INTRODUCTION

The Exobiology Program, within the Office of Space Science and Applications of the National Aeronautics and Space Administration, is an integrated program whose goal is to investigate and understand those processes that may have been responsible for or related to the origin, evolution, and distribution of life in the universe.

This report contains a listing of 1987 publications resulting from research supported by the Exobiology Program. Our intent in compiling this report is twofold: We want to provide the scientific community with an annual publication listing (as we have done since 1975) of current NASA-supported research in this field, and we hope to stimulate the exchange of information and ideas among scientists working in the different areas of the program.

Research supported by the Exobiology Program is explored in the areas of Cosmic Evolution of Biogenic Compounds, Prebiotic Evolution, Early Evolution of Life, and Evolution of Advanced Life. Pre-mission and pre-project activities supporting these areas are supported in the areas of Solar System Exploration and Search for Extraterrestrial Intelligence.

EACH AREA IS DEFINED AS follows:

COSMIC EVOLUTION OF BIOGENIC COMPOUNDS focuses on the history of the biogenic elements (C,H,N,O,P,S) and their compounds in the galaxy and the early solar system. This includes: (1) tracing the physical and chemical pathways taken by the biogenic elements and their compounds from their origins in stars to their incorporation in the pre-planetary bodies; (2) determining the kinds of measurements that can be made on the biogenic elements and compounds in the galaxy and solar system and prebiotic evolution and origin of life; (3) determining the ways in which the physical and chemical properties of the biogenic elements and compounds may have influenced the course of events during the formation of the solar system and the component bodies.

PREBIOTIC EVOLUTION involves research and analysis in two major areas: (1) the consequences of planetary evolution on the physical environment of the Earth and planets, and (2) the evolution of molecules and molecular systems under the constraints imposed by physical environment and the appearance, a posteriori, of living systems on Earth. It also assesses the importance of the physical-chemical processes associated with the dynamic development of planetary surfaces.

EARLY EVOLUTION OF LIFE focuses on the nature of the most primitive organisms, determining the environment in which they evolved, and the way in which they influenced that environment. Investigations are executed through the use of the molecular record in living organisms and the geological record in rocks. These records are used to determine when and in what setting life first appeared; to determine the characteristics of the first successful living organisms; to understand the phylogeny and physiology of microorganisms that inhabit hydrothermal areas now thought to be analogs of primitive environments; to determine the original nature of biotic energy transduction, membrane function, and information processing through study of extant microbes; and to elucidate the physical, chemical, and biotic forces operating on microbial evolution.
EVOLUTION OF ADVANCED LIFE examines the influence of astrophysical, stellar and solar system events on the evolution of advanced life on Earth. Research in this area also attempts to develop a program plan for a paleontological data base; to understand possible evolutionary pathways for advanced life; and to investigate ancient atmospheres.

SOLAR SYSTEM EXPLORATION focuses on providing specific information on the elemental and chemical composition, mainly with respect to gases and volatiles, of the atmospheres and surfaces of solar system bodies, including planets and their satellites, comets, asteroids, meteorites, and dust in space. Improved methods, instrumentation, and experiments will be developed for in situ chemical analyses of the volatile species associated with the bodies to be investigated.

SEARCH FOR EXTRATERRESTRIAL INTELLIGENCE (SETI) involves the search for extraterrestrial intelligent life by detecting signals in the electromagnetic spectrum. Principal emphasis has been on technology development for the microwave observing project.

This bibliography is divided into the six areas noted above. Within each research area, references are listed alphabetically by author. Authors who are Principal Investigators are identified by an asterisk. In addition, current addresses for all Principal Investigators are given in the Appendix.

We wish to thank all the participants in the Exobiology Program for their cooperation in responding to our request for a listing of their 1987 publications. We also wish to thank Janice Susan Wallace for her editorial and technical assistance and Rodney P. Johnson for his technical assistance.

John D. Rummel

*Icarus* 
SEARCH FOR EXTRATERRESTRIAL INTELLIGENCE (SETI)

PREVIOUS PAGE BLANK, NOT FILLED

INTELLIGENTLY BLANK
Real time data acquisition and processing for field tests of the prototype SETI MCSA (Abstract).
In: *Space Life Sciences Symposium: Three Decades of Life Science Research in Space*,

Real time data acquisition in SETI.
Paper presented at the 38th Congress of the International Astronautical Federation,
Brighton, United Kingdom, October 10-17, 1987, 3 p. (GWU 9634)

Brodie, J.; Bowyer*, S.; Tennant, A.
Simultaneous multifrequency observations of Markarian 421.

Burr, J.B.; Linscott*, I.R.; Peterson*, A.M.
New instrumentation for SETI (Abstract).
In: *Space Life Sciences Symposium: Three Decades of Life Science Research in Space*,

Cohen, R.J.; Downs, G.; Emerson, R.; Grimm, M.; Gulkis*, S.; Stevens, G.; Tarter*, J.
Narrow polarized components in the OH 1612-MHz maser emission from supergiant
OH-IR sources.

Crow*, R.B.; Klein*, M.J.; Gulkis*, S.; Foster*, C.F.
Antennas and receiving systems for the SETI microwave observing project (Abstract).
In: *Space Life Sciences Symposium: Three Decades of Life Science Research in Space*,

Dixon*, R.S.; Bolinger, J.L.
Strategies for the detection and study of intermittent extraterrestrial radio signals (Abstract).
In: *Space Life Sciences Symposium: Three Decades of Life Science Research in Space*,

Gosline, R.M. (Klein, M.J. = P.I.)
SETI data controllers.
In: *JPL-TDA Progress Report 42-92*.

Gulkis*, S.; Carr, T.D.
The main source of radio emission from the magnetosphere of Uranus.

Harpers, D.G.; Cullers*, D.K.
Optimization of SETI's targeted search signal detectors (Abstract).
In: *Space Life Sciences Symposium: Three Decades of Life Science Research in Space*,
Washington, DC, June 21-26, 1987, p. 382. (GWU 9242)
Jackson*, E.B.; Klein*, M.J.
Power density measurements in the near field of the DSS 13 26-meter antenna.

Jones, H.W.; Oliver*, B.M.; Klein*, M.J.; Tarter*, J.C.; Backus*, P.R.
The search for extraterrestrial intelligence microwave observing project (Abstract).
In: Space Life Sciences Symposium: Three Decades of Life Science Research in Space,

An assessment of the impact of radio frequency interference on microwave SETI searches.
Paper presented at the 38th Congress of the International Astronautical Federation,
Brighton, United Kingdom, October 10-17, 1987, 14 p. (IAF-Paper-87-593)

Oliver*, B.M.
The windows of SETI: Frequency and time in the search for extraterrestrial intelligence.
Planetary Report

Oliver*, B.M.
Efficient interstellar rocketry.
Paper presented at the 38th Congress of the International Astronautical Federation,
Brighton, United Kingdom, October 10-17, 1987. (IAF-Paper-87-606)

Dynamic range constraints for large size, hybrid fixed/floating point FFTs.
In: Proceedings of the 20th Asilomar Conference on Signals, Systems, and Computers,
Pacific Grove, CA, November 10-12, 1986.
(GWU 9642)

Satorius*, E.H.; Brady, R.; Deich, W.; Gulkis*, S.; Olsen, E.
Simulated performance of an order statistic threshold strategy for detection of narrowband signals.

PRECEDING PAGE BLANK NOT FILMED

INTENTIONALLY BLANK
ADDENDUM

Exobiology (General)

DeVincenzi*, D.L.; Griffiths, L.D.
Emerging space flight opportunities in exobiology (Abstract).
*Origins of Life*
16(3-4): 412-413, 1986. (GWU 9806)

Exobiology in Earth's orbit (Abstract).
*Origins of Life*
16(3-4): 419, 1986. (GWU 9805)

Cosmic Evolution of Biogenic Compounds

Trapping and release of gases by water ice and implications for icy bodies (Abstract).
*Origins of Life*
16(3-4): 220, 1986. (GWU 9732)

DeFrees*, D.J.; McLean, A.D.
Theoretical studies of interstellar isomers (Abstract).
*Origins of Life*
16(3-4): 224-225, 1986. (GWU 9795)

Macklin, J.; Brownlee, D.; Chang*, S.; Bunch*, T.
Raman spectroscopic studies of carbon in extraterrestrial materials (Abstract).
*Origins of Life*
16(3-4): 232-233, 1986. (GWU 9753)

Radicati di Brozolo, F.; Bunch*, T.E.; Chang*, S.
Laser microprobe study of carbon in interplanetary dust particles (IDP) (Abstract).
*Origins of Life*
16(3-4): 236-237, 1986. (GWU 9756)

Tarter*, J.C.
Observational exobiology (Abstract).
*Origins of Life*
16(3-4): 399, 1986. (GWU 9803)

Prebiotic Evolution

Acevedo, O.L.; Orgel*, L.E.
*Origins of Life*
16(3-4): 441, 1986. (GWU 9817)
Armangue, G.; Oro*, J.
Studies of the non-enzymatic template-directed synthesis of oligoguanylates (Abstract).
*Origins of Life*
16(3-4): 448-449, 1986. (GWU 9818)

Berry, J.M.; Oro*, J.
Interstellar and cometary molecules: Prebiological connections (Abstract).
*Origins of Life*
16(3-4): 221, 1986. (GWU 9734)

Deamer*, D.W.
Boundary structures and the non-polar organic components of the Murchison carbonaceous chondrite (Abstract).
*Origins of Life*
16(3-4): 363, 1986. (GWU 9812)

de Llorens, R.; Cuchillo, C.M.; Oro*, J.
Studies on the synthetic activity of bovine pancreatic ribonuclease A and its relevance to the prebiotic synthesis of oligoribonucleotides (Abstract).
*Origins of Life*
16(3-4): 313-314, 1986. (GWU 9759)

Exline, J.D.; Levine*, J.S.
The origin and evolution of the atmosphere: Classroom experiments, demonstrations, and activities (Abstract).
*Origins of Life*
16(3-4): 197-198, 1986. (GWU 9739)

Ishikawa, Y.; Khwaja, H.; Ferris*, J.P.
HCN formation of Jupiter by photolysis of ammonia-acetylene mixtures (Abstract).
*Origins of Life*
16(3-4): 228, 1986. (GWU 9745)

Joe, H.; Kuma, K.; Paplawsky, W.; Rea, B.; Arrhenius*, G.
Abiotic photosynthesis from ferrous carbonate (siderite) and water (Abstract).
*Origins of Life*
16(3-4): 369-370, 1986. (GWU 9813)

Joyce, G.F.; Orgel*, L.E.
Consequences of template self-structure in poly(C,G)-directed synthesis of oligo(G,C)S (Abstract).
*Origins of Life*
16(3-4): 458, 1986. (GWU 9749)

Kanavarioti*, A.; White*, D.H.
Elongation of ribooligoguanylates under template-directed conditions (Abstract).
*Origins of Life*
16(3-4): 442-443, 1986. (GWU 9797)

Katsigiannis, C.; Mar, A.; Oro*, J.
Prebiotic synthesis of purines from metabolic intermediates (Abstract).
*Origins of Life*
16(3-4): 297-298, 1986. (GWU 9746)
Kerridge*, J.F.
Prebiotic chemical evolution: Evidence from carbonaceous meteorites (Abstract).
*Origins of Life*
16(3-4): 216-217, 1986. (GWU 9747)

Lacey*, J.C.; Wolf, M.M.; Watkins, C.L.
Stereoselective intramolecular interactions in aminoacyl-nucleotide esters influences the 2'-3' distribution (Abstract).
*Origins of Life*
16(3-4): 480-481, 1986. (GWU 9800)

Lacey*, J.C., Jr.; Staves, M.P.; Bloch, D.P.
Evolution of *E. Coli* tRNA_Tp (Abstract).
*Origins of Life*
16(3-4): 525-526, 1986. (GWU 9750)

Levine*, J.S.
Oxygen in the early atmosphere (Abstract).
*Origins of Life*
16(3-4): 203-204, 1986. (GWU 9751)

Levine*, J.S.; Kuhn, W.R.
The early atmospheres of Earth and Mars (Abstract).
*Origins of Life*
16(3-4): 218-219, 1986. (GWU 9752)

Macklin, J.W.; White*, D.H.; Gramsch, S.A.
Infrared spectroscopic studies of amino acid binding to synthetic polynucleotides and histidine analogs (Abstract).
*Origins of Life*
16(3-4): 499, 1986. (GWU 9798)

Mar, A.O.; Dworkin, J.; Purbunderwalla, S.; Oro*, J.
Non-enzymatic synthesis of UDPG and phosphorylated metabolic intermediates (Abstract).
*Origins of Life*
16(3-4): 388-389, 1986. (GWU 9804)

Nakashima, T.; Fox*, S.W.
Experiments on reverse translation (Abstract).
*Origins of Life*
16(3-4): 476, 1986. (GWU 9815)

Some aspects of the gamma radiolysis of aqueous solutions of urea in the context of chemical evolution (Abstract).
*Origins of Life*

Orgel*, L.E.
Replication models (Abstract).
*Origins of Life*
16(3-4): 438, 1986. (GWU 9814)
Papagiannis*, M.D.
Planetary properties leading to liquid water and through it to life (Abstract).
*Origins of Life*
16(3-4): 207, 1986. (GWU 9738)

Pohorille, A.; Owenson, B.; MacElroy*, R.D.
Effect of environment on organization and recognition in prebiotic systems
(abstract).
*Origins of Life*
16(3-4): 504-505, 1986. (GWU 9801)

Przybylski, A.T. (Fox*, S.W. = P.I.)
Concept of the origin of protomembranes (Abstract).
*Origins of Life*
16(3-4): 397-398, 1986. (GWU 9809)

Przybylski, A.T.; Fox*, S.W.
Biomimetic properties of simulated protomembranes (Abstract).
*Origins of Life*
16(3-4): 395-396, 1986. (GWU 9808)

Raghunathan, G.; McDonald, J.; Shibata, M.; Rein*, R.
Examination of prebiotic adaptor models (Abstract).
*Origins of Life*
16(3-4): 533-534, 1986. (GWU 9757)

Rich*, A.; Van House, J.
$^{26}$Al in meteorites and the origin of biological optical activity (Abstract).
*Origins of Life*
16(3-4): 435, 1986. (GWU 9810)

Rich*, A.; Van House, J.
High Z metallochiral compounds and the origin of biological chirality: Experimental results using polarized positrons (Abstract).
*Origins of Life*
16(3-4): 423, 1986. (GWU 9811)

Usher*, D.A.; Needels, M.C.
Translation models (Abstract).
*Origins of Life*
16(3-4): 439-440, 1986. (GWU 9799)

Zielinski, W.S.; Orgel*, L.E.
Studies of the oligomerization and properties of oligonucleotide analogs bearing
$$(3'->5')$$ phosphoramidate backbone (Abstract).
*Origins of Life*
16(3-4): 470, 1986. (GWU 9816)

**Early Evolution of Life**

Bermudes, D.; Margulis*, L.
Modes of change in the evolutionary record: Symbiosis as a mechanism of evolution
(abstract).
*Origins of Life*
16(3-4): 348, 1986. (GWU 9733)
Borowska, Z.; Mauzerall*, D.
Formation of hydrogen on irradiation of aqueous ferrous ion with UV light at neutral pH (Abstract).
*Origins of Life*
16(3-4): 194-195, 1986. (GWU 9735)

Des Marais*, D.J.; Bui, H.
Carbon isotopic studies of microbial mats and stromatolites (Abstract).
*Origins of Life*
16(3-4): 343, 1986. (GWU 9742)

Fahey*, R.C.; Buschbacher, R.M.; Newton, G.L.
Evolution of glutathione metabolism in phototrophic microorganisms (Abstract).
*Origins of Life*
16(3-4): 315-316, 1986. (GWU 9740)

Friedmann*, E.I.; Friedmann, R.O.; Weed, R.
Trace fossils of endolithic microorganisms in Antarctica: A model for Mars (Abstract).
*Origins of Life*
16(3-4): 350, 1986. (GWU 9741)

Gibson*, E.K.; Carr, L.P.; Gilmour, I.; Pillinger, C.T.
Carbon and nitrogen isotopic analysis of Archean sediments: Evidence of Earth's early atmosphere? (Abstract)
*Origins of Life*
16(3-4): 199-200, 1986. (GWU 9743)

Archean carbon isotopic abundances: New results and a commentary on the utility of the record (Abstract).
*Origins of Life*
16(3-4): 341-342, 1986. (GWU 9744)

Kasting*, J.F.
Climatic consequences of very high CO₂ levels in Earth's early atmosphere (Abstract).
*Origins of Life*
16(3-4): 186-187, 1986. (GWU 9794)

Kristjansson, H.; Hochstein*, L.I.
*Origins of Life*
16(3-4): 260-261, 1986. (GWU 9748)

Lazcano, A.; Guerrero, R.; Margulis*, L.; Oro*, J.
RNA prior to DNA: The origin of Archean cells (Abstract).
*Origins of Life*
16(3-4): 512-513, 1986. (GWU 9802)

Margulis*, L.; Bermudes, D.; Obar, R.; Tzertzinis, G.
Symbiosis in evolution: Status of the hypothesis of the spirochete origin of undulipodia (Abstract).
*Origins of Life*
16(3-4): 319, 1986. (GWU 9796)
Margulis*, L.; Fleischaker, G.R.
Environmental evolution and the origins of life: A course in planetary biology (Abstract).
*Origins of Life*
16(3-4): 205-206, 1986. (GWU 9754)

Schopf*, J.W.
Precambrian paleobiological 35mm slides for use in teaching (Abstract).
*Origins of Life*
16(3-4): 354-355, 1986. (GWU 9816)

**Search for Extraterrestrial Intelligence (SETI)**

Backus*, P.R.
SETI: Past, present, and future (Abstract).
*Origins of Life*
16(3-4): 407-408, 1986. (GWU 9807)

**4. Title and Subtitle**

Publications of the Exobiology Program for 1987 - A Special Bibliography

**5. Report Date**

May 1989

**6. Performing Organization Code**

EBR

**7. Author(s)**

Science Communication Studies, DCE
The George Washington University
Washington, DC 20006 and NASA Office of Space Science and Applications

**8. Performing Organization Report No.**

21. No. of pages

78

**9. Performing Organization Name and Address**

National Aeronautics and Space Administration
Washington, DC 20546

**10. Work Unit No.**

11. Contract or Grant No.

NASw-4324

**12. Sponsoring Agency Name and Address**

Technical Memorandum

**13. Type of Report and Period Covered**

**14. Sponsoring Agency Code**

**15. Supplementary Notes**

For previous bibliography in this series, see NASA TM-4029

**16. Abstract**

List of 1987 publications resulting from research pursued under the auspices of NASA's Exobiology Program.

**17. Key Words (Suggested by Author(s))**

chemical evolution, prebiotic evolution, evolution of life, origin of life, exobiology, extraterrestrial life, SETI, solar system exploration, bibliography

**18. Distribution Statement**

Unclassified - Unlimited
Subject Category 55

**19. Security Classif. (of this report)**

Unclassified

**20. Security Classif. (of this page)**

Unclassified

**22. Price**

A05
