Foreword

JPL Bibliography 39-25 describes and indexes by primary author the externally distributed technical reporting, released during calendar year 1983, that resulted from scientific and engineering work performed, or managed, by the Jet Propulsion Laboratory. Three classes of publications are included:

(1) JPL Publications (81-, 82-, 83-series, etc.), in which the information is complete for a specific accomplishment and can be tailored to wide or limited audiences and be presented in an established standard format or special format to meet unique requirements.

(2) Articles published in the open literature.

(3) Articles from the quarterly Telecommunications and Data Acquisition (TDA) Progress Report (42-series). Each collection of articles in this class of publication presents a periodic survey of current accomplishments by the Deep Space Network as well as other developments in Earth-based radio technology.

Effective January 1977, the “JPL Publication” replaced the Technical Report, Technical Memorandum, and Special Publication. However, the discontinued classes may still appear in future issues of the Bibliography if succeeding volumes or revisions are published in their former series.

JPL personnel can obtain loan copies of cited documents from the JPL Library. Personnel of outside organizations can obtain copies or information regarding the availability of cited documents by addressing a written request to the Documentation and Materiel Division, Jet Propulsion Laboratory, 4800 Oak Grove Drive, Pasadena, California, 91109, or the National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161.
