This publication was prepared by the Jet Propulsion Laboratory, California Institute of Technology, under a contract with the National Aeronautics and Space Administration.
Foreword

*JPL Bibliography* 39-33 describes and indexes by primary author the externally distributed technical reporting, released during calendar year 1992, that resulted from scientific and engineering work performed or managed by the Jet Propulsion Laboratory. Three classes of publications are included:

1. **JPL Publication (92-series)** in which the information is complete for a specific accomplishment. Publications can be tailored to wide or limited audiences and can be presented in an established standard format or special format to meet unique requirements.

2. **Articles from the quarterly *Telecommunications and Data Acquisition (TDA) Progress Report* (42-series).** Each collection of articles in this class of publication presents a periodic survey of current accomplishments by the Deep Space Network as well as other developments in Earth-based radio technology.

3. **Articles published in the open literature.**

Effective January 1977, the "JPL Publication" replaced the Technical Report, Technical Memorandum, and Special Publication. However, the discontinued classes may still appear in future issues of the *Bibliography* if succeeding volumes or revisions are published in their former series.

JPL personnel can obtain loan copies of cited documents from the JPL Library. Personnel of outside organizations can obtain copies or information regarding the availability of cited documents by addressing a written request to the Jet Propulsion Laboratory, Logistics and Technical Information Division, Archives and Records Group, 4800 Oak Grove Drive, Pasadena, California 91109 or the National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161.
