F:POWER

SYNTAX:  

F:POWER = x  or  ? F:POWER

x = power level in watts

0 <= x <= 255

DESCRIPTION:  SET POWER LEVEL
COMMANDCODE #1

Set the power level of the furnace or get the current power setting from the furnace controller. The power setting can be queried only if the last furnace setting was for power. If the last furnace setting was for temperature, this command returns an error.

EXAMPLE:  

F:POWER = 50

? F:POWER
5 0

NAME:  

F:TEMPERATURE

SYNTAX:  

F:TEMP = x  or  ? F:TEMP

x = temperature in degrees Celsius

0 <= x <= 1600

DESCRIPTION:  SET TEMPERATURE
COMMANDCODE #2

Set the temperature of the furnace or get the current temperature setting from the furnace controller. The temperature setting can be queried only if the last furnace setting was for temperature. If the last furnace setting was for power, this command returns an error.

EXAMPLE:  

F:TEMP = 1000

? F:TEMP
1000
