BOREAS AES MARSII

Surface Meteorological Data

G. B. Atkinson and B. Funk

National Aeronautics and Space Administration

Goddard Space Flight Center
Greenbelt, Maryland 20771
Since its founding, NASA has been dedicated to the advancement of aeronautics and space science. The NASA scientific and technical information (STI) program plays a key part in helping NASA maintain this important role.

The NASA STI program operates under the auspices of the Agency Chief Information Officer. It collects, organizes, provides for archiving, and disseminates NASA's STI. The NASA STI program provides access to the NASA Aeronautics and Space Database and its public interface, the NASA Technical Report Server, thus providing one of the largest collections of aeronautical and space science STI in the world. Results are published in both non-NASA channels and by NASA in the NASA STI Report Series, which includes the following report types:

- **TECHNICAL PUBLICATION.** Reports of completed research or a major significant phase of research that present the results of NASA Programs and include extensive data or theoretical analysis. Includes compilations of significant scientific and technical data and information deemed to be of continuing reference value. NASA counterpart of peer-reviewed formal professional papers but has less stringent limitations on manuscript length and extent of graphic presentations.

- **TECHNICAL MEMORANDUM.** Scientific and technical findings that are preliminary or of specialized interest, e.g., quick release reports, working papers, and bibliographies that contain minimal annotation. Does not contain extensive analysis.

- **CONTRACTOR REPORT.** Scientific and technical findings by NASA-sponsored contractors and grantees.

- **CONFERENCE PUBLICATION.** Collected papers from scientific and technical conferences, symposia, seminars, or other meetings sponsored or co-sponsored by NASA.

- **SPECIAL PUBLICATION.** Scientific, technical, or historical information from NASA programs, projects, and missions, often concerned with subjects having substantial public interest.

- **TECHNICAL TRANSLATION.** English-language translations of foreign scientific and technical material pertinent to NASA's mission.

Specialized services also include organizing and publishing research results, distributing specialized research announcements and feeds, providing help desk and personal search support, and enabling data exchange services. For more information about the NASA STI program, see the following:

- Access the NASA STI program home page at [http://www.sti.nasa.gov](http://www.sti.nasa.gov)

- E-mail your question via the Internet to help@sti.nasa.gov

- Fax your question to the NASA STI Help Desk at 443-757-5803

- Phone the NASA STI Help Desk at 443-757-5802

Environment Canada, Winnipeg, Manitoba, Canada
BOREAS AES MARSII Surface Meteorological Data

G. Barrie Atkinson, Barry Funk

Summary

Canadian AES personnel collected several data sets related to surface and atmospheric meteorological conditions over the BOREAS region. This data set contains 15-minute meteorological data from six MARSII meteorology stations in the BOREAS region in Canada. Parameters include site, time, temperature, dewpoint, visibility, wind speed, wind gust, wind direction, two cloud groups, precipitation, and station pressure. Temporally, the data cover the period of May to September 1994. Geographically, the stations are spread across the provinces of Saskatchewan and Manitoba. The data are provided in tabular ASCII files, and are classified as AFM-Staff data.

1. Data Set Overview

1.1 Data Set Identification

BOREAS AES MARSII Surface Meteorological Data

1.2 Data Set Introduction

This data set contains 15-minute meteorological data from six Meteorological Automatic Reporting System II (MARSII) meteorology stations in the BOReal Ecosystem-Atmosphere Study (BOREAS) region in Canada. Parameters include site, time, temperature, dewpoint, visibility, wind speed, wind gust, wind direction, two cloud groups, precipitation, and station pressure. BOREAS received data for the Intensive Field Campaigns (IFCs) of 1994.

1.3 Objective/Purpose

These monitoring sites were established by Environment Canada to provide hourly weather reports to 1) provide input to the operational program of forecasts and warnings, 2) provide input to
operational weather prediction models, and 3) provide climate data. The frequency of observation was increased to 15 minutes at the request of BOREAS. Data collection for BOREAS occurred during IFCs 1, 2, and 3 in 1994.

1.4 Summary of Parameters
Parameters include site, time, temperature, dewpoint, visibility, wind speed, wind gust, wind direction, two cloud groups, precipitation, and station pressure.

1.5 Discussion
Generally, these stations were installed well before BOREAS began, and they conform to Environment Canada's criteria for accuracy and exposure.

4.1.3 Source/Platform Mission Objectives
None given.

4.1.4 Key Variables
The key variables in these data are: site, time, temperature, dewpoint, visibility, wind speed, wind gust, wind direction, two cloud groups, precipitation, and station pressure.

4.1.5 Principles of Operation
None given.

4.1.6 Sensor/Instrument Measurement Geometry
None given.

4.1.7 Manufacturer of Sensor/Instrument
None given.

4.2 Calibration

4.2.1 Specifications
None given.

4.2.1.1 Tolerance
None given.

4.2.2 Frequency of Calibration
None given.

4.2.3 Other Calibration Information
None given.
5. Data Acquisition Methods

Since there is no provision for onboard storage of observations, each station was telephoned approximately every 15 minutes from a computer in Winnipeg.

6. Observations

6.1 Data Notes
Not applicable.

6.2 Field Notes
The following was obtained from the inspection books. Obviously some visits have not been recorded. Normal practice is to disable the TBRG for the winter and to disable the weighing gauge for the summer.

<table>
<thead>
<tr>
<th>Location</th>
<th>Date of Visit</th>
<th>Actions During Visit</th>
</tr>
</thead>
<tbody>
<tr>
<td>WEQ Swan River, MB</td>
<td>Inspection 21-Mar-1994</td>
<td>All instruments were cleaned and calibrated. Pressure averaged +0.235 mb different from the inspection barometer for 10 readings. Clouds were too high and too few to verify operation of the ceilometer. Temperature averaged 0.0 °C different from inspection psychrometer for 9 readings. The dewpoint was +1.2 deg °C different. A newly calibrated tipping bucket bridge was installed and checked. Bearings in both the speed and direction wind detectors were replaced.</td>
</tr>

WEQ Swan River, MB

The autostation is located at the Swan River Airport in the Swan River Valley. Exposure is open in all directions. Instruments are located on a level, grassed surface. The Valley runs in a southwest to northeast direction with the Porcupine Mountains to the north-northwest and the Duck Mountains to the south-southeast. The Valley bottom is fairly flat cropland with the occasional bluff of trees.
WDC Uranium City, SK
The instrument area is located on a 23-m-wide strip of grass running northeast from the airport terminal building. This grassy area is sandwiched between a gravel vehicle parking area to the southeast and a paved aircraft parking ramp to the northwest. The instrument exposure is fair, with some sheltering to the northeast by the Eldorado warehouse and to the west by the air terminal building. Airflow from the north and south is generally unrestricted, although the south side of the instrument area is bounded by a 2-m security fence. The instruments are subject to occasional "propwash" from aircraft in the parking area immediately to the north. The airport is located approximately 15 km to the north of Lake Athabaska, and the surrounding countrysides is quite hilly, and covered with evergreen and birch trees. Numerous small lakes dot the area.

WJD Grand Rapids, MB
The site is located in the town of Grand Rapids, just north of the intersection of the main thoroughfare of the town and Highway #6. Instrument exposure is very good. Instruments are located in a 30-m-square area surrounded by a 1.2-m-high chain link fence. Low brush has been cleared to a distance of approximately 60 m in all directions. The surrounding terrain is flat, with mixed forest, scrub bush, and muskeg. The mouth of the Saskatchewan River, where it flows into the north basin of Lake Winnipeg, is approximately 1 km to the southeast. These two bodies of water, particularly open water on faster flowing sections of the river, contribute to high year-round humidities, frequent fog conditions, and heavy hoarfrost in the winter months. The wind exposure is excellent in all directions because the 16-m wind mast extends well above the surrounding treetops. In addition, the nearest tall trees (5-10 m) are at least 70 m away.

WOY Wynard, SK
The autostation is located at 505 5th St. W, at the corner of 5th St and Highway #16, in the southwest corner of the town of Wynard (population approximately 2200). The station is situated on a parcel of land that is approximately 98 m (north-south) by 152 m (east-west), grassed, and surrounded by a fence. Buildings from the former manned program are at the west end of the property, and the instruments are located in a 30-m by 30-m plot near the center of the property, with the wind tower near the east end. The immediate surroundings are: North - residential street, mostly one-story single family dwellings; East - open school yard; South - Provincial Highway #16; and West - the local golf course. Farther out to the north and east are residential and business districts. Farther to the south and west is mostly open crop and pasture land. The Quill lakes are located to the west and northwest, with the closest shoreline approximately 8 km away. These lakes are very shallow and can produce local low clouds during periods of northwest winds. The local terrain is mostly gently rolling farmland, open except for an occasional farm shelterbelt or small wooded area in a depression. The topography has a gentle slope from the Touchwood Hills (elevation 670 m) some 10 km to the south, to the shores of the Quill lakes to the northwest (elevation 533 m). The site offers an excellent exposure from all directions and is representative of the area.

WSZ Fisher Branch, MB
The station is situated at the southeast end of the 240-m (north-south) by 90-m (east-west) AES reserve. The instrument area is a 25-m-square grass on gravel area in a rural setting and has good exposure. The reserve has been cleared of trees, but a line of trees borders the reserve on the western and northern edges. The surrounding countryside is generally flat farmland, with about 30% tree coverage. Lake Winnipeg lies about 50 km to the east and Lake Manitoba about 70 km to the west.

WVT Buffalo Narrows, SK
The autostation instruments are colocated with the manned site on a large (60 by 60 m) grass-covered area surrounded by a wire security fence situated along the southwest side of the Buffalo Narrows airport. The airport is located on a broad peninsula that extends northeastward into Churchill Lake. Topography within a 30-km radius is 50% thickly treed bush and muskeg, and 50% large and small lakes of the Churchill River system. The wind tower is located near the runway, with open exposure in all directions.
7.1.2 Spatial Coverage Map
Not available.

7.1.3 Spatial Resolution
These data represent point measurements at the given locations.

7.1.4 Projection
Not applicable.

7.1.5 Grid Description
Not applicable.

7.2 Temporal Characteristics

7.2.1 Temporal Coverage

7.2.2 Temporal Coverage Map
Not available.

7.2.3 Temporal Resolution
Data are reported approximately every 15-minutes.

7.3 Data Characteristics

7.3.1 Parameter/Variable
The parameters contained in the data files on the CD-ROM are:

Note: The "NO PRECIPITATION" values are used only when there is explicit input from the TBRG to indicate that NO precipitation has fallen. e.g. during the winter or at any other time when the precipitation sensor has been removed from the station configuration, use the "WITH PRECIPITATION" column.

**GUST** 10H 10HIN  
The maximum wind speed over the past ten minutes at a height of ten meters above the surface.

**MEAN WIND DIR** 10M 10MIN  
The ten minute mean wind direction at a height of ten meters above the surface.

**CLOUD GROUP 1**  
The first two digits denote the height of the last detected cloud in hundreds of feet within the last six minutes. The next digit can be a 1 if cloud is overhead at the time of observation, or a 0 if no cloud. The last digit denotes the percentage of time, in tens of percent, that clouds were detected overhead during the previous hour.

ChChCwC% (Field is 4 numbers long)

ChCh Height of last detected cloud (100s feet) within the last 6 minutes

Cw 1 = cloud overhead at time of observation;  
0 = no cloud

C% 10s percent of time cloud detected overhead during previous hour

**CLOUD GROUP 2**  
The first digit is for the 0 to 500 feet layer (0 to 174 meters), the second is for the 501 to 1000 feet layer (174 to 348 meters), the third is for the 1001 to 2000 feet layer (348 to 610 meters), and the fourth is for above 2001 feet (610 meters). A 0 in any place (layer) denotes no cloud in that layer in the last fifty minutes or more, a 1 denotes no cloud in the past forty minutes or more, a 2 denotes no cloud in the past thirty minutes or more, a 3 denotes no cloud in the past twenty minutes or more, a 4 denotes no cloud in the past ten minutes or more, a 5 means that cloud became either significant or insignificant within the last ten minutes, a 6 denotes cloud detected for the past ten minutes or more, a 7 denotes cloud detected for the past twenty minutes or more, a 8 denotes cloud detected for the past thirty minutes or more, a 9 denotes cloud detected for the past forty minutes or more, a 10 denotes cloud detected for the past fifty minutes or more.
denotes cloud detected for the past forty minutes or more.

C1C2C3C4 (Field is 4 numbers long)

HEIGHTS
C1 0 - 500 feet
C2 501 - 1000 feet
C3 1001 - 2000 feet
C4 above 2001 feet

NUMBERS any number can appear in any height
0 - no cloud in the past 50 minutes or more
1 - no cloud in the past 40 minutes or more
2 - no cloud in the past 30 minutes or more
3 - no cloud in the past 20 minutes or more
4 - no cloud in the past 10 minutes or more
5 - transition - cloud became significant or insignificant in the last 10 minutes
6 - cloud detected for the past 10 minutes or more
7 - cloud detected for the past 20 minutes or more
8 - cloud detected for the past 30 minutes or more
9 - cloud detected for the past 40 minutes or more

ACCUM_PRECIP_TIP The amount of liquid precipitation that has fallen since a relative date.
STN_PRESS The measured instantaneous atmospheric pressure at station level.
CRTFCN_CODE The BOREAS certification level of the data. Examples are CPI (Checked by PI), CGR (Certified by Group), PRE (Preliminary), and CPI-?? (CPI but questionable).
REVISION_DATE The most recent date when the information in the referenced data base table record was revised.

7.3.3 Unit of Measurement
The measurement units for the parameters contained in the data files on the CD-ROM are:

<table>

### 7.4 Sample Data Record

The following are wrapped versions of data record from a sample data file on the CD-ROM.

```
SITE_NAME, SUB_SITE, DATE_OBS, TIME_OBS, AIR_TEMP_1_5M, DEW_TEMP_1_5M, MEAN_WIND_SPEED_10M_10MIN, VISIBILITY_INDEX, GUST_10M_10MIN, MEAN_WIND_DIR_10M_10MIN, CLOUD_GROUP_1, CLOUD_GROUP_2, ACCUM_PRECIP_TIP, STN_PRESS, CRTFCN_CODE, REVISION_DATE
'REG-999-WSZ04', 'STAFF-AES04', 01-JUN-94, 2, 19.6, 5.4, 5.756, 8, 8.479, 329, '0000', '0000', 21.2, 98.72, 'CPI', 19-DEC-95
'REG-999-WSZ04', 'STAFF-AES04', 01-JUN-94, 17, 20.0, 6.6, 4.676, 8, 7.349, 328, '0000', '0000', 21.2, 98.72, 'CPI', 19-DEC-95
```

### 8. Data Organization

#### 8.1 Data Granularity

The smallest unit of data is a monthly set of 15-minute records for one station.

#### 8.2 Data Format(s)

The Compact Disk-Read-Only Memory (CD-ROM) files contain American Standard Code for Information Interchange (ASCII) numerical and character fields of varying length separated by commas. The character fields are enclosed with single apostrophe marks. There are no spaces between the fields.

Each data file on the CD-ROM has four header lines of Hyper-Text Markup Language (HTML)
code at the top. When viewed with a Web browser, this code displays header information (data set title, location, date, acknowledgments, etc.) and a series of HTML links to associated data files and related data sets. Line 5 of each data file is a list of the column names, and line 6 and following lines contain the actual data.

9. Data Manipulations

9.1 Formulae
   None given.

9.1.1 Derivation Techniques and Algorithms
   Not applicable.

9.2 Data Processing Sequence

9.2.1 Processing Steps
   Data were received by BOREAS in raw form with 1 month's worth of data per station contained in each raw file. They were extracted from the files using a C program provided by AES. The output of this program was a tab-delimited file that contained 1 month's worth of processed data for one station. BOREAS Information System (BORIS) personnel loaded these data into a relational data base and converted the units as needed to match those of other data sets.

9.2.2 Processing Changes
   'RAW' data had many extraneous characters that were removed. The records were checked for completeness.

9.3 Calculations
   No calculations were performed on the data.

9.3.1 Special Corrections/Adjustments
   None given.

9.3.2 Calculated Variables
   None given.

9.4 Graphs and Plots
   None given.

10. Errors

10.1 Sources of Error
   Snow measurements (Fisher) are known to be poor.

10.2 Quality Assessment

10.2.1 Data Validation by Source
   None given.

10.2.2 Confidence Level/Accuracy Judgment
   None given.
10.2.3 Measurement Error for Parameters
None given.

10.2.4 Additional Quality Assessments
None given.

10.2.5 Data Verification by Data Center
An automated quality assurance program was run on this data set to identify anomalies, including sudden jumps or drops ("spikes") in the data. Some of these problems are identified in Section 11.2.

11. Notes

11.1 Limitations of the Data
None given.

11.2 Known Problems with the Data

AIR_TEMP_1_5_M
Some large spikes were identified for these data at the WDC and WVT sites. These high values are most likely not valid.

</tbody>
</table>
VISIBILITY_INDEX
This column contains many spikes. One example of this is listed below. Users should be cautious about using this parameter. See Section 7.3.2 for more information.

| Spike | IREG-999-WSZ04 | STAFF-AES04 | 20-SEP-94 | 20-SEP-94 | 994 - 5 |

GUST_10M_10MIN
A number of spikes were found at the WEQ site that appear to be related to the wind speed spikes at this site. Similar spikes were found at the WJD and WVT sites.

| Spike | IREG-999-WEQ04 | STAFF-AES04 | 02-SEP-94 | 02-SEP-94 | 51.286 - .617 |
| High  | IREG-999-WEQ04 | STAFF-AES04 | 02-SEP-94 | 02-SEP-94 | 51.286 |

MEAN_WIND_DIR_10M_10MIN
No serious problems were found with these data.

ACCUM_PRECIP_TIP
Extremely large values greater than 1900 were found for the WEQ and WVT sites.

| Spike | IREG-999-WEQ04 | STAFF-AES04 | 03-AUG-94 | 03-AUG-94 | 1944.6 - 17.8 |
| High  | IREG-999-WEQ04 | STAFF-AES04 | 03-AUG-94 | 03-AUG-94 | 1944.6 |
| Spike | IREG-999-WVT04 | STAFF-AES04 | 21-JUN-94 | 21-JUN-94 | 106.4 - 1927.2 |
| Spike | IREG-999-WVT04 | STAFF-AES04 | 21-JUN-94 | 21-JUN-94 | 1927.2 - 106.4 |

STN_PRESS
Extremely low values were seen in the data for the WDC and WVT sites.

| Spike | IREG-999-WDC04 | STAFF-AES04 | 03-AUG-94 | 03-AUG-94 | 9.87 - 98.74 |
| Low   | IREG-999-WDC04 | STAFF-AES04 | 03-AUG-94 | 03-AUG-94 | 9.87 |

The original data appears to have a missing digit. The 9.87 value should probably be 98.70.

| Spike | IREG-999-WVT04 | STAFF-AES04 | 17-JUN-94 | 17-JUN-94 | 26.96 - 96.95 |
| Low   | IREG-999-WVT04 | STAFF-AES04 | 17-JUN-94 | 17-JUN-94 | 26.96 |

It is assumed that the value of 26.96 should really be 96.96.

11.3 Usage Guidance
None given.

11.4 Other Relevant Information
None given.

12. Application of the Data Set
These data in conjunction with other surface meteorological data can be used to monitor and model the near-surface conditions on a diurnal and seasonal basis.

13. Future Modifications and Plans
None given.
14. Software

14.1 Software Description
A C program from AES was used for unpacking and converting RAW data files.

14.2 Software Access

15. Data Access

The AES MARSII surface meteorological data are available from the Earth Observing System Data and Information System (EOSDIS) Oak Ridge National Laboratory (ORNL) Distributed Active Archive Center (DAAC).

15.1 Contact Information
For BOREAS data and documentation please contact:

ORNL DAAC User Services
Oak Ridge National Laboratory
P.O. Box 2008 MS-6407
Oak Ridge, TN 37831-6407
Phone: (423) 241-3952
Fax: (423) 574-4665
E-mail: orndaac@ornl.gov or ornl@eos.nasa.gov

15.2 Data Center Identification
Earth Observing System Data and Information System (EOSDIS) Oak Ridge National Laboratory (ORNL) Distributed Active Archive Center (DAAC) for Biogeochemical Dynamics
http://www-eosdis.ornl.gov/ [Internet Link].

15.3 Procedures for Obtaining Data
Users may obtain data directly through the ORNL DAAC online search and order system [http://www-eosdis.ornl.gov/] and the anonymous FTP site [ftp://www-eosdis.ornl.gov/data/] or by contacting User Services by electronic mail, telephone, fax, letter, or personal visit using the contact information in Section 15.1.

15.4 Data Center Status/Plans
The ORNL DAAC is the primary source for BOREAS field measurement, image, GIS, and hardcopy data products. The BOREAS CD-ROM and data referenced or listed in inventories on the CD-ROM are available from the ORNL DAAC.
16. Output Products and Availability

16.1 Tape Products
None.

16.2 Film Products
None.

16.3 Other Products
These data are available on the BOREAS CD-ROM series.

### Technical Report Series on the Boreal Ecosystem-Atmosphere Study (BOREAS)

**Title:** BOREAS AES MARSII Surface Meteorological Data

**Authors:**
- G. Barrie Atkinson and Barry Funk
- Forrest G. Hall and David E. Knapp, Editors

**Performing Organization:**
- Goddard Space Flight Center
- Greenbelt, Maryland 20771

**Sponsoring Agency:**
- National Aeronautics and Space Administration
- Washington, DC 20546-0001

**Abstract:**
Canadian AES personnel collected several data sets related to surface and atmospheric meteorological conditions over the BOREAS region. This data set contains 15-minute meteorological data from six MARSII meteorology stations in the BOREAS region in Canada. Parameters include site, time, temperature, dewpoint, visibility, wind speed, wind gust, wind direction, two cloud groups, precipitation, and station pressure. Temporally, the data cover the period of May to September 1994. Geographically, the stations are spread across the provinces of Saskatchewan and Manitoba. The data are provided in tabular ASCII files, and are classified as AFM-Staff data.

**Subject Terms:**
- BOREAS
- Aircraft flux meteorology
- MARSII

**Distribution Statement:**
Unclassified—Unlimited

**Report Category:**
43

**Report Available:**
From the NASA Center for AeroSpace Information, 7121 Standard Drive, Hanover, MD 21076-1320, (301) 621-0390.
