Bibliography for Aircraft Parameter Estimation

Kenneth W. Iliff and Richard E. Maine

OCTOBER 1986
Bibliography for Aircraft Parameter Estimation

Kenneth W. Iliff and Richard E. Maine

Ames Research Center
Dryden Flight Research Facility
Edwards, California
A bibliography is a useful source of potential references for research in any field of study. An extensive bibliography has not been available in the field of aircraft parameter estimation, and this document is the result of an effort to fill this void. The list is extensive, although not exhaustive, and does contain definitive works related to most aircraft parameter estimation approaches. Theoretical studies as well as practical applications are included. Many of these publications are pertinent to subjects peripherally related to parameter estimation, such as aircraft maneuver design or instrumentation considerations.

This bibliography was generated by soliciting useful reference material from leading international parameter estimation specialists; the primary criterion for including any reference was that it be considered meaningful by some specialists. There is no claim that the list is complete.
