility of ERTS-I/high altitude aircraft imagery to detect underground mine hazards is strongly suggested. A 1:250,000 scale mined lands map of the Vincennes Quadrangle, Indiana has been prepared. This map is a prototype for a national mined lands inventory and will be distributed in March to State and federal offices.

G. **PROBLEMS:**

Retrospective requests for CCT's and color composite imagery, placed in October have yet to be honored. Standing order changes are requiring over four months to be initiated.

H. **RECOMMENDATIONS FOR TECHNICAL CHANGES:**

Interest in mined lands studies using ERTS has increased in Indiana State offices. A gob pile inventory should be conducted as a change to the existing program.

I. **CHANGES TO STANDING ORDER FORMS:**

The change request made in October for the addition of 9 1/2" X 9 1/2" positive transparencies to the standing order has not been added to the NDPF standing order.
J. OVERVIEW OF INVESTIGATION:

The utility of ERTS imagery for regional fracture detection has been demonstrated and substantial new structural data has been acquired over the Illinois Basin. Fracture data from ERTS imagery and high-altitude aircraft photography correlates well with mine accident data and additional studies to more firmly establish the validity of the investigation are underway. Detailed fracture analysis of the Thunderbird Mine area in Sullivan county has begun. A significant quantity of data related to environmental monitoring of coal-mined lands has been generated from ERTS-1 imagery. The capability of ERTS to monitor monthly changes in mined lands has been established.

Sincerely yours,

[Signature]

Frank J. Wobber
Director
Geosciences and Environmental Applications Division

PROGRESS REPORT SUMMARY

Reporting Period

January 1, 1973 - February 28, 1973

Category: 3 - Mineral Resources, Geological Structure and Landform Surveys

Sub-Category: L - Mine Safety, Hazard Survey and Disaster Assessment

Title: Study of Application of ERTS-A Imagery to Fracture-Related Mine Safety Hazards in the Coal Mining Industry

Principal Investigator: Dr. Charles Wier

Co-Investigator: Dr. Frank J. Wobber

SUMMARY:

The utility of ERTS-1 and high-altitude aircraft imagery to detect underground mine hazards is strongly suggested by preliminary studies at the King Station Mine in Gibson County, Indiana.

A 1:250,000 scale mined lands map of the Vincennes Quadrangle, Indiana has been prepared. This map is a prototype for a national mined lands inventory and will be distributed in March to state and federal offices.
