A. MISSION DESCRIPTION

The German Telecommunications Satellite (DFS) program is to provide telecommunications service for high data rate transmission of text and video data to the Federal Republic of Germany within the 11 GHz to 14 GHz and 20 GHz to 30 GHz bands. The space segment of this program is composed of three satellites, DFS-1, DFS-2, and DFS-3, which will be located at 23.5°E longitude of the geostationary orbit.

B. FLIGHT PROFILE

The DFS will be launched from the Centre Spatial Guyanis in French Guiana on an Ariane launch vehicle. The mission follows the typical injection
sequence; i.e., parking orbit, transfer orbit, and drift orbit. Attitude maneuvers will be performed to orient the spacecraft prior to Apogee Kick Motor (AKM) firing. After AKM firing, drift phase orbital and attitude maneuvers will be performed to place the spacecraft in its final geostationary position.

C. COVERAGE

The DSN will support the transfer and drift orbit mission phases. The USAF IOS station will provide early support to DFS pre-Canberra AOS.

1. Coverage Goals

The coverage will consist of the 26-m initial acquisition at Canberra followed by 34-m support at Goldstone and Canberra as prime support for the transfer and drift orbits. Maximum support will consist of two 8-hour tracks per station for a 9-day period, plus 14 days of contingency support.

2. Network Support

The support provided by the DSN is indicated in the following table:

<table>
<thead>
<tr>
<th>System</th>
<th>Goldstone</th>
<th>Canberra</th>
<th>Madrid</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>12 14 15 16</td>
<td>42 43 45 46</td>

</table>

NOTE: P = Prime
0 = Option
*26m S-band support for initial acquisition

3. Compatibility Testing

CTA 21 and GSFC test van will support compatibility testing with the DFS S/C TT&C "suit-case" model at approximately launch minus 7 months. These tests will verify and test the spacecraft RF compatibility with the DSN.
D. FREQUENCY ASSIGNMENTS

Frequencies are allocated according to the following table:

<table>
<thead>
<tr>
<th>System</th>
<th>Uplink (MHz)</th>
<th>Downlink (MHz)</th>
