Definitions of Tactical and Strategic: An Informal Study

Paul C. Schutte
Langley Research Center, Hampton, Virginia
Since its founding, NASA has been dedicated to the advancement of aeronautics and space science. The NASA Scientific and Technical Information (STI) Program Office plays a key part in helping NASA maintain this important role.

The NASA STI Program Office is operated by Langley Research Center, the lead center for NASA’s scientific and technical information. The NASA STI Program Office provides access to the NASA STI Database, the largest collection of aeronautical and space science STI in the world. The Program Office is also NASA’s institutional mechanism for disseminating the results of its research and development activities. These results are published by NASA in the NASA STI Report Series, which includes the following report types:

- **TECHNICAL PUBLICATION.** Reports of completed research or a major significant phase of research that present the results of NASA programs and include extensive data or theoretical analysis. Includes compilations of significant scientific and technical data and information deemed to be of continuing reference value. NASA counterpart of peer-reviewed formal professional papers, but having less stringent limitations on manuscript length and extent of graphic presentations.

- **TECHNICAL MEMORANDUM.** Scientific and technical findings that are preliminary or of specialized interest, e.g., quick release reports, working papers, and bibliographies that contain minimal annotation. Does not contain extensive analysis.

- **CONTRACTOR REPORT.** Scientific and technical findings by NASA-sponsored contractors and grantees.

- **CONFERENCE PUBLICATION.** Collected papers from scientific and technical conferences, symposia, seminars, or other meetings sponsored or co-sponsored by NASA.

- **SPECIAL PUBLICATION.** Scientific, technical, or historical information from NASA programs, projects, and missions, often concerned with subjects having substantial public interest.

- **TECHNICAL TRANSLATION.** English-language translations of foreign scientific and technical material pertinent to NASA’s mission.

Specialized services that complement the STI Program Office’s diverse offerings include creating custom thesauri, building customized databases, organizing and publishing research results ... even providing videos.

For more information about the NASA STI Program Office, see the following:

Definitions of Tactical and Strategic: An Informal Study

Paul C. Schutte
Langley Research Center, Hampton, Virginia
Introduction

In aviation, the terms tactical and strategic are used quite often to describe behaviors and activities on the flight deck. Jonnson and Ricks (Jonsson & Ricks, 1993) found that pilots tended to categorize flight deck information along a tactical and strategic dimension. Tactical behaviors are generally considered to be near-term, dynamic activities while strategic behaviors are generally considered to be long-term and big-picture activities. As will be seen in this paper, the discriminators between tactical and strategic vary depending on context and individual. In personal conversations with designers at US airframe and avionics manufacturers, the designers have claimed that the Flight Management System (FMS) and the Cockpit Display Unit (CDU) have been designed primarily for strategic use and the control inceptor (either wheel-and-column or side-stick), throttle, and mode control panel (MCP) are to be used for tactical activity. Designers reason that the FMS CDU (a device located in the lower center of the flight deck that uses a keyboard interface) is for strategic use because it requires the pilot to divert his attention from the primary flight display (PFD) and take his hands off of the controls to operate. Thus, he cannot focus on the dynamic control of the aircraft while operating the FMS.

Does the FMS exclusively provide controls and display for strategic behavior and the PFD, inceptor, throttle, and MCP exclusively provide controls and display for tactical behavior? Before this question can be answered, we need to have a better understanding of what is meant by the terms tactical and strategic. However, the manufacturers do not have these terms strictly defined. The definitions are assumed to be understood. While many people claim to understand the terms, do they agree on the definition? Can the definitions be put into crisp terms? The obvious place to begin to look is the dictionary. However, standard dictionary definitions do little to shed light on this distinction.

Tactical:
1. of or relating to combat tactics: as
   a. (1): of or occurring at the battlefront <tactical defense> <tactical first strike> (2): using or being weapons or forces employed at the battlefront <tactical missiles>
   b. of an air force: of, relating to, or designed for air attack in close support of friendly ground forces
2. a. of or relating to tactics: as (1): of or relating to small-scale actions serving a larger purpose (2): made or carried out with only a limited or immediate end in view
   b. adroit in planning or maneuvering to accomplish a purpose

Strategic:
1. of, relating to, or marked by strategy <a strategic retreat>
2. a. necessary to or important in the initiation, conduct, or completion of a strategic plan
   b. required for the conduct of war and not available in adequate quantities domestically <strategic materials>
   c. of great importance within an integrated whole or to a planned effect <emphasized strategic points>
3. designed or trained to strike an enemy at the sources of his military, economic, or political power <a strategic bomber> (Merriam, 1976)

For tactical, definition 2a seems closest to how the term is used in aviation. For strategic, 2c seems most appropriate. However, these definitions do not imply dichotomy or an exclusiveness between tactical and strategic. For example, both definitions talk of planning. Could this overlap in definitions lead to a confusion on the flight deck?

The purpose of this study, therefore, was to explore the differences between tactical and strategic behavior based on verb descriptors. An informal survey was given to subject matter experts (SME) in the aviation domain. These included pilots, avionics designers, airframers, and researchers. The SMEs were asked to list five verbs that described “tactical behavior” and five verbs that described “strategic behavior.” Then they were given the opportunity to describe each behavior in a few sentences.
Method

Subjects

Twenty subjects received the questionnaire. Seventeen subjects responded. Eleven of the respondents were NASA researchers in the flight deck and flight management areas. Five respondents were flight deck designers for major US aircraft manufacturers. Two respondents were designers for a US avionics manufacturer. One respondent was a retired pilot for a major US airline. Of the respondents, eight had at least a private pilot instrument rating. Sixteen of the respondents were natives of the United States with English as their first language. One respondent was a German-born US citizen whose first language was German but was fluent in English. Appendix A provides a brief description of each SME.

Questionnaire

The subjects were given the following request in an email. They were asked to respond within a week.

Thank you for participating in this study. I am interested in better defining the meanings of the terms tactical and strategic with regard to flight deck operations and behaviors. To that end I am soliciting your opinions regarding these terms. Please respond to the instructions below.

For 'TACTICAL', please write down the first five verbs that come to your mind.
Then write down a sentence or two describing what tactical behavior is on the flight deck

For 'STRATEGIC', please write down the first five verbs that come to your mind.
Then write down a sentence or two describing what strategic behavior is on the flight deck

Results

Verb Descriptions

As is often the case in such surveys, not all SMEs responded with five verbs and some responded with adjectives and adverbs. When possible, these adjectives and adverbs were translated into corresponding verbs based on their definitions in the dictionary. There were eight verbs that appeared in both tactical and strategic descriptions. These were evaluate, decide, react, navigate, perceive, manage, direct, and get information. Many of the other verbs had similar meaning such as do, perform, and act. To address these similarities, the dictionary definition (Merriam, 1976) was used for clarification. Not surprisingly, many of the verbs were used in the definition of other verbs. Table 1 lists all the verbs that were listed by the SMEs as describing strategic behavior along with their corresponding definitions. If a verb was directly mentioned or alluded to in the definition of another strategic verb, it is printed in a bold font. Nouns and adjectives were mapped to their verb counterparts (e.g., develop an understanding was mapped to the verb to understand, and intention and intended were mapped to the verb to intend). Table 2 presents the same verbs along with the number of times that verb was directly cited by SMEs, the number of times that the verb appeared (or was alluded to) in a definition for other strategic verbs, and the number of times that the verb was listed either directly or in a definition for a tactical verb. If a verb was mentioned more than once in a definition (e.g., perceive is mentioned twice in the definition for know), it was only counted once. Tables 3 and 4 contain the corresponding data for the tactical verbs. The starred (*) verbs are those found in both tactical and strategic descriptions.
TABLE 1
Verbs describing “strategic behavior” along with the corresponding definitions. If a strategic verb is cited or alluded to in the definition of another strategic verb, it is printed in bold font. The starred (*) verbs were cited by SMEs in both the tactical and the strategic verbs.

| | 3. To create in accordance with a prescribed design  
| | 4. To make valid, as by signing  
| | 5. To perform or carry out what is required by  
| **predict** | To state, tell about, or make known in advance, especially on the basis of special knowledge  
| **monitor** | 1. To check the quality or content of (an electronic audio or visual signal) by means of a receiver  
| | 2. To check by means of an electronic receiver for significant content, such as military, political, or illegal activity  
| | 3. To keep track of systematically with a view to collecting information  
| | 4. a. To test or sample on a regular or ongoing basis b. To test (air or an object's surface, for example) for radiation intensity  
| | 5. To keep close watch over; supervise  
| | 6. To **direct**  
| **think ahead** | No explicit definition available  
| **manage * | 1. To **direct** or control the use of; handle  
| | 2. a. To exert control over b. To make submissive to one's authority, discipline, or persuasion  
| | 3. To **direct** the affairs or interests of  
| | 4. To succeed in accomplishing or achieving, especially with difficulty; contrive or **arrange**  
| **elaborate** | 1. To work out with care and detail; develop thoroughly  
| | 2. To produce by effort; create  

4
| establish | 1. a. To set up; found  
b. To bring about; generate  
2. a. To place or settle in a secure position or condition; install  
b. To make firm or secure  
3. To cause to be recognized and accepted  
4. To introduce and put (a law, for example) into force  
5. To prove the validity or truth of |
| proceduralize | No explicit definition available |
| order | 1. To issue a command or an instruction to  
2. To give a command or an instruction for  
3. To direct to proceed as specified  
4. To give an order for; request to be supplied with  
5. To put into a methodical, systematic arrangement |
| perceive * | 1. To become aware of directly through any of the senses, especially sight or hearing.  
2. To achieve understanding of; apprehend |
| consider | 1. To think carefully about  
2. To think or deem to be; regard as  
3. To form an opinion about; judge  
4. To take into account; bear in mind  
5. To show consideration for  
6. To look at thoughtfully |
| understand | 1. To perceive and comprehend the nature and significance of; grasp  
2. To know thoroughly by close contact or long experience with  
3. a. To grasp or comprehend the meaning intended or expressed by another  
b. To comprehend the language, sounds, form, or symbols of  
4. To know and be tolerant or sympathetic toward  
5. To learn indirectly, as by hearsay  
6. To infer  
7. To accept (something) as an agreed fact  
8. To supply or add (words or a meaning, for example) mentally |
| integrate | 1. To make into a whole by bringing all parts together; unify  
2. a. To join with something else; unite  
b. To make part of a larger unit |
| plot | 1. To represent graphically, as on a chart  
2. To conceive and arrange the action and incidents of |
| formulate | 1. a. To state as or reduce to a formula  
b. To express in systematic terms or concepts  
c. To devise or invent  
2. To prepare according to a specified formula |
| inquire | 1. To seek information by asking a question  
2. To make an inquiry or investigation |
| rehearse | 1. a. To practice in preparation for a public performance  
b. To direct in rehearsal  
2. To perfect or cause to perfect (an action) by repetition  
3. a. To retell or recite  
b. To list or enumerate |
| direct * | 1. To manage or conduct the affairs of; regulate  
2. To have or take charge of  
3. To give authoritative instructions to  
4. To cause to move toward a goal; aim  
5. To show or indicate the way for  
6. To cause to move in or follow a straight path  
7. To indicate the intended recipient on (a letter, for example)  
8. To address or adapt (remarks, for example) to a specific person, audience, or purpose  
9. a. To give guidance and instruction to (actors or musicians, for example) in the rehearsal and performance of a work  
b. To supervise the performance of |
| modify | 1. To change in form or character; alter  
2. To make less extreme, severe, or strong |
| allocate | 1. To set apart for a special purpose; designate  
2. To distribute according to a plan; allot |
### TABLE 2

Verbs describing “strategic behavior” along with their corresponding response counts. The starred (*) verbs were cited by SMEs in both the tactical and the strategic verbs. The second column (# of responses) lists the number of times SME listed the verb as an example of strategic behavior. The third column (# of references in def.s for other strategic verbs) lists the number of times this verb was mentioned or alluded to in other strategic verb definitions. The fourth column (# of references in def.s for tactical verbs) lists the number of times this verb was mentioned or alluded to in the tactical verb definitions (Table 3).

Sentence Descriptions

The SMEs were allowed to describe what they meant by tactical and strategic in a few sentences. Excerpts from these comments that the author found particularly interesting are given below. The entire set of responses can be found in Appendix B

Strategic

“… thinking ahead of the airplane, mission & flight planning, setting long term goals and plans for accomplishing goals, knowledge-based reasoning about issues/plans/problems, contingency planning, anticipating future events — concern about future states and situations vs. current states and situations.”

“Primary distinguishing factor: focus on near term vs. far term goals & tasks — not sure what the magic number is for time, but probably in the neighborhood of <5 minutes (maybe as low as <2 minutes) is tactical. Secondary distinguishing factor: workload/ number of tasks requiring immediate attention.”

“… strategic behavior derives from the mission and serves to identify the methods, and (lower) actions required to accomplish this mission; this can include strategies for contingencies. strategic FPM (Flight Path Management) includes route planning, identifying contingency conditions and methods for coping with them....”

“Strategic behavior in the cockpit is planning for flight tasks/maneuvers in the future not ones currently happening. Strategic behavior is more proactive than reactive because there is time to plan for future flight tasks maneuvers.”

"Actions or plans related to long-term goals"

“Strategic requirements, tasks and behaviors relate to situation awareness — the integrated understanding and correlation of the myriad of variables that affect vehicle flight path and systems management. Strategic issues focus on the rationale for present and future actions, and relationships between present and future requirements.”
“Strategic behavior is deciding what appropriate actions should be taken later on — long range planning, reviewing approach, missed approach, and landing procedures, planning contingencies or what-ifs, etc.”

“Planning the future state of the vehicle. This would include navigation (where am I going) and guidance (how do I get there).”

“Strategic behavior on the flight deck is characterized by a long-term focus (with respect to the duration of the flight), as in planning the route and responding to major events which render existing plans unworkable or undesirable.”

“… much strategic behavior takes place before entering the cockpit. It probably begins with learning the time and destination of the flight. This initiates a cognitive review that includes study of the airports, routes, probable weather and special procedures. The strategic behavior continues during the flight planning period with consideration to weather, airplane condition and crew considerations. Once airborne, strategic and tactical considerations are often inseparable.”

“… strategy is what you do when there's nothing to do (e.g., prepare for approach/landing during cruise, preflight brief, flight plan, etc.)”

“Strategic behaviors on the flight deck are any part of a series of operations or procedures used to achieve large-scale and lasting objectives.”

“Strategic behavior on the flight deck means planning in advance for all or long (> 20 minutes) portions of the trip — taking into account anticipated conditions — and setting nav/com/fms for those planned intentions.”

**Tactical**

“… relates to immediate tasks, setting and accomplishing short-term goals, performing and responding quickly without time for knowledge-based reasoning, high workload situations in which pilot attention and workload is focused on accomplishing items with near-in deadlines, working in "real time."”

“tactical behavior includes all immediate activity in response to external stimuli and required as a means of accomplishing pre-established goals pertaining to a strategy.”

“… flight tasks/maneuvers currently in progress or ones in the immediate future. Tactical behavior is reactionary.”

“… associated with direct control of the vehicle — what it is that the pilot needs to do to directly affect the flight path or critical systems. Tactical requirements are often immediate, and emphasize what it is that needs to be done, rather than the rationale for doing it.”

“Tactical behaviors are near-term or current action — means to fly (aviate) the airplane. Keep it right-side up. To navigate — what actions are required to fly a specific heading or to attain a specific altitude or vertical speed or to attain a specific airspeed.”

“Tactical behavior is the identification of a circumstance/situation/condition with near-term implications and the implementation of a trained/pre-established response to rapidly mitigate the situation.”

“Controlling the current state of the vehicle. This would include navigation (where am I) and guidance (where should I be and how do I get there).”
“Tactical behavior is that of flying the airplane. This will include all airplane maneuvering with the primary flight controller and throttles. It includes use of autopilot, changes to the airplane configuration, and communications with ATC.”

“… tactics are what you do when you have to do something (e.g., climb, descend, avoid hitting an aircraft, report in, respond to ATC)”

“… describing current activities”

“Tactical behaviors on the flight deck are short-term, expeditious techniques to achieve a limited or temporary advantage.”

“Tactical behavior on the flight deck means reacting to unexpected events, revising plans over short time periods (less than 20 minutes), involves actually controlling the plane, to carry out those revised plans.”

Summary

Each verb descriptor was scored in the following manner to produce its discriminative value. For each verb the score was equal to the number of times explicitly cited plus the number of times the verb was cited in a definition of the same class minus the number of times the verb was cited in the opposing category either directly or indirectly minus 1 if the verb was directly cited. The formula for computing the score follows.

$$\text{Discriminative Value Score} = (\# \text{ of responses}) + (\# \text{ of references in def.s for other same category verbs}) - (\# \text{ of references in def.s for strategic verbs}) - (1 \text{ if verb listed in both tactical and strategic})$$

The purpose of this scoring was to determine strong discriminators between the two behaviors. If a verb was cited many times by the SMEs, that would indicate that it was very descriptive of that category. Similarly, if the verb was cited in the other definitions of verb descriptors it should be even more descriptive. The more descriptive a verb is, the greater the chances of it being a good discriminator. However, if the verb was cited in the opposite category’s definitions or descriptor verbs, this would imply that it was not a good discriminator and it decreased the discrimination value score. Finally, if a verb was cited in both tactical and strategic, an additional point was subtracted because that meant that it had less discriminative value. If a verb was cited often in both, then the net result would be closer to zero meaning that it had little value as a discriminator. Table 5 shows the scores for the strategic verbs. Table 6 shows the scores for the tactical verbs.

---

1 This is not to say that the verb does not describe the behavior. It simply states that it is common in both behaviors and therefore does not discriminate between the two.

The following verbs received a score of 0 or less and can therefore should not be considered as discriminators between tactical and strategic behaviors: Get Information, Navigate, Know, Execute, Manage, Perceive, Understand, Direct, Concentrate, and Point.

Close scrutiny of the sentence descriptions provided by the SMEs reveal other aspects not implicated in the verb descriptors. One of the aspects is time. Many of the SMEs viewed time as a discriminator with tactical being short-term and strategic being long-term. The time thresholds (mentioned in the narratives) between tactical and strategic ranged from 2 to 20 minutes ahead. Another distinction was the type of processing that is occurring, namely skill-based, rule-based, or knowledge-based. Skill and rule were primarily tactical and knowledge-based was primarily strategic. Goal aggregation or abstraction was also used to distinguish between the two. Strategic behavior dealt more with high-level goals for the overall mission. The scope of these goals is much broader than that of tactical goals. In military terms, tactical goals are concerned with winning the battle while strategic goals are concerned with winning the war. Similarly the scope or breadth of information also appeared to discriminate with strategic information having a broader scope in terms of types of information with less detail (or depth) than tactical information. Another prominent discriminator had to do with whether the pilot was on the flight deck – both physically or mentally. That is, strategic behavior was that behavior that could occur outside the flight deck or when there was "nothing" required to be done on the flight deck. Tactical behavior requires the pilot to be mentally and physically present on the flight deck. One quote is worth repeating regarding this distinction in that it may be a contributing factor to confusion in the flight deck: “Once airborne, strategic and tactical considerations are often inseparable.”
Discussion

The verb descriptors seem to point toward the difference between planning and carrying out those plans. Tactical verbs are more action-oriented verbs that change the state of the world after they have been accomplished. Strategic verbs are more prescriptive in that they do not change the state of the world but offer a procedure or program for changing the world. It is interesting that the verb “Think” is second behind “Plan” in strategic behavior. One way of describing the difference is that strategic behavior is thinking about doing it and tactical is actually doing it. Along those lines, the definitions for the strategic verbs use the term “mind” nine times and the term “mental” two times, whereas “mind” is not found in the definitions for tactical verbs and “mental” is found only once in the definition for “see.” The implication from this is that strategic behavior occurs more in the mind than in the actual world. This was expressed in one of the comments that stated that strategic behavior could occur outside of the flight deck, whereas tactical behavior must occur in the aircraft.

Therefore, one possible way of describing the difference between tactical and strategic behavior is to view the tactical mode as actually moving the aircraft whereas the strategic mode is used for thinking about moving it (i.e., planning, prognosticating, and preparing). Tactical behavior means being immersed in the here-and-now of the situation and limited to the information currently available. Strategic behavior allows the pilot to rise above (ahead of and out of) the situation and look at the big picture, look ahead and behind, and evaluate the current situation and future situations in light of goals and values. This is consistent with the view that the navigation display and the FMS represent strategic devices in that they present a “God’s eye view” or “Plan view” that can interact with and describe situations far from the aircraft’s current position (e.g., planning a landing at the destination shortly after take off, or planning an alternate that will likely never be taken.)

Resource Allocation and Information Processing

Since the human’s information processing capability has some upper bound, the increase in scope involved in strategic behavior (e.g., looking at the big picture) usually requires a decrease in detail. Likewise, the human must have spare resources to rise above the tactical in order to think strategically. If the tactical environment is a high-workload one or greatly time-pressured, the pilot may not have the resources available for strategic behavior. In this sense, strategic behavior is optional, but tactical is required. At each moment, you must do something (even if that something is nothing.) You do not have to think about it.

This interpretation brings to the fore the need for a dynamic balance between tactical and strategic behavior. If a pilot is too immersed in a particular problem or situation (e.g., systems failure or heavy weather), he may lose sight of the big picture (e.g., terrain or fuel state). Likewise, if the pilot is overly concerned with future and broad consequences and information, he may overlook some critical tactical detail (e.g., gear position).

Counterintuitive Results

There were two surprises from this analysis – two verbs that were expected to be strongly associated with a category were not. Navigate was expected to be associated with Strategic, but it received a score of 0 indicating that it was not a good discriminator between tactical and strategic. The definition for Navigate provides some insight. It describes navigating as both planning a route and then following that route or course. For example, I can navigate around rocks and rapids when white water rafting or I can navigate a route on charts. Thus, it is both planning and doing.

Similarly, Execute was expected to be associated with Tactical. The definition for Execute is loaded with action verbs such as do, perform, and carry out. Yet it was mentioned once — only in the Strategic verbs! Perhaps this is due to the usage of the word; for example, you may hear that someone may execute a strategy, but you don’t use the phrase “execute a tactic.” It is strongly worth noting that there is an EXECUTE button on the FMS CDU that is used to couple the plan in the FMS to the guidance system in the aircraft. Here, Execute represents a bridge from strategic to tactical.
Confusion Arising from Tactical and Strategic

Returning now to the flight deck, we can take a preliminary look at the distinction of the FMS CDU as a strategic device and the inceptors and MCP as tactical devices. At first it appears that they do indeed fit the definitions. The FMS can be used to plan a flight; and the inceptors and MCP can be used to carry out that plan. However, closer inspection shows that the FMS is not used exclusively for planning. It is used for moving the aircraft in that a plan in the FMS can be directly coupled to the autopilot and therefore result in movement in the aircraft. The pilot can make changes in the FMS that will cause the aircraft to move and move right now. In short, the pilot can configure the FMS to be used as a tactical device.

Similarly, the MCP can be used in a strategic manner. The altitude indicator is often used as a limit on the aircraft’s altitude rather than a control. For example: The aircraft can be planned to eventually ascend to 30,000 feet based on commands from the FMS. The pilot can dial in 25,000 feet while the aircraft is at 10,000 feet. This will not have any immediate effect on the aircraft. If the FMS did not drive the aircraft above 25,000 feet, this action would never have any effect. It will only come into play later in the flight when the FMS drives the aircraft to ascend to 30,000. Rather than ascending to 30,000 feet, it would level off at 25,000 feet. It is often the case that situations like these cause the pilot to wonder what the aircraft is doing. While this is not the only source of confusion arising from the modern flight management system, I believe that it is a major contributor.

It would be interesting to design a flight management system that was based on the distinction of tactical and strategic that has been described here. That is, one set of controls and displays for actually moving the aircraft and another set of controls and displays for planning the movements of the aircraft. The planning system could be used for providing guidance to the pilot for tactically moving the aircraft, but changes in the plan would not actually move the aircraft.

Conclusion

Seventeen subject matter experts provided opinions on the definitions of tactical and strategic within the aviation domain. These experts provided five verbs and a sentence describing both tactical and strategic behavior. The verbs most often mentioned exclusively for strategic behavior were Plan, Think, Arrange, Formulate, Intend, Devise, Anticipate, and Order. The verbs most often mentioned exclusively for tactical behavior were Act, Fly, Respond, Do, Avoid, Control, React, and Move. Just as interesting were the verbs that were common to both tactical and strategic were Get Information, Navigate, Know, Execute, Manage, Perceive, Understand, Direct, Concentrate, and Point. A person can navigate, manage, and direct in either a tactical sense or in a strategic sense.

The responses seem to point toward the difference between planning (strategic) and carrying out those plans (tactical). Tactical verbs are more action-oriented verbs that change the state of the world after they have been accomplished. Strategic verbs are more prescriptive in that they do not change the state of the world but offer a procedure or program for changing the world. The pilot is in a tactical mode when actually moving the aircraft and in a strategic mode when thinking about moving it (i.e., planning, prognosticating, and preparing).

The results of this study represent a first step toward designing a flight deck that better matches the human’s mental model and intuition. Further study will be required to see if these concepts of tactical and strategic are similar in various pilot communities (e.g., airline pilots, general aviation pilots).
Acronym List

ATC  Air Traffic Control
CDU  Cockpit Display Unit (or Control and Display Unit)
FMS  Flight Management System
MCP  Mode Control Panel
NASA National Aeronautics and Space Administration
PFD  Primary Flight Display

Appendix B: SME Complete Comments

SME 1
TACTICAL
Relates to immediate tasks, setting and accomplishing short-term goals, performing and responding quickly without time for knowledge-based reasoning, high workload situations in which pilot attention and workload is focused on accomplishing items with near-in deadlines, working in "real time."

STRATEGIC
Thinking ahead of the airplane, mission & flight planning, setting long-term goals and plans for accomplishing goals, knowledge-based reasoning about issues/plans/problems, contingency planning, anticipating future events — concern about future states and situations vs current states and situations.

Primary distinguishing factor: focus on near term vs far term goals & tasks — not sure what the magic number is for time, but probably in the neighborhood of <5 minutes (maybe as low as <2 minutes) is tactical.
Secondary distinguishing factor: workload/number of tasks requiring immediate attention

SME 2
TACTICAL
Tactical behavior includes all immediate activity in response to external stimuli and required as a means of accomplishing pre-established goals pertaining to a strategy. Tactical Flight Path Management means active aircraft maneuvering for immediate response. Tactical communication is issuing an instruction that is immediately relevant or responding to another agent.

STRATEGIC
Strategic behavior derives from the mission and serves to identify the methods, and (lower) actions required to accomplish this mission; this can include strategies for contingencies. Strategic Flight Path Management includes route planning, identifying contingency conditions and methods for coping with them. Strategic communication takes the form of dissertation, for example maybe the change-over conversation they give each other in that it serves no immediate purpose but it used to maintain the big picture. Strategic systems management is determining conditions under which you should actively manage things (fuel balance?), determining procedures over different systems to achieve a higher order goal.

SME 3
TACTICAL
Tactical behavior in the cockpit is planning for flight tasks/maneuvers currently in progress or ones in the immediate future. Tactical behavior is reactionary.

STRATEGIC
Strategic behavior in the cockpit is planning for flight tasks/maneuvers in the future not ones currently happening. Strategic behavior is more proactive than reactive because there is time to plan for future flight tasks maneuvers.

SME 4
No Narratives only verbs
SME 5
TACTICAL
Actions or plans related to short-term goals

STRATEGIC
Actions or plans related to long-term goals

SME 6
TACTICAL
Tactical requirements, tasks, and behaviors are associated with direct control of the vehicle - what it is that the pilot needs to do to directly affect the flight path or critical systems. Tactical requirements are often immediate, and emphasize what it is that needs to be done, rather than the rationale for doing it. A tactical requirement, for example, would be to alter pitch attitude to a specific value at initiation of a missed approach.

STRATEGIC
Strategic requirements, tasks and behaviors relate to situation awareness - the integrated understanding and correlation of the myriad of variables that affect vehicle flight path and systems management. Strategic issues focus on the rationale for present and future actions, and relationships between present and future requirements. A strategic requirement, for example, would be the need to request a long straight-in approach to the longest runway at a given airport, following a flap system failure.

SME 7
TACTICAL
Tactical behaviors are near-term or current-action means to fly (aviate) the airplane. Keep it right-side up. To navigate—what actions are required to fly a specific heading or to attain a specific altitude or vertical speed or to attain a specific airspeed.

STRATEGIC
Strategic behavior is deciding what appropriate actions should be taken later on—long-range planning, reviewing approach, missed approach, and landing procedures, planning contingencies or what-ifs, etc.

SME 8
TACTICAL
Looking at the short-term goals of the flight and immediately acting to fulfill those goals. Hopefully, these actions were previously thought out and are part of an overall strategy.

STRATEGIC
Determining the general goal(s) and relative importance of each for the flight and deciding which actions to take and when to take them (so that they then become tactical at the appropriate time) in order to achieve the general goal(s).

SME 9
TACTICAL
Tactical behavior is the identification of a circumstance/situation/condition with near-term implications and the implementation of a trained/pre-established response to rapidly mitigate the situation.

STRATEGIC
Strategic behavior is the identification or "gaming" of a circumstance/situation/condition with future implications and the development of a plan of action to cause the situation to be resolved in a manner favorable to your desires.
**SME 10**  
**TACTICAL**  
Controlling the current state of the vehicle. This would include navigation (where am I) and guidance (where should I be & how do I get there).

**STRATEGIC**  
Planning the future state of the vehicle. This would include navigation (where am I going) and guidance (how do I get there).

---

**SME 11**  
**TACTICAL**  
More immediate/non planned (flight); manual flying (side issue: what does manual mean? say, if we have the auto throttle on, does this take the mission out of tactical or not?)

**STRATEGIC**  
Planned flight;  
May want to relate the two concepts (TACT/STRAT) to display-oriented tasks and/or flight phases;  
Primary tactical flight phases: Takeoff & Landing  
Primary strategic flight phases: Cruise

---

**SME 12**  
**TACTICAL**  
Tactical behavior on the flight deck is characterized by a short-term focus, as in carrying out the steps of previously made plans and responding to minor events which affect not the plans themselves, but the immediate actions that are being taken.

**STRATEGIC**  
Strategic behavior on the flight deck is characterized by a long-term focus (with respect to the duration of the flight), as in planning the route and responding to major events which render existing plans unworkable or undesirable.

---

**SME 13**  
**TACTICAL**  
Tactical behavior deals with the immediacy of ever-changing situations.

**STRATEGIC**  
IMHO, much strategic behavior takes place before entering the cockpit. It probably begins with learning the time and destination of the flight. This initiates a cognitive review that includes study of the airports, routes, probable weather and special procedures. The strategic behavior continues during the flight planning period with consideration to weather, airplane condition and crew considerations. Once airborne, strategic and tactical considerations are often inseparable. For example, avoiding a line of thunderstorms is a tactical maneuver but the extra fuel consumed may cause a strategic reevaluation of the destination holding fuel or alternate.
SME 14
TACTICAL
Tactical behavior is that of flying the airplane. This will include all airplane maneuvering with the primary flight controller and throttles. It includes use of autopilot, changes to the airplane configuration, and communications with ATC.

STRATEGIC
Strategic behavior is that of planning and managing the flight. This will include preflight planning, programming and updating of the flight management computers, referencing and briefing en route chart and arrival information, and communications with operations and ATC. It includes in-flight planning and route modification due to weather, traffic flows, fuel management, etc.

SME 15
TACTICAL
Tactics are what you do when you have to do something (e.g., climb, descend, avoid hitting an aircraft, report in, respond to ATC)

STRATEGIC
Strategy is what you do when there's nothing to do (e.g., prepare for approach/landing during cruise, preflight brief, flight plan, etc.)

SME 16
TACTICAL
I see Tactical as describing current activities. I see this as Monitoring (current state variables), Assessing (with regards to immediate actions), and Modifying/Controlling (current state variables, including aircraft systems).

STRATEGIC
I think of Strategic behavior as Planning or Determining Actions. I wanna fly from HERE to THERE. After the NEXT WAYPOINT I WANNA DO THE FOLLOWING ... I want the cabin altitude to be controlled automatically

If there is anything "different" about my viewpoint I would highlight the notion that there is no distinction between aircraft systems along the TACTICAL/STRATEGIC boundary. Aircraft Systems are not simply one or the other. It all depends on the timeliness of input/response which separates TAC/STRAT for me.

SME 17
TACTICAL
Tactical behaviors on the flight deck are short-term, expeditious techniques to achieve a limited or temporary advantage.

STRATEGIC
Strategic behaviors on the flight deck are any part of a series of operations or procedures used to achieve large-scale and lasting objectives.
Seventeen subject matter experts defined *tactical* and *strategic* within the aviation domain. They provided five verbs and a sentence describing both behaviors. The verbs for strategic behavior were Plan, Think, Arrange, Formulate, Intend, Devise, Anticipate, and Order. The verbs for tactical behavior were Act, Fly, Respond, Do, Avoid, Control, React, and Move. Verbs that were common to both were Get Information, Navigate, Know, Execute, Manage, Perceive, Understand, Direct, Concentrate, and Point. The responses highlight the difference between planning (strategic) and carrying out those plans (tactical). Tactical verbs are more action-oriented that change the state of the world after they have been accomplished. Strategic verbs are more prescriptive in that they do not change the state of the world but offer a procedure or program for changing the world. The pilot is in a tactical mode when actually moving the aircraft and in a strategic mode when thinking about moving it.
