November 2000
Since its founding, NASA has been dedicated to the advancement of aeronautics and space science. The NASA Scientific and Technical Information (STI) Program Office plays a key part in helping NASA maintain this important role.

The NASA STI Program Office is operated by Langley Research Center, the lead center for NASA’s scientific and technical information. The NASA STI Program Office provides access to the NASA STI Database, the largest collection of aeronautical and space science STI in the world. The Program Office is also NASA’s institutional mechanism for disseminating the results of its research and development activities. These results are published by NASA in the NASA STI Report Series, which includes the following report types:

- TECHNICAL PUBLICATION. Reports of completed research or a major significant phase of research that present the results of NASA programs and include extensive data or theoretical analysis. Includes compilations of significant scientific and technical data and information deemed to be of continuing reference value. NASA’s counterpart of peer-reviewed formal professional papers but has less stringent limitations on manuscript length and extent of graphic presentations.

- TECHNICAL MEMORANDUM. Scientific and technical findings that are preliminary or of specialized interest, e.g., quick release reports, working papers, and bibliographies that contain minimal annotation. Does not contain extensive analysis.

- CONTRACTOR REPORT. Scientific and technical findings by NASA-sponsored contractors and grantees.

- CONFERENCE PUBLICATION. Collected papers from scientific and technical conferences, symposia, seminars, or other meetings sponsored or cosponsored by NASA.

- SPECIAL PUBLICATION. Scientific, technical, or historical information from NASA programs, projects, and mission, often concerned with subjects having substantial public interest.

- TECHNICAL TRANSLATION. English-language translations of foreign scientific and technical material pertinent to NASA’s mission.

Specialized services that complement the STI Program Office’s diverse offerings include creating custom thesauri, building customized databases, organizing and publishing research results . . . even providing videos.

For more information about the NASA STI Program Office, see the following:

- E-mail your question via the Internet to help@sti.nasa.gov

- Fax your question to the NASA Access Help Desk at (301) 621-0134

- Telephone the NASA Access Help Desk at (301) 621-0390

BOREAS TGB-8 Starch Concentration Data over the SSA-OBS and the SSA-OJP

Manuel Lerdau

Summary

The BOREAS TGB-8 team collected data to investigate the controls over NMHC fluxes from boreal forest tree species. This data set includes measurements of starch concentrations in foliar samples at mature jack pine and black spruce sites. The data were collected at the OJP and OBS tower flux locations in the BOREAS SSA. These areas contained mature stands of jack pine and black spruce and were the focal sites in the BOREAS program for studies of biosphere/atmosphere exchange from these two habitat types. The OBS site is situated in a black spruce/sphagnum bog with the largest trees 155 years old and 10-15 m tall. The OJP site is in a jack pine forest, 80 to 120 years old, which lies on a sandy bench of glacial outwash with the largest tree standing 15 m tall. Temporally, the data cover the period of 24-May-1994 to 19-Sep-1994. The data are stored in tabular ASCII files.

1. Data Set Overview

1.1 Data Set Identification
    BOREAS TGB-08 Starch Concentration Data over the SSA-OBS and the SSA-OJP

1.2 Data Set Introduction
    The mechanistic controls over nonmethane hydrocarbon (NMHC) fluxes from boreal forest trees were investigated. These studies could be used to modify existing ecosystem models to include NMHC emissions and their response to seasonality and resource variability (primarily water and nitrogen).
1.3 Objective/Purpose
The objective was to measure the starch concentrations in needles from the BOREal Ecosystem-Atmosphere Study (BOREAS) Southern Study Area (SSA)-Old Black Spruce (OBS) and SSA-Old Jack Pine (OJP).

1.4 Summary of Parameters
Starch concentrations.

1.5 Discussion
The research was ordered around three general questions: (1) To what extent are leaf carbon balance and isoprene synthase activity (the enzyme responsible for isoprene emission) predictors of NMHC flux? (2) How do leaf carbon balance and isoprene synthase activity depend on nitrogen/water availability and carbon source/sink parameters? and (3) How do we modify the FORES-BGC ecosystem model, based on question 1 and 2, to predict canopy-level NMHC fluxes? Studies included seasonal monitoring of NMHC emissions and its relationship to plant phenology, photosynthesis, respiration, isoprene synthase activity, and leaf starch concentrations.

1.6 Related Data Sets
BOREAS TGB-08 Photosynthetic Rate Data over the SSA-OBS and the SSA-OJP
BOREAS TGB-08 Monoterpene Concentration Data over the SSA-OBS and the SSA-OJP

4.2.1.1 Tolerance
None given.

4.2.2 Frequency of Calibration
None given.

4.2.3 Other Calibration Information
None given.

5. Data Acquisition Methods

Starch Assay Required Solutions
1. Amyloglucosidase (Boehringer Mannheim) (Desiccator in freezer) 2.5 mg/mL Na-Acetate buffer. Make fresh each day and keep on ice.
2. Na-Acetate buffer (50 mM NaC₂H₃O₂; 0.68 g/100 mL dH₂O). Titrate of pH 4.8 with glacial acetic acid (starts at ~pH 7.1) and vacuum filter. Keeps for 1 month.
3. PGO (peroxidase glucose oxidase, Sigma # 510-6)) capsules (Desiccator in fridge). Add on PGO capsule to 20 mL COLD dH₂O and gently mix. Keeps for 1 month.
4. Glucose standards (1000 μM, 18.02 mg/100 mL ddH₂O). Everything for these must be sterile. Vacuum filter and dilute into standards of 100, 200, 400, 600, and 800 μM. Vacuum filter and keep in freezer. Keeps for 1 week.
5. N buffer (0.1 M NaH₂PO₄; 2.76 g NaH₂PO₄/200 mL dH₂O). Titrate to pH 6.5 with NaOH (HCl to reverse) (pH starts at ~4.7). Use ~5 M NaOH, otherwise one adds too much volume.
6. DMAB (3-dimethylaminobenzoic acid, C₉H₁₁NO₂, FW=165.2 Sigma D-0787) stock solution. 496 mg/100 mL N buffer. Stir and gently heat to bring into solution for about 30 minutes. Vacuum filter. Keeps for about 1 month.
7. MBTH (3-methyl, 2-benzo thiazolinone hydrazoneC₈H₉N₃S*HC1, FW= 215.7, Sigma M-8006, stored in freezer desiccator) stock solution. Stir to bring into solution. 14 mg/100 mL N buffer. Vacuum filter. If this becomes tan/brown discard. Keeps for 3 weeks to 1 month.

Procedure
1. Dry plant material for 1 hour at 100 °C, then store at 60 °C until analysis.
2. Grind tissue in mortar until it becomes a fine powder.
3. Place ~15 mg ground tissue in a 1.7 mL-screwtop epitube and record weight. *** Store at 60 °C if stopping here ***
4. Solubilize free sugars. Cool epitubes in freezer, then add 1 mL of cold dH₂O.
5. Vortex tubes until all tissue is evenly suspended.
6. Place epitubes at 5 °C for 20 minutes.
7. Centrifuge epitubes for 15 minutes at max speed in benchtop centrifuge.
8. Pipette off and discard supernatent while keeping pellet.
9. Add 1 mL dH₂O to epitubes, screw caps on tightly and vortex.
10. Solubilize the starch. Autoclave for 45 mins at 121 °C and 1.2 bars. Screw caps on (very tightly; otherwise, fluid boils out.
11. Vortex tubes until all tissue is evenly suspended.
12. Centrifuge epitubes for 15 minutes at max speed in benchtop centrifuge. *** Freeze if stopping here ***
13 Convert starch to glucose that can be analyzed. All pipette tips, epitubes, and epitube caps must be sterile. Renumber a second set of epitubes (snap top is acceptable) and add the following:
   a) 200 μL 50 mM Na-Acetate buffer.
   b) 100 μL of Amyloglucosidase solution.
   c) 100 μL of sample supernatent.
   Also make a blank epitube by adding 100 μL dH2O rather than sample.
14 Incubate in the 55 °C drying oven for 1 hr.
15 Stop the reaction. Heat epitubes in the 100 °C drying oven for 5 minutes.
16 Centrifuge epitubes for 15 minutes at max speed in benchtop centrifuge.
   *** Freeze if stopping here ***

<table>

17 Convert the glucose to a colored product that can be read spectrophotometrically. The best approach is to have the color reaction take place directly in the microtiter well, avoiding having to transfer samples into the wells. In this process, the total mixture of solutions above must be divided by 5 so the sample volume loaded into the well is 100 μL. If needed, the well volume can be brought up to 200 μL with 100 μL of Na-Acetate buffer to dilute samples to a readable level. Care must be taken to mix all the solutions in the well completely. Load two wells per sample.
   a) 35 μL MBTH
   b) 35 μL DMAB
   c) 15 μL diluted sample or standard
   d) 15 μL PGO enzyme
18 Incubate the epitubes or microtiter plate (cover with parafilm) for 25 minutes (can be longer, BUT be consistent) at 37 °C in a water bath. The sample solutions should turn purple.
19 Measure absorbance at 595 nm on a standard spectrophotometer.

6. Observations

6.1 Data Notes
   None given.

6.2 Field Notes
   None given.
7. Data Description

7.1 Spatial Characteristics

7.1.1 Spatial Coverage
The North American Datum of 1983 (NAD83) coordinates for the measurement sites are:

SSA-OBS 53.99° N, 105.12° W
SSA-OJP 53.92° N, 104.69° W

7.1.2 Spatial Coverage Map
None given.

7.1.3 Spatial Resolution
These data are point source measurements taken near the given coordinates.

7.1.4 Projection
Not applicable.

7.1.5 Grid Description
Not applicable.

7.2 Temporal Characteristics

7.2.1 Temporal Coverage
The data were collected from 24-May-1994 to 19-Sep-1994.

7.2.2 Temporal Coverage Map
None given.

7.2.3 Temporal Resolution
Monthly averages of the data were submitted.

7.3 Data Characteristics

7.3.1 Parameter/Variable
The parameters contained in the data files on the CD-ROM are:

<table>
<thead>
<tr>
<th>Column Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>SITE_NAME</td>
</tr>
<tr>
<td>SUBSITE</td>
</tr>
<tr>
<td>SPECIES</td>
</tr>
<tr>
<td>SAMPLE_MONTH</td>
</tr>
<tr>
<td>NEEDLE_AGE</td>
</tr>
<tr>
<td>SAMPLE_AMOUNT</td>
</tr>
<tr>
<td>MEAN_STARCH_CONTENT</td>
</tr>
<tr>
<td>STD_ERR_STARCH_CONTENT</td>
</tr>
<tr>
<td>CRTFCN_CODE</td>
</tr>
<tr>
<td>REVISION_DATE</td>
</tr>
</tbody>
</table>
### 7.3.2 Variable Description/Definition

The descriptions of the parameters contained in the data files on the CD-ROM are:

<table>
<thead>
<tr>
<th>Column Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SITE NAME</td>
<td>The identifier assigned to the site by BOREAS, in the format SSS-TTT-CCCCC, where SSS identifies the portion of the study area: NSA, SSA, REG, TRN, and TTT identifies the cover type for the site, 999 if unknown, and CCCCC is the identifier for site, exactly what it means will vary with site type.</td>
</tr>
<tr>
<td>SUB_SITE</td>
<td>The identifier assigned to the sub-site by BOREAS in the format GGGGG-IIIII, where GGGGG is the group associated with the sub-site instrument, e.g. HYD06 or STAFF, and IIIII is the identifier for sub-site, often this will refer to an instrument.</td>
</tr>
<tr>
<td>SPECIES</td>
<td>Botanical (Latin) name of the species (Genus + species).</td>
</tr>
<tr>
<td>SAMPLE_MONTH</td>
<td>The month during which the data were measured.</td>
</tr>
<tr>
<td>NEEDLE AGE</td>
<td>Age of the sampled needles, (0 = current year, 1 = 1 year old, 2 = 2 years old, etc.)</td>
</tr>
<tr>
<td>SAMPLE_AMOUNT</td>
<td>The number of trees sampled.</td>
</tr>
<tr>
<td>MEAN_STARCH_CONTENT</td>
<td>The mean starch content of the sample.</td>
</tr>
<tr>
<td>STD_ERR_STARCH_CONTENT</td>
<td>Standard error for the starch content of the sample.</td>
</tr>
<tr>
<td>CRTFCN_CODE</td>
<td>The BOREAS certification level of the data. Examples are CPI (Checked by PI), CGR (Certified by Group), PRE (Preliminary), and CPI-?? (CPI but questionable).</td>
</tr>
<tr>
<td>REVISION_DATE</td>
<td>The most recent date when the information in the referenced data base table record was revised.</td>
</tr>
</tbody>
</table>

### 7.3.3 Unit of Measurement

The measurement units for the parameters contained in the data files on the CD-ROM are:

<table>
<thead>
<tr>
<th>Column Name</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>SITE_NAME</td>
<td>[none]</td>

</table>

Minimum Data Value -- The minimum value found in the column.
Maximum Data Value -- The maximum value found in the column.
Missng Data Value -- The value that indicates missing data. This is used to indicate that an attempt was made to determine the parameter value, but the attempt was unsuccessful.
Unrel Data Value -- The value that indicates unreliable data. This is used to indicate an attempt was made to determine the parameter value, but the value was deemed to be unreliable by the analysis personnel.
Below Detect Limit -- The value that indicates parameter values below the instruments detection limits. This is used to indicate that an attempt was made to determine the parameter value, but the analysis personnel determined that the parameter value was below the detection limit of the instrumentation.
Data Not Collectd -- This value indicates that no attempt was made to determine the parameter value. This usually indicates that BORIS combined several similar but not identical data sets into the same data base table.
but this particular science team did not measure that parameter.

Blank -- Indicates that blank spaces are used to denote that type of value.
N/A -- Indicates that the value is not applicable to the respective column.
None -- Indicates that no values of that sort were found in the column.

7.4 Sample Data Record
The following are wrapped versions of data records from a sample data file on the CD-ROM.

SITE_NAME, SUB_SITE, SPECIES, SAMPLE_MONTH, NEEDLE_AGE, SAMPLE_AMOUNT, MEAN_STARCH_CONTENT, STD_ERR_STARCH_CONTENT, CRTFCN_CODE, REVISION_DATE
'SSA-OBS-FLXTR', 'TGB08-CON01', 'Picea mariana', 'April', 2, 10, 166.0, 252.0, 'CPI', 26-MAR-97
'SSA-OBS-FLXTR', 'TGB08-CON01', 'Picea mariana', 'Aug/Sept', 1, 10, 355.0, 225.0, 'CPI', 26-MAR-97
'SSA-OBS-FLXTR', 'TGB08-CON01', 'Picea mariana', 'Aug/Sept', 2, 10, 477.0, 286.0, 'CPI', 26-MAR-97

8. Data Organization

8.1 Data Granularity
The smallest unit of data tracked by the BOREAS Information System (BORIS) was the starch concentration data for a given site on a given month.

8.2 Data Format(s)
The Compact Disk-Read-Only Memory (CD-ROM) files contain American Standard Code for Information Interchange (ASCII) numerical and character fields of varying length separated by commas. The character fields are enclosed with single apostrophe marks. There are no spaces between the fields.

Each data file on the CD-ROM has four header lines of Hyper-Text Markup Language (HTML) code at the top. When viewed with a Web browser, this code displays header information (data set title, location, date, acknowledgments, etc.) and a series of HTML links to associated data files and related data sets. Line 5 of each data file is a list of the column names, and line 6 and following lines contain the actual data.

9. Data Manipulations

9.1 Formulae

9.1.1 Derivation Techniques and Algorithms
None given.

9.2 Data Processing Sequence

9.2.1 Processing Steps
None given.

9.2.2 Processing Changes
None given.
9.3 Calculations

9.3.1 Special Corrections/Adjustments
None given.

9.3.2 Calculated Variables
None.

9.4 Graphs and Plots
None.

10. Errors

10.1 Sources of Error
None given.

10.2 Quality Assessment

10.2.1 Data Validation by Source
None given.

10.2.2 Confidence Level/Accuracy Judgment
None given.

10.2.3 Measurement Error for Parameters
None given.

10.2.4 Additional Quality Assessments
None given.

10.2.5 Data Verification by Data Center
The data were examined for general consistency and clarity.

11. Notes

11.1 Limitations of the Data
None given.

11.2 Known Problems with the Data
None given.

11.3 Usage Guidance
None.

11.4 Other Relevant Information
None.

12. Application of the Data Set
None given.
13. Future Modifications and Plans

None given.

14. Software

14.1 Software Description
None given.

14.2 Software Access
None given.

15. Data Access

The starch concentration data are available from the Earth Observing System Data and Information System (EOSDIS) Oak Ridge National Laboratory (ORNL) Distributed Active Archive Center (DAAC).

15.1 Contact Information
For BOREAS data and documentation please contact:

ORNL DAAC User Services
Oak Ridge National Laboratory
P.O. Box 2008 MS-6407
Oak Ridge, TN 37831-6407
Phone: (423) 241-3952
Fax: (423) 574-4665
E-mail: ornldaac@ornl.gov or ornl@eos.nasa.gov

15.2 Data Center Identification
Earth Observing System Data and Information System (EOSDIS) Oak Ridge National Laboratory (ORNL) Distributed Active Archive Center (DAAC) for Biogeochemical Dynamics

15.3 Procedures for Obtaining Data
Users may obtain data directly through the ORNL DAAC online search and order system [http://www-eosdis.ornl.gov/] and the anonymous FTP site [ftp://www-eosdis.ornl.gov/data/] or by contacting User Services by electronic mail, telephone, fax, letter, or personal visit using the contact information in Section 15.1.

15.4 Data Center Status/Plans
The ORNL DAAC is the primary source for BOREAS field measurement, image, GIS, and hardcopy data products. The BOREAS CD-ROM and data referenced or listed in inventories on the CD-ROM are available from the ORNL DAAC.
16. Output Products and Availability

16.1 Tape Products
None.

16.2 Film Products
None.

16.3 Other Products
These data are available on the BOREAS CD-ROM series.

17. References

17.1 Platform/Sensor/Instrument/Data Processing Documentation

### Abstract
The BOREAS TGB-8 team collected data to investigate the controls over NMHC fluxes from boreal forest tree species. This data set includes measurements of starch concentrations in foliar samples at mature jack pine and black spruce sites. The data were collected at the OJP and OBS tower flux locations in the BOREAS SSA. These areas contained mature stands of jack pine and black spruce and were the focal sites in the BOREAS program for studies of biosphere/atmosphere exchange from these two habitat types. The OBS site is situated in a black spruce/sphagnum bog with the largest trees 155 years old and 10-15 m tall. The OJP site is in a jack pine forest, 80 to 120 years old, which lies on a sandy bench of glacial outwash with the largest tree standing 15 m tall. Temporally, the data cover the period of 24-May-1994 to 19-Sep-1994. The data are stored in tabular ASCII files.
