A. MISSION DESCRIPTION

The Telecom 2-B and 2-C (TC2B and TC2C) missions will provide high-speed
data link applications, telephone, and television service between France and
overseas territories as a follow-on to the TC2A. The satellite will be placed
in a geostationary orbit at TBS deg east longitude.

B. FLIGHT PROFILE

The TC2B and TC2C will be launched from the Centre Spatial Guyanis in
French Guiana on an Ariane launch vehicle. The mission follows the typical
injection sequence; i.e., parking orbit, transfer orbit, and drift orbit.
Attitude maneuvers will be performed to orient the spacecraft prior to Apogee
Kick Motor (AKM) firings. After the final AKM firing, drift phase orbital and
attitude maneuvers will be performed to place the spacecraft in its final
geostationary position.
C. COVERAGE

The DSN will support the transfer and drift orbit mission phases.

1. Coverage Goals

The coverage will consist of the 26-m antennas at Goldstone, Madrid, and Canberra as prime support for the transfer and drift orbits. Maximum support will consist of two 8-hour tracks per station for a 7-day period, plus 14 days of contingency support.

2. Network Support

The support provided by the DSN is indicated in the following table:

<table>
<thead>
<tr>
<th>System</th>
