# NASA STI Program ... in Profile

Since its founding, NASA has been dedicated to the advancement of aeronautics and space science. The NASA Scientific and Technical Information (STI) Program plays a key part in helping NASA maintain this important role.

The NASA STI Program provides access to the NASA STI Database, the largest collection of aeronautical and space science in the world. The STI Program is also NASA's institutional mechanism for disseminating the results of its research and development activities. These results are published by NASA in the NASA STI Report Series, which includes the following report types:

- **TECHNICAL PUBLICATION.** Reports of completed research or major significant phases of research that present the results of NASA programs and include extensive data or theoretical analysis. Includes compilations of significant scientific and technical data and information deemed of continuing reference value. NASA counterpart of peer-reviewed formal professional papers, but has less stringent limitations on manuscript length and extent of graphic presentations.
- **TECHNICAL MEMORANDUM.** Scientific and technical findings that are of preliminary or specialized interest, e.g., quick release reports, working papers, and bibliographies that contain minimal annotation. Does not contain extensive analysis.
- **CONTRACTOR REPORT.** Scientific and technical findings by NASA-sponsored contractors and grantees.
- **CONFERENCE PUBLICATION.** Collected papers from scientific and technical conferences, symposia, seminars, or other meetings sponsored or co-sponsored by NASA.

- **SPECIAL PUBLICATION.** Scientific, technical, or historical information from NASA programs, projects, and missions, often concerned with subjects having substantial public interest.
- **TECHNICAL TRANSLATION.** English-language translations of foreign scientific and technical material pertinent to NASA's mission.

Specialized services that help round out the STI Program's diverse offerings include creating custom thesauri, building customized databases, organizing and publishing research results ... even providing videos.

The NASA STI Program is managed by the NASA STI Program Office (STIPO). STIPO is the administrative office at Langley Research Center for the NASA STI Program.

For more information about the NASA STI Program, you can:

- Access the NASA STI Program Home Page at <http://www.sti.nasa.gov>
- E-mail your question via the Internet to [help@sti.nasa.gov](mailto:help@sti.nasa.gov)
- Fax your question to the NASA STI Help Desk at (301) 621-0134
- Telephone the NASA STI Help Desk at (301) 621-0390
- Write to:

# Introduction

This issue of the *NASA Video Catalog* cites video productions listed in the NASA STI Database.

The videos listed have been developed by the NASA centers, covering Shuttle mission press conferences; fly-bys of planets; aircraft design, testing and performance; environmental pollution; lunar and planetary exploration; and many other categories related to manned and unmanned space exploration.

Each entry in the publication consists of a standard bibliographic citation accompanied by an abstract. The Table of Contents shows how the entries are arranged by divisions and categories according to the *NASA Scope and Coverage Category Guide*.

For users with specific information, a Title Index is available. A Subject Term Index, based on the *NASA Thesaurus*, is also included.

Guidelines for usage of NASA audio/visual material, ordering information, and order forms are also available.

# GUIDELINES

## *Use of NASA Photography and Audio/Visual Recordings*

### **General Conditions**

NASA material may not be used to state or imply the endorsement by NASA or by any NASA employee of a commercial product, service or activity, or used in any other manner that might mislead.

NASA should be acknowledged as the source of its material.

It is unlawful to falsely claim copyright or other rights in NASA material.

NASA shall in no way be liable for any costs, expenses, claims or demands arising out of use of NASA's cassettes and photographs by a recipient or a recipient's distributees.

NASA personnel are not authorized to sign indemnity or hold harmless statements, releases from copyright infringement, or documents granting exclusive use rights.

### **Photography**

Photographs are not protected by copyright unless noted. If copyrighted, permission should be obtained from the copyright owner prior to use. If not copyrighted, photographs may be reproduced and distributed without further permission from NASA. If a recognizable person appears in a photograph, use for commercial purposes may infringe on a right of privacy or publicity and permission should be obtained from the recognizable person.

### **Audio Recordings**

Audiotape recordings are not protected by copyright unless noted. A cassette may be reproduced and distributed, without further permission from NASA. However, use of a portion or segment of an audiotape, such as talent, narration or music, may infringe on a right of publicity of copyright, and permission should be obtained from the source.

### **Video and Motion Picture Recordings**

Videotape and motion picture recordings are not protected by copyright unless noted. A recording may be reproduced and distributed, without further permission from NASA. Copyrighted music or footage, which is incorporated in a production, may not be used unless permission is obtained from the copyright owner. While in most instances using non-copyrighted segments is permitted, use for a commercial purpose of a portion or segment containing talent or a recognizable person may infringe on a right of publicity and permission should be obtained from the talent or recognizable person. These guidelines also apply to NASA's "live television" satellite broadcasts.

***Please Read These Instructions Carefully Before Completing Form***

# **ORDERING INSTRUCTIONS**

## **Customer Name and Address**

Please give your name, organization, phone number, fax number, and complete shipping address including number and street.

## **Videotape Standards**

All videos are distributed in the U.S. Standard, NTSC. To receive videos in a broadcast standard outside of the United States (PAL or SECAM), please contact the NASA STI Help Desk by phone at (301) 621-0390 for foreign standards pricing.

## **Formats**

All videos are formatted in VHS and Betacam SP. Other formats available include SVHS, Hi8, and PAL for foreign users. Special handling, however, will result in an increased cost to the requester. Please contact the NASA STI Help Desk by phone at (301) 621-0390 for special format requests.

## **Videos Requested**

Please list each quantity, accession number, title, and playing time requested on a separate line. Please include the full title since many of the videos have similar titles. If you are requesting more than six titles, please use an additional form.

## **Video Program Allocation**

Video titles are purchased separately. You may receive each title on a separate videotape, or you may request that several titles ordered go on a single video cassette, if space allows.

## **Method of Payment**

Payment should be made at time of order by check, credit card, or Customer ID number.

## **Processing**

Standard service means that most video requests are processed in-house within three business days, then shipped. Rush service is also available for an additional fee, whereby orders are processed within one business day, then shipped.

## **Shipping**

A standard shipping and handling fee of \$2.00 for U.S. addresses and \$17.00 for international addresses is charged for each item. Standard shipping is through the USPS Priority Mail service with delivery expected within 2–3 days to most U.S. destinations and 4–7 days to most international destinations. USPS Express Mail service is available for \$13.00 per item within the U.S. only. Express Mail service provides 1-day delivery to most destinations.

# NASA VIDEO CATALOG

*A Publication of the National Aeronautics and Space Administration*

---

JANUARY 2005

## 01 AERONAUTICS (GENERAL)

Includes general research topics related to manned and unmanned aircraft and the problems of flight within the Earth's atmosphere. Also includes manufacturing, maintenance, and repair of aircraft. For specific topics in aeronautics, see *categories 02 through 09*. For information related to space vehicles see *12 Astronautics*.

**19940029066** NASA Lewis Research Center, Cleveland, OH, USA

### **NACA fire crash research**

JAN 1, 1992; In English

Report No(s): NASA-TM-109794; NONP-NASA-VT-94-12922; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

This video provides a better understanding of the important factors involved in the start and spread of crash fires, as a necessary first step leading to significant reduction in the crash fire hazards.

CASI

*Accidents; Crashes; Fires; Flight Safety*

**19950004297** NASA Dryden Flight Research Center, Edwards, CA, USA

### **Dryden and transonic research**

May 27, 1992; In English; 20th Anniversary F-8 Digital Fly-By-Wire (DFBW) and Supercritical Wing (SCW) Symposium, 1995

Report No(s): NASA-TM-104281; NONP-NASA-VT-94-23629; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

This video on transonic research is given by Dryden engineer Ed Saltzman as part of the 20th Anniversary F-8 Digital Fly-By-Wire (DFBW) and Supercritical Wing (SCW) Symposium.

DFRC

*F-8 Aircraft; Fly By Wire Control; Research; Supercritical Wings; Transonic Flow*

**19950004337** NASA Dryden Flight Research Center, Edwards, CA, USA

### **NACA/NASA: X-1 through X-31**

Apr 4, 1994; In English

Report No(s): NASA-TM-104304; NONP-NASA-VT-94-23649; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

This video presents clips (in-flight, ground crew, pilots, etc.) of almost everything from X-1 through X-31.

DFRC

*Research Aircraft; Research Projects*

## 02 AERODYNAMICS

Includes aerodynamics of flight vehicles, test bodies, airframe components and combinations, wings, and control surfaces. Also includes aerodynamics of rotors, stators, fans, and other elements of turbomachinery. For related information see also *34 Fluid Mechanics and Thermodynamics*.

**19940009148** NASA Lewis Research Center, Cleveland, OH, USA

### **A future view of computational science in aircraft**

Aug 1, 1989; In English

Report No(s): LERC-CV-108; NASA-TM-109284; NONP-NASA-VT-93-185300; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

The accomplishments of LeRC in the field of computational fluid dynamics are presented.

Author (revised)

*Aircraft Design; Computational Fluid Dynamics; Research Facilities*

**19940009159** NASA Langley Research Center, Hampton, VA, USA

### **HL-20 personnel launch system**

Sep 1, 1990; In English

Report No(s): LARC-HL20-PLS; NASA-TM-109292; NONP-NASA-VT-93-185307; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

An overview of lifting body research to include LaRC's full scale engineering research model is presented.

Author (revised)

*Launchers; Lifting Bodies; Lifting Reentry Vehicles; Spacecraft Launching; Spacecraft Models*

**19940014491** NASA, Washington, DC, USA

**Airflow research**

Dec 1, 1985; In English

Report No(s): ASR-239; NASA-TM-109372; NONP-NASA-VT-94-198219; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

This is an overview of research being done in laminar flow at Ames Dryden Flight Research Center and Langley Research Center. Airflow research at Ames Dryden has resulted in a special wing covering that will artificially induce laminar flow on the wing surface; this specially adapted wing is shown being tested in different flying conditions. This video also features research done at Langley in producing a chemical covering for wings that will make visible natural laminar flow and turbulent airflow patterns as they occur. Langley researchers explain possible use of this technology in supersonic flight.

CASI

*Air Flow; Coatings; Flow Visualization; Laminar Flow; Wings*

**19940022658** NASA Langley Research Center, Hampton, VA, USA

**Leading-edge vortex-system details obtained on F-106B aircraft using a rotating vapor screen and surface techniques**

Lamar, John E.; Brandon, Jay; Stacy, Kathryn; Johnson, Thomas D., Jr.; Severance, Kurt; Childers, Brooks A.; Nov 1, 1993; In English; Videotape supplement to NASA-TP-3374: 14 min., color, sound, VHS

Contract(s)/Grant(s): RTOP 505-59-30-03

Report No(s): NASA-TP-3374-VIDEO-SUPPL; L-0793-127; NAS 1.60:3374-VIDEO-SUPPL; NONP-NASA-SUPPL-VT-94-209775; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

In this video the following sequences are presented: flight-test operational procedures; animation of post-processing key elements; digitization process of flight video tape; extractor procedure demonstration; reconstructor procedure demonstration; reconstructor used to compare flight results from 1985 with those in 1991; enhancer procedure demonstration; and mapping of oil-flow photograph onto surface geometry for comparison with vapor-screen-determined vortex characteristics.

Author

*F-106 Aircraft; Flow Visualization; Leading Edges; Vortices*

**19950004144** NASA, Washington, DC, USA

**Scientific balloons**

Dec 1, 1991; In English

Report No(s): NASA-TM-109907; NONP-NASA-VT-94-23149; ASR-258; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

This video discusses how NASA uses large helium-filled balloons to take payloads up 25 miles to the edge of space to

gather data. Balloons provide a cost effective approach to reach these heights.

CASI

*Balloon Sounding; High Altitude Balloons*

**19950013580** NASA Dryden Flight Research Center, Edwards, CA, USA

**F-16XL interview with Marta Bohn-Meyer**

Jul 27, 1992; In English

Report No(s): NASA-TM-110505; NONP-NASA-VT-95-41117; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

Marta Bohn-Meyer discusses the cooperative research between Rockwell Industries and NASA research facilities in their effort to optimize and maintain the supersonic laminar flow on the F-16XL aircraft. Research on the airfoil design, chord optimization, introduction of a suction feature to maintain pressure distribution, and CFD, both theoretical and actual phenomena, are discussed. Bohn-Meyer discusses the difference between supersonic and subsonic laminar flow, cross flow, reasons behind using this particular F-16 aircraft for this research, and the future of this ongoing research, including the data base that investigators are building from wind tunnel data and in-flight validation.

DFRC

*Aircraft Design; Airfoils; F-16 Aircraft*

**19970005033** NASA Johnson Space Center, Houston, TX USA

**Wind Tunnel Tests of an Inflatable Airplane**

Oct. 09, 1996; In English; Videotape: 32 min. playing time, in color, with sound

Report No(s): NASA-TM-111830; L-1642; NONP-NASA-VT-97-1997005936; No Copyright; Avail: CASI; **V03**, Videotape-VHS

In this video a wind tunnel investigation of aerodynamic and structural deflection characteristics of an inflatable airplane is shown. The film includes scenarios during wind tunnel tests of an inflatable airplane in the Langley Full Scale Tunnel with the main objective of obtaining load factors prior to wing buckle of 4.5 to 5.0 g. The inflation pressure during the test was indicated to be 7.0 psi.

CASI

*Inflatable Structures; Wings; Buckling; Deflection; Aerodynamic Stalling; Aerodynamic Stability; Aerodynamic Loads; Aerodynamic Characteristics*

## AIR TRANSPORTATION AND SAFETY

Includes passenger and cargo air transport operations; airport ground operations; flight safety and hazards; and aircraft accidents. Systems and hardware specific to ground operations of aircraft and to airport construction are covered in *09 Research and Support Facilities (Air)*. Air traffic control is covered in *04 Aircraft Communications and Navigation*. For related information see also *16 Space Transportation and Safety* and *85 Technology Utilization and Surface Transportation*.

**19940010863** NASA Lewis Research Center, Cleveland, OH, USA

### NASA images 6

Jan 1, 1988; In English

Report No(s): LERC-3002; NASA-TM-109437; NONP-NASA-VT-93-190234; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

The videotape is comprised of clips regarding aircraft safety and development through NASA research at its various centers.

CASI

*Aircraft Safety; NASA Programs; Research and Development; Research Facilities*

**19940010953** NASA, Washington, DC, USA

### Life saving satellites

Aug 1, 1985; In English

Report No(s): ASR-238; NASA-TM-109616; NONP-NASA-VT-93-190414; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

Details of COSPAS/SARSAT, the international search and rescue project, are covered.

CASI

*Cospas; Rescue Operations; Sarsat*

**19940027297** NASA Lewis Research Center, Cleveland, OH, USA

### WHIPICE

JAN 1, 1992; In English

Report No(s): LERC-92-175; NASA-TM-109749; NONP-NASA-VT-94-9949; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

This video documents efforts by NASA Lewis Research Center researchers to improve ice protection for aircraft. A new system of deicing aircraft by allowing a thin sheet of ice to develop, then breaking it into particles, is being examined, particularly to determine the extent of shed ice ingestion by jet engines that results. The process is documented by a high speed imaging system that scans the breakup and flow of the ice particles at 1000 frames per second. This data is then digitized and analyzed using a computer program called WHIPICE, which analyzes grey scale images of the ice particles. Detailed

description of the operation of this computer program is provided.

CASI

*Aircraft Hazards; Aircraft Icing; Applications Programs (Computers); Deicing; Ice Prevention*

**19940029057** NASA, Washington, DC, USA

### Airline safety and economy

JAN 1, 1993; In English

Report No(s): NASA-TM-109811; NONP-NASA-VT-94-12939; ASR-263; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

This video documents efforts at NASA Langley Research Center to improve safety and economy in aircraft. Featured are the cockpit weather information needs computer system, which relays real time weather information to the pilot, and efforts to improve techniques to detect structural flaws and corrosion, such as the thermal bond inspection system.

CASI

*Aircraft Maintenance; Aircraft Safety; Aviation Meteorology; Flight Management Systems; Flight Safety; Inspection*

**19940029243** NASA Lewis Research Center, Cleveland, OH, USA

### Crash impact survival in light planes

JAN 1, 1994; In English

Report No(s): NASA-TM-109799; NONP-NASA-VT-94-12927; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

This video explains the effects on aircraft and passengers of light plane crashes. The explanation is provided through the use of simulated light planes and dummies.

CASI

*Aircraft Accidents; Civil Aviation; Crashes; General Aviation Aircraft; Light Aircraft; Passengers*

**Pilot in Command: An Illustration of Autonomous Flight Management**

Wing, David J.; Ponthieux, Joseph G.; June 2004; In English  
Contract(s)/Grant(s): WU 23-727-01-10; No Copyright; Avail: CASI; **V01**, Videotape-VHS; **B01**, Videotape-Beta

Several years of NASA research have produced the concept for air traffic management called 'Distributed Air/Ground Traffic Management,' a major operational advancement that should significantly increase the capacity of the National Airspace System. A key component, 'Autonomous Flight Management,' introduces a new class of aircraft operations in which pilots are authorized to freely maneuver and execute optimal trajectories independent from air traffic controllers. These aircraft operators would benefit from significant increases in flexibility to optimize all flight operations and from avoiding most of the delays associated with ground-controlled operations. Responsibilities for aircraft separation and arrival flow conformance are transferred to the flight deck, and the pilots use computerized decision-support tools to accomplish these tasks. A research prototype of these tools called the 'Autonomous Operations Planner' is being developed at the NASA Langley Research Center. This 14-minute video illustrates Autonomous Flight Management from the airline pilot's perspective.

**VSTOL Systems Research Aircraft (VSRA) Harrier**

Dec 1, 1994; In English

Report No(s): NASA-TM-110117; NONP-NASA-VT-95-37002; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

NASA's Ames Research Center has developed and is testing a new integrated flight and propulsion control system that will help pilots land aircraft in adverse weather conditions and in small confined areas (such as, on a small ship or flight deck). The system is being tested in the V/STOL (Vertical/Short Takeoff and Landing) Systems research Aircraft (VSRA), which is a modified version of the U.S. Marine Corps's AV-8B Harrier jet fighter, which can take off and land vertically. The new automated flight control system features both head-up and panel-mounted computer displays and also automatically integrates control of the aircraft's thrust and thrust vector control, thereby reducing the pilot's workload and help stabilize the aircraft for landing. Visiting pilots will be encouraged to test the new system and provide formal evaluation flights data and feedback. An actual flight test and the display panel of control system are shown in this video.

### ASTRONAUTICS (GENERAL)

Includes general research topics related to space flight and manned and unmanned space vehicles, platforms or objects launched into, or assembled in, outer space; and related components and equipment. Also includes manufacturing and maintenance of such vehicles or platforms. For specific topics in astronautics see *categories 13 through 20*. For extraterrestrial exploration see *91 Lunar and Planetary Science and Exploration*.

This video, using historical film footage, photography, and computer animation, describes the launch, flight, lunar landing and exploration, and return flight of Apollo 12, one of the manned lunar missions. The astronauts were Charles Conrad, Richard Gordon, and Allen Bean. Thirty-six seconds into the November 14, 1969 launch, the spacecraft was hit by lightning from the thunderstorm surrounding the launch site. In spite of this mishap, the vehicle and astronauts were not harmed and continued with their mission. The Yankee Clipper (command module) docked with the Intrepid (lunar module) and upon reaching the Moon, the Intrepid disconnected during lunar orbit and descended to the Moon's surface to a landing area previously marked by the Surveyor satellite. After lunar surface exploration, soil sample collection, satellite maintenance, and setting up various lunar surface monitoring equipment (a seismometer and two atmospheric monitors), the Intrepid launched back into lunar orbit, docked with the Yankee Clipper, and returned to Earth. There are both B/W and color photography and film footage, which includes the earth launch,

lunar orbit, descent and ascent of Intrepid on the Moon, return flight, atmospheric reentry, and recovery on the Earth, and ground to air and space communication is shown.

**Shuttle to Space Station. Heart assist implant. Hubble update. X-30 mock-up**

Aug 1, 1992; In English

Report No(s): NASA-TM-110837; NONP-NASA-VT-95-63907; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

Shuttle to Space Station, Heart Assist Implant, Hubble Update, and X-30 Mockup are the four parts that are discussed in this video. The first part, Shuttle to Space Station, is focussed on the construction and function of the Space Station Freedom. While part two, Heart Assist Implant, discusses a newly developed electromechanical device that helps to reduce heart attack by using electric shocks. Interviews with the co-inventor and patients are also included. Brief introduction to Hubble Telescope, problem behind its poor image quality (mirror aberration), and the plan to correct this problem are the three issues that are discussed in part three, Hubble Update. The last part, part four, reviews the X-30 Mockup designed by the staff and students of Mississippi State University.

**1998 Mars Missions Science Briefing**

Nov. 13, 1998; In English; Videotape: 58 min. 30 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999037064; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

NASA executives gathered together for an interview to discuss the 1998 Mars Mission. A simulated overview of the Lander Mission is presented. Also presented are views of pre-launch activities, countdown, and launch of the spacecraft, burnouts of the first, second, and third engines, and the probe separating from the spacecraft. During this mission the Lander performs in situ investigations that address the science theme 'Volatiles and Climate History' on Mars. The purpose of this mission is to study the following: climate; life; water; carbon dioxide; and dust particles.

**Space 2000 Symposium**

Mar. 24, 1999; In English; Videotape: 7 hours 38 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999053774; No Copyright; Avail: CASI; **B07**, Videotape-Beta; **V07**, Videotape-VHS

The purpose of the Space 2000 Symposium is to present the creativity and achievements of key figures of the 20th century. It offers a retrospective discussion on space exploration. It considers the future of the enterprise, and the legacy that will be left for future generations. The symposium includes panel discussions, smaller session meetings with some panelists, exhibits, and displays. The first session entitled 'From Science Fiction to Science Facts' commences after a brief overview of the symposium. The panel discussions include talks on space exploration over many decades, and the missions of the millennium to search for life on Mars. The second session, 'Risks and Rewards of Human Space Exploration,' focuses on the training and health risks that astronauts face on their exploratory mission to space. Session three, 'Messages and Messengers Informing and Inspire Space Exploration and the Public,' focuses on the use of TV medium by educators and actors to inform and inspire a wide variety of audiences with adventures of space exploration. Session four, 'The Legacy of Carl Sagan,' discusses the influences made by Sagan to scientific research and the general public. In session five, 'Space Exploration for a new Generation,' two student speakers and the NASA Administrator Daniel S. Goldin address the group. Session six, 'Destiny or Delusion? -- Humankind's Place in the Cosmos,' ends the symposium with issues of space exploration and some thought provoking questions. Some of these issues and questions are: what will be the societal implications if we discover the origin of the

universe, stars, or life; what will be the impact if scientists find clear evidence of life outside the domains of the Earth; should there be limits to what humans can or should learn; and what visionary steps should space-faring people take now for future generations.

Live footage shows panelists, Chief Center Systems Division John Muratore, and Acting Chief, Control Center Systems Division, Linda Uljon, giving an overview of the new Mission Control Center. Muratore and Uljon talk about the changes and modernization of the new Center. The panelists mention all the new capabilities of the new Center. They emphasize the Distributed real time command and control environment, the reduction in operation costs, and even the change from coaxial cables to fiber optic cables. Uljon also tells us that the new Control Center will experience its first mission after the launch of STS-70 and its first complete mission (both launching and landing) during STS-71.

Live coverage of the pre-launch Delta X-Ray Timing Explorer (XTE) press briefing is presented. George Diller, NASA Public Affairs, introduces the panel. The panel consists of Floyd Curington, NASA Launch Manager, Kennedy Space Center; David Mitchell, Launch Vehicle Manager, NASA Goddard Space Flight Center; Dale Schulz, Mission Director, XTE Project Manager Goddard Space Flight Center; Dr. Hale Bradt, XTE Principle Investigator, Massachusetts Institute of Technology (MIT); and Joel Tumbiolo, Launch Weather Officer, Department of the Air Force. The launch of the Delta XTE spacecraft atop the Delta 230 expendable launch vehicle is discussed. Once lofted into orbit, the XTE spacecraft will embark on a two-year mission to carry out an in-depth study of x-ray sources in the universe. Floyd Curington gives the lift-off schedule, fueling, and countdown of the spacecraft. David Mitchell discusses the launch sequence and spacecraft separation. Dale Schulz presents viewcharts of the instrument side of the XTE. Dr. Hale will be studying compact stars such as light dwarfs, neutron stars and quasars. Joel Tumbiolo presents the weather forecast for the December 10, 1995 launch. The press briefing ends with a question and answer period.

The X-ray Timing Explorer (XTE), launched on Dec. 30, 1995, is a Satellite that observes the fast-moving, high-energy worlds of black holes, neutron stars, x-ray pulsars and bursts of X-rays that light up the sky and then disappear forever. This videotape presents a pre-launch science briefing to the press by a few of the scientist and managers associated with the XTE satellite. The moderator for the press briefing is Jim Sahli, from the Public Affairs Office at Goddard Space Flight Center (GSFC). He introduces Alan Bunner, of the High Energy Astrophysics at NASA Headquarters; Fred Lamb, from the University of Illinois; Richard Mashotzky, X Ray Scientist at GSFC; Rick Rothschild, Principal Investigator from the University of California at San Diego; and Dale Schultz, the XTE project manager at GSFC. Dr. Bunner explains the electromagnetic spectrum, the placement of x-rays and the importance of the XTE observations to a better understanding of the Universe. Dr. Lamb, explains the difference between white dwarfs, neutron stars and black holes, and the type of observations that the XTE will give to a further understanding of these phenomena. Dr. Mashotzky expands the viewpoint to beyond the galaxy, and explains the interests of scientists who hope to use XTE to further study Quasars and Active Galactic Nuclei. Dr. Rothschild reviews some of the features of XTE, using a diagram to show the features of interest, such as the X ray Telescopes, and the collecting Proportional Counter Array (PCA.) Mr. Schultz presents a videotape tour of the XTE, in which he shows the scientific instruments and the other features of the satellite. In this tour, the source of each of the instruments is noted. Questions from the members of the press are then fielded. Many of the questions are about the cost of the XTE and any problems that are anticipated in regards to the launch.

#### **Delta WIND Mission Science Briefing**

Oct. 31, 1994; In English; Videotape: 62 min. 41 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000078324; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

The science objectives of the WIND mission are to: 1) provide complete plasma, energetic particle, and magnetic field input for magnetospheric and ionospheric studies; 2) Determine the magnetospheric output to interplanetary space in the up-stream region; 3) Investigate basic plasma processes occurring in the near-Earth solar wind; and 4) Provide baseline ecliptic plane observations to be used in heliospheric latitudes from ULYSSES. The WIND science briefing is presented by George Diller, NASA public affairs; Dr. Robert L. Carovillano, Project Scientist for the Global Geospace Science Initiative, NASA Headquarters; Dr. Mario H. Acuna, Project Scientist for the WIND Project, Goddard Space Flight Center (GSFC); Dr. Keith W. Ogilvie, Principle Investigator, Solar Wind Experiment at GSFC; Dr. Jean Louis Bougeret, Principle Investigator, Radio/Plasma Wave Experiment, Paris; and Dr. Eugeny Mazets, Co-Principle Investigator, Russian Gamma Ray Spectrometer Instrument, St. Petersburg, Russia. Dr. Carovillano presents a cartoon slide of the Solar Terrestrial System and describes the Sun and the Magnetic field of the Earth. Dr. Acuna also presents a cartoon slide describing GEOTAIL, POLAR, WIND, SOHO, ULYSSES and Cluster which are the various tools used to study the complex solar terrestrial system. Dr. Ogilvie explains four particle and wave instruments on WIND. These instruments will be used to study the contributions and characteristics of plasma and plasma waves that occur in the solar wind. Dr. Bougeret explains the European participation in the WIND mission. He also shows a slide presentation of SOHO and the CLUSTER spacecraft. Dr. Mazets explains the main objective of the Transient Gamma Ray Spectrometer (TGRS) aboard the WIND spacecraft, which is to perform high resolution measurements of Gamma Ray Burst spectra and time histories, with emphasis on the search for line features in the energy spectra. The briefing ends with a question and answer period. See NONP-NASA-VT-2000078325 for additional question and answer footage.

This video shows footage from the symposium 'Looking Back, Looking Forward: Forty Years of US Human Spaceflight' held at the George Washington University on May 8, 2001. John Logsdon, Director of the GWU Space Policy Institute, introduces Daniel Goldin, NASA Administrator, who briefly discusses 'what it has meant to be a spacefaring nation'. A short video gives an overview of the history of spaceflight, including details on the Cold War space race between the US and the Soviet Union, and the first flights in space and to the moon by the US. Charles Murray presents 'Human Space Flight and American Society: The Record So Far' as the keynote speaker. Session 1, 'The Experience of Space Flight', consists of the astronauts Bob Crippen, Charles Walker, Mary Ellen Weber, and T.J. Creamer, who discuss their personal experiences with space flight. Session 2 ('Perspectives on the Past Forty Years of Human Space Flight'), Session 3 ('Perspectives on the Next Forty Years of US Human Spaceflight'), and the presentation 'The International Space Station and the Future of Human Space Flight' can be found on 'Looking Back, Looking Forward: Forty Years of US Human Spaceflight, These are all in Part 1. Part 2 consists of the following presentations: (1) 'The Space Flight Revolution Revisited' by William Sims Bainbridge; (2) 'Mutual Influences: USSR-US Interactions during the Space Race' by Asif Siddiqi; (3) 'Making Human Space Flight as Safe as Possible' by Fred Gregory; and (4) 'What If? Paths Not Taken' by John Logsdon. Session 3, 'Perspectives on the Next Forty Years of Human Spaceflight', consists of Neil de Grasse Tyson presenting 'Humans or Robots? Choosing Paths of the Frontier of Space Exploration', Robert Zubrin presenting 'Human Space Flight: An Element of American Greatness', Lori Zoloth presenting 'The Ethics of Human Space Flight, and James Garvin presenting 'NASA Faces the Future'. The final presentation is 'The International Space Station and the Future of Human Space Flight' by Bill Readdy, Deputy Associate Administrator for Space Flight, NASA, and William Shepherd, Commander of Expedition 1, International Space Station.

This video gives overviews of the Apollo 10 and Apollo 11 missions to the moon, including footage from the launches and landings of the Command Module Columbia, which is used for both flights. The Apollo 10 crewmembers, Commander Thomas Stafford, Command Module Pilot John Young, and Lunar Module Pilot Eugene Cernan, are seen as they suit-up in preparation for launch and then as they experiment with the microgravity environment on their way to the moon. The moon's surface is seen in detail as the Command Module orbits at an altitude of 69 miles. The Apollo 11 crewmembers, Commander Neil Armstrong, Command Module Pilot Michael Collins, and Lunar Module Pilot Buzz Aldrin, are seen during various training activities, including simulated lunar gravity training, practicing collecting lunar material, and using the moonquake detector. Footage shows the approach and landing of the Lunar Module Eagle on the moon. Armstrong and Aldrin descend to the moon's surface, collect a sample of lunar dust, and erect the American flag. Eagle's liftoff from the moon is seen.

Aug. 04, 1998; In English; Videotape: 55 min. 52 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001181404; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

This video shows footage of the Expedition 1 crew, William Shepherd, Yuri Gidzenko, and Sergei Krikalev, training for their stay on the International Space Station. Shepherd is seen training in the Soyuz spacecraft and inspecting the Service Module and Node 1. The three crewmembers are seen training for winter survival and extravehicular activity (in the Neutral Buoyancy Lab). They are taught how to use the fire extinguishers and extravehicular activity tools. Scenes show Gidzenko training in the crew compartment trainer and on the Mir Space Station and Krikalev on the STS-60 mission. A computer animation shows the Soyuz spacecraft docking with the Service Module.

This video is a collection of computer animations and live footage showing the construction and assembly of the International Space Station (ISS). Computer animations show the following: (1) ISS fly around; (2) ISS over a sunrise seen from space; (3) the launch of the Zarya Control Module; (4) a Proton rocket launch; (5) the Space Shuttle docking with Zarya and attaching Zarya to the Unity Node; (6) the docking of the Service Module, Zarya, and Unity to Soyuz; (7) the Space Shuttle docking to ISS and installing the Z1 Truss segment and the Pressurized Mating Adapter (PMA); (8) Soyuz docking to

the ISS; (9) the Transhab components; and (10) a complete ISS assembly. Live footage shows the construction of Zarya, the Proton rocket, Unity Node, PMA, Service Module, US Laboratory, Italian Multipurpose Logistics Module, US Airlock, and the US Habitation Module. STS-88 Mission Specialists Jerry Ross and James Newman are seen training in the Neutral Buoyancy Laboratory (NBL). The Expedition 1 crewmembers, William Shepherd, Yuri Gidzenko, and Sergei Krikalev, are shown training in the Black Sea and at Johnson Space Flight Center for water survival.

**Expedition 7 Crew Interview: Ed Lu**

April 25, 2003; In English; 15 min. playing time, in color with audio

Report No(s): JSC-1939B; No Copyright; Avail: CASI; **V01**, Videotape-VHS; **B01**, Videotape-Beta

Ed Lu of Expedition Seven is seen during a pre-launch interview. He explains why he became interested in space flight. He states that this is a different type of mission and gives his reaction to the Columbia Space Shuttle tragedy. The handover of Expedition six is explained by Ed Lu. The challenges of this mission are also described by Lu. These challenges include working with a crew member reduction from three to two, and the conservation of clothing and consumables. Ed Lu talks about what it is like to work with commander Yuri Malenchenko in space. Finally, Ed Lu states that he will continue scientific experiments in space on calcium loss in bones.

**Expedition 7 Crew Interview: Yuri Malenchenko**

April 25, 2003; In English; 14 min., 59 sec, with color and audio

Report No(s): JSC-1939A; No Copyright; Avail: CASI; **V01**, Videotape-VHS; **B01**, Videotape-Beta

Cosmonaut Yuri Malenchenko of Expedition Seven is seen during a pre-launch interview. He begins by telling why he wanted to become a cosmonaut. Malenchenko expresses his reaction about the news of the Space Shuttle Columbia accident, and how this mission will be different from other missions. He also expresses the challenges that face Malenchenko and Ed Lu such as the crew reduction from three to two, less supplies and no space shuttle flights. Malenchenko says that he will have to work on a compressed schedule, which will make the mission even more challenging. A description of the handover of Expedition Six is given. Malenchenko and Ed Lu will be cramped in a confined space on the Soyuz Spacecraft for two days before docking, and he talks about this experience. Lastly, Malenchenko gives his thoughts on how it will be to work with Ed Lu in space, and tells of Lu's trustworthiness and reliability as a fellow crew member.

**To Boldly Go: The Universe Now and Beyond**

NASA Administrator's Seminar Series; [2004]; 2 pp.; In English; 2 hrs., 1 min. playing time, in color, with sound; No Copyright; Avail: CASI; **V04**, Videotape-VHS

Dr. France Cordova, NASA's Chief Scientist opened this, the third session in the NASA Administrator's Seminar Series, by asking the following question: 'What would be a bold and aspiring agenda for America's next era in space?' It aimed at answering the following questions: What do we know about the universe? How do we know it? (Dr. Cordova also men-

tioned that the first seminar was about the definition of cellular life and how to recognize it, and featured as speakers, Dr. Lynn Margoles and Dr. Leslie Orgle.) Administrator Daniel S. Goldin was introduced; he welcomed the attendees, and remarked that NASA personnel have a critical need to explain to Congress and the public why a space program is important. Congress and the public pay for the space programs. Therefore the programs' importance cannot remain in the sole domain of scientists. The first speaker, Dr. Vera Ruben of the Department of Terrestrial Magnetism at the Carnegie Institute of Washington, was introduced as an art historian expert in cosmology and an observational astronomer. Dr. Ruben brought up a number of questions regarding the substance, location, and origin of dark matter, radiation, galaxies, and the lumpy structure of galaxies in space, as well as the age and density of our universe. The next speaker was Dr. Bohdan Paczynski, a theoretical astrophysicist from Princeton University's Department of Astrophysical Sciences. The final speaker, Dr. Linda Schale is a cosmologist from the University of Texas at Austin. She was said to be a 'paleontologist of the human mind' who tries 'to understand mechanisms people use to understand the world'. The concluding discussion centered on why NASA scientists don't communicate better with people who are not highly educated. This is a big concern because to continue its work, NASA needs to communicate the importance of its goals to the average person. Additional information is included in the original extended abstract.

**Mars Observer Orbit Insertion Briefing**

Aug. 24, 1993; In English; Videotape: 62 min. 24 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000081556; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

Steve Wall is the host of this video entitled, 'Return to the Red Planet'. Live animation of the Mars Observer orbiting Mars is presented. Steve Wall explains the spacecraft insertion maneuver and also explains the purpose for the Mars Observer launch. Live coverage of the Cape Canaveral launch of the Mars Observer is also presented. Suzanne Dodd, Chief of the Mission Planning team describes the burn start and how the spacecraft will be captured by Mars' gravity. Glenn Cunningham, Mars Observer Project Manager, gives background information on the Mars Observer and describes the organizations behind the Mars Observer Spacecraft, such as the Deep Space Network, the Mission Operation Support Office, Science Investigators, the Flight Engineering Office, Operations Office, and the Ground Data System Office. Dr. William Piotrowski, Acting Director, Solar System Exploration Division, NASA, talks about the purpose of the Mars Pathfinder which is to develop the technology and systems for landing small science packages on Mars. Mr. Roger Gibbs, Former Mars Observer Spacecraft Systems Engineer, tells us how the Mars Observer was built and describes the structural elements on the Mars Observer. The 11-month cruise period for the spacecraft is given by Joseph Beerer, Manager of the Engineering office. The thrust for the Mars Orbit Insertion is described by Ronald Klemetson, Technical Manager, Propulsion Subsystem Jet Propulsion Laboratory (JPL). George Chen, Lead Engineer Attitude and Articulation Subsystem Spacecraft Team, explains the importance of the attitude control engines on the Spacecraft. Marvin Traxler, Manager of Tracking and Data Acquisition, describes how searching for a signal from the Mars Observer works. See NONP-NASA-VT-2000081555 for a continuation of this discussion with Marvin Traxler.

*Mars Observer; Orbit Insertion; Spacecraft Maneuvers; Spacecraft Launching*

**2000080367** NASA Kennedy Space Center, Cocoa Beach, FL USA

**Mars Observer Orbit Insertion Briefing**

Aug. 24, 1993; In English; Videotape: 56 min. 8 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000081555; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

For the first part of this briefing, see NONP-NASA-VT-2000081556. Marvin Traxler continues his discussion on signal tracking from the Mars Observer. Julie Webster, Lead Engineer, Telecommunications Subsystem, is introduced. She explains how signals coming back from Mars are detected. Dr. Pasquale Esposito talks about flyby orbits and capture orbits. He says that frequencies coming from the spacecraft can determine if the spacecraft has flown by Mars, or if a capture orbit has occurred. Charles Whetsel, System Engineer Spacecraft Team, presents a computer program. He shows where the signal will appear on the computer from the Spacecraft. Suzanne Dodd presents orbit insertion geometry. Dr. Arden

Albee, Project Scientist Mars Observer Project, Cal Tech tech, says that Mars is studied to get more data to confirm their hypotheses derived from previous Mars Missions such as the Viking Mars Program and the Mariner Program. Dr. Albee also describes instrumentation on the Mars Observer such as the Ultra Stable Oscillator, Mars Orbiter Laser Altimeter, and Magnetometer. The camera on the spacecraft is similar to a fax machine because it scans one line at a time as the spacecraft orbits Mars. Dr. Michael Malin, Principle Investigator Mars Observer Camera, Malin Space Science Systems, Inc., describe this process.

An overview of the facilities and research being conducted at LeRC's Plumbrook field station is given. The video highlights four main structures and explains their uses. The Space Power Facility is the worlds largest space environment simulation chamber, where spacebound hardware is tested in simulations of the vacuum and extreme heat and cold of the space plasma environment. This facility was used to prepare Atlas I rockets to ferry CRRES into orbit; it will also be used to test space nuclear electric power generation systems. The

Spacecraft Propulsion Research Facility allows rocket vehicles to be hot fired in a simulated space environment. In the Cryogenic Propellant Tank Facility, researchers are developing technology for storing and transferring liquid hydrogen in space. There is also a Hypersonic Wind Tunnel which can perform flow tests with winds up to Mach 7.

**Expedition 7 Crew Training Clip**

April 25, 2003; In English; 22 min., 0 sec, with color and audio  
Report No(s): JSC-1939; No Copyright; Avail: CASI; **V02**, Videotape-VHS; **B02**, Videotape-Beta

This video shows the Expedition 7 crew of the International Space Station (ISS) during various training activities prior to launch. The crew consisted of Commander Yuri Malenchenko and Flight Engineer Ed Lu. At the virtual reality lab, the two astronauts work at a control panel, with Lu operating a joystick and speaking on earphones. Another section of the video shows Lu and Malenchenko inputting data into laptop computers, Lu testing an intercom and a video camera, and Lu using a machine to analyze blood samples from the crew. At the neutral buoyancy lab, the astronauts are helped in suit-up. The attachment of their gloves is shown. The video ends with Lu and Malenchenko lowered into a pool on a platform.

**STS-114 Crew Training Clip**

[2003]; In English

Report No(s): JSC-1938; No Copyright; Avail: CASI; **V03**, Videotape-VHS; **B03**, Videotape-Beta

The crew of Space Shuttle Atlantis on STS-114 is seen conducting several training exercises in preparation for their mission. The crew consists of Commander Eileen Collins, Pilot James Kelly, and Mission Specialists Soichi Noguchi and Stephen Robinson. With them are Yuri Malenchenko, Sergei Moschenko, and Edward Lu, the intended Expedition 7 crew of the International Space Station (ISS). During extravehicular activity (EVA) training in the virtual reality (VR) laboratory, crew members explore the exterior of the ISS, seen on a monitor. Suiing up with VR equipment is also shown. More EVA training takes place in the Neutral Buoyancy Laboratory

(NBL). Here the astronauts are suited up for the NBL pool, and lowered into the water on a platform. After a crew photo session, the astronauts are seated in the Motion Base Simulator in their flight suits. The simulator is shown rocking side-to-side. The crew also hears a hands-on explanation of EVA preparations in the ISS airlock, and practices emergency egress from the CCT, a simulator shaped like an orbiter.

**ATLAS-2 Video News Release**

Mar. 30, 1993; In English; Videotape: 2 min. 38 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000081544; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

This NASA Kennedy Space Center (KSC) video presents a Marshall Space Flight Center-Television (MSFC-TV) news release describing the objectives of the Atmospheric Laboratory for Applications in Science-2 (ATLAS-2), which is being flown on STS-56. Dr. Tim Miller (Mission Scientist), Dr. Marsha Torr (Mission Scientist), and Teresa Vanhooser (Mission Manager) explain that the ATLAS-2 mission is being launched to study earth atmospheric interactions with the sun in general and how manmade chemicals and pollution are

contributing to ozone depletion in our atmosphere in particular. Seven instruments comprise the core payload. ATLAS-2 is an integral part of the Spacelab contribution to NASA's Mission to Planet Earth and characterizes the chemical and physical components of Earth's middle atmosphere and the solar energy injected in the atmosphere, studies that began on ATLAS-1.

**ATLAS-1 Video News Release**

Mar. 06, 1992; In English; Videotape: 2 min. 28 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000081543; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

Allen Kenitzer, from Marshall Space Flight Center (MSFC), narrates this NASA Kennedy Space Center video presenting a MSFC-Television news release describing the overall scientific objectives of the Atmospheric Laboratory for Applications in Science-1 (ATLAS-1) Spacelab mission. Byron Lichtenberg (NASA Science Astronaut) and Anthony O'Neil (ATLAS-1 Mission Manager) explain that the 13 sophisticated and complementary instruments carried in shuttle Atlantis' payload bay are designed to identify the chemical species in our atmosphere, to measure the Sun's energy falling on and entering the atmosphere, to study the behavior of charged particles in the electric and magnetic fields surrounding the earth, and to gather ultraviolet light from stars and galaxies. ATLAS-1 is the first Spacelab flight of the National Aeronautics and Space Administration's (NASA's) Mission to Planet Earth.

**Atlas 2 Animation**

Mar. 30, 1993; In English; Videotape: 6 min. 45 sec. playing time, in color, no sound

Report No(s): NONP-NASA-VT-2000081533; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

The Atmospheric Laboratory for Applications and Science-2 (ATLAS-2), was designed to collect data on the relationship between the sun's energy output and Earth's middle atmosphere and how these factors affect the ozone layer. The ATLAS-2 flew on the Space Shuttle Discovery's mission SST-56, launched on April 8, 1993. The videotape consists of an animated tour of the instruments that were included as part of the mission. The first half of the tape shows the various instruments, pointing to each in turn and identifying each by the associated initialisms. The instruments identified were: the Atmospheric Trace Molecule Spectroscopy (ATMOS), Millimeter Wave Atmospheric Sounder (MAS), Shuttle Solar Backscatter Ultraviolet/A (SSBUV/A) spectrom-

eter, Solar Spectrum Measurement (SOLSPEC) instrument, Solar Ultraviolet Irradiance Monitor (SUSIM), Active Cavity Radiometer (ACR) and Solar Constant (SOLCON).) The second half of the animation shows the same tour without the pointing or the identification of the instruments.

Live coverage of a pre-launch news conference on the Atlas/Centaur SOHO mission is presented. George Diller, NASA Public Affairs, introduces the panel. Floyd Curington, NASA Launch Manager, Kennedy Space Center, presents countdown activities. Pat Symons, Launch Vehicle Manager, NASA Lewis Research Center, analyzes the time duration from liftoff to spacecraft separation. Fabrizio Felici, SOHO Mission Director European Space Agency (ESA), explains the important features of SOHO, which includes a payload of 650 kilos and 12 major instruments with multisensors. Ken Sizemore, International Solar Terrestrial Physics (ISTP) Project Manager Goddard Space Flight Center (GSFC), talks about the successful international collaboration between the ESA and NASA. Joel Tumbiolo, Launch Weather Officer USA Air Force (USAF), presented the weather forecast. SOHO was launched aboard an Atlas II rocket on November 23, 1995. The news conference ends with a brief question and answer period.

**STS-98 Meal - Suit up - Depart O and C - Launch Atlantis On Orbit - Landing - Crew Egress**

February 20, 2001; In English; 1 hr., 9 min. playing time, in color, with sound; No Copyright; Avail: CASI; **V04**, Videotape-VHS; **B04**, Videotape-Beta

The crewmembers of the STS-98 include: Pilot Mark Polansky, Commander Kenneth Cockrell, and Mission Specialists Robert Curbeam, Thomas Jones, and Marsha Ivins. The astronauts are shown during suitup, departure of the Operations and Check-Out (O&C) Building and Ingress. Also, the launch of the STS-98 Atlantis is presented from various vantage points such as the Shuttle Landing Facility (SLF) Convoy, Beach Tracker, Vehicle Assembly Building (VAB) Roof, Pad-A Perimeter, Tower-1, and Grandstand. Live footage of the docking of Atlantis with the International Space Station (ISS) is shown and the opening of the Atlantis/ISS hatch is also presented. Mission Specialists Robert Curbeam and Thomas Jones are shown performing On Orbit Extravehicular Activities (EVA's) during this mission. A camera view of the undocking of the Space Shuttle Atlantis and the landing of the Space Shuttle Atlantis at the Dryden Flight Research Facility along with flight crew Egress is also presented.

The crew of the STS-103 space mission are shown as they prepare for launch and landing of the space shuttle discovery. The crew includes: Commander Curtis L. Brown, Pilot Scott J. Kelly, and Mission Specialists: Steven L. Smith, C. Michael Foale, John M. Grunsfeld, Claude Nicollier and Jean-francois

Clervoy. Footage of these astronauts during suit-up, Ingress, Egress and Operations and Checkout (O&C) is presented. Live footage of the countdown and launch of the space shuttle discovery is shown from various vantage points such as the Tower 1, Vehicle Assembly Building (VAB), and pad perimeter. Once in orbit, a presentation of Steven Smith, John Grunsfield, Michael Foale and Claude Nicollier performing three spacewalks to repair the HST is shown. The landing of the space shuttle discovery at the Kennedy Space Center is shown.

**STS-111/Endeavour/ISS UF2 Pre-Launch Activities: Launch with Playbacks**

June 05, 2002; In English; No Copyright; Avail: CASI; **V04**, Videotape-VHS; **B04**, Videotape-Beta

This video of the preflight preparations for and launch of Space Shuttle Endeavour on STS-111 begins with a view of Endeavour on the launch pad. Additional launch pad views leading up to liftoff are interspersed with footage from the Firing Room at Kennedy Space Center, the crew's prelaunch activities, and inspection of the crew members in the White Room before boarding Endeavour. The crew is introduced by a narrator during the preflight banquet and suiting up, and a later clip shows them departing to the launch site. The crew consists of Commander Kenneth Cockrell, Pilot Paul Lockhart, Mission Specialists Philippe Perrin and Franklin Chang-Diaz, and the Expedition 5 crew of the International Space Station (ISS) (Commander Valery Korzun and Flight Engineers Peggy Whitson and Sergei Treschev). The nozzles on Endeavour's Space Shuttle Main Engine (SSME) are swiveled before liftoff, and the launch is shown past the separation of the solid rocket boosters. After a brief clip from the Mission Control Center at Johnson Space Center, the following launch replays are shown: Beach Tracker, VAB, Pad A, Tower 1, UCS-15, Grandstand, Cocoa Beach DOAMS, Playalinda DOAMS, UCS-23, and OTV-070.

**Shuttle-C, the future is now**

Feb 1, 1989; In English

Report No(s): MSFC-14261; NASA-TM-109355; NONP-NASA-VT-94-198202; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

This video details plans for Shuttle-C, an unmanned heavy launch vehicle to carry payloads into orbit. Computer animations depict the Shuttle-C, which uses the same recoverable external boosters, external fuel tank and main orbiter engines as the existing Space Shuttles, through liftoff and entry into orbit, where it progressively jettisons the cargo shroud, external fuel tank, and nose shroud. The video also shows computer simulations of a remotely controlled orbital maneuvering vehicle positioning preassembled components of a Space Station and delivering planetary probes and lunar exploration materials to orbit.

This video documents the preparations for Shuttle Flight STS-26 with Shuttle Discovery, NASA's return to manned space flight after the Challenger disaster. Footage and descriptions document such changes to the new Shuttle as new joints, improved insulation, and added O-rings to the solid rocket boosters; new safety hardware and procedures such as parachute and sidewire evacuations during liftoff, and new pressure suits; modified landing gear, brakes, and nose wheel steering, as well as a modified landing runway. Also profiled are the 5 member crew of all veteran Shuttle astronauts, the TDRS 3 Satellite to be released from the cargo bay in orbit, and 11 commercial and student experiments to be performed during the mission.

**STS 63 flight day 4 highlights/MIR-Shuttle rendezvous**

Feb 5, 1995; In English

Report No(s): NASA-TM-110512; NONP-NASA-VT-95-42156; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

STS 63 Flight, day 4, the MIR-Shuttle rendezvous is highlighted in this video. The six-member team in the Shuttle are introduced and discuss their functions and tests for this day of the flight. There is actual footage of earth from space, of the MIR Space Station, a tour of the Shuttle cockpit, some footage from the MIR of the Space Shuttle, and footage from inside the MIR with the cosmonauts. Mission control communications with the Shuttle, communication between the Shuttle and MIR, and an historic communication between the Shuttle's astronauts and President Bill Clinton are included. President Clinton interviews each of the six-member team and discusses the upcoming space walk by Dr. Bernard Harris, the first black astronaut to walk in space. This video was recorded on February 6, 1995.

At a post flight conference, Captain Jim Wetherbee, of STS Flight 63, introduces each of the other members of the STS 63 crew (Eileen Collins, Pilot; Dr. Bernard Harris, Payload Commander; Dr. Michael Foale, Mission Specialist from England; Dr. Janice Voss, Mission Specialist; and Colonel Vladimir Titor, Mission Specialist from Russia. A short biography of each member and a brief description of their assignment during this mission is given. A film was shown that included the preflight suit-up, a view of the launch site, the actual night launch, a tour of the Space Shuttle and several of the experiment areas, several views of earth and the MIR Space Station and cosmonauts, the MIR-Space Shuttle rendezvous, the deployment of the Spartan Ultraviolet Telescope, Foale and Harris's EVA and space walk, the retrieval of Spartan, and the night entry home, including the landing. Several spaceborne experiments were introduced: the radiation monitoring experiment, environment monitoring experiment, solid surface combustion experiment, and protein crystal growth and plant growth experiments. This conference ended with still, color pictures, taken by the astronauts during the entire STS 63 flight, being shown.

**Toys in space, 2**

Herbert, Dexter, editor; Jun 24, 1993; In English

Report No(s): NASA-TM-110541; NONP-NASA-VT-95-43944; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

In this educational video from the 'Liftoff to Learning' series, astronauts from the STS-54 Mission (Mario Runco, John Casper, Don McMonagle, Susan Helms, and Greg Harbaugh) explain how microgravity and weightlessness in space affects motion by using both mechanical and nonmechanical toys (gravitrons, slinkys, dart boards, magnetic marbles, and others). The gravitational effects on rotation, force, acceleration, magnetism, magnetic fields, center of axis, and velocity are actively demonstrated using these toys through experiments onboard the STS-54 Mission flight as a part of their spaceborne experiment payload.

**Endeavor: Now and then**

Sep 22, 1992; In English

Report No(s): NASA-TM-110539; NONP-NASA-VT-95-43942; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

In this educational 'Liftoff to Learning' video series, astronauts from STS-49 Space Shuttle Mission (Thomas Akers, Bruce Melnick, Pierre Thuot, Kathy Thornton, Kevin Chilton, and Richard Hieb) compare their mission aboard the Space Shuttle Endeavor and their shuttle with its namesake, the ship 'Endeavor', commanded by Captain James Cook of England in the late 1700's. Using historical paintings, drawings, and computer graphics, Cook's Endeavor is brought to life. Its voyage path, problems, biological experiments, and discoveries are shown and compared to the modern-day Endeavor, its mission and experiments. The Space Shuttle Endeavor was named in 1988, through a nation-wide school contest. It is the fifth Space Shuttle to be built and employs new technology in its design, for example, its drag shoot for shuttle landings. One

part of the STS-49 Mission was the retrieval of the Intel satellite.

In this educational 'Liftoff to Learning' video series, astronauts from STS-40 Space Shuttle Mission (F. Drew Gaffney, Millie Hughes-Fulford, Rhea Seddon, James Bagia, Bryan O'Connor, Tamara Jernigan, and Sidney Gutierrez) show, using footage and highlights from their mission, how microgravity causes changes in the human body. The STS-40 was a mission of spaceborne experiments concerned with the physiological, biological, and chemical changes that occur in the human body as a result of microgravity. Different experiments are shown and their significance are explained.

This video contains the mission highlights of the STS-66 Space Shuttle Atlantis Mission in November 1994. Astronauts included: Don McMonagle (Mission Commander), Kurt Brown, Ellen Ochoa (Payload Commander), Joe Tanner, Scott Parazynski, and Jean-Francois Clervoy (collaborating French astronaut). Footage includes: pre-launch suitup, entering Space Shuttle, countdown and launching of Shuttle, EVA activities (ATLAS-3, CRISTA/SPAS, SSBUV/A, ESCAPE-2), on-board experiments dealing with microgravity and its effects, protein crystal growth experiments, daily living and sleeping compartment footage, earthviews of various meteorological processes (dust storms, cloud cover, ocean storms), pre-landing and land footage (both from inside the Shuttle and from outside with long range cameras), and tracking and landing shots from inside Mission Control Center. Included is air-to-ground communication between Mission Control and the Shuttle. This Shuttle was the last launch of 1994.

This video is the post-flight presentation by the astronauts of the STS-67 Space Shuttle Mission. The astronauts were: Steve Oswald (Mission Commander), Bill Gregory (Shuttle Pilot), John Grunsfeld (Mission Specialist), Sam Durrance (Payload Specialist), Ron Parise (Payload Specialist), and Tammy Jernigan (Payload Commander). Footage includes: pre-launch suitup and launch (liftoff), the deployment of the telescope package payload (Hopkins UV telescope, Wisconsin UV polarimeter, and Astrostar Tracker) for their astronomical observations of different stellar objects, inside Shuttle shots of data collection stations, protein crystal growth experiments, medical BSO of head and eye functions in microgravity environment, storm activity over the USA and other Earth observation shots, Mid-deck Act Control Experiments, school-Shuttle direct radio communication, and descent and landing footage. This launch was a night launch and the flight was a 17

day flight (extended two days from original flight plan).

This video contains historical footage of the flight of Apollo-13, the fifth Lunar Mission and the third spacecraft that was to land on the Moon. Apollo-13's launch date was April 11, 1970. On the 13th of April, after docking with the Lunar Module, the astronauts, Jim Lovell, Fred Haise, and Jack Swiggert, discovered that their oxygen tanks had ruptured and ended up entering and returning to Earth in the Lunar Module instead of the Command Module. There is footage of inside module and Mission Control shots, personal commentary by the astronauts concerning the problems as they developed, national news footage and commentary, and a post-flight Presidential Address by President Richard Nixon. Film footage of the approach to the Moon and departing from Earth, and air-to-ground communication with Mission Control is included.

The first day of the STS-71 flight of the Space Shuttle Atlantis is contained in this video. This mission highlights the first U.S. docking with the Mir Space Station. The scope of this part of the STS-71 mission is to drop off and pickup two cosmonauts, and to pickup one American astronaut who has been living aboard the Mir Station for several months. The STS-71 flight crew consists of: Atlantis Mission Specialist Gregory Harbaugh; Ellen Baker, Flight Commander Robert Gibson; Russian cosmonaut Anatoly Solovyev; Vladimir Dezhuroz; Gennady Strekalov; and Dr. Norman Thagard. Flight footage contains prelaunch activities.

The mission of STS-42, the first International Microgravity Laboratory (IML-1), is highlighted. The main purpose of this seven-member crews (including Payload specialist Raborto Bondar from Canada and Payload specialist Ulf D. Merbold from Germany) space shuttle was to perform different experiments at microgravity environment. The experiments were focussed on the following two major study areas: (1) life sciences ( biorack, biostack, space physiology, mental workload and performance, Microgravity vestibular investigations, etc.); and (2) material sciences (critical point facility, cryostat, fluid experiment system, mercury iodide crystal growth and vapor crystal growth systems). Cargo bay and middeck experiments; earth views (Quebec, Manicougan Reservoir, St. Lawrence River, and Mountain ranges);and orbiter activities are also included.

The flight crew (Blaha, Baker, Low, Adamson, and Lucid) present and discuss their STS-43 Space Shuttle Mission in this press conference video. This mission was the first flight to deploy the Tracking Data and Relay Satellite (TDRS), the primary payload. A large number of secondary payload experiments were performed. The included: several cell tissue growth and enzyme analysis experiments; a Lower Body Negative Pressure Experiment; optic coupling and flame front propagation/combustion physics experiments; The Space Station Heat Pipe Advanced Radiator Experiment (SHARE) for the Space Station; a crystal control device evaluation; a software and hardware systems checkout for the Shuttle; some flight tests of the new orbiter auto-pilot system; some materials tests on polymer membranes; the Zero Gravity physics experiments; and the Space Shuttle Backscatter Ultraviolet Experiment. Earth views included: the Kuwait oil fires; cloud cover; and B/W lightning footage.

In this post-flight overview, the flight crew of the STS-70 mission, Tom Hendricks (Cmd.), Kevin Kregal (Pilot), Major Nancy Currie (MS), Dr. Mary Ellen Weber (MS), and Dr. Don Thomas (MS), discuss their mission and accompanying experiments. Pre-flight, launch, and orbital footage is followed by the in-orbit deployment of the Tracking and Data Relay Satellite (TDRS) and a discussion of the following spaceborne experiments: a microgravity bioreactor experiment to grow 3D body-like tissue; pregnant rat muscular changes in microgravity; embryonic development in microgravity; Shuttle Amateur Radio Experiment (SAREX); terrain surface imagery using the HERCULES camera; and a range of other physiological tests, including an eye and vision test. Views of Earth include: tropical storm Chantal; the Nile River and Red Sea; lightning over Brazil. A three planet view (Earth, Mars, and Venus) was taken right before sunrise. The end footage shows shuttle pre-landing checkout, entry, and landing, along with a slide presentation of the flight.

The prelaunch, launch, and landing activities of the STS-7 Space Shuttle mission are highlighted in this video, with brief footage of the deployment of the Shuttle Pallet Satellite (SPAS). The flight crew consisted of: Cmdr. Bob Crippen, Pilot Rich Hauck, and Mission Specialists John Fabian, Dr. Sally Ride, and Norm Thaggart. With this mission, Cmdr. Crippen became the first astronaut to fly twice in a Space Shuttle Mission and Dr. Sally Ride was the first American woman to fly in space. There is a large amount of footage of the Space Shuttle by the aircraft that accompanies the Shuttle launchings and landings.

In this first part of a two part video mission-highlights set, the flight of the STS-48 Space Shuttle Orbiter Discovery is reviewed. The flight crew consisted of: J. O. Creighton (Commander); Ken Reightler (Pilot); Charles 'Sam' Gemar (Mission Specialist); James 'Jim' Buchli (MS); and Mark Brown (MS). Step-by-step pre-launch and sunset launch sequences are shown with accompanying shots inside the Mission Control Center. The primary goal of this mission was the deployment of Upper Atmosphere Research Satellite (UARS). Other (secondary) payloads included: the MidDeck Zero Gravity Experiment (MODE); the Sam/Cream device; the Shuttle Activation Monitor/Cosmic Ray Effects and Activation Monitor Experiment; and the Physiology and Anatomical Rodent Experiment (PARE). Crew activities were shown, along with Earth views (Aurora Borealis (B/W), light from the Kuwait oil fires, lightning over Italy and other areas, polar regions and ice caps, and the USA at night (B/W)). This was the thirteenth flight of the Space Shuttle Discovery. A night landing is shown.

The mission of the STS-47 flight is highlighted in this video. The flight crew consisted of: Cmdr. 'Hoot' Gibson, Pilot Kurt Brown, Payload Cmdr. Jan Davis, Payload Specialist. M. Mohri (Japanese Astronaut), and Mission Specialists Jay Apt and May Jemison. The primary goal of this mission was the set-up and carrying out of experiments in the accompanying Japanese Spacelab (SL-J) in cooperation with the Japanese Space Program. Dr. Mohri is the first professional Japanese astronaut to fly in space. Vice President Dan Quayle and his wife are shown addressing the astronauts of the Space Shuttle Endeavour with a small pre-launch speech. On this flight many different physical, physiological, and biological spaceborne experiments were performed. These experiments included: a gas evaporation in low gravity environment experiment; a brainwave signals from carp experiment; several human eye movement and visual physiological tests; various physiological tests on a variety of insects and frogs; a embryology experiments on tadpoles; several experiments concerned with fluid dynamics; an imaging furnace test with heated glass containing gold particles (flow measurement); a Solid Surface Combustion Experiment; and a protein crystal growth experiment. Launch, in-orbit, and landing footage is shown, along with a variety of crew activities. One feature that astronauts were able

to videotape was the actual in-orbit movement of the side wing flaps of the Space Shuttle.

The flight crew of the STS-48 Space Shuttle Discovery's 13th Flight (Cmdr. J. O. Creighton, Pilot Ken Reightler, MS Charles Gemar, MS James Buchli, and MS Mark Brown) review their mission and discuss their in-flight activities and experiments in this video. The primary goal of this mission was the deployment of the Upper Atmosphere Research Satellite (UARS). Secondary payloads included: the Mid-Deck Zero Gravity Experiment (MODE) that showed how fluids in microgravity and in in-orbit conditions respond to different influences (dynamics and harmonic analysis) and the Extended Duration Orbiter physiological tests of astronaut heat and lung functions. Through these experiments, information useful in the construction and design of the proposed Space Station is hoped to be gained. Earth views included: the Aurora Borealis (B/W); polar region ice packs and caps; the Nile River (at

night); the Galapagos Islands, and Earth lightning shots. A night landing is shown.

The STS-44 mission is highlighted in this first part of a two part video set. The flight crew consisted of: Cmdr. Fred Gregory; Pilot Tom Hendricks; Payload Specialist Tom Hennen; and Mission Specialists Story Musgrave, Jim Voss, and Mario Runco. The primary space shuttle mission objective was the deployment of the Defense Support Program (DSP) satellite. Secondary payload and spaceborne experiments consisted of a microbial air sampler, the Terra Scout PADVOS system, an M88-1 camera demonstration, a lower body negative pressure test, the Visual Function Tester, and a bioreactor demonstration. A tour of the flight deck, mid-deck, bathroom, and flight compartments with explanations of the equipment found in each area was conducted, a trash compactor was demonstrated, and footage of the crew together for their Thanksgiving dinner was shown. Earth views include several oceans, cloud cover, typhoon Yuri, northeast Australia, and the Barrier Reef Islands.

The actor John Patrick Stewart (Commander Pickard of the show 'Star Trek: The Next Generation') performed the wake-up call for the astronauts. This flight was shortened due to an inertial measurement unit failure on the sixth day of the mission.

In this second day of the STS-69 mission, the SPARTAN-201 satellite is deployed. The SPARTAN satellite is being used for the study of solar physics. An in-orbit interview is conducted with crew member, Mission Specialist Jim Newman, by KABC 7.90 Talk Radio. Newman answers questions from station listeners regarding the mission, future NASA objectives, present NASA objectives, and general questions regarding living in space. The remaining crew members include Cmdr. Dave Walker, Pilot Ken Cockrell, and Mission Specialists Jim Voss and Mike Gernhardt.

On this eleventh day of the STS-69 flight, the astronauts, Cmdr. Dave Walker, Pilot Ken Cockrell, and Mission Specialists Jim Voss, Jim Newman, and Mike Gernhardt were awakened to the theme song for the cartoon 'Charlie Brown.' The crew spent most of the day preparing the shuttle for reentry and landing. Several reporters interviewed the crew via a satellite link. Questions ranging from the status and problems with the mission to NASA's future were asked. Walker and Cockrell performed a successful landing of the space shuttle at Kennedy Space Center.

On the fourth day of the STS-69 mission, the astronauts, Cmdr. Dave Walker, Pilot Ken Cockrell, and Mission Specialists Jim Voss, Jim Newman, and Mike Gernhardt, were awakened by 5 year old Madeline Cockrell (Ken Cockrell's daughter) singing the song 'Bingo Was His Name.' The interception and retrieval of the SPARTAN-201 satellite was the first task of the day. The SPARTAN-201's mission was the study of the solar corona and the solar wind. The rest of the day was spent preparing for the deployment of the Wake Shield Facility (WSF), whose purpose during its two day orbit of the Earth, is to grow films for semiconductors in a vacuum-like environment. Earth views included some cloud cover and different areas of South America.

Awakening to the theme song of the television show 'Rin Tin Tin', the astronauts, Cmdr. Dave Walker, Pilot Ken Cockrell, and Mission Specialists Jim Voss, Jim Newman, and Mike Gernhardt, of the STS-69 mission began their fifth day in orbit. The deployment of the Wake Shield Facility (WSF) was accomplished successfully, although it was delayed several hours due to communication problems between the satellite and its carrier platform located in the shuttle's cargo bay. The WSF satellite's main purpose was to grow up to seven layers of semiconductor films in a vacuum-like state while orbiting behind the space shuttle. The shuttle's Global Positioning System and Satellite Tracking System were both given check-out tests.

After being awakened by the Beatles song, 'A Hard Days Night', the flightcrew of the STS-69 mission, Cmdr. Dave Walker, Pilot Ken Cockrell, and Mission Specialists Jim Voss, Jim Newman, and Mike Gernhardt, began their sixth day in orbit by monitoring the free orbiting Wake Shield Facility (WSF). Later Cmdr. Walker conducted an interview with television reporters from Atlanta and Boston, answering questions about the mission and general questions about NASA's space program. The crew filmed a video of themselves performing daily routines (eating, shaving, exercising), as well as some of the physiological experiments, and shuttle equipment maintenance and checkout. One of the secondary experiments included the Commercial Generic Bioprocessing Apparatus-7 (CGBA-7), which served as an incubator and experiment station for a variety of tests (agricultural, pharmaceutical, biomedical, and environmental). Earth views included some cloud cover, the Gulf of Mexico, Texas, and the Atlantic Ocean.

**STS-70 mission highlights**

Sep 5, 1995; In English

Report No(s): NIPS-95-05639; NASA-TM-110606; JSC-1514; NONP-NASA-VT-95-1995005639; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The highlights of the STS-70 mission are presented in this video. The flight crew consisted of Cmdr. John Hendricks, Pilot Kevin Kregel, Flight Engineer Nancy Curie, and Mission Specialists Dr. Don Thomas and Dr. Mary Ellen Weber. The mission's primary objective was the deployment of the 7th Tracking Data and Relay Satellite (TDRS), which will provide a communication, tracking, telemetry, data acquisition, and command services space-based network system essential to low Earth orbital spacecraft. Secondary mission objectives included activating and studying the Physiological and Ana-

tomical Rodent Experiment/National Institutes of Health-Rodents (PARE/NIH-R), The Bioreactor Demonstration System (BDS), the Commercial Protein Crystal Growth (CPCG) studies, the Space Tissue Loss/National Institutes of Health-Cells (STL/NIH-C) experiment, the Biological Research in Canisters (BRIC) experiment, Shuttle Amateur Radio Experiment-2 (SAREX-2), the Visual Function Tester-4 (VFT-4), the Hand-Held, Earth Oriented, Real-Time, Cooperative, User-Friendly, Location-Targeting and Environmental System (HERCULES), the Microcapsules in Space-B (MIS-B) experiment, the Windows Experiment (WINDEX), the Radiation Monitoring Equipment-3 (RME-3), and the Military Applications of Ship Tracks (MAST) experiment. There was an in-orbit dedication ceremony by the spacecrew and the newly Integrated Mission Control Center to commemorate the Center's integration. The STS-70 mission was the first mission monitored by this new control center. Earth views included the Earth's atmosphere, a sunrise over the Earth's horizon, several views of various land masses, some B/W lightning shots, some cloud cover, and a tropical storm.

#### **STS-71 mission highlights resource tape**

Sep 25, 1995; In English

Report No(s): NASA-TM-111141; JSC-1512; NIPS-95-06082; NONP-NASA-VT-95-1995006082; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

This video highlights the international cooperative Shuttle/Mir mission of the STS-71 flight. The STS-71 flightcrew consists of Cmdr. Robert Hoot' Gibson, Pilot Charles Precourt, and Mission Specialists Ellen Baker, Bonnie Dunbar, and Gregory Harbaugh. The Mir 18 flightcrew consisted of Cmdr. Vladamir Dezhurov, Flight Engineer Gennady Strekalov, and Cosmonaut-Research Dr. Norman Thagard. The Mir 18 crew consisted of Cmdr. Anatoly Solovyev and Flight Engineer Nikolai Budarin. The prelaunch, launch, shuttle in-orbit, and in-orbit rendezvous and docking of the Mir Space Station to the Atlantis Space Shuttle are shown. The Mir 19 crew accompanied the STS-71 crew and will replace the Mir 18 crew upon undocking from the Mir Space Station. Shown is on-board footage from the Mir Space Station of the Mir 18 crew engaged in hardware testing and maintenance, medical and physiological tests, and a tour of the Mir. A spacewalk by the two Mir 18 cosmonauts is shown as they performed maintenance of the Mir Space Station. After the docking between Atlantis and Mir is completed, several mid-deck

physiological experiments are performed along with a tour of Atlantis. Dr Thagard remained behind with the Shuttle after undocking to return to Earth with reports from his Mir experiments and observations. In-cabin experiments included the IMAX Camera Systems tests and the Shuttle Amateur Radio Experiment-2 (SAREX-2). There is footage of the shuttle landing.

#### **STS-69 postflight presentation**

Oct 3, 1995; In English

Report No(s): NASA-TM-111140; JSC-1525; NIPS-95-06083; NONP-NASA-VT-95-1995006083; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

A postflight conference of the STS-69 mission is presented. The flightcrew ('The Dog Team') consisted of Cmdr. David Walker, Pilot Kenneth Cockrell, Payload Cmdr. James Voss, and Mission Specialists James Newman and Michael Gernhardt. The mission's primary objective was the deployment and retrieval of the SPARTAN-201 satellite, which investigated the interaction between the Sun and its solar wind. Other secondary experiments and shuttle payloads included the Wake Shield Facility (WSF), which grew several layers of semiconductor films, the International Extreme Ultraviolet Hitchhiker (IEH-1), the Capillary Pumped Loop-2/Gas Bridge Assembly (CAPL-2/GBA), several Get Away Specials (GAS) experiments, the Electrolysis Performance Improvement Concept Study (EPICS), the Thermal Energy Storage (TES-2) experiment, the Commercial Generic Bioprocessing Apparatus-7 (CGBA-7), the National Institutes of Health-Cells 4 (NIH-C4) experiment, and the Biological Research in Canister-6 (BRIC-6) experiment. Earth views consisted of Saudi Arabia water wells, uncommon vortices over Oman, the Amazon River, the Bahamas, Somalia, a sunset over the Earth's horizon, and two hurricanes, Luis and Marilyn.

On this first day of the STS-73 sixteen day mission, the crew Cmdr. Kenneth Bowersox, Pilot Kent Rominger, Payload Specialists Albert Sacco and Fred Gregory, and Mission Specialists Kathryn Thornton, Catherine 'Cady' Collman, and Michael Lopez-Alegria are shown in various stages of pre-launch and launch activities. This mission carries the USA Microgravity Lab-2 (USML-2) payload, in which a variety of spaceborne microgravity experiments will be performed. These experiments include the Advanced Protein Crystallization Facility (APCF), The Astroculture (tm)(ASC) hardware and experiment, the Commercial Generic Bioprocessing Apparatus (CGBA), the Crystal Growth Furnace (CGF), the Drop Physics Module (DPM), the Geophysical Fluid Flow Cell (GFFC), the Glovebox (GBX), the Zeolite Crystal Growth (ZCG) experiment, the Surface Tension Driven Convection Experiment (STDCE), the Protein Crystal Growth (PCG) experiment, three Measuring Microgravity experiments (the Space Acceleration Measurement System (SAMS), the Three Dimensional Microgravity Accelerometer (3DMA), and the Orbital Acceleration Research Experiment (OARE)), and the High-Packed Digital Television (HI-PAC) demonstration system. Earth views include some cloud cover and various Earth land masses.

On this second day of the STS-73 sixteen day mission, the crew Cmdr. Kenneth Bowersox, Pilot Kent Rominger, Payload Specialists Albert Sacco and Fred Gregory, and Mission Specialists Kathryn Thornton, Catherine 'Cady' Collman, and Michael Lopez-Alegria are shown performing several of the spaceborne experiments on the USA Microgravity Lab-2 (USML-2). These experiments included the Astroculture (tm)(ASC) experiment, the Protein Crystal Growth (PCG) experiment using liquid/liquid diffusion methods, and the Drop Physics Module (DPM) experiment. A High-Packed Digital Television (HI-PAC) system is used to downlink video images of the various experiments from the Shuttle to Mission Control. Video from Mission Control is uplinked to the shuttle using a

Ground-Air Television (GATV) system.

On this third day of the STS-73 sixteen day mission, the crew, Cmdr. Kenneth Bowersox, Pilot Kent Rominger, Payload Specialists Albert Sacco and Fred Gregory, and Mission Specialists Kathryn Thornton, Catherine 'Cady' Collman, and Michael Lopez-Alegria are shown performing several of the spaceborne experiments onboard the USA Microgravity Lab-2 (USML-2). The experiments shown include the Surface Tension Driven Convection Experiment (STDCE), the Drop Physics Module (DPM) experiment, and the High-Packed Digital Television (HI-PAC) demonstration. The HI-PAC allows the digitization of up to six video downlink signals from the Spacelab experiments and other cameras onboard the Shuttle, where previously only one downlink was allowed.

On this sixth day of the STS-73 sixteen day mission, the crew Cmdr. Kenneth Bowersox, Pilot Kent Rominger, Payload Specialists Albert Sacco and Fred Gregory, and Mission Specialists Kathryn Thornton, Catherine 'Cady' Collman, and Michael Lopez-Alegria are shown performing several of the spaceborne experiments onboard the USA Microgravity Lab-2 (USML-2). The experiments shown include the Protein Crystal Growth (PCG) experiment, the Astroculture(tm)(ASC) experiment, the Drop Physics Module (DPM) experiment, and the Surface Tension Driven Convection Experiment (STDCE). The High-Packed Digital Television (HI-PAC) system is further

tested and an in-orbit interview with Lopez-Alegria by NBC Nightside is conducted. The entire flightcrew salutes the 5th game of the World Series between the Atlanta Braves and Cleveland Indians by pretending to throw out the first ball of the game through a downlink to the stadium. Earth views taken from the payload bay cameras include some cloud cover, oceans, land masses, and the Nile River and the Red Sea.

At a post flight press conference, the flight crew of the STS-46 mission (Cmdr. Loren Shriver, Pilot Andrew Allen, Mission Specialists Claude Nicollier (European Space Agency (ESA)), Marsha Ivins (Flight Engineer), Jeff Hoffman (Payload Commander), Franklin Chang-Dias, and Payload Specialist Franco Malerba (Italian Space Agency (ISA))) discussed their roles in and presented video footage, slides and still photographs of the different aspects of their mission. The primary objectives of the mission were the deployment of ESA's European Retrieval Carrier (EURECA) satellite and the joint NASA/ISA deployment and testing of the Tethered Satellite System (TSS). Secondary objectives included the IMAX Camera, the Limited Duration Space Environment Candidate Materials Exposure (LDVE), and the Pituitary Growth Hormone Cell Function (PHCF) experiments. Video footage of the EURECA and TSS deployment procedures are shown. Earth views were extensive and included Javanese volcanoes, Amazon basin forest ground fires, southern Mexico, southern Bolivian volcanoes, south-west Sudan and the Sahara Desert, and Melville Island, Australia. Questions from reporters and journalists from Johnson Space Center and Kennedy Space Center were discussed.

On this first day of the STS-74 mission, the flight crew, Cmdr. Kenneth Cameron, Pilot James Halsell, and Mission Specialists William McArthur, Jerry Ross, and Chris Hatfield, are shown in prelaunch and launch activities. This mission is the second of seven Mir-Space Shuttle hook-ups. Major objectives of this mission are to include a docking between Mir and the Space Shuttle and the transfer of a Russian docking module, water, supplies, and two solar arrays to the Mir space station. This mission highlights the first time that astronauts from Canada, Russia, the U.S. and the European Space Agency (ESA) will be onboard a single spacecraft in space at the same time. Additional experimental payloads onboard the shuttle are the GLO-4 PASDE Payload (GPP) experiment and the Photogrammetric Appendage Structural Dynamics Experiment (PASDE).

On the second day of the STS-74 mission, the flight crew, Cmdr. Kenneth Cameron, Pilot James Halsell, and Mission Specialists William McArthur, Jerry Ross, and Chris Hatfield, were awakened to music from the play 'The Nutcracker'. The astronauts hosted an in-orbit interview with Canadian reporters and journalists from Toronto, answering general questions about living in space and space flight, and explaining the delicate maneuvers that the shuttle will have to perform for the Mir docking procedures scheduled for the next day. Due to the awkward angle that the shuttle will use to approach the Mir, the docking procedure will be done in an almost blind state.

On this fourth day of the STS-74 mission, the flight crew, Cmdr. Kenneth Cameron, Pilot James Halsell, and Mission Specialists William McArthur, Jerry Ross, and Chris Hatfield, perform a successful docking between the space shuttle and the Mir space station using the Russian-made docking module that had been previously installed on the third day of the mission. The astronauts and the Mir 20 cosmonauts, Cmdr. Yuri Gidzenko, Flight Engineer Gergei Avdeyev, and Cosmonaut-Researcher (ESA) Thomas Reiter, are shown greeting each other from inside the docking module and an in-orbit interview between the crews and NASA is conducted in both English and Russian.

On this fifth day of the STS-74 mission, the flight crew, Cmdr. Kenneth Cameron, Pilot James Halsell, and Mission Specialists William McArthur, Jerry Ross, and Chris Hatfield, were awakened to the theme from the movie 2001: A Space Odyssey'. The Mir 20 cosmonauts, Cmdr. Yuri Gidzenko, Flight Engineer Sergei Avdeyev, and Cosmonaut-Researcher (ESA) Thomas Reiter, and shuttle astronauts are shown giving

each other plaques and presents to commemorate their historic docking event and the start towards the development of the International Space Station. There is a press conference from Moscow by a one of the officers of the Russian Space Agency with both flight crews and an additional separate press interview of the crews by Canadian reporters. There is video footage of the two docked spacecraft taken from various angles.

On this sixth day of the STS-74 mission, the flight crew, Cmdr. Kenneth Cameron, Pilot James Halsell, and Mission Specialists William McArthur, Jerry Ross, and Chris Hatfield and the Mir 20 cosmonauts, Cmdr. Yuri Gidzenko, Flight Engineer Sergei Avdeyev, and Cosmonaut-Researcher (ESA) Thomas Reiter, were greeted and briefly interviewed by the Secretary General of the United Nations, Boutros Boutros-Ghali, on the 50th anniversary of the United Nations via a radio satellite hookup. An additional interview with other journalists from different areas of the USA and Canada was also presented.

On this the seventh day of the STS-74 mission, the flight crew Cmdr. Kenneth Cameron, Pilot James Halsell, and Mission Specialists William McArthur, Jerry Ross, and Chris Hatfield, filmed the Mir-shuttle separation maneuver. After separation, the shuttle performed a fly-around of the Mir space station, during which, a variety of views of the Mir station

were taken. Earth views include cloud cover.

### **STS-75 Post Flight Presentation**

Mar. 28, 1996; In English; Videotape: 38 min. 18 sec. playing time, in color, with sound

Report No(s): NASA-TM-111416; JSC-1564; NONP-NASA-VT-96-1996039902; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The flight crew of the STS-75 Space Shuttle, Cmdr. Andrew Allen, Pilot Scott Horowitz, Payload Cmdr. Franklin Chang-Diaz, Payload Specialist Umberto Guidoni (Italy), and Mission Specialists Jeffrey Hoffman, Maurizio Cheli (ESA) and Claude Nicollier (ESA), present a post flight analysis of their mission through the use of color slides and video footage. Prelaunch and launch activities are shown along with Earth entry and landing footage. Both middeck and payload bay microgravity experiments are shown and briefly discussed. The deployment and loss of the European Tethered Satellite experiment are presented and discussed. Earth views include the Nile Valley, Chad, the Himalayas and Mount Everest, and China. A unique moonset is also shown.

### **STS-75 Flight Day 9**

Mar. 01, 1996; In English; Videotape: 17 min. playing time, in color, with sound

Report No(s): NASA-TM-111398; BRF-1391I; NONP-NASA-VT-96-1996037044; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

On this ninth day of the STS-75 mission, the flight crew, Cmdr. Andrew Allen, Pilot Scott Horowitz, Payload Cmdr. Franklin Chang-Diaz, Payload Specialist Umberto Guidoni (Italy), and Mission Specialists Jeffrey Hoffman, Maurizio Cheli (ESA) and Claude Nicollier (ESA), are shown tracking the free-orbiting tethered satellite and performing various experiments from the USA Microgravity Payload-3 (USMP-3). An in-orbit interview with Allen, Cheli, and Guidoni by the Italian news media is shown. The astronauts answer a variety of questions concerning the loss of the tethered satellite, and the progress of the other mission experiments. Earth views include a sunset and horizon shots.

**STS-75 Flight Day 5**

Feb. 26, 1996; In English; Videotape: 18 min. 25 sec. playing time, in color, with sound

Report No(s): NASA-TM-111395; BRF-1391E; NONP-NASA-VT-96-1996037040; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

On this fifth day of the STS-75 mission, the flight crew, Cmdr. Andrew Allen, Pilot Scott Horowitz, Payload Cmdr. Franklin Chang-Diaz, Payload Specialist Umberto Guidoni (Italy), and Mission Specialists Jeffrey Hoffman, Maurizio Cheli (ESA) and Claude Nicollier (ESA), are shown viewing the tethered satellite and performing experiments, both on-board the shuttle and with the TSS. An accident occurs in which the tether breaks and the satellite is shown floating away from the shuttle. There is an in-orbit interview with reporters from Johnson Space Center after the accident occurred, in which they discuss the reasons for the accident and how the experiment can be salvaged.

Feb. 22, 1996; In English; Videotape: 30 min. playing time, in color, with sound

Report No(s): NASA-TM-111391; BRF-1391A; NONP-NASA-VT-96-1996037036; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

On this first day of the STS-75 mission, the flight crew, Cmdr. Andrew Allen, Pilot Scott Horowitz, Payload Cmdr. Franklin Chang-Diaz, Payload Specialist Umberto Guidoni (Italy), and Mission Specialists Jeffrey Hoffman, Maurizio Cheli (ESA) and Claude Nicollier (ESA), were shown performing pre-launch and launching activities. This international space mission's primary objective is the deployment of the Tethered Satellite System Reflight (TSS-1R) to a 12 mile length from the shuttle, a variety of experiments, and the satellite retrieval. These experiments include: Research on Orbital Plasma Electrodynamics (ROPE); TSS Deployer Core Equipment and Satellite Core Equipment (DCORE/SCORE); Research on Electrodynamic Tether Effects (RETE); Magnetic Field Experiments for TSS Missions (TEMAG); Shuttle Electrodynamic Tether Systems (SETS); Shuttle Potential and Return Electron Experiment (SPREE); Tether Optical Phenomena Experiment (TOP); and Observations at the Earth's Surface of Electromagnetic Emissions by TSS (OESSE). The mission's secondary objectives were those experiments found in the USA Microgravity Payload-3 (USMP-3), which include: Advanced Automated Directional Solidification Furnace (AADSDF); Material pour l'Etude des Phenomenes Interessant la Solidification sur Terre et en Orbite (MEPHISTO); Space Acceleration Measurement System (SAMS); Orbital Acceleration Research Experiment (OARE); Critical Fluid Scattering Experiment (ZENO); and Isothermal Dendritic Growth Experiment (IDGE).

#### **STS-72 Post Flight Presentation**

Peterson, Glen, Editor; Feb. 1996; In English; Videotape: 28 min. 59 sec. playing time, in color, with sound  
Report No(s): NASA-TM-111390; JSC-1549; NONP-NASA-VT-96-1996036745; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

In this post flight presentation video for the STS-72 mission, the flight crew, Cmdr. Brian Duffy, Pilot Brent Jett, and Mission Specialists Daniel T. Barry, Winston E. Scott, Leroy Chiao, and Koichi Wakata (NASDA), discuss their mission using flight footage and slides. The pre-launch and launching activities are shown. Using the robot arm inside the space shuttle's cargo bay, the Japanese Space Flyer Unit (SFU) is retrieved and berthed and the Office of Aeronautics and Space Technology (OAST) Flyer satellite is deployed, retrieved, and reberthed. Chiao and Barry performed the first of the two 6 1/2 hour EVAs and Chiao and Scott performed the

second. In both EVAs, the thermal properties of the new space suits were tested, along with new tools and equipment that will eventually be used to build the International Space Station. Space shuttle landing activities are also shown. Earth views include cloud shadows, Africa, Brazil, Australia, and Mt. Kilimanjaro.

#### **STS-74 Post Flight Presentation**

Dec. 08, 1995; In English; Videotape: 39 min. 12 sec. playing time, in color, with sound

Report No(s): NASA-TM-111374; JSC-1538; NONP-NASA-VT-96-1996031303; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The flight crew of the STS-74 Space Shuttle Orbiter Atlantis (Cmdr. Ken Cameron, Pilot Jim Halsell, and Mission Specialists Chris Hadfield, Jerry Ross, and William McArthur) present an overview of their flight mission, whose primary objective was the rendezvous and space docking with the Russian Mir Space Station. Video film footage includes: prelaunch and launch activities; shuttle launch; installation of the Russian-made docking module to the orbiter; in-orbit rendezvous; in-orbit docking between Mir and the orbiter; general crew activities; transfer of supplies, equipment, and a crystal growth experiment to Mir; data collection of Mir thruster firings; undocking maneuvers and Mir fly around; pre-return checkout of flight systems; and reentry and landing of the orbiter. Earth views include horizon sunsets, atmospheric boundary layers, and a variety of geographical location footage (New Orleans; Atlanta; James Bay, Canada; Poland; Turkey; Mt. Pinatubo, Philippines; Salt Lake City, Utah; and Colorado).

#### **Challenger Anniversary Resource Tape**

1996; In English; Videotape: 32 min. 50 sec. playing time, in color, with sound

Report No(s): NASA-TM-111373; JSC-1531A; NONP-NASA-VT-96-1996031302; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

This commemorative video marks the tenth anniversary, January 28, 1986, of the ninth Challenger flight and the seven

astronauts onboard who died when the Challenger exploded 73 seconds into flight. The flight crew was comprised of Cmdr. Francis R. Scobee, Pilot Michael J. Smith, and Mission Specialists Judith A. Resnik, Ellison S. Onizuka, Ronald E. McNair, Gregory Jarvis (Hughes Aircraft representative), and S. Christie McAuliffe (teacher). The flight crew is shown performing preflight training, physiological tests, environmental tests, press conferences, prelaunch activities, and launch activities. The Challenger explosion is shown from both the launch site and from the control center. Various rescue operations, news coverage, and shots of the wreckage after salvage are also presented. President Ronald Reagan is shown giving a tribute at the memorial service for the flight crew. The video ends with a flyby salute and pictures of each of the members of the Challenger.

### **STS-69 Mission Highlights Resource Tape**

Dec. 19, 1995; In English; Videotape: 55 min. 35 sec. playing time, in color, with sound

Report No(s): NASA-TM-111389; JSC-1527; NONP-NASA-VT-96-1996036744; No Copyright; Avail: CASI; [B03](#), Videotape-Beta; [V03](#), Videotape-VHS

The STS-69 mission of the Endeavour Space Shuttle and crew are highlighted in this video. The 'Dog Crew', as they called themselves, Cmdr. Dave Walker, Pilot Ken Cockrell, and Mission Specialists Mike Gernhardt, Jim Voss, and Jim Newman, are shown performing pre-launch and launch activities; the SPARTAN-201 and the Wake Shield Facility (WSF) deployments, retrievals, and berthings; physiological and other Middeck experiments; and jet thruster firing tests on the WSF. A 6 1/2 hour EVA was conducted to test the thermal properties of the new space suits and to test the tools and equipment to be used in the construction of the International Space Station. General crew activities are also shown and Earth views include cloud cover and the WSF with the Earth as the background.

### **STS-72 Flight Day 2**

Jan. 12, 1996; In English; Videotape: 30 min. playing time, in color, with sound

Report No(s): NASA-TM-111387; BRF-1389B; NONP-NASA-VT-96-1996034086; No Copyright; Avail: CASI; [B02](#), Videotape-Beta; [V02](#), Videotape-VHS

On this second day of the STS-72 mission, the flight crew, Cmdr. Brian Duffy, Pilot Brent W. Jett, and Mission Specialists Leroy Chiao, Daniel T. Berry, Winston E. Scott, and Koichi Wakata (NASDA), awakened to music from the motion picture 'Stars Wars'. The crew performed a systems checkout, pre-

pared for the retrieval of the Japanese Space Flyer Unit (SFU), tested the spacesuits for the EVA, and activated some of the secondary experiments. An in-orbit news interview was conducted with the crew via satellite downlinking. Questions asked ranged from the logistics of the mission to the avoidance procedures the Endeavour Orbiter performed to miss hitting the inactive Air Force satellite, nicknamed 'Misty' (MSTI). Earth views included cloud cover, several storm systems, and various land masses with several views of the shuttle's open cargo bay in the foreground.

On this third day of the STS-76 mission, the flight crew, Cmdr. Kevin P. Chilton, Pilot Richard A. Searfoss, and Mission Specialists Shannon W. Lucid, Linda M. Godwin, and Ronald M. Sega, are shown performing the docking maneuvers for the Mir Space Station and the Atlantis in-orbit rendezvous. The Atlantis crew is shown greeting the Mir cosmonaut crew, Cmdr. Yuri Onufrienko and Flight Engineer Yuri Usahev. The docking procedure is shown from both outside and inside the Atlantis. An interview with Mission Control is shown from inside Mir with both crews present. There is footage of the Mir, both docked with Atlantis and free flying. Not shown is the EVA by Clifford and Godwin to attach several experimental packages to the exterior of the Mir docking module, although their packing preparation is shown.

On this fifth day of the STS-76 mission, the flight crew, Cmdr. Kevin P. Chilton, Pilot Richard A. Searfoss, and Mission Specialists Shannon W. Lucid, Linda M. Godwin, Michael R.

Clifford, and Ronald M. Sega, pay tribute to the late astronaut Bob Overmeyer with views from the Atlantis/Mir configuration with the Earth in the background. Atlantis astronauts, interviewed by reporters from NASA Centers and Russia during an in-orbit press conference, describe their observations of Comet Hyakutake as it continues its close pass by Earth, remarking on the comet's brilliance and visibility. The astronauts and cosmonauts also took time out from their transfer and resupply activities to talk with Charlie Gibson of 'Good Morning America'.

#### **STS-76 Flight Day 6**

Mar. 30, 1996; In English; Videotape: 30 min. playing time, in color, with sound

Report No(s): NASA-TM-111412; BRF-1393F; NONP-NASA-VT-96-1996039896; No Copyright; Avail: CASI; [B02](#), Videotape-Beta; [V02](#), Videotape-VHS

On this sixth day of the STS-76 mission, the flight crew, Cmdr. Kevin P. Chilton, Pilot Richard A. Searfoss, and Mission Specialists Shannon W. Lucid, Linda M. Godwin, Michael R. Clifford, and Ronald M. Sega are shown preparing for Godwin and Clifford's extra vehicular activity (EVA). The two astronauts are shown egressing from the Shuttle and performing activities during the EVA with the Earth in the background. Godwin and Clifford spent six hours spacewalking in Atlantis' cargo bay and on the exterior of the Mir's docking module. They are shown completing all of the objectives planned for the spacewalk, the most important of which was to install on the exterior of Mir four experiments to monitor the space environment for the next year and a half. This marks the first time that a spacewalk was conducted from a docked Space Shuttle. A variety of new tools capable of being used on both US and Russian spacecraft were evaluated during the spacewalk.

#### **STS-76 Flight Day 7**

Mar. 31, 1996; In English; Videotape: 30 min. playing time, in color, with sound

Report No(s): NASA-TM-111411; BRF-1393G; NONP-NASA-VT-96-1996039895; No Copyright; Avail: CASI; [B02](#), Videotape-Beta; [V02](#), Videotape-VHS

On this seventh day of the STS-76 mission, the flight crew, Cmdr. Kevin P. Chilton, Pilot Richard A Searfoss, and Mission Specialists Linda M. Godwin, Michael R. Clifford, and Ronald

M. Sega are shown bidding the Mir crew and Shannon W. Lucid an emotional farewell, Chilton calling it 'a bittersweet moment.' The Atlantis and Mir commanders, Chilton and Onufrienko, along with spacewalkers Godwin and Clifford took time out to talk with CBS' 'Up to the Minute.' The space flyers discussed the success of their joint mission and the 6-hour spacewalk. The astronauts and cosmonauts exchanged handshakes and hugs in the Mir core module, and then praised both mission control centers, Houston and Kaliningrad for their support throughout the joint phase of the mission.

The post flight presentation of the STS-73 Space Shuttle's USA Microgravity Lab. (USML) mission was presented by the flight crew, Cmdr. Kenneth Bowersox, Pilot Kent Rominger, Payload Specialists Albert Sacco and Fred Gregory, and Mission Specialists Kathryn Thornton, Catherine 'Cady' Colman, and Michael Lopez-Alegria, using color video and slides. Film footage includes the prelaunch and launch activities, the USML and Middeck experiments (Advanced Protein Crystallization Facility (APCF), the Astroculture(tm) (ASC) hardware and experiment, the Commercial Generic Bioprocessing Apparatus (CGBA), the Crystal Growth Furnace (CGF), the Drop Physics Module (DPM), the Geophysical Fluid Flow Cell (GFFC), the Glovebox (GBX), the Zeolite Crystal Growth (ZCG) experiment, the Surface Tension Driven Convection Experiment (STDCE), the Protein Crystal Growth (PCG) experiment, three Measuring Microgravity experiments (the Space Acceleration Measurement System (SAMS), the Three Dimensional Microgravity Accelerometer (3DMA), and the Orbital Acceleration Research Experiment (OARE)), and the High-Packed Digital Television (HI-PAC) demonstration system), pre-return flight systems checkout, reentry, and space shuttle landing. The USML experiments were monitored via the HI-PAC system downlink. Earth views included mostly geographical locations (Mediterranean Sea; Turkey; Lake Powell, Arizona/Utah area; San Francisco Bay; Baltimore, Maryland; Washington, DC; India; Tibet; China; Bhutan; Philadelphia; and the Himalayas).

**STS-72 Flight Day 1**

Jan. 11, 1996; In English; Videotape: 28 min. 30 sec. playing time, in color, with sound

Report No(s): NASA-TM-111243; BRF-1389A; NONP-NASA-VT-96-1996034087; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

On this first day of the STS-72 mission, the flight crew, Cmdr. Brian Duffy, Pilot Brent W. Jett, and Mission Specialists Leroy Chiao, Daniel T. Berry, Winston E. Scott, and Koichi Wakata (NASDA), were shown in prelaunch and launch activities. This was the tenth flight of the Space Shuttle Orbiter Endeavour. The primary objectives of this mission were the retrieval of the Japanese Space Flyer Unit (SFU) spacecraft, the deployment and retrieval of the NASA Office of Aeronautics and Space Technology Flyer (OAST-FLYER) spacecraft, and two 6 1/2 hour spacewalks to test hardware and tools that will be used to assemble the International Space Station. Secondary objectives included the Shuttle Solar Backscatter Ultraviolet (SSBUV-8), the Shuttle Laser Altimeter GAS(5) (SLA-01/GAS(5)), the National Institutes of Health-R3 (NIH-R3), the Space Tissue Loss (STL/NIH-C), and Thermal Energy Storage (TES-2) experiments. Get-Away-Specials (GAS) included the USAF Academy G-342 Flexible Beam Experiment (FLEXBEAM-2), the Society of Japanese Aerospace Companies G-459 Protein Crystal Growth Experiments, and the Jet Propulsion Laboratory (JPL) GAS Ballast Can with Sample

Return Experiment. This night launch was shown at various angles and distances from the launching pad.

On this third day of the STS-72 mission, the flight crew, Cmdr. Brian Duffy, Pilot Brent W. Jett, and Mission Specialists Leroy Chiao, Daniel T. Barry, Winston E. Scott, and Koichi Wakata (NASDA), awakened to a traditional Japanese song, 'Sea in Springtime'. Wakata, using the shuttle's robot arm, successfully retrieved the Japanese Space Flyer Unit (SFU) satellite and berthed it in the shuttle's cargo bay. Duffy and Wakata were interviewed, via satellite, by Japanese journalists and reporters in Houston, Texas. Earth views include cloud cover, storm systems, Africa and several other land masses.

On this first day of the STS-76 mission, the flight crew, Cmdr. Kevin P. Chilton, Pilot Richard A Searfoss, and Mission Specialists Shannon W. Lucid, Linda M. Godwin, Michael R. Clifford, and Ronald M. Sega, are shown performing prelaunch and launch activities for the night launch of the Space Shuttle Atlantis. The primary objective of this mission is the third docking between the Mir Space Station and Atlantis and a crew transfer. Lucid will remain onboard the Mir for about four months. Other activities include an EVA by Godwin and Clifford, logistics operations, and scientific research with a SPACEHAB module, some middeck experiments, and a Get Away Special (GAS) canister. Also, almost a ton of equipment and supplies will be transferred to the Mir. Experiments

include the Mir Electric Field Characterization (MEFC), European Space Agency (ESA) Biorack life sciences experiment, Queens University Experiment in Liquid Diffusion (QUELD), Optizone Liquid Phase Sintering Experiment (OLIPSE), and a Naval Research Laboratory (NRL) GAS payload Trapped Ions in Space (TRIS), which will measure low-energy particle radiation in the inner magnetosphere. This mission also will include a KidSat, a prototype of Earth viewing cameras and instruments, that allow students in grades K-12 to see and direct the capture of pictures from space. Footage from Mission control is also included.

The flight crew of the STS-72 Space Shuttle Orbiter Endeavour Cmdr. Brian Duffy, Pilot Brent W. Jett, and Mission Specialists; Leroy Chiao, Daniel T. Barry, Winston E. Scott, and Koichi Wakata (NASDA) present an overview of their mission, whose primary objective is the retrieval of two research satellites. The major activities of the mission will include retrieval of the Japanese Space Flyer Unit (SFU), which was launched aboard a Japanese H-2 rocket to conduct a variety of microgravity experiments. In addition, the STS-72 crew will deploy the AST-Flyer, a satellite, that will fly free of the Shuttle for about 50 hours. Four experiments on the science platform will operate autonomously before the satellite is retrieved by Endeavour's robot arm. Three of Endeavour's astronauts will conduct a pair of spacewalks during the mission to test hardware and tools that will be used in the assembly of

the Space Station. Video footage includes the following: prelaunch and launch activities; the crew eating breakfast; shuttle launch; retrieval of the Japanese Space Flyer Unit (SFU); suit-up and EVA-1; EVA-2; crew members performing various physical exercises; various earth views; and the night landing of the shuttle at KSC.

The flight crew of the STS-76 Space Shuttle Orbiter Atlantis; Cmdr. Kevin P. Chilton, Pilot Richard A. Searfoss, and Mission Specialists Linda M. Godwin, Michael R. Clifford, and Ronald M. Sega present an overview of their mission. Highlights STS-76 include the first spacewalk by U.S. astronauts while the shuttle is attached to the Russian Space Station Mir, and the transfer of Shannon W. Lucid to the Mir-21 crew, the first American woman to serve as a Mir station researcher. She will remain aboard the orbiting station until Atlantis again docks with Mir in early August. Video footage includes the following: prelaunch and launch activities; shuttle launch; in-orbit rendezvous; in-orbit docking between Mir and the orbiter; general crew activities; transfer of supplies; Godwin and Clifford's EVA; undocking maneuvers; and the re-entry and landing of the orbiter.

On this tenth day of the STS-77 mission, the flight crew, Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., perform a routine check of the shuttle's flight control surfaces and reaction control system jets, wrap up work with a number of scientific investigations, and begin securing the cabin for the trip back to

Earth. Most experiments aboard the shuttle have been completed and stowed away, although a few will operate throughout the night and be deactivated once the crew wakes. Crew members Andy Thomas, a native of Australia, and Marc Garneau, a Canadian, each receive special greetings today as STS-77 nears its end. South Australia Premier Dean Brown called Thomas with congratulations early this morning as the shuttle passed above Brown's office in Adelaide, Australia, Thomas' hometown. Later, Canadian Prime Minister Jean Chretien called Garneau to congratulate him on the mission and the joint Canadian Space Agency and NASA experiments that were conducted.

On this ninth day of the STS-77 mission, the flight crew, Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., make the third rendezvous with the small aerodynamically stabilized satellite. Commander John Casper and Pilot Curt Brown guided Endeavour to just under 2,000 feet from the cylindrically shaped Passive Aerodynamically Stabilized Magnetically Damped Satellite Test Unit (PMS-STU). It was deployed from a small canister in Endeavour's payload bay earlier in the mission in an unstable, slightly tumbling attitude to observe how or whether it could stabilize itself without using satellite lifetime-limiting propellants. Casper was scheduled to take time out during the final phase of the rendezvous to talk to fellow astronaut Shannon Lucid and her two cosmonaut crewmates aboard the Russian Space Station Mir. Various views of the Earth can be seen.

On this seventh day of the STS-77 mission, the flight crew,

Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., return to the small, cylindrical PAMS-STU satellite and begin eight hours of station-keeping about 1,800 feet away. The second rendezvous with the Passive Aerodynamically Stabilized Magnetically Damped Satellite (PAMS) begins shortly after the crew is awakened by the song 'Down Under' performed by Men At Work, in honor of Australian-born Mission Specialist Andy Thomas. For several hours Commander John Casper and Pilot Curt Brown perform a series of thruster firings which allow Endeavor to close in on the 2 foot by 3 foot satellite. The rendezvous takes place as other crewmembers monitor ongoing science experiments in the Spacehab module and on the middeck of the orbiter.

#### **STS-77 Flight Day 3**

May 20, 1996; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA-TM-110124; BRF-1395C; NONP-NASA-VT-96-1996060592; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

On this third day of the STS-77 mission, the flight crew, Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., can be seen focusing their attention on retrieving the Spartan satellite and returning it to the Shuttle's payload bay. Commander John Casper, Pilot Curt Brown and Mission Specialist Dan Bursch prepared for the rendezvous while Mission Specialists Andy Thomas, Mario Runco and Marc Garneau continued work on the orbiter's middeck and in the Spacehab module. The Inflatable Antenna Experiment (I.A.E) was jettisoned later in the morning and is expected to enter the Earth's atmosphere. This morning's rendezvous is the first of four planned during the mission. Following a series of jet firings, Endeavor approaches within a distance of about 30 feet from Spartan, where Garneau can be seen extending the ship's robot arm to grapple the satellite for its berthing back on its payload bay platform.

#### **STS-77 Flight Day 8**

May 30, 1996; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA-TM-111615; BRF-1395H; NONP-NASA-VT-96-1996060597; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

On this eighth day of the STS-77 mission, the flight crew, Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., take time out from their schedule to discuss the progress of the mission with reporters. Casper said the flight has been highly successful so far, having accomplished all of the goals. Mission Specialists Dan Bursch and Andy Thomas described protein crystal growth and plant growth experiments being conducted throughout the flight in the Spacehab module. And Mario Runco discussed testing soft drink samples in the Fluids Generic Bioprocessing Apparatus.

#### **STS-77 Flight Day 6**

May 24, 1996; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA-TM-110127; BRF-1395F; NONP-NASA-VT-96-1996060595; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

On this sixth day of the STS-77 mission, the flight crew, Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., spend some time relaxing, then go back to working in the Spacehab module and preparing to revisit a small cylindrical satellite that they deployed on the mission's third day. Commander John Casper and Pilot Curt Brown monitor Endeavor's systems. Mission Specialist Mario Runco tests an attitude determination system using the GPS attitude and navigation experiment called GANE. The remaining crew members Mission Specialists Andy Thomas, Dan Bursch and Marc Garneau monitor the health of experiments ongoing in the Spacehab and on the middeck of the orbiter. The crew also conduct a health check of the Aquatic Research Facility (ARF) which contains starfish, mussels and sea urchins.

#### **STS-77 Flight Day 5**

May 23, 1996; In English; Videotape: 14 min. 49 sec. playing time, in color, with sound

Report No(s): NASA-TM-110126; BRF-1395E; NONP-NASA-VT-96-1996060594; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

On this fifth day of the STS-77 mission, the flight crew,

Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., spend the first half of their workday assisting payload controllers with investigations into materials processing of samples and the growth of crystals. The progress of starfish and mussel development in a spaceborne aquarium in the Spacehab module in the Shuttle's cargo bay is seen. The crew then move off in different directions to support work with many of the experiments that make up the fourth mission of the Spacehab pressurized module. Endeavor is about 64 miles away from the Passive Aerodynamically Stabilized Magnetically Damped Satellite-Satellite Test Unit, or PAMS-STU, which was deployed from a canister in the payload bay on day four. Since mission day five coincided with Memorial Day, the crew started the 'Indy 500' from earth orbit.

**19960028601** NASA Johnson Space Center, Houston, TX USA

#### **STS-77 Flight Day 4**

May 22, 1996; In English; Videotape: 14 min. 58 sec. playing time, in color, with sound

Report No(s): NASA-TM-110125; BRF-1395F; NONP-NASA-VT-96-1996060593; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

On this fourth day of the STS-77 mission, the flight crew, Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., turned their attention to the deployment of a small technology demonstration satellite known as PAMS. The Passive Aerodynamically Stabilized Magnetically-damped Satellite uses aerodynamic stabilization to orient itself properly and demonstrates a technique that could prolong the lifetime of a satellite by reducing or eliminating the requirement for attitude control propellants. After Mission Specialist Mario Runco deploys the satellite from a canister in the rear of Endeavor's payload bay, it drifts away from the orbiter in a rotating, unstable attitude by design to evaluate how quickly and effectively the spacecraft can stabilize itself using the aerodynamic stabilization method rather than by thrusters. Later in the day the crew is seen being interviewed by Canadian Television.

#### **STS-77 Flight Day 2**

May 20, 1996; In English; Videotape: 14 min. 45 sec. playing time, in color, with sound

Report No(s): NASA-TM-110123; BRF-1395B; NONP-NASA-VT-96-1996060591; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

On this second day of the STS-77 mission, the flight crew, Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., are seen deploying the Spartan satellite for its 24 hour free flight away from Endeavor to test new inflatable antenna technology. The inflation procedure begins as the shuttle and antenna pass over New Mexico, Southern California, the Grand Canyon, Appalachian Mountains, and coast of Virginia. The inflation takes about 5 minutes, bringing the antenna to its full size of 90 feet by 50 feet. After an hour and a half, the antenna was to be jettisoned from the Spartan.

#### **STS-73 Mission Highlights Resource Tape**

Apr. 11, 1996; In English; Videotape: 59 min. 6 sec. playing time, in color, with sound

Report No(s): NASA-TM-111517; JSC-1531; NONP-NASA-VT-96-1996047712; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The flight crew of the STS-73 Space Shuttle Orbiter Columbia Cmdr. Kenneth D. Bowersox, Pilot Kent V. Rominger, Payload Commander Kathryn C. Thornton, Mission Specialists Catherine G. Coleman Ph.D, and Michael E. Lopez-Alegria, and Payload Specialists Fred W. Leslie Ph.D, Albert Sacco Jr Ph.D, David H. Matthiesen Ph.D, and R. Glynn Holt Ph.D present an overview of their mission. This, the second USA Microgravity Laboratory (USML) Spacelab mission, is the centerpiece of the STS-73 Space Shuttle mission. Some of the experiments being carried on the USML-2 payload cover a variety of scientific disciplines including fluid physics, materials science, biotechnology and combustion science. Video footage includes the following: prelaunch and launch activities; various Spacelab experiments; and reentry and the landing of the Columbia at KSC.

The flight crew of the STS-47 Space Shuttle Orbiter Endeavour Cmdr. Robert L. Gibson, Pilot Curtis L. Brown, Payload Cmdr. Mark C. Lee, Mission Specialists, N. Jan Davis, Jay Apt, Mae C. Jemison, and Payload Specialist, Mamoru Mohri, present an overview of their mission. This the 50th Shuttle flight marks the first NASA mission devoted primarily to Japan. Endeavour carries into Earth orbit Spacelab-J (SL-J), a 23-foot long pressurized laboratory built by the European Space Agency specifically for conducting experiments in a shirt-sleeve environment. SL-J contains 43 experiments, 34 provided by Japan, 7 from the USA and 2 joint experiments. Jemison becomes the first African American woman to fly in space and Mohri first Japanese to fly in space. Video footage includes the following: prelaunch and launch activities; various experiments including protein crystal growth, electronic materials, fluids, glasses and ceramics, metals and alloys, and the effects of microgravity on plants and animals; earth views of Japan, Tokyo Harbor, and Hurricane Bonnie; and the re-entry and landing of the orbiter.

On this fourth day of the STS-72 mission, the flight crew, Cmdr. Brian Duffy, Pilot Brent W. Jett, and Mission Specialists Leroy Chiao, Daniel T. Berry, Winston E. Scott, and Koichi Wakata (NASDA), deployed the OAST-Flyer satellite which will perform two days of scientific investigations, checked out the space tools that they will be testing during their two planned spacewalks, and conducted the secondary middeck experiments. The host, Tom Miller, from NBC's 'Nightside' show, interviewed the astronauts from Charlotte, NC via satellite link. Views include the Japanese Space Flyer Unit (SFU) satellite in its berth in the shuttle's cargo bay with the

Earth in the background, Earth cloud cover, and various shots of the shuttle's cargo bay.

On this thirteenth day of the STS-78 mission, the flight crew, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., begin another day of scientific investigations on board Columbia as the Life and Microgravity Spacelab mission continues its endurance record. The seven crew members continue supporting a variety of experiments investigating the effects of microgravity on the human body. Studies looking at muscle strength and energy expenditure and pulmonary function continue throughout the day, as well as the processing of advanced semiconductor materials and alloys in the Advanced Gradient Heating Facility. In an interview with the NBC News, Mission Commander Tom Henricks is shown discussing Columbia's flight and the varied experiments that are being conducted on board. Crew members are shown participating in tests that measure their performance.

On this eleventh day of the STS-78 mission, the flight crew, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., are shown conducting a news conference to discuss the progress of the international mission with media from the USA, Canada and Europe. During the press conference, the crew explained the relevance of the experiments conducted aboard the Life Sciences and Microgravity mission, and praised support crews and researchers on Earth who are involved in the mission. Payload Specialist Dr. Robert Thirsk told Canadian journalists of how the research will not only benefit astronauts as they conduct long-term space missions, but also people on Earth. Some of the research will aid studies on osteoporosis and the

affects steroids have on bones, and also may help doctors on Earth develop treatments for muscle diseases like muscular dystrophy, Thirsk told reporters in Toronto.

**STS-78 Flight Day 6**

Jun. 25, 1996; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA-TM-111651; BRF-1397F; NONP-NASA-VT-96-1996085862; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

On this sixth day of the STS-78 mission, the flight crew, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., are shown performing status checks on the life and microgravity experiments and conducting a brief maintenance procedure to correct an electrical circuit problem in the Bubble Drop Particle Unit. On this day, the crew is given four hours off to relax after five days of work with the life and microgravity science investigation being conducted on board.

CASI

*Space Transportation System Flights; Microgravity; Gravitational Effects*

**19960050038** NASA Johnson Space Center, Houston, TX USA

**STS-78 Flight Day 10**

Jun. 29, 1996; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA-TM-111655; BRF-1397J; NONP-NASA-VT-96-1996085858; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

On this tenth day of the STS-78 mission, the flight crew, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., continue to perform in a nearly flawless fashion. The crew is shown completing another of four tests focusing on the effects of microgravity on the vestibular system in the inner ear. In space, the vestibular system sometimes becomes confused as to which way is up and down, leading to nausea and disorientation. Using specially designed head gear to monitor head movement and eye coordination, Linnehan, Brady, Favier, Thirsk and Helms performed tests throughout their shifts to determine how the head and eyes track visual and motion targets in microgravity. The study, is providing scientists with important information about the crews' ability to adapt to microgravity.

On this fifteenth day of the STS-78 mission, the forth of July, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., are awakened with Bruce Springsteen's 'Born in the USA,' and Lee Greenwood's 'I'm Proud to be an American' to begin another a day on orbit. Mission Commander Tom Henricks responded to Mission Control's wake up call by saying that the five US-born crew members were very proud to be Americans, particularly on the day America celebrates its 220th anniversary. Work in the Spacelab module will continue with investigations into the effects of microgravity on muscle strength and endurance, lung function, and adaptation of the neurovestibular system to a microgravity environment. Henricks and Pilot Kevin Kregel will complete work with a laptop computer designed to test the crew's critical thinking skills and reaction time. They also will test a voice control system that allows them to reposition Columbia's closed-circuit television cameras with verbal cues, keeping their hands free to perform other tasks.

The flight crew of the STS-78 mission, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., back from their seventeen day mission, offer a video and still photo presentation of their journey. Included in the presentation are pre-launch, launch, and post-launch activities; experiments performed in the Spacelab; and re-entry; and the landing at KSC. Each of the STS-78 crew members discuss particular aspects of the mission including the 22 LMS life science and microgravity experiments. The experiments address human physiology, metallic alloys and protein crystal growth, and the study of the behavior of fluids and materials processing in the near-weightless environment of space.

On this seventeenth day of the STS-78 mission, the flight crew, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., are shown conducting routine firings of the orbiter's reaction control system jets and checking out its flight control systems and aero surfaces in anticipation of the planned landing at the Kennedy Space Center. Commander Tom Henricks and Pilot Kevin Kregel successfully fire Columbia's 44 reaction control system jets and then tests the aero surfaces that will be used during Columbia's high speed re-entry. This firings procedure is part of a test to prove a concept that may be used on Space Shuttle Discovery's next mission -- STS-82 -- to service the Hubble Space Telescope. The vernier jet firings should raise the orbit without disturbing any payloads on board, or in the case of the Hubble Space Telescope, without placing any force

on the telescope's fragile solar arrays.

On this first day of the STS-78 mission, the flight crew, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., can be seen performing pre-launch activities such as eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew can be seen being readied in the white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. Henricks shares a unique view of Columbia's climb to orbit with flight controllers from a small camera that was mounted on the flight deck. The video follows Columbia's flight from just before main engine start through main engine cutoff, showing the force of main engine and solid booster ignition as experienced by the astronauts.

On this fifth day of the STS-78 mission, the flight crew, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., are shown in the Spacelab conducting microgravity research. They concentrate on the use of the gradient furnace and the Bubble Drop Particle Unit to study process of manufacturing materials in microgravity, and on studies of human muscles and balance mechanisms. Also, Brady, Thirsk, Linnehan, and Favier conduct musculoskeletal tests that measure arm and hand-grip strength.

On this sixteenth day of the STS-78 mission, the flight crew, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., are shown continuing their scientific investigations in the Spacelab module. Today's work focuses on how the astronauts' bodies are responding to the microgravity environment after more than two weeks in orbit. The payload crew will continue studies in the adaptation of the neurovestibular system and the musculoskeletal system during spaceflight.

On this eighth day of the STS-78 mission, the flight crew, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., continue to conduct experiments primarily focusing on the effects of weightlessness on human physiology. Results from the studies of muscle activity, task performance, and sleep will help future mission planners organize crew schedules for greater efficiency and productivity. For a second consecutive day, Henricks, Kregel, Thirsk, and Favier continue to enter responses to a battery of problem-solving tasks on the Performance Assessment Work Station, a laptop computer.

On this twelfth day of the STS-78 mission, the flight crew, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., are awakened by the Canadian national anthem 'Oh Canada'. This morning, Thirsk is shown delivering a holiday message to Prime Minister Jean Chretien and other dignitaries gathered at Parliament Hill in Ottawa. The crew is then shown celebrating 'Canada Day' aboard the Space Shuttle. Also this morning, Mission Specialist Susan Helms discusses the progress of Columbia's flight with WBBM Radio in Chicago.

On this ninth day of the STS-79 mission, the flight crew, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, Shannon Lucid, Jay Apt, and Carl E. Walz having completed five days of joint operations

between the American astronauts and the Russian cosmonauts are seen flying solo once again after undocking from the Mir Space Station. As Atlantis/Mir flew over the Ural Mountains of central Asia, the docking hooks and latches that joined the vehicles together were commanded open and Atlantis drifted slowly away from Mir. Wilcutt then initiated a tail-forward fly-around of the Russian space station. After one and one-half revolutions around Mir, Atlantis' jets were fired in a separation maneuver to enable Atlantis to break away from Mir. On board Atlantis, the six-member crew is settling back into its normal routine with a fairly light schedule for the remainder of the day. Early in the morning as Atlantis flew over the USA, the crew took time to talk with anchors for the CBS Up to the Minute' network news broadcast.

#### **STS-79 Flight Day 6**

Sep. 21, 1996; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA-TM-111769; BRF-1399F; NONP-NASA-VT-1996093680; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

On this sixth day of the STS-79 mission, the flight crew, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, Shannon Lucid, Jay Apt, and Carl E. Walz, continue activities aboard Atlantis/Mir as the nine astronauts and cosmonauts work in their second full day of docked operations. The continuing transfer of logistical supplies and scientific hardware can be seen proceeding smoothly. Apt and Walz once again worked with the Active Rack Isolation System experiment to replace a broken pushrod. With that complete, Apt monitors the ARIS experiment as Readdy and Korzun fire small maneuvering jets on their spacecraft to test the ability of ARIS to damp out any disturbances created by the firings. Walz also is continuing his work with the Mechanics of Granular Materials experiment in Atlantis' double Spacehab module. The astronauts used the large format IMAX camera to conduct a photographic survey of Mir from the Shuttle's flight deck windows while Akers shot IMAX movie scenes of Readdy, Wilcutt, and Korzun in the Spektr module.

#### **STS-79 Flight Day 4**

Sep. 19, 1996; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA-TM-111767; BRF-1399D; NONP-NASA-VT-1996093682; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

On this fourth day of the STS-79 mission, the flight crew, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, John Blaha, Jay Apt, and Carl E. Walz, are seen docking with the Mir Space Station. After two hours of pressure and leak checks, the hatches between the two spacecraft is than opened. The two crews are seen greeting one another to begin five days of joint operations. The rendezvous and docking went flawlessly as Readdy flew the orbiter manually through the final 2,000 feet. Docking occurred within seconds of the pre-planned time and flight controllers reported that only slight oscillations were felt through the Orbiter Docking System as the two spacecraft locked together. Within hours of the hatch opening, crew members John Blaha and Shannon Lucid formally swapped places before going to bed with Blaha becoming a member of the Mir-22 crew and Lucid joining the STS-79 crew to wrap up 179 days as a member of the Mir station. Blaha joins Mir 22 Commander Valery Korzun and Flight Engineer Alexander Kaleri on Mir for the next four months. Soon after the crew members completed their welcoming ceremony, they went to work, hauling bags of water and other supplies from the Shuttle's Spacehab module into the Mir. More than 4000 pounds of equipment and logistical supplies will be transferred to the Mir before Atlantis undocks from the space station.

On this eighth day of the STS-79 mission, the flight crew, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, Shannon Lucid, Jay Apt, and Carl E. Walz, are seen bidding the crew of Mir farewell and then closing the hatches between their two spacecraft in preparation for undocking. The nine astronauts and cosmonauts gathered in the Core Module of the Russian space station for a formal goodbye. With the official ceremony complete, the crewmembers shared a final meal together and exchanged private farewells as Shannon Lucid prepared to return home in Atlantis and her replacement on Mir, John Blaha, began a four month stay on the station. Walz and Apt and Mir 22 Commander Valery Korzun with assistance from Flight Engineer 2 John Blaha, swung the hatches between their spacecraft closed concluding five days of joint operations. The vestibule between Atlantis and Mir was depressurized and leak checks were performed in readiness for undocking.

On this third day of the STS-79 mission, the flight crew, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, John E. Blaha, Jay Apt, and Carl E. Walz, start another busy day on orbit activating experiments in the Spacehab module. Readdy and Wilcutt are seen conducting two rendezvous burns while other crew members are seen working in the Spacehab module. The Active Rack Isolation System, or ARIS, is tended to by Walz, who performs a minor maintenance procedure on one of ARIS' vibration-damping pushrods while Akers works with an inventory management system using a bar code reader to more effectively keep track of items that will be transferred back and forth between the Shuttle and the Mir. Apt continues work with a furnace which heats to nearly 1,600 degrees centigrade to melt metal samples for study after the flight. Apt also provides a television tour of the Spacehab, which is twice its normal size for this flight to allow extra room for science experiments and logistical items slated for transfer to Mir.

On this fifth day of the STS-79 mission, the flight crew, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, Shannon Lucid, Jay Apt, and Carl E. Walz, in the first full day of joint Shuttle/Mir operations begin in with the transfer of a biotechnology investigation and logistical supplies from Atlantis to Mir. The Biotechnology System, an investigation that will study the long-term development of cartilage cells in microgravity, was transported to Mir early this morning. During his planned four-month stay on Mir, John Blaha will take weekly samples of the culture which may provide researchers with information on engineering cartilage cells for possible use in transplantation. They also took time out of their schedules to talk with Good Morning America's Elizabeth Vargas in a brief interview. Prior to beginning the day's transfer activities, all nine astronauts and cosmonauts participated in a joint planning session to outline the day's schedule.

On this seventh day of the STS-79 mission, the flight crew, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, Shannon Lucid, Jay Apt, and Carl E. Walz, share a brief video tour of the Mir Space Station with flight controllers, taking a break from the transfer activities that has occupied the astronauts' time during three days of docked operations. Readdy and Apt floated through several of Mir's modules and back into Atlantis' double Spacehab module during the tour pointing out the numerous transfer items stowed on both spacecraft. Readdy, Wilcutt, Lucid and Blaha are seen discussing their mission in an interview with CNN's John Holliman.

On this second day of the STS-79 mission, the flight crew, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, John E. Blaha, Jay Apt, and Carl E. Walz, are seen in activating the double Spacehab module in the shuttle's payload bay, packing materials and supplies and filling the first four containers of water which will be delivered to the Mir Space Station. Apt and Walz set up the Active Rack Isolation System experiment in the Spacehab, a prototype of an International Space Station payload system designed to eliminate vibrations or disturbances caused by crew activity or engine firings. The double-rack which houses ARIS also contains almost 400 pounds of Russian food which is being used to simulate the weight and mass of a scientific investigation for this first test.

#### **STS-81 Flight Day 7**

Jan. 18, 1997; In English; Videotape: 10 min. playing time, in color, with sound

Report No(s): NASA-TM-112422; BRF-1403G; NONP-NASA-VT-97-1997021179; No Copyright; Avail: CASI; [B01](#), Videotape-Beta; [V01](#), Videotape-VHS

On this seventh first day of the STS-81 mission, the flight crew, Cmdr. Michael A. Baker, Pilot Brent W. Jett, Mission Specialists, John M. Grunsfeld, Marsha S. Ivins, Peter J.K. Wisoff, and John Blaha, and the cosmonauts of the Russian Space Station Mir continue to transfer hundreds of pounds of water, supplies, and logistical items to each other's spacecraft. More than 1,300 pounds of water have now been transferred from Atlantis to the Mir to resupply the Russian outpost, along with equipment that will be used by astronaut Jerry M. Linenger during his four-month research mission. A biopro-

cessing device and an experiment used to grow cartilage cells during astronaut John Blaha's four month stay on the Mir is also transferred to Atlantis for the trip back to Earth. Linenger spends most of the day collecting water samples from the Mir for analysis back on Earth and Blaha continues to exercise on a treadmill on the Mir to stay in shape for his return to Earth and a readaptation to gravity after four months of weightlessness.

#### **STS-81 Flight Day 5**

Jan. 16, 1997; In English; Videotape: 16 min. 5 sec. playing time, in color, with sound

Report No(s): NASA-TM-112420; BRF-1403E; NONP-NASA-VT-97-1997021180; No Copyright; Avail: CASI; [B02](#), Videotape-Beta; [V02](#), Videotape-VHS

On this fifth day of the STS-81 mission, the flight crew, Cmdr. Michael A. Baker, Pilot Brent W. Jett, Mission Specialists, John M. Grunsfeld, Marsha S. Ivins, Peter J.K. Wisoff, and John Blaha, and the Mir cosmonauts including astronaut Jerry M. Linenger continue with the transfer of food, water and supplies between the two spacecrafts for a second day of joint operations. With both spacecraft in excellent shape, the nine crewmembers float back and forth between Atlantis and the Mir, hauling bags of water, satchels of logistical supplies and experiment hardware. The supplies and hardware will be used by cosmonauts and Linenger during his four months of scientific research aboard the Mir. Linenger, who officially became a Mir crewmember earlier, spends time with his predecessor; John Blaha to get familiar with his new home.

#### **STS-81 Flight Day 3**

Jan. 14, 1997; In English; Videotape: 14 min. 50 sec. playing time, in color, with sound

Report No(s): NASA-TM-112418; BRF-1403C; NONP-NASA-VT-97-1997021182; No Copyright; Avail: CASI; [B01](#), Videotape-Beta; [V01](#), Videotape-VHS

On this third day of the STS-81 mission, the flight crew, Cmdr. Michael A. Baker, Pilot Brent W. Jett, Mission Specialists, John M. Grunsfeld, Marsha S. Ivins, Peter J.K. Wisoff, and Jerry M. Linenger, spend most of their workday completing preparations for the rendezvous and linkup of the Space Shuttle with the Mir Space Station. Pilot Brent Jett finishes the checkout of navigation tools that will be used during the

rendezvous. Later he joins John Grunsfeld and they install a camera in the Orbiter Docking System to provide television views of the docking target on the Mir. Commander Mike Baker will use this later as he flies Atlantis to its docking with Mir.

#### **STS-79 Mission Highlight Presentation**

Dec. 05, 1996; In English; Videotape: 1 hr. 30 sec. playing time, in color, with sound

Report No(s): NASA-TM-112355; JSC-1604-0062B; NONP-NASA-VT-97-1997021171; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

The flight crew of STS-79, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, Shannon Lucid, Jay Apt, and Carl E. Walz can be seen performing pre-launch activities such as eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew can be seen being readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. STS-79 is the second Shuttle-Mir mission to carry a SPACEHAB module on board, and the first to carry a double module. The forward portion of the double module will house experiments conducted by the crew before, during and after Atlantis is docked to the Russian space station. The aft portion of the double module primarily houses the logistics equipment to be transferred to the Russian space station. Logistics include food, clothing, experiment supplies, and spare equipment for Mir.

**STS-80 Flight Day 2**

Nov. 21, 1996; In English; Videotape: 12 min. 20 sec. playing time, in color, with sound

Report No(s): NASA-TM-112402; BRF-1401B; NONP-NASA-VT-97-1997021169; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

On this second day of the STS-80 mission, the flight crew, Cmdr. Kenneth D. Cockrell, Pilot Kent V. Rominger, Mission Specialists, Tamara E. Jernigan, Thomas D. Jones, and F. Story Musgrave, complete the first major objective of the mission with the deployment of the Orbiting Retrievable Far and Extreme Ultraviolet Spectrometer (ORFEUS) on the reusable Shuttle Pallet Satellite. Release of ORFEUS from Columbia's robot arm came at 8 hours 15 minutes mission elapsed time. Three hours after the release, ground controllers inform the crew that the instrument package appears to be working properly. This begins two weeks of gathering data on the origin and makeup of stars.

**STS-80 Flight Day 12**

Dec. 01, 1996; In English; Videotape: 13 min. playing time, in color, with sound

Report No(s): NASA-TM-112412; BRF-1401L; NONP-NASA-VT-97-1997021159; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

On this twelfth day of the STS-80 mission, the flight crew,

Cmdr. Kenneth D. Cockrell, Pilot Kent V. Rominger, Mission Specialists, Tamara E. Jernigan, Thomas D. Jones, and F. Story Musgrave, spend the day discussing the failed hatch with ground controllers. The failure of the hatch to properly open causes the cancellation of the second planned spacewalk by Jernigan and Jones. NASA engineers and managers continue to collect and analyze data on what may be causing the failure. The leading candidate is a misalignment of the hatch against the airlock seal.

**STS-81 Flight Day 10**

Jan. 20, 1997; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA-TM-112425; BRF-1403J; NONP-NASA-VT-97-1997021175; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

On this tenth day of the STS-81 mission, the flight crew, Cmdr. Michael A. Baker, Pilot Brent W. Jett, Mission Specialists, John M. Grunsfeld, Marsha S. Ivins, Peter J.K. Wisoff, and John Blaha, prepare for the return back to earth. The shuttle's key flight control systems are checked for entry and landing phase of the mission. Commander Mike Baker and Pilot Brent Jett activate one of Atlantis' three hydraulic power units to test the shuttle's aerosurfaces. Baker and Jett fire Atlantis' steering jets in a routine prelanding checkout. The astronauts also test a medical restraint system in the Spacehab module, placing two crewmembers in the device. Crewmembers then begin to stow items away in the crew cabin, initiate the scheduled deactiva-

tion of Spacehab systems and associated hardware.

On this fourth day of the STS-81 mission, the flight crew, Cmdr. Michael A. Baker, Pilot Brent W. Jett, Mission Specialists, John M. Grunsfeld, Marsha S. Ivins, Peter J.K. Wisoff, and Jerry M. Linenger, prepare for the fifth linkup of the Space Shuttle and the Mir Space Station. The Atlantis docks with Mir at a point 210 nautical miles above the Earth southeast of Moscow, culminating a three-day rendezvous. Two hours after docking, the hatches between Atlantis and Mir are opened and Baker and Mir 22 Commander Valery Korzun share a hug to mark the start of five days of joint operations between the two crews. After an informal welcoming ceremony in the Mir's core module, the STS-81 crewmembers receive a station safety briefing. Linenger becomes the fourth American to occupy a position on the Russian Space Station following the docking of Atlantis to the outpost. During the docked phase of the mission, the two crews transfer nearly three tons of food, water and supplies to Mir.

#### **STS-81 Flight Day 2**

Jan. 13, 1997; In English; Videotape: 15 min. 15 sec. playing time, in color, with sound

Report No(s): NASA-TM-112417; BRF-1403B; NONP-NASA-VT-97-1997021177; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

On this second day of the STS-81 mission, the flight crew, Cmdr. Michael A. Baker, Pilot Brent W. Jett, Mission Specialists, John M. Grunsfeld, Marsha S. Ivins, Peter J.K. Wisoff, and Jerry M. Linenger, continue to close in on The Mir Space Station. Payload work involves activating a radiation monitor in addition to the Biorack multipurpose facility which is designed to investigate the effects of microgravity and radiation on plant, tissue, cell and fungus growth. Mission Specialists Jeff Wisoff and John Grunsfeld spend much of their work day setting up and performing initial work in the experiment's glove box.

**STS-81 Flight Day 9**

Jan. 20, 1997; In English; Videotape: 15 min. 35 sec. playing time, in color, with sound

Report No(s): NASA-TM-112424; BRF-1403I; NONP-NASA-VT-97-1997021174; No Copyright; Avail: CASI; [B02](#), Videotape-Beta; [V02](#), Videotape-VHS

On this ninth day of the STS-81 mission, the flight crew, Cmdr. Michael A. Baker, Pilot Brent W. Jett, Mission Specialists, John M. Grunsfeld, Marsha S. Ivins, Peter J.K. Wisoff, and John Blaha, are flying on their own after undocking the Mir Space Station. Following the separation Pilot Brent Jett initiates a two-revolution flyaround of the Russian complex at a distance of about 560 feet. Jett fires maneuvering jets to separate Atlantis from Mir for the final time until May, when the shuttle will return on STS-84 to deliver astronaut Mike Foale to the outpost as Jerry M. Linenger's replacement.

**STS-80 Flight Day 1**

Nov. 20, 1996; In English; Videotape: 15 min. 40 sec. playing time, in color, with sound

Report No(s): NASA-TM-112401; BRF-1401A; NONP-NASA-VT-97-1997021173; No Copyright; Avail: CASI; [B02](#), Videotape-Beta; [V02](#), Videotape-VHS

This first day of the STS-80 mission, begins with the flight crew, Cmdr. Kenneth D. Cockrell, Pilot Kent V. Rominger, Mission Specialists, Tamara E. Jernigan, Thomas D. Jones, and F. Story Musgrave, performing pre-launch activities such as eating the traditional breakfast, being suited-up, and riding out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew is readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including the countdown, engine ignition, and launch. The film ends with the separation of the Solid Rocket Boosters (SRB) from the shuttle.

The flight crew of STS-80, Cmdr. Kenneth D. Cockrell,

Pilot Kent V. Rominger, Mission Specialists, Tamara E. Jernigan, Thomas D. Jones, and F. Story Musgrave are seen performing pre-launch activities such as eating the traditional breakfast, being suited-up, and riding out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew is readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including the countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters (SRB) from the shuttle. The crew completes the first major objective of the mission with the deployment of the Orbiting Retrievable Far and Extreme Ultraviolet Spectrometer (ORFEUS) on the reusable Shuttle Pallet Satellite. The crew then begins final preparations for the release of Wake Shield. Jones powers up the shuttle's Canadian-built robot arm and grapples the satellite, while Jernigan powers up the Orbiter Space Vision System, which will be used to track precisely the Wake Shield's location. Cockrell places Columbia in a gravity gradient attitude to minimize disturbances during the release. Jones uses the robot arm to hold Wake Shield in position for a two-and-a-half hour cleansing by atomic oxygen molecules before moving the arm to the deploy position. The failure of the hatch to properly open causes the cancellation of all EVA's planned for this mission by Jernigan and Jones. The mission ends with the shuttle landing at the Kennedy Space Center.

**STS-82 Day 05 Highlights**

Feb. 15, 1997; In English; Videotape: 19 min. playing time, in color, with sound

Report No(s): NASA-TM-112803; BRF-1405E; NONP-NASA-VT-1997026063; No Copyright; Avail: CASI; [B02](#), Videotape-Beta; [V02](#), Videotape-VHS

The fifth day of the STS-82 mission begins with the crew, Commander Kenneth D. Bowersox, Pilot Scott J. Horowitz, Payload Commander Mark C. Lee, and Mission Specialists Gregory J. Harbaugh, Steven L. Smith, Joseph R. Tanner, and Steven A. Hawley completing the checkout of spacesuits well ahead of schedule, allowing them to start the second spacewalk of the flight. Harbaugh and Tanner went right to work, replacing a degraded Fine Guidance Sensor and a failed Engineering and Science Tape Recorder with new spares. The astronauts also installed a new unit known as the Optical Control Electronics Enhancement Kit, which will further increase the capability of the new Fine Guidance Sensor. During the spacewalk, the astronauts and flight controllers took note of cracking and wear incurred by thermal insulation which

protects several areas of the telescope.

The seventh day of the STS-82 mission begins with the crew, Commander Kenneth D. Bowersox, Pilot Scott J. Horowitz, Payload Commander Mark C. Lee, and Mission Specialists Gregory J. Harbaugh, Steven L. Smith, Joseph R. Tanner, and Steven A. Hawley performing their third spacewalk of the mission by emerging from Discovery's airlock. Their first task is the replacement of a Solar Array Drive Electronics package which is used to control the positioning of Hubble's solar arrays. Harbaugh and Tanner next venture to the top of the telescope where they replaced covers over Hubble's magnetometers, which are used to sense the telescope's position in relation to the Earth through data acquired from the Earth's magnetic field. The spacewalking astronauts then place thermal blankets of multi-layer material over two areas of degraded insulation around the light shield portion of the telescope just below the top of the astronomical observatory.

The eighth day of the STS-82 mission begins with the crew, Commander Kenneth D. Bowersox, Pilot Scott J. Horowitz, Payload Commander Mark C. Lee, and Mission Specialists Gregory J. Harbaugh, Steven L. Smith, Joseph R. Tanner, and Steven A. Hawley performing the final spacewalk of the mission. Lee and Smith attach several thermal insulation blankets to three equipment compartments at the top of the Support Systems Module section of Hubble which contain key data processing, electronics and scientific instrument telemetry packages. Following the completion of that work, Lee and Smith briefly return to the airlock while flight controllers

evaluated a possible glitch with one of four Reaction Wheel Assembly units in Hubble used to maneuver the telescope for its scientific observations. A spare Reaction Wheel Assembly was available aboard Discovery for a swap out during an additional spacewalk had it been necessary, but a few hours later, after further analysis, payload controllers reported that the Reaction Wheel Assembly was in excellent shape and operating at the proper speed.

The ninth day of the STS-82 mission begins with the crew, Commander Kenneth D. Bowersox, Pilot Scott J. Horowitz, Payload Commander Mark C. Lee, and Mission Specialists Gregory J. Harbaugh, Steven L. Smith, Joseph R. Tanner, and Steven A. Hawley placing the Hubble Space Telescope back into its own orbit to continue its investigation of the far reaches of the universe. At the time of deployment, the Shuttle was at an altitude of 334 nautical miles over the southwest coast of Africa. Hubble is now operating at the highest altitude it has ever flown, a 335 by 321 nautical mile orbit. A few hours after Hubble's deployment, the crew receives a congratulatory phone call from NASA Administrator Daniel Goldin. The four spacewalking crewmembers also answered questions from several news networks regarding their work over the past week to upgrade the telescope.

The sixth day of the STS-82 mission begins with the crew, Commander Kenneth D. Bowersox, Pilot Scott J. Horowitz, Payload Commander Mark C. Lee, and Mission Specialists Gregory J. Harbaugh, Steven L. Smith, Joseph R. Tanner, and Steven A. Hawley conducting the third spacewalk of the

mission. Lee and Smith are seen removing and replacing a Data Interface Unit which provides command and data interfaces between Hubble's data management system and other subsystems. They also replace an old reel-to-reel style Engineering and Science Tape Recorder with a new digital Solid State Recorder (SSR) that will allow simultaneous recording and playback of data. The final task for Lee and Smith is the change out of one of four Reaction Wheel Assembly units that use spin momentum to move the telescope toward a target and maintain it in a stable position.

The fourth day of the STS-82 mission begins with the crew, Commander Kenneth D. Bowersox, Pilot Scott J. Horowitz, Payload Commander Mark C. Lee, and Mission Specialists Gregory J. Harbaugh, Steven L. Smith, Joseph R. Tanner, and Steven A. Hawley in preparations for conducting the second servicing mission of the Hubble Space Telescope. The first spacewalk was slightly delayed to enable ground controllers to assess the unexpected movement of one of Hubble's solar arrays, which slewed from a horizontal to a vertical position as Discovery's airlock was depressurized. Astronauts Mark Lee and Steve Smith are seen working in the cargo bay of the Shuttle Discovery. Their spacewalk to upgrade the Hubble Space Telescope lasts six hours and 42 minutes. At the conclusion of their EVA, HST has graded science instruments

for an expanded view of the universe.

The STS-82 is the second in a series of planned service missions to the Hubble Space Telescope (HST). The flight crew of STS-82, Cmdr. Kenneth D. Bowersox, Pilot Scott J. Horowitz, Mission specialists, Mark C. Lee, Steven A. Hawley, Gregory J. Harbaugh, Steven L. Smith, and Joseph R. Tanner can be seen performing pre-launch activities preparing for the night launch. The crew meets the press for pre-launch photos before being transported to the launch pad. Several views can be seen of the final inspection team on the O level and the crew being readied in the 'white room'. Launch activities such as the oxygen vent hood retraction, liftoff, SRB separation, and personnel activities in the Houston Integrated Mission Control room are viewed. Subsequent footage is provided of the crew's

activities during the HST rendezvous and docking, Extravehicular Activities (EVA's) preparation and EVA numbers 1, 3 and 5. During the first EVA the earth can be seen clearly in a reflection off of HST's offshroud during its 60th orbit crossing the equator. The HST deployment and views of the Hale-Bopp comet are clearly seen before Discovery's reentry and landing. After reentry a beautiful view of Discovery moving at 10,400 mph can be seen looking east from Mission Control. The usual twin sonic boom precedes Discovery's touchdown on runway 15 at Kennedy Space Center. This second HST service mission orbited Earth 150 times and traveled 1.4 million miles.

The STS-83 mission flight crew, Cmdr. James D. Halsell Jr., Pilot Susan L. Still, Payload Cmdr. Janice E. Voss, Mission Specialists Michael L. Gernhardt and Donald A. Thomas, and Payload Specialist Gregory T. Linteris and Roger K. Crouch present an overview of their mission. The primary payload is the Microgravity Science Laboratory (MSL), which is a collection of microgravity experiments housed inside a European Spacelab Long Module (LM). MSL features 19 materials science investigations in 4 major facilities. These facilities are the Large Isothermal Furnace, the EXpedite the PROcessing of Experiments to the Space Station (EXPRESS) Rack, the Electromagnetic Containerless Processing Facility (TEMPUS), and the Coarsening in Solid-Liquid Mixtures (CSLM) Facility, the Droplet Combustion Experiment (DCE); and the Combustion Module-1 Facility. Additional technology experiments will be performed in the Middeck Glovebox (MGBX) developed by the Marshall Space Flight Center (MSFC) and the High-Packed Digital Television (HI-PAC DTV) system will be used to provide multi-channel real-time analog science video. Pre-flight, launch, and orbital footage is followed a discussion of the spaceborne experiments aboard the MSL. The end footage shows the shuttle's prelanding checkout, reentry, and landing. CASI

**STS-83 Day 01**

Jul. 01, 1997; In English; Videotape: 21 min. playing time, in color, with sound

Report No(s): NASA-TM-112915; BRF-1407A; NONP-NASA-VT-1997047944; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

On this first day of the STS-83 mission, the flight crew, Cmdr. James D. Halsell Jr., Pilot Susan L. Still, Payload Cmdr. Janice E. Voss, Mission Specialists Michael L. Gernhardt and Donald A. Thomas, and Payload Specialists Gregory T. Linteris and Roger K. Crouch can be seen performing pre-launch activities such as eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew can be seen being readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters.

On this the ninth day of the STS-84 mission, the flight

crew, Cmdr. Charles J. Precourt, Pilot Eileen M. Collions, Payload Cmdr, Jean-Francois Clervoy (ESA), Mission Specialists Edward T. Lu, Carlos I. Noriega, Elena V. Kondakova, Jerry M. Linenger (download), and C. Michael Foale (upload) spend the morning testing Atlantis' flight control surfaces and thruster jets to ensure they are ready to support the Shuttle's high speed return to Earth. The astronauts' final day on orbit is devoted to stowing equipment and finishing experiment work in the Spacehab module in the cargo bay. In addition to 2,600 pounds of items being brought back from the Mir Space Station, Atlantis is ferrying home astronaut Jerry Linenger, who is returning to Earth after 122 days on the Mir. If Atlantis lands as planned Saturday, Linenger will have logged 132 days in space on this flight, the second longest single spaceflight by a U.S. astronaut behind the record 188-day stay in orbit by Shannon Lucid last year.

On this fifth day of the STS-84 mission, the flight crew, Cmdr. Charles J. Precourt, Pilot Eileen M. Collions, Payload Cmdr, Jean-Francois Clervoy (ESA), Mission Specialists Edward T. Lu, Carlos I. Noriega, Elena V. Kondakova, Jerry M.

Linenger (download), and C. Michael Foale (upload) continue their work through the overnight hours, transferring water, hardware and logistical supplies to and from each other's spacecraft. It is the third day of joint operations between the Shuttle and the Russian Space Station crewmembers. As planned, the newest member of the Mir 23 crew, Mike Foale, and astronaut Jerry Linenger continue their handover activities to prepare Foale for his 4 month stay on Mir. Foale will serve aboard the Russian outpost until he is replaced by astronaut Wendy Lawrence during Atlantis' next visit to Mir in September.

On this eighth day of the STS-84 mission, the flight crew, Cmdr. Charles J. Precourt, Pilot Eileen M. Collions, Payload Cmdr, Jean-Francois Clervoy (ESA), Mission Specialists Edward T. Lu, Carlos I. Noriega, Elena V. Kondakova, Jerry M. Linenger (download), and C. Michael Foale (upload) sing The Cosmonauts' Song' to Mir-23 crew members Vasily Tsibliev, Alexander Lazutkin and astronaut Mike Foale, who is beginning his four-month research mission on Mir. Foale and his new crewmates played music as Atlantis departed following the joint phase of the flight. Atlantis' undocking from Mir was modified from previous joint missions in that a flyaround of the station for photographic purposes was not conducted. Instead, Pilot Eileen Collins guided Atlantis below the Mir after the two spacecraft completed their physical separation, stopping three times at distances of 90, 300 and 1,500 feet to collect data from a European sensor device designed to assist future rendezvous of a proposed European Space Agency resupply vehicle with the International Space Station. Once the data collection was completed, the shuttle took advantage of natural orbital mechanics to drift beneath and out in front of Mir.

On this fourth day of the STS-84 mission, the flight crew, Cmdr. Charles J. Precourt, Pilot Eileen M. Collions, Payload Cmdr, Jean-Francois Clervoy (ESA), Mission Specialists Edward T. Lu, Carlos I. Noriega, Elena V. Kondakova, Jerry M.

Linenger (download), and C. Michael Foale (upload) spend their first full day of work together conducting science investigations and transferring equipment from one spacecraft to the other. The Spacehab double module at the rear of Atlantis' payload bay was the focus of activity today as crew members conducted science experiments in the Biorack facility and transferred items to and from the Mir Space Station. In an interview with CBS News, Precourt and Tsibliev praise the sixth joint docking mission between the U.S. and Russia, indicating it is serving as a worthwhile exercise to prepare for the assembly of the International Space Station. Precourt also said the Mir appears to be in good condition despite recent systems problems, and said Mir will be a perfectly safe home for Foale for his stay on orbit.

On this seventh day of the STS-94 mission, the flight crew, Cmdr. James D. Halsell, Jr., Pilot Susan L. Still, Payload Cmdr. Janice E. Voss, Mission Specialists Micheal L. Gernhardt and Donald A. Thomas, and Payload Specialists Gregory T. Linteris and Roger K. Crouch continue their around-the-clock scientific effort to examine how various materials and liquids change and behave in the weightless environment of space. With Columbia providing a stable platform for scientific activity, the seven-member crew has been able to devote its full attention to the more than 30 Microgravity Science Laboratory (MSL) experiments on board.

On this fifteenth day of the STS-94 mission the flight crew, Cmdr. James D. Halsell, Jr., Pilot Susan L. Still, Payload Cmdr. Janice E. Voss, Mission Specialists Micheal L. Gernhardt and Donald A. Thomas, and Payload Specialists Gregory T. Linteris and Roger K. Crouch express thanks to all those on the ground who prepared the shuttle, crew, and payload for an unprecedented repeat launch to complete work with the Microgravity Science Laboratory. The first flight of Columbia with the laboratory, then designated mission STS-83, was cut short due to a faulty fuel cell.

On this first day of the STS-85 mission, the flight crew, Cmdr. Curtis L. Brown, Jr., Pilot Kent V. Rominger, Payload Cmdr. N. Jan Davis (Ph.D.), Mission Specialists Robert L. Curbeam, Jr., and Stephen K. Robinson (Ph.D.), and Payload Specialist Bjarni V. Tryggvason can be seen performing pre-launch activities such as eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew can be seen being readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine

ignition, launch, and the separation of the Solid Rocket Boosters.

On this fifth day of the STS-85 mission, the flight crew, Cmdr. Curtis L. Brown, Jr., Pilot Kent V. Rominger, Payload Cmdr. N. Jan Davis (Ph.D.), Mission Specialists Robert L. Curbeam, Jr. and Stephen K. Robinson (Ph.D.), and Payload Specialist Bjarni V. Tryggvason once again test the small robotic arm serving as a prototype for one that will fly as part of the Japanese Experiment Module on the International Space Station. Simulated orbital replacement unit detachment and reattachment will be the focus. Bob Curbeam discusses the progress of the flight with a television station in St Louis, before continuing his work with the Bioreactor Demonstration System designed to perform cell biology experiments under controlled conditions. Immediately after Curbeam's interview, Canadian Payload Specialist Bjarni Tryggvason is set to talk to

elementary and high school students at a summer camp in Saskatchewan, Canada.

On this eleventh day of the STS-85 mission, the flight crew, Cmdr. Curtis L. Brown, Jr., Pilot Kent V. Rominger, Payload Cmdr. N. Jan Davis (Ph.D.), Mission Specialists Robert L. Curbeam, Jr. and Stephen K. Robinson (Ph.D.), and Payload Specialist Bjarni V. Tryggvason finish packing up the last of the loose items in the crew cabin, and the shuttle's payload bay doors will be closed. Returning to Earth with the astronauts will be the German-built Cryogenic Infrared Spectrometers and Telescopes for the Atmosphere-Shuttle Pallet Satellite-2 (CRISTA-SPAS-2), which spent nine days flying in formation with Discovery and recording data about the composition of the Earth's atmosphere, and the Technology Applications and Science-1 (TAS-01) and International Extreme Ultraviolet Hitchhiker-2 (IEH-02) instruments, which scanned the Earth and the solar system from the payload bay. Also aboard will be the Japanese-built Manipulator Flight Demonstration (MFD) experiment, which tested a small robotic arm destined for use on the future International Space Station.

On this eighth day of the STS-85 mission, the flight crew, Cmdr. Curtis L. Brown, Jr., Pilot Kent V. Rominger, Payload Cmdr. N. Jan Davis (Ph.D.), Mission Specialists Robert L. Curbeam, Jr. and Stephen K. Robinson (Ph.D.), and Payload Specialist Bjarni V. Tryggvason entered the final portion of its flight. The new Mir 24 crew of Commander Anatoly Solovyev and Flight Engineer Pavel Vinogradov, who arrived on the station the same day Discovery was launched, bid farewell to Mir 23 Commander Vasily Tsibliev and Flight Engineer

Alexander Lazutkin who are returning home after 185 days in space. The Soyuz vehicle carrying the Mir 23 crew home undocked from the station. Robinson again used the Southwest Ultraviolet Imaging System (SWUIS), a 7-inch imaging telescope that is pointed out of the orbiter's middeck hatch window, to observe the Hale-Bopp comet. Curbeam continued his work with the Bioreactor Demonstration System designed to perform cell biology experiments under controlled conditions. Tryggvason spent part of his time troubleshooting a computer hard drive system that support the Microgravity Vibration Isolation Mount experiment.

On this ninth day of the STS-85 mission, the flight crew, Cmdr. Curtis L. Brown, Jr., Pilot Kent V. Rominger, Payload Cmdr. N. Jan Davis (Ph.D.), Mission Specialists Robert L. Curbeam, Jr. and Stephen K. Robinson (Ph.D.), and Payload Specialist Bjarni V. Tryggvason watch over the Manipulator Flight Demonstration (MFD) experiment while Japanese investigators again maneuver the Small Fine Arm remotely from a control room near Mission Control. It is the final planned work with the arm during this mission. While MFD operations are ongoing, Robinson again uses the Southwest Ultraviolet Imaging System's ultraviolet imaging telescope to observe Comet Hale-Bopp and Curbeam continue his work with the Bioreactor Demonstration System designed to perform cell biology experiments under controlled conditions. Tryggvason spends his day supporting data gathering with the Microgravity Vibration Isolation Mount experiment. Before the crew's workday began, they discussed the mission's progress with reporters in the U.S. and Canada as part of the traditional crew news conference. Questions ranged from life in space for the first time space travelers to providing a report card on the more than 24 experiments being conducted throughout the mission.

#### **STS-94 Mission Highlights Resource Tape**

Aug. 18, 1997; In English; Videotape: 54 min. 5 sec. playing time, in color, with sound

Report No(s): NASA/TM-97-113062; JSC-1652; NONP-NASA-VT-1997056808; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The flight crew of STS-94, Cmdr. James D. Halsell, Jr., Pilot Susan L. Still, Payload Cmdr. Janice E. Voss, Mission Specialists Micheal L. Gernhardt and Donald A. Thomas, and Payload Specialists Gregory T. Linteris and Roger K. Crouch can be seen performing pre-launch activities such as eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew can be seen being readied in the white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. The crew is seen continuing the payload activation process, as the research efforts of the Microgravity Science Laboratory (MSL) mission get into full swing. The crew is seen in the Microgravity Science Laboratory aboard Space Shuttle Columbia activating the final experiment facility and beginning additional experiments, among the more than 30 investigations to be conducted during the 16-day mission. The tape concludes with the re-entry and landing of the Shuttle.

On this seventh day of the STS-85 mission, the flight crew, Cmdr. Curtis L. Brown, Jr., Pilot Kent V. Rominger, Payload Cmdr. N. Jan Davis (Ph.D.), Mission Specialists Robert L. Curbeam, Jr. and Stephen K. Robinson (Ph.D.), and Payload Specialist Bjarni V. Tryggvason continue to test the Manipulator Flight Demonstration experiment, or Small Fine Arm, supplied by the National Space Development Agency of Japan, which was powered up for a final day of operations. The tests today, however, center on the ability of the arm to be remotely operated from the ground instead of onboard by the crew. The ground-commanded maneuvers of the arm demonstrated the usefulness of conducting work in space even while the crew is asleep or busy with other tasks.

#### **STS-86 Day 01 Highlights**

Sep. 26, 1997; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA/TM-97-205911; BRF-1411A; NONP-NASA-VT-1997077152; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

On this first day of the STS-86 mission, the flight crew, Cmdr. James D. Wetherbee, Jr., Pilot Michael J. Bloomfield, Mission Specialists Scott E. Parazynski, Jean-Loup Chretien, Vladimir G. Titov, Wendy B. Lawrence and David A. Wolf can be seen performing pre-launch activities such as eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew can be seen being readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters.

#### **STS-86 Day 03 Highlights**

Sep. 27, 1997; In English; Videotape: 19 min. playing time, in color, with sound

Report No(s): NASA/TM-97-205913; BRF-1411C; NONP-NASA-VT-1997077154; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

On this third day of the STS-86 mission, the flight crew, Cmdr. James D. Wetherbee, Jr., Pilot Michael J. Bloomfield, Mission Specialists Scott E. Parazynski, Jean-Loup Chretien, Vladimir G. Titov, Wendy B. Lawrence and David A. Wolf conduct a series of engine firings that are designed to refine Atlantis' approach to Mir. With his crewmates providing range rate and closure data obtained from a variety of tools on board, Wetherbee manually flies Atlantis up toward Mir. After docking, the hatches between the two vehicles are swung open allowing Wetherbee and Mir Commander Anatoly Solovyev to greet each other in the airlock. Wetherbee hands Solovyev a new computer for the Mir which was brought into orbit by Atlantis for installation following the docking phase of the mission. The ten crewmembers spend a few minutes greeting one another at the start of their joint work which will involve the transfer of some four tons of supplies and water from Atlantis to the Mir.

On this fourth day of the STS-86 mission, the flight crew, Cmdr. James D. Wetherbee, Jr., Pilot Michael J. Bloomfield, Mission Specialists Scott E. Parazynski, Jean-Loup Chretien, Vladimir G. Titov, Wendy B. Lawrence and David A. Wolf spend their first full day aboard the Atlantis-Mir space complex. The ten astronauts and cosmonauts begin the transfer of more than four tons of supplies. With that transfer, Mike Foale will conclude 134 days as a Mir crew member and board Atlantis as a member of the STS-86 crew. Foale spends time with Wolf, acquainting him with his new home and showing him the location of experiments and hardware.

On this seventh day of the STS-86 mission, the flight crew, Cmdr. James D. Wetherbee, Jr., Pilot Michael J. Bloomfield, Mission Specialists Scott E. Parazynski, Jean-Loup Chretien, Vladimir G. Titov, Wendy B. Lawrence and Mike Foale are seen in preparations for a planned five-hour spacewalk to retrieve four experiment packages and to test tools and techniques for construction of the International Space Station. Parazynski and Titov are seen floating out of a hatch on Atlantis' tunnel adapter in front of the Orbiter Docking System to begin their spacewalk. They then affix a 121-pound instrument called a Solar Array Cap to the Docking Module for future use by Russian cosmonauts to seal off a suspected breach in the hull of the Spektr Module.

On this first day of the STS-89 mission, the flight crew, Cmdr. Terrence W. Wilcutt, Pilot Frank Edwards, and Mission Specialists Michael P. Anderson, James F. Reilly, Bonnie J.

Dunbar, Salizhan Shakirovich Sharipov, David A. Wolf and Andrew S.W. Thomas, can be seen performing pre-launch activities such as eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew is readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters.

### **STS-85 Mission Highlights Resources Tape**

Nov. 12, 1997; In English; Videotape: 57 min. 13 sec. playing time, in color, with sound

Report No(s): NASA/TM-97-206067; JSC-1666; NONP-NASA-VT-1997087432; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The flight crew of STS-85, Cmdr. Curtis L. Brown, Jr., Pilot Kent V. Rominger, Payload Cmdr. N. Jan Davis (Ph.D.), Mission Specialists Robert L. Curbeam, Jr. and Stephen K. Robinson (Ph.D.), and Payload Specialist Bjarni V. Tryggvason, present an overview of their mission. During the pre-launch activities the shuttle is shown being mated to the external tank and Solid Rocket Boosters (SRBs). Also included: is the arrival of the crew at the Kennedy Space Center (KSC), their suit-up, the crew being transported to the pad, being strapped in, and launch control activities. The launch includes the count down, main engine start-up, SRB start-up, the launch, the roll maneuver and SRB separation. Once the crew is in orbit, they deploy the CRISTA-SPAS payload and conduct various micro-gravity experiments. In the last part of the video the crew is seen preparing for the landing phase of the mission.

**STS-90 Day 13 Highlights**

Apr. 23, 1998; In English; Videotape: 17 min. 37 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1998166378; BRF-1414M; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

On this thirteenth day of the STS-90 mission, the flight crew, Cmdr. Richard A. Searfoss, Pilot Scott D. Altman, and Mission Specialists Richard M. Linnehan, Dafydd Rhys Williams and Kathryn P. Hire, and Payload Specialists Jay C. Buckey and James A. Pawelczyk once again take part in a variety of human autonomic experiments designed to examine blood pressure regulation in microgravity. Crew members repeat an experiment in which they use an innovative technique called microneurography. This involves placing a very fine needle in a nerve just below the knee, allowing nerve signals traveling from the brain to the blood vessels to be measured directly while the cardiovascular system is challenged using the Lower Body Negative Pressure device. LBNP is a hi-tech canister that pulls bodily fluids into the lower extremities, simulating the effect of standing on Earth.

On this eighth day of the STS-90 mission, the flight crew, Cmdr. Richard A. Searfoss, Pilot Scott D. Altman, and Mission Specialists Richard M. Linnehan, Dafydd Rhys Williams and Kathryn P. Hire, and Payload Specialists Jay C. Buckey and James A. Pawelczyk continue to operate the 26 individual experiments designed to provide insight into the operation of the nervous system, the most complex and least well-known part of the human body. The STS-90 crew members have used themselves as test subjects in a variety of experiments associated with studying functions such as blood pressure regulation, balance, coordination and sleep patterns. They also have studied a variety of animals to gain additional insight into the effects of the weightless environment of space on the development and performance of the nervous system.

Also, included are various panoramic views of the shuttle on the pad. The crew is readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. Once in orbit, there are various views of the Mir Space Station as the shuttle begins its approach and docks. After the docking the two crews open the entry hatch and greet each other. The astronauts and cosmonauts transfer supplies from the shuttle to Mir. The astronauts prepare for the reentry phase of their mission. The Shuttle separates from the Russian Space Station with a gentle push from springs in the docking mechanism that attaches it to the Space Station. The

final view shows the crews' preparations for reentry and landing.

The flight crew of the STS-90 mission, Cmdr. Richard A. Searfoss, Pilot Scott D. Altman, and Mission Specialists Richard M. Linnehan, Dafydd Rhys Williams and Kathryn P. Hire, and Payload Specialists Jay C. Buckey and James A. Pawelczyk can be seen performing pre-launch activities such as eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew is readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. In the second part of the video the crew turns its attention to a variety of experiments inside the Shuttle's cabin. These experiments include the processing of several samples of materials in the glovebox facility in Columbia's middeck; the experiment called PEP, which involves heating samples as they resolidify; and the study of plant growth in space.

On this fifteenth day of the STS-90 mission, the flight crew, Cmdr. Richard A. Searfoss, Pilot Scott D. Altman, and Mission Specialists Richard M. Linnehan, Dafydd Rhys Williams and Kathryn P. Hire, and Payload Specialists Jay C. Buckey and James A. Pawelczyk turns its attention to dexterity tests and dissections of rats neonates and the ball-catch experiment. Mission Specialists Rick Linnehan and Dave Williams and Payload Specialist Jim Pawelczyk will dissect the newborn

rats. The dexterity test will test the response of young rats as they are tilted and turned while walking and climbing on a special apparatus with various surfaces. Later, all four payload crew members will repeat the ball-catch experiment. This experiment studies the ability of the central nervous system to accept and interpret new stimuli in space. The astronauts have performed this test at various points in the mission so scientists can compare their responses as their bodies adapt to weightlessness.

On this fourteenth day of the STS-90 mission, the flight crew, Cmdr. Richard A. Searfoss, Pilot Scott D. Altman, and Mission Specialists Richard M. Linnehan, Dafydd Rhys Williams and Kathryn P. Hire, and Payload Specialists Jay C. Buckey and James A. Pawelczyk focus on the efforts of Neurolab's Neuronal Plasticity Team to better understand how the adult nervous system adapts to the new environment of space. Columbia's science crew -- Mission Specialists Rick Linnehan and Dave Williams and Payload Specialists Jay Buckey and Jim Pawelczyk -- perform the second and final in-flight dissections of the adult male rats on board. The crew euthanizes and dissects nine rats and remove the vestibular or balance organs of the inner ear; the cerebellum, the part of the brain critical for maintaining balance and for processing information from the limbs so they can be moved smoothly; and the cerebrum, one part of which controls automatic functions such as body temperature regulation and the body's internal clock, and the cortical region that controls cognitive functions such as thinking. The first dissection, which was performed on the second day of the flight, went extremely well, according to Neurolab scientists.

On this tenth day of the STS-90 mission, the flight crew, Cmdr. Richard A. Searfoss, Pilot Scott D. Altman, and Mission Specialists Richard M. Linnehan, Dafydd Rhys Williams and Kathryn P. Hire, and Payload Specialists Jay C. Buckey and James A. Pawelczyk have a relatively light day of scientific activity on board Columbia. The science crew of Mission Specialists Rick Linnehan and Dave Williams, along with Payload Specialists Jay Buckey and Jim Pawelczyk, continue investigations into how the human nervous system adapts to the weightlessness of space. All four serve as subjects in a vestibular experiment that uses an on-board rotating chair. The Visual and Vestibular Integration System (VVIS) correlates eye

movements with balance. Developed by the European Space Agency, the chair stimulates the human balance system with both spinning and tilting sensations. Infrared video cameras observe and capture the eye movements that accompany the exercise.

On this fourth day of the STS-90 mission, the flight crew, Cmdr. Richard A. Searfoss, Pilot Scott D. Altman, and Mission Specialists Richard M. Linnehan, Dafydd Rhys Williams and Kathryn P. Hire, and Payload Specialists Jay C. Buckey and James A. Pawelczyk continue work with the Escher Staircase Behavior Testing of Adult Rats experiment. This is the first of two behavior testing sessions with the adult rats being used for this experiment. The rats will have a 'hyper drive' unit placed on their head which has recording electrodes made of microscopic wires that are positioned in the brain to record activity in the hippocampus. The hippocampus is that portion of the brain used to develop spatial maps to help us navigate from one place to the other. With the 'hyper drive' units in place, the rats will then be put through a maze or on a track. While the rat is maneuvering on the maze or track, the cell activity of the hippocampus will be measured and recorded.

On this seventh day of the STS-88 mission, the flight crew, Commander Robert D. Cabana, Pilot Frederick W. Sturckow, and Mission Specialists Nancy J. Currie, James H. Newman, Jerry L. Ross, and Sergei Krikalev are seen preparing for a 6-1/2 hour space walk. During this walk Newman and Ross install two box-like antennas on the outside of the Unity module. In addition they remove launch restraints over four hatchways, install insulating covers on the trunnion pins, and free one of two bulky antennas on Zarya's backup rendezvous navigation system.

On this eleventh day of the STS-88 mission, the flight crew, Commander Robert D. Cabana, Pilot Frederick W. Sturckow, and Mission Specialists Nancy J. Currie, James H. Newman, Jerry L. Ross, and Sergei Krikalev are awakened with the song 'Goodnight, Sweetheart, Goodnight'. Pilot Rick Sturckow undocks Endeavour from the station and backs the shuttle away to a distance of 450 feet above the station before beginning a nose-forward fly-around. Later Cabana, Sturckow and Ross deploy the SAC-A satellite from Endeavour's payload bay. SAC-A is a small, self-contained, non-recoverable satellite built by the Argentinean National Commission of

Space Activities. The cube-shaped, 590-pound satellite will test and characterize the performance of new equipment and technologies that may be used in future scientific or operational missions. The payload includes a differential global positioning system, a magnetometer, silicon solar cells, a charge-coupled device Earth camera and a whale tracker experiment.

On this sixth day of the STS-88 mission, the flight crew, Commander Robert D. Cabana, Pilot Frederick W. Sturckow, and Mission Specialists Nancy J. Currie, James H. Newman, Jerry L. Ross, and Sergei Krikalev are awakened by Dwight Yokum's 'Streets of Bakersfield,' requested by the wife of Pilot Rick Sturckow, a California native. Cabana and Sturckow fire Endeavour's primary reaction control jets to raise the altitude of the International Space Station by about 5-1/2 statute miles. Later on Cabana, Sturckow and Currie are interviewed by the ABC News/Discovery Channel and MSNBC.

On this fifth day of the STS-88 mission, the flight crew, Commander Robert D. Cabana, Pilot Frederick W. Sturckow, and Mission Specialists Nancy J. Currie, James H. Newman, Jerry L. Ross, and Sergei Krikalev are awakened with the song 'Jerry the Rigger,' in honor of Mission Specialist Jerry Ross. Ross and Newman are then seen being readied for the first EVA. This space walk, which will last 6-1/2 hours, will focus on connecting computer and electrical cables between Unity, the two mating adapters attached to either end of Unity, and Zarya. In all, Ross and Newman will make about 40 connections during the spacewalk. This will enable power to flow to Unity for the first time in orbit and will permit Unity's

avionics, computers and heaters to be activated.

On this fourth day of the STS-88 mission, the flight crew, Commander Robert D. Cabana, Pilot Frederick W. Sturckow, and Mission Specialists Nancy J. Currie, James H. Newman, Jerry L. Ross, and Sergei are awakened to the sounds of 'Somewhere Over the Rainbow,' requested by Commander Bob Cabana's daughter, Sarah. With the three-story-high Unity connecting module latched upright in the shuttle's payload bay, Cabana takes manual control of the shuttle as it moves to within about a half-mile of Zarya. Cabana and Sturckow execute a sequence of maneuvers that will bring Endeavour directly above the module. Currie uses the robotic arm to capture the module. She then positions Zarya above Unity's docking mechanism.

#### **STS-88 Day 10 Highlights**

Dec. 13, 1998; In English; Videotape: 18 min. 38 sec. playing time, in color, with sound

Report No(s): BRF-1417J; NONP-NASA-VT-1998435145; No Copyright; Avail: CASI; [B02](#), Videotape-Beta; [V02](#), Videotape-VHS

On this tenth day of the STS-88 mission, the flight crew, Commander Robert D. Cabana, Pilot Frederick W. Sturckow, and Mission Specialists Nancy J. Currie, James H. Newman, Jerry L. Ross, and Sergei Krikalev are awakened by the sounds of Elvis Presley's 'Hound Dog'. Today's activities are devoted mostly to tasks that ready the station for future assembly work. The crew's first job is to release some cable ties on four cables connected on an earlier space walk, three located on Unity's upper mating adapter and one on its lower adapter, to relieve tension on the lines. The space walkers also will check an insulation cover on one cable connection on the lower Pressurized Mating Adapter (PMA 2) to make sure it is fully installed. Near the end of the space walk, the astronauts

conduct a detailed photographic survey of the space station from top to bottom. Finally, each astronaut test fires the Simplified Aid for Extravehicular Activity Rescue (SAFER) jet backpacks they are wearing, a type of space 'lifejacket,' that would allow an astronaut to fly back to the station if they should ever become untethered.

On this third day of the STS-88 mission, the flight crew, Commander Robert D. Cabana, Pilot Frederick W. Sturckow, and Mission Specialists Nancy J. Currie, James H. Newman, Jerry L. Ross, and Sergei Krikalev check out the various tools they will use during the three scheduled spacewalks to be conducted later in the flight. They then begin an early set-up of the Shuttle's airlock in preparation for that first spacewalk. Newman and Russian cosmonaut Sergei Krikalev take part in an on-line interview by the New York Times. Currie is seen placing Unity just inches above the extended outer ring on Endeavour's docking mechanism, enabling Commander Bob Cabana to fire downward maneuvering jets to lock the shuttle's docking system to one of two Pressurized Mating Adapters (PMA's) attached to Unity.

### **STS-81 Post Flight Presentation**

Feb. 16, 1997; In English; Videotape: 41 min. 45 sec. playing time, in color, with sound

Report No(s): JSC-1623; NONP-NASA-VT-199016919; No Copyright; Avail: CASI; [B03](#), Videotape-Beta; [V03](#), Videotape-VHS

The flight crew of the STS-81 mission, Commander Michael A. Baker, Pilot Brent W. Jett Jr, and Mission Specialists John M. Grunsfeld, Marsha S. Ivins, Peter J.K. Wisoff, and Jerry M. Linenger present a video mission over-view of their space flight. Images include prelaunch activities such as eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also included are various panoramic views of the shuttle on the pad. The crew can be seen being readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. During the presentation the astronauts take turns discussing aspects of the mission including: the SPACEHAB a double module that provides additional mid-deck locker space for secondary experiments. During the five days of docked operations with Mir, the crews is seen transferring water and supplies from one spacecraft to the other.

#### **STS-88 Crew Interview: Frederick 'Rick' Sturckow**

Dec. 17, 1998; In English; Videotape: 26 min. playing time, in color, with sound

Report No(s): JSC-1748B; NONP-NASA-VT-1999011623; No Copyright; Avail: CASI; [B02](#), Videotape-Beta; [V02](#), Videotape-VHS

Frederick Sturckow discusses the seven-day mission that will be highlighted by the mating of the U.S.-built Node 1 station element to the Functional Energy Block (FGB) which will already be in orbit, and two spacewalks to connect power and data transmission cables between the Node and the FGB. Node 1 will be the first Space Station hardware delivered by the Space Shuttle. He also discusses the assembly sequence. The crew will conduct a series of rendezvous maneuvers similar to those conducted on other Shuttle missions to reach the orbiting FGB. Once the two elements are docked, Ross and Newman will conduct two scheduled spacewalks to connect power and data cables between the Node, PMAs and the FGB. The day following the spacewalks, Endeavour will undock from the two components, completing the first Space Station assembly mission.

#### **STS-87 Mission Highlights Resources Tape**

Dec. 15, 1998; In English; Videotape: 1 hour 28 min. playing time, in color, with sound

Report No(s): JSC-1698; NONP-NASA-VT-1998062053; No Copyright; Avail: CASI; [B04](#), Videotape-Beta; [V04](#), Videotape-VHS

The STS-87 mission the flight crew, Commander Kevin R. Kregel, Pilot Steven W. Lindsey, Mission Specialists Winston E. Scott, Kalpana Chawla, and Takao Doi, and Payload Specialist Leonid K. Kadenyuk present an overview of their mission. STS-87 will fly the USA Microgravity Payload (USMP-4), the Spartan-201, the Orbital Acceleration Research Experiment (OARE), the EVA Demonstration Flight Test 5 (EDFT-05). The objective of the observations are to investigate the mechanisms causing the heating of the solar corona and the acceleration of the solar wind which originates in the corona. While flying separately in the cargo bay, the Orbital Acceleration

tion Research Experiment (OARE) is an integral part of USMP-04. It is a highly sensitive instrument designed to acquire and record data of low-level aerodynamic acceleration along the orbiter's principal axes in the free-molecular flow regime at orbital altitudes and in the transition regime during re-entry. OARE data will support advances in space materials processing by providing measurements of the low-level, low frequency disturbance environment affecting various micro-gravity experiments. OARE data will also support advances in orbital drag prediction technology by increasing the understanding of the fundamental flow phenomena in the upper atmosphere.

After the closing of the hatch and arm retraction, launch activities are

shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. Once on-orbit the primary objectives include conducting a variety of science experiments in the pressurized SPACEHAB module, the deployment and retrieval of the Spartan free-flyer payload, and operations with the Hubble Space Telescope (HST) Orbiting Systems Test (HOST) and the International Extreme Ultraviolet Hitchhiker (IEH) payloads being carried in the payload bay. Throughout the presentation, the astronauts take turns narrating particular aspects of the mission with which they were involved.

**STS-88 Mission Highlights Resources Tape, Tape C**

Mar. 02, 1999; In English; Videotape: 54 min. 20 sec. playing time, in color, with sound

Report No(s): JSC-1776/C; NONP-NASA-VT-1999037061; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The STS-88 flight crew, Commander Robert D. Cabana, Pilot Frederick W. Sturckow, and Mission Specialists Nancy J. Currie, James H. Newman, Jerry L. Ross, and Sergei Krikalev present a video overview of their space flight. This is the last of three videos which show the highlights of the mission. This video covers the last four days (day 9 - 12) of the mission. Important images include the closing of the UNITY Connecting Module's hatch, the crew exercising, and the reentry of the spacecraft into Earth's atmosphere.

Report No(s): JSC-1776/A; NONP-NASA-VT-1999037063; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The STS-88 flight crew, Commander Robert D. Cabana, Pilot Frederick W. Sturckow, and Mission Specialists Nancy J. Currie, James H. Newman, Jerry L. Ross, and Sergei Krikalev present a video overview of their space flight. This is the first of three videos which show the highlights of the Endeavour mission. Important visual images include pre-launch activities such as the eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also included are various panoramic views of the shuttle on the pad. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. Once on-orbit crew members are seen delivering and connecting the UNITY Connecting Module to the ZARYA Control Module.

The Crew of STS-86 Atlantis Shuttle, Commander James D. Wetherbee, Pilot Michael J. Bloomfield, Mission Specialists Vladimir G. Titov, Scott E. Parazynski, Jean-Loup J. M. Chretien, Wendy Lawrence, and David Wolf, narrate the footage of their mission to the Mir International Space Station. Scenes include crew suit up, walk out to the transfer vehicle, strap-in into the shuttle, start of the main engine, ignition of the rocket boosters, and separation of the solid rocket boosters. The crew of Atlantis participates in an exchange of gifts with the members of Mir, and a space walk to recover experiments outside the Mir Space Station. A beautiful panoramic view of Mir above South America is seen. Scenes also depict the closing of Mir's hatch, Atlantis' separation from Mir, and the

reentry of the Atlantis Space Shuttle into the Earth's atmosphere.

On this fifth day of the STS-96 Discovery mission, the flight crew, Commander Kent V. Rominger, Pilot Rick D. Husband, and Mission Specialists Ellen Ochoa, Tamara E. Jernigan, Daniel T. Barry, Julie Payette, and Valery Ivanovich Tokarev are seen performing logistics transfer activities within the Discovery/International Space Station orbiting complex. The crew transfers supplies, equipment, and water. Payette and Tokarev perform maintenance activities on the storage batteries in the Zarya module. Barry and Tokarev install acoustic insulation around some of the fans inside Zarya. Jernigan and Husband install shelving in 2 soft stowage racks. Husband and Barry troubleshoot and perform maintenance activities on the Early Communications System. At the end of the workday, Rominger, Jernigan, and Barry discussed the progress of the mission with NBC's 'Today,' CBS 'This Morning,' and CNN. CASI

**Dan Goldin Presentation: Pathway to the Future**

Apr. 05, 1999; In English; Videotape: 87 min. 30 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999064054; No Copyright; Avail: CASI; [B04](#), Videotape-Beta; [V04](#), Videotape-VHS

In the 'Path to the Future' presentation held at NASA's Langley Center on March 31, 1999, NASA's Administrator Daniel S. Goldin outlined the future direction and strategies of NASA in relation to the general space exploration enterprise. NASA's Vision, Future System Characteristics, Evolutions of Engineering, and Revolutionary Changes are the four main

topics of the presentation. In part one, the Administrator talks in detail about NASA's vision in relation to the NASA Strategic Activities that are Space Science, Earth Science, Human Exploration, and Aeronautics & Space Transportation. Topics discussed in this section include: space science for the 21st century, flying in mars atmosphere (mars plane), exploring new worlds, interplanetary internets, earth observation and measurements, distributed information-system-in-the-sky, science enabling understanding and application, space station, microgravity, science and exploration strategies, human mars mission, advance space transportation program, general aviation revitalization, and reusable launch vehicles. In part two, he briefly talks about the future system characteristics. He discusses major system characteristics like resiliency, self-sufficiency, high distribution, ultra-efficiency, and autonomy and the necessity to overcome any distance, time, and extreme environment barriers. Part three of Mr. Goldin's talk deals with engineering evolution, mainly evolution in the Computer Aided Design (CAD)/Computer Aided Engineering (CAE) systems. These systems include computer aided drafting, computerized solid models, virtual product development (VPD) systems, networked VPD systems, and knowledge enriched networked VPD systems. In part four, the last part, the Administrator talks about the need for revolutionary changes in communication and networking areas of a system. According to the administrator, the four major areas that need cultural changes in the creativity process are human-centered computing, an infrastructure for distributed collaboration, rapid synthesis and simulation tools, and life-cycle integration and validation. Mr. Goldin concludes his presentation with the following maxim 'Collaborate, Integrate, Innovate or Stagnate and Evaporate.' He also answers some questions after the presentation.

**STS-96 Mission Highlights, Part 1**

Jul. 07, 1999; In English; Videotape: 50 min. 30 sec. playing time, in color, with sound

Report No(s): JSC-1790/PT1; NONP-NASA-VT-1999087306; No Copyright; Avail: CASI; [B03](#), Videotape-Beta; [V03](#), Videotape-VHS

In this first part of a three-part video mission-highlights set, the flight of the STS-96 Space Shuttle Orbiter Discovery is reviewed. The flight crew consists of Kent V. Rominger, Commander; Rick D. Husband, Pilot; and Mission Specialists Ellen Ochoa, Tamara E. Jernigan, Daniel T. Barry, Julie Payette (Canadian), and Valery Ivanovich Tokarev (Russian). The primary goals of this mission were to work on logistics and resupply the International Space Station (ISS). This is the first

flight to dock to the International Space Station. The primary payloads are the Russian cargo crane, known as STRELA, which the astronauts mount to the exterior of the Russian station segment, the SPACEHAB Oceanering Space System Box (SHOSS), and a U.S. built crane called the ORU Transfer Device (OTD). Other payloads include the Student Tracked Atmospheric Research Satellite for Heuristic International Networking Equipment (STARSHINE), the Shuttle Vibration Forces Experiment (SVF), and the Orbiter Integrated Vehicle Health Monitoring - HEDS Technology Demonstration (IVHM HTD). The traditional pre-launch breakfast, being suited up, entry into the Shuttle, and views of the liftoff from several different vantage points are shown. In-flight footage includes views from the robot arm conducting a television survey of Discovery's payload bay and the flawless docking of the Unity module with the International Space Station. During the docking, camera views from both the ISS and Discovery are presented. These activities make up the first three Flight Days of STS-96.

### **STS-96 Mission Highlights, Part 2**

Jul. 07, 1999; In English; Videotape: 55 min. 51 sec. playing time, in color, with sound

Report No(s): JSC-1790/PT2; NONP-NASA-VT-1999087307; No Copyright; Avail: CASI; [B03](#), Videotape-Beta; [V03](#), Videotape-VHS

In this second part of a three-part video mission-highlights set, on-orbit spacecrew activities performed on the STS-96 Space Shuttle Orbiter Discovery and the International Space Station are reviewed. The flight crew consists of Kent V. Rominger, Commander; Rick D. Husband, Pilot; and Mission Specialists Ellen Ochoa, Tamara E. Jernigan, Daniel T. Barry, Julie Payette (Canadian), and Valery Ivanovich Tokarev (Russian). The primary goals of this mission were to work on logistics and resupply the International Space Station. This second part in the mission series features video from Flight Day 4-7 (FD 4-7). FD 4 of STS-96 presents astronauts Tammy Jernigan and Dan Barry completing the second longest space walk in shuttle history. Footage includes Jernigan and Barry transferring and installing two cranes from the shuttle's payload bay to locations on the outside of the station. The astronauts enter the International Space Station delivering supplies and prepare the outpost to receive its first resident crew, scheduled to arrive in early 2000 on FD 5. The video also captures the crew involved in logistics transfer activities within the Discovery/ISS orbiting complex. FD 6 includes footage of Valery Tokarev and Canadian astronaut Julie Payette charging out the final six battery recharge controller units for two of Zarya's power-producing batteries and all crew members'

involvement in logistics transfer activities from the SPACEHAB module to designated locations in the International Space Station. With the transfer work of FD 6 all but complete, the astronauts conduct some additional work, installing parts of a wireless strain gauge system that will help engineers track the effects of adding modules to the station throughout its assembly. Moving the few remaining items from Discovery to the ISS, then closing a series of hatches within the station's modules leading back to the shuttle are the primary activities contained in FD 7. Final coverage features Discovery's astronauts finishing their work inside the International Space Station, closing all of the hatches and readying the shuttle's small thrusters to be fired to raise the entire complex's orbit in preparation for the undocking and departure set for FD 8.

### **STS-96 Mission Highlights, Part 3**

Jul. 07, 1999; In English; Videotape: 41 min. 58 sec. playing time, in color, with sound

Report No(s): JSC-1790/PT3; NONP-NASA-VT-1999087308; No Copyright; Avail: CASI; [B03](#), Videotape-Beta; [V03](#), Videotape-VHS

In this third part of a three-part video mission-highlights set, spacecrew operations between the STS-96 Space Shuttle Orbiter Discovery and the International Space Station, as well as STS reentry and landing is reviewed. The flight crew consists of Kent V. Rominger, Commander; Rick D. Husband, Pilot; and Mission Specialists Ellen Ochoa, Tamara E. Jernigan, Daniel T. Barry, Julie Payette (Canadian), and Valery Ivanovich Tokarev (Russian). The primary goals of this mission were to work on logistics and resupply the International Space Station. This third part of the three part series includes footage from Flight Days 8-11 (FD 8-11) of the mission. FD 8 includes the crew members moving the last items from Discovery into the International Space Station (ISS), closing the final hatch on the orbiting outpost and commanding a series of 17 pulses of Discovery's reaction control system jets to boost the station's orbit. Discovery undocks from the station, performs a 2 1/2 lap flyaround of the station, before Husband fires Discovery's jets in a final burst to move Discovery away from the station, concluding six days of docked operations. After the flyaround, Husband fires Discovery's jets to depart the station's vicinity. Beginning FD 9, as Discovery departs from the station, Mission Specialists Tammy Jernigan and Dan Barry pack away the space suit gear they used during their spacewalk early in the mission, while Commander Kent Rominger and Pilot Rick Husband practice landings on a laptop computer program. Mission Specialists Julie Payette and Valery Tokarev help to stow gear and repressurize the

shuttle's cabin to its standard 14.7 pounds per square inch. The crew also readies to deploy a small, student-built payload called STARSHINE (Student Tracked Atmospheric Research Satellite for Heuristic International Networking Equipment). In and around landing preparations and the STARSHINE deploy, the crew stowe all equipment used throughout the mission. The STARSHINE satellite ejects from a canister in Discovery's payload bay on FD 10. FD 11 is completed as Discovery swoops out of the darkness as Commander Kent Rominger sets the shuttle and his crewmates down on Runway 15 at the Shuttle Landing Facility in Florida to successfully complete the first shuttle mission of the year. Several different views of the landing are highlighted in the video.

This tape is an interview with Eileen M. Collins. In July 1999, she became the first female shuttle commander in NASA history. It was her third mission to space. She was the pilot of two previous space missions. In this interview she discussed the different telescopes that have been used in prior missions. She also talked about the functions of the new telescope 'chandra' that have been used in this mission.

On this first day of the STS-93 Columbia mission, the flight crew, Commander Eileen Collins, Pilot Jeff Ashby and Mission Specialists Cady Coleman, Steve Hawley and Michael Tognini deployed the Chandra X-Ray Observatory into space. This was done after a full night of work and preparation. Chandra will study the invisible, and often violent mysteries of x-ray astronomy. Commander Collins maneuvered Columbia to a safe distance away from the telescope as an internal timer counted down to the first of a two-phase ignition of the Inertial Upper Stage. After switching to internal battery power until its

solar rays are deployed, the telescope reaches an oval orbit one-third the distance to the Moon to conduct its astronomical observations. Since Chandra is safely on its way and the major objective of their mission is successfully completed, the astronauts end their long day and begin an eight hour sleep period.

Commander Eileen Collins, Pilot Jeff Ashby, and Mission Specialists Cady Coleman, Steve Hawley and Michael Tognini were awakened with the song 'Brave New Girls' performed by Teresa. Steve Hawley, the resident astronomer, continued to work with the Southwest Ultraviolet Imaging System (SWUIS) and collected images of targets associated with Mercury, Venus, Jupiter and the Moon. Collins and Ashby maneuvered Columbia in support of various experiments including observations made with the SWUIS telescope or the Midcourse Space Experiment (MSX), which used sophisticated sensors to collect ultraviolet, infrared, and visible light data of firings of the shuttle's orbital maneuvering system engines or primary reaction control system jets. Collins also conducted a conversation with students at the Harbor View Elementary School in Corona Del Mar, California using the Shuttle Amateur Radio Experiment (SAREX) system. She also checked experiments associated with the Cell Culture Module (CCM) and the Biological Research in Canister (BRIC) payloads.

Following an eight hour sleep period, the five member flight crew, Commander Eileen Collins, Pilot Jeff Ashby, and Mission Specialists Cady Coleman, Steve Hawley and Michael Tognini awakened to begin their second day in space. The main focus of Flight Day 2 activities was to activate the secondary

payloads and experiments. Among those efforts was the set-up and first observations using the Southwest Ultraviolet Imaging System (SWUIS), which operates from inside the shuttle cabin. The specific targets observed included the Earth's moon, Mercury, Venus and Jupiter. A break was taken at 4:36 a.m. CDT by Collins and Coleman to do interviews with reporters from 4 major networks.

Columbia's crew began packing up experiments and preparing to return to Earth tomorrow with a touchdown planned for Kennedy Space Center at 10:20 p.m. CDT. Commander Eileen Collins and Pilot Jeff Ashby checked out the cockpit instruments, displays and flight control systems. They also test fired the 38 small steering jets. Everything was in good shape and ready for the trip back to Earth. Also, Collins and Ashby were joined by the rest of the crew for a press conference, fielding questions from reporters in Houston, Florida and Massachusetts.

The five astronauts aboard the Space Shuttle Columbia began their fourth flight day preparing to make additional celestial observations through the shuttle's windows and continue work with a variety of instruments. Pilot Jeff Ashby and Mission Specialists Steve Hawley and Michael Tognini set up an exercise treadmill and the Treadmill Vibration Information System (TVIS) which measures vibrations and changes in microgravity levels caused by on-orbit workouts. Astronomer Hawley again made observations of Venus, Jupiter and the Moon with the Southwest Ultraviolet Imaging System (SWUIS) as Commander Eileen Collins and Pilot Jeff Ashby put the shuttle in the proper orientation for his observations.

Tognini and Coleman checked the bioprocessing experiments, and harvested mouse-ear cress plants as part of the Plant Growth in Microgravity experiment. Collins and Ashby once again fired the shuttle's engines so that the sensors of the Midcourse Space Experiment (MSX) satellite were able to collect ultraviolet, infrared and visible light data. Columbia was orbiting at an altitude of 182 statute miles with all of its systems in excellent condition.

The Crew of STS-96 Discovery Shuttle, Commander Kent V. Rominger, Pilot Rick D. Husband, Mission Specialists Ellen Ochoa, Tamara E. Jernigan, Daniel T. Barry, Julie Payette, and Valery Ivanovich Tokarev, are shown narrating the mission highlights. Scenes include walk out to the transfer vehicle, and launch of the shuttle. Also presented are scenes of the start of the main engine, ignition of the solid rocket boosters, and the separation of the solid rocket boosters. Footage of Payette preparing the on-board camera equipment, while Barry and Jernigan perform routine checks of the equipment is seen. Also presented are various pictures of the shuttle in its orbit, the docking of the shuttle with the Mir International Space Station, and crewmembers during their space walk. Beautiful panoramic views of the Great Lake, Houston, and a combined view of Italy and Turkey are seen. The crew of Discovery is shown performing a juice ball experiment, tumbling, undocking, performing transfer operations, and deploying the STAR-SHINE educational satellite. The film ends with the reentry of the Discovery Space Shuttle into the Earth's atmosphere.

An overview of Flight STS-93 is presented. The primary

objective of the STS-93 mission was to deploy the Advanced X-Ray Astrophysics Facility (AXAF), also known as the Chandra X-ray Observatory. The mission flew on the Columbia Shuttle, on July 22, 1999. This facility is the most sophisticated X-ray observatory ever built. Other payloads on STS-93 were: (1) the Midcourse Space Experiment (MSX), (2) Shuttle Ionospheric Modification with Pulsed Local Exhaust (SIMPLEX), (3) Southwest Ultraviolet Imaging System (SWUIS), (4) Gelation of Sols: Applied Microgravity Research (GOS-AMR), Space Tissue Loss-B (STL-B), (5) Light Weight Flexible Solar Array Hinge (LFSAH), (6) Cell Culture Module (CCM), and (7) the Shuttle Amateur Radio Experiment-II (SAREX-II), (8) EarthKam, (9) Plant Growth Investigations in Microgravity (PGIM), (10) Commercial Generic Bioprocessing Apparatus (CGBA), (11) Micro-Electrical Mechanical System (MEMS), and (12) the Biological Research in Canisters (BRIC). The crew was: Eileen M. Collins, Mission Commander, the first female shuttle commander; Jeffrey S. Ashby, Pilot; Steven A. Hawley, Mission Specialist; Catherine G. Coleman, Mission Specialist; Michel Tognini (CNES), Mission Specialist. The video contains views of life aboard the space shuttle. This mission featured both a night launching and a night landing at the Kennedy Space Center.

### **STS-103 Crew Training**

Nov. 08, 1999; In English; Videotape: 29 min. 17 sec. playing time, in color, with sound

Report No(s): JSC-1812; NONP-NASA-VT-1999202514; No Copyright; Avail: CASI; [B02](#), Videotape-Beta; [V02](#), Videotape-VHS

The Hubble Space Telescope (HST) team is preparing for NASA's third scheduled service call to Hubble. This mission, STS-103, will launch from Kennedy Space Center aboard the Space Shuttle Discovery. The seven flight crew members are Commander Curtis L. Brown, Pilot Scott J. Kelly, European Space Agency (ESA) astronaut Jean-Francois Clervoy who will join space walkers Steven L. Smith, C. Michael Foale, John M. Grunsfeld, and ESA astronaut Claude Nicollier. The objectives of the HST Third Servicing Mission (SM3A) are to replace the telescope's six gyroscopes, a Fine-Guidance Sensor, an S-Band Single Access Transmitter, a spare solid-state recorder and a high-voltage/temperature kit for protecting the batteries from overheating. In addition, the crew plans to install an advanced computer that is 20 times faster and has six times the memory of the current Hubble Space Telescope computer. To prepare for these extravehicular activities (EVAs), the SM3A astronauts participated in Crew Familiarization sessions with the actual SM3A flight hardware. During these sessions the crew spent long hours rehearsing their space walks in the

Guidance Navigation Simulator and NBL (Neutral Buoyancy Laboratory). Using space gloves, flight Space Support Equipment (SSE), and Crew Aids and Tools (CATs), the astronauts trained with and verified flight orbital replacement unit (ORU) hardware. The crew worked with a number of trainers and simulators, such as the High Fidelity Mechanical Simulator, Guidance Navigation Simulator, System Engineering Simulator, the Aft Shroud Door Trainer, the Forward Shell/Light Shield Simulator, and the Support Systems Module Bay Doors Simulator. They also trained and verified the flight Orbital Replacement Unit Carrier (ORUC) and its ancillary hardware. Discovery's planned 10-day flight is scheduled to end with a night landing at Kennedy.

This NASA KSC video release is comprised of live shots covering the day launch and landing of STS-51C/Discovery. The flight crew members were: Thomas K. Mattingly II, Commander; Loren J. Shriver, Pilot; Ellison S. Onizuka, Mission Specialist; James F. Buchli, Mission Specialist; and Gary E. Payton, Payload Specialist. The launch video is presented from several different vantage points and covers the countdown from the launch pad, main engine ignition, liftoff, and solid rocket booster separation. The landing footage contains final descent and approach, landing gear deployment, and touchdown, which was also captured from different locations including a helicopter. STS-51C carried the DoD 85-1 payload and was the first mission dedicated to the Department of Defense.

This NASA Kennedy Space Center two-part video release is comprised of footage covering STS-26 launch preparations from the arrival of the Tracking and Data Relay Satellite (TDRS) at the Orbiter Processing Facility (OPF) to the lift and mate of the external tanks. The STS-26 flight crew include: Frederick H. (Rick) Hauck, mission commander; Richard O. Covey, pilot; John M. (Mike) Lounge, mission specialist; David C. Hilmers, mission specialist; and George D. (Pinky) Nelson, mission specialist. The primary payload of STS-26 is the TDRS while the secondary payloads include the Physical Vapor Transport of Organic Solids (PVTOS); Protein Crystal Growth (PCG); Infrared Communications Flight Experiment (IRCFE); Aggregation of Red Blood Cells (ARC); Isoelectric Focusing Experiment (IFE); Mesoscale Lightning Experiment (MLE); Phase Partitioning Experiment (PPE); Earth-Limb Radiance Experiment (ELRAD); Automated Directional So-

lidification Furnace (ADSF) and two Shuttle Student Involvement Program (SSIP) experiments. Launch preparation footage includes flight crew arrival at KSC, rollout of Discovery to Pad B, OV-103 Discovery power-up, main engine unpacking and installation, solid rocket boosters' arrival prep and stacking, and aft skirt to aft segment mating.

The STS-93 flight crew, Commander Eileen M. Collins, Pilot Jeffrey S. Ashby, and Mission Specialists Steven A. Hawley, Catherine G. Coleman, and Michel Tognini are seen performing pre-launch activities such as crew suit-up, and ride out to the launch pad for an early morning launch. Also, included are various panoramic views of the shuttle on the pad. The crew is readied in the White Room for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. Once on-orbit the primary objective is to deploy the Advanced X-ray Astrophysics Facility. Throughout the presentation, the astronauts take turns narrating particular aspects of the mission with which they are involved. Coleman and Tognini command Chandra to spring-eject from its cradle in the payload bay. The crew then work on the various experiments being carried out in flight. They successfully set up the first observatory using the Southwest Ultraviolet Imaging System (SWUIS). The SWUIS is used to image planets and other solar system bodies in order to explore their atmospheres and surfaces in the ultraviolet (UV) region of the spectrum. Tognini conducts a ham radio conversation with Jean-Pierre Haignere on the Mir Space Station. Towards the end of the mission Ashby, Hawley and Tognini set up an exercise treadmill and the Treadmill Vibration Information System (TVIS). The live footage ends with the reentry of Columbia into the Earth's Atmosphere. The night landing includes touchdown, deployment of the drag chute and crew departure from the vehicle.

The STS-51G flight crew, Commander Daniel C. Brandenstein, Pilot John O. Creighton, Mission Specialists Shannon W. Lucid, John M. Fabian, and Steven R Nagel, and Payload Specialists Patrick, Baudry, and Sultan Salman Al-Saud are seen performing pre-launch activities such as eating of the traditional breakfast, ride out to the launch pad, and crew suit-up for an early morning launch. Also, included are various panoramic views of Discovery on the pad. The main objective of this mission is to deploy three communication satellites. The satellites being deployed are MORE LOS-A, for Mexico; ARABSAT-A, for the Arab Satellite Communications Organization; and TELSTAR-3D, for AT&T. The crew also retrieve the SPARTAN-1 satellite. Scenes include the crew in the mess deck via video link with Mission Control Center in celebration of the 100th American in space. Al-Saud also spoke with his father in Saudi Arabia via video link. Views of certain experiments are also seen. Al-Saud is seen conducting the postural experiment, and Baudry is seen conducting the equilibrium experiments. Panoramic views of the Hawaiian Island Archipelago, and Wadi Habawnah, Saudi Arabia are also visible from the shuttle. Live footage ends with the re-entry of the vehicle into the Earth's Atmosphere, an early morning

touchdown at Edwards Air Force Base and crew departure from the craft.

**STS-103 Crew Interviews: Jean-Francois Clervoy**

Sep. 09, 1999; In English; Videotape: 38 min. 52 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999213441; JSC-1802D; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Live footage of a preflight interview with Mission Specialist Jean-Francois Clervoy is seen. The interview addresses many different questions including why Clervoy became an astronaut, what were the events that led to his interest. Other interesting information that this one-on-one interview discusses is an explanation of the why this required mission to service the Hubble Space Telescope must take place at such an early date, replacement of the gyroscopes, transistors and computers. Also discussed is an explanation of the ESA (European Space Agency) involvement in this mission, and a brief touch on Clervoy's responsibility during any of the given four space walks scheduled for this mission.

#### **Galileo Press Conference from JPL, Parts 1 and 2**

Dec. 08, 1992; In English; Videotape: Running time 1 hr., 22 min., in color, with sound

Report No(s): NONP-NASA-VT-2000001065; No Copyright; Avail: CASI; [B04](#), Videotape-Beta; [V04](#), Videotape-VHS

This two-tape Jet Propulsion Laboratory (JPL) video production presents a Dec. 8, 1992 press conference held at JPL to discuss the final Galileo spacecraft encounter with Earth before beginning its journey to Jupiter. The main theme of the conference was centered on the significance of the 2nd and final Earth/Moon flyby as being the spacecraft's last planetary encounter in the solar system before reaching Jupiter, as well as final flight preparations prior to its final journey. Each person of the five member panel was introduced by Robert MacMillan (JPL Public Information Mgr.) before giving brief presentations including slides and viewgraphs covering their area of expertise regarding Galileo's current status and future plans. After the presentations, the media was given an opportunity to ask questions of the panel regarding the mission. Mr. Wesley Huntress (Dir. of Solar System Exploration (NASA)), William J. O'Neill (Galileo Project Manager), Neal E. Ausman, Jr. (Galileo Mission Director), Dr. Torrence V. Johnson (Galileo Project Scientist) and Dr. Ronald Greeley (Member, Imaging Team, Colorado St. Univ.) made up the panel and discussed

topics including: Galileo's interplanetary trajectory; project status and performance review; instrument calibration activities; mission timelines; lunar observation and imaging; and general lunar science. Also included in the last three minutes of the video are simulations and images of the 2nd Galileo/Moon encounter.

Highlights of the third day of the STS-103 mission on board the space shuttle Discovery are shown in this videotape. The mission was led by Commander Curtis L. Brown, with Pilot Scott J Kelly, and Mission Specialists Steven L. Smith, Jean-Francois Clervoy, John M. Grunsfeld, Michael Foale, and Claude Nicollier. The main purpose of the mission was to service the Hubble Space Telescope (HST). The primary objective of the mission was to replace all six of the gyroscopes that make up the three Rate Sensor Units. In addition the Astronauts installed a new computer. During the third day when Discovery reached a point about 35 feet from Hubble, astronaut Jean-Francois Clervoy used the robot arm to capture the telescope's grapple fixture located midway up the HST structure. The approach to the HST is described and the actual maneuver aimed at retrieving the telescope is also described. The video includes actual live views of the HST in the shuttle's service bay, the shuttle, and shots of Johnson mission control.

This NASA JSC video release is one in a series of space shuttle astronaut interviews and was recorded Aug. 9, 1999. Mission Specialist, Janet L. Kavandi, Ph.D. provides answers to questions regarding her role in the Shuttle Radar Topography Mission (SRTM), mission objectives, which center on the three-dimensional mapping of the entire Earth's surface, shuttle imaging radar, payload mast deploy and retraction, data recording vs. downlinking, the fly cast maneuver, applications of recorded data, international participation (DLR), the National Imaging and Mapping Agency (NIMA), and EarthCam (educational middle school project). The interview is summed up by Dr. Kavandi explaining that the mission's objective, if successful, will result in the the most complete high-resolution

digital topographic database of the Earth.

The crew, Commander Henry W. Hartsfield, Jr., Pilot Michael L. Coats, Mission Specialists Judith A. Resnik, Steven A. Hawley, and Richard M. Mullane, and Payload Specialist Charles D. Walker are seen participating a panel discussion. Live footage of the Press Conference begins with a brief introduction of all the crew, followed by highlights of the flight, a selection of slides and still pictures, and ends with a question and answer segment. The highlights consist of the astronauts walk out to the Astro-Van, panoramic views of the Discovery on the launch pad, main engine start, ignition of the solid rocket boosters, liftoff, and separation of the boosters. Images of the opening of the sun shield and the deployment of the three communication satellites (Satellite Business System (SBS-D), SYNCOM IV-2, and TELSTAR) are also seen. The crew is seen working on experiments, dumping the wastewater, eating supper, and sleeping. Concluding the live footage are slides, and stills of various areas around the world, including the Libyan Desert, Angola, Namibia, and Australia. The Press Conference ends with questions from Houston, NASA Headquarters, Kennedy Space Center, and Marshall Space Flight Center.

Today Discovery's astronauts begin preparing the spacecraft for its scheduled return to Earth by checking out the flight control system and reaction control jets that support re-entry. Later in the day the astronauts begin stowing equipment used during the past week and start buttoning up on-orbit systems. The Ku-band antenna which provides most of the capacity for data and television relay was stowed around 8:45 p.m. The recently refurbished Hubble Space Telescope moves slowly through its checkout sequence before resuming science

operations. Both the flight control system (FCS) and the reaction control jets (RCS) were without issue, with all systems ready to support Discovery's return to Earth.

Highlights of the fifth day of the STS-103 mission on board the space shuttle Discovery are shown in this videotape. The mission was led by Commander Curtis L. Brown, with Pilot Scott J Kelly, and Mission Specialists Steven L. Smith, Jean-Francois Clervoy, John M. Grunsfeld, Michael Foale, and Claude Nicollier. The main purpose of the mission was to service the Hubble Space Telescope (HST). The primary objective of the mission was to replace all six of the gyroscopes that make up the three Rate Sensor Units. In addition the Astronauts installed a new computer. During the 5th day Michael Foale and Claude Nicollier performed the servicing of the HST in an 8 hour 10 minute Extravehicular Activity (EVA). The servicing included the removal of the old computer and the installation of a new, faster computer with more memory. They also installed a new outer thermal layer to protect the computer. After this was finished the astronauts replaced one of the Fine Guidance Sensors (FGS), an optical sensor which allows NASA to point the telescope in the desired direction. The video includes actual live views of the HST in the shuttle's service bay, and footage of the repair and servicing EVA.

**STS-103: Flight Day 6 Highlights and Crew Activities Report**

Dec. 25, 1999; In English; Videotape: 25min. 19 sec. running time, in color, with sound

Report No(s): NONP-NASA-VT-2000001111; BRF-1420F; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

Discovery's astronauts (Mission Commander, Curtis L. Brown; Pilot, Scott J. Kelly; Mission Specialists, Steven L. Smith, C. Michael Foale, and John M. Grunsfeld; and (ESA) Mission Specialists, Claude Nicollier and Jean-Francois Clervoy) deliver a Christmas present to the world, putting the Hubble Space Telescope back into service after 24 hours and 33 minutes of repairs and upgrades that make the orbital observatory more capable than ever. European Space Agency Astronaut Jean-Francois Clervoy uses the shuttle's robot arm to release the telescope at 5:03 p.m. CST, then places the arm into an upright salute as Commander Curt Brown fires Discovery's steering jets to begin separating from the telescope. The telescope's re-deployment takes place at an altitude of 370 statute miles as the two spacecraft fly over the South Pacific's coral sea northeast of Australia. At 5:39 CST, Brown executes

a second steering jet burn, lowering Discovery's orbit slightly, so that it will begin orbiting faster than the telescope and move away at just under 6 statute miles per orbit. Afterward, each of the seven astronauts on board calls down holiday wishes from space in several languages.

A press conference held on December 16, 1999, to explain the reason behind NASA's decision to delay the Discovery's launching by a period of 24 hrs is presented. According to Ron Dittmore, Space Shuttle Program Manager, the STS-103 team delayed the launch because they need extra time to check one vendor's manufacturing processes, after an x-ray inspection revealed that an improper weld rod was used to weld one of the pressuring lines (called NPS lines) in the ET (external tank). Mr. Dittmore explained that since it is in the ET (not a major load carrying structure and rebuild after each flight), it did not pose any danger to the STS-103 flight. However, the same vendor also manufactured some parts of the orbiter and the team wanted to make sure that the quality of the vendor's manufacturing processes is robust before launching the orbiter to space. He also answered some reporters' questions.

The Hubble Space Telescope (HST) team is preparing for NASA's third scheduled service call to Hubble. This mission, STS-103, will launch from Kennedy Space Center aboard the Space Shuttle Discovery. The seven flight crew members for STS-103 are: Commander Curtis L. Brown (his sixth flight), Pilot Scott J. Kelly and European Space Agency (ESA) astronaut Jean-Francois Clervoy (his third flight) will join space walkers Steven L. Smith (his third flight), C. Michael Foale (his fifth flight), John M. Grunsfeld (his third flight) and ESA astronaut Claude Nicollier (his fourth flight). This current video presents a live footage of the seven STS-103 crewmembers eating breakfast, suiting, and departing the O&C (Operations and Checkout) before the 6:50 p.m. lift-off.

**STS-99 Crew Interviews: Janice E. Voss**

Aug. 04, 1999; In English; Videotape: 29 min. 44 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999208100; JSC-1792E; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

Live footage of a preflight interview with Mission Specialist Janice E. Voss is seen. The interview addresses many different questions including why Voss became an astronaut, the events that led to her interest, and her career path. Other interesting information that this one-on-one interview discusses is the purpose for the Shuttle Radar Topography Mission (SRTM). Specific interest is on the importance of this SRTM flight, the knowledge that we will gain from the 3D topographic map of the Earth, and the reason why this 3D data is being recorded instead of down-linked. The two antennas that will be taking the pictures, the deployment and retraction of the mass, the involvement of the International partners in processing the data (C-band and X-band), and Voss' responsibility during this 24 hour mission are also discussed.

Live footage of a preflight interview with Mission Specialist Gerhard P.J. Thiele is seen. The interview addresses many different questions including why Thiele became an astronaut, the events that led to his interest, and his career path. Other interesting information that this one-on-one interview discusses is the purpose for the Shuttle Radar Topography Mission (SRTM). The main interest is on the importance of this SRTM flight, the knowledge we will learn gain from the 3D topographic map of the Earth, and the possible similarity to the Tethered Satellite System Flight. The two antennas that will be taking the pictures, the involvement of the International partners, mass deployment and retraction, gravity gradient force, flight cast maneuvers, EARTHCAM, a student-controlled camera on the Endeavour Orbiter, and Thiele's responsibility during this 24 hour mission are also discussed.

The primary objective of the STS-93 mission was to deploy the Advanced X-ray Astrophysical Facility, which had been renamed the Chandra X-ray Observatory in honor of the late Indian-American Nobel Laureate Subrahmanyan Chandrasekhar. The mission was launched at 12:31 on July 23, 1999 onboard the space shuttle Columbia. The mission was led by Commander Eileen Collins. The crew was Pilot Jeff Ashby and Mission Specialists Cady Coleman, Steve Hawley and Michel Tognini from the Centre National d'Etudes Spatiales (CNES). This videotape shows the astronauts after breakfast getting into spacesuits, walking out to board the bus, and boarding the bus prior to launch.

**STS-26 Preflight Press Briefing: Flight Crew and TDRS, Part 7 of 9**

Aug. 22, 1988; In English; Videotape: 47 min., 48 sec., playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999207901; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

This NASA KSC video release presents part of a press

conference held prior to Discovery flight STS-26, the first shuttle mission flown following the 51-L Challenger accident. The first portion of the video presents the 5 member flight crew, (Frederick H. Hauck, Commander, Richard O. Covey, Pilot, John M. Lounge, Mission Specialist, George D. Nelson, Mission Specialist, and David C. Hilmers, Mission Specialist) answering questions posed by scientific journalists. Inquiries are made regarding the approximately 250 changes implemented on the orbiter and boosters, failures that occurred during 51-L, astronaut attitudes about flying the first mission since the Challenger accident, and the issue of range safety. The second part of the video includes viewgraph presentations given by Dr. Dale W. Harris (TDRS Project Manager, Goddard Space Flight Center(GSFC)) and Gary A. Morse (Network Director, GSFC) that discuss the primary payload, the NASA Tracking and Data Relay Satellite-3 (TDRS-3) that is attached to an Inertial Upper Stage (IUS), and is the second TDRS deployed.

The primary objective of the STS-93 mission was to deploy the Advanced X-ray Astrophysical Facility, which had been renamed the Chandra X-ray Observatory in honor of the late Indian-American Nobel Laureate Subrahmanyan Chan-

drasekhar. The mission was launched at 12:31 on July 23, 1999 onboard the space shuttle Columbia. The mission was led by Commander Eileen Collins. The crew was Pilot Jeff Ashby and Mission Specialists Cady Coleman, Steve Hawley and Michel Tognini from the Centre National d'Etudes Spatiales (CNES). This videotape shows the astronauts getting into spacesuits, and inspecting the equipment.

Live footage of the GOES-J Satellite News Conference is presented. The participants of this conference include several NASA and NOAA officials. Floyd Curington, NASA's Launch Manager at the Kennedy Space Center, spoke briefly about the AC-77 launch vehicle. Pat Symons, the NASA Launch Vehicle Manager from the Lewis Research Center, discusses the launch window, the vehicle thrust, the Centaur Liquid Hydrogen, and the parking orbit. Martin Davis, NASA Mission Director from the Goddard Space Flight Center, touches on the NOAA partnership. Steven Kirkner, NOAA's GOES Systems Acquisitions Manager, addresses issues of the National Weather Satellite, the 24-hour observation, and the variable scan capacity of the satellite. Joel Tumbiolo, Launch Weather Officer from the USAF 45th Space Wing, presents data images of storm systems over Central USA; his main focus is on the Florida and Gulf of Mexico areas. Tumbiolo also discusses anvil clouds and thunderstorms, and question and answer session is presented. Immediately following this conference is the NOAA/GOES-J News Briefing. Live coverage of the presentation with panelists Gary Davis, Director, Satellite Operations; Dr. James Purdom, Chief Regional and Mesoscale Meteorology; Frederick Ostby, Director, National Severe Storms Forecast Center; and Steven Kirkner, GOES System Acquisition Manager is shown. Gary addresses the issue with the GOES-8 Satellite and the solutions to the problems that were encountered, the GOES-9 Satellite launching, its checkout and the reliability improvements that were made. Jim presents pictographic comparisons between GOES-8 and GOES-7, the GOES-8 Imager Noise Levels, Hurricane Rosa, and the thunderstorm over the Northern Gulf of Mexico. He also looks at storms in the Hudson Bay, Nova Scotia, and the Gulf of Lawrence areas. As the final speaker, Fred discusses GOES-8, Geostationary Satellites, the Automatic Surface Observation System (ASOS), and the Doppler Radar Network. This Abstract describes the content of tape 1 of 2, tape 2 has a Report

number of NONP-NASA-VT-1999206992.

Live footage of a preflight interview with Pilot Jeffrey S. Ashby is presented. The interview addresses many different questions including why Ashby wanted to be an astronaut, how he feels about being the rookie on this launch, and what he expects to feel when he lifts off. Other interesting information that this one-on-one interview discusses is the deployment of the Chandra satellite, why people care about x ray energy, whether or not Chandra will compliment the other X Ray Observatories currently in operation, and his responsibilities during the major events of this mission. The Southwest Research Ultraviolet Imaging System (SWUIS) on board Columbia, and the two observatories presently in orbit (Gamma Ray Observatory, and Hubble Space Telescope) are also discussed.

This NASA Johnson Space Center (JSC) video release presents a one-on-one interview with Mission Specialist 3, Michel Tognini (Col., French Air Force and Centre National Etudes Spatiales (CNES) Astronaut). Subjects discussed include early influences that made Michel want to be a pilot and astronaut, his experience as a French military pilot and his flying history. Also discussed were French participation in building the International Space Station (ISS), the STS-93 primary mission objective, X-ray observation using the Advanced X-ray Astrophysics Facility (AXAF), and failure scenarios associated with AXAF deployment. The STS-93 mission objective was to deploy the Advanced X-ray Astrophysics Facility (AXAF), later renamed the Chandra X-Ray Observatory in honor of the late Indian-American Nobel Laureate Subrahmanyan Chandrasekhar.

This NASA KSC video release presents part of a press conference held prior to Discovery flight STS-26, the first shuttle mission flown following the 51-L Challenger accident. The video opens with a statement from Commander Frederick H. Hauck, and the introductions of crew members, Richard O. Covey, Pilot, and mission specialists, John M. Lounge, George D. Nelson, and David C. Hilmers. Some of the questions posed by scientific journalists addressed the following subjects: launch preparation in the month prior to flight, astronaut family anxieties in light of the Challenger accident, extent of safety measures made prior to flight, flight readiness firing, the crew escape system, civilians in space, conservative mission design, astronaut selection, mission turnaround and launch rate, and the ability to maintain a high level of scrutiny regarding safety on future missions.

This NASA KSC video release begins with opening remarks from Mission Commander Vance D. Brand followed by the other 4 spacecrew panel members (Robert L. Gibson, Pilot, and Mission Specialists, Bruce McCandless II, Ronald E. McNair, Robert L. Stewart) commenting on a home-video that includes highlights of the entire flight from take-off to landing. This video includes actual footage of the deployment of the Westar-VI and PALAPA-B2 satellites as well as preparation for and the actual EVA's that featured a Spacepak that enabled the astronauts to move outside the orbiter untethered. This video is followed by a slide presentation made-up of images taken from approximately 2000 still photographs taken during the mission. All of the slides are described by members of the space crew and include images of the Earth seen from Challenger. A question and answer period rounds out the video, which include problems encountered with the deployment of the satellites as well as the possibilities of sending civilians into space.

This videotape consists of six different segments. The first segment is a close-up shot from Near-Earth Asteroid Rendezvous (NEAR) of the asteroid EROS. The second presents close-up shots of the Chandra telescope in the clean room. The third segment is an animated film showing the deployment of the Chandra telescope from the shuttle payload bay, and views of the elliptical orbit patterns that the telescope is planned to take. The fourth segment shows TRW Executive Vice President & General Manager, Systems & Information Technology Group, Donald Winter announcing the delivery of the Chandra Telescope to NASA. The fifth part was announced on the tape as an interview of Carolyn Griner, the Deputy Director of Marshall Space Flight Center, but this is not on the tape. The sixth segment shows views of the fourth USA Microgravity Payload (USMP-4) experiments. After shots of the STS-87 liftoff, the tape has views of the Isothermal Dendrite Growth Experiment (IDGE), views of the payload bay, and some

further views of the astronauts working on one of the experiments in the payload.

Report No(s): NONP-NASA-VT-2000008277; KSC98-80497; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

After landing, the STS-95 crew (Commander Curtis L. Brown, Pilot Steven W. Lindsey, Mission Specialists Scott E. Parazynski, Stephen K. Robinson, Pedro Duque, Payload Specialists Chiaki Mukai and the legendary John H. Glenn) descend from the Space Shuttle. Commander Brown congratulates the crew and team photos are taken. The crew does a walkaround inspection of the spacecraft, then boards the bus for departure from the facility.

The primary objective of the STS-93 mission was to deploy the Advanced X-ray Astrophysical Facility, which had been renamed the Chandra X-ray Observatory in honor of the late Indian-American Nobel Laureate Subrahmanyan Chandrasekhar. The mission was launched at 12:31 on July 23, 1999 onboard the space shuttle Columbia. The mission was led by Commander Eileen Collins. The crew was Pilot Jeff Ashby and Mission Specialists Cady Coleman, Steve Hawley and Michel Tognini from the Centre National d'Etudes Spatiales (CNES). This videotape shows the astronauts arriving at Kennedy and an inspection in the clean room.

A press briefing held on July 7, 1999 reviews the progress of the Chandra X ray Observatory project. The tape begins with an animated view of the launch of the Chandra X ray Observatory from the shuttle, as it was planned. Next is a press briefing. Bryan Austin, the Lead Flight Director, discusses the five day mission, and the reason for the shortened length, due to the added weight from the Chandra Observatory. He also reviews the other payloads, and activities that will take place during the mission. Kenneth Ledbetter, Science Director Mis-

sion Development, discusses the 4 great observatories and the role of each. They are the Hubble, which observed visible light; Compton Gamma Ray Observatory, the Chandra, and the Space Infrared Telescope Facility. A time line of the expected operational lifetime of each of the 4 great observatories is shown. Specific information about the Chandra Telescope is reviewed. The last press briefing presenter is Fred Wojtalik, who is the Chandra Program Manager. He reviews the Chandra's components, and acknowledges a few of the many companies that contributed to its building. He also reviews the orbital activation and checkout sequences. Question that follows, center around contingency plans if some part of the planned sequence is not successful. The costs are reviewed, and concerns about the Initial Upper Stage, the propulsion unit required to take the Chandra to its high orbit are addressed. The Chandra is planned to take an elliptical orbit, which is higher than the other space telescopes, thus far launched due to the requirement to avoid Earth generated X rays.

This NASA Kennedy Space Center (KSC) video release presents footage of the November 14, 1969 Apollo-12 space mission begun from launch complex pad 39-A at Kennedy Space Center, Florida. Charles Conrad, Jr., Richard F. Gordon, Jr., and Alan L. Bean make up the three-man spacecrew. The video includes the astronaut's pre-launch breakfast, President Nixon, his wife, and daughter arriving at Cape Kennedy in time to see the launch, as well as countdown and liftoff. After the launch, President Nixon gives a brief congratulatory speech to the members of launch control at KSC. The video also presents views of the astronauts and spacecraft in space as well as splashdown of the command module on November 24, 1969. The video ends with the recovery, by helicopter and additional personnel, of the spacecrew from the command module floating in the waters of the Atlantic.

This NASA Kennedy Space Center video release presents the April 19, 1991 STS-37 post-flight crew press conference from Johnson Space Center (JSC). The video begins with Steven R. Nagel, Commander applauding the efforts of everyone involved in the very smooth shuttle mission and introducing the rest of the crew seated to his right: Kenneth D. Cameron (1), Pilot, Jerry L. Ross, Mission Specialist 1, Jay Apt, Mission Specialist 2, and Linda M. Godwin, Mission Specialist 3. A video presenting mission highlights and on-board activities including liftoff footage, and the deployment of the primary payload, Gamma Ray Observatory (GRO), is shown. The GRO high-gain antenna failed to deploy on command and had to be manually freed and deployed by astronauts Ross and Apt during an unscheduled contingency space walk, the first since April 1985. After the mission summary video is shown, a slide show that includes pictures of Earth from Atlantis, and views of the GRO is presented and is followed by a question and answer period with questions posed by scientific journalists from JSC and other NASA centers. Part 2 of the press conference can be found in Report Number NONP-NASA-VT-2000013420.

Live footage shows the crewmembers of STS-96, Commander Kent V. Rominger, Pilot Rick D. Husband, Mission Specialists Ellen Ochoa, Tamara E. Jernigan, Daniel T. Barry, Julie Payette and Valery Ivanovich Tokarev during various training activities. Scenes include astronaut suit-up, EVA training in the Virtual Reality Lab, Orbiter space vision training, bailout training, and crew photo session. Footage also shows individual crew interviews, repair activities to the external fuel tank, and Discovery's return to the launch pad. The engineers are seen sanding, bending, and painting the foam used in repairing the tank. An animation of the deployment of the STARSHINE satellite, International Space Station, and the STS-96 Mission is presented. Footage shows the students from Edgar Allen Poe Middle School sanding, polishing, and inspecting the mirrors for the STARSHINE satellite. Live footage also includes students from St. Michael the Archangel School wearing bunny suits and entering the clean room at Goddard Space Flight Center.

**STS-37 Mission Overview: Lead Flight Director Briefing**

Feb. 25, 1991; In English; Videotape: 1 hr. 2 min. 34 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000013428; No Copyright; Avail: CASI; [B04](#), Videotape-Beta; [V04](#), Videotape-VHS

This NASA Kennedy Space Center (KSC) video release presents a Johnson Space Center (JSC) press conference featuring Chuck Shaw, Lead Flight Director discussing the STS-37 Atlantis shuttle mission. Topics presented include overall mission objectives, flight crew, flight directors, primary payload (Gamma Ray Observatory (GRO)), Extravehicular Activities (EVA) Development Flight Experiment (EDFE), secondary payloads, Development Test Objectives (DTO's), Detailed Supplementary Objectives (DSO's), and flight day activities. Certain flight day activities including the Gamma Ray Observatory deployment and EVA movements and translations are presented as computerized simulations. The video ends with a summary of the key points of STS-37 and a question and answer period with questions posed from Johnson as well as other NASA centers. Questions include topics involving EVA safety, emergency EVA's, and what determines the day of primary payload deployment.

**STS-99 Crew Activities Report / Flight Day 11 Highlights**

Feb. 21, 2000; In English; Videotape: 19 min. 6 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000022261; BRF-1421K; No Copyright; Avail: CASI; [B02](#), Videotape-Beta; [V02](#), Videotape-VHS

The primary objective of the STS-99 mission was to complete high resolution mapping of large sections of the Earth's surface using the Shuttle Radar Topography Mission (STRM), a specially modified radar system. This radar system produced unrivaled 3-D images of the Earth's Surface.. The mission was launched at 12:31 on February 11, 2000 onboard the space shuttle Endeavour. The mission was led by Commander Kevin Kregel. The crew was Pilot Dominic L. Pudwill Gorie and Mission Specialists Janet L. Kavandi, Janice E. Voss, Mamoru Mohri, the National Space Development Agency (Japanese Space Agency) and Gerhard P. J. Thiele, from DARA (German Space Agency). The astronauts finished the mapping operations early on day 11, and then retracted the

200 foot long mast into its payload bay canister. The mast, the longest rigid structure ever deployed in space, supported the external antenna during the mapping operation. The videotape shows the mast folding into the canister. The final stowage was delayed when the three latches on the lid of the canister failed to engage as expected. After a few procedures were executed the mast canister was sealed, on the third attempt, as shown on the videotape. The video also contains several views from the STRM. They include a computerized animation of a flight from Pasadena to Palmdale, a still view of Fiji, a view of the San Francisco Bay Area, and another of Pasadena.

The primary objective of the STS-99 mission was to complete high resolution mapping of large sections of the Earth's surface using the Shuttle Radar Topography Mission (STRM), a specially modified radar system. This radar system produced unrivaled 3-D images of the Earth's Surface.. The mission was launched at 12:31 on February 11, 2000 onboard the space shuttle Endeavour. The mission was led by Commander Kevin Kregel. The crew was Pilot Dominic L. Pudwill Gorie and Mission Specialists Janet L. Kavandi, Janice E. Voss, Mamoru Mohri, the National Space Development Agency (Japanese Space Agency) and Gerhard P. J. Thiele, from DARA (German Space Agency). This tape shows some of the activities on board the shuttle during day six of the mission. By the end of day six, the mission to map 32 million square miles of the Earth's surface was about 67.2 percent complete. On this video tape there is discussion about the attempts to conserve propellant, to allow for the completion of the planned mapping. There is discussion by Mamoru Mohri about the mission, and Gerhard Thiele answers questions from the German Press about the mission. New radar images from the SRTM of the Kamchatka Peninsula and northwestern Mongolia are shown. There are shots of Endeavour's 200-foot mast, which required troubleshooting due to a balky small thruster.

Live footage shows the Blue Team of STS-99, Pilot Dominic L. Pudwill Gorie, and Mission Specialists Mamoru Mohri and Janet E. Voss, participating in a discussion with the Launch Control Center (LCC). Gorie and Mohri are also seen speaking with the Prime Minister of Japan. The Blue Team also answers questions from students. Footage also includes various shots of the mass hanging from the shuttle, the star tracker, the X- and C-band panels on the shuttle, and the dumping of water from the shuttle. Still shots of the (Shuttle Radar Topography Mission) SRTM Coverage Map are also presented. Places shown include the San Andreas Fault, San Gabriel Mountains, Simi Valley, Las Angeles, New Zealand, New Mexico, and Hokkaido Japan.

Live footage of the (Terminal Countdown Demonstration Test) TCDT shows the crew of STS-88, Commander Robert D. Cabana, Pilot Frederick W. Sturckow, and Mission Specialists Nancy J. Curry, Jerry L. Ross, James H. Newman, and Sergei K. Krikalev, participating in a press conference. The moderator Bruce Buckingham is seen introducing Bob Cabana, who then introduces the rest of the crewmembers. Cabana explains the mission and addresses the flight day activities. He includes the building of the Node 1 station element to the Functional Energy Block (FGB) which will already be in orbit, and two space-walks to connect power and data transmission cables. The crewmembers took turn answering questions from both the audience and via radio communication with the Johnson Space Center.

This video shows a press briefing, reviewing the type of information which scientist hope to get from the Chandra X-ray Telescope. The telescope is scheduled to be launched during the STS-93 flight. The participants in the briefing are: Don Savage, of NASA Headquarters; Ed Weiler, Associate Administrator for Space Sciences; Alan Bunner, Chandra Project Scientist and Michael Turner, an astrophysicist at the University of Chicago. After the introduction by Mr. Savage, the broad scientific goals of the Chandra mission are reviewed by Dr. Weiler. This is followed by an acknowledgement of many of the people who participated in the development of the Chandra Telescope. This is followed by a discussion of the astrophysics and the information which the telescope should provide. Mrs. Chandrasekhar, the widow of Subrahmanyan Chandrasekhar, was in the audience. She was introduced and spoke briefly about the late Nobel Laureate astrophysicist.

#### **STS-37/Atlantis/GRO**

Apr. 11, 1991; In English; Videotape: 55 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000013422; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The primary objective of the STS-37 mission was to

deploy the Gamma Ray Observatory. The mission was launched at 9:22:44 am on April 5, 1991, onboard the space shuttle Atlantis. The mission was led by Commander Steven Nagel. The crew was Pilot Kenneth Cameron and Mission Specialists Jerry Ross, Jay Apt, and Linda Godwing. This videotape shows the crew having breakfast on the launch day. It then shows the crew's final preparations and the entry into the shuttle. The countdown and launch is shown including the shuttle separation from the solid rocket boosters. The launch is reshown from several different camera views. Some of the other camera views were in black and white. The deployment of the Gamma Ray Observatory is shown, including an unscheduled spacewalk to deploy the high gain antenna. The landing at Edwards Air Force Base is shown. The landing is also shown from several different cameras views.

The primary objective of the STS-99 mission was to complete high resolution mapping of large sections of the Earth's surface using the Shuttle Radar Topography Mission (SRTM), a specially modified radar system. This radar system produced unrivaled 3-D images of the Earth's Surface. The mission was launched at 12:31 on February 11, 2000 onboard the space shuttle Endeavour. and led by Commander Kevin Kregel. The crew was Pilot Dominic L. Pudwill Gorie and Mission Specialists Janet L. Kavandi, Janice E. Voss, Mamoru

Mohri from the National Space Development Agency (Japanese Space Agency), and Gerhard P. J. Thiele from DARA (German Space Agency). In this tape Commander Kevin Kregel introduces the crew to the assembled press at the site where they will practice emergency exit procedures as part of the Terminal Countdown Demonstration Test (TCDT), a dress rehearsal for launch.

The primary objective of the STS-99 mission was to complete high resolution mapping of large sections of the Earth's surface using the Shuttle Radar Topography Mission (SRTM), a specially modified radar system. This radar system produced unrivaled 3-D images of the Earth's Surface. The mission was launched at 12:31 on February 11, 2000 onboard the space shuttle Endeavour, and led by Commander Kevin Kregel. The crew was Pilot Dominic L. Pudwill Gorie and Mission Specialists Janet L. Kavandi, Janice E. Voss, Mamoru Mohri from the National Space Development Agency (Japanese Space Agency), and Gerhard P. J. Thiele from DARA (German Space Agency). This tape shows the activities of the ninth day of the mission. The announcement of the decision to extend the SRTM for 9 hours is made to the crew. This means that almost all (i.e., 99.9 %) of the target area of the Earth will be imaged, at least once. Some shots of the 200 foot long mast where the outboard antennas are located are shown. Mamoru Mohri is shown changing a data tape, while he explains the rationale for recording rather than transmitting the data. Gerhard Thiele speaks to the German press. At the end of this tape are images generated from the SRTM. There are views of Oahu, Molokai, Lanai and west Maui, Hawaii; Dallas, Texas; Salalah, Oman; and Tasmania, Australia. Animations showing the topography around Hokkaido, Japan and Brazil are also shown.

The primary objective of the STS-99 mission was to complete high resolution mapping of large sections of the Earth's surface using the Shuttle Radar Topography Mission (SRTM), a specially modified radar system. This radar system produced unrivaled 3-D images of the Earth's Surface. The mission was launched at 12:31 on February 11, 2000 onboard the space shuttle Endeavour. This tape presents a pre-launch briefing for the press held on Feb 8, 2000. Statements were given by Doug Lyons, Shuttle Test Director; Scott Higginbotham, STS-99 Payload Director and Ed Priselac, Shuttle Weather Officer. Mr. Lyons reported on the replacement of the Master Control Unit on board Endeavour, the part that had caused a delay in the launch. He reviewed the work that had to be done and the timeline for completion. Scott Higginbotham reported that there were no problems with the SRTM. Ed Priselac reported on favorable weather conditions for the launch. Discussion after the statements concerned a possible problem with a cable, and the possibility of a further delay to the launch.

The primary objective of the STS-99 mission was to complete high resolution mapping of large sections of the Earth's surface using the Shuttle Radar Topography Mission (SRTM), a specially modified radar system that will produce unrivaled 3-D images of the Earth's Surface. The mission was launched at 12:31 on February 11, 2000 onboard the space shuttle Endeavour. The mission was led by Commander Kevin Kregel. The crew was Pilot Dominic L. Pudwill Gorie and Mission Specialists Janet L. Kavandi, Janice E. Voss, Mamoru Mohri, the National Space Development Agency (Japanese Space Agency) and Gerhard P. J. Thiele, from DARA (German Space Agency). The shuttle landed at Kennedy on the February 22, 2000 at 5:22 CST. This tape shows a post landing press conference with the crew. Commander Kregel made a brief statement praising the crew for the mission's success and then introduced the crewmembers. The crew answered questions about the retraction of the mast. The retraction had been successful, but the latches to the canister had failed. The extreme cold may have caused the problem and a solution was proposed from ground control. If this had not worked, an EVA would have been required. The astronauts were confident in the solution to the problem, however they were ready to perform any required EVA. Mamoru Mohri answered questions from the Japanese press, speaking in English and Japanese.

Report No(s): NONP-NASA-VT-2000025574; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

The primary objective of the STS-99 mission was to complete high resolution mapping of large sections of the Earth's surface using the Shuttle Radar Topography Mission (SRTM), a specially modified radar system. This radar system produced unrivaled 3-D images of the Earth's Surface. This videotape shows a science press briefing. The panel members are Michael Kobrick, the SRTM Project Scientist at JPL; Thomas Henning, SRTM Program Manager at the National Imagery and Mapping Agency; Diane Evans, the Director of the Earth Sciences Program at NASA; and Marian Werner, XSAR Project Manager for the DLR, Deutschen Zentrum fur Luft- und Raumfahrt, Germany's National Aerospace Research Center. Michael Kobrick explained the mechanics of interferometric measurements of the Earth. He explained and demonstrated with a scale model the deployable mast's use. He also explained the importance of the attitude and orbit determination avionics. A brief animated video showing how four beams would give a 225 km wide swath of the Earth topography was viewed. Thomas Henning discussed some of the usage of the digital terrain elevation data for flood relief planning, cell phone station placement, military planning for command and control centers, and flight simulation. He explained that public access to the most precise data would be limited. Diane Evans described data usage in flood prediction, earthquake fault identification and archeology. Marian Werner described the German and Italian input to the project. The questions from the press concerned the time to process this data, and the reasons for the limited access to the more precise data.

**STS-99 / Endeavour Mission Overview**

Jan. 30, 2000; In English; Videotape: 1 hr. 7 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000025572; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

The primary objective of the STS-99 mission was to complete high resolution mapping of large sections of the Earth's surface using the Shuttle Radar Topography Mission (SRTM). This radar system will produce unrivaled 3-D images of the Earth's Surface. This videotape presents a mission overview press briefing. The panel members are Dr. Ghassem Asrar, NASA Associate Administrator Earth Sciences; General James C. King, Director National Imagery and Mapping Agency (NIMA); Professor Achim Bachem, Member of the Executive Board, Deutschen Zentrum fur Luft- und Raumfahrt (DLR), the German National Aerospace Research Center; and Professor Sergio Deiulio, President of the Italian Space Agency. Dr. Asrar opened with a summary of the history of Earth Observations from space, relating the SRTM to this history. This mission, due to cost and complexity, required partnership with other agencies and nations, and the active participation of the astronauts. General King spoke to the expectations of NIMA, and the use of the Synthetic Aperture Radar to produce the high resolution topographic images. Dr. Achim Bachem spoke about the international cooperation that this mission required, and some of the commercial applications and companies that will use this data. Dr. Deiulio spoke of future plans to improve knowledge of the Earth using satellites. Questions from the press concerned use of the information for military actions, the reason for the restriction on access to the higher resolution data, the mechanism to acquire that data for scientific research, and the cost sharing from the mission's

partners. There was also discussion about the mission's length.

#### **STS-103 Mission Highlights Resource Tape (1 of 2)**

Mar. 01, 2000; In English; Videotape: 1 hr. 29 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000036030; JSC-1814; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

The STS-103 flight crew, Commander Curtis L. Brown, Pilot Scott J. Kelly, Mission Specialists Steven L. Smith, C. Michael Foale, John M. Grunsfeld, Claude Nicollier, and Jean-Francois Clervoy, are seen performing pre-launch activities such as crew suit-up, and ride out to the launch pad for a night launch. Also, included are various panoramic views of the shuttle on the pad. The crew is readied in the White Room for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. Once on-orbit the primary objective is to capture and service the Hubble Space Telescope. Included are various live shots of the payload bay showing the flight support system, the orbiter replacement unit carrier and the forward fixture that house the new Fine Guidance System (FGS). Smith and Grunsfeld replaces and changes the sensor units during the first space walk of this mission. The second space walk by Nicollier and Foale includes the changing of the computer and installa-

tion of the FGS. This is tape 1 of 2, tape 2 has a report number of NONP-NASA-VT-2000036031.

#### **STS-71/Mir/Spacelab Landing at KSC**

Jul. 07, 1995; In English; Videotape: 57 min. 27 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000036562; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Live footage of various day landing views of the Spacecraft Atlantis are shown from different camera sites. Also shown is the re-entry and day landing of the spacecraft at Kennedy Space Center. Footage also includes touchdown, drag chute deployment, nose gear touchdown, and the ground recovery crew as they travel to the spacecraft. Atlantis crew, Commander Robert L. Gibson, Pilot Charles J. Precourt, Mission Specialists Ellen S. Baker, Bonnie J. Dunbar, Gregory J. Harbaugh, and the download crew from MIR-18 Norman E. Thagard, Vladimir Dezhurov, and Gennadiy Strekalov are also seen leaving the craft. Included is a phone conversation between President Clinton and the crew.

**STS-30 Post Flight Press Conference**

May 18, 1989; In English; Videotape: 58 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000036554; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Live footage shows the crewmembers of STS-30, Commander David M. Walker, Pilot Ronald J. Grabe, Mission Specialists Norman E. Thagard, Mary L. Cleave and Mark C. Lee, participating in the Post Flight Press Conference. The astronauts took turns narrating the footage taken from the inside of the cockpit during lift-off. The crew answer questions from the audience as well as some of the NASA Centers. Included are various stills of Magellan, and some ground shots of the Florida Peninsula, Bahamas, North West Nicaragua, California, the Himalayan Mountains, the Canary Islands, Houston, Dust Storms across the Sahara, and some waves in the South China Seas.

**STS-103 Mission Highlights Resource Tape (2 of 2)**

Mar. 01, 2000; In English; Videotape: 58 min. 36 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000036031; JSC-1814; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The STS-103 flight crew, Commander Curtis L. Brown, Pilot Scott J. Kelly, Mission Specialists Steven L. Smith, C. Michael Foale, John M. Grunsfeld, Claude Nicollier, and Jean-Francois Clervoy, are seen passing over the Yucatan and Florida Peninsulas. Smith and Grunsfeld replace and change the S-band single transmission cables during the third and final space walk of this mission. Crewmembers are also seen taking video documentation of the solar arrays. Footage presented includes the release of the Hubble Space Telescope, thruster firing and orbit adjust burn over the Central Indian Ocean and Australia. Also shown is the night landing of Discovery at Kennedy Space Center, crew departure from the vehicle, and short statements made by the crew. This is tape 2 of 2; tape 1 has a report number of NONP-NASA-VT-2000036030.

**STS-30 Launch Highlights and Continuous Record from T-9 Mins.**

19890428; In English; Videotape: 36 min. 34 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000036565; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The primary objective of the STS-30 mission was to deploy the Magellan/Venus radar mapper spacecraft and attached Inertial Upper Stage (IUS). The commander of the mission was David M. Walker. The crew was pilot, Ronald J. Grabe, and mission specialists, Norman E. Thagard, Mary L. Cleave, and Mark C. Lee. The mission was launched on May 4, 1989, after the April 28 launch attempt was scrubbed due to a problem with a liquid hydrogen recirculation pump on the number one main engine and a vapor leak in the four-inch liquid hydrogen recirculation line between the orbiter and the external tank. This videotape shows the crew breakfast on April 28, and the final preparations for launch. It also shows the crew boarding the shuttle. After the countdown is halted at T-31 seconds the crew leaves the orbiter.

**STS-31: APU Controller Removal**

Apr. 11, 1990; In English; Videotape: 2 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000039787; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

The launch April 10 of the STS-31 was scrubbed at T-4 minutes due to a faulty valve in auxiliary power unit (APU) number one. The auxiliary power unit is a hydrazine-fueled, turbine-driven power unit that generates mechanical shaft power to drive a hydraulic pump that produces pressure for the orbiter's hydraulic system. This video shows the removal of the STS-31's auxiliary power unit (APU).

**STS-101 Crew Interview / Scott Horowitz**

Mar. 20, 2000; In English; Videotape: 38 min. 22 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000039860; JSC-1809B; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Live footage of a preflight interview with Pilot Scott J. Horowitz is seen. The interview addresses many different questions including why Horowitz became an astronaut, the events that led to his interest, any role models that he had, and his inspiration. Other interesting information that this one-on-one interview discusses is the reaction and reasons for the splitting-up of the objectives for STS-101 with STS-106. Horowitz also mentions the scheduled space-walk, docking with the International Space Station (ISS), the new glass cockpit of Atlantis, the repairs of equipment and change of the batteries. Horowitz also discusses his responsibilities during the space-walk, and docking of the spacecraft. He stresses that he will have an added challenge during the space-walk, his inability to see where he needs to place the Extravehicular Activities (EVA) crew.

**STS-31 Mission Highlights Resource Tape, Part 1**

Jun. 01, 1999; In English; Videotape: 55 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000039772; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The primary objective of mission STS-31 was to deploy the Hubble Space Telescope. The commander of the mission was Loren J. Shriver. The crew was pilot Charles F. Bolden, and Mission Specialists, Steven A. Hawley, Bruce McCandless II, and Kathryn D. Sullivan. The mission was launched on April 24, 1990. This videotape shows the astronauts at their pre-launch breakfast, their final preparations for launch and boarding the Shuttle Discovery. It shows the launch and the detachment of the rocket boosters. It shows the deployment of the Hubble Telescope and the unfurling of its Solar Arrays. Other payloads include the Protein Crystal Growth (PCG) experiment, and the Radiation Monitoring Equipment III, to measure gamma ray levels in the crew cabin. The videotape shows many shots of the Kennedy Mission Control room and the shuttle cockpit. The videotape finally shows the landing at Edwards Air Force Base, and the crew disembarking the shuttle.

**STS-31: Hubble HST Science**

Apr. 08, 1990; In English; Videotape: 42 min. 45 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-200039780; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The primary objective of STS-31 was to deploy the Hubble Space Telescope (HST). This videotape presents a press briefing about the scientific goals of the HST program. The panel members were Dr. Weiler, HST program scientist; Dr. Boggess from NASA Goddard, the Center managing the HST Program; and Dr. Bahcall, President Elect of the American Astronomical Union. Dr. Weiler opened the panel discussion by introducing other HST scientists who were in the audience.

Dr. Bahcall explained the four major areas that astronomers hope to better understand using the HST data: (1) The size and age of the universe; (2) quasars as flashlights to understanding other features of the universe; (3) planets around other stars; and (4) weather on the other planets of our Solar System. Other areas in which he hopes to have some understanding are galaxies under quasars, black holes, and missing matter. After his remarks, Dr. Bahcall presented a plaque to Charles Pellerin, who helped initiate the series of astrophysics telescopes. The HST is the first of these 'Great Observatories'. After the presentation, questions from the press were answered.

**STS-99: Post Flight Presentation**

Apr. 03, 2000; In English; Videotape: 15 min. 13 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000043499; JSC-1819; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

Live footage shows the crewmembers of STS-99, Commander Kevin R. Kregel, Pilot Dominic L. Pudwill Gorie, and Mission Specialists Janet L. Kavandi, Janice E. Voss, Mamoru Mohri, and Gerhard P.J. Thiele, arriving at Kennedy Space Center (KSC) in the T-38 aircraft. Crewmembers are seen speaking to the welcoming crowd at KSC, suiting-up, walking out to the Astro-van, being strapped in the shuttle, and performing various activities while in orbit. Scenes include the

astronaut training process, main engine ignition, liftoff, solid rocket booster separation, mast deployment and retraction, and the changing of the mapping tapes. Footage also includes the crewmembers sleeping, eating, exercising, dancing and having fun in zero gravity. The High Definition Television Camera (HDTV) picks up images from the Earth. These images includes Bolivia, Paraguay, Brazil, Bahamas, Mauritania, Saudi Arabia, Mount Fuji, Tokyo Bay, Southern Russia, the Black Sea, Equador, Northern Peru, the Mediterranean Sea, Malta, Sicily and Italy. The crewmembers of STS-99 each took a turn to narrate the scenes and events as they occur.

**STS-101: Crew Interview / Yuri Vladimirovich Usachev**

Mar. 20, 2000; In English; Videotape: 23 min. 2 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000039856; JSC-1809G; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

Live footage of a preflight interview with Mission Specialist Yuri Vladimirovich Usachev is seen. The interview addresses many different questions including why Usachev became a cosmonaut, the individuals who influenced him, and the events that led to his interest. Other interesting information that this one-on-one interview discusses is his reaction and integration into the STS-101 crew. Usachev also mentions the scheduled space-walk of James S. Voss and Jeffrey N. Williams, his feeling once he steps into the International Space Station (ISS), the repairs of equipment, his handling of the hand held laser, and the change of the batteries.

Live footage shows the crewmembers of STS-29, Commander Michael L. Coats, Pilot John E. Blaha, and Mission Specialists James P. Bagian, James F. Buchli, and Robert C. Springer, seated in the White Room with the traditional cake. The crew is seen performing various pre-launch activities including suit-up, and walk out to the Astro-van. This early morning launch shows countdown, main engine start, liftoff,

booster separation, and various isolated footage of the launch from different cameras. Also presented are footage of the approach, gear touchdown, rollout at Edwards Air Force Base, and various isolated views of the landing.

This video presents a post-launch press conference on the STS-31 Hubble Space Telescope. Dick Young, Kennedy Space Center Public Affairs, introduces the panel. The panel consists of Robert Sieck, Kennedy Space Center Launch Director, and George T. Sassen, Director Shuttle Engineer. The STS-31 launch was accomplished with very few problems. Terminal count was started and then stopped at 31 seconds because the software sensed that a valve was not positioned correctly. The valve was positioned correctly, the count was resumed, and the launch was carried out safely and successfully. George T. Sassen explains, in detail, how the problem was corrected.

Live footage shows the remaining two crewmembers of STS-37, Mission Specialists Jerry L. Ross, and Jay Apt, entering the White Room, putting on their life preservation vest, and then entering the launch vehicle. Video playbacks, of the crew during the earlier stage of the Terminal Countdown and Demonstration Test, and the processing of the primary payload (Gamma Ray Observatory) are shown. Scenes showing the arrival of Ross at Kennedy Space Center in the T-38 aircraft, the crew on the launch complex during familiarization activities, and training with the M113 vehicle are presented. Also shown are some beautiful panoramic views of the shuttle on the pad. This is tape 2 of 3. Tape 1 has a report # of NONP-NASA-VT-2000013416, and tape 3 has a report # of NONP-NASA-VT-2000013418.

**Mars Surveyor '98 Animation From JPL**

Jun. 16, 1997; In English; Videotape: 19 min. 40 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000010563; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

This video presents live animation of the Mars Surveyor Program. NASA is looking for faster, better, cheaper missions to Mars since the Mars Observer malfunctioned on August 22, 1993. Daniel Goldin, NASA Administrator says that NASA will perform flyby missions, orbiters, landers, and sample returns to look for evidence of life on Mars. The first mission to Mars, the Mars Global Surveyor, was launched on November 7, 1996, to provide geological, topographical, and atmospheric maps from its polar orbit about Mars. The second, the Mars Pathfinder, launched on December 4, 1996, photographs terrain, monitors weather and deploys a robotic rover that analyzes samples of Mars' rocks and soils. The third, the Mars Surveyor '98, includes two separate, launched spacecraft, the orbiter and the lander. The Orbiter was launched December 98 from Cape Canaveral. Its 9-month journey to Mars will circle the planet every two hours and once stability was achieved, will configure itself for mapping. On January 3, 1999, the lander was on an 11-month journey to Mars, scheduled to arrive on Mars on December 3, 1999 to record the geological

composition of the landing site from its SSI (Surface Stereo Imager).

The primary objective of STS-31 was the deployment of the Hubble Space Telescope (HST). The flight was commanded by Loren J. Shriver. The pilot was Charles F. Bolden, Jr., and the mission specialists were Steven A. Hawley, Bruce McCandless II, and Kathryn D. Sullivan. This videotape shows an inflight press conference that occurred after the deployment of the HST. The press gathered at the Goddard Space Flight Center and the Kennedy Space Center, asked questions mainly about the deployment of the HST.

**STS-101: Crew Interview - Jim Halsell**

Mar. 24, 2000; In English; Videotape: 36 min. 9 sec. playing time, in color, with sound

Report No(s): JSC-1809A; NONP-NASA-VT-2000039861; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The objective of STS-101 will be the servicing of the International Space Station, to ensure that it will be ready to receive a crew later in 2000. The crew, commanded by James D. Halsell, will include Pilot Scott J. Horowitz, Mission Specialists Mary Ellen Weber, Jeffrey N. Williams, James S. Voss, Susan J. Helms and Yuri V. Usachev. This videotape provides live coverage of an interview with the mission commander Jim Halsell. He describes the influences on his life that led him to become a NASA astronaut, and the importance of the mission. He discusses the new glass cockpit design. He describes the flight plan and the docking maneuver. An important feature of this mission is the replacement of electric components, voltage and current regulators on the space station. Commander Halsell also describes the role of each crew member during the re-supply and refitting of the Space Station and reviews the priorities.

The primary mission objective for STS-101 was to deliver supplies to the International Space Station, perform a space walk, and reboost the station from 230 statute miles to 250 statute miles. The commander of this mission was, James D. Haslsell. The crew was Scott J. Horowitz, the pilot, and mission specialists Mary Ellen Weber, Jeffrey N. Williams, James S. Voss, Susan J. Helms, and Yuri Vladimirovich Usachev. This videotape shows the activities of the second day of the flight. On this day the shuttle crew checked the equipment in preparation for rendezvous with the International Space Station. This video shows the astronauts entering the SpaceHab, where the supplies bound for the space station are stored. There are also views of the robotic arm, which will be used during the spacewalk to maneuver Williams and Voss between Atlantis and the station.

The primary mission objective for STS-101 was to deliver supplies to the International Space Station, perform a space walk, and reboost the station from 230 statute miles to 250 statute miles. The commander of this mission was, James D. Halsell. The crew was Scott J. Horowitz, the pilot, and mission specialists Mary Ellen Weber, Jeffrey N. Williams, James S. Voss, Susan J. Helms, and Yuri Vladimirovich Usachev. This videotape shows the launch of STS-101, beginning with the pre-flight breakfast and the crew's introduction. The videotape next shows a pre-dawn view of the orbiter waiting the crew's arrival. The crew is shown getting into their space suits and then climbing onboard the shuttle. In this videotape we are shown a few of the crew getting into their places onboard the shuttle. We are also shown the newly designed 'glass cockpit', which gives the pilot and the commander better views and are told that this is the first flight of the shuttle with the new design. After the hatch is closed, we see the shuttle launch into the night, followed by the Solid Rocket Boosters (SRB) separation.

On this fourth day of the STS-101 Atlantis mission, the flight crew, Commander James D. Halsell Jr., Pilot Scott J. Horowitz, and Mission Specialists Mary Ellen Weber, Jeffrey N. Williams, James S. Voss, Susan J. Helms, and Yuri Vladimirovich Usachev are seen performing final preparations for the scheduled space walk. Horowitz, Williams and Voss are seen in the mid-deck before the space walk. Horowitz and Weber are also seen in the flight deck, powering-up the robot-arm. During the space walk Voss is seen checking the American Cargo Crane-Orbital Replacement Unit Transfer Device. Voss and Williams are shown securing the American-built crane that was installed on the station last year. They are seen as they install the final parts (boom extension) of a Russian-built crane on the station. Voss and Williams are also shown as they replace a faulty antenna for one of the station's communications systems on the Unity Module, and install several handrails and a camera cable on the station's exterior.

The primary mission objective for STS-101 was to deliver supplies to the International Space Station, perform a space walk, and reboost the station from 230 statute miles to 250 statute miles. The commander of this mission was, James D. Haslsell. The crew was Scott J. Horowitz, the pilot, and mission specialists Mary Ellen Weber, Jeffrey N. Williams, James S. Voss, Susan J. Helms, and Yuri Vladimirovich Usachev. This videotape shows the activities of the fifth day of the mission. The day's activities started with the opening of the hatch to the space station. Helms and Usachev then opened the hatch to the station's Unity Connecting Module. The crew also placed ducting throughout the Zarya Control Module to improve air circulation and prevent problems with stale air. Helms and Usachev are shown replacing two of six batteries to be replaced in this mission in the Zarya module. The crew began moving supplies into the space station. There are several shots of the interior of the space station.

The primary mission objective for STS-101 was to deliver supplies to the International Space Station, perform a space walk, and reboost the station from 230 statute miles to 250 statute miles. The commander of this mission was James D. Halsell. The crew was Scott J. Horowitz, the pilot, and mission specialists Mary Ellen Weber, Jeffrey N. Williams, James S. Voss, Susan J. Helms, and Yuri Vladimirovich Usachev. This videotape is a press briefing by Scott Bleisath, STS-101 Lead EVA Officer, about the planned Extravehicular Activity planned for the fourth day of the mission. The work that this EVA is to accomplish is the repair of a crane and the installation of a beam on Unity. The astronauts will also replace antennae and install hand rails and cables. The astronauts who are scheduled to perform the EVA activities are Williams and Voss. They will be assisted by Weber, who will operate the Shuttle's robotic arm, and Scott Horowitz. The spacewalk is scheduled to take 6 hours. The videotape includes some views of the astronauts training in an underwater environment. Mr. Bleisath answered questions from the press after he completed the briefing.

November 1, 1994; In English; Videotape: 1 hr. 2 min. 34 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000078316; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

This NASA Kennedy Space Center (KSC) video release presents live footage of the successful Delta II/WIND spacecraft launch from Pad 17B at the Eastern Test Range, Cape Canaveral Air Station, FL. Footage of engineering activity from launch control as well as narrative information concerning spacecraft configuration, equipment, instruments and objectives is also presented. WIND is the first of two NASA spacecraft in the Global Geospace Science initiative and part of the ISTEP Project. WIND is positioned in a sunward, multiple double-lunar swingby orbit with a maximum apogee of 250Re during the first two years of operation. This will be followed by a halo orbit at the Earth-Sun L1 point. The main scientific objectives of the WIND mission are to provide complete plasma, energetic particle, and magnetic field input for magnetospheric and ionospheric studies. The WIND spacecraft includes KONUS, the first Russian instrument to fly on an American satellite since civil space cooperation between the U.S. and Russia was resumed in 1987.

#### **Delta/Wind Launch with Isolated Cameras from Continuous Recording**

Nov. 01, 1994; In English; Videotape: 38 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000078317; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The Wind spacecraft represents one of NASA's contributions to the International Solar Terrestrial Program (ISTP), an international effort to quantify the effects of solar energy on the Earth's magnetic field. Wind will provide continuous measurement of the solar wind, particularly charged particles and magnetic field data. The specific objectives of Wind are to: (1) provide complete plasma, energetic particle, and magnetic field

input for magnetospheric and ionospheric studies; (2) determine the magnetospheric output to interplanetary space in the upstream region; (3) investigate basic plasma processes occurring in the near-Earth solar wind; and (4) provide baseline ecliptic plane observations to be used in heliospheric studies. This videotape shows the pre-dawn launch of the Wind spacecraft aboard a Delta 7925 on November 1, 1994. After the countdown and launch, the tape shows the activity in the Telemetry Room at Kennedy Space Center, where people are following the progress of the spacecraft. Following the activity in the telemetry room, there are four different replays of the launch from different locations. After showing the replays of the launch, the video returns to the Telemetry Room when an important stage in the launch and flight is achieved.

The crew (Mission Commander James D. Halsell, Jr., Pilot Scott J. Horowitz, and Mission Specialists Mary Ellen Weber, Jeffrey N. Williams, James S. Voss, Susan J. Helms, and Yuri Vladimirovich Usachev) describe the highlights of the STS 101 Mission. The primary scenes reviewed include the spacewalk, incremental assembly/upgrades, space station rendezvous, suit testing, critical replacement and repairs to suspect batteries, and reboosting the station from 230 statute miles to 250 statute miles.

**STS-106 Crew Interviews: Scott D. Altman**

Jul. 19, 2000; In English; Videotape: 30 min. 10 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000111953; JSC-1822B; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

Live footage of a preflight interview with Pilot Scott D. Altman is seen. The interview addresses many different questions including why Altman became a pilot, the events that led to his interest, his career path through the Navy, and then finally, his selection by NASA as an astronaut. Other interesting information discussed in this one-on-one interview was his work on the movie set of 'Top Gun,' the highlights of his Navy career, and possible shorter time frame turnarounds for missions. Altman also mentions the scheduled docking with the new International Space Station (ISS) after the arrival of the Zvezda Service Module.

Report No(s): NONP-NASA-VT-2000111954; JSC-1822D; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

Live footage of a preflight interview with Mission Specialist Richard A. Mastracchio is seen. The interview addresses many different questions including why Mastracchio became

interested in the space program, the events that led to his interest, his 14 year career path through the Johnson Space Center (JSC) as an engineer before finally getting selected into the astronaut program. Other interesting information that this one-on-one interview discusses is the main goal of the STS-106 mission, and its scheduled docking with the new International Space Station (ISS) since the arrival and connection of the Zvezda Service Module. Mastracchio also mentions his responsibility during the much-anticipated docking and scheduled space-walk.

**Orbiter Umbilical Hinge Door Problem**

Feb. 19, 1991; In English; Videotape: 4 min. 14 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000113527; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

During processing work on the orbiter Discovery at Pad A, significant cracks were found on all four lug hinges on the two external tank umbilical door drive mechanisms. NASA managers opted to roll back the vehicle to the Vehicle Assembly Building (VAB) on March 7, and then to the Orbiter Processing Facility (OPF) for repair. Hinges were replaced with units taken from orbiter COLUMBIA, and reinforced. Discovery returned to the pad on April 1. Shown are the cracked orbiter umbilical door hinges.

**STS-39: Landing at KSC**

May 06, 1991; In English; Videotape: 55 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000118018; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The Space Shuttle Discovery landed on May 6, 1991, 2:55:35 p.m. EDT at the Shuttle Landing Facility after traveling more than 3,500,000 miles on a successful eight-day mission. Rollout distance and time were 9,235 feet and 56 secs respectively. The landing weight was 211,512 lbs. Landing was diverted to KSC because of unacceptably high winds at the planned landing site, Edwards Air Force Base, California. Aboard were: Commander Michael L. Coats; Pilot L. Blaine Hammond, Jr.; and Mission Specialists Guion S. Bluford Jr., Gregory J. Harbaugh, Richard J. Hieb, Donald R. McMonagle, and Charles L. Veach. This was the 40th flight in the Space Shuttle program and the 12th for the orbiter Discovery. The landing was the 7th Shuttle landing in Florida. After landing at the Shuttle Landing Facility, the STS-39 crew posed for a photo in front of Discovery.

Live footage of the STS-106 crewmembers shows Commander Terrence W. Wilcutt, Pilot Scott D. Altman, Mission Specialists Daniel C. Burbank, Edward T. Lu, Richard A. Mastracchio, Yuri Ivanovich Malenchenko, and Boris V. Morukov going through various training activities. These activities include SpaceHab Training at Kennedy Space Center (KSC), EVA Pre-Post Operations, Post Launch Operations, Rendezvous, Bailout, and Post Landing Egress Training at Johnson Space Center (JSC). The crew is also seen participating in a group photograph session.

Live footage shows the crewmembers of STS-41, Commander Richard N. Richards, Pilot Robert D. Cabana, Mission Specialists William M. Shepherd, Bruce E. Melnick, and Thomas D. Akers, participating in the traditional activities the day of their flight. The crew are seen eating breakfast, suiting-up, walking out to the Astronaut-Van, putting on life vests in the 'White Room' area, and entering the crew module of the Discovery Orbiter. Footage also includes the deployment of the Ulysses satellite. The Discovery spacecraft is seen as it approaches and lands at Edwards Air Force Base. Also shown are several scenes from different cameras of both launching and landing of the STS-41 spacecraft.

A press briefing is presented by Admiral Richard Truly about the STS-42 Discovery International Microgravity Laboratory-1 (IML). He describes the launch that took place on the morning of January 22, 1992. It was NASA's first launch of 1992 following the Challenger disaster. Life Sciences and materials science microgravity experiments were flown on the STS-42 to study the behavior of materials and living things in microgravity. The briefing ends with a short question and answer period.

STS-106 was launched on Sept 8, 2000 at 8:45 a.m. The crew was commanded by Terrence W. Wilcutt, the pilot was Scott D. Altman. The mission specialists were Daniel C. Burbank, Edward T. Lu, Richard A. Mastracchio, Yuri Ivanovich Malenchenko, and Boris V. Morukov. During the 11-day mission, the crew spent a week inside the International Space Station (ISS) unloading supplies from both a double SPACE-

HAB cargo module in the rear of the Atlantis cargo bay and from a Russian Progress M-1 resupply craft docked to the aft end of the Zvezda Service Module. The videotape shows the activities of the second day of the flight and the preparations for docking with the ISS. Shown on the video are shots of the flight deck on the shuttle, the shuttle payload arm, and shots of the crew eating lunch.

On this first day of the STS-106 Atlantis mission, the flight crew, Commander Terrence W. Wilcutt, Pilot Scott D. Altman, and Mission Specialists Daniel C. Burbank, Edward T. Lu, Richard A. Mastracchio, Yuri Ivanovich Malenchenko, and Boris V. Morukov are seen performing pre-launch activities. They are shown sitting around the breakfast table with the traditional cake, suiting-up, and riding out to the launch pad. The final inspection team is seen as they conduct their final check of the space shuttle on the launch complex. Also, included are various panoramic views of the shuttle on the pad. The crew is readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters.

A panel of scientists give an overview of the experiments that are to take place on-board the STS-42 Discovery mission. Ronald J. White, International Microgravity Laboratory (IML) Program Scientist, gives a general description of why going into space with IML is so important. Robert Snyder, IML

Mission Scientist, describes other aspects of the microgravity environment. Millard Reschke, Principal Investigator (PI) Microgravity Vestibular Investigation (MVI), explains what MVI is and the effects of space on the vestibular system. David Heathcote, PI for the Gravitational Plant Physiology Facility (GPPF), describes the GPPF's on-board experiment involving the effects of light and gravity on plants. Claude Brillouet, Program Scientist of the Biorack Facility, gives an overview of the Biorack equipment and experiment. Alan Mortimer, Chief Life Sciences for the Canadian Space Agency (CSA), describes the on-board experiments for the long- and short-term effects of microgravity on humans and biotechnology (cell separation techniques). The men then answer questions from the press and NASA centers.

Live footage of a preflight interview with Pilot Michael J. Bloomfield is shown. The interview addresses many different questions including why Bloomfield became interested in the space program, the events and people that influence him and ultimately led to his interest, and his vigorous training in the astronaut program. Other interesting information that this one-on-one interview discusses are the main goals of the STS-97 mission, its scheduled docking with the new International Space Station (ISS), and its delivery of the first set of U.S.-provided solar arrays, batteries, and radiators. Bloomfield briefly discusses his responsibilities during the much-anticipated docking as well as during the scheduled spacewalks.

**STS-56 Launch Attempt Press Conference**

Apr. 06, 1993; In English; Videotape: 7 min. 9 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001001578; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

Dick Young introduces Dr. Jack Kaye, Program Scientist for NASA, Brewster Shaw, Deputy Program Manager Space Shuttle, and Robert Sieck, Kennedy Space Center (KSC) Launch Director in a press conference regarding the failed launch attempt of the Discovery Orbiter. The hardware problem causing the failure is discussed, and questions from the press are answered.

CASI

*Discovery (Orbiter); Failure; Spacecraft Launching; Pre-launch Problems*

**20010011126** NASA Kennedy Space Center, Cocoa Beach, FL USA

**STS-56 Preflight Briefs/Mission Overview from MSFC**

Mar. 19, 1993; In English; Videotape: 46 min. 42 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001001579; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Chuck Shaw, Lead Flight Director, and Teresa Vanhooser, Mission Manager, each give an overview of the STS-56 Discovery mission's objectives, activities, payloads (ATLAS-2, SPARTAN-201, etc.), and experiments. They then answer questions from the press.

CASI

*Prelaunch Summaries; Spaceborne Experiments*

**20010011131** NASA Kennedy Space Center, Cocoa Beach, FL USA

**STS-41 Ulysses Compiled Flow Tape**

Oct. 01, 1990; In English; Videotape: 11 min. 30 sec. playing time, in color, with sound (no narration)

Report No(s): NONP-NASA-VT-2000118124; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

Footage shows the unloading and installation of the Ulysses spacecraft into the payload bay of the Discovery Orbiter. Discovery is then seen during the rollout to the launch site.

CASI

*Discovery (Orbiter); Ulysses Mission; Installing*

**20010011174** NASA Kennedy Space Center, Cocoa Beach, FL USA

**STS-51 Crew Briefing**

Jul. 06, 1993; In English; Videotape: 62 min. 32 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000152236; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

Commander Frank L. Culbertson, Jr. introduces the crew of STS-51, Pilot William F. Readdy, and Mission Specialists James H. Newman Ph.D., Daniel W. Bursch, and Carl E. Walz, in a preflight conference. Each crew member gives an overview of the mission activities, objectives, and payload (ACTS-TOS, ORFEUS-SPAS, etc.), and answers questions from the press.

CASI

*Spacecrews; Crew Procedures (Preflight); Prelaunch Summaries*

**20010011175** NASA Kennedy Space Center, Cocoa Beach, FL USA

#### **STS-46 TSS-1**

Feb. 02, 1993; In English; Videotape: 4 min. 3 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000152235; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

An overview of the Tethered Satellite System (TSS) is given. Simulations show the deployment and operation of TSS from the Atlantis Orbiter. The experimental applications and objectives are explained.

CASI

*Atlantis (Orbiter); Deployment; Simulation; Tethered Satellites*

**20010011176** NASA Kennedy Space Center, Cocoa Beach, FL USA

#### **STS-51 Mission Overview**

Jul. 06, 1993; In English; Videotape: 32 min. 45 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000152231; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Robert Castle, Lead Flight Director, gives an overview of the STS-51 Discovery mission, including details on the Space Shuttle, the payloads (ACTS-TOS, ORFEUS-SPAS, etc.), the crew, mission objectives, and the spacewalks to be performed. Simulations of the ACT-TS deployment and the ORPFEUS-SPAS operations are shown.

CASI

*Deployment; Discovery (Orbiter); Prelaunch Summaries*

**20010011177** NASA Kennedy Space Center, Cocoa Beach, FL USA

#### **STS-49 Endeavour Landing**

May 16, 1992; In English; Videotape: 51 min. 7 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000152227; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Footage shows the landing of the Endeavour Orbiter from various vantage points, including the deployment of the drag chute, which is used for the first time. The crew of STS-49,

Commander Daniel C. Brandenstein, Pilot Kevin P. Chilton, and Mission Specialists Pierre J. Thuot, Kathryn C. Thornton, Richard J. Hieb, Thomas D. Akers, and Bruce E. Melnick, are seen exiting the Orbiter. Footage of the landing taken with the infrared camera is seen.

CASI

*Endeavour (Orbiter); Drag Chutes; Spacecraft Landing*

**20010011178** NASA Kennedy Space Center, Cocoa Beach, FL USA

#### **STS-49 Endeavour/Removal of Engine 2 at Pad B**

Apr. 14, 1992; In English; Videotape: 5 min. 35 sec. playing time, in color, with sound (no narration)

Report No(s): NONP-NASA-VT-2000152225; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

Footage shows the removal of Engine 2 from the the Endeavour Orbiter at Pad B.

CASI

*Endeavour (Orbiter); Spacecraft Equipment; Spacecraft Power Supplies; Removal*

**20010011179** NASA Kennedy Space Center, Cocoa Beach, FL USA

#### **STS-49 Endeavour/Compiled Video for Editors**

May 01, 1992; In English; Videotape: 40 min. 6 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000152222; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Compiled footage includes shots taken of the rollout of Endeavour at Palmdale, CA, the departure and arrival of Endeavour for Kennedy Space Center (KSC), main engine three installation, solid rocket booster (SRB) segment lift and stack at the Vehicle Assembly Building (VAB), external tank mate to SRB, Intelsat rotation at the Vertical Processing Facility (VPF), Endeavour rollover from the Orbiter Processing Facility (OPF) to VAB, rollout to Pad B, and the flight readiness firing (FRF). The crew is seen during the Terminal Countdown and Demonstration Test (TCDDT) training activities, at breakfast, suiting up, and exiting the Operations and Checkout (O&C) Building.

CASI

*Endeavour (Orbiter); Checkout; Prelaunch Tests; Crew Procedures (Preflight)*

**20010011180** NASA Kennedy Space Center, Cocoa Beach, FL USA

#### **STS-49 Endeavour Overview**

Apr. 07, 1992; In English; Videotape: 41 min. 41 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000152221; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Daniel Germany, Manager, Orbiter and GFE Projects, Johnson Flight Center, gives an overview of the STS-49

Endeavour mission. He discusses Endeavour's successful firing test, the upcoming launch, and the Endeavour Orbiter's recent enhancements. He then answers questions from the press.

CASI

*Endeavour (Orbiter); Prelaunch Summaries*

**20010011186** NASA Kennedy Space Center, Cocoa Beach, FL USA

**STS-47 Astronaut Crew at Pad B for TCDT, Emergency Egress Training, and Photo Opportunity**

Aug. 26, 1992; In English; Videotape: 37 min. 8 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000152218; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The crew of STS-47, Commander Robert L. Gibson, Pilot Curtis L. Brown, Payload Commander Mark C. Lee, Mission Specialists N. Jan Davis, Jay Apt, and Mae C. Jemison, and Payload Specialist Mamoru Mohri are seen during emergency egress training. Then Commander Gibson introduces the members of the crew and they each give a brief statement about the mission and answer questions from the press.

CASI

*Astronaut Training; Prelaunch Summaries; Crew Procedures (Preflight)*

**20010011187** NASA Kennedy Space Center, Cocoa Beach, FL USA

**STS-50 Crew Briefing**

May 26, 1992; In English; Videotape: 48 min. 4 sec. playing time, in color, with sound (no narration)

Report No(s): NONP-NASA-VT-2000152217; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Commander Richard N. Richards introduces the crew of STS-50, Pilot Kenneth D. Bowersox, Payload Commander Bonnie J. Dunbar, Mission Specialists Ellen S. Baker and Carl J. Meade, and Payload Specialists Lawrence J. DeLucas and Eugene H. Trinh, in a preflight conference. Each crew member gives an overview of the mission's activities, objectives, and payload (USML-01), and answers questions from the press.

CASI

*Spacecrews; Crew Procedures (Preflight); Prelaunch Summaries*

**20010011188** NASA Kennedy Space Center, Cocoa Beach, FL USA

**STS-49 Endeavour/Breakfast/Suit-up/Depart O&C/Launch/On-Orbit/Landing with ISOS**

May 01, 1992; In English; Videotape: 58 min. 48 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000152212; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Footage of various stages of the STS-46 Endeavour launch

is shown, including shots of the crew at breakfast, getting suited up, and departing to board the Orbiter. The launch is seen from many vantage points, as is the landing. On-orbit activities are shown, such as the Intelsat rescue and deployment on flight day 7, and some of the Space Station assembly techniques.

CASI

*Endeavour (Orbiter); Intelsat Satellites; Spacecraft Launching; Rescue Operations; Crew Procedures (Preflight); Crew Procedures (Inflight)*

**20010011189** NASA Kennedy Space Center, Cocoa Beach, FL USA

**STS-46 Eureka/TSS/Compiled Tape for Editors**

Jul. 17, 1992; In English; Videotape: 58 min. 26 sec. playing time, in color, with sound (no narration)

Report No(s): NONP-NASA-VT-2000148094; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Compiled footage shows shots of the Tethered Satellite System (TSS) lift in the Operations and Checkout (O&C) Building, TSS move onto satellite assembly section, the Eureka arrival and offload at Kennedy Space Center (KSC), Eureka instrument and tracker installation, the solar panel battery installation, and Eureka high-gain antenna deploy. The astronaut crew is seen at the O&C building for the TSS site test, and Atlantis rolls out to Pad B.

CASI

*Eureka (ESA); Tethered Satellites; Atlantis (Orbiter)*

**20010011190** NASA Kennedy Space Center, Cocoa Beach, FL USA

**STS-43 Crew Briefing**

Jun. 26, 1991; In English; Videotape: 44 min. 34 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000148092; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Commander John E. Blaha introduces the crew of STS-43, Pilot Michael A. Baker, and Mission Specialists Shannon W. Lucid, James C. Adamson, and G. David Low, in a preflight conference. Each crew member gives an overview of the mission objectives and experiments and answers questions from the press.

CASI

*Spacecrews; Crew Procedures (Preflight); Spaceborne Experiments; Prelaunch Summaries*

**20010011191** NASA Kennedy Space Center, Cocoa Beach, FL USA

**STS-46 Standard Mission Handout Tape**

Aug. 08, 1992; In English; Videotape: 61 min. 10 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000148088; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

Footage of various stages of the STS-46 Atlantis launch is shown, including shots of the crew at breakfast, getting suited up, and departing to board the Orbiter. The launch is shown from many vantage points, as is the landing. The Eureka deployment and the Tethered Satellite System (TSS-1) deployment and retrieval are seen.

CASI

*Eureca (ESA); Spacecraft Launching; Spacecraft Landing; Crew Procedures (Preflight); Atlantis (Orbiter)*

**20010011192** NASA Kennedy Space Center, Cocoa Beach, FL USA

**STS-44 Astronaut Crew Briefing**

Oct. 28, 1991; In English; Videotape: 27 min. 59 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000148085; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

Commander Frederick D. Gregory introduces the crew of STS-44, Pilot Terence T. Henricks, Mission Specialists F. Story Musgrave, Mario Runco, Jr., and James S. Voss, and Payload Specialists Thomas J. Hennen, in a preflight conference. Each crew member gives an overview of the mission objectives, experiments, and his role in the mission. They then answer questions from the press.

CASI

*Crew Procedures (Preflight); Prelaunch Summaries*

**20010011193** NASA Kennedy Space Center, Cocoa Beach, FL USA

**STS-43 TDRS-E Sharp Edge Inspection at VPF**

Jul. 22, 1991; In English; Videotape: 2 min. 5 sec. playing time, in color, with sound (no narration)

Report No(s): NONP-NASA-VT-2000148077; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

Footage shows the inspection of the Tracking and Data Relay Satellite (TDRS) at the Vertical Processing Facility (VPF).

CASI

*TDR Satellites; Inspection*

**20010011198** NASA Kennedy Space Center, Cocoa Beach, FL USA

**STS-56 Atlas-2/Spartan O&C and Hangar AO**

Feb. 01, 1993; In English; Videotape: 6 min. playing time, in color, with sound (no narration)

Report No(s): NONP-NASA-VT-2001001580; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

Close-up shots are seen of Atlas-2 and Spartan-201, the payload for the Discovery Orbiter.

CASI

*Spartan Satellites; Payloads*

**20010011199** NASA Kennedy Space Center, Cocoa Beach, FL USA

**STS-56/TCDT O&C Walkout**

Mar. 18, 1993; In English; Videotape: 2 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001001581; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

The crew of STS-56, Commander Kenneth D. Cameron, Pilot Stephen S. Oswald, and Mission Specialists C. Michael Foale Ph.D., Kenneth D. Cockrell, and Ellen Ochoa are seen exiting the Operations and Checkout (O&C) Building on their way to the bus that will take them to the launch pad.

#### **STS-55 Downline Waste Water Tank Problem**

Apr. 27, 1993; In English; Videotape: 11 min. 34 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001001586; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

Onboard, in-flight close-up shots show the buckling of the waste water tank. Details are given on the problem.

CASI

*Buckling; Tanks (Containers); Spacecraft Equipment*

**20010011853** NASA Kennedy Space Center, Cocoa Beach, FL USA

#### **STS-92 Z-1 Truss Overview**

Sep. 26, 2000; In English; Videotape: 45 min. 11 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001007189; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Robert Galvez, Launch Package Manager, gives an overview of the launch package of the STS-92 Discovery mission (Z-1 Truss, PMA-3, DDCU, etc.), and gives details on the configuration and equipment positioning on the Z-1 Truss. Simulations show the installation of the DDCU (DC to DC power converter) and the S-band Antenna.

CASI

*Simulation; Trusses; Prelaunch Summaries; Spacecraft Equipment*

**20010011854** NASA Kennedy Space Center, Cocoa Beach, FL USA

#### **STS-97 Countdown Status**

Nov. 29, 2000; In English; Videotape: 17 min. 8 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001006468; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

Joel Wells, NASA Public Affairs, introduces Steve Altemus, NASA Test Director, David Flowers, P-6 Truss Integration Engineer, and Ed Priselac, Shuttle Weather Officer. Mr. Altemus describes the successful countdown thus far, and some of the prelaunch activities. Mr. Flowers gives an overview of the P-6 Truss and its role on the International Space Station (ISS). Mr. Priselac gives a forecast for good launching weather.

The men then answer questions from the press.

CASI

*Countdown; Weather Forecasting; Trusses; Spacecraft Launching*

**20010011855** NASA Kennedy Space Center, Cocoa Beach, FL USA

#### **STS-97 Countdown Status**

Nov. 28, 2000; In English; Videotape: 17 min. 5 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001006010; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

George Diller, NASA Public Affairs, introduces Jeff Spaulding, NASA Test Director, David Flowers, P-6 Truss Integration Engineer, and Ed Priselac, Shuttle Weather Officer. Mr. Spaulding discusses the Shuttle status, successful countdown, and preflight preparations. Mr. Priselac describes a good weather forecast for the upcoming STS-97 Endeavour launch. The men then answer questions from the press.

CASI

*Countdown; Prelaunch Summaries; Prelaunch Tests; Weather Forecasting; Spacecraft Launching*

**20010011856** NASA Kennedy Space Center, Cocoa Beach, FL USA

#### **STS-97 ISS Science Payloads Briefing**

Nov. 13, 2000; In English; Videotape: 21 min. 2 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001006009; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

John Un, International Space Station (ISS) Lead Increment Scientist, gives an overview of the STS-97 Endeavour mission payload (PV Module P6) and Expedition 1 crew. He describes the research and experimentation to take place on the ISS in the following fields: (1) Life Sciences, (2) Microgravity Research, (3) Commercial, (4) Space Sciences, and (5) Earth Sciences. Observations of Earth include images of the Aral Sea in central Asia and fires in Mongolia. Mr. Un then answers questions from the press.

CASI

*Spaceborne Experiments; Research and Development; International Space Station; Prelaunch Summaries*

**20010011857** NASA Kennedy Space Center, Cocoa Beach, FL USA

#### **STS-92 Extravehicular Activity Overview**

Sep. 26, 2000; In English; Videotape: 46 min. 2 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001006008; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Daryl Schuck, STS-92 Lead Extravehicular Activity (EVA) Officer, gives an overview of the four EVAs scheduled for the STS-92 mission. He discusses the construction phase of

the International Space Station (ISS) and the equipment to be installed onto the ISS, such as the Z-1 Truss, PMA-3 (Third Pressurized Mating Adapter), S-Band Antenna, and the DC to DC Power Converter. Mr. Schuck describes the challenges of the mission, and the activities and objectives of the spacewalks. He then answers questions from the press.

CASI

*Extravehicular Activity; Crew Procedures (Inflight); International Space Station; Prelaunch Summaries*

**20010011858** NASA Kennedy Space Center, Cocoa Beach, FL USA

**STS-97 Prelaunch Press Conference**

**STS-55 Crew Briefing, Part 1 of 2**

Feb. 04, 1993; In English; Videotape: 62 min. 41 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001011306; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

Commander Steven R. Nagel introduces the crew of STS-55, Pilot Terence T. Henricks, Mission Specialists Jerry L. Ross, Charles J. Precourt, and Dr. Bernard A. Harris Jr., and Payload Specialists Dr. Ulrich Walter and Hans Schlegel. Each crew member gives an overview of the mission objectives, activities, spaceborne experiments, payload (Spacelab-D2, SAREX-II), and his role in the mission. They then answer questions from the press. The video ends during the questions and continues on 'STS-55 Crew Briefing, Part 2 of 2' (internal processing ID 2001001575).

**STS-92 Preflight Briefings Video Feed and International Space Station Overview**

Sep. 26, 2000; In English; Videotape: 71 min. 2 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001007190; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

The first half of this video is a collection of video feeds from various preflight conferences and simulations show the payload bay and payload equipment. The International Space Station's (ISS) structure is seen, as are close-up shots of the Z-1 truss. Footage shows extravehicular activity (EVA) underwater training. The second half of the video is a preflight conference on the mission objectives concerning the ISS. Tommy Halloway, Manager, ISS Program, and Robert Cabana, ISS Manager for International Operations, discuss the STS-92 mission in terms of the ISS and the role of ISS in the future. Mr. Cabana gives the status of present and future ISS hardware. The men then answer questions from the press.

STS-102 Commander Jim Wetherbee is seen being interviewed. He answers questions about his inspiration to become an astronaut and his career path. He gives details on the mission's goals and significance, its payload (ISS-07/5A1 (MPLM-1)), and spacewalks. Wetherbee discusses the upcoming transfer of the International Space Station's (ISS) crew Expedition 1 and Expedition 2 and the role of the Mir Space Station in the evolution and success of the ISS.

Various shots highlight the STS-97 Endeavour mission. Footage shows the crew suiting up and leaving the Operations and Checkout (O&C) Building, the launch, and landing. Various on-orbit activities are seen, such as docking with the International Space Station (ISS), the spacewalks (installing the PV Module P6), array deployment, meeting the Expedition 1 crew, eating, and undocking. Shots show the northern lights and a meteorite entering Earth's atmosphere from above. The Andes can be seen from the Orbiter while the P6 arrays are deploying.

Dick Young, NASA Public Affairs, introduces Brewster Shaw, Deputy Program Manager Space Shuttle, and Bob Sieck, Launch Director, Kennedy Space Center, who give brief statements about the countdown and launch of the STS-52 Columbia Orbiter. The problems encountered during countdown are discussed, including details on the hydrogen leak in the ground umbilical carrier tank, the 100% exceedance of load on the external tank, and the reasons why the flight rule for an

upper limit of cross winds was waived. The men then answered questions from the press.

Various clips give an overview of the STS-97 Endeavour mission. Footage includes Endeavour on the launch pad, the crew of STS-97 (Commander Brent W. Jett, Pilot Michael J. Bloomfield, and Mission Specialists Joseph R. Tanner, Carlos I. Noriega, and Marc Garneau) suiting up, replays of the nighttime launch, Launch Control Center at Kennedy Space Center during countdown, and the activities of flight days one through three. The activities of flight days four through six can be seen on 'STS-97 Mission Highlights Resource Tape, Part 2 of 3' (document ID 20010020282). The activities of flight days seven through eleven and Endeavour's landing can be found on 'STS-97 Mission Highlights Resource Tape, Part 3 of 3' (document ID 20010020283).

John Shannon, STS-102 Lead Flight Director, Bernestine Dickey, STS-102 Launch Package Manager, and Rick La Brode, International Space Station (ISS) Lead Flight Director, give an overview of the STS-102 mission during a prelaunch press conference. Mr. Shannon discusses how the mission came into being and its objectives, including information on the launch and a day-by-day account of mission activities. Ms. Dickey gives details on the payload of STS-102, describing the system racks, cargo elements, and crew supplies delivered via the Leonardo Multi-Purpose Logistics Module. Mr. La Brode describes the current configuration of the ISS and upcoming changes. He also discusses the activities of the Expedition 2 crew during the next four months. Computer simulations show the ISS' current and future (after the STS-102 mission) configurations, the installations of Leonardo, and the move of the Pressurized Mating Adapter from one port to another on the Destiny Laboratory. The panel then answers questions from the press.

Merri Sanchez, Expedition 2 Increment Manager, John Uri, Increment Scientist, and Lybrease Woodard, Lead Payload Operations Director, give an overview of the upcoming activities and objectives of the Expedition 2's (E2's) mission in this prelaunch press conference. Ms. Sanchez describes the crew rotation of Expedition 1 to E2, the timeline E2 will follow during their stay on the International Space Station (ISS), and the various flights going to the ISS and what each will bring to ISS. Mr. Uri gives details on the on-board experiments that will take place on the ISS in the fields of microgravity research, commercial, earth, life, and space sciences (such as radiation characterization, H-reflex, colloids formation and interaction, protein crystal growth, plant growth, fermentation in microgravity, etc.). He also gives details on the scientific facilities to be used (laboratory racks and equipment such as the human torso facsimile or 'phantom torso'). Ms. Woodard gives an overview of Marshall Flight Center's role in the mission. Computerized simulations show the installation of the Space Station Remote Manipulator System (SSRMS) onto the ISS and the installation of the airlock using SSRMS. Live footage shows the interior of the ISS, including crew living quarters, the Progress Module, and the Destiny Laboratory. The three then answer questions from the press.

**STS-100 Flight Day 10 Highlights**

Apr. 30, 2001; In English; Videotape: 23 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001061751; BRF-1428J; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

On this tenth day of the STS-100 mission, the computer problems that delayed tests on the Canadian robotic arm are discussed between the Atlantis and Mission Ground Control. The Canadian robotic arm is seen after it lifts Spacelab from the pallet on Atlantis and moves to meet the Space Shuttle's robotic arm as it 'hands over' Spacelab to the smaller robotic arm. The Canadian robotic arm with Spacelab are seen against a backdrop of Earth as the Space Shuttle and International Space Station pass to the northeast of Australia.

On this ninth day of the STS-100 mission, Commander Kent Rominger and Mission Specialist Chris Hadfield answer questions about the mission in an on-orbit press conference. The Expedition 2 crew, Commander Yuriy Usachev and Flight Engineers James Voss and Susan Helms, answer questions about their mission and the Canadian Robotic Arm in another on-orbit press conference. The Raffaello Logistics Module is removed from the Unity Module on the International Space

Station and transfers it to the payload bay of Atlantis.

STS-105 Mission Specialist Dan Barry is seen during a prelaunch interview. He answers questions about his inspiration to become an astronaut, his career path, training for the mission, and his role in the mission's activities. He gives details on the mission's goals, which include the transfer of supplies from the Discovery Orbiter to the International Space Station (ISS) and the change-over of the Expedition 2 and Expedition 3 crews (the resident crews of ISS). Barry discusses the importance of the ISS in the future of human spaceflight.

**STS-104 Flight Day 9 Highlights**

Jul. 20, 2001; In English; Videotape: 19 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001110044; BRF-1429I; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

On this ninth day of the STS-104 mission, Mike Gernhardt and Jim Reilly are seen in the newly installed Quest Airlock performing a dry run for flight day ten's spacewalks' preparations. The crews of STS-104 (Commander Steven Lindsey, Pilot Charles Hobaugh, and Mission Specialists Mike Gernhardt, Jim Reilly, and Janet Kavandi) and Expedition 2 (Commander Yuriy Usachev and Flight Engineers James Voss and Susan Helms) answer questions about the STS-104 mission, the next day's spacewalks, and Expedition 2's stay on the International Space Station during an on-orbit interview. An external shot of the Atlantis Orbiter shows a water dump as it leaves the Shuttle and dissipates into space. Commander Lindsey gives a guided video tour of the Quest Airlock, displaying equipment and summarizing its purpose.

On this tenth day of the STS-105 mission, footage shows the Leonardo Multipurpose Logistics Module packed and ready to return to Earth before it is grappled using the robotic arm and returned to the payload bay of Discovery. As the orbiter and the International Space Station fly over Earth, Florida is seen, as are Washington and Oregon (where the

forest fires blaze), Lake Winnipeg, and the border between Ontario and Quebec.

In this 12th day of the STS-105 mission, Discovery continues to fly towards Earth after the previous day's undocking from the International Space Station (ISS). Several on-orbit interviews are conducted, including questions to the STS-105 crew (Commander Scott Horowitz, Pilot Fred Sturckow, and Mission Specialists Dan Barry and Pat Forrester) about spaceflight, questions to the Expedition 2 crew (Commander Yuriy Usachev and Flight Engineers James Voss and Susan Helms) about their stay on the ISS, and questions to the Expedition 3 crew (Frank Culbertson, Jr., Mikhail Turin, and Vladimir Dezhurov) about some of the experiments on board the ISS. Typhoon 14 is seen from above as Discovery passes over the storm.

On this fourth day of the STS-108 mission, the robotic arm is seen as it moves towards the Raffaello Multipurpose Logistics Module to prepare for the grapple and transfer of the module from Endeavour to the International Space Station (ISS). Expedition 4 Flight Engineer Carl Walz and STS-108 Mission Specialist Linda Godwin are shown during preparations to open the hatch between ISS and Raffaello. Expedition 3 Commander Frank Culbertson, Expedition 4 Commander Yuri Onufrienko, and STS-108 Pilot Mark Kelly are seen during an on-orbit press conference, where they answer questions about the supply transfer between Raffaello and ISS and share their thoughts about the September 11th tragedy.

#### **STS-104 Mission Highlights Resource Tape, Part 1 of 4**

Dec. 11, 2001; In English; Videotape: 59 min. 16 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001214904; JSC-1891; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

An overview of the STS-104 mission is given through footage of each flight day. Scenes from flight days one through three show activities such as astronaut prelaunch procedures (breakfast, suit-up, and boarding Atlantis), launch, and on-orbit activities such as the opening of the payload bay doors, rendezvous and docking of the Orbiter to the International Space Station (ISS), and the opening of the hatches separating the Orbiter from ISS. The STS-104 crew (Commander Steven Lindsey, Pilot Charles Hobaugh, and Mission Specialists Mike Gernhardt, Jim Reilly, and Janet Kavandi) greets the Expedition 2 crew (Commander Yuriy Usachev and Flight Engineers

James Voss and Susan Helms). Footage from flight days four through twelve can be found on the following videos: 'STS-104 Mission Highlights Resource Tape, Part 2 of 4' (internal ID 2001214902), 'STS-104 Mission Highlights Resource Tape, Part 3 of 4' (internal ID 2001214906), and 'STS-104 Mission Highlights Resource Tape, Part 4 of 4' (internal ID 2001214905).

#### **STS-109 Crew Interviews - Altman**

Feb. 04, 2002; In English; Videotape: 34 min. 3 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2002033710; JSC-1901A; No Copyright; Avail: CASI; [B03](#), Videotape-Beta; [V03](#), Videotape-VHS

STS-109 crew Commander Scott D. Altman is seen during a prelaunch interview. He answers questions about his inspiration to become an astronaut and his career path. He gives details on the mission's goals and significance, which are all related to maintenance of the Hubble Space Telescope (HST). After the Columbia Orbiter's rendezvous with the HST, extravehicular activities (EVA) will be focused on several important tasks which include: (1) installing the Advanced Camera for Surveys; (2) installing a cooling system on NICMOS (Near

Infrared Camera Multi-Object Spectrometer); (3) repairing the reaction wheel assembly; (4) installing additional solar arrays; (5) augmenting the power control unit; (6) working on the HST's gyros. The reaction wheel assembly task, a late addition to the mission, may necessitate the abandonment of one or more of the other tasks, such as the gyro work.

STS-109 Mission Specialist James H. Newman is seen during a prelaunch interview. He answers questions about his inspiration to become an astronaut, his career path, and his most memorable experiences. He gives details on the mission's goals and objectives, which focus on the refurbishing of the Hubble Space Telescope, and his role in the mission. He provides a brief background on the Hubble Space Telescope, and explains the plans for the rendezvous of the Columbia Orbiter with the Hubble Space Telescope. He provides details and timelines for each of the planned Extravehicular Activities (EVAs), which include replacing the solar arrays, changing the Power Control Unit, installing the Advanced Camera for Surveys (ACS), and installing a new Cryocooler for the Near

Infrared Camera and Multi-Object Spectrometer (NICMOS). He gives further explanation of each of these pieces of equipment. He also describes the break-out plan in place for these spacewalks. The interview ends with Newman explaining the details of a late addition to the mission's tasks, which is to replace a reaction wheel on the Hubble Space Telescope.

**STS-109 Crew Interviews - Linnehan**

Feb. 05, 2002; In English; Videotape: 44 min. 52 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2002033715; JSC-1901E; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

STS-109 Mission Specialist 3 (MS3) Richard M. Linnehan is seen during a prelaunch interview. He answers questions about his lifelong desire to become an astronaut and his career path, which included becoming a zoo veterinarian. He gives details on the Columbia Orbiter mission, which has as its main

purpose the maintenance and augmentation of the Hubble Space Telescope (HST). As MS3, his primary role in the mission pertains to EVAs (Extravehicular Activities) 1, 3, and 5. During EVA 1, Linnehan and another crewmember will replace one of two flexible solar arrays on the HST with a smaller, more efficient rigid solar array. The second solar array will be replaced on EVA 2 by other crewmembers. EVA 3 will involve the replacement of the Power Control Unit (PCU), and will require the first complete powering down of HST since its deployment. The possibility of a serious problem occurring is greatest during this portion of the mission because the original PCU was not built to be replaced. In EVA 5, Linnehan and another crewmember will install a replacement cooling system on NICMOS (Near Infrared Camera Multi-Object Spectrometer), which has not been operational. Linnehan discusses his role during the mission as well as that of his crewmates, and provides an abbreviated timeline, including possible contingencies.

**STS-109 Crew Interviews - Currie**

Feb. 05, 2002; In English; Videotape: 42 min. 11 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2002033714; JSC-1901D; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

STS-109 Mission Specialist 2 Nancy Jane Currie is seen during a prelaunch interview. She answers questions about her inspiration to become an astronaut and her career path. She gives details on the Columbia Orbiter mission which has as its main tasks the maintenance and augmentation of the Hubble Space Telescope (HST). While she will do many things during the mission, the most important will be her role as the primary operator of the robotic arm, which is responsible for grappling the HST, bringing it to the Orbiter bay, and providing support for the astronauts during their EVAs (Extravehicular Activities). Additionally, the robotic arm will be responsible for transferring new and replacement equipment from the Orbiter to the HST. This equipment includes: two solar arrays, a Power Control Unit (PCU), the Advanced Camera for Surveys, and a replacement cooling system for NICMOS (Near Infrared Camera Multi-Object Spectrometer).

STS-109 Payload Commander John Grunsfeld is seen during a prelaunch interview answering questions about his inspiration to become an astronaut and his career path. He gives details on the mission's goal (which is to service the Hubble Space Telescope (HST)), his role during the mission, the five scheduled spacewalks, the Columbia Orbiter's recent upgrades, and what he sees as the challenges of the mission. Grunsfeld describes how his experience on the STS-103 mission, a previous HST servicing mission, has helped prepare him for the STS-109 mission. The interview ends with Grunsfeld explaining why the servicing of the Reaction Wheel Assembly, a task added late in his training, is so important.

The crewmembers of STS-108, Commander Dominic Gorie, Pilot Mark Kelly, and Mission Specialists Linda Godwin and Daniel Tani, narrate this video as footage from the mission is shown. The crew is seen flying into Kennedy Space Center, suiting up, boarding the Endeavour Orbiter, and during launch. Various mission highlights are seen, including the rendezvous with the International Space Station (ISS) and docking of Endeavour, the unloading of the Multipurpose Logistics Module (MPLM), and the spacewalk to install thermal blankets over the Beta Gimbal Assemblies (BGAs) at the bases of the Space Station's solar panels. A glimpse is given into the difficulties of working in a microgravity environment as the crewmembers attempt to eat food before it floats away from them and drink water from a bag. The exchange of the Expedition 4 (Yuri I. Onufrienko, Carl E. Walz, and Daniel W. Bursch) for the Expedition 3 crew (Frank L. Culbertson, Mikhail Turin, and Vladimir N. Dezhurov) is also seen. The Endeavour undocks from the ISS, which is seen over the Caribbean Sea. Endeavour passes over Cuba, and footage of the Swiss Alps is shown. The video ends with the landing of the spacecraft.

This footage from the third day of the STS-109 mission to service the Hubble Space Telescope (HST) begins with the grappling of the HST by the robotic arm of the Columbia Orbiter, operated by Mission Specialist Nancy Currie. During the grappling, numerous angles deliver close-up images of the telescope which appears to be in good shape despite many years in orbit around the Earth. Following the positioning of the HST on its berthing platform in the Shuttle bay, the robotic arm is used to perform an external survey of the telescope. Some cursory details are given about different equipment which will be installed on the HST including a replacement cooling system for the Near Infrared Camera Multi-Object Spectrometer (NICMOS) and the Advanced Camera for Surveys. Following the survey, there is footage of the retraction of both of the telescope's two flexible solar arrays, which was successful. These arrays will be replaced by rigid solar arrays with decreased surface area and increased performance.

STS-109 Payload Commander John Grunsfeld and Mission Specialist Richard Linnehan are seen suiting up in preparation for their spacewalk with the assistance of Mission Specialists Michael Massimino and James Newman. Linnehan and Grunsfeld move the old solar arrays from the Hubble Space Telescope (HST) into the cargo bay of the Columbia Orbiter for storage. Grunsfeld is seen maneuvering around the HST to remove the connections to the diode box controller. Linnehan is seen controlling the new rigid solar array as he moves it into position onto the HST and Grunsfeld locks it into place. Footage is shown of Linnehan unfolding the solar array and Grunsfeld attaching the cables to the diode box controller to supply power to the solar array. Scenes of the HST with its new starboard rigid solar array are shown. The video concludes with footage of the activities of Nancy Currie, James Newman, and Michael Massimino during the spacewalk.

The Hubble Space Telescope (HST) is seen on its berthing platform on the rear of the cargo bay of the Columbia Orbiter. Additional footage shows the port solar array of the HST as well as the area where the new thermal blanket was installed. Mission Specialists James Newman and Michael J. Massimino are performing their spacewalk. The footage includes Newman unbolting and sliding out the Faint Object Camera, moving it into storage, then lifting the Advanced Camera for Surveys (ACS) out of the cargo bay, and Massimino installing the ACS. The second stage of their spacewalk shows Newman retrieving the Electronic Support Module out of the cargo bay, and assisting Massimino as he installs the module and its connectors in front of the ACS. As they return to Columbia, additional members of the crew are seen preparing spacesuits for the following day's spacewalk and cleaning the seals on the airlock. The video concludes with Pilot Duane G. Carey interviewing Massimino about his spacewalk using internet questions from school children.

Footage shows the Hubble Space Telescope (HST) against a backdrop of Earth. The grappling of the HST with the robotic arm is seen, and payload bay cameras show different angles of the HST in its deploy orientation. The deployment of the HST from the Columbia Orbiter is seen, followed by footage of the HST flying freely over the Earth's horizon. All seven crew members are gathered together during an in-flight interview as they answer questions about the mission, the experiences of being in space, and their lives as astronauts. Additional footage of the crew working during the deployment of the HST is shown. Duane Carey is seen interviewing Nancy Currie with internet questions from young students. The video concludes with the view from Columbia of the Pacific Ocean, the coast of Northwestern Chile, and a sunrise.

On the fifth day of the STS-109 mission, the crewmembers and Commander Scott Altman of the Columbia Orbiter are shown in their servicing mission to the Hubble Space Telescope (HST). Selected footage is presented of the extravehicular activities (EVA) of Mission Specialists Jim Newman and Mike Massimino, who installed a new port solar array on the HST. Information is presented on the size and power capacity of the array. The reaction wheel assembly, one of four gyroscopic devices used to maneuver the HST, is also shown being replaced by the astronauts. A new insulation blanket panel was also installed at the end of the spacewalk because the astronauts had extra time.

On the sixth flight day of the STS-109 mission, the crewmembers of the Columbia Orbiter (Commander Scott Altman, Pilot Duane Carey, Payload Commander John Grunsfeld, and Mission Specialists Nancy Currie, James Newman, Richard Linnehan, and Michael Massimino) are shown in selected footage of their servicing mission to the Hubble Space Telescope (HST). The third of five extravehicular activities (EVA) is performed in which Linnehan and Grunsfeld replaced the HST's Power Control Unit (PCU). The astronauts' egress from the Orbiter was delayed after water was found in Grunsfeld's suit. The removal of the old unit was particularly difficult, given the difficulty of demating the PCU's 36 connectors encumbered by the heavy gloves of the astronaut's suit. During this space walk, the HST was powered down to a completely dormant state for the first time since its launch in 1990. Following the successful installation of the new PCU, the HST's power was restarted by engineers at the Goddard Space Flight Center (GSFC). There had been some concern about the telescope's possible failure to restart, but everything went smoothly.

Footage shows the view of Earth from the Columbia Orbiter. A video conference of the crew members of STS-109 (Commander Scott Altman, Pilot Duane Carey, Payload Commander John Grunsfeld, and Mission Specialists Nancy Currie, James Newman, Richard Linnehan, and Michael Massimino) and of the International Space Station is seen as they discuss and share their experiences in space. Carey and Currie are seen as they answer questions sent from school children. Additional footage of the view of Earth is shown as the crew members answer more questions about the mission during an on-orbit interview. The view of the Hubble Space Telescope in the distance is seen. The video concludes with a view of the Galapagos Islands.

#### **STS-105 Mission Highlights Resource Tape: Flight Days 4-6, Part 2 of 4**

Mar. 05, 2002; In English; Videotape: 56 min. 28 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2002046549; JSC-1899; No Copyright; Avail: CASI; [B03](#), Videotape-Beta; [V03](#), Videotape-VHS

A continuation of 'STS-105 Mission Highlights Resource Tape: Flight Days 1-3' (internal ID 2002046550), this video shows footage from flight days four through six of the STS-105 mission. Commander Scott Horowitz helps Mission Specialist Pat Forrester maneuver the Space Shuttle's robotic arm as it grapples the Multipurpose Logistics Module (MPLM) from Discovery's payload bay to the International Space Station (ISS). The three crews, STS-105 (Commander Horowitz, Pilot Fred Sturckow, and Mission Specialists Dan Barry and Forrester), Expedition 2 (Commander Yuriy Usachev and Flight Engineers James Voss and Susan Helms), and Expedition 3 (Commander Frank Culbertson, Jr. and Flight Engineers Mikhail Turin and Vladimir Dezhurov), are seen during unloading operations as they transfer equipment from the MPLM to the ISS. Forrester and Barry check their equipment and suits for the next day's spacewalks. The E2 crew shows the E3 crew around ISS. The crescent moon and the end of a sunset are seen from space. For activities from flight days 7-13, see 'STS-105 Mission Highlights Resource Tape: Flight Days 7-9' (internal ID 2002046552) and 'STS-105 Mission Highlights Resource Tape: Flight Days 10-13' (internal ID 2002046551).

Mission Specialists Dan Barry and Pat Forrester are seen preparing for and performing their spacewalks, where they install an Early Ammonia Servicer on the International Space Station (ISS). The Expedition 2 crew (Commander Yuriy Usachev and Flight Engineers James Voss and Susan Helms) hands control of the ISS over to the Expedition 3 crew (Commander Frank Cul-

bertson, Jr. and Flight Engineers Mikhail Turin and Vladimir Dezhurov) in a short ceremony. Barry and Forrester return to space the next day for another spacewalk to install handrails and heater cables. Hawaii is seen from space as ISS passes over, and the smoke from forest fires in Oregon and Idaho is shown. For footage from flight days 10-13, see 'STS-105 Mission Highlights Resource Tape: Flight Days 10-13' (internal ID 2002049551).

An overview of the STS-105 mission is given through footage of each flight day. Scenes from flight days one through three show activities such as astronaut prelaunch procedures

(breakfast, suit-up, and boarding Discovery), the launch from multiple vantage points, and various on-orbit activities. Expedition 3 (E3) Commander Frank Culbertson, Jr. and Flight Engineer Mikhail Turin perform the H-Reflex Experiment, an experiment to test the effects of microgravity on the human spinal cord. As Discovery approaches the International Space Station (ISS), the Expedition 2 (E2) crew, Commander Yuriy Usachev and Flight Engineers James Voss and Susan Helms, are seen working in the Destiny Laboratory Module aboard ISS. Discovery docks to the space station and the three crews (STS-105, E2, and E3) greet each other after the hatches between the orbiter and ISS are opened. As Discovery passes over the USA, Utah, Wyoming, South Dakota, and Minnesota are seen through patchy clouds. Footage from flight days 4-13 can be found on 'STS-105 Mission Highlights Resource Tape: Flight Days 4-6' (internal ID 2002046549), 'STS-105 Mission Highlights Resource Tape: Flight Days 7-9' (internal ID 2002046552), and 'STS-105 Mission Highlights Resource Tape: Flight Days 10-13' (internal ID 2002046551).

**STS-109 Flight Day 8 Highlights**

Mar. 08, 2002; In English; Videotape: 41 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2002047890; BRF-1432H; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

Footage of the eighth day of STS-109 is shown during which Mission Specialists John Grunsfeld and Rick Linnehan service the Hubble Space Telescope (HST). A broad overview of the Columbia Orbiter mission is presented. On the fifth extravehicular activity (EVA) of the mission, Grunsfeld and Linnehan installed a new cryogenic cooling system and radiator on HST for NICMOS (Near Infrared Camera and Multi-Object Spectrometer) which had not been previously operational due to the failure of an earlier cooling system. Linnehan and Grunsfeld are both shown on the end of the Orbiter's robot arm, the Remote Manipulator System, which was controlled by Commander Scott Altman. Following the completion of their spacewalks, the two Mission Specialists make statements which include thanking the numerous support personnel. Linnehan answers questions on the differences between training simulation at facilities such as the Neutral Buoyancy Lab (NBL) and his actual experiences in space.

STS-110 Mission Specialist Lee Morin is seen during this preflight interview, where he gives a quick overview of the mission before answering questions about his inspiration to become an astronaut and his career path. Morin outlines his role in the mission in general, and specifically during the docking and extravehicular activities (EVAs). He describes the payload (S0 Truss and Mobile Transporter) and the dry run installation of the S0 truss that will take place the day before the EVA for the actual installation. Morin discusses the planned EVAs in detail and outlines what supplies will be left for the resident crew of the International Space Station (ISS). He ends with his thoughts on the most valuable aspect of the ISS.

**STS-108 Mission Highlights Resource Tape**

Mar. 06, 2002; In English; Videotape: 59 min. 41 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2002049331; JSC-1908; No Copyright; Avail: CASI; [B03](#), Videotape-Beta; [V03](#), Videotape-VHS

This is Part 1 of a three part video series which provides highlights of the STS-108 mission during which the Expedition Three crew (Commander Frank Culbertson) of the International Space Station (ISS) was relieved by the Expedition Four crew (Commander Yuri Onfrienko). For the other parts of the series, refer to 'STS-108 Mission Highlights Resource Tape, Part 2 of 3' (Internal ID 2002049330) and 'STS-108 Mission Highlights Resource Tape, Part 3 of 3' (Internal ID 2002049329). During this video, the STS-108 crew of the Space Shuttle Endeavour (Commander Dom Gorie), as well as the Expedition Four crew, are shown preparing for liftoff at Kennedy Space Center (KSC). Preparations include preflight suiting up, and the strapping in of the crew by support staff. The launch is shown from the Launch Control Center. Following the orbital entry of Endeavour, there is an inspection of the shuttle's payload bay. There is some flight deck activity as the crew prepares for the rendezvous and docking of Endeavour

with the ISS. Following the docking, the Expedition Three crew welcomes the others aboard the station, and both crews are briefed. There is an unobstructed view of the South Atlantic Ocean and the coast line of Argentina which includes Peninsula Valdes and Golfo Nuevo. The Raffaello Multipurpose Logistics Module (MPLM) is unberthed from the shuttle payload bay and attached to the ISS.

This video is a continuation of 'STS-108 Mission Highlights Resource Tape: Part 1 of 3' (Internal ID 2002049331). Flight day four footage continues with a video tour of the International Space Station (ISS). During flight day five, an exterior view of the Multipurpose Logistics Module (MPLM) is seen, followed by the crew unloading the supplies and equipment from the MPLM. Commander Dominic Gorie and Mission Specialist Linda Godwin are seen making preparations for the Extravehicular Activity (EVA) scheduled for the following day. Footage of an exterior view of the ISS is also shown. Flight day six footage includes Godwin and Mission Specialist Daniel Tani suiting up for their EVA and the installation of thermal blankets around the solar array wings of the ISS. Expedition 3 Commander Frank Culbertson is seen working in the ISS laboratory during flight day seven. Views are shown of Saudi Arabia and the Red Sea, the western coast of Australia, Cuba and Florida, and Switzerland and Northern Italy. During flight day eight, the crew is seen stowing objects in the MPLM for return to earth. The video concludes with footage of the treadmill used by the astronauts for physical exercise. Flight days nine through twelve are included in 'STS-108 Mission Highlights Resource Tape: Part 3 of 3' (Internal ID 2002049329).

**STS-112 Crew Interviews - Magnus**

Aug. 15, 2002; In English; 43 min., 9 sec. playing time, in color, with sound

Report No(s): JSC-1924C; NONP-NASA-VT-2002137519; No Copyright; Avail: CASI; [B03](#), Videotape-Beta; [V03](#), Videotape-VHS

STS-112 Mission Specialist 2 Sandra H. Magnus is seen during a prelaunch interview. She answers questions about her inspiration to become an astronaut and her career path. She gives details on the mission's goals, the most significant of which will be the installation of the S-1 truss structure on the International Space Station (ISS). The installation, one in a series of truss extending missions, will be complicated and will require the use of the robotic arm as well as extravehicular activity (EVA) by astronauts. Magnus also describes her function in the performance of transfer operations. Brief descriptions are given of experiments on board the ISS as well as on board the Shuttle.

**STS-112 Crew Interviews: Sellers**

Aug. 16, 2002; In English; 41 min., 24 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2002137511; JSC-1924D; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Piers Sellers is an Astronaut from Crowborough, UK. His Bachelor of Science degree is in Ecological science from Scotland's University of Edinburgh and his doctorate is in biometeorology from Leeds University in the UK. After two years of intense training, Sellers's first assignment as a Mission Specialist is on Flight 111 STS-112. The goal of this flight is to continue building the International Space Station. Sellers, accompanied by five astronauts, will install the S1 truss of the space station which will take three EVA's, or Extra Vehicular Activities to complete. In EVA 1, the highest priority, the S1 truss will be attached to the space station. EVA 2, the electrical work, will set up the radiator and cooling equipment for the station. EVA 3, the final process of the flight, will prepare the station for the next mission. The primary reason for installing the truss is to change the center of gravity of the station so when the next truss is installed, it will be at a symmetrical point.

**STS-112 Crew Interviews: Ashby**

Aug. 15, 2002; In English; 25 min., 51 sec. playing time, in color, with sound

Report No(s): JSC-1924A; NONP-NASA-VT-2002137582; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

STS-112 Mission Commander Jeffrey Ashby is seen during this preflight interview, answering questions about his inspiration in becoming an astronaut and his career path and provides an overview of the mission. Ashby outlines his role in the mission in general, and specifically during the docking and extravehicular activities (EVAs). He describes the payload (S1 truss) and the importance that the S1 truss will have in the development of the International Space Station (ISS). Ashby discusses the delivery and installation of the S1 truss scheduled to be done in the planned EVAs in some detail. He touches on the use and operation of the Canadarm 2 robotic arm in this process and outlines what supplies will be exchanged with the resident crew of the ISS during transfer activities. He ends with his thoughts on the value of the ISS in fostering international cooperation.

**STS-111 Flight Day 09 Highlights**

Jun. 13, 2002; In English; 27 min., 29 sec., playing time, in color, with sound

Report No(s): BRF-1434I; NONP-NASA-VT-2002137516; No Copyright; Avail: CASI; **V02**, Videotape-VHS

The STS-111 flight crew consists of Kenneth D. Cockrell, Commander, Paul S. Lockhart, Pilot, Franklin R. Chang-Diaz, Mission Specialist, Philippe Perrin, (CNES), Mission Specialist, Valery G. Korzun, (RSA), ISS Up, Peggy A. Whitson, ISS Up, Sergei Y. Treschev (RSC), ISS Up, Yuri I. Onufriyenko (RSA), ISS Down, Carl E. Walz, and Daniel W. Bursch (ISS) Down. The main goal on this ninth day of flight STS-111, is to replace the wrist roll joint of the Robotic Arm on the International Space Station. Live footage of the wrist roll joint replacement is presented. Paul Lockhart is the spacewalk coordinator for this mission. Franklin Chang-Diaz and Philippe Perrin, are responsible for replacing the wrist roll joint and performing maintenance activities. The spacewalk to repair this joint occurs outside the Space Station's Quest Airlock. The wrist roll joint was replaced successfully. The spacewalk took approximately 7 hours and 17 minutes to complete.

**Expedition 5 Crew Interviews: Peggy Whitson**

May 08, 2002; In English; 38 min., 41 sec. playing time, in color, with sound

Report No(s): JSC-1910B; NONP-NASA-VT-2002137655; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Expedition 5 Flight Engineer Peggy Whitson is seen during a prelaunch interview. She gives details on the mission's goals and significance, her role in the mission, what her responsibilities will be, what the crew activities will be like (docking and undocking of two Progress unpowered supply vehicles, normal space station maintenance tasks, conducting science experiments, installing the CETA (Crew and Equipment Translation) cart, and supporting the installation of the International Truss Structure S1 segment), the day-to-day life on an extended stay mission, the experiments she will be conducting on board, and what the S1 truss will mean to the International Space Station (ISS). Whitson ends with her thoughts on the short-term and long-term future of the ISS.

Aug. 20, 2002; In English; 37 min., 22 sec. playing time, in color, with sound

Report No(s): JSC-1924F; NONP-NASA-VT-2002137523; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

A preflight interview with mission specialist Fyodor Yurchikhin is presented. He worked for a long time in Energia in the Russian Mission Control Center (MCC). Yurchikhin discusses the main goal of the STS-112 flight, which is to install the Integrated Truss Assembly S1 (Starboard Side Thermal Radiator Truss) on the International Space Station. He also talks about the three space walks required to install the S1. After the installation of S1, work with the bolts and cameras are performed. Yurchikhin is involved in working with nitrogen and ammonia jumpers. He expresses the complexity of his work, but says that he and the other crew members are ready for the challenge.

**STS-113 Crew Interviews: John Herrington, Mission Specialist 2**

Oct. 07, 2002; In English; 29 min., 46 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2002137662; JSC-1925D; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

STS-113 Mission Specialist 2 John Herrington is seen during a prelaunch interview. He answers questions about his inspiration to become an astronaut and his career path, as well as his thoughts on becoming the first Native American in space. He gives details on the mission's goals and significance, which include the transfer of the International Space Station's (ISS) Expedition 6 crew for the Expedition 5 crew, as well as the installation of the ISS's P-1 integrated truss structure. Herrington, who will participate in three EVAs (extravehicular activity), provides details on the installation of the truss structure. He also describes the process of crew transfer, which also involves the transfer of soft goods and scientific experiments, such as the MEMS (microelectromechanical systems)-based Picosatellite Inspector (MEPSI) which will be ejected from the shuttle shortly after it undocks from the ISS.

Report No(s): JSC-1925A; NONP-NASA-VT-2002137656; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

STS-113 Commander Jim Wetherbee is seen during this preflight interview where he gives a quick overview of the mission before answering questions about his inspiration to become an astronaut and his career path. Wetherbee outlines his role in the mission, what his responsibilities will be, what the crew exchange will be like (transferring the Expedition 6 crew in place of the Expedition 5 crew on the International Space Station (ISS)) and what the importance of the primary payload (the P1 truss) will be. He also provides a detailed account of the three planned extravehicular activities (EVAs) and additional transfer duties. He ends by offering his thoughts on the success of the ISS as the second anniversary of continuous human occupation of the ISS approaches.

Oct. 09, 2002; In English; 21 min., 57 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2002137661; JSC-1926C; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

Expedition 6 member Don Pettit (Flight Engineer 2/ International Space Station (ISS) Science Officer (SO)) is seen during a prelaunch interview. He answers questions about his inspiration to become an astronaut and his career path. Pettit, who had been training as a backup crewmember, discusses the importance of training backups for ISS missions. He gives details on the goals and significance of the ISS, regarding experiments in various scientific disciplines such as the life sciences and physical sciences. Pettit also comments on the value of conducting experiments under microgravity. He also gives an overview of the ISS program to date, including the ongoing construction, international aspects, and the routines of ISS crewmembers who inhabit the station for four months at a time. He gives a cursory description of crew transfer procedures that will take place when STS-113 docks with ISS to drop off Pettit and the rest of Expedition 6, and retrieve the Expedition 5 crew.

**STS 110 Mission Highlights Resource Tape, Part 3 of 4**

Jun. 14, 2002; In English; 57 min., 35 sec. playing time, in color, with sound

Report No(s): JSC-1923; NONP-NASA-VT-2002137574; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

A continuation of 'STS 110 Mission Highlights Resource Tape'. This video, Part 3 of 4, shows footage from flight days 6 through 9 of STS-110. The spacecrew includes Michael J. Bloomfield, Commander Stephen N. Frick, Pilot; Jerry L. Ross, Mission Specialist; Steven L. Smith, Mission Specialist; Ellen Ochoa, Mission Specialist; Lee M.E. Morin, Mission Specialist; Rex J. Walheim, Mission Specialist. On flight day 6, Ross and Morin conduct an EVA (extravehicular activity) to secure a tripod like strut to the S0 Truss of the International Space Station (ISS). They also move the drag link and keel pins from one face of the Truss to the other to free the rail on the truss for a railcar to move. Smith installs a camera onto the CANADARM robotic arm on flight day 7, and on flight day 8 the restraints are removed from the railcar connected to the S0 Truss in preparation for checkout. The checkout of the railcar is shown, including its inaugural run. Ross and Morin conduct another EVA on flight day 9 to complete the outfitting of the S0 Truss Structure. Notable footage includes views of Ross and Morin at work from the helmet-mounted camera on Ross' EVA suit, including close-ups of the pistol grip tool, CANADARM 2 onboard the ISS lit at sunrise, a 'diamond ring' effect formed by the Sun between the Earth's limb and the ISS, a brief shot of the Yucatan peninsula, and an end-to-end pan down the length of the ISS. The activities from other flights days can be seen on 'STS 110 Mission Highlights Resource Tape' Part 1 of 4 (internal ID 2002137575), 'STS 110 Mission Highlights Resource Tape' Part 2 of 4 (internal ID 2002137573), and 'STS 110 Mission Highlights Resource Tape' Part 4 of 4 (internal ID 2002137517).

**STS 110 Mission Highlights Resource Tape, Part 2 of 4**

Jun. 14, 2002; In English; 58 min., 17 sec. playing time, in color, with sound

Report No(s): JSC-1923; NONP-NASA-VT-2002137573; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

A continuation of 'STS 110 Mission Highlights Resource Tape'. This video, Part 2 of 4, shows footage from flight days 3 through 5 of STS-110. The flight crew includes Michael J. Bloomfield, Commander; Stephen N. Frick, Pilot; Jerry L. Ross, Mission Specialist; Steven L. Smith, Mission Specialist; Ellen Ochoa, Mission Specialist; Lee M.E. Morin, Mission Specialist; Rex J. Walheim, Mission Specialist. The coverage from flight day 3 includes docking replays of Atlantis and the International Space Station (ISS), and postdocking procedures, as well as intermingling of the flight crew with the Expedition 4 crew (Yury I. Onufrienko, Commander; Daniel W. Bursch, Flight Engineer; Carl E. Walz, Flight Engineer) of the ISS. Flight day 4 includes an EVA (extravehicular activity) in which Walheim and Smith lift the S0 Truss from the payload bay, and temporarily clamp it onto the Destiny laboratory. On flight day 5 a suite of spaceborne experiments (not shown) arrives at Destiny, including protein crystal growth and wheat plant growth experiments. Notable footage includes Hawaii, New Zealand, and sunrise on Atlantis. An unknown object streaks across the field of view during the video, with the Earth in the background. The activities of the other flight days can be seen on 'STS 110 Mission Highlights Resource Tape, Part 1 of 4' (internal ID 2002137575), 'STS 110 Mission Highlights Resource Tape, Part 3 of 4' (internal ID 2002137574), and 'STS 110 Mission Highlights Resource Tape, Part 4 of 4' (internal ID 2002137517).

#### **Crew Training STS-110**

Mar. 20, 2002; In English; 37 min. playing time, in color, with sound

Report No(s): JSC-1917; NONP-NASA-VT-2002137533; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The crewmembers are shown being suited for the STS-110 flight. The STS-110 crews are shown in training for four EVA's on the International Space Station. The crewmembers consist of: Michael J. Bloomfield, mission commander; Stephen N. Frick, pilot; and mission specialists: Ellen Ochoa, Lee M.E. Morin, Rex J. Walheim, Steven L. Smith, and Jerry Ross. Crew ascent middeck operations and Orbiter Skills Training in a fixed Based Simulator are the training areas shown. The STS-110 crew and Expedition four are seen during training at the Johnson Space Center Space Station Training Facility

(SSTF). A photo session of the crew is also presented.

A continuation of 'STS 110 Mission Highlights Resource Tape'. This video, Part 4 of 4, shows footage from flight days 10 through 12 of STS-110. The spacecrew includes Michael J. Bloomfield, Commander; Stephen N. Frick, Pilot; Jerry L. Ross, Mission Specialist; Steven L. Smith, Mission Specialist; Ellen Ochoa, Mission Specialist; Lee M.E. Morin, Mission Specialist; Rex J. Walheim, Mission Specialist. Flight day 10 includes an exchange of farewells with the Expedition 4 crew (Yury I. Onufrienko, Commander; Daniel W. Bursch, Flight Engineer; Carl E. Walz, Flight Engineer) of the International Space Station (ISS), and undocking. The video includes many views of the ISS as Atlantis departs, including cloud cover and the Earth's limb as backgrounds. There is also a view of Atlantis with its payload bay open. On flight day 11, in preparation for landing, the crew conducts a checkout of flight controls and a test firing. A spaceborne wheat plant experiment onboard the ISS is briefly shown. Flight day 12 includes closing the payload bay, suit-up, and landing. Kennedy Space Center is seen from the air, and the video shows landing replays, as well as a heads-up display view of the landing. Earth views include clear views of Western Sahara, Morocco, Mauritania, and Algeria, with the Atlantic Ocean, a cloud obstructed view of Newfoundland and the Atlantic, Pacific Ocean sun glint, and an excellent view of the Chicago area and Lake Michigan at night. The activities from other flights days can be seen on 'STS 110 Mission Highlights Resource Tape' Part 1 of 4 (internal ID 2002137575), 'STS 110 Mission Highlights Resource Tape' Part 2 of 4 (internal ID 2002137573), and 'STS 110 Mission Highlights Resource Tape' Part 3 of 4 (internal ID 2002137574).

#### **STS-110 Flight Day 6 Highlights**

Apr. 13, 2002; In English; 41 min., 30 sec. playing time, in color, with sound

Report No(s): BRF-1433F; NONP-NASA-VT-2002137515; No Copyright; Avail: CASI; [B03](#), Videotape-Beta; [V03](#), Videotape-VHS

On the sixth day of the STS-110 mission, Mission Specialists Jerry Ross and Lee Morin are seen in the second extravehicular activity (EVA) of this mission to the International Space Station (ISS). The video opens with the two astronauts preparing for the EVA, which will be Ross' eighth, thereby making him the most experienced space-walker in history. This pair of astronauts has been dubbed the Silver Team, largely because they both have grandchildren. As Ross and Morin prepare for the EVA by breathing pure oxygen and experiencing reduced pressure, Mission Specialist Ellen Ochoa maneuvers the robotic arm towards the hatch of the Space Shuttle Atlantis. There is video footage of the astronauts exiting the hatch and preparing their tools and work areas. During this EVA the astronauts will install two tripod-like struts, which will serve as structural attachments between the S-0 truss segment and the Destiny Laboratory Module. While the construction takes place, helmet mounted cameras on the spacesuits provide live video of the astronauts at work, most often using a pistol grip tool used as an electric ratcheting-type drill to loosen and tighten bolts. Following the installation of the struts, Ross and Morin remove the draglinks and keelpins that had functioned to hold the S0 truss structure securely in Atlantis' payload bay during the launch sequence of the mission. They move these to temporary storage positions, bolted on the outside of the ISS. They then install an umbilical system that will provide power to the Mobile Transporter (MT).

The most significant highlights of flight day 4 of STS-111 are the lifting of the Leonardo Multi Purpose Logistics Module (MPLM) out of Endeavour's payload bay, and its temporary attachment to the Unity module of the International Space Station (ISS). The lifting and attachment are shown. Also shown is the testing of cameras on the CANADARM2 robotic arm on the ISS, an ISS extravehicular activity (EVA) suit, and an interview with the outgoing Expedition 4 crew of the ISS.

Earth views include the ISS and Earth limb, and cloud formations.

This video, Part 1 of 4, shows footage from flight days 1 and 2, and part of day 3, of STS-110. The spacecrew includes Michael J. Bloomfield, Commander; Stephen N. Frick, Pilot; Jerry L. Ross, Mission Specialist; Steven L. Smith, Mission Specialist; Ellen Ochoa, Mission Specialist; Lee M.E. Morin, Mission Specialist; Rex J. Walheim, Mission Specialist. They are shown at their pre-launch meal, introducing themselves and talking about their roles on the coming flight. The launch of Atlantis is shown, with replays. On flight day 2, the crew conducts a checkout of the CANADARM robotic arm. Flight day 3 includes Atlantis docking with the International Space Station (ISS), firing its thrusters to reach it. The approach and docking are shown. Other notable footage includes CANADARM with the Earth's limb in the background, Atlantis moving over a cloud cover background, sunlight from behind the Earth's limb, showing the 'diamond ring' effect, sunrise upon Atlantis, and the docking hatches of the two spacecraft during approach. The activities from other flights days can be seen on 'STS 110 Mission Highlights Resource Tape' Part 2 of 4 (internal ID 2002137573), 'STS 110 Mission Highlights Resource Tape' Part 3 of 4 (internal ID 2002137574), and 'STS 110 Mission Highlights Resource Tape' Part 4 of 4 (internal ID 2002137517).

#### **STS-110 Flight Day 7 Highlights**

Apr. 14, 2002; In English; 32 min. playing time, in color, with sound

Report No(s): BRF-1433G; NONP-NASA-VT-2002137514; No Copyright; Avail: CASI; [B03](#), Videotape-Beta; [V03](#), Videotape-VHS

On the seventh day of STS-110, Mission Specialists Steven Smith and Rex Walheim are shown preparing for their second extravehicular activity (EVA) and the third of the mission, with the assistance of Mission Specialist Jerry Ross.

Following this mission, Ross and Smith will be the first and second most experienced spacewalkers, respectively, in history. A camera mounted on the Space Shuttle Atlantis shows footage of the International Space Station. While Smith and Walheim are on EVA, Mission Specialists Ross and Lee Morin will provide choreography from inside the Atlantis crew cabin, Pilot Stephen Frick will operate the robotic arm, and Commander Mike Bloom will control the cameras on the robotic arm. Smith and Walheim are shown exiting the airlock hatch and then installing an PFR (Portable Foot Restraint) on the end of the robotic arm, from which much of the work will be done. Following the switching off of a circuit breaker, the main EVA task of rewiring umbilical cables that provide power, commands, and video is begun. These cables will be connected to the Mobile Transporter's (MT) robotic arm. The MT, an external transportation system which runs on rails, is seen with a helmet mounted camera as the astronauts work to release bolts that had served to secure the MT during launch. After a final check of the umbilical connections mated, the Umbilical Reconfiguration Panel is fitted over the cables, and the astronauts make their way to the airlock hatch.

The most important highlight of flight day 10 of STS-111 was the undocking of the Leonardo Multi Purpose Logistical Module (MPLM) from the Unity module of the International Space Station (ISS). The undocking is shown, as is Leonardo resting in Endeavour's payload bay. The video also includes an interview, and footage of the West Africa and the Atlantic Ocean, Gibraltar and the Mediterranean Sea, Italy, Mexico and the Pacific Ocean, Hispanola, an unknown land mass, and unknown mountains.

#### **STS-112 Crew Interviews: Melroy**

Aug. 15, 2002; In English; 45 min., 46 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2002137512; JSC-1924B; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Pamela A. Melroy USAF Pilot, is seen during a prelaunch interview. She gives a brief overview of the STS-112 mission which is to install the S1 truss on the International Space Station. She also gives some specific details about the structural design of the S1 truss. Pamela Melroy is also the Internal EVA (IV) coordinator for this mission. She talks about her responsibilities as the IV which are to direct the spacewalkers back into the Airlock after the S1 is installed. A detailed description about the goals of EVA (2) and EVA (3) are also given by Melroy.

The eleventh day of the STS-112 begins with a live shot from the flight deck of the Space Shuttle Atlantis. The flight crew consists of: Commander Jeff Ashby, Pilot Pamela Melroy, Mission Specialists: Dave Wolfe, Fyodor Yurchikhin, Sandy Mangus and Piers Sellers. Dave Wolfe and Jeff Ashby are shown cleaning the flight deck. Pam Melroy, Dave Wolfe, Sandy Mangus, and Jeff Ashby, answer questions from the internet about microgravity, spacesuits, and orbital docking. The six astronauts then enter into the flight deck to answer questions from the media.

#### **Expedition 6 Crew Interviews: Ken Bowersox CDR**

Oct. 09, 2002; In English; 29 min., 17 sec. playing time, in color, with sound

Report No(s): JSC-1926A; NONP-NASA-VT-2002137691; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

Expedition 6 Commander Ken Bowersox is seen during a prelaunch interview. He gives details on the mission's goals and significance, his role in the mission, what his responsibilities will be as commander, what the crew exchange will be like (transferring the Expedition 6 crew in place of the Expedition 5 crew on the International Space Station (ISS)) and what day-to-day life on an extended stay mission is like. Bowersox

also discusses in some detail the planned extravehicular activities (EVAs), the anticipated use of the robot arms in installing the P1 truss and the on-going science experiments which will be conducted by the Expedition 6 crew. He touches on challenges posed by a late change in the crew roster. Bowersox ends with his thoughts on the value on the ISS in fostering international cooperation.

### **STS-110 Flight Day 8 Highlights**

Apr. 15, 2002; In English; 38 min., 16 sec. playing time, in color, with sound

Report No(s): BRF-1433H; NONP-NASA-VT-2002137518; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

On Flight Day 8 of the STS-110 mission, the combined members of the Atlantis STS-110 crew and the International Space Station (ISS) Expedition 4 crew, Commanders Michael J. Bloomfield and Yuri I. Onufrienko, respectively, answer questions posed to them by press members on the ground. Topics covered include: challenges of long term space habitation, adequacy of training for the on-orbit construction of the space station, details on the Mobile Transporter (MT) railcar system. Footage of the MT directly precedes and follows the extended question and answer portion of the video. The MT is seen from a variety of angles, as it slowly moves from Workstation 4 to Workstation 5 in order to test its ability to grapple to a fixed point along the track. The MT will eventually

be used as a base for the robot arm in order to perform maintenance and assembly tasks on the ISS.

### **STS-107 Crew Interviews: Kalpana Chawla MS2**

Jun. 10, 2002; In English; 1 hr., 8 min., 30 sec. playing time, in color, with sound

Report No(s): JSC-1920D; NASA-NONP-VT-2002139466; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

STS-107 Mission Specialist 2 Kalpana Chawla is seen during this preflight interview where she gives a quick overview of the mission before answering questions about her inspiration to become an astronaut and her career path. Chawla outlines her role in the mission in general, and specifically in conducting the on-board science experiments. She discusses the following experiments in detail: MEIDEX (Mediterranean Israel Dust Experiment), CM2 (Combustion Module 2), MIST (Water Mist Fire Suppression), SOFBALL (Structures of Flame Balls at Low Lewis-Number), LSP (Laminar Soot Processes), MGM (Mechanics of Granular Materials) and BDS (Biotechnology Demonstration System). She also discusses the potential benefits of space research, the dual-work shift of the mission and the rewards of international cooperation.

**Crew Interviews: Treschev**

May 08, 2002; In English; 36 min., 11 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2002137531; JSC-1910C; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Sergei Treschev is a Cosmonaut of the Rocket Space Corporation Energia, (RSC), from Volynsky District, Lipetsk Region (Russia). He graduated from Moscow Energy Institute. After years of intense training with RSC Energia, he was selected as International Space Station (ISS) Increment 5 flight engineer. The Expedition-Five crew (two Russian cosmonauts and one American astronaut) will stay on the station for approximately 5 months. The Multipurpose Logistics Module, or MPLM, will carry experiment racks and three stowage and resupply racks to the station. The mission will also install a component of the Canadian Arm called the Mobile Base System (MBS) to the Mobile Transporter (MT) installed during STS-110. This completes the Canadian Mobile Servicing System, or MSS. The mechanical arm will now have the capability to 'inchworm' from the U.S. Lab fixture to the MSS and travel along the Truss to work sites.

**STS-107 Crew Interviews: David Brown MS1**

Jun. 18, 2002; In English; 49 min., 13 sec. playing time, in color, with sound

Report No(s): JSC-1920C; NONP-NASA-VT-2002140934; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

STS-107 Mission Specialist 1 David Brown is seen during this preflight interview where he gives a quick overview of the mission before answering questions about his inspiration to become an astronaut and his career. Brown outlines his role in the mission in general, and specifically during the conducting of on-board science experiments. Brown discusses the following instruments and experiments in detail: ARMS (Advanced Respiratory Monitoring System), MEIDEX (Mediterranean Israeli Dust Experiment), Combustion Module 2, and FREE-STAR (Fast Reaction Enables Science Technology and Research). He also describes the new primary payload carrier, the SPACEHAB research double module which doubles the

amount of space available for research. Brown shares his thoughts about the importance of international cooperation in mission planning and the need for scientific research in space.

On this fifth day of the STS-112 mission, the crewmembers Atlantis will begin transferring equipment and supplies to the orbiting laboratory. The crew reviews procedures for Saturday's spacewalk. Mission Specialists, Dave Wolf and Piers Sellers will prepare the tools and other equipment for use during Saturday's spacewalk. The spacewalkers reverse positions for most of the EVA, with Sellers riding the arm and Wolf free-floating while tethered to the station. They will attach umbilicals, install a second camera, install spool positioning devices to quickly disconnect fittings on ammonia lines and release radiator beam launch locks. The crewmembers will move a number of scientific experiments back and forth between the vehicles to return completed experiments to Earth and deploy new experiments at the station. One experiment transferred includes a set of liver cell tissue samples from an experiment studying the function of human liver cells in micro-gravity experiments were moved from the station onto the shuttle for return to Earth. Payload experiments such as Marshall Space Flight Center's protein crystals in micro-gravity experiments were moved to and from the station.

### **STS-111 Flight Day 5 Highlights**

Jun. 09, 2002; In English; 26 min., 21 sec. playing time, in color, with sound

Report No(s): BRF-1434E; NONP-NASA-VT-2002139359; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

On Flight Day 5 of STS-111, the crew of Endeavour (Kenneth Cockrell, Commander; Paul Lockhart, Pilot; Franklin Chang-Diaz, Mission Specialist; Philippe Perrin, Mission Specialist) and the Expedition 5 crew (Valery Korzun, Commander; Peggy Whitson, Flight Engineer; Sergei Treschev, Flight Engineer) and Expedition 4 crew (Yury Onufrienko, Commander; Daniel Bursch, Flight Engineer; Carl Walz, Flight Engineer) are aboard the docked Endeavour and International Space Station (ISS). The ISS cameras show the station in orbit above the North African coast and the Mediterranean Sea, as Chang-Diaz and Perrin prepare for an EVA (extravehicular activity). The Canadarm 2 robotic arm is shown in motion in a wide-angle shot. The Quest Airlock is shown as it opens to allow the astronauts to exit the station. As orbital sunrise approaches, the astronauts are shown already engaged in their EVA activities. Chang-Diaz is shown removing the PDGF (Power and Data Grapple Fixture) from Endeavour's payload bay as Perrin prepares its installation position in the ISS's P6 truss structure; The MPLM is also visible. Following the successful detachment of the PDGF, Chang-Diaz carries it to the installation site as he is transported there by the robotic arm. The astronauts are then shown installing the PDGF, with video provided by helmet-mounted cameras. Following this task, the astronauts are shown preparing the MBS (Mobile Base System) for grappling by the robotic arm. It will be mounted to the Mobile Transporter (MT), which will traverse a railroad-like system along the truss structures of the ISS, and support astronaut activities as well as provide an eventual mobile base for the robotic arm.

#### **STS-112 Flight Day 4 Highlights**

Oct. 11, 2002; In English; 34 min. playing time, in color, with sound

Report No(s): BRF-1435D; NONP-NASA-VT-2002137663; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

On the fourth day of STS-112, its crew (Jeffrey Ashby, Commander; Pamela Melroy, Pilot; David Wolf, Mission Specialist; Piers Sellers, Mission Specialist; Sandra Magnus, Mission Specialist; Fyodor Yurchikhin, Mission Specialist) onboard Atlantis and the Expedition 5 crew (Valery Korzun, Commander; Peggy Whitson, Flight Engineer; Sergei Treschev, Flight Engineer) onboard the International Space Station (ISS) are seen preparing for the installation of the S1 truss structure. Inside the Destiny Laboratory Module, Korzun and other crewmembers are seen as they busily prepare for the work of the day. Sellers dons an oxygen mask and uses an exercise machine in order to purge the nitrogen from his bloodstream, in preparation for an extravehicular activity (EVA). Whitson uses the ISS's Canadarm 2 robotic arm to grapple the S1 truss and remove it from Atlantis' payload bay, with the assistance of Magnus. Using the robotic arm, Whitson slowly maneuvers the 15 ton truss structure into alignment with its attachment point on the starboard side of the S0 truss structure, where the carefully orchestrated mating procedures take place. There is video footage of the entire truss being rotated and positioned by the arm, and ammonia tank assembly on the structure is visible, with Earth in the background. Following the completion of the second stage capture, the robotic arm is ungrappled from truss. Sellers and Wolf are shown exiting the the Quest airlock hatch to begin their EVA. They are shown performing a variety of tasks on the now attached S1 truss structure, including work on the Crew Equipment Translation Cart (CETA), the S-band Antenna Assembly, and umbilical cables that provide power and remote operation capability to cameras. During their EVA, they are shown using a foot platform on the robotic arm. Significant portions of their activities are shown from the vantage of helmet mounted video cameras. The video closes with a final shot of the ISS and its new S1 truss.

#### **STS-112 Flight Day 10 Highlights**

Oct. 16, 2002; In English; 35 min. playing time, in color, with sound

Report No(s): BRF-1435J; NONP-NASA-VT-2002137660; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

On Flight Day 10 of the STS-112 mission, its crew (Jeffrey Ashby, Commander; Pamela Melroy, Pilot; David Wolf, Mission Specialist; Piers Sellers, Mission Specialist; Sandra Magnus, Mission Specialist; Fyodor Yurchikhin, Mission Specialist) on the Atlantis and the Expedition 5 crew on the International Space Station (ISS) (Valery Korzun, Commander; Peggy Whitson, Flight Engineer; Sergei Treschev, Flight Engineer) are shown exchanging farewells in the ISS's Destiny Laboratory Module following the completion of a week-long period of docked operations. The Expedition 5 crew is nearing the end of five and a half continuous months aboard the space station. Following the closing of the hatches, the Atlantis Orbiter undocks from the station, and Melroy pilots the shuttle slowly away from the ISS, and engages in a radial fly-around of the station. During the fly-around cameras aboard Atlantis shows ISS from a number of angles. ISS cameras also show Atlantis. There are several shots of each craft with a variety of background settings including the Earth, its limb, and open space. The video concludes with a live interview of Ashby, Melroy and Yurchikhin, still aboard Atlantis, conducted by a reporter on the ground. Questions range from feelings on the conclusion of the mission to the experience of being in space. The primary goal of the mission was the installation of the Integrated Truss Structure S1 on the ISS.

#### **STS-112 Crew Training Clip**

Sep. 03, 2002; In English; 47 min. playing time, in color, with sound

Report No(s): JSC-1927; NONP-NASA-VT-2002137513; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Footage shows the crew of STS-112 (Jeffrey Ashby, Commander; Pamela Melroy, Pilot; David Wolf, Piers Sellers, Sandra Magnus, and Fyodor Yurchikhin, Mission Specialists) during several parts of their training. The video is arranged into short segments. In 'Topside Activities at the NBL', Wolf and Sellers are fitted with EVA suits for pool training. 'Pre-Launch Bailout Training in CCT II' shows all six crew members exiting from the hatch on a model of a shuttle orbiter cockpit. 'EVA Training in the VR Lab' shows a crew member training with a virtual reality simulator, interspersed with footage of Magnus, and Wolf with Melroy, at monitors. There is a 'Crew Photo Session', and 'Pam Melroy and Sandy Magnus at the SES Dome' also features a virtual reality simulator. The final two segments of the video involve hands-on training. 'Post Landing Egress at the FFT' shows the crew suiting up into their flight suits, and being raised on a harness, to practice rappelling

from the cockpit hatch. 'EVA Prep and Post at the ISS Airlock' shows the crew assembling an empty EVA suit onboard a model of a module. The crew tests oxygen masks, and Sellers is shown on an exercise bicycle with an oxygen mask, with his heart rate monitored (not shown).

### **STS-111 Flight Day 3 Highlights**

Jun. 07, 2002; In English; 27 min. playing time, in color, with sound

Report No(s): BRF-1434C; NONP-NASA-VT-2002139352; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

On Flight Day 3 of STS-111, the crew of Endeavour (Kenneth Cockrell, Commander; Paul Lockhart, Pilot; Franklin Chang-Diaz, Mission Specialist; Philippe Perrin, Mission Specialist) and the Expedition 5 crew (Valery Korzun, Commander; Peggy Whitson, Flight Engineer; Sergei Treschev, Flight Engineer), begin their final approach towards the International Space Station (ISS). From cameras aboard the ISS, live video of Endeavour is shown as it approaches the station. The Orbiter is maneuvered slowly to a position for docking, and cameras from multiple angles show this process. As it is maneuvered, there are clear views of its payload bay, which includes the Leonardo MultiPurpose Logistics Module (MPLM) and the Mobile Base System (MBS), both of which will be installed on the ISS during this mission. In the final stages of the docking procedure there is close-up footage of Endeavour meeting the ISS's Pressurized Mating Adapter 2 on the Destiny Laboratory Module. Inside the ISS, the Expedition 4 crew (Yury Onufrienko, Commander; Daniel Bursch, Flight Engineer; Carl Walz, Flight Engineer), which will be replaced by the Expedition 5 crew, prepares for final docking. Crew members are shown transferring equipment from the Endeavour to the ISS, prior to a replay of the mating of the two crafts. In the replay, the hatch is shown being opened and the two newly arrived crews are greeted with excitement by Expedition 4 crewmembers. The video closes with footage of the Quest airlock used for EVA (extravehicular activity) egress, and the Canadarm 2 robotic arm.

### **STS-107 Crew Interviews: Michael Anderson, Mission Specialist**

Jun. 10, 2002; In English; 51 min., 59 sec. playing time, in color, with sound

Report No(s): JSC-1920E; NONP-NASA-VT-2002140927; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

STS-107 Mission Specialist 3 and Payload Commander Michael Anderson is seen during this preflight interview, where he gives a quick overview of the mission before answering questions about his inspiration to become an astronaut and his career path. He outlines his role in the mission in general, and career specifically in conducting onboard science experiments. He discusses the following instruments and sets of experiments in detail: CM2 (Combustion Module 2), FREESTAR (Fast Reaction Enabling Science Technology and Research, MEIDEX (Mediterranean Israeli Dust Experiment) and MGM (Mechanics of Granular Materials). Anderson also mentions on-board activities and responsibilities during launch and reentry, mission training, and microgravity research. In addition, he touches on the dual work-shift nature of the mission, the use of crew members as research subjects including pre and postflight monitoring activities, the emphasis on crew safety during training and the value of international cooperation.

On Flight Day 2 of STS-111, the crew of Endeavour (Kenneth Cockrell, Commander; Paul Lockhart, Pilot; Franklin Chang-Diaz, Mission Specialist; Philippe Perrin, Mission Specialist) and the Expedition 5 crew (Valery Korzun, Commander; Peggy Whitson, Flight Engineer; Sergei Treschev, Flight Engineer), having successfully entered orbit around the Earth, begin to maneuver towards the International Space Station (ISS), where the Expedition 5 crew will replace the Expedition 4 crew. Live video is shown of the Earth from several vantage points aboard the Shuttle. The center-line camera, which will allow Shuttle pilots to align the docking apparatus with that on the ISS, provides footage of the Earth. Chang-Diaz participates in an interview, in Spanish, conducted from the ground via radio communications, with Cockrell also appearing. Footage of the Earth includes: Daytime video of the Eastern USA with some cloud cover as Endeavour passes over the Florida panhandle, Georgia, and the Carolinas; Daytime video of Lake Michigan unobscured by cloud cover; Nighttime low-light camera video of Madrid, Spain.

**STS-107 Crew Interviews: Laurel Clark, Mission Specialist**

Jun. 10, 2002; In English; 56 min., 42 sec. playing time, in color, with sound

Report No(s): JSC-1920F; NONP-NASA-VT-2002139459; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

STS-107 Mission Specialist 4 Laurel Clark is seen during this preflight interview, where she gives a quick overview of the mission before answering questions about her inspiration to become an astronaut and her career path. Clark outlines her role in the mission in general, and specifically in conducting onboard science experiments. She discusses the following suite of experiments and instruments in detail: ARMS (Advanced Respiratory Monitoring System) and the European Space Agency's Biopack. Clark also mentions on-board activities and responsibilities during launch and reentry, mission training, and microgravity research. In addition, she touches on the use of crew members as research subjects including pre and postflight monitoring activities, the emphasis on crew safety and the value of international cooperation.

On Flight Day 8 of STS-111 (Space Shuttle Endeavour crew includes: Kenneth Cockrell, Commander; Paul Lockhart, Pilot; Franklin Chang-Diaz, Mission Specialist; Philippe Perrin, Mission Specialist; International Space Station (ISS) Ex-

pedition 5 crew includes Valery Korzun, Commander; Peggy Whitson, Flight Engineer; Sergei Treshev, Flight Engineer; ISS Expedition 4 crew includes: Yury Onufrienko, Commander; Daniel Bursch, Flight Engineer; Carl Walz, Flight Engineer), the Leonardo Multi Purpose Logistics Module (MPLM) is shown from the outside of the ISS. The MPLM, used to transport goods to the station for the Expedition 5 crew, and to return goods used by the Expedition 4 crew, is being loaded and unloaded by crewmembers. Live video from within the Destiny Laboratory Module shows Whitson and Chang-Diaz. They have just completed the second of three reboosts planned for this mission, in each of which the station will gain an additional statutory mile in altitude. Following this there is an interview conducted by ground-based reporters with some members from each of the three crews, answering various questions on their respective missions including sleeping in space and conducting experiments. Video of Earth and space tools precedes a second interview much like the first, but with the crews in their entirety. Topics discussed include the feelings of Bursch and Walz on their breaking the US record for continual days spent in space. The video ends with footage of the Southern California coastline.

On Flight Day 7 of STS-111 (Space Shuttle Endeavour crew includes: Kenneth Cockrell, Commander; Paul Lockhart, Pilot; Franklin Chang-Diaz, Mission Specialist; Philippe Perrin, Mission Specialist; International Space Station (ISS) Expedition 5 crew includes Valery Korzun, Commander; Peggy Whitson, Flight Engineer; Sergei Treshev, Flight Engineer; ISS Expedition 4 crew includes: Yury Onufrienko, Commander; Daniel Bursch, Flight Engineer; Carl Walz, Flight Engineer), this video opens with answers to questions asked by the public via e-mail about the altitude of the space station, the length of its orbit, how astronauts differentiate between up and down in the microgravity environment, and whether they hear wind noise during the shuttle's reentry. In video footage shot from inside the Quest airlock, Perrin is shown exiting the station to perform an extravehicular activity (EVA) with Chang-Diaz. Chang-Diaz is shown, in helmet mounted camera footage, attaching cable protection booties to a fish-stringer device with multiple hooks, and Perrin is seen loosening bolts that hold the replacement unit accommodation in launch position

atop the Mobile Base System (MBS). Perrin then mounts a camera atop the mast of the MBS. During this EVA, the astronauts installed the MBS on the Mobile Transporter (MT) to support the Canadarm 2 robotic arm. A camera in the Endeavour's payload bay provides footage of the Pacific Ocean, the Baja Peninsula, and Midwestern USA. Plumes from wildfires in Nevada, Idaho, Yellowstone National Park, Wyoming, and Montana are visible. The station continues over the Great Lakes and the Eastern Provinces of Canada.

On the sixth flight day of STS-112 (Atlantis crewmembers include Dave Wolf, Mission Specialists; Sandy Magnus, Mission Specialists; Pam Melroy, Pilot; Jeff Ashby, Commander; Piers Sellers, Mission Specialists; Fyodor Yurchikhin, Mission Specialists), Wolf and Sellers are seen preparing for an EVA (extravehicular activity) during which they will service the ISS (International Space Station) to which Atlantis is docked. This will be the 45th EVA in support of ISS assembly and maintenance and the 20th conducted from the ISS. While the astronauts prepare, video footage is shown of the Sahara desert, over which the ISS is passing in a track that will take it over North Africa and the Mediterranean Sea. During the EVA, the External Television Camera Group will be brought out of the station and attached to the station. As the astronauts work, their helmet mounted cameras provide excellent footage of the ISS with the Shuttle docked at the Destiny Laboratory Module. Multiple shots of the station show several modules including

Destiny, Quest, Unity and Zarya, as well as Canadarm 2 and Atlantis. The video closes with a wide angle shot of the ISS.

**STS-109 Mission Highlights Resource Tape, Part 4 of 4, Flight Days 8 - 12**

May 31, 2002; In English; 1 hr., 30 min. playing time, in color, with sound

Report No(s): JSC-1916; NONP-NASA-VT-2002137577; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

This video, Part 4 of 4, shows footage of crew activities from flight days 8 through 12 of STS-109. The crew included: Scott Altman, Commander; Duane Carey, Pilot; John Grunsfeld, Payload Commander; Nancy Currie, Richard Linnehan, James Newman, Michael Massimino, Mission Specialists. The

activities from other flights days can be seen on 'STS-109 Mission Highlights Resource Tape' Part 1 of 4 (internal ID 2002139471), 'STS-109 Mission Highlights Resource Tape' Part 2 of 4 (internal ID 2002137664), and 'STS-109 Mission Highlights Resource Tape' Part 3 of 4 (internal ID 2002139476). The primary activity on flight day 8 was an EVA (extravehicular activity) by Grunsfeld and Linnehan to install a cryocooler and radiator for the NICMOS (Near Infrared Camera and Multi-Object Spectrometer) on the HST (Hubble Space Telescope). Before returning to Columbia's airlock, the astronauts, with a cloudy background, hold onto the orbiter and offer their thoughts on the significance of their mission, the HST, and spaceflight. Footage from flight day 9 includes the grappling, unbearthing, and deployment of the HST from Columbia, and the crew coordinating and videotaping Columbia's departure. Flight day 10 was a relatively inactive day, and flight day 11 includes a checkout of Columbia's aerodynamic surfaces. Columbia landed on flight day 12, which is covered by footage of the crew members speaking during reentry, and their night landing, primarily shown through the orbiter's head-up display. The video includes numerous views of the HST, as well as views of the the Galapagos Islands, Madagascar, and Southern Africa with parts of the Atlantic, Indian, and Pacific Oceans, and part of the coast of Chile. The pistol grip space tool is shown in use, and the crew answers two messages from the public, including a message to Massimino from the Fire Department of New York.

**STS-109 Mission Highlights Resource Tape, Part 2 of 4, Flight Days 4 & 5**

May 30, 2002; In English; 1 hr., 24 min., 50 sec. playing time, in color, with sound

Report No(s): JSC-1916; NONP-NASA-VT-2002137664; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

This video, Part 2 of 4, shows the activities of the STS-109 crew (Scott Altman, Commander; Duane Carey, Pilot; John Grunsfeld, Payload Commander; Nancy Currie, James Newman, Richard Linnehan, Michael Massimino, Mission Specialists) during flight days 4 and 5. The activities from other flights days can be seen on 'STS-109 Mission Highlights Resource Tape' Part 1 of 4 (internal ID 2002139471), 'STS-109 Mission Highlights Resource Tape' Part 3 of 4 (internal ID 2002139476), and 'STS-109 Mission Highlights Resource Tape' Part 4 of 4 (internal ID 2002137577). The primary activities during these days were EVAs (extravehicular activities) to replace two solar arrays on the HST (Hubble Space Telescope). Footage from flight day 4 records an EVA by

Grunsfeld and Linnehan, including their exit from Columbia's payload bay airlock, their stowing of the old HST starboard rigid array on the rigid array carrier in Columbia's payload bay, their attachment of the new array on HST, the installation of a new starboard diode box, and the unfolding of the new array. The pistol grip space tool used to fasten the old array in its new location is shown in use. The video also includes several shots of the HST with Earth in the background. On flight day 5 Newman and Massimino conduct an EVA to change the port side array and diode box on HST. This EVA is very similar to the one on flight day 4, and is covered similarly in the video. A hand operated ratchet is shown in use. In addition to a repeat of the previous tasks, the astronauts change HST's reaction wheel assembly, and because they are ahead of schedule, install installation and lubricate an instrument door on the telescope. The Earth views include a view of Egypt and Israel, with the Nile River, Red Sea, and Mediterranean Sea.

**STS-109 Mission Highlights Resource Tape, Part 1 of 4, Flight Days 1 - 3**

May 30, 2002; In English; 1 hr. playing time, in color, with sound

Report No(s): JSC-1916; NONP-NASA-VT-2002139471; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

This video, Part 1 of 4, shows the activities of the STS-109 crew (Scott Altman, Commander; Duane Carey, Pilot; John Grunsfeld, Payload Commander; Nancy Currie, James Newman, Richard Linnehan, Michael Massimino, Mission Specialists) during flight days 1 through 3. The activities from other flight days can be seen on 'STS 109 Mission Highlights Resource Tape' Part 2 of 4 (internal ID 2002137664), 'STS 109 Mission Highlights Resource Tape' Part 3 of 4 (internal ID 2002139471), and 'STS-109 Mission Highlights Resource Tape' Part 4 of 4 (internal ID 2002137577). The main activity recorded during flight day 1 is the liftoff of Columbia. Attention is given to suit-up, boarding, and pre-flight procedures. The pre-launch crew meal has no sound. The crew members often wave to the camera before liftoff. The jettisoning of the solid rocket boosters is shown, and the External Tank is seen as it falls to Earth, moving over African dunes in the background. There are liftoff replays, including one from inside the cockpit. The opening of the payload bay doors is seen from the rear of the shuttle's cockpit. The footage from flight day 2 shows the Flight Support System for bearthing the HST (Hubble Space Telescope). Crew preparations for the bearthing are shown. Flight day 3 shows the tracking of and approach to the HST by Columbia, including orbital maneu-

vers, the capture of the HST, and its lowering onto the Flight Support System. Many views of the HST are shown, including one which reveals an ocean and cloud background as the HST retracts a solar array.

**STS-109 Mission Highlights Resource Tape, Part 3 of 4, Flight Days 6 & 7**

May 30, 2002; In English; 58 min., 54 sec. playing time, in color, with sound

Report No(s): JSC-1916; NONP-NASA-VT-2002139476; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

This video, Part 3 of 4, shows the activities of the STS-109 crew (Scott Altman, Commander; Duane Carey, Pilot; John Grunsfeld, Payload Commander; Nancy Currie, James Newman, Richard Linnehan, Michael Massimino, Mission Specialists) during flight days 6 and 7. The activities from other flight days can be seen on 'STS-109 Mission Highlights Resource Tape' Part 1 of 4 (internal ID 2002139471), 'STS-109 Mission Highlights Resource Tape' Part 2 of 4 (internal ID 2002137664), and 'STS-109 Mission Highlights Resource Tape' Part 4 of 4 (internal ID 2002137577). Flight day 6 features a very complicated EVA (extravehicular activity) to service the HST (Hubble Space Telescope). Astronauts Grunsfeld and Linnehan replace the HST's power control unit, disconnecting and reconnecting 36 tiny connectors. The procedure includes the HST's first ever power down. The cleanup of spilled water from the coolant system in Grunsfeld's suit is shown. The pistol grip tool, and two other space tools are also shown. On flight day 7, Newman and Massimino conduct an EVA. They replace the HST's FOC (Faint Object Camera) with the ACS (Advanced Camera for Surveys). The video ends with crew members playing in the shuttle's cabin with a model of the HST.

On this eighth day of the STS-112 mission, the crew

members of Atlantis (Commander Jeff Ashby; Pilot Pam Melroy; Mission Specialists Sandy Magnus, Piers Sellers, Dave Wolf, and Fyodor Yurchikhin) are seen preparing for the mission's third extravehicular activity (EVA). Magnus is shown reviewing instructions for operation of the International Space Station's (ISS) robot arm. Wolf and Sellers are seen successfully attaching cable connections to the S1 truss during the EVA. Scenes shown include: the ISS's robot arm, the Crew Equipment Translation Aid (CETA) cart and the deployment of the central radiator panel of the S1 truss.

On the second flight day of STS-112 (Commander Jeff Ashby, Pilot Pam Melroy and Mission Specialists Sandy Magnus, Piers Sellers, David Wolf and Fyodor Yurchikhin), video footage is shown of the Space Shuttle Atlantis's payload bay, which contains the International Space Station's (ISS) S1 (S-One) truss section, which will be installed on the ISS by Sellers and Wolf during EVAs (extravehicular activities) following Atlantis's docking with the station. Also shown, via a camera on the shuttle's robotic arm, are the three radiators that reside on the truss structure and will provide cooling capability for the entire station. During this flight day, Atlantis passes over Southern California, Nevada, Wyoming, South Dakota, and Minnesota in a track that will eventually bring it over Newfoundland and Labrador.

### **STS-112 Flight Day 1 Highlights**

Oct. 07, 2002; In English; 25 min. playing time, in color, with sound

Report No(s): BRF-1435A; NONP-NASA-VT-2002139472; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

On the first day of STS-112 the crew (Commander Jeff Ashby, Pilot Pam Melroy and Mission Specialists Sandy Magnus, Piers Sellers, David Wolf and Fyodor Yurchikhin) are shown preparing for launch at Kennedy Space Center, being transported to the Space Shuttle Atlantis at its launch pad, and being seated in the Orbiter. During the launch, the External Tank (ET) camera, mounted to the top of Atlantis's ET and aimed downward) will provide never before seen footage of the shuttle during lift-off. Following the final countdown and liftoff, the ET camera provides footage as Atlantis quickly leaves the Earth behind, at speeds over 2,800 miles per hour. Following orbital insertion, the shuttle's payload bay doors are shown opening in footage provided by a payload bay camera. Sellers and Magnus narrate their thoughts during a replay of the initial launch sequence, shortly after entering orbit. Following the tape, they are shown in the crewcabin with the rest of the crew, and they each share brief thoughts.

During the third flight day of STS-112 (Commander Jeff Ashby, Pilot Pam Melroy and Mission Specialists Sandy Magnus, Piers Sellers, David Wolf and Fyodor Yurchikhin), the Space Shuttle Atlantis begins its final approach to the International Space Station (ISS) with which it will dock. The Chinese mainland is seen, at night, at a height of 242 statute miles. In one section of video from a camera onboard the ISS, Atlantis can be seen to be almost directly below the station, at a distance of several hundred feet. The orbiter's docking system is shown, as it is slowly guided by Ashby towards the forward docking port on the ISS's Destiny Laboratory Module and its

forward docking port. Above the docking port, the S0 truss structure can be seen, to which the S1 truss structure in Atlantis' payload bay will be attached during this mission. Also seen are the Unity airlock and other modules. Following the completion of docking, in which an excellent shot of the docking system in hard dock is visible, the hatches between the two crafts are opened and the members of Atlantis are greeted by the very excited members of Expedition 5, who have been aboard the ISS for several months.

### **STS-111 Mission Highlights Resource Tape, Part 1 of 4, Flight Days 1 - 4**

Aug. 02, 2002; In English; 1 hr., 20 min. playing time, in color, with sound

Report No(s): JSC-1930; NONP-NASA-VT-2002139357; No Copyright; Avail: CASI; [B04](#), Videotape-Beta; [V04](#), Videotape-VHS

This video, Part 1 of 4, shows the activities of the STS-111 crew (Kenneth Cockrell, Commander; Paul Lockhart, Pilot; Franklin Chang-Diaz, Phillipe Perrin, Mission Specialists) during flight days 1 through 4. Also shown are the incoming Expedition 5 (Valeri Korzun, Commander; Peggy Whitson, NASA ISS Science Officer; Sergei Treschev, Flight Engineer) and outgoing Expedition 4 (Yuri Onufriyenko, Commander; Carl Walz, Daniel Bursch, Flight Engineers) crews of the ISS (International Space Station). The activities from other flight days can be seen on 'STS-111 Mission Highlights Resource Tape' Part 2 of 4 (internal ID 2002139469), 'STS-111 Mission Highlights Resource Tape' Part 3 of 4 (internal ID 2002139468), and 'STS-111 Mission Highlights Resource Tape' Part 4 of 4 (internal ID 2002139474). The primary activity of flight day 1 is the launch of Space Shuttle Endeavour. The crew is seen before the launch at a meal and suit-up, and some pre-flight procedures are shown. Perrin holds a sign with a personalized message. The astronauts communicate with Mission Control extensively after launch, and an inside view of the shuttle cabin is shown. The replays of the launch include close-ups of the nozzles at liftoff, and the fall of the solid rocket boosters and the external fuel tank. Flight day 2 shows footage of mainland Asia at night, and daytime views of the eastern USA and Lake Michigan. Flight day three shows the Endeavour orbiter approaching and docking with the ISS. After the night docking, the crews exchange greetings, and a view of the Nile river and Egypt at night is shown. On flight day 4, the MPLM (Multi-Purpose Logistics Module) Leonardo was temporarily transferred from Endeavour's payload bay to the ISS.

This video, Part 2 of 4, shows the activities of the STS-111 crew (Kenneth Cockrell, Commander; Paul Lockhart, Pilot; Franklin Chang-Diaz, Phillipe Perrin, Mission Specialists) during flight days 5 through 7. Also shown are the incoming Expedition 5 (Valeri Korzun, Commander; Peggy Whitson, NASA ISS Science Officer; Sergei Treschev, Flight Engineer) and outgoing Expedition 4 (Yuri Onufriyenko, Commander; Carl Walz, Daniel Bursch, Flight Engineers) crews of the ISS (International Space Station). The activities from other flight days can be seen on 'STS-111 Mission Highlights Resource Tape' Part 1 of 4 (internal ID 2002139357), 'STS-111 Mission Highlights Resource Tape' Part 3 of 4 (internal ID 2002139468), and 'STS-111 Mission Highlights Resource Tape' Part 4 of 4 (internal ID 2002139474). On flight day 5, the transfer and installation of a Power and Data Grapple Fixture onto the P6 Truss during an EVA (extravehicular activity) is shown. The relocation of micrometeorite debris shields is also shown. Canadarm 2 is used to move the Mobile Base System near the Mobile Transporter on the ISS Destiny Module. The capture of the Mobile Base System takes place on flight day 6, along with a crew transfer ceremony on board the ISS. The video includes a view of the South Pacific just before dawn, and the Endeavour crew answers questions from the public.

### **STS-113 Flight Day 3 Highlights**

Nov. 26, 2002; In English; 32 min., 30 sec. playing time, in color, with sound

Report No(s): BRF-1436C; NONP-NASA-VT-2002149519; No Copyright; Avail: CASI; [B03](#), Videotape-Beta; [V03](#), Videotape-VHS

This video shows the activities of the STS-113 crew (Jim Wetherbee, Commander; Paul Lockhart, Pilot; Michael Lopez-Alegria, John Herrington, Mission Specialists) during flight day 3. The major tasks of flight day 3 were rendezvous and docking with the ISS (International Space Station), the transfer of the Expedition 6 crew (Kenneth Bowersox, Commander; Donald Pettit, Nikolai Budarin, Flight Engineers) to the ISS,

and preparations for an EVA (extravehicular activity) scheduled for the following day. The approach of Space Shuttle Endeavour to the ISS is shown in detail, including the firing of the Left Orbital Maneuvering System, and the aiming maneuvers the orbiter makes to dock with the ISS. There are centerline views of the ISS before and during the final docking maneuver. The new ISS crew is received by the Expedition 5 crew (Valeri Korzun, Commander; Peggy Whitsun, Sergei Treschev; Flight Engineers), and the transfer of EVA suits is shown. Earth views include a pan along a reddish Earth limb, and the Pacific Ocean with Endeavour's Canadarm robotic arm in the foreground.

This video shows the activities of the STS-113 crew (Jim Wetherbee, Commander; Paul Lockhart, Pilot; Michael Lopez-Alegria, John Herrington, Mission Specialists) during flight day 5. The crew is seen together with the Expedition 5 (Valeri Korzun, Commander; Peggy Whitsun, ISS Science Officer/Flight Engineer; Sergei Treschev, Flight Engineer) and Expedition 6 (Kenneth Bowersox, Commander; Donald Pettit, Nikolai Budarin, Flight Engineers) crews of the ISS (International Space Station) preparing for an EVA (extravehicular activity) the following day, and performing tasks on board the ISS. The changing of valves on the ISS carbon dioxide removal assembly is shown. The STS-113 crew is seen together answering numerous questions from the general public, with Lopez-Alegria answering all but one. There is also a clip of Jay Leno congratulating Wetherbee on his fiftieth birthday. Inside views of the Endeavour orbiter and the ISS modules are shown, as well as a view of the coast of Chile.

This video shows the activities of the STS-113 crew (Jim Wetherbee, Commander; Paul Lockhart, Pilot; Michael Lopez-Alegria, John Herrington, Mission Specialists) during flight day 6. Also shown are the Expedition 5 (Valeri Korzun, Commander; Peggy Whitsun, ISS Science Officer/Flight Engineer; Sergei Treschev, Flight Engineer) and Expedition 6 (Kenneth Bowersox, Commander; Donald Pettit, Nikolai Budarin, Flight Engineers) crews of the ISS (International Space Station). The primary activity of flight day 6 is the outfitting of the P1 (Port 1) Truss Structure. The suiting up and departure of Lopez-Alegria and Herrington through the ISS Quest airlock is shown. The departure is shown through sequential still video. The ISS CETA handrail cart is shown in use, as is a pistol-grip space tool. At the end of the EVA, the astronauts are shown cleaning up outside the ISS. The video also contains a Thanksgiving message about the importance of technological advances in spaceflight, and footage of the Moon disappearing behind the Earth's limb.

The fourth day of the STS-113 space mission begins with NASA ISS Science Officers Peggy Whitson and Don Pettit inside of the Destiny Laboratory Module. The first spacewalk of the STS-113 is presented. The purpose of this spacewalk is to make connections of the P1 and the S0 truss segments. An actual view of Robot Arm operator Peggy Whitson grasping the P1 is shown. The actual connection of the S0 with the P1 truss is presented.

This video shows the activities of the STS-107 crew (Rick Husband, Commander; William McCool, Pilot; Kalpana Chawla, David Brown, Michael Anderson, Laurel Clark, Mission Specialists, Ilan Ramon, Payload Specialist) during flight day 8 of the Columbia orbiter's final flight. The primary activities of flight day 8 are spaceborne experiments. Some background information is given on the SOFBALL (Structure of Flame Balls at Low Lewis-Number) microgravity experiment as footage of the flame balls is shown. The video also shows the MEIDEX (Mediterranean Israeli Dust Experiment) calibrating on the Moon. The six STARS (Space Technology and Research Students) international student experiments are profiled, including experiments on carpenter bees (Liechtenstein), spiders (Australia), silkworms (China), ants (USA), crystal growth (Israel), and fish embryos (Japan). A commer-

cial experiment on roses is also profiled. Astronaut Clark gives a tour of the SpaceHab RDM (Research Double Module), in the space shuttle's payload bay. Astronauts McCool and Ramon take turns on an exercise machine. The video includes a partly cloudy view of the Pacific Ocean.

Stephen Robinson, Mission Specialist 2 (MS2), of the STS-114 space mission is seen during a prelaunch interview. He discusses his duties as flight engineer, Extravehicular Activity 2 (EVA 2) spacewalker, and medical officer. Robinson answers questions about his interests in spaceflight and the specific goals of the mission. He identifies this mission as the International Space Station Resupply Mission because supplies and experiments are brought to the International Space Station and Expedition 6 crew of Commander Kenneth Bowersox, and Flight Engineers Donald Pettit and Nikolai Budarin are returning to Earth. Lastly, he talks about the docking of the Space

Shuttle Atlantis with the International Space Station. He looks forward to this experience in space.

Soichi Noguchi, Mission Specialist 1 (MS1) representing Japan's National Space Development Agency (NASDA) is seen during a prelaunch interview. He discusses the main goals of this flight which are to take expedition 7 to the International Space Station and bring back expedition 6 to the Earth. He is also responsible for all Extravehicular (EVA) work on this mission. Expedition seven includes: Mission Specialist and Commander Yuri Malenchenko; NASA ISS Science Officer Edward Lu; and Flight Engineer Alexander Kaleri. Expedition Six includes: Commander Kenneth Bowersox; NASA ISS Science Officer Donald Pettit; and Flight Engineer Nikolai Budarin. Noguchi explains the Utilization and Logistics Flight 1 (ULF1) Mission which entails the exchange of crewmembers, various supplies and experiments and the replacement of a control component on the International Space Station. This is also will be Soichi Noguchi's first spacewalk.

**STS-114 Crew Interview: James M. Kelly, PLT**

Jan. 21, 2003; In English; 40 min., 50 sec. playing time, in color, with sound

Report No(s): JSC-1936B; NONP-NASA-VT-2003013989; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Pilot James M. Kelly, Lieutenant Colonel USAF, is shown during a prelaunch interview. He expresses the major goals of the mission which are to replace the Expedition Six crew of the International Space Station (ISS), install the Raffaello Multi-Purpose Logistics Module, deliver the External Stowage Platform to the ISS, and replace the Control Moment Gyroscope (CMG). The major task that he has is to be the backup pilot for Commander Eileen Collins. He talks about the three new research racks brought up to the International Space Station inside the U.S. Destiny Laboratory along with the Window Observational Research Facility (WORF), Human Research Facility 2 (HRF-2), and a Minus Eighty Degree Laboratory

Freezer (MELF-1). Kelly also explains how he uses the ISS' Robotic arm to lift the MPLM out of Atlantis' payload bay and attach it to the Unity node to unload hardware, supplies and maintenance items. This will be his second trip to the International Space Station.

This video shows the activities of the STS-107 crew on flight day 6 of the Columbia orbiter's final mission. The crew members include: Rick Husband, Commander; William McCool, Pilot; Kalpana Chawla, David Brown, Michael Anderson, Laurel Clark; Mission Specialists; Ilan Ramon, Payload Specialist. The primary activities of flight day 6 are spaceborne experiments, and a conversation between Israeli Prime Minister Ariel Sharon, accompanied by the Israeli Minister of Education, and Israeli astronaut Ilan Ramon. Both the Israelis and their interpreter are audible on the tape. The video also features a bioreactor used to grow cancer cells in microgravity, and footage taken by the Mediterranean Israeli Dust Experiment (MEIDEX) of sprites, lightning in the lower ionosphere. Mission Specialist Anderson is shown working on the Laminar Soot Processes (LSP-2) experiment. Pilot McCool answers two questions from the public, and a view of Panama is shown.

This video shows the activities of the STS-107 crew on flight day 13 of the Columbia orbiter's final mission. The crew members include: Rick Husband, Commander; William McCool, Pilot; Kalpana Chawla, David Brown, Michael Anderson, Laurel Clark, Mission Specialists; Ilan Ramon, Payload Specialist. The primary activities of flight day 13 are spaceborne experiments, including troubleshooting undertaken by Mission Specialist Chawla on the Water Mist Fire Suppression (MIST) experiment. Chawla performs troubleshooting tasks

relayed to her by Mission Control. She shows Mission Control the location of air and water in a transparent hose that is part of the atomizer on the exterior of the combustion module. She also changes the atomizer head. All six Space Technology and Research Students (STARS) experiments are profiled in the video. These experiments are on ants, crystal growth in a chemical garden, fish embryos, carpenter bees, spiders, and silkworms. The video also includes a view of the southeast Texas coast near Houston, and a view of Portugal, Spain, Gibraltar, Morocco, and the Sahara Desert. The video ends with an explanation of roses at Mission Control which commemorate astronauts who have died on missions.

#### **STS-107 Flight Day 14 Highlights**

Jan. 29, 2003; In English; 40 min., 18 sec. playing time, in color, with sound

Report No(s): BRF-1437N; NONP-NASA-VT-2003013991; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

This video shows the activities of the STS-107 crew on flight day 14 of the Columbia orbiter's final mission. The crew includes Commander Rick Husband, Pilot William McCool, Mission Specialists Kalpana Chawla, David Brown, Michael Anderson, and Laurel Clark, and Payload Specialist Ilan Ramon. Most of the video shows a press conference on board Columbia featuring all seven astronauts. Reporters ask the crew members questions, who reply via a handset. Most of the questions cover life in space and the mission's spaceborne experiments. Each astronaut answers multiple questions, and in response to one of the questions, each of the seven describes an 'O Wow!' moment. The remainder of the video consists of a tour of the orbiter, including the flight deck, mid-deck, and the SpaceHab Research Double Module (RDM) in the payload bay. Mission Specialist Chawla demonstrates eating at the shuttle's galley, and Commander Husband shows his toiletries. In the RDM, Mission Specialist Clark exercises on a machine for an experiment on respiration.

#### **STS-107 Flight Day 15 Highlights**

Jan. 30, 2003; In English; 27 min., 35 sec. playing time, in color, with sound

Report No(s): BRF-1437O; NONP-NASA-VT-2003013986; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

This video shows the activities of the STS-107 crew on flight day 15 of the Columbia orbiter's final mission. The crew includes Commander Rick Husband, Pilot William McCool, Mission Specialists Michael Anderson, David Brown, Laurel Clark, and Kalpana Chawla, and Payload Specialist Ilan Ramon. The primary activities of flight day 15 are crew interviews, and operating the Water Mist Fire Suppression (MIST) experiment. Early in the video, astronauts McCool and Ramon respond together to a question. Much of the video is taken up by an interview of astronauts Brown, Anderson, and McCool. Two parts of the video show the MIST experiment in operation, operated the first time by astronaut Brown. Another part of the video is narrated by Mission Specialist Clark, who identifies views of Mount Vesuvius, and an atoll in the south Pacific. In this part, Payload Specialist Ramon is seen on an exercise machine, Commander Husband shows body fluid samples from the crew taken during the mission, and Clark demonstrates how the crew eats meals. The video ends with footage from earlier in the mission which shows a deployed radiator in the shuttle's payload bay that reflects an image of the Earth.

#### **STS-107 Flight Day 1 Highlights**

Jan. 16, 2003; In English; 20 min. playing time, in color, with sound

Report No(s): BRF-1437A; NONP-NASA-VT-2003009262; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

This video shows the activities of the STS-107 crew on flight day 1 of the Columbia orbiter's final mission. The crew includes Commander Rick Husband, Pilot William McCool, Mission Specialists Michael Anderson, David Brown, Laurel Clark, and Kalpana Chawla, and Payload Specialist Ilan Ramon. The video begins with a view of the space shuttle on its launch pad, while an announcer gives an overview of the mission, including its spaceborne experiments. The announcer then introduces the crew members, listing their previous experience. They are seen seated at a banquet table, and during suit up. The seating of the crew in the orbiter is shown, as are other prelaunch procedures. Dialog from during the launch is audible on the tape, and the video includes views of the ascent from different angles, as well as booster separation. The video ends with a view of Columbia in orbit, showing the Research Double Module (RDM) on the inside of its payload bay.

The STS-107 flight day highlights begin with a shot inside the flight deck of the Space Shuttle Columbia where Commander Rick Husband, Pilot William McCool, and Mission Specialists David Brown and Kalpana Chawla are seated. The actual liftoff of the Space Shuttle Columbia is shown with Mission Specialists Michael Anderson and Laurel Clark, and Payload Specialist Ilan Ramon seated on the middeck of the spacecraft. Mission Specialist David Brown exits his seat to take pictures of the external tank while Michael Anderson also prepares to take photographs. A beautiful shot of the orbiter flying over Egypt is presented. A view of the Spacehab Research Double Module is shown where crystals are growing in microgravity. Laurel Clark is also shown working on the Bioreactor experiment. Michael Anderson is shown performing various breathing experiments in space. This video shows the last flight of STS-107 during ascent as the crew is seated in the flight deck and middeck of the Space Shuttle Columbia.

#### **STS-114 Crew Interviews Eileen Collins, CDR**

Jan. 21, 2003; In English; 38 min., 15 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2003013985; JSC-1936A; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Commander Eileen Collins of the STS-114 space mission is seen during a pre-launch interview. She answers questions about the primary goals of the mission which are to exchange the expedition six and expedition seven crews. Also, she says that a large amount of logistics will be taken up to the International Space Station. The primary payload on this mission include: 1) The Utilization and Logistics Flight-1 (ULF-1); 2) Raffaello Multi-Purpose Logistics Module (MPLM); and 3) External Stowage Platform (ESP-2) which are all explained in detail by the Commander. The Window Observational Research Facility (WORF) rack, Human Research Facility (HRF) rack, Minus Eighty Degree Laboratory Freezer (MELF) and EXPRESS rack are the Space Station equipment to be installed on the International Space Station (I.S.S.). Collins is the Intravehicular Activity (IVA) specialist for this mission who oversees the three Extravehicular Activity (EVA)'s performed by Mission Specialists Soichi Noguchi and

Stephen Robinson. The three EVA's include an external camera installation, positioning devices for an ammonia system and the installation of Floating Potential Measuring Unit (FPMU). Commander Collins expresses that she wants to have a successful mission, and also wants to see the Earth from space.

This video, Part 1 of 3, shows the activities of the STS-112 crew on flight days 1 - 3. The crew included Commander Jeff Ashby, Pilot Pam Melroy, and Mission Specialists Sandy Magnus, David Wolf, Piers Sellers, and Fyodor Yurchikhin. Flight day 1 begins with an introduction of the astronauts, seen during their pre-flight banquet, and suit-up. The ingress of some of the crew into the Space Shuttle Atlantis is shown. The launch footage includes the view from a camera mounted on the shuttle's external fuel tank, as well as replays. The separation of the shuttle's booster rockets is also shown. On flight day 2 a view of the payload bay and orbiter docking mechanism on Atlantis is shown from a camera on the shuttle's robotic arm. The footage of flight day 3 includes the docking of Atlantis and the International Space Station (ISS), and the exchange of greetings between the two spacecrews. Views of Earth include a pass over the western USA on flight day 2, and a night view of China on flight day 3.

**STS-113 Post Flight Presentation**

Jan. 23, 2002; In English; 22 min., 24 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2003018356; JSC-1945; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

The STS-113 post-flight presentation begins with a view of Mission Specialists Michael E. Lopez-Alegria and John B. Herrington getting suited for the space mission. The STS-113 crew consists of: Commander James D. Wetherbee, Pilot Paul Lockhart, Mission Specialists Michael Lopez-Alegria and John Herrington. Cosmonauts Valery Korzun, and Sergei Treschev,

and astronaut Peggy Whitson who are all members of the expedition five crew, and Commander Kenneth Bowersox, Flight Engineers Nikolai Budarin and Donald Pettit, members of Expedition Six. The main goal of this mission is to take Expedition Six up to the International Space Station and Return Expedition Five to the Earth. The second objective is to install the P(1) Truss segment. Three hours prior to launch, the crew of Expedition Six along with James Wetherbee, Paul Lockhart, Michael Lopez-Alegria and John Herrington are shown walking to an astrovan, which takes them to the launch pad. The actual liftoff is presented. Three Extravehicular Activities (EVA)'s are performed on this mission. Michael Lopez-Alegria and John Herrington are shown performing EVA 1 and EVA 2 which include making connections between the P1 and S(0) Truss segments, and installing fluid jumpers. A panoramic view of the ISS with the Earth in the background is shown. The grand ceremony of the crew exchange is presented. The astronauts performing everyday duties such as brushing teeth, washing hair, sleeping, and eating pistachio nuts are shown. The actual landing of the Space Shuttle is presented.

An overview of the STS-112 Mission is presented. The fourth flight day begins with a view inside of the Destiny Laboratory of the International Space Station where Expedition Five Commander Valery Korzun is shown. The robotics workstation where Mission Specialist Sandra Mangus and Flight Engineer Peggy Whitson operate Canadarm 2 to lift the S(1) Truss segment out of the payload bay of the Space Shuttle Atlantis and maneuver it for installation onto the S(1) Truss is presented. Mission Specialist Piers Sellers is shown preparing for his six and one half hour spacewalk by performing breathing exercises. Animation of the installation of the S(1) Truss, and also the unbirthing of the S(1) truss is also presented. Mission Specialists David Wolf and Piers Sellers are shown getting suited for their spacewalks. During the spacewalk, David Wolf is removing the antenna assembly from its launched position and Piers Sellers is releasing launch restraints from the Radiator Beam Assembly. A beautiful view of the coast of Texas is captured during this spacewalk. Flight day five shows pilot Pam Melroy and Mission Specialist Dave Wolf working inside of the International Space Station's Quest Airlock. Flight day six is shown with Dave Wolf and Piers Sellers exiting their spacesuits inside of the Quest Airlock

Module after a successful spacewalk. This presentation ends with views of the International Space Station's installed S(1) Truss, rotation of the radiator assembly and the radiator's coolant tubing.

The STS-112 Mission begins with a view of the center radiator on the S(1) Truss. A good view of the International Space Station's (ISS) Destiny Laboratory, Soyuz Crew Return Vehicle and Quest Airlock are shown from a video camera located at the end of the S(1) Truss Segment. The ISS Canadarm 2 is shown getting in position for spacewalk three. Highlights of flight day eight begin with Pilot Pam Melroy and Mission Specialist Fyodor Yurchikhin shown inside of the Quest Airlock closing the hatch as spacewalkers David Wolf and Piers Sellers move in the outer compartment of the Airlock to begin Extravehicular Activity 3 (EVA 3). During EVA 3, Dave Wolf and Piers Sellers are installing spool positioning devices on ammonia lines located on the ISS. Robot Arm Operators Peggy Whitson and Sandy Magnus are shown reviewing procedures for operating the robot arm. A view of Piers Seller climbing back into the Quest Airlock is presented. During flight day nine, robot arm operators Pam Melroy, Jeff Ashby and Peggy Whitson are in the process of removing spacesuits worn by David Wolf and Piers Sellers. A final farewell of the nine crewmembers shown inside of the Destiny Laboratory is presented during flight day ten. The undocking of Space Shuttle Atlantis from the International Space Station is shown on flight day eleven. This presentation ends on flight day 12 with a view of head up displays and the actual landing of the Space Shuttle Atlantis.

This video shows an overview of crew activities from STS-100. The crew of Space Shuttle Endeavour includes: Commander Kent Rominger; Pilot Jeffrey Ashby; and Mission Specialists Chris Hadfield, John Phillips, Scott Parazynski, Umberto Guidoni, and Yuri Lonchakov. Sections of the video include: Photo-op; Suit-up; Depart O&C; Ingress; Launch with Playbacks; On-orbit; Landing with Playbacks; Crew Egress & Departure. Voiceover narration introduces the astronauts at their pre-flight meal, and continues during the video, except for the launch and landing sequences. Launch playback views include: NEXT; Beach Tracker; VAB; PAD-A; Tower-1; UCS-15; Grandstand; OTV-60; OTV-70; OTV-71; DOAMS; UCS-10 Tracker; UCS-23 Tracker; On-board Ascent Camera. The On-orbit section of the video shows preparations for an extravehicular activity (EVA) to install Canadarm 2 on the International Space Station (ISS). Preparation for docking with the ISS, and the docking of the orbiter and ISS are shown. The attachment of Canadarm 2 and the Raffaello Logistics Module, a resupply vehicle, are shown. The crew also undertakes some maintenance of the ISS. Landing playback views include: TV-1; TV-2; LRO-1; LRO-2; PPOV.

The STS-87 Space Shuttle Columbia mission begins with the introduction of the seven crew members. The seven crew members include: Commander Kevin R. Kregel, pilot Steven W. Lindsey, mission specialists: Winston E. Scott, Kalpana Chawla and Takao Doi and payload specialist Leonid K. Kadenyuk. The USA Microgravity Payload (USMP-4), Orbital Acceleration Research Experiment (OARE), the EVA Demonstration Flight Test 5 (EDFT-05), Shuttle Ozone Limb Sending Experiment (SOLSE), Loop Heat Pump (LHP), and Sodium Sulfur Battery Experiment (NaSBE) were all shown during this video presentation. The launch of the STS-87 from different Kennedy Space Flight Center (KSFC) areas and Pre-flight training at the Johnson Space Center is presented. The retrieve and recovery spot satellite are also shown. Also, the landing of the Space Shuttle Columbia is presented from different areas at Kennedy Space Flight Center.

**STS-102 Photo-op/Suit-up/Depart O&C/Launch Discovery On Orbit/Landing/Crew Egress**

March 22, 2001; In English; No Copyright; Avail: CASI; **V04**, Videotape-VHS; **B04**, Videotape-Beta

The spacecrews of STS-102 and the Expedition 1 and 2 crews of the International Space Station (ISS) are seen in this video, which presents an overview of their activities. The crew consists of Commander Jim Wetherbee, Pilot James Kelly, and Mission Specialists Andrew Thomas, and Paul Richards. The sections of the video include: Photo-op, Suit-up, Depart O&C, Ingress, Launch with Playbacks, On-orbit, Landing with Playbacks, and Crew Egress & Departs. The prelaunch activities are explained by two narrators, and the crew members are assisted in the White Room just before boarding the Space Shuttle Discovery. Isolated views of the shuttle's launch include: VAB, PAD-B, DLTR-3, UCS-23 Tracker, PATRICK IGOR, UCS-10 Tracker, Grandstand, Tower-1, OTV-160, OTV-170, OTV-171, and On-board Camera. The video shows two extravehicular activities (EVAs) to perform work on the ISS, one by astronauts Helms and Voss from Expedition 2, and another by Richards and Thomas. The attachment of the Leonardo Multipurpose Logistics Module, a temporary resupply module, is shown in a series of still images. The on-orbit footage also includes a view of the Nile River, and a crew exchange ceremony between Expedition 1 (Commander Yuri Gidzenko, Flight Engineer Sergei Krikalev) and Expedition 2 (Commander Yury Usachev, Flight Engineers James Voss, Susan Helms). Isolated views of the landing at Kennedy Space Center include: North Runway Camera, VAB, Tower-1, Midfield, Midfield IR, Tower-2, and UCS-12 IR. The Crew Transfer Vehicle (CTV) for unloading the astronauts is shown, administrators greet the crew upon landing, and Commander Wetherbee gives a briefing.

**STS-112/Atlantis/ISS 9A Pre-Launch - Launch On-Orbit - Landing - Crew Egress**

October 18, 2002; In English; 1 hr, 3 min. playing time, in color with audio; No Copyright; Avail: CASI; **V04**, Videotape-VHS; **B04**, Videotape-Beta

The video starts with an introduction of the crew of Space Shuttle Atlantis on STS-112 at their customary pre-flight meal. The crew consists of Commander Jeffrey Ashby, Pilot Pam Melroy, and Mission Specialists David Wolf, Sandra Magnus, Piers Sellers, and Fyodor Yurchikhin. The crew is then shown during suit-up, while exiting the Operations and Checkout Building to board the Astrovan, and during ingress and seating. Launch views include: Beach Tracker, VAB, PAD-B, Tower-1, DLTR-3, Grandstand, Cocoa Beach DOAMS, Playalinda DOAMS, UCS-23, OTV-170, OTV-171, and External Tank Camera. On-orbit footage includes the Atlantis orbiter docking with the ISS (International Space Station). The video shows clips of extravehicular activities (EVAs), and some of the tasks performed during the mission. Footage included shows the installation of the S1 Truss onto the ISS with the Space Station Remote Manipulator System (Canadarm 2), Canadarm 2 carrying the Ammonia Tank Assembly prior to connection, the checkout of the Thermal Radiator Rotary Joint, the soft docking of an S-Band antenna, and the deployment of the S1 Radiator. An onboard repair of the ISS humidity separator is also shown. Landing views include: VAB, Tower 1, Mid-Field, Runway South End, Runway North End, Tower-2, Cocoa Beach DOAMS, and PPOV. Kennedy Space Center managers greet the crew upon arrival, and Commander Ashby gives a brief speech while standing with his crew members.

October 24, 2000; In English; 60 min, with color and sound; No Copyright; Avail: CASI; **V03**, Videotape-VHS; **B03**, Videotape-Beta

The video begins with the introduction of the crew of Space Shuttle Discovery on STS-92, at their customary pre-flight meal. The crew consists of Commander Brian Duffy, Pilot Pamela Melroy, and Mission Specialists Leroy Chiao, William McArthur, Peter 'Jeff' Wisoff, Michael Lopez-Alegria, and Koichi Wakata. The introduction and suit-up of the astronauts, and their departure in the Astrovan are shown at a quick pace. The video shows in detail the seating of the crew and each astronaut's final preparations in the White Room prior to boarding. Views of Discovery's night launch include: SLF Convoy, Beach Tracker, VAB, Pad Perimeter, Tower-1, UCS-15, Press Site, UCS-23, OTV-61, OTV-70, OTV-71, and the In-Cabin Ascent Camera. While in orbit, the Discovery orbiter docks with the International Space Station (ISS). The docking is shown in a series of still images. The video includes clips from four extravehicular activities (EVAs). The crew members who performed the EVAs comment on them while speaking to Mission Control. During the EVAs, the Z1 Truss and an antenna are attached to the ISS. The crew members on the fourth EVA test jet packs. Views of landing include: TV-1, TV-2, TV-3, LRO-1, and HUD.

The crew of STS-113 and the Expedition 6 crew of the International Space Station (ISS) are introduced leaving the suitup room and while being assisted in their seats onboard Space Shuttle Endeavour. The shuttle's crew consisted of Commander Jim Wetherbee, Pilot Paul Lockhart and Mission Specialists Michael Lopez-Alegria and John Herrington. The Expedition 6 crew consisted of Commander Ken Bowersox, Flight Engineer Nikolai Budarin and NASA ISS Science Officer Don Pettit. Clips of the Endeavour's night launch are shown from these cameras: Beach Tracker, VAB, Pad A, OTV-60, OTV-70, Tower 1, UCS-15, Press Site Grandstand, Cocoa Beach DOAMS, Playalinda Beach DOAMS, UCS-23, and the In-Cabin Camera. While on-orbit, highlights include the docking of Endeavour with the ISS, the Change of Command Ceremony by the Expedition 5 and 6 crews of the ISS, the mating of the P1 and S0 Trusses, and three extravehicular activities (EVAs) by astronauts Lopez-Allegria and Herrington. The shuttle crew also repairs a leak in the onboard

Carbon Dioxide Removal Assembly. Clips of the shuttle's landing are shown from these cameras: VAB, Tower 1, Mid-field, Runway South End, Runway North End, Tower 2, Playalinda DOAMS, UCS-3 Infrared, UCS-23, Midfield Infrared, and Pilot Point of View (PPOV).

The crew of STS-110, which consists of Commander Michael Bloomfield, Pilot Stephen Frick, and Mission Specialists Rex Walheim, Ellen Ochoa, Lee Morin, Jerry Ross, and Steven Smith is introduced at the customary pre-flight meal. The narrator provides background information on the astronauts during suit-up. Each crew member is shown in the White Room before boarding Space Shuttle Atlantis, and some display signs to loved ones. Launch footage includes the following replays: Beach Tracker, VAB, Pad B, Tower 1, DLTR-3, Grandstand, Cocoa Beach DOAMS, Playalinda DOAMS, UCS-23, SLF Convoy, OTV-154, OTV-163, OTV-170 (mislabelled), and OTV-171 (mislabelled). After the launch, NASA administrator Sean O'Keefe gives a speech to the Launch Control Center, with political dignitaries present. While on-orbit, Atlantis docks with the International Space Station (ISS), and Canadarm 2 on the ISS lifts the S0 Truss out of the orbiter's payload bay. The video includes highlights of three extravehicular activities (EVAs). In the first, the S0 Truss is fastened to the Destiny Laboratory Module on the ISS. During the third EVA, Walheim and Smith assist in the checkout of the handcart on the S0 Truss. The Atlantis crew is shown gathered together with the Expedition 4 crew of the ISS, and again by itself after undocking. Replays of the landing include: VAB, Tower 1, Mid-field, Runway South End, Runway North End, Tower 2, Playalinda DOAMS, Cocoa Beach DOAMS, and Pilot Point of View (PPOV). After landing, Commander Bloomfield lets each of his crew members give a short speech.

**STS-113 Mission Highlights Resource Tape Flight Days 4-6 Tape: 2 of 4**

[2003]; In English; Tape: 2 of 4, 1 hr. 30 mins. playing time, in color with sound

Report No(s): JSC1946; No Copyright; Avail: CASI; **V04**, Videotape-VHS; **B04**, Videotape-Beta

This video, Part 2 of 4, shows the activities of the crew of the Space Shuttle Endeavor on flight days 4-6 of STS-113. The crew consists of Commander Jim Wetherbee, Pilot Paul Lockhart, and Mission Specialists Michael Lopez-Alegria and John Herrington. On flight day 4, The P1 truss was transferred from Canadarm on Endeavour to Canadarm 2 on the ISS, and aligned with the S0 Truss for attachment. The mission specialists connected utility cables between the trusses on an extravehicular activity (EVA). Flight day 5 was Commander Wetherbee's 50th birthday, and the video includes a clip from The Tonight Show in which Jay Leno wishes him a happy birthday. Intravehicular activity on flight day 5 includes Peggy Whitsun of the outgoing Expedition 5 crew of the International Space Station (ISS) showing incoming Expedition 6 crew members Ken Bowersox and Don Pettit how to replace valves on the ISS CO2 removal system. The video also includes an interior tour of Endeavour and the ISS, and an brief exterior tour of the ISS. On flight day 6 Lopez-Alegria and Herrington attach a television antenna to the P1 truss, and are shown using a handcart on the truss several times. The video includes several Earth views, including one of the west coast of South America.

**STS-105/Discovery/ISS 7A.1: Pre-Launch Activities, Launch, Orbit Activities and Landing**

August 10, 2001; In English; 60 Mins. playing time, in color, with sound; No Copyright; Avail: CASI; **V03**, Videotape-VHS; **B03**, Videotape-Beta

The crew of Space Shuttle Discovery on STS-105 is introduced at their pre-launch meal and at suit-up. The crew members include Commander Scott Horowitz, Pilot Rick Sturckow, and Mission Specialists Patrick Forrester and Daniel Barry, together with the Expedition 3 crew of the International Space Station (ISS). The Expedition 3 crew includes Commander Frank Culbertson, Soyuz Commander Vladimir Dezhurov, and Flight Engineer Mikhail Tyurin. When the astronauts depart for the launch pad in the Astrovan, their convoy is shown from above. Upon reaching the launch pad, they conduct a walk around of the shuttle, display signs for family members while being inspected in the White Room, and are strapped into their seats onboard Discovery. The video includes footage of Discovery in the Orbiter Processing Facil-

ity, and some of the pre-launch procedures at the Launch Control Center are shown. The angles of launch replays include: TV-1, Beach Tracker, VAB, Pad A, Tower 1, UCS-15, Grandstand, OTV-70, Onboard, IGOR, and UCS-23. The moment of docking between Discovery and the ISS is shown from inside Discovery's cabin. While in orbit, the crew conducted extravehicular activities (EVAs) to attach an experiments container, and install handrails on the Destiny module of the ISS. The video shows the docking and unloading of the Leonardo Multipurpose Logistics Module (MPLM) onto the ISS. The deployment of a satellite from Discovery with the coast of the Gulf of Mexico in the background is shown. Cape Canaveral is also shown from space. Landing replays include VAB, Tower 1, mid-field, South End SLF, North End SLF, Tower 2, Playalinda DOAMS, UCS-23, and Pilot Point of View (PPOV). NASA Administrator Dan Goldin meets the crew upon landing and participates in their walk around of Discovery. The video concludes with a short speech by commander Horowitz.

This video, part 1 of 4, shows the activities of the crew of Space Shuttle Endeavour during flight days 1-3 of STS-113. The crew consists of Commander Jim Wetherbee, Pilot Paul Lockhart, Mission Specialists Michael Lopez-Alegria and John Herrington. With them were the Expedition 6 crewmembers of the International Space Station (ISS), Ken Bowersox, Nikolai Budarin, and Don Pettit. Pre-launch procedures are shown, and the rain-delayed night launch is shown from several camera angles. On flight day 2 there was a check out of the Canadarm on Endeavour, and some intravehicular activity. Flight day 3 highlights the docking of Endeavour and the ISS, and preparation for an extravehicular activity (EVA) the following day. Earth views include the English Channel at night with a close-up of London, the coast of Ecuador, and some views of Endeavour with the Earth in the background.

This short video, Part 4 of 4, shows the activities of the crew of Space Shuttle Endeavour and the Expedition 5 crew of the International Space Station (ISS) on the final day of STS-113. The shuttle's crew consists of Commander Jim Wetherbee, Pilot Paul Lockhart, and Mission Specialists Michael Lopez-Alegria and John Herrington, together with the Expedition 5 crew, Commander Valery Korzun, Flight Engineer Sergei Treschev, and NASA ISS Science Officer Peggy Whitson. Onboard video is not available for flight days 12 through 14, but footage of flight day 15 includes suiting up into flight suits, reentry and landing from different angles, including Pilot Point of View (PPOV), and replays of landing.

This video, part 3 of 4, shows the activities of the crew of Space Shuttle Endeavour and the Expedition 5 and 6 crews of the International Space Station (ISS) during flight days 7 through 11 of STS-113. Endeavour's crew consists of Commander Jim Wetherbee, Pilot Paul Lockhart, and Mission Specialists Michael Lopez-Alegria and John Herrington. Footage of flight day 7 includes a change of command ceremony on board the ISS, and Endeavour dumping supply water through a nozzle. On flight day 8 the Space Station Mobile Transporter jams while traveling on the P1 truss of the ISS, and Herrington attempts to free it as part of a lengthy extravehicular activity (EVA) with Lopez-Alegria. Flight day 9 is the last full day the three crews spend together. Expedition 5 NASA ISS Science Officer Peggy Whitsun troubleshoots the Microgravity Glovebox on board the ISS with her successor Don Pettit. The undocking of Endeavour and the ISS is the main activity of flight day 10. Endeavour also deploys a pair of experimental tethered microsatellites for the Department of Defense. The footage from flight day 11 shows the Expedition 5 crew exercising, laying in recumbent seats to help them adjust to the gravity on Earth, and sleeping. The video includes numerous views of the earth, some with the ISS and Endeavour in the

foreground. There are close-ups of Italy, Spain and Portugal, Tierra del Fuego, and Baja California, and a night view of Chicago and the Great Lakes.

**Expedition 8 Crew Interview: Pedro Duque**

[2003]; In English

Report No(s): JSC-1949C; No Copyright; Avail: CASI; **V02**, Videotape-VHS; **B02**, Videotape-Beta

European Space Agency (ESA) astronaut Pedro Duque is interviewed in preparation for his flight to and eight day stay on the International Space Station (ISS) as part of the Cervantes mission. Duque arrived on the ISS with the Expedition 8 crew onboard a Soyuz TMA-3, the seventh Soyuz flight to the station. He departed from the ISS on a Soyuz TMA-2 with the Expedition 7 crew of the ISS. In the video, Duque answers questions on: the goals of his flight; his life and career path; the Columbus Module, which ESA will contribute to the ISS, the ride onboard a Soyuz, and the importance of the ISS.

**STS-107 Mission Highlights Resource Tape, Part 1 of 4**

[2003]; In English; 57 min., 45 sec. playing time, in color, with sound

Report No(s): JSC-1952; No Copyright; Avail: CASI; **V03**, Videotape-VHS; **B03**, Videotape-Beta

This video, Part 1 of 4, shows the activities of the STS-107 crew during flight days 1 through 3 of the Columbia orbiter's final flight. The crew consists of Commander Rick Husband, Pilot William McCool, Payload Commander Michael Anderson, Mission Specialists David Brown, Kalpana Chawla, and Laurel Clark, and Payload Specialist Ilan Ramon. Before launch on flight day 1 the astronauts are seen at their pre-flight banquet, during suit-up, and while being seated on the orbiter. David Brown takes footage of the space shuttle's external tank after it is jettisoned. The video includes replays of the launch from several angles. The onboard views of launch are narrated by William McCool and Kalpana Chawla. On flight days 2 and 3 student microgravity experiments in the SpaceHab module in the shuttle's payload bay are profiled. These experiments address microgravity effects on crystal growth, ants, bees, fish embryos, silkworms, and spiders. Other experiments profiled include the Mediterranean Israeli Dust Experiment (MEIDEX), FAST (surface tension of bubbles), SOLS (Ozone), an experiment to culture prostate cancer cells in a bioreactor, and a commercial plant growth experiment. Earth views include

lightning at night, and a view of the Strait of Gibraltar, including Spain and Morocco.

This video, Part 2 of 4, shows the activities of the STS-107 crew during flight days 4 through 7 of the Columbia orbiter's final flight. The crew consists of Commander Rick Husband, Pilot William McCool, Payload Commander Michael Anderson, Mission Specialists David Brown, Kalpana Chawla, and Laurel Clark, and Payload Specialist Ilan Ramon. During the video the crew members are at work on a variety of spaceborne experiments, such as the Laminar Soot Processes (LSP) experiment, the Mediterranean Israeli Dust Experiment (MEIDEX), international student experiments, and the Structures of Flame Balls at Low Lewis-number (SOFBALL) experiment. Other crew activities recorded on the video include exercising on a bicycle, drawing blood, and answering questions from the public. A couple of scenes on the video are narrated by Clark, including one in which she gives a tour of the SPACEHAB module in the shuttle's payload bay. The video also includes a scene in which Israeli Prime Minister Ariel Sharon addresses Ramon and the other Red Team crew members (Husband, Chawla, Clark). The Earth views shown include Saudi Arabia and the Persian Gulf; the Appalachian Mountains; Egypt, the Red Sea, and the Sinai Peninsula, and the east coast of Africa. CASI

This video, Part 3 of 4, shows the activities of the STS-107 crew during flight days 9 through 12 of the Columbia orbiter's final flight. The crew consists of Commander Rick Husband, Pilot William McCool, Payload Commander Michael Anderson, Mission Specialists David Brown, Kalpana Chawla, and Laurel Clark, and Payload Specialist Ilan Ramon. On flight day 9 David Brown and other crew members are at work on experiments in the Spacehab research module, and imagery is shown from the Mediterranean Israeli Dust Experiment (MEIDEX) on a pass over North Africa and the Horn of Africa. Ilan

Ramon narrates part of the footage from flight day 10, and intravehicular activities of the astronauts onboard Columbia are shown, as well as views of the Gulf of Aden, and Lake Chad, which is seen with the back of the orbiter in the foreground. Rick Husband narrates the footage from day 11, which includes cleaning duties and maintenance, as well as an excellent view of the Sinai Peninsula, Israel, and Jordan, as well as the Mediterranean Sea, Red Sea, and Gulf of Aqaba. The highlight of flight day 12 is a conversation between Columbia's crew and the crew of the International Space Station (ISS). A special section of Earth views at the end of the video shows: 1) Atlantic Ocean, Strait of Gibraltar, Mediterranean Sea, Iberian Peninsula, Morocco, and Algeria; 2) Baja Peninsula; 3) Cyprus and Mediterranean Sea; 4) Florida; 5) Earth limb and Pacific Ocean; 6) North Carolina Outer Banks, Cape Hatteras, and Atlantic Ocean; 7) Houston with zoom out to Texas and Louisiana; 8) Mt. Vesuvius (Italy); 9) Earth limb and Atlantic Ocean; 10) Earth limb and terminator, and Pacific Ocean; 11) Saudi Arabia, Yemen, Oman, and Arabian Sea.

This video, Part 4 of 4, shows the activities of the STS-107 crew during flight days 13 through 15 of the Columbia orbiter's final flight. The crew consists of Commander Rick Husband, Pilot William McCool, Payload Commander Michael Anderson, Mission Specialists David Brown, Kalpana Chawla, and Laurel Clark, and Payload Specialist Ilan Ramon. The highlight of flight day 13 is Kalpana Chawla conversing with Mission Control Center in Houston during troubleshooting of the Combustion Module in a recovery procedure to get the MIST fire suppression experiment back online. Chawla is shown replacing an atomizer head. At Mission Control Center a vase of flowers commemorating the astronauts who died on board Space Shuttle Challenger's final flight is shown and explained. The footage of flight day 14 consists of a tour of Columbia's flight deck, middeck, and Spacehab research module. Rick Husband narrates the tour, which features Kalpana Chawla, Laurel Clark, and himself. The astronauts demonstrate hygiene, a dining tray, the orbiter's toilet, and a space iron, which is a rack for strapping down shirts. The Earth limb is shown with the Spacehab module in the foreground. Clark exercises on a bicycle for a respiration experiment, and demonstrates how a compact disk player gyrates in microgravity. On flight day 15, the combustion module is running again, and footage is shown of the Water Mist Fire-Suppression

Experiment (Mist) in operation. Laurel Clark narrates a segment of the video in which Ilan Ramon exercises on a bicycle, Rick Husband, Kalpana Chawla, and Ramon demonstrate spinning and push-ups in the Spacehab module, and Clark demonstrates eating from a couple of food packets. The video ends with a shot of the Earth limb reflected on the radiator on the inside of Columbia's open payload bay door with the Earth in the background.

Report No(s): G03-029; No Copyright; Avail: CASI; **V01**, Videotape-VHS; **B01**, Videotape-Beta

This video presents an overview of the first Tracking and Data Relay Satellite (TDRS-1) in the form of text, computer animations, footage, and an interview with its program manager. Launched by the Space Shuttle Challenger in 1983, TDRS-1 was the first of a network of satellites used for relaying data to and from scientific spacecraft. Most of this short video is silent, and consists of footage and animation of the deployment of TDRS-1, written and animated explanations of what TDRS satellites do, and samples of the astronomical and Earth science data they transmit. The program manager explains in the final segment of the video the improvement TDRS satellites brought to communication with manned space missions, including alleviation of blackout during reentry, and also the role TDRS-1 played in providing telemedicine for a breast cancer patient in Antarctica.

This video documents the initiative to develop a multinational, permanent space research laboratory. Historical background on the U.S. and Soviet manned space flight program as well as joint efforts such as the Apollo-Soyuz link up is shown. The current initiative will begin with collaborative missions involving NASA's space shuttle and Russia's Mir space station, and culminate in a permanently manned space station involving the U.S., Russia, Japan, Canada, and ESA. Shown are computer simulations of the proposed space station. Commentary is provided by the NASA administrator, former astronauts, cosmonauts, and Russian and American space experts.

In this 'Lift off to Learning' series, Loren Shriver, commander of STS 46, and the other members of the mission (Claude Nicollier, Marsha Ivins, Andrew Allen, Jeffrey Hoffman, Franklin Chiang-Diaz, and Franco Maerba) use computer graphics, and physical experiments to explain how the tethered satellite to be deployed during their mission will be raised, how it works, the influence of the Shuttle on the satellite and the satellite's influence on the Shuttle's orbit, the gravitational effects, and other effects concerning the Theoretical Physics used to plan this mission (gravity gradient force, center of mass, angular momentum, centrifugal force, and coriolis effect). This video ends with a discussion of the technology transfer and utilization of this tethered satellite concept and design.

**Hey! What's Space Station Freedom?**

Vonehrenfried, Dutch; JAN 1, 1992; In English

Report No(s): NASA-TM-110531; NONP-NASA-VT-95-42907; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

This video, 'Hey! What's Space Station Freedom?', has been produced as a classroom tool geared toward middle school children. There are three segments to this video. Segment One is a message to teachers presented by Dr. Jeannine Duane, New Jersey, 'Teacher in Space'. Segment Two is a brief Social Studies section and features a series of Presidential Announcements by President John F. Kennedy (May 1961), President Ronald Reagan (July 1982), and President George Bush (July 1989). These historical announcements are speeches concerning the present and future objectives of the USA's space programs. In the last segment, Charlie Walker, former Space Shuttle astronaut, teaches a group of middle school children, through models, computer animation, and actual footage, what Space Station Freedom is, who is involved in its construction, how it is to be built, what each of the modules on the station is for, and how long and in what

sequence this construction will occur. There is a brief animation segment where, through the use of cartoons, the children fly up to Space Station Freedom as astronauts, perform several experiments and are given a tour of the station, and fly back to Earth. Space Station Freedom will take four years to build and will have three lab modules, one from ESA and another from Japan, and one habitation module for the astronauts to live in. CASI

**Delta II Mars Pathfinder**

Dec. 04, 1998; In English; Videotape: 1 hour 15 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999036756; No Copyright; Avail: CASI; **V04**, Videotape-VHS

Final preparations for lift off of the DELTA II Mars Pathfinder Rocket are shown. Activities include loading the liquid oxygen, completing the construction of the Rover, and placing the Rover into the Lander. After the countdown, important visual events include the launch of the Delta Rocket, burnout and separation of the three Solid Rocket Boosters, and the main engine cutoff. The cutoff of the main engine marks the beginning of the second stage engine. After the completion of the second stage, the third stage engine ignites and then cuts off. Once the third stage engine cuts off spacecraft separation occurs.

**Mars Climate Orbiter**

Dec. 11, 1998; In English; Videotape: 1 hour 2 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999036757; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

The purpose of this mission is to study the climate history and the water distribution of Mars. Beautiful panoramic views of the shuttle on the launch pad, engine ignition, Rocket launch, and the separation and burnout of the Solid Rocket Boosters are shown. The footage also includes an animation of the mission. Detailed views of the path that the Orbiter traversed were shown. Once the Orbiter lands on the surface of Mars, it will dig a six to eight inch hole and collect samples from the planets' surface. The animation also included the prospective return of the Orbiter to Earth over the desert of Utah. The remote sensor on the Orbiter helps in finding the exact location of the Orbiter so that scientists may collect the sample and analyze it.

**Galileo Press Conference from JPL**

Jul. 27, 1995; In English; Videotape: 44 min. 20 sec. playing time, in color with sound

Report No(s): NONP-NASA-VT-1999206977; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The press conference concerns the Orbiter Deflection maneuver that had taken place earlier that day. The participants in the press conference, spoke of the success of the maneuver, which was performed perfectly. The Galileo project was a cooperative effort with the German Space Agency. Two members of the German Space Agency were introduced. There was a review of the trip to Jupiter, and the probe release. The deflection maneuver was important to getting the Probe on the correct path for the descent into the atmosphere of Jupiter. A brief video showed simulations of the probe release and the descent of the probe into the atmosphere. There was discussion about the failure of the high gain antenna to deploy, and the requirement to use the low gain antenna instead. A full scale model of the probe was shown.

This NASA Kennedy Space Center video release presents the countdown and liftoff of Apollo 11, the first manned journey to the Moon which began at Pad A, Launch Complex 39, Kennedy Space Center, Florida at 9:32 a.m. EDT on July 16, 1969. The crew of Apollo 11 included Commander Neil A. Armstrong, Command Module pilot Michael Collins, and Lunar Module pilot Edwin E. Aldrin, Jr. Several different camera viewpoints of the spacecraft as well as over-head shots of the Kennedy launch control center are presented prior to liftoff. Other footage includes shots of President Lyndon B. Johnson and his wife among the Florida audience viewing liftoff. During the countdown several audio updates from Kennedy launch control are presented as to the status of pre-launch testing and system readiness. Captivating footage from liftoff to the spacecraft nearing the outer Earth atmosphere is shown as the video ends with Neil Armstrong's confirmation of engine skirt separation and launch escape tower separation from the spacecraft.

**International Space Station: Expedition 2000**

Jan. 01, 2000; In English; Videotape: 55 min. 17 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000043347; No Copyright; Avail: CASI; **V03**, Videotape-VHS

Live footage of the International Space Station (ISS) presents an inside look at the groundwork and assembly of the ISS. Footage includes both animation and live shots of a Space Shuttle liftoff. Phil West, Engineer; Dr. Catherine Clark, Chief Scientist ISS; and Joe Edwards, Astronaut, narrate the video.

The first topic of discussion is People and Communications. Good communication is a key component in our ISS endeavor. Dr. Catherine Clark uses two soup cans attached by a string to demonstrate communication. Bill Nye the Science Guy talks briefly about science aboard the ISS. Charlie Spencer, Manager of Space Station Simulators, talks about communication aboard the ISS. The second topic of discussion is Engineering. Bonnie Dunbar, Astronaut at Johnson Space Flight Center, gives a tour of the Japanese Experiment Module (JEM). She takes us inside Node 2 and the U.S. Lab Destiny. She also shows where protein crystal growth experiments are performed. Audio terminal units are used for communication in the JEM. A demonstration of solar arrays and how they are tested is shown. Alan Bell, Project Manager MRMDF (Mobile Remote Manipulator Development Facility), describes the robot arm that is used on the ISS and how it maneuvers the Space Station. The third topic of discussion is Science and Technology. Dr. Catherine Clark, using a balloon attached to a weight, drops the apparatus to the ground to demonstrate Microgravity. The bursting of the balloon is observed. Sherri Dunnette, Imaging Technologist, describes the various cameras that are used in space. The types of still cameras used are: 1) 35 mm, 2) medium format cameras, 3) large format cameras, 4) video cameras, and 5) the DV camera. Kumar Krishen, Chief Technologist ISS, explains inframetrics, infrared vision cameras and how they perform. The Short Arm Centrifuge is shown by Dr. Millard Reske, Senior Life Scientist, to subject astronauts to forces greater than 1-g. Reske is interested in the physiological effects of the eyes and the muscular system after their exposure to forces greater than 1-g.

**Delta II/Geotail Pre-Launch Press Conference**

Jul. 23, 1992; In English; Videotape: 62 min. 29 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000078601; No Copyright; Avail: CASI; [B04](#), Videotape-Beta; [V04](#), Videotape-VHS

This video presents a live coverage of a pre-launch press conference on the Delta II/Geotail Mission. George Diller, NASA Public Affairs, presents the panel. The panel consists of James Womack, NASA Launch Manager, Kennedy Space Center; Mario Acuna, Project Scientist, Goddard Space Flight Center; Atsuiro Nishida, Project Manager, ISAS (Institute of Space and Astronautical Science) Tokyo; Michael Calabrese, Program Manager, NASA Headquarters; Kenneth Sizemore, Project Manager, GSFC; Tono Uesugi, Project Manager, ISAS; John Beckham, Delta Launch Manager, GSFC; and Joel Tumbiolo, Launch Weather Officer, CCAFS (Cape Canaveral Air Force Station). Atsuiro Nishida presents the objectives of the Geotail Mission which are: 1) To determine the characteristics of the Geomagnetic Tail; 2) To understand the internal instability that leads to sudden energy releases; 3) To clarify the source of plasma in the tail; and 4) To study the structure of important interfaces such as the Magnetopause. Mario Acuna gives illustrations of the Magnetosphere. James Womack discusses the countdown and status of the mission. Tono Uesugi discusses spacecraft readiness for the July 24, 1992

launch, and Joel Tumbiolo gives the weather forecast for the launch. The press conference concludes with a question and answer period. See NONP-NASA-VT-200078605 for additional questions and footage.

The launch vehicle for the Solar Heliospheric Observatory (SOHO) mission is a two stage Atlas-IIAS (Atlas/Centaur). The Atlas, consists of a solid rocket booster stage powered by four Thiokol Castor IVA solid rocket boosters (SRB) and a core vehicle stage (booster and sustainer) powered by Rocketdyne MA-5A liquid propellant engines (RP-1 fuel and liquid oxygen). The multiple firing Centaur is powered by two Pratt and Whitney (RL10A-4) liquid hydrogen and liquid oxygen engines with extendible nozzles. This video shows the erection of the Atlas booster and transportation (to 36-B launching pad) and erection of the Centaur.

**XTE Payload at Hangar AO**

Aug. 14, 1995; In English; Videotape: 3 min. 30 sec. playing time, in color, no sound

Report No(s): NONP-NASA-VT-2000078618; WO X9085-257; KSC95-50850; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

The X-ray Timing Explorer (XTE), launched on Dec. 30, 1995, is a satellite that observes the fast-moving, high-energy worlds of black holes, neutron stars, X-ray pulsars and bursts of X-rays that light up the sky and then disappear forever. This videotape shows the XTE satellite being worked on by personnel in clean room clothing. The XTE is mounted on a base, which moves the satellite from the vertical to the horizontal position, to allow for access to various parts.

**Atlas Centaur 77 GOES-J Wet Dress Rehearsal at Cape Canaveral Air Station**

May 03, 1995; In English; Videotape: 6 min. playing time, in color, no sound

Report No(s): KSC95-50472; NONP-NASA-VT-2000078614; WO X9055-252; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

A Wet Dress Rehearsal (WDR) was successfully run on Atlas/Centaur 77 launch vehicle. The WDR verifies the launch readiness of the vehicle, the launch support equipment at the pad and in the blockhouse, the countdown procedure, and the launch countdown operations of the Eastern Range. During this countdown test liquid hydrogen, liquid oxygen and RP-1 propellants are aboard the vehicle, verifying the structural integrity of the Atlas first stage and Centaur upper stage tanks.

Jul. 20, 1992; In English; Videotape: 3 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000078599; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

The Geotail mission, part of the International Solar Terrestrial Physics (ISTP) program, measures global energy flow and transformation in the magnetotail to increase understanding of fundamental magnetospheric processes. The satellite was launched on July 24, 1992 onboard a Delta II rocket. This video shows with animation the solar wind, and its effect on the Earth. The narrator explains that the Geotail spacecraft was designed and built by the Institute of Space and Astronautical Science (ISAS), the Japanese Space Agency. The mission objectives are reviewed by one of the scientist in a live view. The video also shows an animation of the orbit, while the narrator explains the orbit and the reason for the small launch window.

**ATLAS-SOHO: Satellite Arrival and Uncrating, Uncrating of the Propulsion Unit and Electric Module**

Aug. 01, 1995; In English; Videotape: 3 min. 46 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000078597; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

The SOHO satellite, part of the International Solar-Terrestrial Physics Program (ISTP), is a solar observatory designed to study the structure, chemical composition, and dynamics of the solar interior. It will also observe the structure (density, temperature and velocity fields), dynamics and composition of the outer solar atmosphere, and the solar wind and

its relation to the solar atmosphere. The spacecraft was launched on December 2, 1995. This video shows the unloading of the satellite from the transport plane at the Kennedy Space Station and the lowering to an awaiting flatbed truck. The video also shows the uncrating of the satellite, the propulsion unit and the electric module in a clean room.

#### **Starfire I/ Consort III Launch**

May 16, 1990; In English; Videotape: 28 min. 11 sec. playing time, in color. with sound

Report No(s): NONP-NASA-VT-2000081529; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

The Consort 3 is a commercial suborbital rocket that carried 12 microgravity experiments. It was launched on a Starfire rocket on May 16, 1990, from the Naval Ordnance Missile Test Station facilities at the U.S. Army's White Sands Missile Range (WSMR), NM. The videotape opens with approximately 2 minutes of a man speaking into a microphone but there is no sound. This is followed by a brief summary of the payload, and the expected trajectory, a view of the launch vehicle, the countdown and the launch. The videotape then shows a film clip from the University of Alabama, with Dr. Francis Wessling, project manager for the Consort 3 project, speaking about the mission goals in the materials sciences experimentation. The video shows footage of the payload being assembled. The next section is a discussion by Dr. Roy Hammstedt, of Pennsylvania State University, who reviews the Penn State Bio Module, and the goal of learning about the effects of gravity on physiology. This is followed by George Maybee, from McDonald Douglas, who spoke about the payload integration process while the video shows some of the construction. The last section of the videotape shows a press conference at the launch site. Ana Villamil answers questions from the press about the flight.

#### **AC-67/FLTSATCOM Launch with Isolated Cam Views/ Freeze of Lightning/ Press Conference**

Mar. 26, 1987; In English; Videotape: 34 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000078604; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

The FLTSATCOM system provides worldwide, high-priority UHF communications between naval aircraft, ships, submarines, and ground stations and between the Strategic Air Command and the national command authority network. This videotape shows the attempted launch of the 6th member of the satellite system on an Atlas Centaur rocket. Within a minute of launch a problem developed. The initial sign of the problem was the loss of telemetry data. The videotape shows three isolated views of the launch, and then a freeze shot of a lightning strike shortly after the launch. The tape then shows a press conference, with Mr. Wolmaster, Mr. Gibbs, and Air Force Colonel Alsbrooke. Mr. Gibbs summarizes the steps that would be taken to review the launch failure. The questions from the press mostly concern the weather conditions, and the possibility that the weather might have caused the mission failure.

On March 26, 1987, after the launch of an Atlas/Centaur rocket with a payload of a Navy Communications Satellite, a problem developed and the rocket was lost. This videotape is a press conference held to review the incident. Mr. John Gibb, the Atlas-Centaur Program Manager at Lewis Research Center, opens the press conference with a statement that reviews the situation, and what is known about the accident. He reviews the

constraints to launch and explains that to the best of his knowledge there was no violation of these constraints. He further states that a review panel will investigate the circumstances and make recommendations. The press conference is then opened up to questions. Most of the questions concern the weather conditions and the existence of lightning in the area. The Air Force representative, Colonel John Albrook, is asked if the loss of the satellite would pose any problems. He answers that there were several satellites performing the role for which this satellite was slated, and that these were still healthy, and capable of continuing for a considerable length of time.

An overview of the improvements made on the spacewalking suits and equipment used to assemble the International Space Station (ISS) while in orbit is presented. Details are given on the adjustable heaters and helmet lights. The tools used are shown, and the safety equipment, such as space life jackets and stiff tethers, are described. Astronaut training in the Neutral Buoyancy Laboratory (NBL) and shuttle simulators also are seen.

**International Space Station Video Progress Report**

Oct. 01, 2000; In English; Videotape: 7 min. 16 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001041441; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

A narrated overview of the construction and assembly of the International Space Station (ISS) is given through a collection of clips ranging from the launch of the Russian Proton rocket containing the Zvezda module to computerized animations showing the installation of the Zarya and Unity connecting modules. Footage from some of the space missions that assembled the ISS in space (i.e., STS-106 and STS-92) are seen. The Z1 truss (including the deployment of the solar arrays), Destiny Laboratory Module, Leonardo Module, the Japanese Kibo Experiment Module, Columbus Pressurized Module, and the ISS's robotic arm are seen. Animations show

the assembly and evolution of the ISS as new components are added.

The construction and evolution of the International Space Station (ISS) is seen through various clips. Live footage shows the following: (1) the Zarya Module under construction and during launch preparations; (2) the Unity Module under construction, during launch preparations, and being lowered into the payload canister; (3) STS-88 Mission Specialists Jerry Ross and Jim Newman during training for their spacewalks, including activities in the Neutral Buoyancy Laboratory (NBL); (4) Zarya and Unity docking to the Service Module; (5) the Expedition 1 crew (William Shepherd, Yuri Gidzenko, and Sergei Krikalev) during emergency escape training in the Black Sea and during water survival training at Johnson Space Center; (6) the X-38 Crew Return Vehicle Drop Test; and (7) the US Destiny Laboratory Module, Pressurized Mating Adapter (PMA), Service Module, Italian Multi-Purpose Logistics Module, US Airlock, and US Habitation Module under construction. Computerized animations show the following: (1) an ISS fly-around; (2) the STS-88 Space Shuttle as it docks with Zarya and attaches Zarya to the Unity Module; (3) the Space Shuttle as it docks with ISS and installs the Z1 truss segment and PMA; (4) the Soyuz spacecraft as it docks with ISS; (5) interior and exterior views of the Columbus Attached Pressurized Module; and (6) a Transhab animation showing the interior and exterior and marking the components.

March 12, 2002; In English; 1 hr, with color and sound; No Copyright; Avail: CASI; [V03](#), Videotape-VHS; [B03](#), Videotape-Beta

The STS-109 Space Shuttle Mission begins with introduction of the seven crew members: Commander Scott D. Altman, pilot Duane G. Carey, payload commander John M. Grunsfeld, mission specialists: Nancy J. Currie, James H. Newman, Richard M. Linnehan, and Michael J. Massimino. Spacewalking NASA astronauts revive the Hubble Space Telescope's (HST) sightless infrared eyes, outfitting the observatory with an experimental refrigerator designed to resuscitate a comatose camera. During this video presentation John Grunsfeld and Rick Linnehan bolt the new cryogenic cooler inside HST and hung a huge radiator outside the observatory and replaces the telescope power switching station. In the video we can see how the shuttle robot arm operator, Nancy Currie, releases the 13-ton HST. Also, the landing of the Space Shuttle Columbia is presented.

This video tape examines microgravity research that is ongoing at LeRC. The video details the development of the Multiple Axis Space Test and its use in training the Mercury 7 astronauts. The LeRC drop tower is discussed, and a comparison is made between research being done at LeRC and rides anyone can experience at the nearby Cedar Point Amusement Park.

### **IDGE (Isothermal Dendritic Growth Experiment)**

Feb 1, 1994; In English

Report No(s): LERC-235; NASA-TM-109929; NONP-NASA-VT-94-23166; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

The Isothermal Dendritic Growth Experiment (IDGE) flew on STS-62 to study the microscopic, tree-like structures (dendrites) that form within metals as they solidify from molten materials. The size, shape, and orientation of these dendrites affect the strength and usefulness of metals. Data from this experiment will be used to test and improve the mathematical models that support the industrial production of metals.

**Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 2 of 4**

Feb. 20, 1996; In English; Videotape: 40 min. playing time, in color, with sound

Report No(s): NASA-TP-3564/Videotape 2 of 4; NAS 1.60:3564/Videotape 2 of 4; W/O-472411-Tape-2 of 4; NONP-NASA-VT-97-1997005938; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The report presents the results of the flight experiment Tank Pressure Control Experiment/Thermal Phenomena (TPCE/TP) performed in the microgravity environment of the space shuttle. TPCE/TP, flown on the Space Transportation System STS-52, was a second flight of the Tank Pressure Control Experiment (TPCE). The experiment used Freon 113 at near saturation conditions. The test tank was filled with liquid to about 83 percent by volume. The experiment consisted of 21 tests. Each test generally started with a heating phase to increase the tank pressure and to develop temperature stratification in the fluid, followed by a fluid mixing phase for the tank pressure reduction and fluid temperature equilibration. The heating phase provided pool boiling data from large (relative to bubble sizes) heating surfaces (0.1046 m by 0.0742 m) at low heat fluxes (0.23 to 1.16 kW/m(exp 2)). The system pressure and the bulk liquid subcooling varied from 39 to 78 kPa and 1 to 3 deg C, respectively. The boiling process during the entire heating period, as well a jet-induced mixing process for the first 2 min. of the mixing period, was also recorded on video. Analyses of data from the two flight experiments (TPCE and TPCE/TP) and their comparison with the results obtained in drop tower experiments suggest that as Bond number approaches zero the flow pattern produced by an axial jet and the mixing time can be predicted by the Weber number. This is video tape 2 of 4.

Herbert, Judith E., editor; Kane, Richard, editor; Mar 1, 1987; In English

Report No(s): NONP-NASA-VT-95-49097; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The completion and advances to the NIST Automated Manufacturing Research Facility (AMRF) is described in this video. The six work stations: (1) horizontal machining; (2) vertical machining; (3) turning machinery; (4) cleaning and deburring; (5) materials handling; and (6) inspection are shown and uses for each workstation are cited. Visiting researchers and scientists within NIST describe the advantages of each of the workstations, what the facility is used for, future applications for the technological advancements from the AMRF, including examples of how AMRF technology is being trans-

ferred to the U.S. Navy industry and discuss future technological goals for the facility.

**Thermocapillary convection in evaporating sessile drops**

JAN 1, 1986; In English

Report No(s): NASA-TM-109758; NONP-NASA-VT-94-9958; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

The purpose of this video is to understand the effects of surface tension on fluid convection. The fluid system chosen is the liquid sessile droplet to show the importance in single crystal growth, the spray drying and cooling of metal, and the advance droplet radiators of the space stations radiators. A cross sectional representation of a hemispherical liquid droplet under ideal conditions is used to show internal fluid motion. A direct simulation of buoyancy-dominant convection and surface tension-dominant convection is graphically displayed. The clear differences between two mechanisms of fluid transport, thermocapillary convection, and bouncy dominant convection is illustrated.

**Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test**

Holland, Scott D.; Nov 1, 1994; In English

Contract(s)/Grant(s): RTOP 763-23-35-08

Report No(s): NASA-TM-109984; NONP-NASA-SUPPL-VT-94-32020; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

This supplement to NASA TM 109152 shows the Schlieren video (10 min. 52 sec., color, Beta and VHS) of the external flow field and a portion of the internal flow field of a two-dimensional scramjet inlet model in the NASA Langley 20-Inch Mach 6 Tunnel. The intent of the overall test program is to study (both experimentally and computationally) the dynamics of the inlet unstart; this (phase I) effort examines potential wind-tunnel blockage issues related to model sizing and the adequacy of the actuation systems in accomplishing the start and unstart. The model is equipped with both a moveable cowl and aft plug. Windows in the inlet sidewalls allow limited optical access to the internal shock structure. In the video, flow is from right to left, and the inlet is oriented inverted with respect to flight, i.e., with the cowl on top. The plug motion is obvious because the plug is visible in the aft window. The cowl motion, however, is not as obvious because the cowl is hidden from view by the inlet sidewall. The end of the cowl actuator arm, however, becomes visible above the inlet sidewalls between the windows when the cowl is up (see figure 1b of the primary document). The model is injected into the tunnel and observed through several actuation sequences with two plug configurations over a range of unit freestream Reynolds number at a nominal freestream Mach number of 6. The framing rate and shutter speed of the camera were too slow to fully capture the dynamics of the unstart but did prove sufficient to identify inlet start and unstart. This series of tests indicated that the model was appropriately sized for this facility and identified operability limits required first to allow

the inlet to start and second to force the unstart.

Filtered Rayleigh Scattering and shadowgraph flow visualization were used to characterize the penetration of helium or moist air injected transversely at several pressures into a Mach 3 flow in the NASA Lewis 3.81 inch by 10 inch continuous flow supersonic wind tunnel. This work is in support of the LOX (liquid oxygen) Augmented Nuclear Thermal Rocket program. The present study used an injection-seeded, frequency doubled ND:YAG pulsed laser to illuminate a transverse section of the injectant plume. Rayleigh scattered light was passed through an iodine absorption cell to suppress stray laser light and was imaged onto a cooled CCD camera. The scattering was based on condensation of water vapor in the injectant flow. Results are presented for various configurations of sonic and supersonic injector designs mounted primarily in the floor of the tunnel. Injectors studied include a single 0.25 inch diameter hole, five 0.12 inch diameter holes on 0.177 inch spacing, and a 7 deg. half angle wedge. High speed shadowgraph flow visualization images were obtained with several video camera systems. Roof and floor static pressure data are presented several ways for the three configurations of injection designs with and without helium and/or air injection into Mach 3 flow. A 12 min. video supplement is also included.

**PMMW Camera TRP, Phase 1**

1997; 32 pp.; In English

Contract(s)/Grant(s): NCC1-196

Report No(s): NASA-CR-205700; NAS 1.26:205700; NONP-NASA-VT-1997057310; No Copyright; Avail: CASI; **A03**, Hardcopy; **V01**, Videotape-VHS

Passive millimeter wave (PMMW) sensors have the ability to see through fog, clouds, dust and sandstorms and thus have the potential to support all-weather operations, both military and commercial. Many of the applications, such as military transport or commercial aircraft landing, are technologically stressing in that they require imaging of a scene with a large field of view in real time and with high spatial resolution. The development of a low cost PMMW focal plane array camera is essential to obtain real-time video images to fulfill the above needs. The overall objective of this multi-year project (Phase 1) was to develop and demonstrate the capabilities of a W-band PMMW camera with a microwave/millimeter wave monolithic integrated circuit (MMIC) focal plane array (FPA) that can be manufactured at low cost for both military and commercial applications. This overall objective was met in July 1997 when the first video images from the camera were generated of an

outdoor scene. In addition, our consortium partner McDonnell Douglas was to develop a real-time passive millimeter wave flight simulator to permit pilot evaluation of a PMMW-equipped aircraft in a landing scenario. A working version of this simulator was completed. This work was carried out under the DARPA-funded PMMW Camera Technology Reinvestment Project (TRP), also known as the PMMW Camera DARPA Joint Dual-Use Project. In this final report for the Phase 1 activities, a year by year description of what the specific objectives were, the approaches taken, and the progress made is presented, followed by a description of the validation and imaging test results obtained in 1997.

**High temperature NASP engine seal development**

JAN 1, 1992; In English

Report No(s): LERC-92-174; NASA-TM-109750; NONP-NASA-VT-94-9950; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

This video details research being conducted at the Lewis Research Center on high temperature engine seal design for the National Aerospace Plane. To maximize the speed, the jets on the NASP extract oxygen from the air rather than carry large liquid fuel tanks; this creates temperatures within the jet of over 5000 F. To prevent these potentially explosive gases from escaping, researchers are developing new technologies for use in the engine seals. Two examples explained are the ceramic wafer seal and the braided ceramic rope seal. Computer simulations and laboratory footage are used to illustrate the workings of these seals. Benefits for other aerospace and industrial applications, as well as for the space shuttle, are explored.

The story of research and technology at NASA Lewis Research Center's Structures Division is presented. The job and designs of the Structures Division needed for flight propulsion is described including structural mechanics, structural dynamics, fatigue, and fracture. The video briefly explains why properties of metals used in structural mechanics need to be tested. Examples of tests and simulations used in structural dynamics (bodies in motion) are briefly described. Destructive and non-destructive fatigue/fracture analysis is also described. The arc sprayed monotape (a composite material) is explained, as are the programs in which monotape plays a roll. Finally, the National Aero-Space Plane (NASP or x-30) is introduced, including the material development and metal matrix as well as how NASP will reduce costs for NASA.

This video contains two segments: one a 0:01:50 spot and the other a 0:08:21 feature. Dante 2, an eight-legged walking machine, is shown during field trials as it explores the inner depths of an active volcano at Mount Spurr, Alaska. A NASA sponsored team at Carnegie Mellon University built Dante to withstand earth's harshest conditions, to deliver a science payload to the interior of a volcano, and to report on its journey to the floor of a volcano. Remotely controlled from 80-miles away, the robot explored the inner depths of the volcano and information from onboard video cameras and sensors was relayed via satellite to scientists in Anchorage. There, using a computer generated image, controllers tracked the robot's movement. Ultimately the robot team hopes to apply the technology to future planetary missions.

In this educational 'Liftoff to Learning' video series, astronauts from the STS-45 Space Shuttle Mission (Kathy Sullivan, Byron Lichtenberg, Brian Duffy, Mike Foale, David Leestma, Charlie Bolden, and Dirk Frimont) explain and discuss the Earth's atmosphere, its needs, the changes occurring within it, the importance of ozone, and some of the reasons behind the ozone depletion in the Earth's atmosphere. The questions of: (1) what is ozone; (2) what has happened to the ozone layer in the atmosphere; and (3) what exactly does ozone do in the atmosphere, are answered. Different chemicals and their reactions with ozone are discussed. Computer animation and graphics show how these chemical reactions affect the atmosphere and how the ozone hole looks and develops at the south pole during its winter season appearance.

This real-time educational video series, featuring Camille Jennings from Maryland Public Television, includes information from Antarctic scientists and interactive discussion between the scientists and school children from both Maryland and Hawaii. This is part of a 'Passport to Knowledge Special' series. In this part of the four part Antarctic series, the history of Antarctica from its founding to the present, its mammals, plants, and other life forms are shown and discussed. The importance of Antarctica as a research facility is explained, along with different experiments and research that the facilities there perform.

**METEOROLOGY AND CLIMATOLOGY**

Includes weather observation forecasting and modification.

In this first part of a four part 'Passport to Knowledge Special', hosted by Camille Jennings from Maryland Public Television, children from Maryland and Texas schools had the opportunity to directly interact with and ask questions of scientists and researchers in Antarctica live. The physical characteristics of Antarctica are featured, along with their effects on the human and microbiological organisms living in the region. The reasons behind the clothing worn in the Antarctic and the importance of the meteorological station are featured. Interviews with Professor Ian Dolziel (U of Texas) and Lt. commander John Joseph, NSFA (the head of the Navy Meteorology Center) occur with the school children, along with actual video footage of the surrounding geological features and geography. The 'Weatherops' is located at McMurdo Station, Antarctica.

In this fourth video of a four part 'Passport to Knowledge Special', hosted by Camille Moody Jennings from Maryland Public Television, children from Maryland and Alaska public schools had the opportunity to directly interact with and ask questions of scientists and researchers from the Antarctic, and learn about the different geological and meteorological research going on in the Antarctic and McMurdo Base at McMurdo Sound. The scientists questioned included: Donal Manahan (biologist from Un. of So. California), who described some of the geological features from Hut Point, the historic hut built by Capt. Scott in 1902; Sridar Anandakrishnan (Penn State Un.) whose research includes ice plate movement of the central ice sheet and earthquakes and how they affect the sheet; and Lt. j.g. Kate McNitt, who spends her winters investigating the trace gases, aerosols, CFC's and ozone levels over the Antarctic area that are affecting the seasonal ozone hole that appears in that region. Historical film footage of Capt. Scott's exploration of the Antarctic is included.

**Inertial oscillation of a vertical rotating draft with application to a supercell storm: Video supplement to NASA Technical Paper 3230**

Costen, Robert C.; Stock, Larry V.; Sep 15, 1992; In English  
Contract(s)/Grant(s): RTOP 506-41-41-01

Report No(s): NASA-TP-3230-VIDEO-SUPPL; NONP-NASA-VT-92-125097; L0592-9-7; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

In this video (8 min., color, sound, VHS), animation depicts the inertial oscillation of a new mathematical model ('vertical rotating draft') for spinning up a single supercell storm. The oscillation consists of a long quiescent phase when the draft is large in diameter and rotates anticyclonically and a short intense phase when the draft is small and cyclonic. During the intense phase, the rotating draft resembles a supercell. The physical basis for the oscillation is depicted by tracking air parcels in the draft as they move along inertial circles (projected on a horizontal plane), where the horizontal pressure gradient is zero and the Coriolis force balances the centrifugal force. A side view of the oscillation shows that contraction and expansion are linked, respectively, to buoyantly driven compressible downdraft and updraft. An aerial view tracks the draft as it moves above the surface of the Earth and turns to the right during the intense phase. Radar echoes from a supercell storm are superimposed for comparison. The data appear to support only the intense phase. A critical experiment would measure the predominantly downward flow that theoretically occurs before the right turn in a supercell track and causes contraction and spin-up.

Dr. France Cordova, NASA's Chief Scientist, chaired this, the fourth seminar in the NASA Administrator's Seminar Series. She introduced NASA Administrator, Daniel S. Goldin, who greeted the attendees, and in his opening remarks said that human beings have a need to understand the what and why of the forces of nature and of people, and the stresses on the planet Earth. The first speaker, Dr. Ellen Mosley-Thompson of Ohio State University discussed the many things that scientists

have learned from ice cores obtained in Peru and the Antarctic. The next speaker, Dr. Michael McElroy of Harvard University, is active in environmental research. He noted that insurance companies need to know more about the physics and chemistry of weather in order to avoid bankruptcy; that the greenhouse effect, which is good because it reflects heat, is being changed, and we don't know the rules. In the discussion that followed, Goldin asked if the present technology for measuring circulation of air and water and contents of the atmosphere is worth the cost. Drs. McElroy and Mosley-Thompson noted that the historic record in an ice core is endangered by ice melts; that in the last 10 years we've learned that tropics change; that the water vapor in the tropics is critical right now; that clouds absorb short-wave radiation; and that there is a need to improve measurements of atmospheric contents, the development of models, and the understanding of basic physics. We also need to understand parameters for detecting climate change, water, water temperature, and be able to provide fundamental information. Additional information is included in the original extended abstract.

#### Dino Fest

Rosenberg, Gary D., Editor; Wolberg, Donald L., Editor; Spencer, Randall S., Editor; 1994; 512 pp.; In English; FROM, 24-26 Mar. 1994, Indianapolis, IN, USA; Videotape: 2 hours playing time, in color, with sound

Contract(s)/Grant(s): NAG3-11657

Report No(s): NASA/CR-94-205958; NAS 1.26:205958; Rept-7; UTK-EO1-1040-002-95; NONP-NASA-VT-1997087409; No Copyright; Avail: CASI; **A22**, Hardcopy; **V04**, Videotape-VHS

This document and videotape represent the proceedings of the first Dinofest conference, which was unprecedented in bringing together exhibits of dinosaurs and other fossils and attracting many of the world's leading paleontologists and science educators, students and the public. This first Dinofest

consisted of scores of exhibits that included live and fossil plants, invertebrates and vertebrates. Lasting three weeks, the event concluded with a three-day symposium, providing dinosaur experts from around the country a forum to discuss their research and ideas with the public and other scientists. The document presents the talks of many of the scientists. The videotape is from an interactive television broadcast relayed by a NASA satellite that enabled children at remote locations to ask questions of a panel of dinosaur experts, literally reaching an audience around the world.

**Sustaining Life on the Earth**

[2004]; 1 pp.; In English; 1 hr., 44 min. playing time, in color, with sound; No Copyright; Avail: CASI; **V04**, Videotape-VHS

Dr. France Cordova, NASA's Chief Scientist, opened this, the sixth seminar in the Administrator's Seminar Series, by introducing NASA Administrator Daniel S. Goldin. Mr Goldin welcomed the attendees and set the stage for Dr. Cordova's introduction of the first speaker, Dr. Robert Kates of Brown University. Dr. Kates primary concerns are global environmental changes, world hunger, and the size of the population. Human changes, he said, rival the changes of nature. Changes in the size of world population affect the need for more agricultural products, therefore more land for growing food, which leads to deforestation, which affects rainfall, and therefore the water supply which is in increased demand. Human ingenuity can reduce some shortages but generally doesn't keep up with increased demand for life-sustaining essentials. These problems require the concern of intergovernmental organizations, treaties and activities, as well as transnational corporations, and non-governmental and private, volunteer organizations. Next Dr. Diana Liverman of Pennsylvania State University spoke on human interactions regarding climate and society. She considered the effect of changes in land use on climate, using Mexico as an example. Mexicans changed from raising much wheat to raising more fruits and vegetables. This was in response to the demands of the market. The results were more industry, population growth, greater income, drought (because the new crops required more water), and conflicts over water supplies. Dr. Charles Kennel of the Office of Mission to Planet Earth joined Dr.s Cordova, Kates, and Liverman for the question and answer session that followed.

#### **Robotic Assisted Microsurgery - RAMS FY'97**

Oct. 15, 1997; In English; Videotape: 5 min., 13 sec. playing time, in color, with sound

Report No(s): AVC-1998-020; NONP-NASA-VT-1999202515; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

JPL and Microdexterity Systems collaborated to develop new surgical capabilities. They developed a Robot Assisted

Microsurgery (RAM) tool for surgeons to use for operating on the eye, ear, brain, and blood vessels with unprecedented dexterity. A surgeon can hold the surgical instrument with motions of 6 degrees of freedom with an accuracy of 25 microns in a 70 cu cm workspace. In 1996 a demonstration was performed to remove a microscopic particle from a simulated eyeball. In 1997, tests were performed at UCLA to compare telerobotics with mechanical operations. In 5 out of 7 tests, the RAM tool performed with a significant improvement of preciseness over mechanical operation. New design features include: (1) amplified forced feedback; (2) simultaneous slave robot instrumentation; (3) index control switch on master handle; and (4) tool control switches. Upgrades include: (1) increase in computational power; and (2) installation of hard disk memory storage device for independent operation and independent operation of forceps. In 1997 a final demonstration was performed using 2 telerobotics simultaneously in a microsurgery suture procedure to close a slit in a thin sheet of latex rubber which extended the capabilities of microsurgery procedures. After completing trials and demonstrations for the FDA the potential benefits for thousands of operations will be exposed.

In this educational video from the 'Liftoff to Learning' series, astronauts from the STS-56 Mission (Ken Cockell, Mike Foale, Ellen Ochoa, Steve Oswald, and Ken Cameron) explain and show through demonstrations how microgravity affects the way astronauts live onboard the Space Shuttle, and how these same daily habits or processes differ on Earth. A tour of the Space Shuttle is given, including the sleeping compartments, the kitchen area, the storage compartments, and the Waste Collection System (or WCS, as they call it). Daily habits (brushing teeth, shampooing hair and bathing, eating,...) are explained and actively illustrated, along with reasons of how these applications differ from their employment on Earth

[2001]; In English; Videotape: 29 min. 13 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001095020; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

This episode (second in a four-part series) shows the procedures Apollo operators used in order to make sure the astronauts would be able to survive in outer space, namely testing man's limitations and preferences (atmospheric pressure, temperature range, breathing gas, acceleration protection) and adapting the Columbia Module to account for these limitations. This show explains the function of the different stages of the moon rocket, i.e., how the stages separate and what becomes of them. We pick up the moonwalk story by

looking back at some of the old classic space films that were a Hollywood perspective on future space travel.

Dr. Sargent noted that evidence of other solar systems that might sustain life, particularly human life, is being sought. Protoplanetary (or debris) disks have been observed and are considered evidence that other solar systems exist or are being formed. Also observed is a wobble which is seen as evidence of circulation around a celestial body and gaps that are created by the potential planet. One indicator of life may be these rings or disks of debris around stars. Interferometers, which are telescopic devices that consist of multiple lenses, are being developed in order to better see celestial objects and what may be found around them. Other methods for improving celestial viewing capabilities are also under development. She spoke of particularly looking for wobble and gaps and debris disks where new planets are being formed in an effort to discover another planet that might sustain life as we know it. The next

speaker, Dr. Chris McKay, is a planetary scientist at NASA Ames. He talked about the possibility of life on Mars or in some other solar system. He commented on the sameness of the origin of all life, and of the origin of, and the need for, oxygen and water. He believes that water originally came to Earth from comets. At least that is a viable possible source. Water might also have come to Earth via asteroids. Dr. McKay also postulates that there can be no water on Mars because Mars has no plate tectonic system, which he believes is an essential for recycling water. . Dr. Wes Huntress, NASA's Associate Administrator for Space Science, and Dr. Barbara Stone, also from NASA Headquarters, joined Drs. Cordova, Sargent and McKay in the question and answer period following the presentations. (Mr. Goldin was excused to keep an appointment with the President.) The discussion included the following statements and questions: The more missions that there are, the more technology is developed. We need to study our solar system to have something to which we can compare other systems. Before we send people to distant places or to other planets, we need to study the psychological and biological problems that are created by going away from Earth for a long period of time. Pulsars appear to have planets rotating around them. This is of interest and should be studied further. Looking back in time, is there any thought to seeing the development of life? How long did it take for oxygen to rise on the Earth? Do debris disks around the stars provide velocity patterns? To detect life scientists are listening for radio signals, looking for oxygen or ozone, and looking for liquid water. On Earth liquid water is the defining ecological parameter for life. This means that operationally the search for life elsewhere is primarily a search for liquid water.

##### **To Boldly Go: Machine Consciousness and the Exploration of Space**

[2004]; 1 pp.; In English; 2 hrs., 1 min., playing time, in color, with sound; No Copyright; Avail: CASI; **V04**, Videotape-VHS

Dr. France Cordova, NASA's Chief Scientist, chaired this meeting, another part of the NASA Administrator's Seminar Series. She introduced Administrator Daniel S. Goldin, who welcomed the attendees, and noted that the two speakers have a running feud regarding the possibility of creating robots that can 'think'. Dr. Cordova then introduced the first speaker, Dr. Roger Penrose of the Mathematical Institute at Oxford in the U.K. His primary interests are in mathematics, physics, information systems technology, and artificial intelligence. He thinks that robots cannot be made to 'think' and that consciousness is not computable. Dr. Hans Moravec, who spoke next,

has opinions and activities that are related to, but substantially different from those of Dr. Penrose. Dr. Moravec believes that he can build a robot that can act based on the deductions that it will make. To mimic human thinking capabilities, he figures that a robot ultimately will need to be able to handle ten trillion computations per second. He predicts that his goal of building a 'thinking' robot will be met in the 2030-2040 time period. He pointed out that he already has built a car that successfully drove itself from Washington, DC to San Diego, CA. He commented that a human being, was ready to take over driving the car, if necessary, but there was no need. The robots envisioned by Dr. Moravec would not only be able to 'think', but also would have human-like emotions, and ultimately would be able to reproduce. The discussion that followed raised questions about the morality of sending human-like robots into outer space. Also a concern was expressed that human-like robots might perceive humans as a threat and become dangerous to people.

#### NUMERICAL ANALYSIS

Includes iteration, differential and difference equations, and numerical approximation.

**19960001040** California Inst. of Tech., Irvine, CA, USA

##### **The story of pi**

Apostol, Tom M., editor; JAN 1, 1989; In English

Report No(s): NASA-CR-199499; NONP-NASA-VT-95-68010; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

The early history and the uses of the mathematical notation - pi - are presented through both film footage and computer animation in this 'Project Mathematics' series video. Pi comes from the first letter in the Greek word for perimeter. Archimedes, and early Greek mathematician, formulated the equations for the computation of a circle's area using pi and was the first person to seriously approximate pi numerically, although only to a few decimal places. By 1985, pi had been approximated to over one billion decimal places and was found to have no repeating pattern. One use of pi is the application of its approximation calculation as an analytical tool for determining the accuracy of supercomputers and software designs.

##### **Sines and cosines. Part 3 of 3**

Apostol, Tom M., editor; JAN 1, 1994; In English

Report No(s): NASA-CR-199455; NONP-NASA-VT-95-67470; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

In this 'Project Mathematics' series video, the addition formulas of sines and cosines are explained and their real life applications are demonstrated. Both film footage and computer animation is used. Several mathematical concepts are discussed and include: Ptolemy's theorem concerned with quadrilaterals; the difference between a central angle and an inscribed angle; sines and chord lengths; special angles; subtraction formulas; and a application to simple harmonic motion. A brief history of the city Alexandria, its mathematicians, and their contribution to the field of mathematics is shown.

The Law of Sines and the Law of Cosines are introduced and demonstrated in this 'Project Mathematics' series video using both film footage and computer animation. This video deals primarily with the mathematical field of Trigonometry and explains how these laws were developed and their applications. One significant use is geographical and geological surveying. This includes both the triangulation method and the spirit leveling method. With these methods, it is shown how the height of the tallest mountain in the world, Mt. Everest, was determined.

Applying the concept of similarities, the mathematical principles of circular motion and sine and cosine waves are presented utilizing both film footage and computer animation in this 'Project Mathematics' series video. Concepts presented include: the symmetry of sine waves; the cosine (complementary sine) and cosine waves; the use of sines and cosines on coordinate systems; the relationship they have to each other; the definitions and uses of periodic waves, square waves, sawtooth waves; the Gibbs phenomena; the use of sines and cosines as ratios; and the terminology related to sines and

cosines (frequency, overtone, octave, intensity, and amplitude).

### **Similarity**

Apostol, Tom M., editor; JAN 1, 1990; In English

Report No(s): NASA-CR-199458; NONP-NASA-VT-95-67473; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

In this 'Project Mathematics! series, sponsored by the California Institute for Technology (CalTech), the mathematical concept of similarity is presented. The history of and real life applications are discussed using actual film footage and computer animation. Terms used and various concepts of size, shape, ratio, area, and volume are demonstrated. The similarity of polygons, solids, congruent triangles, internal ratios, perimeters, and line segments using the previous mentioned concepts are shown.

### **The tunnels of Samos**

Apostol, Tom M., editor; JAN 1, 1995; In English  
Report No(s): NASA-CR-199461; NONP-NASA-VT-95-67476; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

This 'Project Mathematics' series video from CalTech presents the tunnel of Samos, a famous underground aqueduct tunnel located near the capital of Pithagorion (named after the famed Greek mathematician, Pythagorus, who lived there), on one of the Greek islands. This tunnel was constructed around 600 BC by King Samos and was built under a nearby mountain. Through film footage and computer animation, the mathematical principles and concepts of why and how this aqueduct tunnel was built are explained.

### **FIDO - Video File**

Apr. 27, 1999; In English; Videotape: 10 min. playing time, in color, with sound

Report No(s): AVC-1999-062; NONP-NASA-VT-2000033900; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

Field Integrated Design and Operations (FIDO) rover is a prototype of the Mars Sample Return rovers that will carry the integrated Athena Science Payload to Mars in 2003 and 2005. The purpose of FIDO is to simulate, using Mars analog settings, the complex surface operations that will be necessary to find, characterize, obtain, cache, and return samples to the ascent vehicles on the landers. This videotape shows tests of the FIDO in the Mojave Desert. These tests include drilling through rock and movement of the rover. Also included in this tape are interviews with Dr Raymond Arvidson, the test director for FIDO, and Dr. Eric Baumgartner, Robotics Engineer at the Jet Propulsion Laboratory.

This is an edition of 'NASA Report to Education' covering NASA's Educational Workshop, Lewis Research Center's T-34 and the Space Exploration Initiative. The first segment shows NASA Education Workshop program (NEWEST - NASA

Educational Workshops for Elementary School Teachers). Highlights of the 14 days of intense training, lectures, fieldtrips and simple projects that the educators went through to teach the program are included. Participants are shown working on various projects such as the electromagnetic spectrum, living in Space Station Freedom, experience in T-34, tour of tower at the Federal Aviation Administrative Facilities, conducting an egg survival system and an interactive video conference with astronaut Stori Musgrave. Participants share impressions of the workshop. The second segment tells how Lewis Research Center's T-34 aircraft is used to promote aerospace education in several Cleveland schools and excite students.

An overview of NASA's 11th annual Aerospace Education Workshop Program is presented. A portion of activities that are performed during the workshop sessions, which are used to familiarize teachers with up-to-date information are shown. An overview of aerospace concepts and terms is provided. Activities shown include: how model rockets are used to teach about the principles of rocketry; how eggs are packaged to represent an astronaut landing on another planet; a trip to the Cleveland Museum of Natural History was used to introduce a telescope and planetarium; and a visit to LeRC. How lectures and discussion material are presented on such topics as the history of aircraft and the space shuttle is demonstrated.

Richard T. Barrett, Senior Aerospace Engineer of NASA Lewis Research Center presents a comprehensive course on fastener design. A recognized expert in the field of fastener technology Mr. Barrett combines lecture, charts, illustrations with real-world experiences. Topics covered include: materials, plantings and coatings, locking methods threads, joint stiffness, rivets, inserts, nut plates, thread lubricants, design criteria, etc. A workbook accompanies the videotape.

STEP (STandard for the Exchange of Product Model Data) is an innovative software tool that allows the exchange of data between different programming systems to occur and helps speed up the designing in various process industries. This exchange occurs easily between those companies that have STEP, and many industries and government agencies are requiring that their vendors utilize STEP in their computer aided design projects, such as in the areas of mechanical, aeronautical, and electrical engineering. STEP allows the process of concurrent engineering to occur and increases the quality of the design product. One example of the STEP

program is the Boeing 777, the first paperless airplane.

On March 26, 1987, after the launch of an Atlas/Centaur rocket with a payload of a Navy Communications Satellite, a problem developed and the rocket was lost. John Busse chaired the Accident Investigation Board that was convened to investigate the incident. This videotape is a press conference with Mr Busse, who reviews the findings of the investigation concerning the loss of the Atlas/Centaur-67 launch vehicle. The loss is primarily attributed to a hardover engine yaw command that was caused by an erroneous signal from the digital

computer unit. The generation of the erroneous signal is blamed on unfavorable weather conditions which created a lightning hazard. Mr. Busse, also, reviews the investigation's recommendations for avoiding similar occurrences. The press then asks questions about the findings and recommendations.

**The future of bibliographic standards in a networked information environment**

Apr. 16, 1997; In English; FROM CENDI Workshop, 16 Apr. 1997, Bethesda, MD, USA; Videotape: 5 hrs. 51 min. playing time, in color, with sound

Report No(s): NASA/TM-97-113452; NONP-NASA-VT-1998000466; No Copyright; Avail: CASI; **V06**, Videotape-VHS; **B06**, Videotape-Beta; **V06**, Videotape-VHS

The main mission of the CENDI Cataloging Working Group is to provide guidelines for cataloging practices that support the sharing of database records among the CENDI agencies, and that incorporate principles based on cost effectiveness and efficiency. Recent efforts include the extension of COSATI Guidelines for the Cataloging of Technical Reports to include non-print materials, and the mapping of each agency's export file structure to USMARC. Of primary importance is the impact of electronic documents and the distributed nature of the networked information environment. Topics discussed during the workshop include the following: Trade-offs in Cataloging and Indexing Internet Information; The Impact on Current and Future Standards; A Look at WWW Metadata Initiatives; Standards for Electronic Journals; The Present and Future Search Engines; The Roles for Text Analysis Software; Advanced Search Engine Meets Metathesaurus; Locator Schemes for Internet Resources; Identifying and Cataloging Web Document Types; In Search of a New Bibliographic Record. The videos in this set include viewgraphs of charts and related materials of the workshop.

As speaker of this lecture series Michael Sander, Director of Technology and Application at the Jet Propulsion Laboratory (JPL), addresses three questions that scientists and engineers at JPL and NASA face daily. These questions are: How did the universe evolve, how did life start, and are we alone? The video focuses on the technological developments, improvements, and applications in society. Slides include several still pictures (infrared, x-ray, radio, and visible) of the universe, pictures of Venus through the use of radar instruments, and the visible and infrared pictures of the Orion nebula. Also included are the first images of Mars taken by the Mariner 4 spacecraft, color images from the Viking Lander spacecraft, and high resolution maps taken by the Mars Global Surveyor. Radar images of Los Angeles (Pasadena), San Francisco and San Juan are also shown. Some of the technological developments include the active pixel sensor camera, infrared cameras, CCD cameras, QWIP (Quantum Well Infrared Photodetector) cameras, a 3 inch diameter chip to analyze the amino acid and chemical compounds of the Martian soil, and sensors with the

ability to crawl. The lecture also includes the planning of future missions.

In this education video series, 'Liftoff to Learning', astronauts (Bruce Melnick, Thomas Akers, William Shepherd, Robert Cabana, and Richard Richards) describe the historical beginnings of space exploration from the time of Robert H. Goddard (considered the Father of Rocketry), who, in 1929, invented the first propellant rocket, the prototype of modern liquid propellant rockets, up to the modern Space Shuttles. The questions - where is space, what is space, and how do astronauts get to, stay in, and come back from space are answered through historical footage, computer graphics, and animation. The space environment effects, temperature effects, and gravitational effects on the launching, orbiting, and descent of the Shuttles are discussed. Included is historical still photos and film footage of past space programs and space vehicles.

### **The Plasma Universe**

[2004]; 2 pp.; In English; 1 hr., 59 min. playing time, in color, with sound; No Copyright; Avail: CASI; **V04**, Videotape-VHS

Dr. France Cordova, NASA's Chief Scientist, chaired this, the eighth seminar in the Administrator's Seminar Series. She introduced the NASA Administrator, Daniel S. Goldin, who, in turn, introduced the subject of plasma. Plasma, an ionized gas, is a function of temperature and density. We've learned that, at Jupiter, the radiation is dense. But, Goldin asked, what else do we know? Dr. Cordova then introduced Dr. James Van Allen, for whom the Van Allen radiation belt was named. Dr. Van Allen, a member of the University of Iowa faculty, discussed the growing interest in practical applications of space physics, including radiation fields and particles, plasmas and ionospheres. He listed a hierarchy of magnetic fields, beginning at the top, as pulsars, the Sun, planets, interplanetary medium, and interstellar medium. He pointed out that we have investigated eight of the nine known planets. He listed three basic energy sources as 1) kinetic energy from flowing plasma such as constitutional solar wind or interstellar wind; 2) rotational energy of the planet, and 3) orbital energy of satellites. He believes there are seven sources of energetic particles and five potential places where particles may go. The next speaker, Dr. Ian Axford of New Zealand, has been associated with the Max Planck Institut fuer Aeronomie and plasma physics. He has studied solar and galactic winds and clusters of galaxies of which there are several thousand. He believes that the solar wind temperature is in the millions of degrees. The final speaker was Dr. Roger Blanford of the California Institute of Technology. He classified extreme plasmas as lab plasmas and cosmic plasmas. Cosmic plasmas are from supernovae remnants. These have supplied us with heavy elements and may come via a shock front of 10(sup 15) electron volts. To understand the physics of plasma, one must learn about x-rays, the maximum energy of acceleration by supernova remnants, particle acceleration and composition of cosmic rays, maximum acceleration, and how fast protons are heated by ions. He asked questions about where high energy cosmic rays are made, what accelerates electrons, radiates gamma rays, makes electronpositron plasma, and finally noted that pulsars are good

time keepers, but we need a better understanding of their mechanism and of plasmas, both cosmic and ground-based. In the discussion period, Goldin asked if NASA should put up an x-ray interferometer. The answer was no; gamma rays are of greater interest just now. Goldin also asked what the assembled scientists would like to see for a future mission? They expressed an interest in learning more about the origin of galaxies, cosmic rays, solar systems, planets, the existence of life 'out there', gamma ray sources, the nature of gamma ray bursts, and the flow of gases around black holes. The discussion concluded with a suggestion that NASA should communicate to the general public more information regarding actual technological trials and tribulations involved in getting an experiment to work. The speakers thought that this would help non-scientists to better appreciate what it is that NASA does in connection with the benefits that are achieved.

An overview of the mission of the Hubble Space Telescope, a joint project between NASA and the European Space Agency which will be used to study deep space, as well as our solar system is presented. The video contains animations depicting the Hubble Space Telescope in orbit, as well as footage of scientists at the Space Telescope Science Institute making real time observations. The images Hubble acquires will be downloaded into a database that contains images of over 19,000,0000 celestial objects called the Star Catalog.

A discussion of the images obtained by NASA's Hubble Space Telescope (HST) is featured on this video. The discussion panel consists of Dr. Jeff Hester (Arizona State Univ.), Dr. Jon Morse (Space Telescope Science Inst.), Dr. Chris Burrows (European Space Agency), Dr. Bruce Margon (Univ. of Washington), and host Don Savage (Goddard Space Flight Center). A variety of graphics and explanations are provided for the images of star formations and other astronomical features that were viewed by the HST.

The focus of this lecture is to discuss the purpose of the Ulysses mission. The mission objective is to study magnetic fields, cosmic rays and the solar winds from both the equator and the (North and South) poles of the Sun. The moderator of this lecture is Dr. Steve Maran, NASA/Goddard Space Flight Center, and panel members include Dr. Richard Marsden, ESA (European Space Agency) Project Scientist, Dr. Edward J. Smith, JPL/NASA Project Scientist, Dr. Antoinette Galvin, University of Maryland College Park, Dr. Randy Jokipii, University of Arizona, and Dr. John Phillips, Los Alamos

National Laboratory. Each panel member contributes to the informative nature of this live video coverage. Topics discussed are the direction of the magnetic fields, solar winds, and cosmic rays. Visual aids of this lecture consist of various slides and computerized simulations.

This NASA Kennedy Space Center video release presents a broad overview of the science that is now possible as a result of the servicing of the Hubble Space Telescope (HST). Dr. Ed Weiler (HST Program Scientist, NASA Headquarters), Dr. Dave Leckrone (HST, Senior Project Scientist, Goddard Space Flight Center (GSFC)), Dr. John Trauger (Wide Field Planetary Camera 2 (WFPC2) Principal Investigator, Jet Propulsion Lab. (JPL)), Dr. Chris Burrows (WFPC2 Co-Investigator, Space Telescope Science Inst.(STSci)-European Space Agency (ESA), Jim Crocker ((Corrective Optics Space Telescope Axial Replacement) COSTAR Team Leader, STSci), Dr. Holland Ford (COSTAR Project Scientist, Johns Hopkins Univ., STSci), and Dr. Duccio Masetto (European Space Agency (ESA)) give brief presentations, which feature images of stars and galaxies taken from the ground, from WFPC1 (prior to the servicing mission), and from WFPC2 (after the servicing mission). The main theme of the discussions center around the spherical aberration that was found in the images prior to servicing and the corrected images seen without the aberration following servicing. A question and answer period rounds out the press conference, with questions posed from scientific journalists at GSFC and other NASA centers.

In this colloquim presentation, Professor of Astronomy, Geoffrey Marcy discusses the discovery of planets orbiting other stars. Using the Doppler shift caused by stellar wobble that is caused by nearby planetary mass, astronomers have been able to infer the existence of Jupiter-sized planets around other stars. Using a special spectrometer at Lick Observatory, the wobble of several stars have been traced over the years required to generate an accurate pattern required to infer the stellar wobble. Professor Marcy, discusses the findings of planets around 47 Ursae Majoris, 16 Cygni B, 51 Pegasus, and 56 Rho 1 Cne. In the case of 56 Rho 1 Cne the planet appears to be close to the star, within 1.5 astronomical units. The observations from the smaller Lick Observatory will be aug-

mented by new observations from the larger telescope at the Kek observatory. This move will allow observations of smaller planets, as opposed to the massive planets thus far discovered. The astronomers also hope to observe smaller stars with the Kek data. Future spaceborne observations will allow the discovery of even smaller planets. A spaceborne interferometer is in the planning stages, and an even larger observatory, called the Terrestrial Planet Finder, is hoped for. Professor Marcy shows artists' renderings of two of the planets thus far discovered. He also briefly discusses planetary formation and shows slides of both observations from the Orion Nebula and models of stellar system formation.

Computerized animations show the following: (1) the acceleration and deceleration of the universe; (2) an image subtraction of the 1995 and 1997 images of the Hubble Deep Field to reveal a supernova in the 1997 image; (3) a pie-chart of the mass composition of the universe; (4) the universe's expansion after the Big Bang; (5) a supernova detonating; and (6) the lightbulb test (to determine distance by comparing light intensity). Zoom shots show the Hubble Deep Field (from ground-based observations to the Hubble Space Telescope (HST) image) and the Hubble Deep Field with a supernova (from an artist's conception animation to a ground-based

view). Dr. Ron Gilliland explains that he looked for a supernova in the Hubble Deep Field and how supernova are useful as standard candles. Dr. Adam Riess describes how astronomers used supernovae to discover that the universe is expanding and why it might be expanding.

**Microlensing: Globular Cluster M22 Video File**

[2001]; In English; Videotape: 6 min. 55 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001092796; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

A computerized animation begins outside a globular cluster similar to M22, with the center of the Milky Way in the distance. The camera flies through the center of the cluster and rests with a dark object in the distance. This object, a suspected brown star, passes in front of a star in the galactic bulge, bending its light gravitationally. This bending, or lensing, causes a momentary brightening of the background star. Another sequence begins with a ground-based view of the center of our galaxy in the upper right. We zoom in to reveal a ground-based view of the region surrounding the cluster and continue zooming to reveal the Hubble Space Telescope view of M22. In an interview with Kailash Sahu, Astronomer, he describes the Hubble results, explains why the objects in M22 can't be planets, and explains Hubble's role in the observations of M22. The last image was taken with Hubble's Wide Field and Planetary Camera 2 and pierces the heart of a globular cluster with its needle-sharp vision and uncovers tantalizing clues to what could potentially be a strange and unexpected population of wandering, planet-sized objects.

Two of NASA's greatest observatories, the Chandra X-Ray Observatory and the Hubble Space Telescope have produced this new action movie of the Crab Pulsar. The Crab Pulsar was first observed by Chinese astronomers in 1050 A.D. and has since become one of the most studied objects in the sky. By combining the power of both Chandra and Hubble, the movie, made from multiple observations from several months, reveals features never seen in still images. By understanding the Crab Pulsar, astronomers hope to unlock the secrets of how similar objects across the universe are powered.

NASA's Hubble Space Telescope looks deep within the violent center where the two Antennae Galaxies were merging. The Hubble's high resolution and sensitivity reveals the birth of young star clusters formed in the collision. New Hubble images of young star clusters help investigators put the evolutionary sequence into the right order. The Hubble Space Telescope images are: (1) zoom into the antennae galaxies; (2) galaxy merger evolution sequence; (3) the formation of the antennae pair; and (4) artist's conception of the collision of Milky-Way Galaxy with the Andromeda.

A panel discussion held on May 18, 1994, about the impact of the P/Shoemaker-Levy 9 (SL9) comet with Jupiter and its observable effects on Jupiter's atmosphere, rings, satellites, and magnetosphere, is presented. Before the panel discussion animations show the first nuclei impact, collision with Jupiter's night side (5 of the 22 known fragments of P/Shoemaker-Levy 9; N, P2, P1, Q2, and Q1), and simulated views of the Shoemaker-Levy 9 comet impact with Jupiter (from Earth and Galileo spacecraft) were presented. The panelists are: Dr. Eugene Shoemaker (from Lowell Observatory and US Geological Survey), the moderator and Shoemaker-Levy co-discoverer; Dr. Hal Weaver (from Space Telescope Science Institute); Dr. Lucy McFadden (from University of California-San Diego and the University of Maryland); Dr. Melissa McGrath (from Space Telescope Science Institute); and Dr. Heidi Hammel (from Massachusetts Institute of Technology). Topics discussed include: interactions of cometary material with Jupiter's atmosphere, dynamical parameters of Jupiter's troposphere and stratosphere, and Hubble Space Telescope (HST) Observations of the SL9 Impacts on Jupiter's Atmosphere. The panel answered some of the audience's questions at the end of the discussion. This video, Part 1 (of 2), presents the panel discussion and part of the question and answer session.

This videotape is comprised of several segments of animations on black holes and galaxy formation, and several segments of an interview with Dr. John Kormendy. The animation segments are: (1) a super massive black hole, (2) Centarus A active black hole found in a collision, (3) galaxy NGC-4261 (active black hole and jet model), (4) galaxy M-32 (orbits of stars are effected by the gravity of the black hole), (5) galaxy M-37 (motion of stars increases as mass of black hole increases), (6) Birth of active galactic nuclei, (7) the collision of two galaxy leads to merger of the black holes, (8) Centarus A and simulation of the collision of 2 galaxies. There are also several segments of an interview with John Kormendy. In these segments he discusses the two most important aspects of his recent black hole work: (1) the correlations between galaxies speed and the mass of the black holes, and (2) the existence of black holes and galactic formation. He also discusses the importance of the Hubble Space Telescope and the Space Telescope Imaging Spectrograph to the study of black holes. He also shows the methodology of processing images from the spectrograph in his office.

**The Secret Lives of Galaxies**

Feb. 01, 2001; In English; Videotape: 3 min. 53 sec. playing time, in color, no sound

Report No(s): NONP-NASA-VT-2001026546; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

The ground-based image in visible light locates the hub imaged with the Hubble Space Telescope. This barred galaxy feeds material into its hub, igniting star birth. The Hubble NICMOS instrument penetrates beneath the dust to reveal clusters of young stars. Footage shows ground-based, WFPC2, and NICMOS images of NGS 1365. An animation of a large spiral galaxy zooms from the edge to the galactic bulge.

**Giant Star Clusters Near Galactic Core**

Feb. 01, 2001; In English; Videotape: 4 min. 11 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001026545; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

A video sequence of still images goes deep into the Milky Way galaxy to the Arches Cluster. Hubble, penetrating through dust and clouds, peers into the core where two giant clusters shine more brightly than any other clusters in the galaxy. Footage shows the following still images: (1) wide view of Sagittarius constellation; (2) the Palomar Observatory's 2 micron all-sky survey; and (3) an image of the Arches Cluster taken with the Hubble Space Telescope NICMOS instrument. Dr. Don Figer of the Space Telescope Science Institute discusses the significance of the observations and relates his first reaction to the images.

**Astronomers Ponder Lack of Planets in Globular Cluster**

[2000]; In English; Videotape: 7 min. 58 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001026553; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

This videotape has seven segments, discussing and showing the evidence for the proposition that the galactic clusters do not have many planets. Specifically the segments show: (1) Dr. Ron Gilliland discussing the process of looking for 'Hot Jupiters' (i.e., planets about the size of Jupiter, which are hotter than Jupiter) in the globular clusters, (2) a zoom into 47 Tucanae globular cluster, (3) an animation of a planet passing between the host star and the earth with a brightness graph, (4) the same animation as before without the graph, (5) Ron Gilliland of the Space Telescope Science Institute (STScI) discussing possible interpretations of his findings in the 47 Tucanae globular cluster, (6) Ron Gilliland examining the images of 47 Tucanae, and (7) images of 47 Tucanae watching for variations in brightness.

**Quasar Host Galaxies/Neptune Rotation/Galaxy Building Blocks/Hubble Deep Field/Saturn Storm**

[2001]; In English; Videotape: 13 min. 57 sec. playing time, in color, no sound

Report No(s): NONP-NASA-VT-2001026556; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

Computerized animations simulate a quasar erupting in the core of a normal spiral galaxy, the collision of two interacting galaxies, and the evolution of the universe. Hubble Space Telescope (HST) images show six quasars' host galaxies (including spirals, ellipticals, and colliding galaxies) and six

clumps of galaxies approximately 11 billion light years away. A false color time lapse movie of Neptune displays the planet's 16-hour rotation, and the evolution of a storm on Saturn is seen though a video of the planet's rotation. A zoom sequence starts with a ground-based image of the constellation Ursa major and ends with the Hubble Deep Field through progressively narrower and deeper views.

### **Spinning Stardust into Planets**

[2001]; In English; Videotape: 6 min. 19 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001026554; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

A computerized animation simulates the formation of a stellar disk and planets. Ten images from the Hubble Space Telescope (HST) show young stellar disks (taken with the Near-Infrared Camera Multi-Object Spectrometer (NICMOS)) and stellar disks around young stars (taken with the Wide-Field Planetary Camera 2 (WFPC2)). Dr. Deborah Padgett describes what astronomers see in the images of young stellar disks and Dr. Karl Stapelfeldt explains HST's role in helping astronomers to examine young stars in order to understand how solar systems like our own may form.

### **Galaxy Group Stephan's Quintet Video File HubbleMinute: Battle Royale in Stephan's Quintet**

Jul. 19, 2001; In English; Videotape: 12 min. 40 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001107899; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

The Hubble Space Telescope's closeup view of Stephan's Quintet, a group of five galaxies, reveals a string of brighter star clusters that separate like a diamond necklace. Astronomers studying the compact galaxy group Stephan's Quintet have seen creative destruction in the many collisions taking place among its galaxies. This HubbleMinute discusses what astronomers are learning and hope to learn from exploring the quintet.

The following are presented: computer animation of trajectories for both Voyagers 1 and 2; view of Jupiter during one orbit of Ganymede; computer animation of Voyager 2's encounter with Jupiter and its satellites; time lapse of the planet's rotation and its satellites; stroboscopic sequence of selected frames; cloud motion; Jupiter's Great Red Spot (4/25 - 5/24, 1979) through a violet filter; and the Great Red Spot through a blue filter by Voyager 1. The dynamics of Jupiter's clouds are shown - the whole planet is shown first, then two closer looks are repeated several times. Also included are pans of stills of Jupiter's satellites and a computer simulation tour of Saturn system from POV just behind Voyager, made of 116 images of Saturn through a green filter and of 516 images taken by Voyager 1 (9/12 - 9/14, 1980). Frames are enhanced to show the motion of features in Saturn's rings. Pans of stills of Saturn's satellites are shown. There is computer animation of the planet's system, rings, and Sigma Sagittari. Images on January 14, 1986 are through an orange filter. Uranus's satellites are shown as is computer animation of an August 1989 encounter.

**Neptune encounter highlights**

Nov 28, 1989; In English

Report No(s): JPL-AVC-151-89; NASA-TM-109421; NONP-NASA-VT-93-190218; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Voyager encounter data are presented in computer animation (CA) and real (R) animation. The highlights include a view of 2 full rotations of Neptune. It shows spacecraft trajectory 'diving' over Neptune and intercepting Triton's orbit, depicting radiation and occultation zones. Also shown are a renegade orbit of Triton and Voyager's encounter with Neptune's Magnetopause. A model of the spacecraft's complex maneuvers during close encounters of Neptune and Triton is presented. A view from Earth of Neptune's occultation experiment is shown as well as a recreation of Voyager's final pass. There is detail of Voyager's Image Compensation technique which produces Voyager images. Eighteen images were produced on June 22 - 23, 1989, from 57 million miles away. A 68 day sequence which provides a stroboscopic view - colorization approximates what is seen by the human eye. Real time images recorded live from Voyager on 8/24/89 are presented. Photo-

clinometry produced the topography of Triton. Three images are used to create a sequence of Neptune's rings. The globe of Neptune and 2 views of the south pole are shown as well as Neptune rotating. The rotation of a scooter is frozen in images showing differential motion. There is a view of rotation of the Great Dark Spot about its own axis. Photoclinometry provides a 3-dimensional perspective using a color mosaic of Triton images. The globe is used to indicate the orientation of Neptune's crescent. The east and west plumes on Triton are shown.

A combination of sophisticated computer animation and shuttle footage describe the missions of Ulysses, Galileo, and Magellan satellites to the solar system. Ulysses, launched in October 1990 by the European Space Agency, will study the sun. Galileo, launched in October 1989, will probe the Jovian system by releasing a probe that will descend into Jupiter's atmosphere and by using 12 instruments which will study Jupiter's 16 moons, its atmosphere, and its radiation and magnetic fields. Magellan, released from Space Shuttle Atlantis in May 1989, uses a synthetic aperture radar to probe through Venus' dense atmosphere to map its planetary surface. A computer animation simulates flying over the surface of Venus.

This video gives a historical survey of philosophy and scientific study of the nature of the surface of Mars and discussion of whether life existed or exists on Mars. Several Lewis researchers recount early telescope observations of Mars including the identification of 'channels' or possible ancient waterways on the surface. An overview of the accomplishments of the Mariner spacecraft in mapping the surface of Mars as well as a detailed description of the Viking missions to Mars are presented. The results of the Viking Biology Experiment, conducted by the Viking Lander, are highlighted. There is also a discussion of the possible presence of monuments and a huge 'face' on the Martian surface. The video includes several computer simulations of flight over the Martian surface.

This film shows the landing and the three lunar traverses in the highland region of the moon, near the crater descartes. It includes an astronaut's eye view from the rover, lunar grand prix, discovery of the house-sized rock, lunar lift-off and eva 173,000 miles above the earth. Microphones and cameras in mission control record the emergency problem solving during the prelanding crisis and the reactions of scientists on earth as the astronauts explore the moon.

The decade of 1969-1979 is seen as the time when lunar science emerged from the dark ages as a result of the geophysical and sample investigations made possible by the Apollo flights to the moon. After a brief summary of the Apollo missions and laboratory investigative techniques, the film treats the major epochs in lunar history uncovered by the investigations. Finally, the moon is depicted as having a practical role in the future of science and technology, as well as serving as the pattern for the future exploration of space.

The 1971 Apollo 14 Mission to Fra Mauro, a lunar highland area, is highlighted in this video. The mission's primary goal was the collection of lunar rocks and soil samples and lunar exploration. The soil and rock sampling was for the geochronological determination of the Moon's evolution and its comparison with that of Earth. A remote data collection station was assembled on the Moon and left for continuous data collection and surface monitoring experiments. The Apollo 14 astronauts were Alan B. Shepard, Edgar D. Mitchell, and Stuart A. Rossa. Astronauts Shepard and Mitchell landed on the Moon (February 5, 1971) and performed the sampling, the EVA, and deployment of the lunar experiments. There is film-footage of the lunar surface, of the command module's approach to both the Moon and the Earth, Moon and Earth spacecraft launching and landing, in-orbit command- and lunar-module docking, and of Mission Control.

This NASA JPL (Jet Propulsion Laboratory) video presents a collection of the best videos that have been published of the Voyager mission. Computer animation/simulations comprise the largest portion of the video and include outer planetary magnetic fields, outer planetary lunar surfaces, and the Voyager spacecraft trajectory. Voyager visited the four outer planets: Jupiter, Saturn, Uranus, and Neptune. The video contains some live shots of Jupiter (actual), the Earth's moon (from orbit), Saturn (actual), Neptune (actual) and Uranus (actual), but is mainly comprised of computer animations of these planets and their moons. Some of the individual short videos that are compiled are entitled: The Solar System; Voyage to the Outer Planets; A Tour of the Solar System; and the Neptune Encounter. Computerized simulations of Viewing Neptune from Triton, Diving over Neptune to Meet Triton, and Catching Triton in its Retrograde Orbit are included. Several animations of Neptune's atmosphere, rotation and weather features as well as significant discussion of the planet's natural satellites are also presented.

This NASA JPL (Jet Propulsion Laboratory) video production is a compilation of the best short movies and computer simulation/animations of the Galileo spacecraft's journey to Jupiter. A limited number of actual shots are presented of Jupiter and its natural satellites. Most of the video is comprised of computer animations of the spacecraft's trajectory, encounters with the Galilean satellites Io, Europa and Ganymede, as well as their atmospheric and surface structures. Computer animations of plasma wave observations of Ganymede's magnetosphere, a surface gravity map of Io, the Galileo/Io flyby, the Galileo space probe orbit insertion around Jupiter, and actual shots of Jupiter's Great Red Spot are presented. Panoramic views of our Earth (from orbit) and moon (from orbit) as seen from Galileo as well as actual footage of the Space Shuttle/Galileo liftoff and Galileo's space probe separation are also included.

This videotape is a compilation of the best NASA JPL (Jet Propulsion Laboratory) videos of the Mars Pathfinder and Mars Global Surveyor missions. The mission is described using animation and narration as well as some actual footage of the entire sequence of mission events. Included within these animations are the spacecraft orbit insertion; descent to the Mars surface; deployment of the airbags and instruments; and exploration by Sojourner, the Mars rover. JPL activities at spacecraft control during significant mission events are also included at the end. The spacecraft cameras pan the surrounding Mars terrain and film Sojourner traversing the surface and inspecting rocks. A single, brief, processed image of the Cydonia region (Mars face) at an oblique angle from the Mars Global Surveyor is presented. A description of the Mars Pathfinder mission, instruments, landing and deployment process, Mars approach, spacecraft orbit insertion, rover operation

are all described using computer animation. Actual color footage of Sojourner as well as a 360 deg pan of the Mars terrain surrounding the spacecraft is provided. Lower quality black and white photography depicting Sojourner traversing the Mars surface and inspecting Martian rocks also is included. CASI

This video is a compilation of visualizations, animation and some actual shots from the Galileo mission. It shows the trajectories of the mission around Jupiter that took the mission to Jupiter, and the various orbits of the spacecraft around the planet, that allowed for the views of several of Jupiter's moons from which the visualizations of this video are taken. It mainly shows the visualizations of the Galileo's view of Jupiter's atmosphere, Io, Ganymede, and Europa. There is no spoken presentation, the views are announced with slides prior to the presentation. Orchestrated selections from Vivaldi's Four Season's serves as background.

This video is a compilation of three short videos related to the Galileo mission. The first section shows animation of the descent of the Galileo probe into the atmosphere of Jupiter. It includes cutaway views of the atmosphere showing the different layers. This descent will represent the first entry into the atmosphere of an outer planet in our solar system. A second section shows some live shots of the development and drop chute tests of the Galileo spacecraft. A third section is an animation that shows the Probe mission. It shows visualizations from the launch, including the Venus flyby, the separation of the probe and the orbiter, and the trajectory of the planetary arrival. It also shows the descent of the probe into the atmosphere.

A Press conference held on July 20, 1994 is presented. Leading off the press conference was an announcement about a major discovery that was made possible from the study of the impact. The participants in the panel were: (1) Roger Yelle

from the University of Arizona, (2) Renee Prange of the Institute Astrophysique Spatiale, (3) Lucy McFadden of the University of California, and the University of Maryland, (4) David Levy, the co-discoverer of the Shoemaker-Levy comet. The moderator for this conference was Steven Maran of the Goddard Space Flight Center. Roger Yelle, who had been working on analyzing spectrographic evidence, made the announcement that sulfur in the form of S<sub>2</sub> had been discovered. There was also discussion about the interactions of the atmosphere with the fragments. This interaction had caused a shift in the aurora of Jupiter. The observations of the impact sites made by amateurs were discussed. A summary of the observations from different observatories was also given. Included in these observations were reports from the airborne Kuiper Observatory Telescope and the McDonald observatory. CASI

This video has five sections. The first is a live discussion of the information that scientists hope to gain by the Galileo flyby of the Moon. This section has no introduction. There is a great deal of the discussion about the lunar craters and lunar volcanism. There is also some discussion of the composition of the far side of the moon. The second section is a short animation that shows the final step to Jupiter with particular emphasis on the gravitational assisted velocity boost, which was planned to give the spacecraft the requisite velocity to make the trip to Jupiter. The next section is an update of the status of the flyby of the Moon, and the Earth, with an explanation of the trajectory around the earth, and the moon. A photograph of the tracking station in Canberra, Australia is included. The next section is a tour of a full-scale model of the spacecraft. The last section is a discussion with the person charged with the procurement of the instrumentation aboard the spacecraft; the importance of the lunar flyby to assist in the calibration of the instruments is discussed.

The main focus of this lecture is to discuss the relative size of the planets, the formation of the solar system, details of atmospheric motion (atmospheric dynamics), the aspects of the magnetic fields, different ring systems, and the Triton satellite. The study evolves around the planets of Jupiter, Saturn, Uranus, and Neptune. Their temperature and absorption properties of the ice are discussed. Two of the chemicals being absorbed by the ice are ammonia and methane. Also discussed are the belt and zonal circulation models, jet streams, plumes and clouds, magnetic fields, planetary rings, the pressure on Triton, the atmosphere of Titan, Callisto, Aria, Ganymede, Ariel, Miranda, Io, Europa, Amalthea, Rhea, Dione, Tethys, Enceladus, Mimas, Hyperion, Oberon, Titania, and Umbriel. The lecture also contained some computerized simulation and various images from Voyager.

A press conference held on July 21, 1994, about the impact of some of the fragments from Comet Shoemaker Levy is presented. The press conference opened with a still of Jupiter, showing the impact site of several fragments. The following people were on the panel: (1) Hal Weaver, from the Space Telescope Science Institute, (2) Rita Beebe from New Mexico State University, (3) Lucy McFadden from the University of California and the University of Maryland, (4) David Levy, the co-discoverer of the Shoemaker-Levy comet. The moderator was Eugene Shoemaker. The discussion was about the impact of the fragments on Jupiter. There were 21 pieces that were counted from earlier observations. There was some discussion about the further fragmentation of Q into two pieces. There was also some discussion about the impact on the planet of several fragments. These were due to hit ten hours apart on about the same spot. There were reports from the observatories around the world, including a tape from the Lowell Observatory, a summary of the views from the Galileo orbiter, a video of the impacts from the G fragment, and views of the results from the impact of the C and G fragments as viewed from Australia.

**Galileo Science Writers' Briefing, Part 3**

Aug. 20, 1989; In English; Videotape: 1 hr., 2 min., 17 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000001070; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

This NASA Kennedy video production presents Part 3 of a press conference held at JPL on August 8, 1989. The briefing in its entirety covers the Galileo Project's mission design from launch to completion in 1997 and is moderated by JPL Public Information Mgr. Robert Macmillan. Part 3 of the 3 part video series centers on the Galileo science goals, which are to explore not only Jupiter but the entire Jovian system, and the individual instruments that will make these objectives possible. Dr. Torrence V. Johnson (Project Scientist) introduces Dr. Richard Young (Probe Scientist (AMES)) and Dr. Clayne M. Yeates (Acting Science Mission Design Manager) who discuss the six main instruments included on the Probe and the Orbiter experiments and instrumentation, respectively. The video is rounded out by a period in which the Science Writer's are given an opportunity to ask questions of the seven member panel.

This NASA Kennedy video production presents Part 2 of a press conference held at JPL on August 8, 1989. The briefing in its entirety covers the Galileo Project's mission design from launch to completion in 1997 and is moderated by JPL Public Information Mgr. Robert Macmillan. Part 2 of the 3 part video series begins with Richard J. Spenhalski's (Galileo Project Manager) description of the spacecraft and mission operations. E. Cherniack gives a slide presentation of a Galileo spacecraft model and some design features unique to the spacecraft. John Givens (Probe System Design Manager) then presents a brief overview of the mission and subsystems surrounding the Galileo Space Probe. Neal E. Ausman, Jr. (Mission Director) ends the video with a discussion of mission operations including slides of the Galileo launch scenario and a trajectory correction maneuver.

**Voyager Briefing: Expectations of the Neptune Encounter**

Aug. 04, 1989; In English; Videotape: 52 min., 25 sec., running time, in color, with sound

Report No(s): NONP-NASA-VT-1999206981; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

This NASA KSC video release presents a news briefing held Aug. 4, 1989 at NASA Headquarters three weeks after Voyager 2's official 'encounter' with Neptune began. The video is comprised of two slide presentations followed by a short question and answer period. The press conference is moderated by Charles Redmond, (NASA Public Affairs), includes an introduction by Dr. Geoffrey A Briggs (Dir., Solar System Exploration Div.), and features Norman R. Haynes (Voyager Project Manager, JPL) and Dr. Edward C. Stone (Voyager Project Scientist, Cal Tech). Mr. Haynes' presentation centers on Voyager's history, engineering changes, and spacecraft trajectories while Dr. Stone presents the scientific aspects of Voyager, including the 11 scientific investigations planned for the mission, instruments used, and imaging techniques.

**Shoemaker-Levy Comet Impact on Jupiter Briefing From JPL**

Jul. 17, 1999; In English; Videotape: 1 hr., 62 min., 22 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999206995; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

A panel discussion held on July 17, 1994, about the impact of the P/Shoemaker-Levy 9 (SL9) comet with Jupiter and its observable effects on Jupiter's atmosphere, rings, satellites, and magnetosphere, is presented. The panelists were Dr. Eugene and Carolyn Shoemaker (from Lowell Observatory and US Geological Survey), the Shoemaker-Levy comet co-discoverers; David Levy, also the co-discoverer of the Shoemaker-Levy comet; and Dr. Heidi Hammel (from Massachusetts Institute of Technology). On this second day of impact, the discussion was focused on the impact of the fragments A, B, C, and D. Dr. Hammel, who is also a Principal Investigator for the Hubble Imaging Team at MIT, presents preliminary results of the study of images taken by the Hubble Space Telescope (HST). A summary of the observations from different observatories was also given. Included in these observations were reports from the W.M. Keck Observatory, and Infrared Telescope Facility (IRTF) at Mauna Kea Observatory.

#### **Galileo Earth/Moon News Conference, Part 1**

Dec. 01, 1992; In English; Videotape: 1 hr., 2 min., 20 sec., playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000001077; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

This NASA Kennedy Space Center (KSC) video release (Part 1 of 2) begins with a presentation given by William J. O'Neil (Galileo Project Manager) describing the status and position of the Galileo spacecraft 7 days prior to the Galileo Earth-2 flyby. Slides are presented including diagrams of the Galileo spacecraft trajectory, trajectory correction maneuvers, and the Venus and asteroid flybys. Torrence Johnson (Galileo Project Scientist) follows Mr. O'Neil with an explanation of the Earth/Moon science activities that will be undertaken during the second Galileo/Earth encounter. These activities include remote sensing, magnetospheric and plasma measurements, and images taken directly from Galileo of the Earth and Moon. Dr. Joseph Veverka (Galileo Imaging Team, Cornell University) then gives a brief presentation of the data collected by the first Galileo/Gaspra asteroid flyby. Images sampled from the 57 photographs taken of Gaspra are presented along with discussions of Gaspra's morphology, shape and size, and surface features. These presentations are followed by a question and answer period given for the benefit of scientific journalists whose subjects include overall Galileo spacecraft health, verification of the Gaspra images timeframe, and the condition of certain scientific spacecraft instruments. Part 2 of this video can be retrieved by using Report No. NONP-NASA-VT-2000001078.

#### **Galileo Mission Science Briefing**

Jul. 21, 1989; In English; Videotape: 1 hr. 1 min. 32 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999206978; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

The first of two tapes of the Galileo Mission Science press briefing is presented. The panel is moderated by George Diller from the Kennedy Space Center (KSC) Public Affairs Office. The participants are John Conway, the director of Payload and operations at Kennedy; Donald E. Williams, Commander of STS-43, the shuttle mission which will launch the Galileo mission; John Casani, the Deputy Assistant Director of Flight Projects at the Jet Propulsion Lab (JPL); Dick Sphehalski, Galileo Project Manager at JPL; and Terrence Johnson, Galileo Project Scientist at JPL. The briefing begins with an announcement of the arrival of the Galileo Orbiter at KSC. The required steps prior to the launch are discussed. The mission trajectory and gravity assists from planetary and solar flybys are reviewed. Detailed designs of the orbiter are shown. The distance that Galileo will travel from the sun precludes the use of solar energy for heat. Therefore Radioisotope heater units are used to keep the equipment at operational temperature. A video of the arrival of the spacecraft at KSC and final tests and preparations is shown. Some of the many science goals of the mission are reviewed. Another video showing an overview of the Galileo

mission is presented. During the question and answer period, the issue of the use of plutonium on the mission is broached, which engenders a review of the testing methods used to ensure the safety of the capsules containing the hazardous substance. This video has actual shots of the orbiter, as it is undergoing the final preparations and tests for the mission.

**Galileo Science Update: Observing Changes on Europa and in Jupiter's System**

Aug. 13, 1996; In English; Videotape: 1 hr. 9 min. 10 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000008134; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

This NASA Kennedy Space Center (KSC) video release presents a news briefing from the Jet Propulsion Laboratory (JPL) featuring video presentations by Dr. Alfred McEwen (Univ. of Arizona, Lunar and Planetary Lab.), Dr. Ronald Greeley (Arizona St. Univ.), Dr. Andrew Ingersoll (California Inst. of Tech.), and Dr. Diana Blaney (Jet Propulsion Lab.). Discussions center on the atmospheric and surface features of Jupiter and two of its moons, Europa and Io. Possible energy mechanisms that create atmospheric features of Jupiter, such as the Great Red Spot, as well as possible thunderstorm and lightning activity associated with these features are included. Discussions of the craters and fractures on the icy surface of Europa, surface features of Io, two of which are named Loki and Pele, believed to be of volcanic origin, as well as infrared observations of volcanism on Io are presented. The individual presentations are followed by a question and answer period with questions posed by scientific journalists from JPL and other NASA centers. The video ends with computer animations, as well as actual footage, of features on Jupiter and its satellites taken from the Galileo spacecraft. Some of these images were seen previously in the individual presentations.

This NASA Kennedy Space Center (KSC) video release presents Part 3 of a press conference from Ames Research Center (ARC) regarding the successful entry of the Galileo

Space Probe into Jupiter's atmosphere. The press conference panel is comprised of twelve principal investigators and project scientists that oversee the Galileo mission. The press conference question and answer period is continued from Part 2. Atmospheric thermal structure, water abundances, wind profiles, radiation, cloud structure, chemical composition, and electricity are among the topics discussed. The question and answer period is followed by a presentation in which all of the visuals that are shown during the press conference are reviewed. The video ends with several animations depicting the entry of the probe, descent, and the first measurements of the Jovian atmosphere, historical footage of the building of the probe, and a short interview with Dr. Richard Young (Galileo Probe Scientist, ARC). Parts 1 and 2 of the press conference can be found in document numbers NONP-NASA-VT-2000001073, and NONP-NASA-VT-2000001074.

Jan. 22, 1996; In English; Videotape: 1 hr., 2 min., 26 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000001073; No Copyright; Avail: CASI; **B04**, Videotape-Beta; **V04**, Videotape-VHS

This NASA Kennedy Space Center (KSC) video release presents Part 1 of a press conference regarding the successful entry of the Galileo Space Probe into Jupiter's atmosphere. The press conference panel is comprised of twelve principal investigators and project scientists that oversee the Galileo mission.

Among these panelists, William J. O'Neil (Jet Propulsion Lab.) begins the video praising all of the scientists that worked on the orbiter mission. He then presents a visual overview of Galileo's overall mission trajectory and schedule. Marcie Smith (NASA Ames Research Center) then describes the Galileo Probe mission and the overall engineering and data acquisition aspects of the Probe's Jupiter atmospheric entry. Dr. Richard Young (NASA Ames Research Center) follows with a brief scientific overview, describing the measurements of the atmospheric composition as well as the instruments that were used to gather the data. Atmospheric pressure, temperature, density, and radiation levels of Jupiter were among the most important parameters measured. It is explained that these measurements would be helpful in determining among other things, the overall dynamic meteorology of Jupiter. A question and answer period follows the individual presentations. Atmospheric thermal structure, water abundances, wind profiles, radiation, cloud structure, chemical composition, and electricity are among the topics discussed. Parts 2 and 3 of the press conference can be found in document numbers NONP-NASA-VT-2000001074, and NONP-NASA-VT-2000001075.

This videotape presents a panel discussion press conference about the attempts to discover if there is moisture in the atmosphere of Jupiter. David Seidel, of the Jet Propulsion Laboratory (JPL) moderates the discussion. The panel consists of Andrew Ingersoll, California Institute of Technology, Tobias Owen, of the University of Hawaii, Glenn Orton, Robert Carlson of JPL, and Ashwin Vasavada, a graduate student at Cal Tech. Each of the panelists discusses evidence for moisture in Jupiter's atmosphere. They show video tapes of either animation or shots from the Galileo mission or diagrams of the atmosphere of Jupiter. The videos clips that are shown, include a brief summary of the Galileo mission. A diagram showing the layers of Jupiter's atmosphere is discussed. One panelist discusses and shows shots from the nightside of Jupiter. Another video clip shows evidence for convergence down-drafts around dry spots. Evidence for thunderstorms and updrafts is also reviewed. Shots of the giant red spot on Jupiter are shown, and explanations are given as to what it may be.

This video presents a Magellan Science update on the most recent findings from the Magellan Mission to Venus. Brian Dunbar, NASA Public Affairs, introduces Dr. Wes Huntress, Division Director Solar System and Exploration Division. Dr. Huntress explains the Magellan Mission to Venus, which tested the temperature and emissivity of Venus, and collected high resolution radar imagery of 92% of the surface of the planet. Dr. Steve Saunders, Magellan Project Scientist, Jet Propulsion Lab, presents a visual global view of the North Pole of Venus. He also presents planet wide patterns of fracture on Venus. Dr. Saunders showed a video presentation of radio mapping results from Artemis. Dr. Wood, Radar Investigator, Smithsonian Astrophysical Observatory explains Mat Mons, which is the second highest mountain on Venus. Dr. John Wood also presents a video presentation of his findings. Dr. Gordon Pettengill, Principle Investigator, Massachusetts Institute of Technology, presents a video on the Topography of the Magellan Mission, which is able to give resolution ten times finer and further into the South and into the North than was possible earlier. The video of the Magellan Science update ends with a question and answer period.

This NASA Kennedy Space Center video presents live footage of the delivery of the Titan III Mars Explorer Transfer Orbital Stage (TOS) to the Payload Hazardous Servicing

Facility (PHSF). The TOS is a single-stage, solid propellant upper stage vehicle used to propel a spacecraft from low Earth orbit toward its ultimate destination. The TOS is delivered to the PHSF where it is designed to accommodate a variety of NASA and NASA customer payloads and can be used as a payload processing facility (PPF) or a hazardous processing facility (HPF).

#### **Titan III Mars Observer Arrival and Uncrating at PHSF**

Jul. 09, 1992; In English; Videotape: 8 min. 25 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000081540; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

Live footage of the uncrating and the arrival of the Titan III Mars Observer to the Payload Hazardous Servicing Facility (PHSF) is presented. The Mars Observer's mission is to study the surface, atmosphere, interior and magnetic field of Mars from Martian orbit. At the PHSF, fueling of the spacecraft with its orbit insertion and attitude control propellants will occur. This will be followed by mating to the Transfer Orbit Stage (TOS). This is the upper stage that will provide the final thrust to propel the spacecraft on its 11-month journey to Mars.

The Mars Observer mission spacecraft was primarily designed for exploring Mars and the Martian environment. The Mars Observer was launched on September 25, 1992. The spacecraft was lost in the vicinity of Mars on August 21, 1993 when the spacecraft began its maneuvering sequence for Martian orbital insertion. This videotape shows a press briefing, held after the spacecraft had not responded to attempts to communicate with it, to explain to the press the problems and the steps that were being taken to re-establish communication with the spacecraft. The communications had been shutdown prior to the orbital insertion burn to protect the instruments. At the time of the press conference, the communications system was still not operational, and attempts were being made to re-establish communication. Bob McMillan of the Public Affairs Office at JPL gives the initial announcement of the continuing communication problem with the spacecraft. Mr. McMillan introduces William Piotrowski, acting director of solar system exploration, who reiterates that there is indeed no communication with the Observer spacecraft. He is followed by Glenn Cunningham, the Project Manager of the Mars Observer who speaks about the attempts to re-establish contact. Mr. Cunningham is followed by Satenios Dallas, the Mission Manager for the Mars Observer Project, who speaks about the sequence of events leading up to the communication failure, and shows an animated video presenting the orbital insertion maneuvers. The briefing was then opened up for questions from the assembled press, both at JPL and at the other NASA Centers. The questions are about the possible reasons for the communication failure, and the attempts to restore communications with the spacecraft. Dr. Arden L. Albee, chief scientist for the Mars Observer Mission, joins the other panel members to answer questions. At the end of the press briefing the animation of the Mars orbital insertion is shown again.

#### **Mars Observer Lecture: Mars Orbit Insertion**

Dodd, Suzanne R., Personal Name; Aug. 17, 1993; In English; Videotape: 45 min. 45 sec. playing time, in color, with sound Report No(s): NONP-NASA-VT-2000081538; No Copyright; Avail: CASI; [B03](#), Videotape-Beta; [V03](#), Videotape-VHS

The Mars Observer mission spacecraft was primarily designed for exploring Mars and the Martian environment. The Mars Observer was launched on September 25, 1992. The spacecraft was lost in the vicinity of Mars on August 21, 1993 when the spacecraft began its maneuvering sequence for Martian orbital insertion. This videotape shows a lecture by Suzanne R. Dodd, the Mission Planning Team Chief for the Mars Observer Project. Ms Dodd begins with a brief overview of the mission and the timeline from the launch to orbital

insertion. Ms Dodd then reviews slides showing the trajectory of the spacecraft on its trip to Mars. Slides of the spacecraft being constructed are also shown. She then discusses the Mars orbit insertion and the events that will occur to move the spacecraft from the capture orbit into a mapping orbit. During the trip to Mars, scientists at JPL had devised a new strategy, called Power In that would allow for an earlier insertion into the mapping orbit. The talk summarizes this strategy, showing on a slide the planned transition orbits. There are shots of the Martian moon, Phobos, taken from the Viking spacecraft, as Ms Dodd explains that the trajectory will allow the orbiter to make new observations of that moon. She also explains the required steps to prepare for mapping after the spacecraft has achieved the mapping orbit around Mars. The lecture ends with a picture of Mars from the Observer on its approach to the planet.

**NASA Today - Mars Observer Segment (Part 4 of 6)**

Aug. 20, 1993; In English; Videotape: 16 min. 20 sec. playing time, in color with sound

Report No(s): NONP-NASA-VT-200096690; No Copyright; Avail: CASI; **B02**, Videotape-Beta; **V02**, Videotape-VHS

This videotape consists of eight segments from the NASA Today News program. The first segment is an announcement that there was no date set for the launch of STS-51, which had been postponed due to mechanical problems. The second segment describes the MidDeck Dynamic Experiment Facility. The third segment is about the scheduled arrival of the Mars Observer at Mars, it shows an image of Mars as seen from the approaching Observer spacecraft, and features an animation of the approach to Mars, including the maneuvers that are planned to put the spacecraft in the desired orbit. The fourth segment describes a discovery from an infrared spectrometer that there is nitrogen ice on Pluto. The fifth segment discusses the Aerospace for Kids (ASK) program at the Goddard Space Flight Center (GSFC). The sixth segment is about the high school and college summer internship programs at GSFC. The seventh segment announces a science symposium being held at Johnson Space Center. The last segment describes the National Air and Space Museum and NASA's cooperation with the Smithsonian Institution.

Computerized animations show the following: (1) an artist's conception of a Saturn-like extrasolar planet; (2) star and planet motion; and (3) young stellar disk and planet formation. Footage shows the outside of the Mauna Kea Observatories in Hawaii and Geoff Marcy and Paul Butler inside while they are processing information. Then a press conference, 'Worlds Smaller than Saturn', is seen. Anne Kinney, Origins Science Director, NASA Headquarters, introduces Geoff Marcy, Paul Butler, Alan Boss, and Heidi Hammel. They discuss the discovery of the two new Saturn-sized extrasolar planets that are orbiting the stars HD46375 and 79 Seti, giving details on the search technique and size distribution. They then answer questions from the press.

**Plentiful Water Detected in Mars Northern Hemisphere**

June 26, 2003; In English; 6 min., 56 sec. playing time, in color, with sound

Report No(s): G03-043; No Copyright; Avail: CASI; **V01**, Videotape-VHS; **B01**, Videotape-Beta

NASA's Mars Odyssey Spacecraft is revealing new details about a changeable array of frozen layers on Northern Mars. Odyssey's neutron and gamma-ray sensors have tracked seasonal changes as layers of 'dry ice' carbon dioxide frost or snow accumulated during northern Mars' winter and then dissipate in the spring to expose a permafrost soil layer rich in water ice. The research is presented in a paper in the June 27, 2003 issue of the Journal Science. This video contains a slide show interspersed with computer generated graphics of seasonal ice distribution and thickness on Mars. The graphics utilize Viking and Mars Orbiter Laser Altimeter (MOLA) data as well as Odyssey data.

Dr. France Cordova, NASA's Chief Scientist, chaired this, another seminar in the Administrator's Seminar Series. She introduced NASA Administrator, Daniel S. Goldin, who greeted the attendees, and noted that, from the day people first looked into the sky, they've wondered what was up there, who or what created it, is Earth unique, what shaped the solar system, what is the Kuiper Belt and why is it there, and what are the solar system's building blocks. NASA's missions may discover some of the answers. Dr. Cordova then introduced Dr. Anita Cochran, research scientist at the University of Texas. Dr. Cochran has been searching for some of this information. She is especially interested in finding out when various planets and asteroids were discovered, what their orbits are, when the solar system was formed, and more about the comets in the Kuiper Belt. Are they icy planetesimals that helped form our solar system? Dr. Toby Owen of the University of Hawaii faculty spoke next. He believes that life on Earth exists because comets brought water and a variety of light elements to Earth from the outer parts of the solar system. Without them, we couldn't exist. He noted that noble gases don't mix with other gases. Gases come to Earth via rocks and by bombardment. Ice can trap argon and carbon, but not neon. Dr. Owens concluded with comments that we need 'better numbers for the Martian atmosphere', and it would be good to get samples of material from a comet. The third speaker was Dr. Eugene Shoemaker of the Lowell Observatory and the U.S. Geological Survey. He is credited with discovering more than 800 asteroids and learning about the Oort Cloud, which is believed to be a cloud of rocks and dust that may surround our solar system and be where comets originate. Comet storms reoccur about every 30 million years. Dr. Shoemaker suggested that since we are presently in a period of comet showers, it would be good to get a comet sample. It might provide insight regarding the origin of life. Additional information is included in the original extended abstract.

This video gives an overview of planetary nebulae through a computerized animation, images from the Hubble Space Telescope (HST), and interviews with Space Telescope Science Institute Theorist Dr. Mario Livio. A computerized animation simulates a giant star as it swallows its smaller companion. HST images display various planetary nebulae, such as M2-9 Twinjet Nebula, NGC 3568, NGC 3918, NGC 5307, NGC 6826, NGC 7009, and Hubble 5. An artists conception shows what our solar system might look like in a billion years when the Sun has burned out and cast off its outer layers in a shell of glowing gas. Dr. Livio describes the shapes of the planetary nebulae, gives three reasons to study planetary nebulae, and what the observations made by HST have meant to him. A succession of 17 HST images of planetary nebulae are accompanied by music by John Serrie.

**Langley's 50th year**

Oct 1, 1967; In English

Report No(s): ASR-34; NASA-TM-109365; NONP-NASA-VT-94-198212; No Copyright; Avail: CASI; **B01**, Videotape-Beta; **V01**, Videotape-VHS

This video gives an historical overview of Langley Research Center's major achievements in aeronautics and astronautics research between the years 1917-1967. Historical footage accompanies explanation of research into wind tunnel, spin tunnel, and hydrodynamic test tanks for studying aircraft airflow, wartime research into overwater combat ditching, diving, and braking, the X series aircraft experiments with supersonic flight, helicopter and vertical Take Off and Landing

(VTOL) aircraft, airport landing studies, and early prototypes for the Space Shuttle.

**Twenty-five years of progress. Part 1: Birth of NASA. Part 2: The Moon-a goal**

JAN 1, 1984; In English

Report No(s): NASA-TM-110819; NAS 1.15:110819; CMP-178-0045B; NONP-NASA-VT-95-61007; No Copyright; Avail: CASI; **B03**, Videotape-Beta; **V03**, Videotape-VHS

Historical footage (1958 - 1983) concerning NASA's Space Program, is reviewed in this two-part video. Host, Lynn Bondurant describes the birth of NASA and its accomplishments through the years. Part one contains: the launch of Russian satellite Sputnik on October 4, 1957; the first dog (Soviet) in space; NACA Space Research, Explorer-6; and still photographs of various Space projects. Tiros 1 experimental weather satellite, Microgravity simulators, Echo 1 passive communications satellite, and the first U.S. manned spaceflight Mercury are included in part two. The seven Mercury astronauts are: Captain Donald Slayton, Lt. Commander Alan Shepard, Lt. Commander Walter Schirra, Captain Virgil Grissom, Lt. Col. John Glenn Jr., Captain Leroy Cooper Jr, and Lt. Malcolm Scott Carpenter. Also included are an ongoing interview (throughout the video) with NASA's first Administrator Keith Glennan, the first flight in 1961 with Enos, a chimpanzee, President Kennedy's speech in Washington about the Space Program, Project Gemini - the 2-manned space flights, and the recovery of Virgil Grissom from splash down.

*Imaging Techniques; Rivers; River Basins; Earth Observations (From Space)*

# Subject Term Index

## 2001 MARS ODYSSEY

Plentiful Water Detected in Mars Northern Hemisphere – 407

## ABERRATION

Hubble Space Telescope Briefing: HST Science Overview – 384

## ACCELERATION (PHYSICS)

SAMS (space acceleration measurement system) – 334

Space acceleration measurement system – 374

## ACCELEROMETERS

SAMS (space acceleration measurement system) – 334

Space acceleration measurement system – 374

STS-40/SLS-1: Lift to Cargo Bay – 195

## ACCIDENT INVESTIGATION

A/C 67 Investigation Board Final Report – 377

Shuttle 51L: Challenger – 44

## ACCIDENT PREVENTION

The 1971 highlights – 412

## ACCIDENTS

NACA fire crash research – 1

## ACID RAIN

What's killing the trees? – 351

## ACOUSTIC LEVITATION

STS-94 Day 09 Highlights – 101

## ACOUSTICS

Acoustic climb to cruise test – 7

## ACTIVITY (BIOLOGY)

STS-78 Flight Day 8 – 81

## ACTS

STS-51 ACTS/TOS and SPAS Deploy – 235

STS-51 ACTS/TOS Payload Briefing – 207

## ADAPTATION

STS-81 Flight Day 7 – 86

## ADAPTERS

Fuse Lift to Payload Adapting Fixture (PAF) at Hangar A& – 159

STS-88 Day 03 Highlights – 126

## ADVANCED LAUNCH SYSTEM (STS)

STS 63 flight day 4 highlights/MIR-Shuttle rendezvous – 45

## ADVANCED SOLID ROCKET MOTOR (STS)

Advanced Solid Rocket Motor – 335

ASRM testing at Stennis Space Center (proposed) – 336

## ADVANCED TECHNOLOGY LABORATORY

STS-66 mission highlights resource tape – 47

## AERIAL EXPLOSIONS

Challenger Anniversary Resource Tape – 67

## AERIAL PHOTOGRAPHY

Johnson Space Center and downtown Houston, Texas aeriels – 344

## AEROACOUSTICS

Flying on the ground – 371

## AEROBATICS

STS-103 Flight Crew Departs from Shuttle Landing Facility in T-38 for Acrobatics Flight, Discovery – 146

## AERODYNAMIC CHARACTERISTICS

Wind Tunnel Tests of an Inflatable Airplane – 2

## AERODYNAMIC LOADS

Wind Tunnel Tests of an Inflatable Airplane – 2

## AERODYNAMIC STABILITY

STS-77 Flight Day 9 – 74

Wind shear and heavy rain – 355

Wind Tunnel Tests of an Inflatable Airplane – 2

## AERODYNAMIC STALLING

Wind Tunnel Tests of an Inflatable Airplane – 2

## AERODYNAMICS

The world's largest wind tunnel – 9

## AERONAUTICAL ENGINEERING

Dryden summer 1994 update – 414

## AERONAUTICS

NACA-NASA: 75 years of flight – 410

## AEROSPACE ENGINEERING

Aerospace test facilities at NASA LERC Plumbrook – 29

Hernandez Engineering: NASA – 322

Highlights, 1981 – 409

Hurricane Andrew mission – 355

NACA-NASA: 75 years of flight – 410

NASA images 7 – 379

One fantastic ride – 336

The 1965 highlights – 410

The 1967 highlights – 410

The 1969 highlights – 410

The 1972 highlights – 410

Welcome to the Ohio Aerospace Institute – 374

## AEROSPACE ENVIRONMENTS

Go for EVA – 47

Moonwalking Series, Episode 2: Adapting to a Space Environment – 366

Space basic – 380

STS-88 Day 02 Highlights – 127

## AEROSPACE INDUSTRY

An announcement by Dan Goldin – 377

Welcome to the Ohio Aerospace Institute – 374

## AEROSPACE MEDICINE

All systems go! – 47

Answering the space medicine challenge – 358

Life sciences program – 356

Living well in space: Clinical care challenge – 358

Living well in space: Ensuring crew capability – 358

STS-42 mission highlights resource tape. Part 1 of 2 – 52

STS-67 post flight presentation – 47

## AEROSPACE PLANES

Aero-Space Plane: Flexible access to space – 321

Futurepath 3 – 347

High temperature NASP engine seal development – 346

National aerospace plane – 337

## AEROSPACE SAFETY

Gearing up for 1988 – 39

Living well in space: Clinical care challenge – 358

STS-29 post-insertion/deorbit prep and crew bailout – 37

## AEROSPACE SCIENCES

Challenger Center: Orientation – 373

Challenger Center – 373

Coast encounters: A space age adventure in science literacy – 378

Dan Goldin Presentation: Pathway to the Future – 135

NEWEST 1990 no. 4007 – 375

Short walk to everywhere – 373

STS-102 Expedition 2 Increment and Science Briefing – 246

The sky is your classroom – 374

## AEROSPACE SYSTEMS

GOES 9 Spacecraft at Astrotech Plus Exterior and Logo – 325

## AEROSPACE TECHNOLOGY TRANSFER

Advanced microsensors – 380

Aircraft to medicine – 359

Endeavor: Now and then – 46

From space to Earth – 379

Improved mapping system – 348

Monitoring history – 378

## ATLAS CENTAUR LAUNCH VEHICLE

A/C 67 Investigation Board Final Report – 377

AC 67 Launch Video – 35

Atlas Centaur 77 GOES-J Mated to Centaur at Cape Canaveral Air Station Complex 36B – 33

Atlas Centaur 77 GOES-J Wet Dress Rehearsal at Cape Canaveral Air Station – 326

Atlas Centaur/GOES-J News Conference – 155

Atlas SOHO Booster and Centaur Erection – 326

ATLAS SOHO Presentation, SAEF 2 – 17

Atlas/Centaur 121 SOHO Launch – 35

Atlas/Centaur-SOHO Pre-Launch News Conference – 36

Atlas-SOHO Propulsion Unit and Electrical Module Uncrating at SAEF-2 – 33

SOHO Payload Mate to Atlas/Centaur at the SAEF 2 – 326

## ATLAS LAUNCH VEHICLES

Atlas First Stage Erection, GEOS I – 33

Atlas GEOS-J Arrives at KSC and Uncanning at Astrotech – 325

Atlas SOHO Wet Dress Rehearsal – 33

INTELSAT V-A (F-10) Launch – 36

## ATMOSPHERIC CIRCULATION

Evolution of the Southern Hemisphere ozone hole as seen by TOMS from August 1979 to December 1991 – 352

Galileo Update: The Search for Water in Jupiter's Atmosphere – 403

Inertial oscillation of a vertical rotating draft with application to a supercell storm: Video supplement to NASA Technical Paper 3230 – 354

Meteor 3/TOMS launch of 15 August 1991 in Plesetsk, USSR – 31

## ATMOSPHERIC COMPOSITION

Global Greenhouse Expedition – 351

Live from Antarctica, volume 4 – 354

## ATMOSPHERIC ENTRY

Apollo 13 Facts: Recovery – 21

Galileo Space Probe News Conference – 402

STS-70 post flight presentation – 53

## ATMOSPHERIC MODELS

Inertial oscillation of a vertical rotating draft with application to a supercell storm: Video supplement to NASA Technical Paper 3230 – 354

## ATMOSPHERIC RADIATION

SPRITE video news release – 353

## ATTITUDE CONTROL

STS-77 Flight Day 4 – 76

STS-77 Flight Day 6 – 75

## ATTITUDE (INCLINATION)

STS-77 Flight Day 4 – 76

STS-77 Flight Day 6 – 75

STS-77 Flight Day 9 – 74

## AUDIO EQUIPMENT

STS-29 IMAX camera audio class FFT – 343

## AURORAS

Comet Shoemaker-Levy 9 Impact Press Conference – 398

## AUSTRALIA

Shuttle Earth Views, 1994 – 349

## AUTOMATED PILOT ADVISORY SYSTEM

The 1980 highlights – 413

## AUTOMATIC CONTROL

NIST Automated Manufacturing Research Facility (AMRF): March 1987 – 340

NIST: Information management in the AMRF – 379

VSTOL Systems Research Aircraft (VSRA) Harrier – 4

## AUTONOMIC NERVOUS SYSTEM

STS-90 Day 12 Highlights – 120

STS-90 Day 13 Highlights – 116

## AUXILIARY POWER SOURCES

STS-31: APU Controller Removal – 179

STS-95 Day 09 Highlights – 122

## AVIATION METEOROLOGY

Airline safety and economy – 3

## AVIONICS

STS-35: Astro-1 BBXRT Problem Area – 182

## AWARDS

Malcolm Baldrige National Quality Award winners 1989 – 377

Quest for excellence 5 – 376

## B-52 AIRCRAFT

Pegasus Departs from KSC – 330

## B-70 AIRCRAFT

The 1968 highlights – 412

## BACKGROUND RADIATION

Cosmic Background Radiation Explorer (COBE) – 320

## BAILOUT

STS-101 Crew Training – 179

STS-29 crew bailout in WETF – 363

STS-29 post-insertion/deorbit prep and crew bailout – 37

STS-31 crew training inflight maintenance and bailout exercises in CCT and WETF – 28

STS-32 bailout training in WETF – 362

STS-33 emergency egress training – 363

STS-34 crew bailout exercise in CCT – 362

STS-35 Crew training: Bailout in CCT, firefighting, TAGS class and bailout in WETF – 361

STS-38 crew training: Habitation equipment procedures, bailout in CCT, 70mm photo class, EVA prep and post, and firefighting – 364

STS-41 crew training bailout in CCT, 16mm camera class EVA prep, habitation equipment procedures, and food tasting – 29

STS-47 Astronaut Crew Training Clip – 236

STS-93 Crew Training – 155

STS-96 Crew Training, Mission Animation, Crew Interviews, STARSHINE, Discovery Rollout and Repair of Hail Damage – 165

STS-97 Crew Training – 210

STS-98 Crew Training – 222

STS-99 Crew Training – 156

## BALLOON FLIGHT

Dutch Viking TROS Aktua Special – 329

## BALLOON SOUNDING

Scientific balloons – 2

The 1980 highlights – 413

## BARRED GALAXIES

The Secret Lives of Galaxies – 388

## BAYS (STRUCTURAL UNITS)

STS-103 Hubble Telescope into Discovery Payload Bay – 146

STS-34: Galileo Payload Canister Doors Closing in VPF – 187

STS-37 Payload Gamma Ray Observatory Pad-B in PCR – 169

STS-37 The Payload bay door closing at PCR Pad B – 409

STS-40/SLS-1: Lift to Cargo Bay – 195

STS-84 Day 09 Highlights – 97

STS-87 Mission Highlights Resources Tape – 128

STS-95 Day 07 Highlights – 123

STS-96: SPACEHAB Double MOD/ICC Going into the Payload Bay – 160

STS-99 Payload Door Closure in Orbiter Processing Facility # 2, Endeavour, (SRTM) – 168

STS-99 Payload Door Closure in Orbiter Processing Facility #2 Endeavour (SRTM) – 151

## BEAMS (SUPPORTS)

STS-99 SRTM Lift and Insert into Canister – 170

## BIBLIOGRAPHIES

The future of bibliographic standards in a networked information environment – 379

## BIG BANG COSMOLOGY

Cosmic Background Radiation Explorer (COBE) – 320

## CERAMICS

High temperature NASP engine seal development – 346

STS-47 Post Flight Press Conference – 77

## CHALLENGER (ORBITER)

Challenger Anniversary Resource Tape – 67

Challenger's night flight – 15

Memorial service for the mission 51-L crew (edited) – 45

Shuttle 51L: Challenger – 44

STS-41G TCDT – 139

STS-51B Launch and Landing – 141

The 1982 highlights – 412

## CHARACTER RECOGNITION

Freedom system Text and Graphics Systems (TAGS) – 367

## CHARGE COUPLED DEVICES

HST Briefing: HST Science Overview – 383

## CHECKOUT

Apollo 11 Facts Project: Earth Views and Crew Activities – 21

Apollo 13 Facts [On-Orbit Activities] – 23

Galileo probe spacecraft mission to Jupiter – 391

STS-100 Crew Activity Report: Flight Day 1 Highlights – 249

STS-102 Countdown Status Briefing – 246

STS-102 Crew Activity Report/Flight Day 1 Highlights – 241

STS-103 Mission Highlights Resource Tape (2 of 2) – 178

STS-26 SRB LRFT Forward Center Segment Joint Inspection – 139

STS-37 astronauts Ross and Apt during CETA hardware checkout – 365

STS-41G TCDT – 139

STS-43 post flight press conference – 52

STS-45 Atlas-1 Compiled Processing Footage – 228

STS-49 Endeavour/Compiled Video for Editors – 218

STS-53 TCDT O&C Exit – 233

STS-69 flight day 7 highlights – 57

STS-72 Flight Day 2 – 69

STS-72 Flight Day 4 – 77

STS-99 Countdown Status Briefing – 174

STS-99 Countdown Status Press Conference – 174

## CHEMICAL ANALYSIS

STS-95 Day 08 Highlights – 124

## CHEMICAL ENGINEERING

Chemical engineering: Measurements for a competitive age – 337

## CHEMICAL PROPULSION

Low thrust space propulsion – 335

One fantastic ride – 336

## CHEMICAL REACTIONS

All systems go! – 47

The atmosphere below – 353

## CHEMOTHERAPY

STS-95 Day 02 Highlights – 124

## CHICKENS

STS-29 crew with student experiment – 356

## CHILDREN

Short walk to everywhere – 373

## CHLOROFLUOROCARBONS

The atmosphere below – 353

## CHRONIC CONDITIONS

Cool suit – 357

## CIVIL AVIATION

Back to propellers – 8

Crash impact survival in light planes – 3

## CLEAN ROOMS

ATLAS-SOHO: Satellite Arrival and Uncrating, Uncrating of the Propulsion Unit and Electric Module – 328

STS-31: Hubble in VPF Lift to Work Platform – 181

STS-34 Galileo PCR at Pad & Galileo in Atlantis – 180

STS-34: Galileo Processing – 182

STS-30: Mission Highlights Reel – 186

STS-30 mission tape – 38

STS-30 onboard 16mm photography quick release – 41

STS-30 Post-Flight Press Conference – 38

STS-31 crew training inflight maintenance and bailout exercises in CCT and WETF – 28

STS-31 mission highlights resource tape – 41

STS-31 onboard 16mm photography quick release – 41

STS-34 Chang-Diaz and E. Baker during Galileo contingency training in WETF – 362

STS-34 Galileo integrated deploy sim – 40

STS-34 McCully and Baker during IFM training – 39

STS-48 UARS Release – 230

STS-49 Endeavour Mission Highlights Resource Tape, Part 2 of 2 – 238

STS-49 Endeavour/Breakfast/Suit-up/Depart O&C/Launch/On-Orbit/Landing with ISOS – 219

STS-52 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 235

STS-52 Crew Briefing – 238

STS-53 Launch and Landing – 233

STS-55 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 237

STS-56 Atlas-2/Breakfast, Suit-up, Depart O&C, Launch, On Orbit, Landing with ISOS – 216

STS-58 Video Update Day 10: Crew Press Conference and View of California Fires – 232

STS-60 Discovery/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 236

STS-60 Mission Update – 233

STS-62 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 235

STS-76 Flight Day 7 – 70

STS-76 Flight Day 8 – 73

STS-87 Day 06 Highlights – 113

STS-87 Day 13 Highlights – 113

STS-88 Day 07 Highlights – 125

STS-89 Day 05 Highlights – 115

STS-92 Extravehicular Activity Overview – 221

STS-92 Mission Highlights Resource Tape – 260

STS-92 Post-Flight Presentation – 253

STS-93 Post Flight Presentation – 138

STS-96 Crew Interview: Kent Rominger – 150

STS-96 FD Highlights and Crew Activities Report: Flight Day 09 – 135

STS-96 FD Highlights and Crew Activities Report: Flight Day 10 – 134

STS-96 Meal - Suit Up - Depart O and C C7 Discovery Launch - On Orbit - Landing - Isos – 312

STS-97 Crew Activity Report/Flight Day 10 Highlights – 215

STS-97 Crew Activity Report/Flight Day 11 Highlights – 215

STS-97 Crew Activity Report/Flight Day 2 Highlights – 214

STS-97 Crew Activity Report/Flight Day 4 Highlights – 214

STS-97 Crew Activity Report/Flight Day 5 Highlights – 215

STS-97 Crew Activity Report/Flight Day 7 Highlights – 215

STS-97 Mission Highlights Resource Tape – 240

STS-97 Post Flight Presentation – 228

STS-98 Crew Activity Report/Flight Day 10 Highlights – 239

STS-98 Crew Activity Report/Flight Day 11 Highlights – 239

STS-98 Crew Activity Report/Flight Day 2 Highlights – 239

STS-98 Crew Activity Report/Flight Day 6 Highlights – 241

STS-98 Crew Activity Report/Flight Day 7 Highlights – 240

STS-98 Crew Activity Report/Flight Day 8 Highlights – 240

STS-98 Crew Activity Report/Flight Day 9 Highlights – 239

STS-98 Crew Interview: Bob Curbeam – 225

STS-98 Crew Interview: Ken Cockrell – 224

STS-98 Crew Interview: Marsha Ivins – 225

STS-98 Crew Interview: Tom Jones – 225

STS-98 Mission Highlights Resource Tape – 248

STS-98 Post Flight Presentation – 254

STS-99 Crew Activities Report / Flight Day 10 Highlights – 170

STS-99 Mission Highlights Resource Tape, Part 1 of 2 – 227

STS-99 Mission Highlights Resource Tape, Part 2 of 2 – 227

#### CREW PROCEDURES (PREFLIGHT)

Apollo 10 - 11 – 19

Apollo 11 Facts Project [EVA Training/Washington, D. C. Tour] – 20

Apollo 11 Facts Project [Pre-Launch Activities and Launch] – 20

Delta XTE Spacecraft Activities at CCAS Skid Strip – 34

ISS Expedition 1 Crew Interviews: Sergei K. Krikalev – 198

ISS Expedition 1 Crew Interviews: William M. Shepherd – 196

ISS Expedition 1 Crew Interviews: Yuri P. Gidzenko – 198

Op. No A4495 Columbia, STS-93 Chandra - Breakfast, Suiting, and Walk-out – 150

STS-100 Crew Activity Report: Flight Day 1 Highlights – 249

STS-100 Crew Training – 247

STS-100 Mission Highlights Resource Tape – 259

STS-101: Crew Interview / James S. Voss – 181

STS-101: Crew Interview / Jeffrey N. Williams – 181

STS-101 Crew Interview / Mary Ellen Weber – 180

STS-101 Crew Interview / Scott Horowitz – 180

STS-101: Crew Interview / Susan J. Helms – 181

STS-101: Crew Interview / Yuri Vladimirovich Usachev – 183

STS-101: Flight Day Highlights / CAR – 190

STS-101 Mission Highlights Resource Tape, Part 1 of 3 – 228

STS-102 Crew Activity Report/Flight Day 1 Highlights – 241

STS-102 Crew Training – 241

STS-102 Mission Highlight Resource Tape, Tape 1 of 4 – 253

STS-103 Crew at Breakfast, Suiting, Departing O&C – 148

STS-103 Crew Interviews: Jean-Francois Clervoy – 142

STS-104 Flight Day 1 Highlights – 255

STS-104 Mission Highlights Resource Tape – 269

STS-104 Post Flight Presentation – 265

STS-105 Flight Day 1 Highlights – 261

STS-105 Mission Highlights Resource Tape: Flight Days 1-3 – 276

STS-106 Crew Interviews: Edward T. Lu – 196

STS-106 Crew Interviews: Richard A. Mastracchio – 194

STS-106 Crew Interviews: Scott D. Altman – 194

STS-106 Crew Interviews: Terrence W. Wilcutt – 196

STS-106 Crew Training – 200

STS-106 Mission Highlights Resource Tape – 250

STS-106 TCDT Photo Opportunity – 247

STS-108 Flight Day Highlights: Flight Day 1 – 267

STS-112 Flight Day 5 Highlights – 289

STS-29 pre-launch and post-landing egress – 361

STS-29: Pre-Launch Preparations/Launch and Landing – 183

STS-29: TCDT – 184

STS-30: Mission Highlights Reel – 186

STS-35/Astro-1: Editors Work Tape – 185

STS-36: Isolated Camera Breakfast Suit-up Walkout – 187

STS-37: TCDT Pad B Atlantis GRO (1 of 3) – 189

STS-37: TCDT Pad B Atlantis GRO (2 of 3) – 189

STS-37: TCDT Pad B Atlantis GRO (3 of 3) – 189

STS-37/GRO Crew Arrival and TCDT Activities – 178

STS-38 Atlantis Crew Arrival – 212

STS-39/Breakfast, Suit-Up, Depart O&C, Launch, On-Orbit, and Landing – 208

STS-40 TCDT – 199

STS-40/SLS-1 Breakfast/Suit-up/Depart O&C/Ingress/Launch with isolated Views – 199

STS-41 Ulysses TCDT Activities – 199

STS-42 Discovery/Breakfast, Suit-Up, Depart O&C, Ingress, Launch, On-Orbit, and Landing – 209

STS-43 Astronaut Arrival for TCDT – 211

STS-43 Atlantis/Breakfast & Suit-Up, Depart O&C, Ingress, Launch with Isolated Views, TDRS-E Deploy, and Landing with Isolated Views – 208

STS-43 Crew Briefing – 219

STS-43 TCDT – 212

STS-44 Astronaut Crew Briefing – 220

STS-44 Crew Training – 225

STS-44 Prelaunch Activities, O&C and LCC Firing Room – 222

STS-44 TCDT Activities – 206

STS-45 Atlas-1/ Breakfast & Suit-Up, Depart O&C, Ingress, Launch with Isolated Views, On-Orbit Activities, and Landing with Isolated Views – 211

STS-45/Atlas-1 TCDT Activities – 210

STS-46 Crew Training – 208

STS-46 Mission Highlights Resource Tape – 210

STS-46 Standard Mission Handout Tape – 219

STS-46 TCDT Slideware Training and Photo Session – 203

STS-47 Astronaut Crew at Pad B for TCDT, Emergency Egress Training, and Photo Opportunity – 219

STS-48 Discovery/Prelaunch Activities with Isolated Views – 235

STS-49 Astronaut Flight Crew – 234

STS-49 Crew Press Conference, Part 1 of 2 – 238

STS-49 Endeavour/Breakfast/Suit-up/Depart O&C/Launch/On-Orbit/Landing with ISOS – 219

STS-49 Endeavour/Compiled Video for Editors – 218

STS-50 Crew Arrival – 205

STS-50 Crew Briefing – 219

STS-50 TCDT Activities – 226

STS-51 Crew Briefing – 217

STS-52 Astronaut Crew Activities for TCDT – 229

STS-52 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 235

STS-52 Crew Arrival for Launch – 234

STS-53 Launch and Landing – 233

STS-53 TCDT Activities – 236

STS-53 TCDT O&C Exit – 233

STS-53 TCDT Training and Press Q&A at Pad A – 232

STS-54 Astronaut Crew Emergency Egress Training, Press Q&A, TCDT – 235

STS-54 Crew Arrival for TCDT – 233

STS-55 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 237

STS-55 Crew Arrival – 216

STS-55 Emergency Egress Training/Photo Opportunity at Pad A – 220

STS-56 Astronaut Crew Arrival at KSC for Launch – 217

STS-56 Atlas-2/Breakfast, Suit-up, Depart O&C, Launch, On Orbit, Landing with ISOS – 216

STS-56 Atlas-2/TCDT Activities – 217

STS-56/TCDT O&C Walkout – 220

STS-59 Crew Arrival – 237

STS-60 Discovery/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 236

STS-62 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 235

STS-69 Launch/Composite of Breakfast, Suiting, and Firing Room Activities – 236

STS-69 TCDT/Crew Emergency Egress, Walk Down, and Press Showing – 236

STS-92 Crew Activity Report/Flight Day 1 Highlights – 210

STS-92 Crew Training – 213

STS-92 Mission Highlights Resource Tape – 260

STS-93 / Columbia Flight Crew Photo Op & QA at Pad for TCDT – 164

STS-93 CEIT with crew in the OPF-3 – 151

STS-93: CEIT with Crew in the OPF-3 – 160

STS-93: Chandra Crew Arrival – 163

STS-93: Chandra Flight Crew During Breakfast, Suiting and Departing the O&C Building – 157

STS-93: Columbia Flight Crew Arrival on FSS 195' Level, Walk Across OAA and Ingress into White Room – 157

STS-93: Crew Arrival and PR Location – 161

STS-96: Expedition Crew #2 and 4 Work in Node #1 at the SSPF – 159

STS-96 Flight Crew Press Q & A at KSCNF for TCDT – 165

STS-96 Meal - Suit Up - Depart O and C C7 Discovery Launch - On Orbit - Landing - Isos – 312

STS-96 TCDT Crew Arrival – 166

STS-78 Flight Day 4 – 79

#### **EROSION**

Louisiana delta study – 351

#### **ERROR ANALYSIS**

Getting it right, making it better – 377

#### **ESA SATELLITES**

Arrival of SOHO Satellite at Kennedy Space Center-Atlas Launch – 325

SOHO Mission Science Briefing – 329

#### **ESCAPE SYSTEMS**

Crew escape certification test – 363

#### **EURECA (ESA)**

STS-46 Eureka/TSS/Compiled Tape for Editors – 219

STS-46 Mission Highlights Resource Tape – 210

STS-46 post flight press conference – 63

STS-46 Standard Mission Handout Tape – 219

STS-46 Unedited Eureka Solar Array Deploy – 206

STS-46/Eureka Guidance Installation/Astronaut Inspection – 210

#### **EUROPA**

Galileo Science Summary October, 1997 – 398

Galileo Science Update Europa Unveiled – 89

Galileo Science Update – 403

#### **EUROPEAN SPACE AGENCY**

ATLAS SOHO Presentation, SAEF 2 – 17

Expedition 8 Crew Interview: Pedro Duque – 316

STS-46 post flight press conference – 63

#### **EUROPE**

Shuttle Earth Views, 1994 – 349

## EVAPORATION

Thermocapillary convection in evaporating sessile drops – [342](#)

## EXCIMER LASERS

Laser artery repair – [358](#)

## EXCITATION

Research excitation system flight testing – [6](#)

## EXERCISE PHYSIOLOGY

Living well in space: Ensuring crew capability – [358](#)

## EXO BIOLOGY

Exobiology and solar system exploration – [392](#)

Galileo Science Update Europa Unveiled – [89](#)

Living well in space: Ensuring crew capability – [358](#)

Space 2000 Symposium – [16](#)

STS-40 crew during spacelab Sim – [28](#)

STS-81 Flight Day 2 – [91](#)

## EXPANSION

Farthest Supernova Bolsters Proof for a Mysterious Form of Energy Pervading the Universe – [384](#)

## EXPEDITIONS

Airborne Arctic stratospheric expedition: Ozone – [4](#)

Expedition 7 Crew Interview: Ed Lu – [24](#)

Expedition 7 Crew Interview: Yuri Malenchenko – [24](#)

International Space Station: Expedition 2000 – [323](#)

International Space Station Expedition 6 Crew Training Clip – [298](#)

ISS Expedition 1 Crew Interviews: William M. Shepherd – [196](#)

Ozone hole – [351](#)

STS-111 Flight Day 11 Highlights – [289](#)

STS-111 Flight Day 12 Highlights – [289](#)

STS-113 Flight Day 1 Highlights – [302](#)

STS-113 Flight Day 10 Highlights Replay – [304](#)

STS-113 Flight Day 2 Highlights – [303](#)

STS-113 Flight Day 7 Highlights – [303](#)

## EXPERIMENT DESIGN

Science operation in space: Lessons – [42](#)

STS-29 crew with student experiment – [356](#)

## EXPERIMENTATION

Expedition 6 Crew Interviews: Don Pettit, Flight Engineer 2/ International Space Station (ISS) Science Officer (SO) – [282](#)

STS-42 mission highlights resource tape. Part 1 of 2 – [52](#)

STS-42 mission highlights resource tape. Part 2 of 2 – [52](#)

## EXPLOSIONS

Early Mission Blowups – [234](#)

## EXTERNAL TANKS

Orbiter Umbilical Hinge Door Problem – [196](#)

Robotics – [43](#)

STS-104 Crew Interview: Janet Kavandi – [251](#)

STS-104 Crew Interview: Jim Reilly – [250](#)

STS-104 Crew Interview: Mike Gernhardt – [250](#)

STS-104 Crew Interview: Steve Lindsey – [251](#)

STS-104 Flight Day 7 Highlights – [256](#)

STS-41 Activity/Rollover Preparations/Lift Preparations in VAB/Mated – [223](#)

## EXTRASOLAR PLANETS

Astronomers Ponder Lack of Planets in Globular Cluster – [388](#)

Searching for Planets Around other Stars – [384](#)

Worlds Smaller than Saturn – [407](#)

## EXTRATERRESTRIAL INTELLIGENCE

The quest for contact – [366](#)

## EXTRATERRESTRIAL LIFE

Living Places in Other Solar Systems – [366](#)

Mars: Five views on what is known – [392](#)

Pioneer-Venus press clip – [385](#)

Space 2000 Symposium – [16](#)

## EXTRAVEHICULAR ACTIVITY

Apollo 11 Facts [Lunar EVA] – [22](#)

Apollo 11 Facts Project [EVA Training/Washington, D. C. Tour] – [20](#)

Apollo 11 Facts Project [Prelaunch Press Conference/EVA Training] – [20](#)

Apollo 15: In the mountains of the Moon – [395](#)

Crew Training STS-110 – [284](#)

EVA retriever demonstration – [346](#)

Expedition 1 Crew Resource Reel – [22](#)

Expedition 3 Crew Interview: Frank Culbertson, Jr. – [256](#)

Expedition 3 Crew Interview: Mikhail Turin – [256](#)

Expedition 3 Crew Interview: Vladimir Dezhurov – [256](#)

Expedition 3 Crew Training Clips – [259](#)

Expedition 6 Crew Interviews: Ken Bowersox CDR – [286](#)

Future of robotics – [345](#)

Houston, I think we've got a satellite – [321](#)

International Space Station Expedition 6 Crew Training Clip – [298](#)

ISS General Resource Reel – [331](#)

Moonwalking Series, Episode 2: Adapting to a Space Environment – [366](#)

STS 110 Mission Highlights Resource Tape – [283](#)

STS 63: Post flight presentation – [46](#)

STS Flight 64 mission highlights – [46](#)

STS-100 Crew Activity Report: Flight Day 4 Highlights – [252](#)

STS-100 Crew Activity Report: Flight Day 8 Highlights – [249](#)

STS-100 Crew Interview: Chris Hadfield – [245](#)

STS-100 Crew Interview: Jeff Ashby – [244](#)

STS-100 Crew Interview: John Phillips – [244](#)

STS-100 Crew Interview: Kent Rominger – [244](#)

STS-100 Crew Interview: Scott Parazynski – [244](#)

STS-100 Crew Interview: Umberto Guidoni – [243](#)

STS-100 Crew Interview: Yuri Lonchakov – [245](#)

STS-100 Crew Training – [247](#)

STS-100 Mission Highlights Resource Tape – [258](#)

STS-100 Post Flight Presentation – [254](#)

STS-101 / Atlantis EVA briefing – [193](#)

STS-101: Crew Activity Report CAR/Flight Day 04 Highlights – [191](#)

STS-102 Crew Activity Report/Flight Day 4 Highlights – [243](#)

STS-102 Crew Activity Report/Flight Day 6 Highlights – [242](#)

STS-102 Extravehicular Activities Briefing – [247](#)

STS-102 Mission Highlight Resource Tape, Tape 3 of 4 – [253](#)

STS-102 Post Flight Presentation – [254](#)

STS-102/Expedition 2 Pre-Flight News Conference – [245](#)

STS-103 Crew Training – [139](#)

STS-103 Flight Day 5 Highlights and Crew Activities Report – [146](#)

STS-103 Photo-op/Suit-up/Depart O&C/Launch Discovery On-Orbit/Landing/Crew Egress – [36](#)

STS-104 Crew Interview: Charlie Hobaugh – [250](#)

STS-104 Crew Interview: Janet Kavandi – [251](#)

STS-104 Crew Interview: Jim Reilly – [250](#)

STS-104 Crew Interview: Mike Gernhardt – [250](#)

STS-104 Crew Interview: Steve Lindsey – [251](#)

STS-104 Crew Training Clips – [254](#)  
 STS-104 Flight Day 10 Highlights – [257](#)  
 STS-104 Flight Day 4 Highlights – [255](#)  
 STS-104 Flight Day 5 Highlights – [256](#)  
 STS-104 Flight Day 6 Highlights – [255](#)  
 STS-104 Flight Day 7 Highlights – [256](#)  
 STS-104 Mission Highlights Resource Tape – [268](#)  
 STS-104 Post Flight Presentation – [265](#)  
 STS-105 Flight Day 7 Highlights – [262](#)  
 STS-105 Flight Day 9 Highlights – [262](#)  
 STS-105 Mission Highlights Resource Tape: Flight Days 7-9 – [275](#)  
 STS-105 Post-Flight – [267](#)  
 STS-106 Crew Interviews: Yuri Malenchenko – [195](#)  
 STS-106 Mission Highlights Resource Tape – [250](#)  
 STS-108 Crew Training Clip – [266](#)  
 STS-108 Flight Day 6 Highlights – [268](#)  
 STS-108 Mission Highlights Resource Tape – [279](#)  
 STS-108 Post Flight Presentation – [272](#)  
 STS-109 Crew Interview: Grunsfeld – [272](#)  
 STS-109 Crew Interviews - Altman – [270](#)  
 STS-109 Crew Interviews - Currie – [272](#)  
 STS-109 Crew Interviews - Linnehan – [271](#)  
 STS-109 Crew Interviews: James H. Newman – [271](#)  
 STS-109 Crew Interviews: Michael J. Massimino – [271](#)  
 STS-109 Crew Training – [272](#)  
 STS-109 Flight Day 4 Highlights – [273](#)  
 STS-109 Flight Day 5 Highlights – [274](#)  
 STS-109 Flight Day 6 Highlights – [274](#)  
 STS-109 Flight Day 7 Highlights – [274](#)  
 STS-109 Flight Day 8 Highlights – [276](#)  
 STS-109 Mission Highlights Resource Tape – [296](#)  
 STS-109 Post Flight Presentation – [296](#)  
 STS-110 Flight Day 4 Highlights – [295](#)  
 STS-110 Flight Day 6 Highlights – [284](#)  
 STS-110 Flight Day 7 Highlights – [285](#)  
 STS-110 Flight Day 9 Highlights – [300](#)  
 STS-110 Post Flight Presentation – [295](#)  
 STS-110/Atlantic/ISS 8A Pre-Launch On Orbit-Landing-Crew Egress – [313](#)  
 STS-111 Crew Interviews: Franklin Chang-Diaz, Mission Specialist 2 – [283](#)  
 STS-111 Crew Interviews: Ken Cockrell, Commander – [293](#)  
 STS-111 Crew Interviews: Paul Lockhart, Pilot – [294](#)  
 STS-111 Flight Day 09 Highlights – [280](#)  
 STS-111 Flight Day 5 Highlights – [290](#)  
 STS-111 Flight Day 6 Highlights – [290](#)  
 STS-111 Flight Day 7 Highlights – [294](#)  
 STS-111 Mission Highlights Resource Tape – [301](#)  
 STS-111 Post Flight Presentation – [296](#)  
 STS-112 Crew Interviews - Wolf – [289](#)  
 STS-112 Crew Interviews: Melroy – [286](#)  
 STS-112 Crew Interviews: Sellers – [280](#)  
 STS-112 Crew Training Clip – [291](#)  
 STS-112 Flight Day 4 Highlights – [291](#)  
 STS-112 Flight Day 5 Highlights – [289](#)  
 STS-112 Flight Day 6 Highlights – [296](#)  
 STS-112 Flight Day 7 Highlights – [298](#)  
 STS-112 Flight Day 8 Highlights – [298](#)  
 STS-112 Mission Highlights Resource, Part 3 of 3 – [311](#)  
 STS-112 Mission Highlights Resource Tape Part 2 of 3 – [310](#)  
 STS-112 Post Flight Presentation – [304](#)  
 STS-113 Crew Interviews: Michael Lopez-Alegria, Mission Specialist 1 – [282](#)  
 STS-113 Crew Interviews: Paul Lockhart, Pilot – [282](#)  
 STS-113 Flight Day 4 Highlights – [303](#)  
 STS-113 Flight Day 6 Highlights – [302](#)  
 STS-113 Flight Day 8 Highlights – [303](#)  
 STS-113 Mission Highlights Resource Tape Flight Days 4-6 Tape: 2 of 4 – [314](#)  
 STS-113 Mission Highlights Resource Tape Flight Days 7-11. Tape: 3 of 4 – [315](#)  
 STS-113 Post Flight Presentation – [310](#)  
 STS-113/Endeavour/ISS 11A Pre-Launch - Launch On Orbit - Landing - Crew Egress – [313](#)  
 STS-114 Crew Interview: Soichi Noguchi – [307](#)  
 STS-26 EVA rescue training – [27](#)  
 STS-28 Adamson and Brown EMU walk through – [363](#)  
 STS-29 EVA prep in FFT – [362](#)  
 STS-30 Magellan IUS/EVA training in WETF – [360](#)  
 STS-32 LDEF EVA training in WETF with Low and Dunbar – [362](#)  
 STS-33 EVA prep and post with Gregory, Blaha, Carter, Thornton, and Musgrave in FFT – [40](#)  
 STS-35 crew training: EMU walk through and EVA prep and post – [360](#)  
 STS-35 EVA payload training in WETF – [360](#)  
 STS-36 crew EVA prep and post-training, bailout exercises, final bench review – [365](#)  
 STS-37 astronauts Ross and Apt during CETA hardware checkout – [365](#)  
 STS-37 CETA evaluation with Ross – [361](#)  
 STS-37 Mission Overview: Lead Flight Director Briefing – [166](#)  
 STS-37/Atlantis/GRO – [168](#)  
 STS-38 crew training: Habitation equipment procedures, bailout in CCT, 70mm photo class, EVA prep and post, and firefighting – [364](#)  
 STS-66 mission highlights resource tape – [47](#)  
 STS-69 flight day 10 highlights – [57](#)  
 STS-69 flight day 9 highlights – [57](#)  
 STS-69 Mission Highlights Resource Tape – [69](#)  
 STS-72 Flight Day 5 – [107](#)  
 STS-72 Flight Day 7 – [108](#)

#### FLIGHT HAZARDS

A/C 67 Investigation Board Final Report – 377  
AC-67 Press Conference – 330

#### FLIGHT INSTRUMENTS

Better way to fly – 5

#### FLIGHT MANAGEMENT SYSTEMS

Airline safety and economy – 3

#### FLIGHT MECHANICS

Galileo Mission Science Briefing – 401

#### FLIGHT OPERATIONS

Atlas GEOS-J Pad Activity with Blockhouse – 30

Delta XTE Spacecraft Activities at CCAS Skid Strip – 34

Flight operations highlights, tapes 1 and 2 – 410

STS-26 crew participation in meetings – 11

STS-59/SRL-1 – 43

STS-71 Shuttle/Mir flight: Day 10 – 50

STS-71 Shuttle/Mir flight: Day 9 – 50

XTE Delta 2nd Stage Erection at Complex 17A, Cape Canaveral Air Station – 327

#### FLIGHT PATHS

STS-37 Landing – 178

#### FLIGHT PLANS

Pilot in Command: An Illustration of Autonomous Flight Management – 4

STS-99 / Endeavour Pre Launch Press Conference – 176

#### FLIGHT RULES

STS-26 crew participation in meetings – 11

#### FLIGHT SAFETY

Airline safety and economy – 3

NACA fire crash research – 1

STS-99 Post-Launch Press Conference – 175

The 1968 highlights – 412

White Sands Test Facility – 31

#### FLIGHT SIMULATION

Manned vehicle systems research facility – 27

Spacework 16 – 373

STS-37: TCDT Pad B Atlantis GRO (1 of 3) – 189

STS-37: TCDT Pad B Atlantis GRO (2 of 3) – 189

STS-37: TCDT Pad B Atlantis GRO (3 of 3) – 189

STS-95 CEIT in the OPF-2 and the MPPF – 164

STS-96 Crew Training, Mission Animation, Crew Interviews, STARSHINE, Discovery Rollout and Repair of Hail Damage – 165

#### FLIGHT SIMULATORS

STS-93 Crew Training – 155

#### FLIGHT STRESS (BIOLOGY)

All systems go! – 47

#### FLIGHT TESTS

Acoustic climb to cruise test – 7

F-15 resource tape – 7

NASA and the SR-71: Back to the future – 6

Radio controlled for research – 8

Research excitation system flight testing – 6

STS 87: Meal - Suit Up - Depart O&C - Launch Columbia On Orbit - Landing - Crew Egress – 311

STS-37: TCDT Pad B Atlantis GRO (1 of 3) – 189

STS-37: TCDT Pad B Atlantis GRO (2 of 3) – 189

STS-43 post flight press conference – 52

STS-85 Day 02 Highlights – 106

STS-85 Day 07 Highlights – 106

STS-85 Day 09 Highlights – 105

X-29: Experiment in flight – 5

#### FLIGHT TRAINING

STS 87: Meal - Suit Up - Depart O&C - Launch Columbia On Orbit - Landing - Crew Egress – 311

STS-95 CEIT in the OPF-2 and the MPPF – 164

STS-95: Discovery Flight Crew Arrives at the Shuttle Landing Facility for TCDT – 160

STS-96 Crew Training, Mission Animation, Crew Interviews, STARSHINE, Discovery Rollout and Repair of Hail Damage – 165

#### FLOW DISTRIBUTION

Rotor stator CGI – 8

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 1 of 4 – 339

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 2 of 4 – 339

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 3 of 4 – 340

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 4 of 4 – 339

Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test – 342

#### FLOW VISUALIZATION

Airflow research – 2

Improved Optical Techniques for Studying Sonic and Supersonic Injection into Mach 3 Flow – 344

- Leading-edge vortex-system details obtained on F-106B aircraft using a rotating vapor screen and surface techniques – 2
- Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test – 342
- FLUID DYNAMICS**
- STS-47 mission highlights resource tape – 54
- STS-73 Mission Highlights Resource Tape – 76
- FLUID FLOW**
- The 1988 computational fluid dynamics highlights – 342
- FLUID INJECTION**
- Improved Optical Techniques for Studying Sonic and Supersonic Injection into Mach 3 Flow – 344
- FLUID JETS**
- Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 1 of 4 – 339
- Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 2 of 4 – 339
- Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 3 of 4 – 340
- Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 4 of 4 – 339
- FLUIDS**
- ZENO: A critical fluid light scattering experiment – 342
- FLY BY WIRE CONTROL**
- Dryden and transonic research – 1
- FLYBY MISSIONS**

## **GLOBULAR CLUSTERS**

Microlensing: Globular Cluster M22 Video File – 385

STS-67 mission highlights resource tape – 48

## **GLOVES**

STS-27 crew fire training and glove molding – 364

## **GOES 4**

The 1980 highlights – 413

## **GOES 7**

Atlas Centaur/GOES-J News Conference – 155

## **GOES 8**

Atlas Centaur/GOES-J News Conference – 155

## **GOES 9**

Atlas Centaur/GOES-J News Conference – 155

GOES 9 Spacecraft at Astrotech Plus Exterior and Logo – 325

## **GOES SATELLITES**

Atlas Centaur 77 GOES-J Mated to Centaur at Cape Canaveral Air Station Complex 36B – 33

Cooler Deployment, GOES J on ATLAS – 341

## **GOVERNMENT/INDUSTRY RELATIONS**

Malcolm Baldrige National Quality Award winners 1989 – 377

NIST Automated Manufacturing Research Facility (AMRF): March 1987 – 340

NIST: Information management in the AMRF – 379

Quest for excellence 5 – 376

STEP: A future vision, today – 377

The second giant leap – 376

## **GRAIN BOUNDARIES**

STS-26 SSIP briefing – 338

## **GRAND TOURS**

And then there was Voyager – 392

## **GRAVITATIONAL EFFECTS**

From undersea to outer space: The STS-40 jellyfish experiment – 44

Galileo Earth Moon Flyby – 399

Life sciences program – 356

Living in space – 365

Newton in space – 371

Spaceship Skylab: Wings of Discovery – 334

STS-42 Preflight Background Briefing Life Sciences (MSFC) – 209

STS-54 Physics of Toys – 234

STS-72 Mission Highlights Resource Tape – 73

STS-75 Post Flight Presentation – 65

STS-78 Flight Day 6 – 78

STS-78 Flight Day 7 – 78

STS-78 Post Flight Presentation – 80

STS-80 Flight Day 5 – 91

STS-85 Day 08 Highlights – 104

STS-85 Day 09 Highlights – 105

STS-87 Mission Highlights Resources Tape – 128

STS-90 Day 11 Highlights – 122

STS-93 Flight Day 4 Highlights and Crew Activities – 138

STS-94 Day 06 Highlights – 101

STS-95 Day 02 Highlights – 124

STS-95 Day 08 Highlights – 124

Tethered satellite: Forces and motion – 321

Toys in space, 2 – 46

## **GRAVITATIONAL FIELDS**

Mars observer mission: Mapping the Martian world – 396

## **GRAVITATIONAL LENSES**

Microlensing: Globular Cluster M22 Video File – 385

## **GRAVITATIONAL PHYSIOLOGY**

All systems go! – 47

Life sciences program – 356

Living well in space: Ensuring crew capability – 358

Starfire I/ Consort III Launch – 329

STS-42 Preflight Background Briefing Life Sciences (MSFC) – 209

STS-67 post flight presentation – 47

## **GRAVITATION**

Defying gravity – 338

STS-81 Flight Day 7 – 86

## **GREECE**

The tunnels of Samos – 371

## **GREENHOUSE EFFECT**

Forest fire study – 351

Global Greenhouse Expedition – 351

New Frontiers in Climate Research – 355

## **GROUND BASED CONTROL**

Apollo 11 Facts Project [Mission Control During Spacecraft Recovery] – 21

New Mission Control Center Briefing – 17

STS-111/Endeavour/ISS UF2 Landing with Playbacks – 24

STS-26 missions highlight resource tape – 41

STS-47/Vice President Dan Quayle's Visit to KSC for Launch – 212

STS-60 Firing Room Activities – 234

STS-69 Launch/Composite of Breakfast, Suiting, and Firing Room Activities – 236

STS-85 Day 09 Highlights – 105

## **GROUND HANDLING**

Atlas SOHO Booster and Centaur Erection – 326

Atlas SOHO Wet Dress Rehearsal – 33

Atlas-SOHO Propulsion Unit and Electrical Module Uncrating at SAEF-2 – 33

STS-103 HST Hubble Hardware Arrival – 149

STS-103 Payload Removal From Shipping Canister PHSF: Discovery Hubble Repair Mission – 30

STS-103 Rollout From VAB – 149

STS-103 Rollover to VAB From OPF#1: Discovery Hubble Mission – 149

STS-31: Hubble Space Telescope Lift to Vertical – 179

STS-39 Discovery in the VAB and Columbia Tow From HB-2 – 198

STS-39 Discovery Rollback to the OPF High Bay #2 (Shots of Doors) – 198

STS-39 IBSS SPASS II Rotation and Installation – 198

STS-96: SPACEHAB Double MOD into PGHM at Launch Complex 39B – 161

## **GROUND OPERATIONAL SUPPORT SYSTEM**

New Mission Control Center Briefing – 17

## **GROUND STATIONS**

ASTRO-1 to explore invisible universe – 334

Goldstone – 30

STS-37: Downlinks M. E. T. – 188

## **GROUND SUPPORT EQUIPMENT**

Delta XTE Lift and Mate at Complex 17A – 328

Delta XTE Moved from Hangar M to Complex 17 at Cape Canaveral Air Station – 324

Delta XTE Moved to Vertical at Cape Canaveral Air Station Hangar AO – 324

STS-103 Discovery: Hubble Servicing Mission Press Showing PHSF – 148

## **GROUND SUPPORT SYSTEMS**

Apollo 11 Facts Project [Tracking] – 21

Apollo 13: Houston, we've got a problem – 48

Space Shuttle: Ground Support – 248

## **GROUND TESTS**

STS-41G TCDDT – 139

## **GROUND-AIR-GROUND COMMUNICATION**

STS-35 mission highlights resource tape – 42

STS-68 mission highlights resource tape – 14

STS-71 Shuttle/Mir flight: Day 4 – 49

STS-71 Shuttle/Mir flight: Day 7 – 49

STS-71 Shuttle/Mir flight: Day 8 – 49

STS-73 flight day 14 – 62

- STS-73 flight day 4 – 59
- STS-73 flight day 5 – 60
- STS-73 flight day 6 – 60
- STS-73 flight day 7 – 60
- STS-73 flight day 8 – 60

STS-109/Columbia/HST Pre-Launch Activities/Launch On Orbit-Landing-Crew Egress – 335

STS-31 HST deploy sim in SMS and MOCR – 28

STS-31: Hubble Discovery Payload Doors Closing – 182

STS-31: Hubble HST Science – 180

STS-31: Hubble in VPF Lift to Work Platform – 181

STS-31 Hubble space telescope deploy: Training at MDF with Hawley – 28

STS-31: Hubble Space Telescope Lift to Vertical – 179

STS-31: Hubble Space Telescope Post Launch Press Conference from Kennedy Space Center – 187

STS-31 mission highlights resource tape – 41

STS-31 Mission Highlights Resource Tape – 180

STS-31: Mission Highlights Resource Tape – 190

STS-31 Post-Flight Conference – 40

STS-82 Day 02 Highlights – 94

STS-82 Day 03 Highlights – 94

STS-82 Day 07 Highlights – 93

STS-82 Day 08 Highlights – 93

STS-82 Day 09 Highlights – 93

STS-82 Day 10 Highlights – 94

STS-82 Mission Highlight Presentation – 95

STS-82 Post Flight Presentation – 95

STS-93 Crew Interview: Jeff Ashby – 155

STS-95 Mission Highlights Resources Tape – 130

The 1979 highlights – 390

The 1982 highlights – 412

The four great observatories – 381

## HUMAN BEHAVIOR

Astro smile – 38

STS-78 Flight Day 11 – 78

STS-78 Flight Day 12 – 81

## HUMAN BODY

All systems go! – 47

STS-78 Flight Day 11 – 78

STS-78 Flight Day 12 – 81

STS-78 Flight Day 13 – 78

## HUMAN FACTORS ENGINEERING

Human factor studies – 26

## HUMAN PERFORMANCE

Human factor studies – 26

STS-78 Flight Day 8 – 81

## HURRICANES

Hurricane Andrew mission – 355

## HYDRAULIC EQUIPMENT

STS-31: APU Controller Removal – 179

STS-55 Hydraulic Work in Aft Section of Columbia – 230

- STS-76 Flight Day 2 – 65
- HYDRODYNAMICS**  
Langley's 50th year – 413  
Riblets: New speed technology – 342
- HYDROGEN**  
STS-36: Hydrogen Turbo Pump Removal Preps – 347
- HYDROLOGY**  
The tunnels of Samos – 371
- HYPERSONIC FLIGHT**  
Hyper-X Model Testing with Animation – 7  
X-43 Composite Tape – 185
- HYPERSONIC INLETS**  
Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test – 342
- HYPERSONIC WIND TUNNELS**  
Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test – 342
- HYPERVELOCITY GUNS**  
High velocity gas gun – 318
- HYPERVELOCITY IMPACT**  
Comet impact 1994 animation reel – 385  
Comet Shoemaker-Levy Impact: Briefing – 387  
Shoemaker-Levy Comet Impact on Jupiter Briefing From JPL – 400  
Shoemaker-Levy Comet Impact with Jupiter Press Briefing – 398
- HYPOTHETICAL PLANETS**  
Searching for Planets Around other Stars – 384
- ICE FORMATION**  
Galileo Science Update Europa Unveiled – 89
- ICE PREVENTION**  
Icing research tunnel – 10  
WHIPICE – 3
- ICE**  
Plentiful Water Detected in Mars Northern Hemisphere – 407
- IGNITION**  
STS-43 TCDT – 212  
STS-77 Flight Day 1 – 74  
STS-81 Flight Day 1 – 91  
STS-82 Day 01 Highlights – 94  
STS-84 Day 01 Highlights – 100  
STS-84 Mission Highlights Resource Tape – 104  
STS-86 Day 01 Highlights – 108  
STS-88 Day 01 Highlights – 127  
STS-90 Mission Highlights Resource Tape – 121  
STS-94 Mission Highlights Resource Tape – 105
- STS-99 Countdown Status Briefing – 174
- IMAGE RESOLUTION**  
Programmable Remapper project – 369
- IMAGES**  
Colliding Galaxies: Hubble Space Telescope – 386  
Mars Global Surveyor Images – 404  
Mars Global Surveyor MOC Images – 403  
Mars Images MOC2-106 through 109 – 404  
NASA images 12 – 391  
NASA images 13 – 391
- IMAGING RADAR**  
STS-30: Flight Summary – 187
- IMAGING TECHNIQUES**  
Beyond Earth's Boundaries – 414  
Glacier Bay, Alaska, from the Ground, Air, and Space – 349  
HST Briefing: HST Science Overview – 383  
Medical imaging – 378  
PMMW Camera TRP – 344  
Refocusing space technology – 379  
STS-47 mission highlights resource tape – 54  
STS-67 mission highlights resource tape – 48  
STS-93 Flight Day 2 Highlights and Crew Activities – 137  
STS-93 Flight Day 3 Highlights and Crew Activities – 137  
STS-93 Flight Day 4 Highlights and Crew Activities – 138
- IMPACT TESTS**  
STS-34: JPL RTG Safety Tests – 183
- IMPROVEMENT**  
STS-101: Atlantis Orbiter Upgrade Briefing – 194
- IMP**  
The 1971 highlights – 412
- IN SITU MEASUREMENT**  
In-situ monitoring of crystal growth using MEPHISTO – 338
- INDEXES (DOCUMENTATION)**  
The future of bibliographic standards in a networked information environment – 379
- INDIAN OCEAN**  
Shuttle Earth Views, 1994 – 349
- INDONESIA**  
Shuttle Earth Views, 1994 – 349
- INDUSTRIAL PLANTS**  
NIST Automated Manufacturing Research Facility (AMRF): March 1987 – 340
- INDUSTRIES**  
Finding fish from above – 348  
From space to Earth – 379  
Quest for excellence 5 – 376
- INERTIAL UPPER STAGE**  
Inertial Upper Stage – 319  
STS-26 generic integrated IUS deploy simulation – 27  
STS-30 Magellan IUS/EVA training in WETF – 360  
STS-43 IUS Lift to Workstand at the VPF – 203  
STS-54 IUS Removal from Canister to Test Cell at VPF – 233  
STS-93: Crew Interview - Cady Coleman – 158  
STS-93: Crew Interview - Steve Hawley – 158
- INFESTATION**  
Assisting wine growers – 356
- INFLATABLE SPACECRAFT**  
STS-77 Flight Day 2 – 76  
STS-77 Flight Day 3 – 74  
STS-77 Flight Day 5 – 75
- INFLATABLE STRUCTURES**  
STS-77 Flight Day 2 – 76  
STS-77 Flight Day 3 – 74  
Wind Tunnel Tests of an Inflatable Airplane – 2
- IN-FLIGHT SIMULATION**  
STS-96 Crew Training – 132
- INFORMATION MANAGEMENT**  
NIST: Information management in the AMRF – 379  
STI: Managing a universe of information – 378
- INFORMATION SYSTEMS**  
NASA Spacelink computer – 367
- INFORMATION TRANSFER**  
STS-93: Crew Interview - Cady Coleman – 158  
STS-93: Crew Interview - Steve Hawley – 158
- INFRARED INSTRUMENTS**  
HST Briefing: HST Science Overview – 383
- INFRARED INTERFEROMETERS**  
STS-99 Crew Interviews: Kevin R. Kregel – 146  
STS-99 Crew Interviews: Mamoru Mohri – 147
- INFRARED RADAR**  
STS-99 Crew Interviews: Gorie – 148
- INFRARED RADIATION**  
STS-109/Columbia/HST Pre-Launch Activities/Launch On Orbit-Landing-Crew Egress – 335
- INFRARED RADIOMETERS**  
Testing the waters from space – 348

## **INGRESS (SPACECRAFT PASSAGE-WAY)**

TCDT STS-99 Crew at FSS/White Room – 173

## **INJECTORS**

Improved Optical Techniques for Studying Sonic and Supersonic Injection into Mach 3 Flow – 344

## **INLET FLOW**

Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test – 342

## **INORGANIC COATINGS**

Restoring Miss Liberty – 338

## **INSECTS**

Combating malaria – 348

## **INSPECTION**

Airline safety and economy – 3

KSC technology: Automated orbiter window inspection system – 44

STS-103 HST Blacklight and Whitelight Inspections – 148

STS-103 Hubble Inspection with Astronauts at Payload Hazardous Servicing Facility (PHSF) – 151

STS-26: O-Ring Installation and Inspection – 140

STS-26: Preparations for Launch – 143

STS-26 SRB LRFT Forward Center Segment Joint Inspection – 139

STS-36 : Turbo Pump Deinstalled and Being Inspected – 346

STS-40: Hinge Inspection – 195

STS-41: Discovery Payload Bay Door Investigation – 196

STS-43 TDRS-E Sharp Edge Inspection at VPF – 220

STS-45 Atlas-1 Compiled Processing Footage – 228

STS-93 CEIT with crew in the OPF-3 – 151

STS-93: CEIT with Crew in the OPF-3 – 160

STS-95: Post Landing and Crew Walkaround of the Orbiter at the Shuttle Landing Facility – 160

## **INSTALLING**

Delta XTE Fairing Installation at Complex 17-B CCAS – 325

International Space Station Video Progress Report – 332

ISS Animation Resource Reel – 331

SOHO Solid Rocket Booster Installation – 337

STS-100 Crew Interview: Chris Hadfield – 245

STS-100 Crew Interview: Jeff Ashby – 244

STS-100 Crew Interview: John Phillips – 244

STS-100 Crew Interview: Kent Rominger – 244

STS-100 Crew Interview: Scott Parazynski – 244

STS-100 Crew Interview: Umberto Guidoni – 243

STS-100 Crew Interview: Yuri Lonchakov – 245

STS-100 Mission Highlights Resource Tape – 258

STS-101: Crew Activity Report / Flight Day 6 – 192

STS-102 Crew Activity Report/Flight Day 4 Highlights – 243

STS-104 Flight Day 7 Highlights – 256

STS-112 Crew Interviews: Yurchikhin – 281

STS-26: O-Ring Installation and Inspection – 140

STS-39 IBSS SPASS II Rotation and Installation – 198

STS-41 Ulysses Compiled Flow Tape – 217

STS-46/Eureca Guidance Installation/Astronaut Inspection – 210

STS-47/Spacelab-J Installation into Payload Bay of Endeavour OPF HB-3 – 210

STS-50 Columbia/EDO Plate Installation – 222

STS-59 Endeavour Space Radar Lab I Antenna Installed on Pallet – 232

STS-92 Mission Highlights Resource Tape – 260

STS-93: Crew Watch the Installation of Chandra's Solar Panel in the VPF – 157

STS-97 Crew Activity Report/Flight Day 4 Highlights – 214

STS-98 Crew Activity Report/Flight Day 4 Highlights – 239

STS-98 Crew Activity Report/Flight Day 6 Highlights – 241

XTE Solid Motor Installation at Pad 17-A, Cape Canaveral Air Station – 336

## **INSTRUCTORS**

NEWEST 1990 no. 4007 – 375

Taecannautics: Sharing the dream – 372

Teacher in space – 359

## **INSULIN**

New insulin pump – 357

## **INTEGRATED MISSION CONTROL CENTER**

STS-47/Vice President Dan Quayle's Visit to KSC for Launch – 212

## **INTEGRATED TRUSS STRUCTURE S1**

STS-112 Crew Interviews - Wolf – 289

STS-112 Crew Interviews: Ashby – 280

STS-112 Crew Interviews: Melroy – 286

STS-112 Crew Interviews: Yurchikhin – 281

STS-112 Flight Day 2 Highlights – 299

STS-112 Flight Day 4 Highlights – 291

STS-112 Flight Day 7 Highlights – 298

STS-112 Flight Day 8 Highlights – 298

STS-112 Mission Highlights Resource, Part 3 of 3 – 311

STS-112 Mission Highlights Resource Tape Part 2 of 3 – 310

STS-112/Atlantis/ISS 9A Pre-Launch - Launch - On-Orbit - Landing - Crew Egress – 312

## **INTELSAT SATELLITES**

Endeavour: Now and then – 46

Houston, I think we've got a satellite – 321

INTELSAT V-A (F-10) Launch – 36

STS-49 Endeavour/Breakfast/Suit-up/Depart O&C/Launch/On-Orbit/Landing with ISOS – 219

STS-49 Endeavour/Intelsat Briefing – 226

The 1970 highlights – 412

## **INTERACTING GALAXIES**

Quasar Host Galaxies/Neptune Rotation/Galaxy Building Blocks/Hubble Deep Field/Saturn Storm – 388

## **INTERNATIONAL COOPERATION**

International food research project – 362

Meteor 3/TOMS launch of 15 August 1991 in Plesetsk, USSR – 31

Mir 18 post flight presentation – 322

STS-47 mission highlights resource tape – 54

STS-75 Flight Day 1 – 66

STS-75 Flight Day 2 – 71

STS-75 Flight Day 3 – 66

STS-88 Crew Interview: Frederick 'Rick' Sturckow – 128

STS-88 Crew Interview: Jerry Ross – 130

STS-88 Crew Interview: Nancy Currie – 129

STS-88 Crew Interview: Robert Cabana – 130

STS-88 Day 08 Highlights – 124

STS-89 Day 05 Highlights – 115

STS-96 Crew Interview: Ellen Ochoa – 152

STS-96 Crew Interview: Tamara Jernigan – 151

STS-99 / Endeavour Mission Overview – 176

Telemedicine Spacebridge – 359

USA/Russia space cooperation documentary – 320

Yohkoh Soft X-ray Telescope – [382](#)

## INTERNATIONAL SPACE STATION

Crew Activity Report / Flight Day 7 – [191](#)

Crew Activity Report/Flight Day 6 Highlights – [204](#)

Crew Interviews: Treschev – [288](#)

## LARGE SPACE STRUCTURES

STS-88 Crew Interview: Frederick 'Rick' Sturckow – 128

STS-88 Crew Interview: Jerry Ross – 130

STS-88 Crew Interview: Jim Newman – 130

STS-88 Crew Interview: Robert Cabana – 130

STS-88 Crew Interview: Sergei Krikalev – 129

STS-88 Day 10 Highlights – 126

## LASER APPLICATIONS

Lunar ranging – 381

## LASER RANGE FINDERS

Lunar ranging – 381

## LAUGHING

Astro smile – 38

## LAUNCH DATES

STS-99 / Endeavour: Launch Postponement Press Conference – 179

## LAUNCH ESCAPE SYSTEMS

STS-26 Preflight Press Briefing: Crew Escape/Crew Equipment – 153

## LAUNCH VEHICLE CONFIGURATIONS

Delta/Wind Launch – 193

WIND Mated to Delta – 327

## LAUNCH VEHICLES

Atlas SOHO Booster and Centaur Erection – 326

Crew Interviews: Treschev – 288

Historical Footage of John Glenn Friendship 7 – 132

Stardust Launch Coverage – 32

STS-104 Countdown Status Briefing – 263

STS-37 Breakfast / Ingress / Launch & ISO Camera Views – 165

STS-86 Day 01 Highlights – 108

TITAN III Launch Replays – 405

## LAUNCH WINDOWS

STS-102 Countdown Status – 246

## LAUNCHERS

AC-67/FLTSATCOM Launch with Isolated Cam Views/ Freeze of Lightning/ Press Conference – 329

HL-20 personnel launch system – 1

RADARSAT Launch – 194

STS-35: Helicopter Footage Orbiters on Both Pads A and B – 183

STS-37 Breakfast / Ingress / Launch & ISO Camera Views – 165

## LAUNCHING BASES

RADARSAT Launch – 34

STS-26/Discovery Preparations for Launch – 140

STS-35/Astro-1: Launch T-20 Through Orbit with Replays (Tape 2 of 2) – 186

STS-88 Endeavor: Crew Arrival at the Shuttle Launch Facility – 159

## LAUNCHING PADS

Atlas Centaur 77 GOES-J Mated to Centaur at Cape Canaveral Air Station Complex 36B – 33

Atlas GEOS-J Pad Activity with Blockhouse – 30

STS-103 Discovery on Pad 39B – 149

STS-26/Discovery Preparations for Launch – 140

STS-35: Helicopter Footage Orbiters on Both Pads A and B – 183

STS-37 Rollout to Pad B – 165

STS-48 Discovery Rollout to Pad – 230

STS-50 TCDT Activities – 226

XTE Solid Motor Installation at Pad 17-A, Cape Canaveral Air Station – 336

## LAUNCHING SITES

STS-26/Discovery Preparations for Launch – 140

STS-59 Endeavour RSS Rollback, Edited for Media – 231

## LAUNCHING

AC-67/FLTSATCOM Launch with Isolated Cam Views/ Freeze of Lightning/ Press Conference – 329

Challenger's night flight – 15

Delta II/Geotail Launch with Pre-Launch Activities – 32

RADARSAT Launch VAFB – 32

RADARSAT Launch – 34

Starfire I/ Consort III Launch – 329

STS 87: Meal - Suit Up - Depart O&C - Launch Columbia On Orbit - Landing - Crew Egress – 311

STS-101: Flight Day Highlights / CAR – 190

STS-111 Mission Highlights Resource Tape – 300

STS-26: Preparations for Launch – 143

STS-30 Launch Highlights and Continuous Record from T-9 Mins. – 179

STS-35/ASTRO-1: Breakfast/Suit-up /Depart O & C / Ingress / Launch with Isolated Views – 188

STS-37/Atlantis/GRO – 168

STS-45 Atlas-1/ Breakfast & Suit-Up, Depart O&C, Ingress, Launch with Isolated Views, On-Orbit Activities, and Landing with Isolated Views – 211

STS-48 mission highlights resource tape. Part 1 of 2 – 53

STS-77 Flight Day 1 – 74

STS-77 Post Flight Presentation – 85

STS-78 Flight Day 1 – 80

STS-79 Flight Day 1 – 83

STS-79 Mission Highlight Presentation – 87

STS-80 Flight Day 1 – 92

STS-80 Flight Day 6 – 91

STS-81 Flight Day 1 – 91

STS-82 Day 01 Highlights – 94

STS-82 Mission Highlight Presentation – 95

STS-83 Postflight Presentation – 95

STS-84 Day 01 Highlights – 100

STS-84 Mission Highlights Resource Tape – 104

STS-85 Day 01 Highlights – 103

STS-86 Day 01 Highlights – 108

STS-88 Day 01 Highlights – 127

STS-89 Day 01 Highlights – 113

STS-90 Mission Highlights Resource Tape – 121

STS-90 Post Flight Presentation – 119

STS-91 Flight Day 1 Highlights and Crew Activities Report – 131

STS-91 Mission Highlights Resource Tape – 119

STS-93: Columbia / Chandra Mission Overview (from JSC) – 161

STS-94 Day 01 Highlights – 101

STS-94 Mission Highlights Resource Tape – 105

STS-95 Day 01 Highlights – 124

STS-95 Post Flight Presentation – 128

STS-99 Countdown Status Briefing – 173

STS-99 Rollout to SRTM 39A – 170

The Lighthouse that Never Fails – 241

TITAN III Launch Replays – 405

## LAWS

Sines and cosines. Part 2 of 3 – 370

## LEADING EDGES

Leading-edge vortex-system details obtained on F-106B aircraft using a rotating vapor screen and surface techniques – 2

## LEAKAGE

STS-104 Flight Day 6 Highlights – 255

STS-52 Post Launch Press Conference – 229

## LECTURES

Fastener Design Course – 375

NASA Administrator Dan Goldin Speaks to the Press at the Shuttle Landing Facility After the Landing of STS-95 – 160

## LIFE SCIENCES

Life sciences program – 356

STS-102 Expedition 2 Increment and Science Briefing – 246

STS-40 crew during spacelab Sim – 28

STS-96 Post Flight Presentation – 138

## MIRANDA

Spacework 16 – 373

Voyager encounters Uranus – 390

## MISALIGNMENT

STS-80 Flight Day 12 – 88

## MISSION ADAPTIVE WINGS

Mission adaptive wing – 5

## MISSION PLANNING

Apollo 13: Houston, we've got a problem – 48

Commitment to challenge – 28

Dan Goldin Presentation: Pathway to the Future – 135

Dare to dream – 319

DELTA/WIND Pre-Launch Press Conference – 193

Galileo Science Writers' Briefing – 400

Long Duration Exposure Facility – 319

Mars observer mission: Mapping the Martian world – 396

Mars rover sample return mission – 11

STS 63 flight day 4 highlights/MIR-Shuttle rendezvous – 45

STS-26 crew participation in meetings – 11

STS-26 Preflight Press Briefing: 5 Man Crew – 156

STS-41 Ulysses: Ulysses - The Movie – 199

STS-93: Columbia / Chandra Mission Overview (from JSC) – 161

STS-99 Pre-Launch Press Conference – 175

Tethered satellite: Forces and motion – 321

## MODULES

Hey! What's Space Station Freedom? – 321

STS-74 flight day 3 – 63

## MOISTURE

Galileo Update: The Search for Water in Jupiter's Atmosphere – 403

## MOJAVE DESERT (CA)

The desert tortoise: A delicate balance – 352

## MOON

Apollo 10 - 11 – 19

Apollo 11 Facts: First Moonwalks – 23

Apollo 11 Facts [Lunar EVA] – 22

Apollo 11 Facts [Post Flight Press Conference] – 21

Apollo 11 Facts Project [On-Orbit Lunar Module Checkout] – 20

Apollo 11: For all mankind – 16

Apollo 11 highlights – 12

Apollo 11 Onboards – 22

Apollo 11: The Goddard connection – 12

Apollo 12: Pinpoint for science – 15

Apollo 14: Shepard hitting golf ball on Moon – 396

Apollo 16: Nothing so hidden – 395

Apollo Presentation – 333

Galileo Earth Moon Flyby – 399

Moon: Old and new – 396

Moonwalking Series, Episode 2: Adapting to a Space Environment – 366

New look at the old Moon – 395

STS-32 LDEF EVA training in WETF with Low and Dunbar – 362  
STS-32 onboard 16mm photography quick release – 40  
STS-69 flight day 4 highlights – 56  
STS-69 flight day 8 highlights – 57  
STS-72 Flight Day 1 – 71  
STS-72 Flight Day 3 – 71  
STS-72 Flight Day 6 – 107  
STS-72 Post Flight Presentation – 67  
STS-75 Flight Day 1 – 66  
STS-81 Post Flight Presentation – 127  
STS-85 Mission Highlights Resources Tape – 114  
STS-86 Day 05 Highlights – 109  
STS-87 Day 01 Highlights – 112  
STS-89 Day 05 Highlights – 115  
STS-89 Day 07 Highlights – 116  
STS-89 Post Flight Presentation – 116  
STS-95 Mission Highlights Resources Tape – 130
- PAYLOAD STATIONS**  
STS-30 onboard 16mm photography quick release – 41
- PAYLOAD TRANSFER**  
STS-109 Mission Highlights Resource Tape – 297  
STS-111 Flight Day 10 Highlights Replay – 286  
STS-111 Flight Day 4 Highlights Replay – 285  
STS-111 Flight Day 5 Highlights – 290  
STS-111 Mission Highlights Resource Tape – 300  
STS-40/SLS-1: Move from Work Stand to Canister – 200  
STS-89 Day 05 Highlights – 115
- PAYLOADS**  
Delta II/Geotail Launch with Pre-Launch Activities – 32  
Delta/Wind Launch – 193  
Fuse Lift to Payload Adapting Fixture (PAF) at Hangar A& – 159  
Meteor 3/TOMS launch of 15 August 1991 in Plesetsk, USSR – 31  
Rotating unbalanced mass proof-of-concept – 372  
SOHO Payload Mate to Atlas/Centaur at the SAEF 2 – 326  
Starfire I/ Consort III Launch – 329  
STS 87: Meal - Suit Up - Depart O&C - Launch Columbia On Orbit - Landing - Crew Egress – 311  
STS-102 Countdown Status – 246  
STS-102 Crew Activity Report/Flight Day 5 Highlights – 242  
STS-104 Countdown Status Briefing – 264  
STS-105 Countdown Status Briefing – 263  
STS-106 Countdown Status Briefing – 231  
STS-109 Crew Interview: Grunsfeld – 272  
STS-111 Crew Interviews: Paul Lockhart, Pilot – 294  
STS-111 Expedition Five Crew Training Clip – 293  
STS-26: Preparations for Launch – 143  
STS-31: Hubble Discovery Payload Doors Closing – 182  
STS-34: Galileo Payload Canister Doors Closing in VPF – 187  
STS-35 EVA payload training in WETF – 360  
STS-37 Payload Gamma Ray Observatory Pad-B in PCR – 169  
STS-39 Activities in Orbiter Bay – 223  
STS-48 UARS at PHSF – 234

- STS-54 Diffuse X-Ray Spectrometer – 233
- STS-55 Crew Briefing, Part 1 of 2 – 223
- STS-56 Atlas-2/Spartan O&C and Hangar AO – 220
- STS-68 mission highlights resource tape – 14
- STS-77 Flight Day 4 – 76
- STS-78 Flight Day 8 – 81
- STS-79 Flight Day 2 – 84
- STS-80 Flight Day 8 – 90
- STS-84 Day 01 Highlights – 100
- STS-84 Day 05 Highlights – 98
- STS-84 Day 06 Highlights – 98
- STS-84 Day 07 Highlights – 98
- STS-84 Post Flight Presentation – 98
- STS-85 Day 10 Highlights – 104
- STS-87 Mission Highlights Resources Tape – 128
- STS-92 Crew News Conference – 223
- STS-92 Mission Overview – 224
- STS-92 Preflight Briefings Video Feed and International Space Station Overview – 223
- STS-93 Flight Day 2 Highlights and Crew Activities – 137
- STS-94 Day 02 Highlights – 100
- STS-94 Day 03 Highlights – 100
- STS-94 Day 04 Highlights – 100
- STS-94 Day 05 Highlights – 101
- STS-94 Day 06 Highlights – 101
- STS-94 Day 07 Highlights – 102
- STS-94 Day 09 Highlights – 101
- STS-95 Post Flight Presentation – 128
- STS-97 Crew Activity Report/Flight Day 2 Highlights – 214
- STS-98 Crew Interview: Bob Curbeam – 225
- STS-98 Crew Interview: Ken Cockrell – 224
- STS-98 Crew Interview: Mark Polansky – 227
- STS-98 Crew Interview: Marsha Ivins – 225
- STS-98 Crew Interview: Tom Jones – 225
- STS-99 Atlantis, Shuttle Radar Topography Mission (SRTM) in the MPPF with Technicians working – 168
- STS-99 Payload Bay Door Opening at Pad 39A Endeavour – 169
- STS-99 Payload Door Closure in Orbiter Processing Facility #2 Endeavour (SRTM) – 151
- Titan III Mars Explorer Transfer Orbital Stage Delivery to the PHSF – 405
- Titan III Mars Observer Arrival and Un-crating at PHSF – 405
- Titan III Mars Observer Press Showing at the PHSF – 406
- Toys in space, 2 – 46
- WIND Mated to Delta – 327
- PEGASUS AIR-LAUNCHED BOOSTER**
- Hyper-X Model Testing with Animation – 7
- NASA report to education, volume 7 – 391
- Pegasus Departs from KSC – 330
- X-34 Captive Carry & Seunghee Lee Interview – 184
- PERFORMANCE TESTS**
- STS-34: JPL RTG Safety Tests – 183
- Technology test bed – 9
- PERSONNEL DEVELOPMENT**
- PET team – 376
- PERSONNEL MANAGEMENT**
- An announcement by Dan Goldin – 377
- PERSONNEL SELECTION**
- Astronauts number 1 – 359
- PERSONNEL**
- Return to flight 3, the journey continues – 376
- STS-47/Vice President Dan Quayle's Visit to KSC for Launch – 212
- PHOTOGRAPHIC EQUIPMENT**
- STS-27 crew photo training and habitation procedures – 343
- STS-30 crew photo in building 4 – 343
- STS-35 payload specialists Durrance and Parise: 70mm photo training and cabin familiarization – 344
- PHOTOGRAPHIC FILM**
- Space basic – 380
- PHOTOGRAPHS**
- STS-83 Postflight Presentation – 95
- PHOTOGRAPHY**
- National Aero-Space Plane resource reel – 5
- National Aero-Space Plane – 5
- STS-27 crew photo training and habitation procedures – 343
- STS-34 onboard 16mm photography quick release – 39
- STS-41 crew training bailout in CCT, 16mm camera class EVA prep, habitation equipment procedures, and food tasting – 29
- PHOTOVOLTAIC CONVERSION**
- Futurepath 1 – 335
- PHYSICAL EXERCISE**
- GSFC Fun Run – 357
- Living well in space: Ensuring crew capability – 358
- Lockheed Stabilizer System for space exercise equipment – 365

- STS-78 Flight Day 3 – 77
- STS-78 Flight Day 4 – 79
- STS-81 Flight Day 7 – 86
- STS-90 Day 10 Highlights – 120
- PHYSICAL FITNESS**
- Living well in space: Ensuring crew capability – 358
- PHYSICS**
- ZENO: A critical fluid light scattering experiment – 342
- PHYSIOLOGICAL EFFECTS**
- Living well in space: Ensuring crew capability – 358
- Starfire I/ Consort III Launch – 329
- PHYSIOLOGICAL RESPONSES**
- All systems go! – 47
- PHYSIOLOGICAL TESTS**
- STS-32 crew training for lower body negative pressure unit and AFE – 358
- STS-43 post flight press conference – 52
- STS-47 mission highlights resource tape – 54
- STS-48 post flight press conference – 54
- STS-67 post flight presentation – 47
- STS-70 mission highlights – 57
- STS-70 post flight presentation – 53
- STS-75 Flight Day 14 – 72
- PILOT SUPPORT SYSTEMS**
- STS-101: Atlantis Orbiter Upgrade Briefing – 194
- PILOTLESS AIRCRAFT**
- AC 67 Launch Video – 35
- PILOTS (PERSONNEL)**
- STS-97 Crew Interviews: Michael J. Bloomfield – 212
- PIONEER PROJECT**
- NASA images 11 – 389
- NASA images 9 no. 3005 – 13
- PIONEER SPACE PROBES**
- The 1968 highlights – 412
- The 1978 highlights – 411
- The 1982 highlights – 412
- PIONEER VENUS SPACECRAFT**
- Pioneer-Venus press clip – 385
- PLANETARY COMPOSITION**
- Probing the Primordial Constituents of Our Solar System – 407
- PLANETARY CRATERS**
- Magellan collection of radar calibration results – 393

## PLANETARY EVOLUTION

- Pioneer-Venus press clip – 385
- Searching for Planets Around other Stars – 384
- Spinning Stardust into Planets – 389
- Worlds Smaller than Saturn – 407

## PLANETARY GEOLOGY

- Collection of Magellan Venus radar mapping results – 396
- Exploring Mars – 389
- Magellan, Galileo, and Ulysses – 392

## PLANETARY IONOSPHERES

- Galileo Mission Science Briefing – 401

## PLANETARY MAGNETIC FIELDS

- Mars observer mission: Mapping the Martian world – 396

## PLANETARY MAPPING

- Collection of Magellan Venus radar mapping results – 396
- Mars: Five views on what is known – 392
- Mars observer mission: Mapping the Martian world – 396
- Sines and cosines. Part 2 of 3 – 370

## PLANETARY MASS

- Searching for Planets Around other Stars – 384

## PLANETARY NEBULAE

- Final Blaze of Glory – 408

## PLANETARY RINGS

- Voyager's last encounter – 391

## PLANETARY ROTATION

- Neptune encounter highlights – 390

## PLANETARY SYSTEMS

- Searching for Planets Around other Stars – 384

## PLANETS

- Spinning Stardust into Planets – 389
- Welcome to Outer Space – 17

## PLANTS (BOTANY)

- Plant research – 356

## PLASMA INTERACTIONS

- SAMPIE (Solar Array Module Plasma Interactions Experiment) – 350

## PLASMA PHYSICS

- The Plasma Universe – 381

## PLASMAS (PHYSICS)

- Delta WIND Mission Science Briefing – 18

## PLATES (TECTONICS)

- Galileo Science Update Europa Unveiled – 89
- Live from Antarctica, volume 4 – 354

## PLAYBACKS

- STS-30: TGS Isolated Video Playbacks – 187
- STS-51 Main Engine Shutdown Playbacks from OTV – 226

## PLUTO ATMOSPHERE

- NASA Today - Mars Observer Segment (Part 4 of 6) – 407

## PLUTO (PLANET)

- NASA Today - Mars Observer Segment (Part 4 of 6) – 407

## PODS (EXTERNAL STORES)

- STS-39: OMS Pod Thruster Removal/Replace – 197

## POINTING CONTROL SYSTEMS

- Rotating unbalanced mass proof-of-concept – 372

## POLAR METEOROLOGY

- Arctic ozone expedition – 350

## POLAR ORBITS

- Ulysses: A solar odyssey – 12

## POLAR REGIONS

- STS-41 Ulysses: Ulysses - The Movie – 199

## POLARIMETERS

- STS-67 post flight presentation – 47

## POLYGONS

- Similarity – 370

## POLYNOMIALS

- Polynomials – 370

## PORTABLE EQUIPMENT

- STS-96 Crew Interview: Kent Rominger – 150
- STS-96 FD Highlights and Crew Activities Report: Flight Day 06 – 134

## POSEIDON SATELLITE

- TOPEX Press Conference (2 of 2) – 330
- TOPEX/POSEIDON Launch from Guiana Space Center Aboard an Ariane 42P – 330

## POSTFLIGHT ANALYSIS

- Apollo 11 Facts [Post Flight Press Conference] – 21
- Apollo 13 Facts [Post Flight Press Conference] – 23
- STS-104 Flight Crew Post-Landing Press Conference – 264
- STS-105 Post-Landing Crew Press Conference – 264
- STS-110 Flight Day 8 Highlights – 287
- STS-110 Post Flight Presentation – 295
- STS-111 Post Flight Presentation – 296
- STS-30 Post Flight Press Conference – 178
- STS-31: Post Flight Press Conference (Tape 2 of 2) – 188
- STS-38: Post Landing News Conference – 197
- STS-45/Atlas-1 Post-Landing Science Briefing from MSFC – 209
- STS-46 post flight press conference – 63
- STS-56 Post Landing Press Conference – 224

- STS-61 mission highlights resource tape – 45

- STS-68 post flight presentation – 45
- STS-75 Post Flight Presentation – 65
- STS-84 Post Flight Presentation – 98

## POSTLAUNCH REPORTS

- STS-102 Flight Crew Post-Landing Press Conference – 247
- STS-104 Post-Launch News Conference – 264
- STS-105 Post-Launch Press Conference – 264
- STS-112 Flight Day 1 Highlights – 299
- STS-35: Post Launch News Conference – 182

- STS-46 Special Events Resource Tape, Part 1 of 2 – 225
- STS-46 Special Events Resource Tape, Part 2 of 2 – 224
- STS-47 Post-Launch News Conference – 205
- STS-51 ACTS/TOS Payload Briefing – 207
- STS-52 Post Launch Press Conference – 229
- STS-55 Post Launch Press Conference – 225
- STS-56 Post Launch Press Conference – 224
- STS-58 Video Update Day 10: Crew Press Conference and View of California Fires – 232
- STS-60 Mission Update – 233
- STS-66 post flight presentation – 45
- STS-99 Post-Launch Press Conference – 175

## POSTMISSION ANALYSIS (SPACECRAFT)

- STS-45/Atlas-1 Post-Landing Science Briefing from MSFC – 209
- STS-56 Post Landing Press Conference – 224

## POWERED LIFT AIRCRAFT

- STOVL – 6

## PREFIRING TESTS

- STS-37: TCDT Pad B Atlantis GRO (3 of 3) – 189
- STS-41G TCDT – 139

## PREFLIGHT ANALYSIS

- STS-37: TCDT Pad B Atlantis GRO (3 of 3) – 189

## PREFLIGHT OPERATIONS

- Atlas Centaur 77 GOES-J Mated to Centaur at Cape Canaveral Air Station Complex 36B – 33

Atlas GEOS-J Pad Activity with Blockhouse – [30](#)

Atlas SOHO Booster and Centaur Erection – [326](#)

Delta Near Launch Activities, Launch Complex 17B, Cape Canaveral Air Station – [328](#)

Delta XTE Spacecraft Activities at CCAS Skid Strip – [34](#)

Op. No A4495 Columbia, STS-93 Chandra - Breakfast, Suiting, and Walkout – [150](#)

SOHO Payload Mate to Atlas/Centaur at the SAEF 2 – [326](#)

STS-101: Flight Day Highlights / CAR – [190](#)

STS-103 Crew at Breakfast, Suiting, Departing O& – [148](#)

STS-105/Discovery/ISS 7A.1: Pre-Launch Activities, Launch, Orbit Activities and Landing – [314](#)

STS-109 Mission Highlights Resource Tape – [297](#)

STS-111/Endeavour/ISS UF2 Pre-Launch Activities: Launch with Playbacks – [37](#)

STS-29: TCDT – [184](#)

STS-35: Astronaut Departure – [182](#)

STS-36: Isolated Camera Breakfast Suit-up Walkout – [187](#)

STS-37 Rollout to Pad B – [165](#)

STS-37: TCDT Pad B Atlantis GRO (1 of 3) – [189](#)

STS-37: TCDT Pad B Atlantis GRO (2 of 3) – [189](#)

STS-37: TCDT Pad B Atlantis GRO (3 of 3) – [189](#)

STS-39: Payloads in Cannister at VPF – [197](#)

STS-40 SRB/MLP Rollout to Pad B – [200](#)

STS-40/SLS-1: Move from Work Stand to Canister – [200](#)

STS-83 Day 01 – [97](#)

STS-93 / Columbia Flight Crew Photo Op & QA at Pad for TCDT – [164](#)

STS-93 CEIT with crew in the OPF-3 – [151](#)

STS-93: CEIT with Crew in the OPF-3 – [160](#)

STS-93 Columbia, Chandra moved to Payload Canister in the VPF – [150](#)

STS-93: Columbia Flight Crew Arrival on FSS 195' Level, Walk Across OAA and Ingress into White Room – [157](#)

STS-93: Crew Arrival and PR Location – [161](#)

STS-99 CEIT at the OPF High Bay-2, Endeavour, SRTM Mission – [174](#)

STS-99 Crew departs SLF after TCDT – [169](#)

STS-99 Crew with Press, TCDT Crew Emergency Egress Training, Walkdown Pad 39A – [171](#)

STS-99 Prelaunch Press Briefing – [171](#)

STS-99 Rollover from OPF-2 to VAB – [169](#)

XTE Delta 2nd Stage Erection at Complex 17A, Cape Canaveral Air Station – [327](#)

#### PRELAUNCH PROBLEMS

Orbiter Umbilical Hinge Door Problem – [196](#)

STS-30 Launch Highlights and Continuous Record from T-9 Mins. – [179](#)

STS-39: OMS Pod Thruster Removal/Replace – [197](#)

STS-47 Post-Launch News Conference – [205](#)

STS-50 Countdown Status – [205](#)

STS-55 Crew Arrival – [216](#)

STS-56 Launch Attempt Press Conference – [217](#)

STS-99 / Endeavour: Launch Postponement Press Conference – [179](#)

STS-99 Countdown Status Briefing – [173](#)

STS-99 Prelaunch Press Briefing – [171](#)

STS-99 Pre-Launch Press Conference – [175](#)

#### PRELAUNCH SUMMARIES

Apollo 11 Facts Project [Prelaunch Press Conference/EVA Training] – [20](#)

Atlas/Centaur-SOHO Pre-Launch News Conference – [36](#)

Delta II/Geotail Pre-Launch Press Conference – [324](#)

Delta XTE Press Briefing – [17](#)

DELTA/WIND Pre-Launch Press Conference – [193](#)

Expedition 2 Crew Interview: Susan Helms – [231](#)

Expedition 2 Crew Interview: Yury Usachev – [231](#)

Expedition 4 Crew Interviews: Carl Walz – [265](#)

Expedition 4 Crew Interviews: Dan Bursch – [265](#)

Expedition 4 Crew Interviews: Yury I. Onufrienko – [265](#)

Expedition 5 Crew Interviews: Peggy Whitson – [280](#)

Expedition 5 Crew Interviews: Valery Korzun, Commander – [283](#)

Expedition 6 Crew Interviews: Don Pettit, Flight Engineer 2/ International Space Station (ISS) Science Officer (SO) – [282](#)

Expedition 6 Crew Interviews: Ken Bowersox CDR – [286](#)

Expedition 6 Crew Interviews: Nikolai Budarin FEI (Flight Engineer 1) – [287](#)

Galileo probe spacecraft mission to Jupiter – [391](#)

ISS Expedition 1 Pre-Launch Press Conference – [333](#)

Multi-Purpose Logistics Module Briefing – [245](#)

OV-105 Endeavour Main Engine Press Showing at VAB – [336](#)

Rollout of Endeavour at Palmdale, California (Part 1 of 2) – [216](#)

Rollout of Endeavour at Palmdale, California (Part 2 of 2) – [216](#)

STS-100 Crew Interview: Chris Hadfield – [245](#)

## QUASARS

Hubble Images from 1996 – 383

Quasar Host Galaxies/Neptune Rotation/Galaxy Building Blocks/Hubble Deep Field/Saturn Storm – 388

## RADAR ANTENNAS

STS-59 Endeavour Space Radar Lab I Antenna Installed on Pallet – 232

STS-99 Crew Activities Report / Flight Day 08 Highlights – 167

## RADAR GEOLOGY

STS-99 / Endeavour SRTM Science Briefing and Applications from JSC – 176

## RADAR IMAGERY

Collection of Magellan Venus radar mapping results – 396

Magellan collection of radar calibration results – 393

STS-30: Flight Summary – 187

STS-99 / Endeavour SRTM Science Briefing and Applications from JSC – 176

STS-99 Crew Activities Report / Flight Day 06 Highlights – 167

STS-99 Crew Activities Report / Flight Day 07 Highlights – 167

STS-99 Crew Interviews: Gerhard P.J. Thiele – 149

STS-99 Crew Interviews: Gorie – 148

STS-99 Crew Interviews: Janice E. Voss – 149

STS-99 Crew Interviews: Kevin R. Kregel – 146

STS-99 Crew Interviews: Mamoru Mohri – 147

STS-99 Flight Day Highlights and Crew Activities Report – 163

STS-99: Post Flight Presentation – 183

STS-99 Post-Launch Press Conference – 175

STS-99 SRTM Moved from the SSPF to the OPF #2 – 173

## RADAR MAPS

Collection of Magellan Venus radar mapping results – 396

STS-99 Crew Activities Report / Flight Day 08 Highlights – 167

STS-99 Crew Interviews: Gerhard P.J. Thiele – 149

STS-99 Crew Interviews: Janice E. Voss – 149

STS-99 Crew Interviews: Kevin R. Kregel – 146

STS-99 Crew Interviews: Mamoru Mohri – 147

STS-99 Flight Day Highlights and Crew Activities Report – 163

STS-99: Post Flight Presentation – 183

STS-99 SRTM Moved from the SSPF to the OPF #2 – 173

## RADAR TRACKING

High resolution microwave survey – 341

## RADARSAT

RADARSAT Launch VAFB – 32

RADARSAT Launch – 34

## RADIATION BELTS

The Plasma Universe – 381

## RADIATION EFFECTS

Life sciences program – 356

STS-68 mission highlights resource tape – 14

## RADIATION MEASURING INSTRUMENTS

Atlas 2 Animation – 35

## RADIATION PROTECTION

CRRES to blaze new trails in orbit – 352

## RADIATION

Global climate study – 352

## RADIO ASTRONOMY

High resolution microwave survey – 341

## RADIO COMMUNICATION

High resolution microwave survey – 341

STS-67 post flight presentation – 47

STS-70 mission highlights – 57

## RADIO CONTROL

Radio controlled for research – 8

## RADIO RELAY SYSTEMS

STS-70 mission highlights – 57

## RADIO SIGNALS

Living Places in Other Solar Systems – 366

## RADIO TELESCOPES

The quest for contact – 366

## RADIOISOTOPE BATTERIES

STS-34: JPL RTG Safety Tests – 183

## RAINSTORMS

Wind shear and heavy rain – 355

## RAIN

Wind shear and heavy rain – 355

## RAYLEIGH SCATTERING

Improved Optical Techniques for Studying Sonic and Supersonic Injection into Mach 3 Flow – 344

## REACTION WHEELS

STS-109 Flight Day 5 Highlights – 274

STS-82 Day 06 Highlights – 93

## READING

Enhancing sight – 372

## RECEIVERS

STS-99 Countdown Status Briefing – 174

## RECONSTRUCTION

Unitary plan wind tunnel landmark dedication and revitalization – 412

## RECORDS MANAGEMENT

Monitoring history – 378

## RECORDS

Monitoring history – 378

## RECOVERABLE LAUNCH VEHICLES

X-33, X-34, X-37 Press Conference (Tape 2) – 185

## RECREATION

Ban Joule Hi-8 Footage – 236

GSFC Fun Run – 357

## RECYCLING

Recycling in space – 360

## REENTRY

STS-103 Crew Activities Report: Flight Day 7 Highlights – 145

STS-71/Mir/Spacelab Landing at KSC – 177

## REFINING

ISS Node 1 and 2 Resource Reel – 23

## REFRACTORY MATERIALS

High temperature NASP engine seal development – 346

## REFRIGERATORS

STS-109/Columbia/HST Pre-Launch Activities/Launch On Orbit-Landing-Crew Egress – 335

## REFUELING

Delta II/Geotail Launch with Pre-Launch Activities – 328

STS 41-G: Mission Highlights – 140

## REGULATIONS

Standards for excellence – 376

## RELIABILITY

Malcolm Baldrige National Quality Award winners 1989 – 377

Quest for excellence 5 – 376

STS-34: JPL RTG Safety Tests – 183

## RELIEF MAPS

STS-99 Crew Activities Report / Flight Day 07 Highlights – 167

STS-99 Crew Activities Report / Flight Day 08 Highlights – 167

STS-99 Crew Interviews: Gerhard P.J. Thiele – 149

STS-99 Crew Interviews: Gorie – 148

STS-99 Crew Interviews: Janice E. Voss – 149

STS-99 Crew Interviews: Kevin R. Kregel – 146

STS-99 Flight Day Highlights 03 and Crew Activities Report – 164

STS-99 SRTM Moved from the SSPF to the OPF #2 – 173

## REMOTE CONTROL

Dante's volcano – 353

Perseus: Global watcher – 5

## REMOTE HANDLING

STS-41 VCS training with mission specialist Bruce Melnick and Bill Shepard – 346

## REMOTE MANIPULATOR SYSTEM

Robotics Demo Peer Group review – 346

Robotics – 43

STS-102 Crew Training – 241

STS-108 Flight Day 2 Highlights – 267

STS-26 EVA rescue training – 27

STS-72 Flight Day 3 – 71

STS-72 Flight Day 6 – 107

STS-82 Day 02 Highlights – 94

STS-86 Day 08 Highlights – 109

STS-87 Day 03 Highlights – 110

## REMOTE SENSING

A collection of The Movies – 348

Assisting wine growers – 356

Combating malaria – 348

Insight to global change: EOS/SAR mission – 352

Refocusing space technology – 379

STS-99 / Endeavour SRTM Science Briefing and Applications from JSC – 176

Views from space – 347

## REMOTE SENSORS

STS-103 Crew Activity Report/Flight Day 4 Highlights – 147

## REMOVAL

STS-36: Hydrogen Turbo Pump Removal Preps – 347

STS-49 Endeavour/Removal of Engine 2 at Pad B – 218

## RENDEZVOUS SPACECRAFT

STS 63 flight day 4 highlights/MIR-Shuttle rendezvous – 45

STS-96 FD Highlights and Crew Activities Report: Flight Day 06 – 134

STS-96 FD Highlights and Crew Activities Report: Flight Day 07 – 134

STS-96 FD Highlights and Crew Activities Report: Flight Day 08 – 134

## RENDEZVOUS

STS-49 Endeavour/Intelsat Briefing – 226

## REPLACING

STS-101: Crew Interview - Jim Halsell – 190

STS-103 Crew Interviews: Claude Nicollier – 9

STS-103 Crew Interviews: Curtis Brown – 142

STS-103 Crew Interviews: Jean-Francois Clervoy – 142

STS-103 Crew Interviews: Scott Kelly – 142

STS-103 Crew Interviews: Steven Smith – 144

STS-103 Mission Highlights Resource Tape (2 of 2) – 178

STS-39: OMS Pod Thruster Removal/Replace – 197

STS-43 Atlantis Main Engine #3 Computer Controller Removal and Replacement – 209

## REPORTS

DELTA/WIND Pre-Launch Press Conference – 193

## REPTILES

Dino Fest – 356

## RESCUE OPERATIONS

Life saving satellites – 3

STS-26 EVA rescue training – 27

STS-49 Endeavour/Breakfast/Suit-up/Depart O&C/Launch/On-Orbit/Landing with ISOS – 219

## RESEARCH AIRCRAFT

F-104 resource tape – 6

F-15 835 (HIDEC) resource tape – 6

F-16XL resource tape – 6

F-18 HARV presentation for industry – 6

NACA/NASA: X-1 through X-31 – 1

Ozone hole – 351

Radio controlled for research – 8

Research excitation system flight testing – 6

The world's largest wind tunnel – 9

VSTOL Systems Research Aircraft (VSRA) Harrier – 4

X-29: Research aircraft – 5

X-31 resource tape – 7

## RESEARCH AND DEVELOPMENT

Aerospace test facilities at NASA LERC Plumbrook – 29

Back to propellers – 8

Dryden summer 1994 update – 414

Highlights, 1981 – 409

NASA images 6 – 3

NIST Automated Manufacturing Research Facility (AMRF): March 1987 – 340

Return to flight 1 – 376

STS-97 ISS Science Payloads Briefing – 221

Student researchers – 372

The 1965 highlights – 410

The 1969 highlights – 410

The 1972 highlights – 410

Theodore von Karman Lecture Series: 'Technologies of the Future--Today' – 380

X-34 Captive Carry & Seunghee Lee Interview – 184

X-38 Phase 3 Drops V-132 FF#3 – 184

## RESEARCH FACILITIES

A future view of computational science in aircraft – 1

Activities of the NASA centers – 347

Aerospace test facilities at NASA LERC Plumbrook – 29

Building 46 grand opening – 27

Commitment to challenge – 28

Cray Y-MP – 367

Dryden overview for schools – 10

Dryden tour tape, 1994 – 10

Dryden year in review: 1992 – 413

GFSC-TV demo tape – 26

John C. Stennis Space Center overview – 29

Johnson Space Center and downtown Houston, Texas aeriels – 344

Langley overview – 10

Live from Antarctica: Then and now – 353

Lunar Curatorial Facility resource – 27

Manned vehicle systems research facility – 27

NACA/NASA history at Dryden, part 1 and 2 – 413

NASA images 6 – 3

NIST Automated Manufacturing Research Facility (AMRF): March 1987 – 340

NIST: Information management in the AMRF – 379

Stock footage of Goddard Space Flight Center and Headquarters – 26

STS-114 Crew Interview: James M. Kelly, PLT – 307

The Space Shuttle: America's team reaching for the future – 52

The world's largest wind tunnel – 9

The world's most powerful computer – 367

## RESEARCH PROJECTS

Aerospace test facilities at NASA LERC Plumbrook – 29

Chemical engineering: Measurements for a competitive age – 337

Dryden summer 1994 update – 414

Hernandez Engineering: NASA – 322

Langley's 50th year – 413

NACA/NASA: X-1 through X-31 – 1

NASA: The state of the agency – 377

Shaping tomorrow – 375

## RESEARCH VEHICLES

F-18 high alpha research vehicle resource tape – 7

FIDO - Video File – 371

X-34 Captive Carry & Seunghee Lee Interview – 184

X-38 Phase 3 Drops V-132 FF#3 – 184

**RESEARCH**  
Dryden and transonic research – 1

**RESOURCES MANAGEMENT**  
EOCAP: Commercial Earth observations program – 348

**RESTORATION**  
Restoring Miss Liberty – 338

**RETRIEVAL**  
EVA retriever demonstration – 346

**RETURN TO EARTH SPACE FLIGHT**  
Delta II Stardust Pre-Launch Press – 31  
Mars Climate Orbiter – 322  
STS-96 FD Highlights and Crew Activities Report: Flight Day 09 – 135  
STS-96 FD Highlights and Crew Activities Report: Flight Day 10 – 134

**REUSABLE LAUNCH VEHICLES**  
X-33, X-34, X-37 Press Conference (Tape 2) – 185

**REVIEWING**  
STS-96 Discovery, Bench Review and SPACEHAB Familiarization at SPACEHAB – 162

**REVISIONS**  
STS-101: Atlantis Orbiter Upgrade Briefing – 194

**RIBLETS**  
Riblets: New speed technology – 342

**RIGID STRUCTURES**  
STS-99 Crew Activities Report / Flight Day 11 Highlights – 166

**RISK**  
STS-80 Flight Day 13 – 88

 STS-87 Day 08 Highlights – 111  
 STS-90 Day 05 Highlights – 122  
 STS-90 Day 06 Highlights – 122  
 STS-90 Day 11 Highlights – 122  
 STS-93: Columbia / Chandra Mission Overview (from JSC) – 161  
 STS-93 Columbia, Chandra moved to Payload Canister in the VPF – 150  
 STS-93: Columbia/Chandra Crew Press Conference – 159  
 STS-96 Mission Highlights – 136  
 STS-96: SPACEHAB Double MOD into PGHM at Launch Complex 39B – 161  
 STS-99 / Endeavour SRTM Science Briefing and Applications from JSC – 176  
 STS-99 Crew Arrival for Launch of SRTM, Endeavour – 169  
**SPACE SHUTTLES**  
 A New Beginning – 236  
 Apollo 17: On the shoulders of giants – 395  
 GAS highlights, 1988 – 11  
 Houston, I think we've got a satellite – 321  
 Langley's 50th year – 413  
 Liftoff to learning: Assignment space – 52  
 Mir 18 post flight presentation – 322  
 Robotics – 43  
 SAMS (space acceleration measurement system) – 334  
 Shuttle Earth Views, 1994 – 348  
 Simulated Shuttle no. 4008 – 44  
 Space basic – 380  
 Space Shuttle: Ground Support – 248  
 Space Shuttle highlights – 39  
 Space Shuttle Propulsion – 248  
 Spacework 16 – 373  
 STS 63 flight day 4 highlights/MIR-Shuttle rendezvous – 45  
 STS 63: Post flight presentation – 46  
 STS-101: Flight Day Highlights / CAR – 190

#### **SPACE TRANSPORTATION**

Delta XTE Moved from Hangar M to Complex 17 at Cape Canaveral Air Station – [324](#)  
Delta XTE Moved to Vertical at Cape Canaveral Air Station Hangar AO – [324](#)

#### **SPACE VEHICLE CHECKOUT PROGRAM**

Galileo probe spacecraft mission to Jupiter – [391](#)  
STS-30 Launch Highlights and Continuous Record from T-9 Mins. – [179](#)  
STS-31 crew training: firefighting, food tasting, EVA prep and post – [28](#)

#### **SPACEBORNE ASTRONOMY**

ASTRO-1 to explore invisible universe – [334](#)  
Best of Hubble Space Telescope – [383](#)  
Cosmic Background Radiation Explorer (COBE) – [320](#)  
Delta XTE Spacecraft Removed from Transfer Cannister at Hangar AO, CCAS – [325](#)  
Hubble Space Telescope Briefing: HST Science Overview – [384](#)  
Magellan Press Conference (2 of 2) – [191](#)  
NASA space astronomy update 6 – [382](#)  
Space astronomy update – [382](#)  
STS-30 Post Flight Press Conference – [178](#)  
STS-31: Hubble HST Science – [180](#)  
STS-35: ASTRO-1 Assembly at O& – [185](#)  
STS-35: Mission Highlights Resource Tape – [186](#)

STS-35/ASTRO-1: Day-1 Downlinks – [188](#)  
STS-35/Astro-1: Launch T-20 Through Orbit with Replays (Tape 2 of 2) – [186](#)  
STS-37: Gamma Ray Observatory (2 of 2) – [409](#)  
STS-37 Gamma Ray Observatory Arrival and VPF Activities – [409](#)  
STS-67 mission highlights resource tape – [48](#)  
STS-67 post flight presentation – [47](#)  
STS-69 postflight presentation – [58](#)  
STS-93/ Chandra Science Briefing – [168](#)  
STS-93 Crew Interview: Jeff Ashby – [155](#)  
STS-93 Mission Highlights Resource Tape – [141](#)

#### **SPACEBORNE EXPERIMENTS**

All systems go! – [47](#)  
Challenger's night flight – [15](#)  
Endeavor: Now and then – [46](#)  
Expedition 3 Crew Interview: Frank Culbertson, Jr. – [256](#)  
Expedition 3 Crew Interview: Mikhail Turin – [256](#)  
Expedition 3 Crew Interview: Vladimir Dezhurov – [256](#)  
Expedition 6 Crew Interviews: Don Pettit, Flight Engineer 2/ International Space Station (ISS) Science Officer (SO) – [282](#)  
Expedition 6 Crew Interviews: Ken Bowersox CDR – [286](#)  
Flight Day 2 Highlights – [304](#)  
GAS highlights, 1988 – [11](#)  
Go for EVA – [47](#)  
In-situ monitoring of crystal growth using MEPHISTO – [338](#)  
International Space Station Overview – [331](#)  
Living in space – [365](#)  
Long Duration Exposure Facility is coming home – [318](#)  
Mid-deck experiments, STS-26 – [337](#)  
Newton in space – [371](#)  
Science operation in space: Lessons – [42](#)  
Skylab: The first 40 days – [14](#)  
Skylab: The second manned mission. A scientific harvest – [15](#)  
Space acceleration measurement system – [374](#)  
Spacelab Life Sciences-1 – [358](#)  
Spaceship Skylab: Wings of Discovery – [334](#)  
STS 63: Post flight presentation – [46](#)

STS 87: Meal - Suit Up - Depart O&C - Launch Columbia On Orbit - Landing - Crew Egress – [311](#)  
STS Flight 64 mission highlights – [46](#)  
STS-102 Crew Activity Report/Flight Day 2 Highlights – [241](#)  
STS-102 Expedition 2 Increment and Science Briefing – [246](#)  
STS-105 Flight Day 2 Highlights – [261](#)  
STS-107 Crew Interviews: David Brown MS1 – [288](#)  
STS-107 Crew Interviews: Ilan Ramon, Mission Specialist – [295](#)  
STS-107 Crew Interviews: Kalpana Chawla MS2 – [287](#)  
STS-107 Crew Interviews: Laurel Clark, Mission Specialist – [293](#)  
STS-107 Crew Interviews: Michael Anderson, Mission Specialist – [292](#)  
STS-107 Crew Interviews: Rick D. Husband, Commander – [288](#)  
STS-107 Crew Interviews: William McCool, Pilot – [288](#)  
STS-107 Crew Training Clip – [295](#)  
STS-107 Flight Day 1 Highlights – [309](#)  
STS-107 Flight Day 10 Highlights – [306](#)  
STS-107 Flight Day 11 Highlights – [307](#)  
STS-107 Flight Day 12 Highlights – [306](#)  
STS-107 Flight Day 13 Highlights – [308](#)  
STS-107 Flight Day 14 Highlights – [308](#)  
STS-107 Flight Day 15 Highlights – [308](#)  
STS-107 Flight Day 3 Highlights – [305](#)  
STS-107 Flight Day 5 Highlights – [306](#)  
STS-107 Flight Day 6 Highlights – [308](#)  
STS-107 Flight Day 7 Highlights – [305](#)  
STS-107 Flight Day 8 Highlights – [305](#)  
STS-107 Flight Day 9 Highlights – [305](#)  
STS-107 Mission Highlights Resource, Part 2 of 4 – [316](#)  
STS-107 Mission Highlights Resource, Part 3 of 4 – [316](#)  
STS-107 Mission Highlights Resource, Part 4 of 4 – [317](#)  
STS-107 Mission Highlights Resource Tape, Part 1 of 4 – [316](#)  
STS-26 protein growth (PCG) experiment – [338](#)  
STS-26 SSIP briefing – [338](#)  
STS-29 crew with student experiment – [356](#)  
STS-30: Mission Highlights Reel – [186](#)  
STS-31 onboard 16mm photography quick release – [41](#)  
STS-37: Gamma Ray Observatory (2 of 2) – [409](#)  
STS-40 crew during spacelab Sim – [28](#)

STS-40 Get Away Special Experiment Preflight Briefing – [199](#)

STS-42 Discovery/Breakfast, Suit-Up, Depart O&C, Ingress, Launch, On-Orbit, and Landing – [209](#)

STS-42 Preflight Background Briefing Life Sciences (MSFC) – [209](#)

STS-42/Discovery/IML-1 Admiral Richard Truly Press Briefing – [200](#)

STS-43 Astronaut Interview in Space – [208](#)

STS-43 Crew Briefing – [219](#)

STS-43 post flight press conference – [52](#)

STS-44 mission highlights resource tape. Part 1 of 2 – [55](#)

STS-45 Atlas-1/ Breakfast & Suit-Up, Depart O&C, Ingress, Launch with Isolated Views, On-Orbit Activities, and Landing with Isolated Views – [211](#)

STS-46 post flight press conference – [63](#)

STS-47 mission highlights resource tape – [54](#)

STS-47 Mission Overview – [203](#)

STS-48 mission highlights resource tape. Part 1 of 2 – [53](#)

STS-48 post flight press conference – [54](#)

STS-49 CPCG – [207](#)

STS-52 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – [235](#)

STS-52 Crew Briefing – [238](#)

STS-53 Launch and Landing – [233](#)

STS-54 Physics of Toys – [234](#)

STS-55 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – [237](#)

STS-55 Crew Briefing, Part 1 of 2 – [223](#)

STS-56 Preflight Briefs/Mission Overview from MSFC – [217](#)

STS-59 mission highlights resource tape – [44](#)

STS-59 post flight presentation – [14](#)

STS-60 Discovery/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – [236](#)

STS-60 mission highlights resource tape – [44](#)

STS-60 post flight press conference – [14](#)

STS-61 post flight press conference – [14](#)

STS-62 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – [235](#)

STS-107 Flight Day 10 Highlights – 306

STS-107 Flight Day 11 Highlights – 307

STS-107 Flight Day 12 Highlights – 306

STS-107 Flight Day 3 Highlights – 305

STS-107 Flight Day 4 Highlights – 306

STS-107 Flight Day 7 Highlights – 305

STS-107 Flight Day 8 Highlights – 305

STS-81 Post Flight Presentation – 127

STS-95: Discovery Flight Crew at SPACEHAB – 158

STS-96: Crew Training at SPACEHAB – 160

STS-96 Discovery, Bench Review and SPACEHAB Familiarization at SPACEHAB – 162

STS-96 Mission Highlights – 136

STS-96: SPACEHAB Double MOD/ICC Going into the Payload Bay – 160

## SPACECRAFT ORBITS

Mars Observer Lecture: Mars Orbit Insertion – 406

Mars Observer Orbit Insertion Briefing – 25

NASA Today: Mars Observer Segment – 407

Space basic – 380

STS-66 mission highlights resource tape – 47

## SPACECRAFT POWER SUPPLIES

Futurepath 2 – 8

STS-31: APU Controller Removal – 179

STS-49 Endeavour/Removal of Engine 2 at Pad B – 218

## SPACECRAFT PROPULSION

Aerospace test facilities at NASA LERC Plumbrook – 29

Low thrust propulsion no. CV-110 – 336

Low thrust space propulsion – 335

One fantastic ride – 336

Space Shuttle Propulsion – 248

Technology test bed – 9

## SPACECRAFT RADIATORS

Thermocapillary convection in evaporating sessile drops – 342

## SPACECRAFT RECOVERY

LDEF update – 320

Long Duration Exposure Facility retrieval animation – 319

Long Duration Exposure Facility – 319

STS-32 mission highlights resource tape – 11

## SPACECRAFT REENTRY

Launch, entry, and landing resource clip – 37

Mars Climate Orbiter – 322

STS-111 Mission Highlights Resource Tape – 301

STS-96 Mission Highlights – 136

## SPACECRAFT RELIABILITY

Gearing up for 1988 – 39

STS-99 / Endeavour: Launch Postponement Press Conference – 179

STS-99 Prelaunch Press Briefing – 171

STS-99 Pre-Launch Press Conference – 175

## SPACECRAFT SHIELDING

CRRES to blaze new trails in orbit – 352

## SPACECRAFT STRUCTURES

Atlas Centaur 77 GOES-J Wet Dress Rehearsal at Cape Canaveral Air Station – 326

Delta XTE Spacecraft Removed from Transfer Cannister at Hangar AO, CCAS – 325

STS-103 Discovery Launch Scrub Press Conference – 148

## SPACECRAFT SURVIVABILITY

NASA report to education, volume 9 – 374

## SPACECRAFT TRACKING

Apollo 11: The Goddard connection – 12

STS-30: TGS Isolated Video Playbacks – 187

## SPACECRAFT TRAJECTORIES

Neptune encounter highlights – 390

## SPACECRAFT

Space basic – 380

The 1965 highlights – 410

The 1967 highlights – 410

The 1972 highlights – 410

## SPACECREW TRANSFER

Expedition 6 Crew Interviews: Ken Bowersox CDR – 286

STS 110 Mission Highlights Resource Tape – 284

STS-102 Photo-op/Suit-up/Depart O&C/Launch Discovery On Orbit/Landing/Crew Egress – 312

STS-111 Crew Interviews: Ken Cockrell, Commander – 293

STS-111 Crew Interviews: Paul Lockhart, Pilot – 294

STS-111 Flight Day 1 Highlights – 290

STS-111 Flight Day 8 Highlights – 293

STS-111 Mission Highlights Resource Tape – 301

STS-111 Post Flight Presentation – 296

STS-113 Flight Day 3 Highlights – 302

STS-113 Flight Day 9 Highlights – 304

STS-96 FD Highlights and Crew Activities Report: Flight Day 05 – 133

## SPACECREWS

## STELLAR EVOLUTION

Colliding Galaxies: Hubble Space Telescope – 386

Searching for Planets Around other Stars – 384

## STELLAR MODELS

Spinning Stardust into Planets – 389

## STELLAR ORBITS

Searching for Planets Around other Stars – 384

## STIRLING ENGINES

Futurepath 2 – 8

The Stirling engine – 346

## STOVL AIRCRAFT

STOVL – 6

## STOWAGE (ONBOARD EQUIPMENT)

Delta XTE Solar Panel Deployment and Stowing – 331

STS-96 Crew Interview: Dan Barry – 152

STS-96 Crew Interview: Ellen Ochoa – 152

STS-96 Crew Interview: Julie Payette – 152

STS-96 Crew Interview: Kent Rominger – 150

STS-96 Crew Interview: Rick Husband – 151

STS-96 Crew Interview: Tamara Jernigan – 151

STS-96 Crew Interview: Valery Tokarev – 153

STS-96 FD Highlights and Crew Activities Report: Flight Day 06 – 134

## STRATEGY

Malcolm Baldrige National Quality Award winners 1989 – 377

## STRATOSPHERE

Airborne Arctic stratospheric expedition: Ozone – 4

Ozone hole airborne Arctic stratospheric expedition (pre-flight) – 351

Ozone hole – 351

## STRUCTURAL ANALYSIS

Atlas Centaur 77 GOES-J Wet Dress Rehearsal at Cape Canaveral Air Station – 326

## STRUCTURAL DESIGN

Go for EVA – 47

Hey! What's Space Station Freedom? – 321

## STRUCTURES

The making of the time capsule – 29

## STUDENTS

Liftoff to learning: Assignment space – 52

National Boy Scout Jamboree – 373

STS-107 Flight Day 9 Highlights – 305

STS-29 crew with student experiment – 356

Student researchers – 372

## SUBORBITAL FLIGHT

Astronauts number 2 – 11

## SUITS

Cool suit – 357

## SULFUR

Comet Shoemaker-Levy 9 Impact Press Conference – 398

## SUN

STS-41 Ulysses: Ulysses - The Movie – 199

Ulysses: A solar odyssey – 12

Unmasking the Sun – 408

Welcome to Outer Space – 17

## SUPERCOMPUTERS

The world's most powerful computer – 367

## SUPERCritical WINGS

Dryden and transonic research – 1

## SUPERNOVAE

Farthest Supernova Bolsters Proof for a Mysterious Form of Energy Pervading the Universe – 384

## SUPERSONIC COMBUSTION RAMJET ENGINES

Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test – 342

## SUPERSONIC FLOW

Improved Optical Techniques for Studying Sonic and Supersonic Injection into Mach 3 Flow – 344

## SUPERSONIC JET FLOW

Pressure Wave Propagation in a Screech Cycle – 96

## SUPERSONIC TRANSPORTS

The High Speed Research Program – 3

## SUPPLYING

STS-101: Crew Activity Report / Flight Day 5 – 191

STS-101: Crew Activity Report / Flight Day 6 – 192

STS-106 Crew Activity Report / Flight Day Highlights Day 2 – 201

STS-79 Flight Day 2 – 84

STS-79 Flight Day 4 – 82

STS-79 Flight Day 5 – 84

STS-79 Flight Day 6 – 82

STS-79 Mission Highlight Presentation – 87

STS-80 Flight Day 5 – 91

STS-81 Flight Day 4 – 89

STS-81 Flight Day 5 – 86

STS-81 Flight Day 6 – 87

STS-81 Flight Day 7 – 86

STS-86 Day 04 Highlights – 109

STS-86 Day 05 Highlights – 109

STS-86 Mission Highlights Resources Tape – 111

STS-91 Day 06 Highlights – 118

## SUPPORT SYSTEMS

STS-109 Flight Day 2 Highlights – 274

## SUPPORTS

Delta XTE Lifted To Work Stand – 327

## SURFACE PROPERTIES

EM-ANIMATE: A computer program for displaying and animating electromagnetic near-field and surface-current solutions: Video supplement to NASA Technical Memorandum 4539 – 368

## SURFACE TEMPERATURE

Testing the waters from space – 348

## SURFACE WATER

Galileo Science Update Europa Unveiled – 89

## SURGERY

Laser artery repair – 358

Robotic Assisted Microsurgery - RAMS FY'97 – 359

## SURGICAL INSTRUMENTS

Robotic Assisted Microsurgery - RAMS FY'97 – 359

## SURVEYOR PROJECT

Mars Surveyor '98 Animation From JPL – 189

The 1968 highlights – 412

## SURVIVAL

1990 ASCAN land survival training – 363

1995 ASCAN Training: Land Survival – 366

NASA report to education, volume 9 – 374

STS-29 crew bailout in WETF – 363

## SWEAT

Cool suit – 357

## SWEPT FORWARD WINGS

X-29: Experiment in flight – 5

X-29: Research aircraft – 5

## SWINGBY TECHNIQUE

Galileo Earth Moon Flyby – 399

## SWITCHING

STS-109/Columbia/HST Pre-Launch Activities/Launch On Orbit-Landing-Crew Egress – 335

## SYMMETRY

Sines and cosines. Part 1 of 3 – 370

## SYNCHRONOUS PLATFORMS

Atlas Centaur/GOES-J News Conference – 155

## SYNCOM 4 SATELLITE

STS-32 mission highlights resource tape – 11

STS-32 onboard 16mm photography quick release – 40

STS-41D Post Flight Press Conference with Highlights – 145

## SYNTHETIC APERTURE RADAR

Insight to global change: EOS/SAR mission – [352](#)

## SYSTEMS ANALYSIS

STS-37: TCDT Pad B Atlantis GRO (3 of 3) – [189](#)

## SYSTEMS ENGINEERING

Dan Goldin Presentation: Pathway to the Future – [135](#)

## SYSTEMS INTEGRATION

New Mission Control Center Briefing – [17](#)

## T-38 AIRCRAFT

Adamson, Jim – [364](#)

STS-103 Flight Crew Departs from Shuttle Landing Facility in T-38 for Acrobatics Flight, Discovery – [146](#)

STS-34: Galileo TCDT – [186](#)

STS-37/GRO Crew Arrival and TCDT Activities – [178](#)

STS-38 Atlantis Crew Arrival – [212](#)

STS-43 Astronaut Arrival for TCDT – [211](#)

STS-45/Atlas-1 TCDT Activities – [210](#)

STS-93 Crew Training – [155](#)

STS-93: Crew Visit and Departure – [159](#)

STS-95: Discovery Flight Crew Arrives at the Shuttle Landing Facility for TCDT – [160](#)

STS-96 TCDT Crew Arrival – [166](#)

## TAKEOFF

F-15 resource tape – [7](#)

## TALKING

ISS Expedition 1 Crew Interviews: Sergei K. Krikalev – [198](#)

ISS Expedition 1 Crew Interviews: William M. Shepherd – [196](#)

ISS Expedition 1 Crew Interviews: Yuri P. Gidzenko – [198](#)

STS-101: Crew Interview / James S. Voss – [181](#)

STS-101: Crew Interview / Susan J. Helms – [181](#)

STS-101: Crew Interview / Yuri Vladimirovich Usachev – [183](#)

STS-106 Crew Interviews: Edward T. Lu – [196](#)

STS-106 Crew Interviews: Richard A. Mastracchio – [194](#)

STS-106 Crew Interviews: Scott D. Altman – [194](#)

STS-106 Crew Interviews: Terrence W. Wilcutt – [196](#)

STS-97 Crew Interviews: Brent W. Jett Jr. – [213](#)

STS-97 Crew Interviews: Michael J. Bloomfield – [212](#)

STS-99: Post Flight Presentation – [183](#)

## TANKS (CONTAINERS)

STS-55 Downline Waste Water Tank Problem – [221](#)

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 1 of 4 – [339](#)

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 2 of 4 – [339](#)

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 3 of 4 – [340](#)

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 4 of 4 – [339](#)

## TARGET ACQUISITION

EVA retriever demonstration – [346](#)

## TASTE

STS-29 crew food tasting in building 45 – [362](#)

## TDR SATELLITES

STS-26 generic integrated IUS deploy simulation – [27](#)

STS-26 missions highlight resource tape – [41](#)

STS-26 onboard 16mm photography quick release – [38](#)

STS-26 Post-Flight Press Conference – [38](#)

STS-26 Preflight Press Briefing: Flight Crew and TDRS – [154](#)

STS-26 through STS-34, deploy activities – [410](#)

STS-29 mission highlights resource tape – [40](#)

STS-43 post flight press conference – [52](#)

STS-43 TDRS at the PCR/Cannister Doors Opening – [209](#)

STS-43 TDRS-E Sharp Edge Inspection at VPF – [220](#)

STS-54 TDRS-F in Cargo Bay at Pad B – [234](#)

STS-54 Tracking and Data Relay Satellite – [233](#)

STS-54 Tracking Data and Relay Satellite Briefing – [237](#)

STS-70 mission highlights – [57](#)

STS-70 post flight presentation – [53](#)

TDRS and the TDRS System – [331](#)

TDRS press release – [320](#)

TDRS video clip – [318](#)

TDRS-1 Going Strong at 20 – [317](#)

## TECHNOLOGICAL FORECASTING

An announcement by Dan Goldin – [377](#)

Dan Goldin Presentation: Pathway to the Future – [135](#)

Hernandez Engineering: NASA – [322](#)

Rover story – [396](#)

## TECHNOLOGY ASSESSMENT

Chemical engineering: Measurements for a competitive age – [337](#)

Hernandez Engineering: NASA – [322](#)

NASA: The state of the agency – [377](#)

NIST Automated Manufacturing Research Facility (AMRF): March 1987 – [340](#)

## TECHNOLOGY TRANSFER

From space to Earth – [379](#)

Medical imaging – [378](#)

## TECHNOLOGY UTILIZATION

Endeavor: Now and then – [46](#)

Finding fish from above – [348](#)

From space to Earth – [379](#)

Hurricane Andrew mission – [355](#)

Improved mapping system – [348](#)

Monitoring history – [378](#)

NASA images 16 – [379](#)

NASA images 7 – [379](#)

NIST Automated Manufacturing Research Facility (AMRF): March 1987 – [340](#)

Refocusing space technology – [379](#)

Revitalizing general aviation – [7](#)

Saving Yellowstone – [350](#)

Theodore von Karman Lecture Series: 'Technologies of the Future--Today' – [380](#)

Unistick vehicle controller – [345](#)

## TELECOMMUNICATION

STS-31: Mission Highlights – [185](#)

## TELECONFERENCING

STS-31: Mission Highlights – [185](#)

STS-96 FD Highlights and Crew Activities Report: Flight Day 07 – [134](#)

STS-99 Crew News Conference/ESA Call Flight Day 8 – [174](#)

Telemedicine Spacebridge – [359](#)

## TELEOPERATORS

Teleoperation and supervised autonomy for ORU exchange – [346](#)

Telepresence media resource tape – [368](#)

## TELEROBOTICS

Robotic Assisted Microsurgery - RAMS FY'97 – [359](#)

Robotics Demo Peer Group review – [346](#)

Teleoperation and supervised autonomy for ORU exchange – [346](#)

## TELEVISION CAMERAS

STS-112 Flight Day 6 Highlights – [296](#)

## TELEVISION SYSTEMS

STS-48 mission highlights resource tape. Part 2 of 2 – [54](#)

STS-72 Mission Update Flight Day 8 – [108](#)

STS-72 Mission Update Flight Day 9 – [107](#)

STS-73 Post Flight Presentation – [70](#)

STS-99: Flight Day 05 Highlights and Crew Activities Report – [165](#)

Welcome to the Ohio Aerospace Institute – [374](#)

#### TELSTAR PROJECT

STS-41D Post Flight Press Conference with Highlights – [145](#)

#### TEMPERATURE CONTROL

Cool suit – [357](#)

#### TEMPERATURE DEPENDENCE

The Plasma Universe – [381](#)

#### TEMPERATURE PROBES

STS-40 Temperature Probe and MDM – [212](#)

#### TERMINOLOGY

Sines and cosines. Part 1 of 3 – [370](#)

#### TERRAIN

Improved mapping system – [348](#)

STS-99 / Endeavour SRTM Science Briefing and Applications from JSC – [176](#)

#### TEST CHAMBERS

Unitary plan wind tunnel landmark dedication and revitalization – [412](#)

#### TEST FACILITIES

Aerospace test facilities at NASA LERC Plumbrook – [29](#)

Building the Integrated Test Facility: A foundation for the future – [10](#)

GFSC-TV demo tape – [26](#)

High Heat Flux Facility – [9](#)

John C. Stennis Space Center overview – [29](#)

Stennis Space Center 1992 – [29](#)

The Western Aeronautical Test Range – [10](#)

Way station to space: The history of Stennis Space Center – [30](#)

White Sands Test Facility – [31](#)

#### TEST FIRING

ASRM testing at Stennis Space Center (proposed) – [336](#)

SSME testing at Stennis Space Center – [335](#)

STS-37: TCDT Pad B Atlantis GRO (1 of 3) – [189](#)

STS-37: TCDT Pad B Atlantis GRO (2 of 3) – [189](#)

STS-37: TCDT Pad B Atlantis GRO (3 of 3) – [189](#)

STS-41G TCDT – [139](#)

Technology test bed – [9](#)

#### TEST RANGES

The Western Aeronautical Test Range – [10](#)

X-31 tailless testing – [7](#)

#### TEST STANDS

Technology test bed – [9](#)

#### TESTS

Goddard Space Flight Center robotics demo – [345](#)

#### TETHERED SATELLITES

STS-46 Eureka/TSS/Compiled Tape for Editors – [219](#)

STS-46 Mission Highlights Resource Tape – [210](#)

STS-46 post flight press conference – [63](#)

STS-46 Tethered Satellite System Mate to Deployer – [224](#)

STS-46 TSS-1 – [218](#)

STS-75 Flight Day 13 – [68](#)

STS-75 Flight Day 1 – [66](#)

STS-75 Flight Day 4 – [66](#)

STS-75 Flight Day 5 – [66](#)

STS-75 Flight Day 6 – [72](#)

STS-75 Flight Day 9 – [65](#)

STS-75 Post Flight Presentation – [65](#)

Tethered satellite: Forces and motion – [321](#)

#### TETHERLINES

Go for Assembly: Building the International Space Station – [332](#)

#### TEXTS

The future of bibliographic standards in a networked information environment – [379](#)

#### THEOREMS

Discovering the Theorem of Pythagorus – [370](#)

Sines and cosines. Part 3 of 3 – [369](#)

#### THEORETICAL PHYSICS

Tethered satellite: Forces and motion – [321](#)

#### THERMAL CONTROL COATINGS

Robotics – [43](#)

#### THERMAL INSULATION

STS-109 Flight Day 5 Highlights – [274](#)

STS-82 Day 05 Highlights – [92](#)

STS-82 Day 07 Highlights – [93](#)

STS-82 Day 08 Highlights – [93](#)

#### THERMAL MAPPING

Testing the waters from space – [348](#)

#### THERMOELECTRIC GENERATORS

STS-34: JPL RTG Safety Tests – [183](#)

#### THRUST VECTOR CONTROL

VSTOL Systems Research Aircraft (VSRA) Harrier – [4](#)

#### THUNDERSTORMS

Inertial oscillation of a vertical rotating draft with application to a supercell storm: Video supplement to NASA Technical Paper 3230 – [354](#)

SPRITE video news release – [353](#)

Venus lightning – [355](#)

#### TILT ROTOR AIRCRAFT

XV-15: Tiltrotor – [5](#)

STS-34: Galileo TCDT – [186](#)

STS-34: JPL RTG Safety Tests – [183](#)

STS-34 McCully and Baker during IFM training – [39](#)

STS-34 mission highlights resource tape, part 1 – 39

STS-34: Mission Overview Briefing – 185

STS-34 onboard 16mm photography quick release – 39

STS-34 post-flight press conference – 39

STS-34 Space Shuttle Portable Onboard Computer (SPOC) briefing – 39

STS-35: ASTRO-1 Assembly at O& – 185

STS-35: Astro-1 BBXRT Problem Area – 182

STS-35: Astronaut Departure – 182

STS-35 Crew training: Bailout in CCT, firefighting, TAGS class and bailout in WETF – 361

STS-35 crew training: EMU walk through and EVA prep and post – 360

STS-35 crew trash compactor briefing – 26

STS-35 EVA payload training in WETF – 360

STS-35: Helicopter Footage Orbiters on Both Pads A and B – 183

STS-35 integrated sim in SMS and MOCR – 26

STS-35 mission highlights resource tape – 42

STS-35: Mission Highlights Resource Tape – 186

STS-35 onboard photography quick release – 42

STS-35 payload specialists Durrance and Parise: 70mm photo training and cabin familiarization – 344

STS-35: Post Launch News Conference – 182

STS-35 post-flight press conference – 38

STS-35/ASTRO-1: Breakfast/Suit-up /Depart O & C / Ingress / Launch with Isolated Views – 188

STS-35/ASTRO-1: Day-1 Downlinks – 188

STS-35/Astro-1: Editors Work Tape – 185

STS-35/Astro-1: Launch T-20 Through Orbit with Replays (Tape 2 of 2) – 186

STS-36 : Turbo Pump Deinstalled and Being Inspected – 346

STS-36: Breakfast / Suit-Up / C-7 Ex / Launch and Landing at Edwards – 187

STS-36 crew EVA prep and post-training, bailout exercises, final bench review – 365

STS-36 crew presentation clip – 41

STS-36: Hydrogen Turbo Pump Removal Preps – 347

STS-36: Isolated Camera Breakfast Suit-up Walkout – 187

STS-37 astronauts Ross and Apt during CETA hardware checkout – 365

STS-37 Breakfast / Ingress / Launch & ISO Camera Views – 165

STS-37 CETA evaluation with Ross – 361

STS-37: Downlinks M. E. T. – 188

STS-37: Gamma Ray Observatory (2 of 2) – 409

STS-37 Gamma Ray Observatory Arrival and VPF Activities – 409

STS-37: Gamma Ray Observatory Removal from Cannister at the PHSF – 409

STS-37: Gamma Ray Observatory – 408

STS-37 Landing – 178

STS-37 Mission Overview: Lead Flight Director Briefing – 166

STS-37 Payload Gamma Ray Observatory Pad-B in PCR – 169

STS-37 Post-flight Crew Press Conference – 163

STS-37 Rollout to Pad B – 165

STS-37: TCDT Pad B Atlantis GRO (1 of 3) – 189

STS-37: TCDT Pad B Atlantis GRO (2 of 3) – 189

STS-37: TCDT Pad B Atlantis GRO (3 of 3) – 189

STS-37 The Payload bay door closing at PCR Pad B – 409

STS-37/Atlantis/GRO – 168

STS-37/GRO Crew Arrival and TCDT Activities – 178

STS-38 Atlantis Crew Arrival – 212

STS-38: Bolt Tightening – 197

STS-38 crew training: Habitation equipment procedures, bailout in CCT, 70mm photo class, EVA prep and post, and firefighting – 364

STS-38: Landing at Kennedy Space Center/Crew Exit – 213

STS-38: Post Landing News Conference – 197

STS-38 Rollback from Pad A to VAB – 212

STS-38 Rollout to Pad A – 212

STS-39 Activities in Orbiter Bay – 223

STS-39 Compiled Orbiter Footage – 174

STS-39 Discovery in the VAB and Columbia Tow From HB-2 – 198

STS-39 Discovery Rollback to the OPF High Bay #2 (Shots of Doors) – 198

STS-39 IBSS SPASS II Rotation and Installation – 198

STS-39: Landing at KSC – 197

STS-39: OMS Pod Thruster Removal/Replace – 197

STS-39: Payloads in Cannister at VPF – 197

STS-39/Breakfast, Suit-Up, Depart O&C, Launch, On-Orbit, and Landing – 208

STS-40 crew during spacelab Sim – 28

STS-40 Get Away Special Experiment Preflight Briefing – 199

STS-40: Hinge Inspection – 195

STS-40 SRB/MLP Rollout to Pad B – 200

STS-40 TCDT – 199

STS-40 Temperature Probe and MDM – 212

STS-40/SLS-1 Breakfast/Suit-up/Depart O&C/Ingress/Launch with isolated Views – 199

STS-40/SLS-1: Lift to Cargo Bay – 195

STS-40/SLS-1: Move from Work Stand to Canister – 200

STS-41 Activity/Rollover Preparations/Lift Preparations in VAB/Mated – 223

STS-41 crew training bailout in CCT, 16mm camera class EVA prep, habitation equipment procedures, and food tasting – 29

STS-41: Discovery Payload Bay Door Investigation – 196

STS-41 mission highlights resource tape – 43

STS-41 onboard 16mm photography quick release – 42

STS-41 post-flight press presentation – 42

STS-41 Ulysses Breakfast, Suit-up, C-7 Exit, Launch and ISOS Cam Views – 200

STS-41 Ulysses Compiled Flow Tape – 217

STS-41 Ulysses Launch (10/06/90), Ulysses Deploy (10/06/90), Landing (10/10/90) – 200

STS-41 Ulysses TCDT Activities – 199

STS-41 Ulysses: Ulysses - The Movie – 199

STS-41 VCS training with mission specialist Bruce Melnick and Bill Shepard – 346

STS-41D Post Flight Press Conference with Highlights – 145

STS-41G TCDT – 139

STS-41/Ulysses Camcorder Footage Replay of Ulysses Deploy on 10/06/90 – 201

STS-42 Discovery Rollout to Pad A – 211

 STS-99: Flight Day 05 Highlights and Crew Activities Report – 165  
 STS-99 Flight Day Highlights 03 and Crew Activities Report – 164  
 STS-99 Flight Day Highlights and Crew Activities Report – 163  
 STS-99 Lift and Mate to External Tank in VAB, Endeavour, SRTM Mission – 173  
 STS-99 Mission Highlights Resource Tape, Part 1 of 2 – 227  
 STS-99 Mission Highlights Resource Tape, Part 2 of 2 – 227  
 STS-99 Payload Bay Door Opening at Pad 39A Endeavour – 169  
 STS-99 Payload Door Closure in Orbiter Processing Facility # 2, Endeavour, (SRTM) – 168  
 STS-99 Payload Door Closure in Orbiter Processing Facility #2 Endeavour (SRTM) – 151  
 STS-99: Post Flight Presentation – 183  
 STS-99 Post-Launch Press Conference – 175  
 STS-99 Prelaunch Press Briefing – 171  
 STS-99 Pre-Launch Press Conference – 175  
 STS-99 Rollout to SRTM 39A – 170

STS-99 Rollover from OPF-2 to VAB – 169  
 STS-99 SRTM Lift and Insert into Canister – 170  
 STS-99 SRTM Moved from the SSPF to the OPF #2 – 173  
 Student researchers – 372  
 Supporting life in space – 361  
 Sustaining Life on the Earth – 357  
 Taecannautics: Sharing the dream – 372  
 Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 1 of 4 – 339  
 Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 2 of 4 – 339  
 Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 3 of 4 – 340  
 Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 4 of 4 – 339  
 TCDT STS-99 Crew at FSS/White Room – 173  
 TDRS and the TDRS System – 331  
 TDRS press release – 320  
 TDRS video clip – 318  
 TDRS-1 Going Strong at 20 – 317  
 Teacher in space – 359  
 Technology test bed – 9  
 Telemedicine Spacebridge – 359  
 Teleoperation and supervised autonomy for ORU exchange – 346  
 Telepresence media resource tape – 368  
 TES (Thermal Energy Storage) video news release – 338  
 Testing the waters from space – 348  
 Tethered satellite: Forces and motion – 321  
 Text and graphics systems – 378  
 The 1965 highlights – 410  
 The 1966 highlights – 411  
 The 1967 highlights – 410  
 The 1968 highlights – 412  
 The 1969 highlights – 410  
 The 1970 highlights – 412  
 The 1971 highlights – 412  
 The 1972 highlights – 410  
 The 1973 highlights – 411  
 The 1977 highlights – 412  
 The 1978 highlights – 411  
 The 1979 highlights – 390  
 The 1980 highlights – 413  
 The 1982 highlights – 412  
 The 1988 computational fluid dynamics highlights – 342  
 The 1989 computational fluid dynamics highlights – 341  
 The 61-M long duration sim video highlights resource tape – 27  
 The atmosphere below – 353  
 The crash of Flight 232 – 4  
 The desert tortoise: A delicate balance – 352  
 The four great observatories – 381  
 The future of bibliographic standards in a networked information environment – 379  
 The High Speed Research Program – 3  
 The Lighthouse that Never Fails – 241  
 The making of the time capsule – 29  
 The model builders – 10  
 The Plasma Universe – 381  
 The quest for contact – 366  
 The second giant leap – 376  
 The Secret Lives of Galaxies – 388  
 The sky is your classroom – 374  
 The Space Shuttle: America's team reaching for the future – 52  
 The Stirling engine – 346  
 The story of pi – 369  
 The Trifid Nebula: Stellar Sibling Rivalry – 389  
 The tunnels of Samos – 371  
 The vision machines – 368  
 The Western Aeronautical Test Range – 10  
 The world's largest wind tunnel – 9  
 The world's most powerful computer – 367  
 Theodore von Karman Lecture Series: 'Technologies of the Future--Today' – 380  
 Thermocapillary convection in evaporating sessile drops – 342  
 Time of Apollo – 15  
 TITAN III Launch Replays – 405  
 Titan III Mars Explorer Transfer Orbital Stage Delivery to the PHSF – 405  
 Titan III Mars Observer Arrival and Un-crating at PHSF – 405  
 Titan III Mars Observer Press Showing at the PHSF – 406  
 TITAN III/Mars Observer Flow Tape for Playback – 407  
 TITAN III/Mars Observer Post-Launch Press Conference – 35  
 To Boldly Go: Machine Consciousness and the Exploration of Space – 369  
 To Boldly Go: The Universe Now and Beyond – 24  
 TOMS computer graphics – 350  
 TOPEX Press Conference (2 of 2) – 330  
 TOPEX/POSEIDON Launch from Guiana Space Center Aboard an Ariane 42P – 330  
 Toys in space, 2 – 46  
 TRW Video News: Chandra X-ray Observatory – 323  
 Twenty-five years of progress. Part 1: Birth of NASA. Part 2: The Moon-a goal – 414  
 Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test – 342  
 Ulysses: A solar odyssey – 12  
 Ulysses News Conference – 383  
 Unistick vehicle controller – 345  
 Unitary plan wind tunnel landmark dedication and revitalization – 412  
 University Joint Venture: JOVE – 378  
 Unmasking the Sun – 408  
 USA/Russia space cooperation documentary – 320  
 Venus lightning – 355  
 Views from space – 347  
 Virtual reality – 368  
 Voyager 2: Neptune encounter – 391  
 Voyager Briefing: Expectations of the Neptune Encounter – 400  
 Voyager encounter highlights – 390  
 Voyager encounters Uranus – 390  
 Voyager II Encounter with Neptune: Voyager/Neptune Briefing – 399  
 Voyager last picture show – 393  
 Voyager: National Air and Space Museum – 393  
 Voyager Outreach Compilation – 397  
 Voyager science summary tape – 393  
 Voyager's last encounter – 391  
 VSTOL Systems Research Aircraft (VSRA) Harrier – 4  
 Way station to space: The history of Stennis Space Center – 30  
 Welcome to Outer Space – 17  
 Welcome to the Ohio Aerospace Institute – 374  
 What is the Value of Space Exploration? - A Prairie Perspective – 350  
 What's killing the trees? – 351  
 WHIPICE – 3  
 White Sands Test Facility – 31  
 WIND Mated to Delta – 327  
 Wind shear and heavy rain – 355  
 Wind Tunnel Tests of an Inflatable Airplane – 2

Worlds Smaller than Saturn – [407](#)  
X-29: Experiment in flight – [5](#)  
X-29: Research aircraft – [5](#)  
X-31 resource tape – [7](#)  
X-31 tailless testing – [7](#)  
X-33, X-34, X-37 Press Conference  
(Tape 2) – [185](#)  
X-34 Captive Carry & Seunghee Lee  
Interview – [184](#)

X-38 Phase 3 Drops V-132 FF#3 – [184](#)  
X-43 Composite Tape – [185](#)  
XTE Delta 2nd Stage Erection at Com-  
plex 17A, Cape Canaveral Air Sta-  
tion – [327](#)  
XTE Payload at Hangar AO – [326](#)  
XTE Science Briefing from KSCNF – [18](#)  
XTE Solid Motor Installation at Pad 17-A,  
Cape Canaveral Air Station – [336](#)

XV-15: Tiltrotor – [5](#)  
Yohkoh Soft X-ray Telescope – [382](#)  
Zarya Resource Reel – [333](#)  
ZENO: A critical fluid light scattering ex-  
periment – [342](#)  
Zvezda Launch Coverage – [333](#)

# Report Documentation Page

1. Report No. NASA/SP—2005-7109/SUPPL15	2. Government Accession No.	3. Recipient's Catalog No.	
4. Title and Subtitle  NASA Video Catalog		5. Report Date January 2005	
		6. Performing Organization Code	
7. Author(s)		8. Performing Organization Report No.	
9. Performing Organization Name and Address  NASA Scientific and Technical Information Program Office		10. Work Unit No.	
		11. Contract or Grant No.	
12. Sponsoring Agency Name and Address National Aeronautics and Space Administration Langley Research Center Hampton, VA 23681		13. Type of Report and Period Covered Special Publication	
		14. Sponsoring Agency Code	
15. Supplementary Notes			
16. Abstract This report lists video productions from the NASA STI Database.			
17. Key Words (Suggested by Author(s)) Bibliographies Videotape		18. Distribution Statement Unclassified – Unlimited Subject Category – 99	
19. Security Classif. (of this report) Unclassified	20. Security Classif. (of this page) Unclassified	21. No. of Pages	22. Price
