Joe Yasecko

Joe does think the nose is too long and would need to be shortened. The tail booms are designed for construction of telescoping aluminum tubes.

The fuselage is based on a mold which he has already. Joe does think the nose is too long and would need to be shortened. The tail booms are designed for construction of telescoping aluminum tubes.

As the plans are currently drawn the airborne length is 17 feet. The tailbooms would retract about 3 feet for road use. Joe is concerned about the weight distribution of the vehicle in the ground mode. Because the majority of a tapered cantilever wing panel's weight is concentrated at the root, the folded wing does not move the CG forward very much.

The power plant will be a Rotax 503 of 46 to 52 horsepower.

Joe Yasecko's new roadable aircraft design in flight configuration.
Road configuration. CAD dimension marks on drawing are at one foot intervals.

Roadable Aircraft
Designed by: Joe Yasecko
Drawn by: Wayne Lanza
July, 1993

26 ROADABLE AIRCRAFT March/April 1994
Fourth in the series, the Aircar - 11. Also known as the Mini-Aircar 11.
New Technologies

Information

GPS and enhancements
Radio modem communications
Kalman filters

Structures

Advanced composite structures

Propulsion

Electronic fuel and spark controls
Propeller diameter 70”

**Trailerine**

For ease of transportation to or from the airport, the outboard wing panels are easily removable. Attach bolts are reached from the gear wells.

Feature

Practical transformation between automobile and airplane.

It is a goal to use an automobile engine for flight.

Precision control with differential GPS, including automatic landings.

Goals

Star car
Starcar 3 (Continued)

Specifications

Span of 28 ft.

Gross weight of 2190 lbs as airplane.

Fuel economy of 21.6 mpg at 200 mph.

Top speed of 235 mph.
Conclusion

Flying cars are possible and have commercial potential.

The penalty for roadability is about 500 lbs.

Goals

Integrate an automotive engine with a dual-mode transmission.

Build a flying car similar to Starcar 3 but self-contained, with folding wings and telescoping tail booms.
