NASA ULTRA EFFICIENT ENGINE TECHNOLOGY PROJECT OVERVIEW

Catherine L. Peddie and Robert J. Shaw
National Aeronautics and Space Administration
Glenn Research Center
Cleveland, Ohio

NASA Ultra Efficient Engine Technology Project Overview

Enabling Technologies for 21st Century Turbine Engines

Joe Shaw
UEET Project Manager

Catherine Peddie
UEET Assistant Project Manager
Outline

- Overview of current UEET Project
- Reinvention of UEET as part of the Vehicle Systems Program
The NASA Mission

To understand and protect our home planet
To explore the Universe and search for life
To inspire the next generation of explorers

...as only NASA can.
The UEET Program will develop and transfer to the U. S. industry critical gas turbine engine technologies which will contribute to “enabling a safe, secure, and environmentally friendly air transportation system”.
Environmentally Friendly Aircraft

Noise within airport boundaries
Constrain objectionable noise to within airport boundaries

Smog-free
Minimize the contribution of air vehicles to the production of smog

No impact on global climate
Minimize the impact of air vehicles on global climate
Revolutionize Aviation Goal

Emissions Objective

Reduce emissions of future aircraft by a factor of three within 10 years (2007), and by a factor of five within 20 years.

NASA Three Pillars for Success-1997

Reduce NOx emissions of future aircraft by 70 percent within 10 years, and by 80 percent within 25 years (using the 1996 ICAO Standard for NOx as the baseline). Reduce CO2 emissions of future aircraft by 25 percent and by 50 percent in the same timeframes (using 1997 subsonic aircraft technology as the baseline).

NASA Aerospace Technology Enterprise Strategic Plan-2000

UEET will be the responsible propulsion program for delivering on this objective!
Vision: Develop and hand off revolutionary turbine engine propulsion technologies that will enable future generation vehicles over a wide range of flight speeds.

Goals:

Propulsion technologies to enable increases in system efficiency and, therefore, fuel burn reductions of up to 15% (equivalent reductions in CO₂)

Combustor technologies (configuration and materials) which will enable reductions in LTO* NOₓ of 70% relative to 1996 ICAO standards.

* LTO - Landing/Take-off
Vision

Develop and hand off revolutionary propulsion turbine engine technologies that will enable future generation vehicles over a wide range of flight speeds.

We support the vision and are committed to the success of NASA’s Ultra Efficient Engine Technology (UEET) Project.

Last Update: April 2003
Baseline Vehicles for UEET Technology Application Studies

**Subsonic**
- 300 PAX: Large Subsonic Transport
- 50 PAX: Regional Jet Transport
- 500-600 PAX: Blended Wing Body (BWB)

**Supersonic**
- 300 PAX: High Speed Civil Transport (HSCT)
- 10 PAX: Supersonic Business Jet (SBJ)

**Hypersonic**
- These vehicles drive the technology investment strategy

**Commercial Vehicles**
- 4 PAX: General Aviation Aircraft (GA)
- Military Transport (C-17)

**Non-Commercial Vehicles**
- 4 PAX: Advanced Fighter
- Unmanned Aerial Vehicle (UAV)

**These vehicles determine the technology synergies**

**Access-to-Space/High Mach Platform**
# Program Technical Objectives

**System Test and Operations**

- **System/Subsystem Development**
  - **Technology Demonstration**
    - **Technology Development**
      - **Research to Prove Feasibility**
        - **Basic Technology Research**

In partnership with DOD, industry

**UEET**

Ultra Efficient Engine Technology

**IDEA**

Government Role

**Industry Role**
Selected Technical Highlights

Ultra Efficient Engine Technology

- Ultra Efficient Engine Technology
- 70% LTO NOx combustor sector tests
- 2 stage POC compressor rig design
- Turbomachinery disk material temperature limit
- CMC combustor liner for engine test
- Active flow control to reduce inlet distortion
- Rig/engine tests to measure particulates, aerosol emissions
The UEET “Roadmap”

2015 “Ultimate” Turbine Engine Systems
- Emissions
- Fuel burn
- Weight
- Noise
- Safety
- Reliability

Integrated component technology validations
(in cost-sharing partnership with other government agencies and/or industry)

UEET Technologies
- Components
- Materials and structures
- Intelligent propulsion controls
- Propulsion-airframe integration

Periodic assessments/rebalancing of portfolio
The Path to Re Invention of the UEET Project
Aeronautics Technology – Three Integrated Programs

Airspace Systems

Aviation Safety & Security

Vehicle Systems
Aeronautics Theme Objectives for the Public Good

**Protect the Environment**
Protect local environmental quality and the global climate by reducing aircraft noise and emissions.

**Increase Mobility**
Enable more people and goods to travel faster and farther, anywhere, anytime with fewer delays.

**Explore New Aerospace Missions**
Pioneer novel aerospace concepts to support earth and space science missions.

**Support National Security**
Leverage NASA aeronautics technology investments in partnership with DOD to support their role of protecting the Nation.
Environmentally Friendly Aircraft

Noise within airport boundaries
Constrain objectionable noise to within airport boundaries

Smog-free
Minimize the contribution of air vehicles to the production of smog

No impact on global climate
Minimize the impact of air vehicles on global climate
Aircraft for Public Mobility

More Convenient
Expand access to aviation to more locations and make it available on-demand

More Affordable
Make air travel available to the entire population

...without compromising safety

Faster
Increase the speed of air travel
Innovative Vehicle Concepts to Identify Key Technology Requirements

- **Clean Transport**
  - Minimum environmental impact, maximum efficiency

- **Global Strike**
  - Strengthen national security through rapid deployment and global reach

- **Planetary Flight Vehicles**
  - Conduct extended science and exploration missions

- **Santa Monica at Midnight**
  - All hour access to any location without noise disturbance

- **Global Reach Transport**
  - Global reach and on-demand delivery

- **Personal Air Vehicle**
  - Rural, regional, and intra-urban transportation

- **Heartland Express**
  - Rural and regional economic growth, time critical transport

- **Tanker**
  - Automated refueling capability, ultra-long endurance, wide speed range

- **V/STOL Commuter**
  - Enables city center access in all weather

- **Extreme STOL Transport**
  - Expands the use of existing airport infrastructure

- **Supersonic Overland**
  - Reduce passenger flight time by at least a factor of 2

- **High Altitude Long Endurance**
  - High altitude observations for science and defense
Project Evolution within Replanned Vehicle Systems Strategic Focus Areas

Quiet Aircraft for Community Friendly Service
- QAT
- 4x Noise Reduction
- 4X Demo (F&SD)
- Design for Quiet
- Integrated Quiet, Efficient Aircraft Design

Environmentally Friendly, Clean Burning Engines
- UEET
- UEET Demo (F&SD)
- Intelligent Propulsion Systems
- Integrated Flight/Propulsion Intelligence Demo (F&SD)
- Autonomous Propulsion Systems

Smart Aircraft and Autonomous Control
- IFCS-GenII (F&SD)
- IFCS - Adaptive Optimal FCS Demo (F&SD)
- UAV in the NAS Step 1 and 2 (FSD)
- Multi-UAV Command, Control, Communications (F&SD)
- Autonomous Robust Avionics
- AuRA Flight Demo (F&SD)
- Sentient Air Vehicle
- Autonomous Certification Methods
- Autonomous Transport Technology
Factors Driving Change

- Administration/OMB drivers that are not going away
  - Be more competitive (outhouse and in house) to get “best product”
  - Right size the NASA institution (people and facilities)
  - Proper role of government programs in aerospace R&D food chain

- Increasing stress on Federal budget
  - Growing Federal deficits for foreseeable future
  - Administration priorities (Homeland security and anti terrorism)
  - Aerospace priorities (National and Agency)
Opportunity to:

- significantly strengthen UEET in the eyes of our customers/partners/stakeholders

-- increase the support of key decision makers for UEET

- make major technology impacts on next generation gas turbine engine propulsion systems

- carry our relationship with DoD (IHPTET/VAATE) to the next level

- forge a partnership with NAI, NGLT

- be a leader in developing a new NASA/other government agencies/industry/university partnership model for aerospace R&T
How do we do it?
Vehicle Systems Program Structure

**External Groups**
- Red Team
- ATAC/VSWG
- NRC/ASEB

**Vehicle Systems** (HQ)

**Strategy Team** (One representative per center)

**Vehicle Integration, Strategy, and Technical Analysis (VISTA)**

**Flight and System Demonstrations (DFRC)**

**Efficient Aerodynamic Shapes and Integration - EASI (LaRC)**

**Integrated Tailored Aerostructures - ITAS (LaRC)**

**Ultra Efficient Engine Technology - UEET (GRC)**

**Quiet Aircraft Technology - QAT (LaRC/GRC)**

**Autonomous Robust Avionics - AuRA (LaRC/DFRC)**

**Low Emissions Alternative Power - LEAP (GRC)**

**UEETnew will:**
- Be a TRL 1-6 project.
- The only project in the Vehicle Systems Program focused entirely on turbine engine propulsion systems.
- Invest approximately 20% of resources into developing a technology foundation for the follow on project.
The FY04 Challenge

UEET Program/Project (FY04 plans)

Propulsion & Power Program/Project (Turbine engine portion)

UEETnew (FY04-07)
**Vision:** Develop and hand off revolutionary turbine engine propulsion technologies that will enable future generation vehicles over a wide range of flight speeds.

**Goals:**

Propulsion technologies to enable increases in system efficiency and, therefore, fuel burn reductions of up to 15% (equivalent reductions in CO₂)

Combustor technologies (configuration and materials) which will enable reductions in LTO* NOₓ of 70% relative to 1996 ICAO standards.

* LTO - Landing/Take-off

These will remain the same!
UEETnew “Characteristics”

- UEETnew will focus on technologies for subsonic and supersonic commercial systems.
  The subsonic systems will be regional jets though large wide bodies
  The supersonic systems will be SSBJ through commercial transports (10 -100 PAX)

- UEETnew will do selected rotorcraft technologies that are dual use technologies which benefit our prime customer base.

- UEETnew will continue to emphasize partnership efforts with DoD that emphasize collaborative efforts to develop dual use technologies.

- UEETnew will use systems studies results as a prime factor in prioritizing and selecting technology efforts. Expert opinion will be employed wherever appropriate (e.g. areas where systems studies cannot currently model technology impacts).
Critical aspects of UEET Re invention

**Lower TRL efforts**
- Lay foundation for follow on project - Intelligent Propulsion Systems
- All efforts openly competed and selected
- Partnerships encouraged

**Higher TRL efforts**
- Contribution to achievement of UEET goals
- Appropriate for NASA investment
- Possible dual use technology with partnering with DoD
- Up front commitments by cost sharing partner
  - Cost sharing amount and type
  - Technology transition/insertion plan
- Approach to utilizing NASA personnel, facilities

A key part of the new UEET Project will be the selection and transition of UEET technologies with industry/DoD partners to a sufficiently high level so that our partners can use them in future “product designs” after further technology efforts that go beyond NASA’s charter (i.e. TRL6).

The success of this effort will be one measure as to how UEET will be graded both by the government (e.g. NASA HQ, OMB, Congress) and our partners.

But we must address “corporate welfare” concerns and doing DoD’s job.

Approach to Re inventing UEET-Higher TRL’s

Some technologies will not require engine tests to successfully transition.
UEET and F&SD projects will TOGETHER proactively work with the customers to define and conduct the required flight demonstrations!
Some things won’t change!
Baseline Vehicles for UEET Technology Application Studies

**Subsonic**
